

GRIGORY GRABOVOY  
Structuring of Consciousness  
**Method of structuring Consciousness  
founded  
on the construction of a dynamic element of Reality**  
(2)  
22.06.2001

Good day to all

Now I'm starting the first part of the lecture  
this lesson will be structured in this way  
that first there will be a lecture of about an hour  
then there will be answers to questions

the next part of the questions  
well, for example, to the next lecture  
it is better to leave now

in this lecture  
according to my system of saving and structuring Consciousness  
specifically in the part concerning  
preventing a possible global catastrophe

I give a method of structuring Consciousness  
based on that  
that you are building an element of Reality  
as such an optical manifestation on Perception  
that this element of Reality  
you make it dynamic

the thing is that my methods of structuring Consciousness  
this technology can be either step-by-step  
i.e., by studying you get a new method every time  
or each of the methods can work separately  
especially in situations related to Salvation  
from a possible global catastrophe

and therefore it should be taken into account  
that each of the methods  
is also autonomous

so this method

based on Perception technology  
i.e. Consciousness is considered as a control system  
at the same time Perception  
is considered as an element of Consciousness

but the task of this method  
is to manage  
i.e. specifically to save from a possible global catastrophe  
by imparting Perception in the optical range  
dynamic properties

so the principle of this method is that  
what do you look at first  
any element of Reality  
as an element primarily perceived

i.e. look first  
what does your Perception mean to you  
if you have information  
about a possible global catastrophe  
or for example you don't have

the thing is that this first part  
prevention of a possible global catastrophe  
in fact, a fairly narrow specialization in management

and therefore in the future, if possible  
we need to separate this part

although it is also aimed at that  
what can you do through it  
do, well, basically any control  
but treat it as a narrow specialization

so here's the difference from usual  
as if background level of control  
in this case  
primary level  
May be  
or manifested in Perception  
i.e. you can receive some signal  
that there is some problem and that it can cause  
global catastrophic consequences  
either now or in the future

and or can you just set the task  
namely the search task  
and at the same time in the search task  
work systematically on that  
to prevent a possible global catastrophe

therefore the situation here is that  
to make the Perception signal dynamic  
for example in two positions

or it is a signal that exists  
from some external problem

or you are involved in system level management  
and then the principle here will be different

so the first principle  
when you react  
to the element of external Reality  
i.e. some information appears in your Perception  
it is your information  
i.e. I mean this information is not from TV for example  
namely the information of your Perception  
or there not from any physical media

so you get information  
about a possible problem  
and then the dynamics of control  
fits into certain Axiomatic principles  
describing which  
here you should know right away

what is needed first of all  
highlight that segment of information  
which means in the optical range  
so that you can do it right away  
control action  
due to the failure to perform this element of Reality

i.e. to prevent a possible global catastrophe

therefore, based on this  
the logic of further development is as follows  
what first of all  
you mean from your Consciousness

realize the impulse  
which conveys the essence of your work

i.e. the task is not to fix it naturally  
possible global catastrophe  
and be able to actually prevent it

here the concept of "real" is that  
that you should immediately make such management  
so that it is stable in the future period of time  
i.e. this does not happen in the future

therefore this is it  
the key position of this method  
if it is an external element of Reality  
when you make the future sustainable  
by positions what is not happening there  
for example, a global catastrophe

then the situation here is already simplified  
i.e. you need to make the future design dynamic

so that the future design  
was dynamic  
in your Perception

you just extend your Perception  
into the realm of the future  
but in such a way that it is stable  
i.e. fixed

prolongation into the future through fixation in the past

this is the Axiomatic level

This level is determined by  
that the first Axiom is past

to give dynamics to the image of Perception  
consists of  
in the elements of the beginning of the future

i.e. you select an element for Perception  
Where the future begins

in Perception you can do this very easily  
because you can highlight  
area of the beginning future  
as a very real area

The second Axiom is that  
What  
the area of the beginning of the future is natural  
your own control system

but the Axiom says that

what is your control system  
becomes reality  
when she develops according to the Creator's purpose

the purpose of the Creator  
this is a creative harmonious development  
and at the same time This is how you build Reality

and the third Axiom

that the construction of Reality  
is happening in the canons of the Eternal construction  
in case you  
Eternity highlight in your own Consciousness

i.e. you must find the element of Consciousness  
consider Consciousness  
for example when you look at yourself  
that your point of Perception is in the physical body  
for example there The soul is in the physical body  
and you look at yourself from the outside  
but it means that you look at your image from the outside  
and here you must find Eternity in Consciousness  
it's your own task

