

GRIGORY GRABOVOY
Structuring of Consciousness
Control via discretization
(13)
25.09.2001

In this lecture
according to my system of Salvation and harmonious development
I show the control technology
means based on sampling systems

those. systems separation
Consciousness
Spirit
Soul
logical i.e. mental control

and this division is based on the fact that
that you by a volitional impulse, i.e. by an effort of will
introduce the system of this division
as if by a logical impulse

and at the level of this system
i.e. at the level of detection
these control components
control component
you are making a control system
by the level of Macrosalvation

so what is the principle of this system
by the level of analogy of control systems
consists in the fact that
that by setting the task on a logical principle
the task of saving everyone
including Eternal Sustainable Development

You can pose this problem logically
i.e. having set the goal of this management

and once you have defined this goal
then control mechanisms arise
which may be
for example, management through the Spiritual basis
control through a logical system

and control through
the principle means the realization of the knowledge of the Soul, for example, yes

and generally speaking any systems
which can be reproduced and named
so they can be used in the same way
in this control system

in this regard it means
in order for this control to be implemented
it means we need to distribute the next level
at the level of, as it were, the logic of understanding this process

the first level is
need to
primary impulse
correlate
with the named systems
where the systems that you name are included
as information systems
and you can call them differently, for example

i.e. there is
Soul level
Consciousness for example
logical control level
let's assume some formal expressions
fixed in the form of thought forms means

here at the level of creating a control impulse
how do these systems exist
the issue of this level of management needs to be resolved

i.e. the meaning is this
what is in the primary level
these systems are somehow contained

and then the question arises
How

so to solve this issue
and mark this level
should be considered
specific control action

i.e. for example the level means the next action
after making a decision

and from this level try to find the answer
then to the first level
solution level i.e. next action
this is already the second level

This means that the logic of this process is quite simple
i.e. if we have
consequence of some process
let's assume we have a Macrosystem

then we can consider
principle means Well means partitions of the Macrosystem
to a sublevel
let's assume we can go from macro-matter to micro-matter
which makes up this macro-substance

here the logical principle is approximately the same
having a secondary level
So we are trying to get to the first level
and we try to understand
where in the first level
contains the second

if we have
component
Well let's assume some metal let's assume iron
it is clear that the object is made of iron
from the levels of the molecular plane of the same iron

and this is the same type of management principle
this means it is a unique period
a unique level
as if the platform means understanding
what happens in the first level

and the Rescue Department
in all areas of access
precisely according to Macrosalvation
is based precisely on the level of such platforms

i.e. at the transition level
from level two
to level one for example
level one is the original level

you have control over Macrosalvation
because the transition level

contains
dynamic links
with all the elements of Reality

and that's when you look at it
dynamic links
then first of all you go through
through the structure of Spiritual content
control system

then you move on
to the level of the Soul that reproduces
for example, the Spiritual Management Structure

and then you get it
logically recreated level
i.e. logic as a multi-component unification

where is the Soul
where is the Spiritual level
reproduced by the Soul

and at the same time logic is considered
in this context
as a system
it means reflective and actually reproducing
for example, control from the Soul
and from the Spiritual system

i.e. in this case
the logic is exposed
as the first control level

i.e. in this case, unlike, for example, a lecture
where Spiritual direct control is considered
taking into account infinite connections
as a primary system

here logic is considered
as a control system
and such that it is in the logical phase
united
as control from the Soul
and control from the Spirit for example

means we need to be more careful here
this transition

it is quite complex
and moreover I show
as in the logical phase
find existence of processes
related to the Soul or, for example, the Spirit

so if we consider this lecture
we will tell you about the periods of its presentation
then you can see that the purpose of management
was
control pulse delimitation phase
for example by structure
Souls
Spirit
and logic and Consciousness
i.e. the mental principle of Consciousness

if we consider the word suppose principle
in this context
that is, the principle of Consciousness of the organization from the Soul
there is a principle of supposition there is logic
there is a principle of Spiritual management
but also which applies
to the concept of Consciousness for example Yes

then we can see it in words
what is the multidimensional phase
means logical logical implementation
is located means Well for example in the word
which means "principle"

i.e. and some systemic connections
having the same type
or novelty
or a uniform system of actions

and that's when I was talking about those platforms
which are platforms
maximum or fast access
by the level of Macrosalvation

then these platforms
can be designated in the statics of words
as a fundamental control system

as an independent work
consider this process

when you can on the basis of the ^{supposition} principle
build ^{well for example,} that infinite number of connections
which give control

but the word "principle"
you appoint yourself

There is a fairly subtle transition here
which speaks about that
that the designated word is "principle"
denotes a fairly general control

and at the same time this word includes management
^{for example} from the level of the Soul
from the level of the Spirit
or from the level of, ^{for example,} logic of Thinking
i.e. from the level of reproduction
and controlled Thinking

but within the limits of this word "principle"
we can outline conditional boundaries
but you named the word "principle" yourself

and ^{how} this platform level is in management
related to the ability to, ^{for example,} reproduce a word
it means exactly
infinite access in control systems

i.e. if we are talking about that
that having considered the word
as a carrier of information with infinite access
and as a form within which it is contained
^{means} within the volume of which
in this form
contains , ^{for example} , management at all levels

that's the difference
^{let's assume} between ^{well} ^{let's assume} there is animal life
which does not reproduce the common word ^{yes}
for everyone ^{for example} means animal species
and the difference between a person
who can use the word
for management

consists in the fact that
what if you do management
through the consciousness ^{of an animal,} ^{let's say}

then this control
requires exactly this approach

because in the Macro Rescue control system
naturally all systems are involved
which are reproduced, let's say, at the physical level

This is also on a physical level
because it is not necessary
there may be information systems

and so this principle says that
that identifying the system
existence of all connections
in the management message
This is a management principle
through there perception system
suppose animal stone plant

and your task is to identify that commonality in the approach
for example, if a person has
the word "principle" and management begins
including, for example, various subsystems

then what then for example Well, it happens to a dog, for example Yes
when is the management going on
through the system of general connections

dog there tree for example Yes
any object of information
participates in the system of stability of connections

and it turns out that this is how these systems participate
when they don't pronounce
let's assume a verbal control system yes

in this case
means management of these systems
consists in the fact that
what are you moving on to
to the non-verbal phase of control
accessible to systems
which for example Well, they don't use words, let's say
or are in another society
or are located in other habitat systems

that's why when I talked about it

that as soon as we start
consider the process means connections
means Souls
Consciousness for example Yes
Spirit
Consciousness in mental manifestation

we'll move on right away
to a generalized design
as socially conditioned connections

Now I'm looking at that
what is located
well, within the limits of logical access, yes
these are animals, for example plants
and some systems that can be
or come up with something
or let's say see through clairvoyance

I introduced the concept of "invent" here specifically
because any invented system
it already exists

and that means management that concerns
means systems that are not implemented
this is that special control system
which unites
all of the above components
as if a pre-control signal

therefore it means Well, I did it like this
like a small excursion
there are enough special transitions to the area
related to the topic
what is on the physical level
or is there in the presentation yes
or you can create something based on logic

I moved on to the area
which unites all systems
this is the area
which may not be realized yes

It is easiest to designate
area of unification
this particular area
and make the control from it

because the governing status
it's simpler in this approach
where there is well let's say so an infinite number of connections

and an infinite number of connections
you can find it right away very easily
in that size
which for example is not defined
from the point of view of the functions of Consciousness

so but this area
I don't call it, for example, the realm of the unconscious
or area for example there are subconscious minds
I'm just saying
that we are functional at the level of the logic of knowledge
we don't define it

hence
undefined region
it's still an area defined by me
but labeled as "undefined"

so if I enter for example
the principle of control through Consciousness
and I say that the area which, for example, is not defined
so she is the manager
then I can, so as I named this area with a word
I can structure it
and get out of it
control signal

means control through Consciousness
for example animals plants
in the event management structure
there is a need
management including
from the point of view of existing harmonic norms

i.e. if the plant bears the load
for example, the absence of an explosion at the nuclear power plant there
which is located near the plant
does it make sense to use this static construction
and how to strengthen it yes

therefore here is this control
which I now propose
consists in the fact that

what you should be able to do
means to strengthen the structure of the substance
structure of existing management objects
in the control impulse

and for this you must
be able to work through the system
which, for example, is not comparable
with the concept of let's say "human Consciousness"
"of the human Spirit"
or "human Soul"

because in this case we are talking about
what you can control
through the system as if well, third objects of information

these can be objects as I explained
either plants animals
or generally speaking
Well, at the current time, there are missing physical objects
or objects assigned by Thinking

and here the important element of control is that
what does the so-called appointed mean
appointed by the way of Thinking
objects
they generally don't come from anywhere

i.e. they are therefore the same
that dealing with the control system
anyway, somehow
full access to control systems
You should also designate these systems
where do you get them from

i.e. of course you can come up with something
any design so to speak Yes
which can be the manager

but when you come up with
you always base information on something

if you come up with
something completely new
then you will adapt anyway
to existing control systems

and in connection with this management
this is the kind of plan I just talked about
which means which is based on the assigned system

it as a primary basis
it still carries that area
which is initially undefined

i.e. if you do Spiritual
Well like scanning this situation
then it immediately becomes clear

as an independent work
then practice the principle of Spiritual scanning
of this object
and why did I say that "it becomes clear immediately"
this needs to be understood
and the "why" is enough right away
means "as it becomes clear"

this is as an independent work

when do you get
from this, as it were, area of undefined control
area of correct control
let's assume structure management
it means through consciousness
there is an animal there
or plants
or stone
or even microparticles, let's assume Yes

then you see and understand
that management is essentially quite general
because it is fundamentally no different
that you control from your Consciousness
or do you manage as if strengthening yes
system of existing connections

because the impulse is controlling
it always comes from one point
Well for example, located inside your physical body

so when you start researching
on the development of this point, as it were
i.e. come to her with Consciousness rising up

you come into direct contact with the Creator
at the level of manifested knowledge

i.e. contact with the Creator can be
at the level of manifested knowledge
or maybe there is a contact

for example, there in the highest degree or the highest measure yes
which implies a measure of understanding

i.e. you on your part
must mean express understanding
and this understanding should be based
on the seemingly super-fast accumulation of knowledge

if you for example Well, you're talking
Well let's say so with the teacher well let's assume there are mathematicians there
while in high school
who has a higher education
this is a rather conditional principle
related only to the level of knowledge

because the math teacher
he may not participate, yes let's assume directly
in your creation

and in this case
I'm talking about contact with the Creator

contact technology
it is based on that
what if the math teacher knows a lot
he is in high school
that means to adapt the conversation with him
and for example on the following topic

often you have to try to understand
and how can he explain
because he has knowledge , for example yes others
and include the base, let's say, of higher education

if he recently became a math teacher
then it is more difficult to find an adaptation system with him

so that's how the Creator created everyone, generally speaking
in the act of creation
at the same time
from the point of view of their manifested systems, so to speak Yes

in the physical body

then it turns out that contact with the Creator is like this
that this element is missing
element means Well as if not adapted connections

and it turns out that way
Well let's say the highest level contact and already as if higher
Well let's say so vertically
or higher in Spiritual development

this contact consists of
that you're just well remembering yes
the example I gave
this example is output
from the level of understanding of contact

i.e. an example of contact with a teacher
this is just that example
who does not come into contact with the Creator

it turns out to be on the same level well as if logical connections
you understand the infinite indefinite level

this is the technology of understanding
It's quite simple by the way
based on the principles of contact
with God with the Creator

and she is connected well in general, in the communication system on that
that you are just
by means of imagination, let's say, logical connections
build, for example, an example like the one I just gave
and speak
but the contact doesn't include this

because the Creator
He is the original Creator of everything.
and there is no system of adaptive connections
you understand him perfectly well directly
straightaway

so that's when you research
for example, systems of uncertain connections
which are also reproduced by the Creator, so

that's enough to understand this system

one of them is enough

Well for example, a logically reproduced example

Well, let's put it this way

I want to explore

the structure of this table

in a logical way

so then I think so

that this table is not , for example, a video camera

Well let's assume that according to this scheme it is clear

that as soon as I think so

I have it on a spiritual basis

Impetus for the development of management

hits

precisely in the structure of the table

on Spiritual content

Spiritual exploration begins

table structures

in this case this binding is not logical

look here carefully

i.e. well, a peculiar level of work

how does a billiard ball work

if I, for example, put one postulate

the limitation there is a billiard ball

in the form of a table

then the billiard ball does it anyway

the same trajectory of movement, I guess

if you hit it there at a certain angle

on it

this is the system that develops

Spiritual clairvoyance

i.e. if, for example, I set a task

research of some object of information

and relying on any other object

Well, let's assume the nearby one there is a microphone

there doesn't necessarily have to be a video camera there

then I get a different system

she is more she is much faster

in the study of the table

table structures

Spiritual system of table research

so, and at the same time I put it
First of all, I don't ask myself the question at all

about the table structure
as if about micro, say, cracks, etc.