it is such that as soon as you ask yourself  
technology of searching for Eternity in Consciousness  
you will definitely find it  
at the first impulse of Perception  
and this impulse is a dynamic impulse

the thing is that this lecture  
will be specially complicated in the conceptual version

and therefore it is advisable to listen to it several times  
for example, there on the dictaphone  
and at the same time follow the logic that I am now expounding

when you discover Eternity  
in external perception  
this is the dynamic characteristic of future management

so it works out  
that dynamics is just that  
that you find Eternity in Perception  
so from an external view well information about yourself

and since being here is mandatory  
because you are in the manifestation of Eternity  
it turns out that in any case  
you are saving from a possible global catastrophe

if the phraseology that I have just presented  
you translate to the structure for example DN K  
by vibrational structure

then it turns out just like that  
DNA system  
plus an element of future development  
which is mainly embedded in human tissue

i.e. micromolecular level or DNA level  
this is the development information that exists  
for example, in the form of microscopic studies

and the manifestation of the future is the fabric of man  
already in macromolecular manifestation  
i.e. in the form

therefore the future is manifested as a person  
and in connection with this  
by information I mean

and in this regard it is quite simple  
find from this position  
control system  
if you know how a person moves

i.e. it is embedded in a certain automatism

well, let's say it's on the level  
where it is not necessary to apply Mind Control  
where the elements of collective Consciousness are already folded  
exactly in that  
that the control element is based on the human form  
associated with Eternal Life

when you work on this technology yourself  
then you will see here  
what is the position of Eternal Life  
here it is manifested in this way  
what is Eternal life  
is a mandatory requirement  
for the infinite functioning of future processes

in this regard when I say  
about the concepts <sup>there</sup> Eternal life and  
or why did the Creator initially pose the question this way

then we get that these elements are as follows  
that they are in fact just that  
Laws of information distribution

It seems that someone came up  
invite them here

due to the fact that the elements of development  
in this case we are considering the elements of Eternal life  
then the element of the development of Eternity and the image of it  
is the man himself

that's why when I said that  
that you look at yourself and see the element of Eternity  
it's because you are the manifestation  
but in the technology of development of Consciousness  
this <sup>means</sup> it fits into the logic of the Laws of the development of Consciousness

so when you are in control  
through compositions such as Eternity  
and building future events

then you should consider here  
as an independent work  
that these are similar phenomena  
and phenomena that follow from one another and intersect

at the level of Perception

hence  
technology of creating a control impulse  
based on imparting dynamics  
for the meaning of impulses of external nature  
is that you build this technology  
or sequentially  
or you just add a control impulse  
only due to that  
what do you perceive yourself as  
and in the present tense  
and in the future

i.e. a fairly simple technology  
perceive oneself at the same time  
both in the present and in the future  
and this impulse he will steadily control Reality so  
that a global catastrophe will not happen

by control system from a static image  
i.e. you do it this way  
that suppose you regularly consider the whole Reality  
and look for those controls  
which means they create a stable Reality  
i.e. preventing in the future  
for example, a possible global catastrophe

or are you working with information from the past  
so that this catastrophe does not happen in the future

then the systematic nature of this search  
first of all, it should consist of  
to keep your search focused  
to actually prevent a possible global catastrophe  
and you didn't record it  
possibly negative elements  
either from the past  
either from the future

i.e. information of a negative nature  
which concerned  
well, there are possible internuclear conflicts there  
it still needs to be manageable  
from the current control time

i.e. well, it is known that there were situations  
when internuclear conflicts were possible  
therefore this information should not remain  
as information fixed for the past

in any case when you are in control  
from the point of view of search engines, *so to speak*  
when you look at Reality and manage from yourself  
and give the elements of Perception a dynamic characteristic

then you should definitely  
manage the entire volume of information

for example, *it means* if you do management  
even in the distant future  
Well, let's say we take it a million years in advance

then this part still contains  
all known information  
about possible conflicts that could occur  
Well for example there is the Cuban missile crisis

and in connection with this, this information exists  
in the total volume of information  
as an element that reacts  
for your future management  
the logic is quite simple