but I know at the same time
It's enough for me to focus attention
for example on a microphone yes

if you are considering
some part of your body
you on the same similar principle
do you know what is happening around the body

as an independent work
here make such a control system
i.e. such a unique diagnostic system

when does it mean you are due to comparison
and that means as in the logical phase
what does the development of your Spirit look like?
according to diagnostics

based on comparative, so to speak, features
based on the nearest objects of Perception
and it can be physical sight

you can have control quite fast
and management at that
direct
any information system

if you take for example
and look at the microphone
and imagine, let's say, mentally
so I take it and imagine
there is some kind of musical instrument there
let's assume a violin

mental representation of a violin
gives the same similar control
but this already turns out to be clairvoyance
where is not a combination of logical phase

for example, I assembled a violin using logic
and table study
goes taking into account the logical phase
where one element holds
for example in Perception violin

when you do such management
you see
what is the principle of development of controlling clairvoyance
where does it exist
logical phase of control
consists in the fact that
what do you mean necessarily in the direction of travel
consider the control segment

then you are in control
taking into account the logical phase

if you see directly
without optical expression
previous management
you're just making an analogy

and watch the development of speech carefully
in this case
when will you listen to this lecture

so in this case
you have Spiritual clairvoyance
if there is no logical phase
entered by you

logical phase entered by you
it consists of the following
what about the level of your Soul
developed optics are assigned
which characterizes
path to the control system

i.e. you can watch any event
do management without asking questions
generally speaking, what is the path to this object

and can I ask a question
and where is the control trajectory
for example in the optical phase
near you

then you enter into management
logical phase
but contribute from the Soul side

pay attention here
this is specifically the work of the Soul

and accordingly
if we start walking
Well kind of the other way around
from event to Soul
then we are considering this platform
as a supporting dynamic platform
by means of access
to any level of Macrocontrol

"platform" I mean
optically manifested logical phase

in this case it plays a role
platform
which I spoke about earlier

hence
if you listen to the whole lecture
then I found it
by means of , well , logical combinations
found this platform
but already from the point of view of Soul management
which, for example, is located in your physical body

and therefore the location
two levels from the outer level yes
as if in a staged plan
and from the inside
creates that Reality
what are you and
what is your management
on a completely individual level

you will see
in this case any of your control
from the meaning of the connection task
as if two phases of control

this is external control
and control from you

when deciding
the same task
you get a clear line of development
you receive
that control trajectory
which is under control all the time
because that's who you are

i.e. the Creator created objects
so let's say Reality created the World
here, including using this technology
and it can be
completely non-load bearing system

because knowledge
for example, which represent well
Here is the delineation of the logical access phases
let's assume Consciousness
Soul
there is logical thinking

gives in consequence
such a two-factor control system
from you
And
to you
and at the same time makes the methods synchronous

synchronous methods
this is a transitional period
this platform

if you consider
two parts of this platform
For example as if from you we assume the beginning here
a little further to you
then the connection of two parts
shows an infinite number of connections
and infinite speed of information exchange

it turns out to be control
only on this platform
it is
system of sustainable harmonious development of the World

because in this case you
are you participating well as if

in the initial level of education of the World

and then it turns out you are in control
personal connections
through the system
as if super-fast exchange levels
between such concepts
like Soul for example
Consciousness
logical phase of Consciousness
Spirit , etc.

i.e. to get
interaction system
on real existing systems
the Spirit really exists
the Soul really exists
for example, the logical phase in Consciousness
i.e. Thinking suppose

and to connect these systems
need to get access
to infinitely fast communication systems

in this case
if you watch this lecture material
specifically from this point of view

you will find in this lecture
a specific, or rather unique, thread
connecting each element of the lecture

and this thread
should lead to that
What
you are in this system of connections
are you located

and this system of connections
this is you

here is the identification of such a system of connections
this is an understanding of the tasks of the Creator
to the next level of development

and in this lecture
by the level of self-healing

by restoring all systems
It is important to note here
that once you get there
then into this system
you are then in control at this moment
then the whole communication system
from the point of view of the absence of global destruction

because it is you
and you control
and that's why you are in this system

and when do you regenerate?
and participate in the system of all connections
through their further harmonious development

well, that is, your recovery is underway
and it goes like this

that everything around is harmoniously restored
or is developing
unless we are talking specifically about restoration
and just oh well let's say so maintaining
the right level healthy level
and the next development

then here is the next development
next step of development
this is your reproduction
in this system of infinitely fast connections
in the form of static systems

let's assume a body
statically manifested system

and as soon as you
for example in this system of connections
you put it well let's say so your physical body
from the point of view of your clairvoyance
i.e. you can watch
or Spiritual Scanning
or logical status yes

you can look at clairvoyance
the body is like yours
what is located well let's assume there in this hall yes
or wherever it is

in case you listen to a lecture later outside the hall

and look at the Spiritual level
where the body is formed
at this moment

then you will see
what shall we say clairvoyance of the Soul
which is implemented with this design
this is a manifestation of the logic of knowledge

i.e. this is the formula that I just entered
means direct vision of the Soul
which is manifested in the logical phase
For example , I entered how there is clairvoyance of the Soul

clairvoyance technology from the Soul
from your Soul

then you will see
what is the regeneration process
with such a staging system
recovery process
next level development process
it's a process
constant contact with the Creator
at the level of precision of understanding of His tasks

i.e. you need to be able to understand knowledge
as if the next moment
from the point of view of the development of the entire system

and since you are a manager
you must first understand
that it is your free will

i.e. the task is not tough
as if mechanically existing
as some kind of written systems

although one can perceive them this way

and your task
take part in this
Well, in relation to everyone, yes

i.e. it turns out

that in complete freedom of Spirit we will say there
creativity of all members of the World , for example, yes
there in the general understanding
then you should be able to
still have to deal with management
according to the accuracy of its development

given that
that as if every person can
or each system
there is a tree dog conditionally an animal
or any microparticle there
can develop with complete freedom of will

and so with such a design of the World
means management
provided that means Well, your health standards , so to speak
consists in the fact that
that the health norm is characterized by the fact that
what's in your soul
located inside your physical body
all these processes are controlled

i.e. the logical level of this, as it were, postulate
it is concluded in that
What
you have control
inside the physical body

i.e. in a more well as if in a logical expression
the body is a control system

so according to this status too
it turns out naturally more desirable
so that the image of a human body, for example ,
spread as far as possible
to increase stability
the whole system

if we consider such a process
then for example there is
interaction of two forms of man
then one person and another

when they are near there
some object of information
then this object well as if it is created by two forms

if we look at the work of the Soul
then the work of the Soul is that
that for this docking as if Yes
in terms of managing the creation of this form
or some process

The soul of one person and another
did something
for this process to occur

as soon as you lay it out
event any event
for example from the point of view of people

then you will see
what does the participation of the Creator mean
consists in the fact that
so that the Soul organizes the World in this way
to make things happen
certain event systems

and in connection with this, in order to somehow understand
well the deep meaning of any event
It is advisable to consider this process
Well, in this lecture technology
exactly like that

i.e. if there are two people
let's assume two forms of man
organize
well, some kind of orientation of microparticles there
Yes let's assume there are molecules
well in the same table
there is a joint organization going on in the hall

then how
for example, the presence of a plant outside the hall
Firstly, it affects this system

so if on condition of what was said
that the Soul is organized in such a way
that she is organizing this event

and the second
where there is the presence of the Creator
locally in physical space

Well for example in this hall there are plants in the area

or for example if we talk in general in the World ^{yes}
in the information system

i.e. the path to the Creator
at the information level
where is it concentrated
for example , there in the Soul of a person
and where it is laid there by the Creator himself
from the point of view of all communication systems

when you start to analyze for example
this question
that is the principle of organizing events
from the logical phase
it flows over
in the Spiritual Logical Phase

where logic is no different
Well as if from the Spirit

let's say I'm considering
well some systems
any reproduced there on a physical level

and try on the physical level
do such a practice
right now in the hall
look

where is the logical phase
specifically in this room
there for example, there is a radius of 2 meters around me
where is the logical phase
no different from the Spiritual phase
in management

find these places simply

do this exercise
and I'll look after you

so when did you do this exercise
then in front of you
well in your perception
certain systems emerged

there are supposedly related to that
that even when viewing the space of the hall
arises naturally

let's assume there is a table surface there yes

microphone for example

I am visible

and some elements

which well let's assume if there are existing ones close to me yes
air in physical space

when well there is air near the physical body then
there are boundaries of the physical body
and air

and here is the border in this case

Well for example leather yes

in this case specifically skin

there let's say the skin of the hand is visible

if you look at this kind of management

and look, let's assume this

that you see the Spiritual component

then visual logic perceives

for example, what is visible on the physical level

and here is the imposition of visual logic
what you see in logic generally speaking

because visual processes

relate, let's say, in many ways to logical processes

what you perceive with just your eyesight

you will practice in the future

such an exercise

if you pass

Well Means well, in the form of some level of Reality

let's assume some physical object

these are not all objects

and those that interest you

then you try

find Spiritual phase

try to find a logical phase

at that level

where the Spiritual is no different from the logical phase

and find an organization
layered organization of matter
any physical substance

then go to
to organize the event in this way

I'll explain it to you in more detail
what it might look like
for example, I'm walking somewhere, let's say through the forest
and in front of me there is a tree
which interests me from this position
I'm considering
at the first level of visual perception
where is the Spiritual as it were well, the faction of the organization of this tree
from my point of view

then I look at it
where is the logic
and it is desirable to consider here
What
Spiritual is more like a wave
as a kind of continuous meaning as if a connection
but here is the logical one
looks more like a point system
inside the Spiritual connection

although somehow
although they seem to be in the same place
suppose on the bark of a tree yes
these control systems

and on the other hand they mean
here are different phases that are logically different
which we kind of planned so that they are different
simultaneously
they mean the same thing
simultaneously mean continuity
that the logical phase is no different from the Spiritual

and that's when you solve this problem
you see that you are solving the problem with your Soul

i.e. this is the training of the Soul
denotes her presence
in a specific place
and denotes its specific work

associated with the cognitive system

so when you work like this

well in relation to

for example to an event

to a person

to the event

this is the management there let's assume an event system

man this treatment suppose

or structuring its event

then you see

which is often enough only necessary

Well how to illuminate the optical point

in the area of human information

at the same time this illumination

it just looks like that in optics

what do you activate well as if inside myself

i.e. in your Soul

at the same time inside yourself

not necessarily only in the Soul

which is here Well let's say it works

in parts inside the physical body

look when i speak

The soul is in the body

this is the logical phase of Consciousness

The soul is also the physical body

i.e. the physical body is a part of the Soul

in this design

and so when we look at

as if the informational structure of the Soul

inside the physical body

then this is the work of the Soul as if inside

and you see the tension

in reality, for example, body tissues

so that's what restoration means

Well let's say ourselves regeneration

or there is maintenance of health standards

in the context of a system of harmonious development

and universal access through the S- Savings system

in this design

Consciousness looks like this

what do you ^{mean} activate

as if a restorative optical range

well, some kind of cellular level

it could be just a fingernail ^{yes}

but located inside the body

and at the same time activation due to knowledge

external control systems

or internal at the same time

described in this substructure of the lecture

allows you to do everything harmoniously

how to self-heal

and to control, ^{for example,} external Reality

harmoniously

in this case ^{it means} it works

that it is one of the elements

studying your own body

in the context of, ^{as it were,} universal connections

here is what I brought

that including connections

through strengthening management

external systems

which do not relate to humans, ^{for example}

i.e. another form

and here is the direct access level

from your Consciousness

for any event

it may consist of

what exactly is the transition

from Consciousness which is correlated with the form of man

to Consciousness ^{means} which is not correlated with the form of man

this transition is the control

^{means} by access

into any event plan system

i.e. that's exactly it

transition to another form

it is always universal access

i.e. it is necessary
logically it is clear
We need to review all possible communication systems
to understand for example
and in what system is the other form
and how to give control through this form

but from the point of view of precision
i.e. instant control
and direct access to any event
the technology may consist of
what are you for example Well, imagine, let's put it this way
human form

Well, you just have it for treating the disease
it might look like this
that for the treatment of human disease
Well as if on a physical level

i.e. if the body has some pathology
physical body
then you can work
to restore this person
from the relationship of forms
for the target task of transfer of control
into a form different from the form of a human

i.e. for example on this in principle
based on for example level
what if a person is near, say, a tree
then he can
a certain recovery system
receive as soon as he
Well, somehow it navigates
in relation to the tree yes

so here it is somewhat deliberately
may not be complete
a certain principle of restoration
from some natural systems
there is wood, stone, etc.

if means in this case
consider well that concept
which I have just suggested

then it becomes clear here

that recovery occurs because
that when moving to another form
there is a perception of one's own task

here at the moment of transition
for example, a person sets a task there
let's assume to recover yes or get recovery
which includes the range of its events

i.e. a healthy person
which means there are more events accordingly
and more realized events

and it turns out that it naturally touches
event perspective

so here is the access
for example in this event structure
this is a transitional level

transitional level
This is a special control system
which is characterized by the fact that
that any form there for example, wood and stone
or any element of Reality at all
which is not correlated
with the form of a specific person

it could be
basically it means if we look through
transitional level
it could be, generally speaking, any new other form

and here is this transition
it is based on that
does it mean when considering the development of Reality
from a person
with such a conceptual system

can be considered
what is around a person
there are certain levels so to speak
around the physical body of a person

certain levels that characterize
availability of special forms
there are special combinations of shapes

which you can get
generally speaking any system

well, that is, a kind of mosaic
peculiar, as if spectral
or constituent level
all elements of Reality

as an independent work
look around you
in a specific place
make up for example a unique
as if an atlas of the organization of any substance
from a kind of peculiar design material
which you pre-develop
in the form of certain shapes
near yourself

forms
it doesn't have to be a geometric shape
this may be a form of Spiritual Perception
it may be a form of Consciousness that is not defined
for example, in the form of an optical form

the form of Consciousness can be different yes
information form

what is included in the concept of form in general
and the concept of the image, let's assume

and when you set such a task
that created
for example, in the image and likeness of the Creator
turns into that
that you find a specific way
to the creation of any substance

to either maintain its condition yes
or, for example, to its creative development
or to the creation of new systems and substances, for example

so therefore it is individual
if possible, make up
well, these are some kind of atlases or something
they may not be multicomponent
may consist of even a small number of elements

the main thing is that they carry it on themselves
this problem and it was actually solved

as soon as you make such a distribution
assigned by you initially
then you get
direct control of any event
based on the characteristics you have assigned

i.e. the forms you have assigned
they are under your control
that you appointed them
you created them around yourself
or did you see them around you

that's why i often give assignments
related to your own analysis of the system
because static systems
which means well reproduced at some time
often needed for the current moment only
and then we need to get them
well, either modify or somehow reconstruct
or introduce some control coefficients, etc.