Be careful here  
because the logic that I give  
at the logical control level  
intersects  
with the level of Spiritual Management

and here the Spirit can manifest itself  
very ambiguous, capacious  
because this is your personal task each  
prevent a possible global catastrophe  
and spread this knowledge

and in connection with this, technologies of knowledge  
which will happen  
when studying this part  
they can be completely universal

but the main thing is that they should be directed  
only to one goal  
it is precisely the prevention of a possible global catastrophe  
through your own search engine

i.e. when you specifically set a task  
and look for what could be the reason  
and how should we work today  
what is an hour, second, minute or half a day <sup>there</sup>  
or maybe you need to work there constantly for several hours  
so that this catastrophe does not happen

then here you must definitely manage  
all the information of the past

in this regard, there are a number of axioms  
they are very simple in logical understanding  
but again, there is a meaning here precisely in that Togo  
that I give spiritual education

i.e. the Spirit must be like this  
to prevent in any case  
possible global catastrophe  
and not only a global one, but better yet, any problem at all  
sweep away  
towards the optimal solution

in this regard, the Axiomatic level  
which logically follows  
from the optical laws of interaction  
it should be explored and understood by you here

where Perception passes into the Spiritual basis

why is there control  
when there is a real result  
but there is no intermediate verbal level, <sup>for example</sup>

in this regard, control optics  
what I'm talking about now is the optical range  
which we all understand

he must definitely  
connect at the level of knowledge  
With

the range of development of the Spirit

what does the development of the Spirit mean in this case

and here as a rule

these are elements of awareness of the whole Reality

in my systems of concentration for each day

I lay down elements of mandatory awareness there

due to the fact that this methodology  
is aimed at allowing you to manage on your own  
and had their own management tool

I'm just entering now

independent level of development

as the level required

i.e. this is not the usual logic of reasoning, *for example*

let's assume you view the process this way

what do you have

some information constant

from some source of information

which characterizes what development is, *for example*

or is it slow

or it is very fast

i.e. the point here is that any element of Reality

including development

own Spirit

of one's own Soul

by target management

are you personally involved?

and that's why when I talk about management

*for example* in the optical range

then the joining of two optical elements

let's say I can have a video camera or a microphone

consider

as two optical elements of Perception

i.e. simply translate into some signals

*for example*, I close my eyes and look

what yes they are standing next to

but from the interaction of these two signals

I can get Spiritual development  
by understanding what these objects are

the thing is that everyone's task  
is a study of the field  
which has no known characteristics  
this is the main thing that is required for Salvation in any case

as well as understanding of any field  
which has known characteristics

due to this  
for example, a video camera, a microphone  
it is known what it is

and the concept of Spiritual development in terms of management  
fits into the task just a little bit  
that I am the elements of the Spirit  
I'm considering  
as some creative elements manifested  
when learning <sup>about</sup> the microcircuit of this board  
or there are mathematicians or physicists  
or even an image there

but when you're dealing  
with unknown systems  
then in this case there are two optical coefficients  
i.e. two optics located next to each other  
in your Perception  
like, <sup>well,</sup> two light bulbs, for example  
they require management  
including the essence of knowing themselves

in this regard, Spiritual development  
this is again an advanced future  
which forms  
element of its own form  
due to the fact that you are  
simultaneously in these two elements of Reality

<sup>well,</sup> for example, ancient yogis  
elements of development  
<sup>well,</sup> which concerned only personal progress , <sup>let's say</sup>  
consisted in the fact that at one of the stages  
a person must

to become self-aware of oneself in the objects of external Perception  
or your Perception

here as an independent work  
analyze this phrase  
why did i say external perception  
or there of your Perception

and that's when the realization happened  
the work was considered complete  
because there was an impact on Reality  
let's assume they could melt there snow  
i.e. to increase the temperature  
well and in general to manage Reality  
it is quite obvious on a physical level

or let's assume self-resurrection

there are documentary shots when at the beginning of the century, let's assume  
when a yogi pulled himself together just after he was burned

these are completely obvious things  
which are done and even recorded

but the task of my management, for example,  
is not to go to the level means that  
to record a negative status

i.e. the meaning of Salvation is that  
so that in any case  
there was a following logic of development of such  
what is the human body  
firstly it should not be destroyed  
but if it is for example there is a problem then it needs to be fixed

so the principle that I am now expounding  
according to the study of the dynamic structure  
again this is the dynamic structure of the future  
it consists of the following  
that is not specifically necessary  
for example, let's say there is something to be injured there  
there is no need there let's assume cut your finger and instantly repair it

the thing is that the meaning of management  
is to do so

so that those people who don't know such methods, for example  
they were still at the level of information transfer  
with you  
i.e. the meaning is that management should be for everyone