any knowledge at all
which is expressed for example
in the form of static target systems
it needs it of course
Firstly, in constant monitoring of the fact of adaptation
i.e. the reality of solutions to existing problems, for example Yes

and secondly, how often
a system of coefficients is introduced
which would solve the same problem

Well, let's assume that in some century
a set of some herbs
were treating some disease
now is the time
or add some microelement
some other grass
to basically cure the same thing
or make a different composition altogether

i.e. there are systems that say that
that some technologies until some time
static means technologies

as if static in purpose
solve the problem

and some have to
to do completely different ones
in order to solve the problem at least in principle

and therefore this is the concept of "principle"
which I was talking about in this case
sounds like a principle over an uncertain system

i.e., in principle, solve the problem
and the methodology, for example, is not revealed

then under this system
here is the direct access system
which I was just talking about
in transition from form to form

carries a specific
constructive methodological mechanism
as a methodical mechanism even
because you can get a lot of techniques
based solely on optical forms
which are built in this logic

so you can see from here too
for example what if we have this logic
then this logic can develop quite quickly
many contexts can be identified in this logic
different contexts
there Spiritually containing or coming from the Soul

and, if possible, as independent work
after this lecture
This is where I end this lecture

After this lecture, work
as much as possible
Well as if with the maximum, so to speak, creative impulse
organizing the message itself
let's assume even at the logical phase

then work on this lecture
to lengthen or, as it were, to develop
to the level of Macrosalvation
through the system of understanding all

i.e. ask yourself a question
direct tactical and strategic control
like this lecture
for example, either through telepathy or through lectures
explaining these positions
bring to completion and to the point

First of all, it needs to be clear
what to understand yes for example material
in the context in which I presented

and secondly
you need to be able to convey it to the level
Well as if any listener

then it turns out
what is the task of management
in this case it comes down to the problem
again work on ultra-high speed characteristics

and here are the super-fast characteristics
they were laid down as lecture material
as a supporting structure
of this lecture plan

so as homework
look at the optical information level
where is this structure located
super-fast characteristics
for example near your physical body

and thus
you can create a kind of atlas
fairly unified
for a person in general
when control is from Consciousness
so it solves problems
due to a simple set of control systems
which are located near the physical body
which often simplifies
let's assume a logical path of development

and it turns out
that increases the Spiritual path of development

i.e. here I am after this lecture
I'm already introducing a lot of material

next lecture plan

what if we think more simply

well, faster , I guess yes logically

then it turns out that we have more opportunities

we provide to the Spiritual Administration

logically the task is very clear

the less we reason logically

in relation to

to the same control system

the more we do Spiritually

provided that all control systems are equal

and by the next lecture you will have a look

so this is the path of equality of all control systems

what does it give in relation to

for example to this lecture material

and in general this path can be seen

in relation to any lecture

if we have

equality of control systems

then how can you minimize it ?

one control system

in terms of maintaining its universal status

and at the same time use mainly

or one

or another process

and when you negotiate there

are you solving some social issues?

through logic there through words

how to formulate words

to be present

Spiritual phase of management

what they should be

i.e. the technology of composing words

in negotiation systems social systems

this is as a preliminary material

as if for the next lecture

well, in the form of a staged one
first you analyze
then listen generally speaking
or the next lecture
or any other one, generally speaking
with this task at hand

This is where I end my lecture
and after a 15 minute break
there will be answers to questions

in terms of questions
which could be used for that
to show in practice
today's lecture material

so next question
it was well related to the lecture
two-parameter control image
when control came from two areas

and he touched on that
what *if* For example *we do management
remote systems* For example *elements
which relate more to future events
then in this case
how to define the parameters of this control*

Well, that's how I'm basically retelling this question
parameters of this control
from the point of view of current time
Well how does it work then
Human perception

and at the same time, how do we, simply put,
we can control future events
if we have current time or there is past
remember the past and time

from the point of view of localizing the meaning of this question
I can say that we are talking about that
what shall we say so we need to make management
any future events
or this is a cure for example Yes
or these are event structures
where there are many situations

but the cure also contains
many including event structures
i.e. it is an interconnected system

from the point of view of today's lecture

and their connection is located
at a sufficiently high level of management processes
i.e. in a system of infinite connections

and when, for example, we pose a question of this content
what if we say this is how management is done
from the current time
and in the current time
we perceive, let's assume, what we see with our eyes
what we have in the form of thoughts
or we have some facts
which are considered as facts of the past

they can be obvious
i.e. recollection of the past
clairvoyance suppose in the past
and including the spiritual baggage of the past yes
the facts are largely like this
you can also add memory there, for example

that's when the conversation was going on
about two areas of management
as if in the outer realm of Consciousness
then the future was perceived
how does the optical compression system mean
in which it is organized
current time

from the point of view of today's lecture
in the optical range
the future is the system
the fastest possible connections
between
current time system
And
past

i.e. that's what I set the task for then
that some platform
which is the managing one
this means the level of infinite connections

and here it is if we have
in the future the task of management
then you can just do it
logically approximate as if
well, let's correlate
future information
how such a platform
between the past tense element
and the following current time

if you consider this
The spiritual meaning of the current time
it happens all the time
as if a discrete organization
the next Spiritual state

i.e. every next moment in time
on a spiritual basis one can consider
like a moment
as if it were reborn
and the Spirit does
jerky movements

this movement is possible
give meaning to development

but naturally
it develops because of connections
for example, in a second
even they increase significantly
under the condition of the infinity of the World
they increase infinitely

therefore even on a physical level
there is a constant and endless development going on
under conditions
when a person well for example it doesn't
there are no active actions there
according to self-development, let's say

so when i say
what if you are doing
technology of saving all
you even when maybe
don't do it at some point
active management systems
you are still developing relatively quickly

i.e., in principle, almost equally fast
in many ways this ideology
because in terms of the next development
the goal of salvation of all is found

and then you have development
from all, so to speak, creative forces
creative systems
and then they are very fast
and you look and count
what is this happening well as if spontaneously not very quickly

In fact
development is largely uniform
from this position

Why
I already explained yes
each element develops
and if the supporting structure is Salvation of all
it just happens because
that external forces are organizing
this development system

so from the point of view of this design
development means the future system
this is that platform
which is a transition platform

between each element
already past events as if
With
each element of the current event
but which is as if well recently it was a future event
roughly this design

and here is the concept of "recently was a future event"
This is a Spiritual control system
where the Soul is manifested in the form of Spirit

because if you look
well for any future event
then the logic of development is largely determined
current physical processes

i.e. Reality in the present

any future moment
this means in many ways a spiritual construct
i.e. not yet a perfect design
in Reality, for example, physical Reality

although at the management level
Of course this is a perfect design

and here to get precise and stable control
all you need here is just
so fix the future design
so that it would be organizing
between element
past
And

current and current moment which is here for example just now
was a future moment in time

then it turns out that you are doing
control
from Spiritual manifestation

i.e. the Soul manifests itself in the form of the Spirit
at a future point in time

at the current moment
The soul manifests itself in the form of a structure
where is logic and Spiritual management
united
and often do not differ
at the level of the primary impulse of Perception

and when do you cross over
to the previous design
you get there
in the logical phase of realization of Consciousness

so therefore you get
logical control of structure from the Soul
logical control
Well for example, the structure of information from the Soul

and as soon as you received
structuring information
it is a structured form of information
gives control
already elements of, for example, physical Reality

and in the context of this question, for example
you can see it here
what well let's say in the ideology of today's lecture
control structure
that's why it becomes stable
future
that it is fixed in the phases of the past

and the past
it is a stable structure
from the point of view of Consciousness
collective consciousness

i.e. Consciousness is arranged this way
that when a second passes
collective Consciousness of all
believes that the structure is already stable
because at this moment
for example, nothing there for example, nothing bad happened

i.e. there is some average Norm
there are no nuclear explosions, etc., for example .

and so if we build
future control design
with this Norm
or to identify the best possible Norms
I just said that there is management
at any point in the past

then we can fix it
Well as if these organizing platforms
in these areas
already appointing
what good comes from one plot
to another
there is some movement

translate the level of future development
in the form of a control platform
to this area

and based on this area
defining its properties
even undefined control
you can control
any design of the future

already knowing in advance that the future will be stable

i.e. at this moment it obviously does not happen
there will be some kind of nuclear global explosions, let's say

but also
if you make such control systems
so many
that may not happen
and even local disasters

but then for this you need such systems
place a lot
for example in the construction of the past

so that's why it turns out
what if by management
for example, preventing possible global catastrophes
sometimes you don't need that many actions
because this point is very critical
and the Consciousness of all is involved
in this maximum

and even minimal movement
calls
as if movement according to the governing status
maximum

here is local disaster management
concerns when a small number of people, for example
sometimes of course big
but still not all yes

then here the control is more involved
on the number of manager's works, so to speak
who saw it in his time
well, problematic possible disasters

then the task is a strategic plan
or manager
seeing for example Well, that can't be allowed
some kind of global catastrophe
basically works with this yes
and spends , as it were, the main part of his time

and works in parallel
over other systems

A or is he then
if time becomes available
from management according to the global meaning of Macrosalvation
then he controls more
local type systems

then in my opinion the solution here is that
which is more
attract managers here
i.e. to train as many people as possible
management
including local systems
for example, according to the type I indicated

First of all, the general collective consciousness
when more involved in such systems
Firstly, it produces more resources.
so from the point of view of not causing any disasters yes

if from the point of view of the optical signal
consider
that is not a commission
this is just a more revealed optical signal
characterizing the Norm

and the more such concentrations there will be
the more optimal events
i.e. not of a catastrophic nature

as a matter of fact
the treatment process itself
in case of complex or rapidly progressing diseases
it was identified exactly according to this scheme
what is treated first
what is most problematic for health

and is already undergoing treatment at the same time
which can even be considered basic
there the current diagnosis is known so to speak

in this case it is desirable
always pass on knowledge
Well let's say information from the body
immune system
so that the immune system remembers
how is the recovery process going

for some people
this is fundamentally important
and that's why sometimes it's necessary to give it
Well as if for a long time

often many people learn this very quickly
then in principle it is possible to show
this cure is like instant

here you have to choose , for example
in a particular case of treatment yes For example

and if we consider
event management
then in this case
the choice still comes from the level
as if a strategic option for decision making

and in accordance with this
well, to produce
here are the elements of collective Consciousness
according to this scheme, stable
from the point of view of forecasting, i.e. future development
focusing on the elements of the collective Consciousness

we can in this management
by analogy, as it were, with the systems of the past
through the major cultural systems
well, the conquests of culture or art
in general human thought

be able to disseminate knowledge
having diagnosed the main access systems
in the past
which determines
current collective consciousness

i.e., revealing not just elements of the past
as such
let's assume there are physical parameters of the past

and having identified the main coordinates , so to speak
for example, the ideological status of the development of society yes

can be controlled
positive creative development of society
in terms of meaning definitions for society

tasks

for example the planet was not destroyed there

and I think

that this technology

if you work with her according to today's lecture

Well let's say in terms of managing Macroprocesses

it gives quite a lot of parameters

for the development of educational systems

i.e. what should they be

then educational systems

so that future development depends on it

as from every member of society

and in general, in total from all

was there let's say more stable more dynamic

and followed the main plan of the Creator

this is Eternal development

and in the same physical body

that's why the design when I say

Eternal

this is firstly a special postulate yes

but it is relatable

with the level of collective Consciousness

based on discreteness

i.e. on the limbs there let's assume development yes here

let's say it is believed that it really exists

there objective Reality is such

that Consciousness perceives what it reproduces

this element of Consciousness phase as aging

if you ask the question

Eternities of development in the physical body

then a completely different modulation occurs

next level of Consciousness

and this modulation

she is just that

and gives birth to a renewed cell

i.e. often

to get

Well For example there Eternal development is real

first thing first

this goal is generally defined to set
and it turns out
a definite and set goal
implements a management system

so in the next part I have already finished this question
he was addressing a specific issue
I told him about him in general

so now I want to give it means let's say
a unique methodological answer
concerning that
what the hell for example, it is desirable that the system
understand in today's lecture

well, that is , sort of
what is the target question in principle
could be the most optimal
from the point of view of the current situation
and how would it be desirable to consider the answer to it , so to speak

so in my opinion
what is the first question
this is the applied use of this lecture
in relation to
to specifically applied technologies

for example, the more fundamentalism Yes
lecture plan
in Perception
i.e. if the lecture is perceived
more there for example fundamentally
and some supporting structures are considered
for example Consciousness
on the fundamental plane of implementation
let's assume the Soul of the Spirit

then here it is more desirable
that's exactly what today's lecture is about
consider the completely practical meaning
so in terms of implementation
of these fundamental systems

then we should consider this implementation
in a very specific and practical way
but in relation to
also a fundamental system of a fairly global nature
this is a system of collective Consciousness

so that's why you are now
do such training
right in the hall well for example at a distance means
approximately, let's say, 10 meters from me
for example, towards the hall
10 meters from me in a straight line
there is a system of Spiritual development
collective consciousness

find a system of logical development
collective consciousness
For example there 2 meters from me

in the first case
this is the point
in the second case it is a sphere
and find the position of this sphere

i.e. therefore do it with this formulation of the problem
such and such management training
I'll watch

pay attention
what is in this production part
I talked about what needs to be implemented
implementation
the most pragmatic, as it were, the most practical

and at the same time submitted for consideration
it is precisely an element of collective Consciousness
in general, in general terms

i.e. it turns out that the most pragmatic part
for this lecture
I looked at the controls
collective phase of Consciousness
and at the same time I suggest
the following mechanism for understanding
for example lecture material
in the status of Macromanagement
as if a special type of understanding