It's another matter when everyone will be able to do this  
but even then it is better to follow the ideological principle  
first of all, do no harm  
then restore it

the fact that I entered this explanation  
this is of fundamental importance  
in order to see  
dynamic management structure  
future characteristics

and this dynamic structure consists in the fact that  
what do you constantly reproduce  
your own restored image  
and restored according to the parameters from the past, including

i.e. you must accumulate your past in this way  
so that for example what you are now  
for example in the current time  
this is the result of that  
that in the past you your information  
restored to the level you need

therefore if you have restored to the required level  
then the Cuban Missile Crisis is not happening  
i.e. the logic here is simple

i.e. before this logic  
I brought it to fruition  
through the level it is enough, theoretically, well, diverse  
the construction of this part of the lecture

and try to do it as an independent work  
tie this lecture on creation  
for example, a single sphere of governance  
which is stable in any case  
and you achieve it anyway  
that there is no possible global catastrophe happening

the thing is that i keep adding the word " possible "

because the verbal description says that  
that this does not necessarily happen

as a work look at this formulation  
in the internal content of the management sphere

as a self-healing control  
I am considering the method here  
when you do management  
building ourselves at the same time  
and from the inside  
and simultaneously in some one local segment  
the external world, i.e. external Reality

it's self-healing  
has a positive effect on everyone  
this is a mandatory necessary condition

and this condition forms  
systems of impulse transmission in Consciousness  
which means that they thus form Reality  
that Consciousness begins to work  
according to very specific canonical laws

in this method in this case  
I am introducing a system of growth of Consciousness  
i.e. increase in the characteristics of Consciousness  
on the creation of special areas  
which are canonized for all

i.e. it is a system of knowledge transfer

and in this regard I am considering those positions here  
what are you looking at  
external impulse of control from external Reality  
you can basically split it  
on the elements of external Reality  
when they appear as if from external sources  
i.e. this is someone's information or from somewhere

or you created the information yourself

in this case it is not important

here here here

there is a unique difference from the first part  
when it came to  
on managing a possible global catastrophe

in this case it is not important  
you can either assign an external source  
or take it from any external Reality

and plus consider yourself  
and at the same time start building  
through the self-restoration of the whole Reality  
from two levels of Perception

the thing is that it is logically clear  
why in case of self-healing  
it doesn't matter

because as I already said in the first part  
on technology to prevent a possible global catastrophe

the human form is the ideal form  
from the point of view of Eternal development

therefore all external events are according to the Creator's plan  
are human actions  
and including the action of the Creator

so all external events for example  
which you will consider as an external element  
anyway in the end  
is your own participation  
in the development system

the question naturally arises  
what is the difference  
if we are considering a possible global catastrophe

yes but the thing is that here  
global potential catastrophe  
this is exactly what is not provided  
elements of creative development

so in that case  
it was of fundamental importance  
when I said

about technologies for giving elements of Reality  
namely characteristics as external  
or reproduced by you

in the case of building Reality through self-restoration  
it means the same thing

in this regard, you need to consider it yourself  
such elements of Consciousness  
which are universal

i.e. in some cases  
one area of Consciousness works  
as in the case of external Reality  
and your appointed means some kind of informative education

and in some case  
ta the same area of Consciousness works like this  
what's in this area  
external and internal are one

as a result of this you immediately see  
how to do self-healing management  
because you are  
in one place and in one form

i.e. from the point of view of Eternal development  
having considered simply this element of Consciousness  
you see that you can build forever  
harmonized Reality  
for example there build worlds information systems develop  
only because you understand the structure of Consciousness

this principle of self-healing  
and building Reality through self-healing

it is built on that  
that you build your own Reality  
and in this way  
that the manifestation, for example, is the first you yourself

then it turns out that this construction is like this  
what can you build  
well not only there Reality of its own  
let's assume there is your own body there

and at the same time harmoniously develop everything external

but it is enough to understand the tasks of the Creator  
plus for example yours  
tasks of all  
and you can build  
the next element of Reality

i.e. this way you can build equipment, for example  
which may not destroy in the future  
but at the same time have forms  
which are necessary for Eternal development

i.e. I used the word "forms" here in a mechanical sense

there are elements of development  
when even the forms of technology  
formal signs such as parameters  
geometric parameters determine  
elements of Eternal development

if we look at the histories of civilizations  
which had a fairly long development  
then in some civilizations  
at one time in the past I mean in the history of the earth  
the concept of form was given special meaning  
in terms of the possibility of being reborn again  
but on condition  
which means that there will be some possible problems in the development period

i.e. they laid down a system of stability  
formal symbolic features  
and generally speaking, in many ways, of course, this helped that  
that now the earth is not destroyed after all

so when you look at  
elements of development  
be more attentive to the forms  
which you create in the elements of knowledge

pay attention here  
that in the elements of knowledge you create forms

when you learn this information remains  
in the form of new supplemented forms

in the elements of world development

these forms can also be controlled  
they can be controlled too

as a result you will not have  
some uncontrolled areas of management  
and it is this feature, this principle, that it denotes  
what can you do management  
by creating your own form

not only for example in the material embodiment  
in the form of a human body and corresponding events  
but also forms  
from the point of view of infinite future development