it consists of the following
that pragmatism is practicality
logically it is understandable
what needs to be done first Macro management
then go for example Yes

to a private solution to the issue

and so understanding lies in this

what if you have means

well, it's kind of a necessity

here is a completely practical implementation

and for example even simpler

first iteration

is management still a Macrosystem

Let's assume that the entire collective Consciousness

from the point of view of Macrosalvation

once you have done this management

then a peculiar effect arises

Well as if superfast connections

control applied

to a very large volume

gives birth to creates high intensity of communication

i.e. the concept of collective Consciousness

this is a very large volume of connections

and concerns, for example, all of humanity

in the past

and you can also include the future tense

and plus the current one

so in connection with this

a Spiritual structure emerges

awareness of the current time yes

as realized by the Spirit

current time

special task

and when this special task

for example, it is being implemented

let's assume logically we can say yes

this is the current time

if you watch the clock hand

we know logically

what's there in a minute it will be the future tense yes

or in the past minute it will be the past

and here is the current time

logically we can sort of perceive

well one of the parameters

such as the movement of a clock hand
or there is a logical measurement, as it were, internal

and the Spiritual system
because that's where the connections are
in the future and in the past
to diagnose the current time
it turns out we need to narrow it down
the structure of Spiritual Access
in this very part

i.e. you kind of take measurements in a targeted manner
as of the current time

and so what is it in
this is the current time
if the concept is like "time"
can also be considered as a conditional value
appointed by the system of collective Consciousness
well just people

and it turns out that you are then in Spiritual diagnostics
you find yourself back in the system of collective Consciousness
and identification only gets into that
that once upon a time people agreed
that there is a flow of time
to make it easier and restructure events

and at the same time now
you just need to consider it
vector of development of this agreement

therefore we have found out that it turns out
time as a component of collective Consciousness
for Spiritual diagnostics

but we were going by logic
i.e. in the current time
we have a generalized system
and in logical development we
it turns out that logic comes to a point of development
to the point where the development system began
Spiritual impulse of knowledge

therefore we have identified here
such a law
What

logical level of development means
always comes
to that point, as if to that area
which was originally
the field of Spiritual knowledge

and it turns out that well why for example often
you can understand more there
at the level of the spiritual plane

because the logical plan
in many ways it all comes out the same
in the Spiritual construction
but only containing the same plan
on the Spiritual level

and then we get multidimensionality yes
process of cognition
where there is a process of Spiritual knowledge
i.e. Spiritual content of knowledge
logical knowledge

but in principle I did consider it
just such an element
element of collective Consciousness
how is time

if I go further
and I will consider what is in the collective Consciousness
there is a human image

then in principle
I can on the collective Consciousness
then how would it be Well, should I improve the image of a person ?
based on this logical system

i.e. Spiritual message
led to such a logic of development

pay attention to why I am doing it this way
developed logical thought

i.e. you can find
Laws of development of logic of thinking
based on Spiritual Perception

so it turns out that every thought

based on this logic
this system is quite specific
Well as if naturally conditioned
or conditioned naturally by the Creator
but in the structured area of development of the Spirit

i.e. if the plant grows on the ground
because there is a nutrient medium
it turns out to be logical
is growing
on the initially structured
in a spiritual form, so to speak
Wednesday

and grows
according to specifically defined Laws

so when you want to consider, for example
logical status in the development of events
as a management status for example
by the presence of Spiritual content
in this status
it's easier to find it initially
points of the Spiritual beginning
any logical action

logically it is clear
from the point of view of this ideology

and from here it is clear
that the Spiritual principle i.e. Spiritual goals yes
Spiritual goals mean
containing large amounts of information
let's assume religious goals
there are the goals of society
there are corporate goals there
or a large number of connections

they are like this
what is the connection between them
basically starts to happen
on the Spiritual level
because the logical level
doesn't have time for example Means Well, let 's develop
on the terms of the controlling level

and therefore if we consider

development of collective consciousness
in terms of society, i.e. or the World in general
at every next moment

there is a logical phase
which refers to
to a certain speed level

then Spiritual for example Yes

further control from the Soul
here is control from the Soul
is inside every person

pay attention
what from the point of view of the design of today's lecture
so it turns out that you can control from the Soul

i.e. in the will of each person
determine the current situation
in Norm

will is one thing
another thing is to follow the Creator's plan
when everyone should be able to do this

i.e. to teach

that's why the learning process often looks
just like that
what do you find
governing Spiritual system
collective consciousness
as if you impose it on the logical sphere
well, just like Consciousness
by the volitional impulse of Consciousness
it doesn't matter whether it's spiritual or logical

squeeze
with the logical level of Consciousness
as if you are pressing these areas
to each other
aiming to well let's assume there is a transfer of knowledge

i.e. how to take knowledge there
for example, I want to pass on knowledge
what does it mean there is a region

where is the manifestation of the Spiritual and logical status

Well, it's not really clear-cut

i.e. areas that look
and as Spiritual Administration
and as a logical
but in Consciousness

then I just take and put it
the purpose of this task is to transfer knowledge
for example, not to those who are sitting in the hall
or who listens to the lecture yes
for example to any other person
who, for example, does not listen to this lecture

I'm going out
to the phase of collective Consciousness
in the design that I described
I'm going to manage, that means, the Spiritual status
and in logical status management

difference in management
there may be only a difference
Well as if in Perception
so it means in terms of connection speed or something
it is not necessary to identify logical patterns

and at the exit point
I'm going out for this purpose

I connect them for this purpose
I am receiving a transmission of information
well, let 's say that quickly
as far as this is possible in this action

and at the same time, it is critical
there is a task from the Creator
teach him by word for example yes, on logic
so that he could pass it on to others
the one who has learned

but now the task is different
social
i.e. the action taken
creates a backlash

here's how to teach yes

I what should I mean I should suppose write text there
which was understandable yes
or broadcast it on the radio
or by some means of information

and this is where multifactorial access comes in
again, all the same to the same person
for example on the word

i.e. the meaning and necessity of creating a word
this is a development system
Well, logically it's understandable

but in this case I found it out
as a task of development of a specific person
for example Well, according to different signs

and now if we look
and how then to transmit
for example, other elements of Reality
there plant animal
yes, so that they would participate more and more actively
in the process of management
for example there is Eternal development
according to the Salvation system

that is a sign of transmission
it consists of the following
What
we work in that area
where is the point of Consciousness of logical Consciousness
gives birth to a logical phase

in this case
since this was lecture material at first
and this is a practical application

then you treat it
this is like a practical application
and try to see
that where the point of Consciousness gives birth to a logical phase
there is control over those systems
which well as if from the beginning
at least at the moment
they are not focused on the perception of words there

and then the action of the word

what could it be

i.e. how can you say the word
so that it contains controls
and these systems

then you just need to put the word
into the structure that covers this event

i.e. event
which contains control
i.e. this point of Consciousness of control
as if a system that does not perceive the word
and to which, as it were, Well there through television through writing
it is impossible to convey yes
let's assume an animal

but at the same time this word covers
and their participation and their development
i.e. every action is verbal
covers the action
that's all as if the perceived World, let's say Yes
we are talking about all elements of Reality in general

having transferred this training
to control through movement
i.e. to perform each action
we get into the philosophy of management
when every action
this is universal management

and then as if
every movement of the hand there
every movement is then a logical one
physical
even information movement there let's assume thoughts
this means universal control

if this task is translated for example
personally for example yourself personally everyone
then you can also express general control
according to this ideology

and as homework
define as
i.e. from the point of view of personal context
how then is universal governance expressed through you

so that's what I basically calculated
what would be most appropriate to consider
for example, this type of questions
related to the use of this lecture
when the element of self-knowledge
and an element of logical self-knowledge
based on the Spiritual level
and on the distribution of levels and self-knowledge
through the logical phase

leads to that
what you can do in every action
see Macro Management

means if possible
please do it if possible
such a fairly simple practical training

i.e., for example , there is a sheet of paper in front of you
and you are planning some action
and you do the management

Well for example using
as if limited phase of control
i.e. the goal

Well there Well for example, the light-optical control level

visualize the goal
you make it, saturate it with control optics
and control occurs

now do this
listen to this part of the lecture, for example
It's better to listen to it
so it's in the section
that there is lecture material
and is there any way the material can be applied to practice?
i.e. in this very sense

and look how in this case
for example, a sheet of paper is involved
in control systems
which lies, for example, the same sheet
It's better to take a specific one
let's assume a specific sheet in some notebook, for example
in math there in a cage
It is desirable that the grid systems be visible

and look
as if through a kind of lens, yes
on Consciousness
Consciousness transforms
i.e. increases in Perception in your Spiritual
the distance increases
between well as if by these cells
the cells seem to expand
i.e. the convexity of space increases

space gets a multidimensional system
in general in your Perception

and then it is more adjustable
this space
not even a sheet of paper

i.e. through this sheet of paper
Firstly, you can do it
in general, direct control then already
with designated factual systems

i.e. let's assume to reflect the projection of control
on a sheet of paper
go through it
and even track how the event is going
specifically on the sheet
you don't have to look at it

but you see
that the sheet begins to participate
he starts well how to help

this speaks to that
that you have connected the Macrocontrol system
management due to that
that every action of yours is control
including the current element of Reality
for example, a leaf

it can be understood logically
what if you do an action
all connections are involved yes
and something changes all the time

and here's how to fix it
Well, this is one of the trainings.

this is work with a sheet of paper

then if possible
we need to move to the real thing to a greater extent
direct access level
when there is no need to use, say, a sheet of paper
but you have to watch it
that when your control level moves
Well as if into the future or into the past

simply by developing the management level
and look how parallel
begin to interact
all control spaces
and generally speaking there are those that can be called
passive spaces of the control system

and how it interacts
each element
your impulse control
with each other

when you start to watch this
you basically see
a kind of control circuit
which exists
around your physical body
and which carries
well, a kind of control load, so to speak
it means that as a result of the origin of such processes
from Consciousness

sometimes let's say on some instrument systems
parts of this control loop
are visible as peculiar well let's put it this way
they are called like aura there, aura state there, etc.

that is, reproduction
these optical systems
it's so strong
that it is revealed in the form of a certain contour
in the form of well near a person
so if you analyze
How
from what you see
Well, it is considered accepted to consider aura
means to understand

what does it mean to pass well kind of the other way around
then you will come
to the governing status of your Consciousness
which, strictly speaking,
and organizes this aura or information there
in the optically dense range
around you

and at the same time you can generally regulate

it is believed that there For example this is the concept of "aura"
it's okay it depends on the mood
and has different colors

and having that technology
which I have just suggested
you can then change the color
and accordingly it turns out
Well as if by a mechanical means
change the mood structure

It's natural that it gets there
into the system means deeper connections
you really control events

but doing it near yourself
you kind of work with the projection of events
well which may be sufficient
but I think
It is necessary to do a review of all systems
which fall under control

therefore setting a goal
as if a mutual analysis of different systems
I came to one of the manifestations
this is aura
I said that this is one of the manifestations

Of course, you can treat it like that by the way
for example, let's say a disease there are psychics there
means disease
associated with depressive states
where does it mean changing the design of the outer level
in the optically dense range
you get the norm

in this case, it is of course better to make the change

from the point of view of activation, i.e. raising
as if at the level of Consciousness
training is carried out accordingly
the one around whom it happens yes

and how does Consciousness work
by this technique you know

due to this
so homework again

then we need to find it
here in this organizing system
around the body
so those manifestations
which are like on the optical version
you perceive
or in the Spiritual version
who organize
as any element participates at least in the organization
and in reality it organizes
like any element of physical Reality
and the level of self-organization

those. find the cells
or there let's say so these are the points
around the physical body
where it happens at the same time

it is clear that this happens simultaneously
then you need to find the areas
which are as if maximally concentrated
and this happens at the same time
in areas of such maximum concentration

so by analogy with what I just said
i.e. there are questions that were asked
Well, for example, I was asked and answered
from the point of view of the applied question

then there was an answer
from the point of view of the possible
Well as if searching and analyzing
and what would be desirable in my opinion yes
consider

and me too like this

answered and got well let's say So
Spiritual component
in understanding this issue
and by everyone who listens
and who will even listen in the future, for example ?
study this technology

then if possible
do it well how to say at home
such a procedure for developing a knowledge system
precisely as applied
i.e. separating the fundamental, as it were , lecture system
or a fundamental system in cognition
What
formulate or receive
from someone means a question question level
Well, in general, it can be formulated

and secondly, what would you consider yes? Means

in this case I formulated the question
which was the first
it was set as if from outside

but I can ask the question generally speaking and say so
what question could be asked from outside yes
to create it at all

answer this question for example
from the point of view of practical significance
lecture material
or a fundamental plan , so to speak

and then just for the hell of it
having considered the whole spectrum of events
formulate the main question
it's not even a question
and what would it be desirable to receive, for example?
as a response
for applied development of the material

and from a combination of answers
try to find that control area
which firstly creates technology
this is how you ask these questions
how do you answer them

i.e. to trace the logic of interaction
why does this response happen
and why does such a question arise
from the point of view of your personal self-organization

and ^{then} look further
how can this be used
for training, ^{well}, as a training system

Well, in the first case
the question is ^{kind of} a local question
or someone really asked
or it can be created
^{as if} a single system from Macroinformation ^{yes}
because there can be many different questions

and the second one you look at all the events
and you formulate ^{well} ^{as if} for everyone
and including
can be formulated for all times
it's better to do it this way

possible questions
answer them

^{so} it works out
the maximum level of your personal access
plus a single factor
at your suggestion
unites ^{as if} a spiritual logical message

and knowledge is then transferred very quickly

and so I propose this technology
use as a technology
including knowledge transfer

^{so} that's it for today's lecture course
along with some practice
adaptation of the course ^{means} ^{specific} ^{actions}
I'm finishing

thank you for your attention