I am not revealing this part on purpose well, sort of until the end

i.e. this part needs to be thought out  
by signs of self-healing  
and as if mentally dictating to myself  
so that I could still dictate here  
By self-healing control system

in the part that follows  
i.e. managing events of any order  
from your Consciousness

I'm just making a platform on that  
what is the part i didn't tell you about  
on this I do event management  
from one's own Consciousness

i.e. in this case you get control  
from the area that is undefined in your Consciousness  
well at least for now  
or if someone has already quickly come up with one of the options  
basically, everything has already been thought out in the hall

another question  
What I still put this lecture on that basis  
that the element of Reality is indefinite

in this regard you should  
still get precise control

when the starting point is uncertain

that is why this control technology  
she is special  
and is built as a technology for the development of Consciousness  
but also including management of a wide range of events  
including that  
that by managing one particular event  
you manage the whole system in a harmonized manner

let's say that by healing you simultaneously heal  
practically speaking, let's say so all those participating in the event  
or optimize everything at once

why is such a complex possible with this technology  
It's not difficult to understand here  
because management not announced  
and it can be projected anywhere

i.e. the carrier control is not declared  
therefore, with infinite development  
it will be projected anyway  
where you want

and the task of your Consciousness is simply  
is  
give the status of infinity by the target attribute  
well, according to the initial control goal, the impulse

if this sounds complicated somehow  
there may be a development plan for the situation  
then try to consider the system here  
when it just feels right to you  
i.e. re-tune yourself to that  
that the material is perceived simply

and study this part from this position

so make sure you bookmark it specially  
that there are no special problems here  
and you from this position of Consciousness  
study this part of the material

so that means I'm defining it here once again  
an area that is actually unknown

and control goes to the target area  
on what you want  
this could be a treatment  
it can be any event you want to have

and this control naturally passes  
by preventing a possible macro-catastrophe  
Anyway

i.e. any of the substructures passes through this system  
the same way DNA works  
it is always in control  
no matter  
does a person control Consciousness intentionally or not?

and therefore the control system in this case is as follows  
what is needed to build a control impulse  
which, first of all, is already being implemented  
everyone participates in some issue with their Consciousness  
one way or another

but at the same time the management is built  
in a position where there are no primary characteristics

therefore the problem is logical it's very simple further

to manage  
from the level of characteristics and which are unknown  
all you have to do is just determine  
at least some kind of borderline conditions  
what should be taken into account in order to manage

so here are the boundary conditions  
this is the environment that contains the unknown environment

and the thing is that according to the system of general relationships  
that every element of Reality  
interacts in any case.  
with each other

it is clear that the surrounding environment  
it is formed taking into account the interaction  
with unknown environment

for example, when I made a device at one time

crystal based  
and the device , well, let's say, was doing this or was aimed at that  
and now it is functioning  
to prevent possible global catastrophes

then the task of prevention means  
in case we have unknown characteristics  
then the task of this control in crystals  
Means it was that the crystal itself  
did not have the characteristics of the external environment  
for control pulse

any impulse that passed  
he was like this in optics  
that its parameters were already known  
because the shape of the crystal and their arrangement  
were exactly like that  
which is what they were considering, among other things  
then any external signal  
as a signal that carries all the external signs  
around yourself

mathematically, by the way, it's not that difficult  
that's exactly it in mathematics

from the point of view of optics if well optics of perception for example  
then the same type of processes often occur there  
the same as in crystalline systems

and in this regard when you have control  
then this is management  
firstly it can be current  
i.e. you can have current control  
based on what you mean as I said  
have control

but there could also be control from the future  
i.e. when you have some area of control  
but at the same time this area comes from the future

as an explanation for this  
you are at home if possible  
or somehow even while at work  
try the term

" you have control"  
i.e. when you are in a state of control  
transfer to a normal situation  
which, well, maybe you think it's household

i.e., to have control if possible  
adapt the term to yourself in some way  
here in this lecture

i.e. being in that state  
that <sup>there is</sup> a special purpose of management  
you don't do it through Consciousness  
look how the control happens anyway  
because you don't do anything

and here when I look at  
management <sup>means</sup> external events  
then the principle, <sup>for example,</sup> of constructing external Reality  
and at the same time the inner Reality  
reflected in what you  
at the level of the Creator  
you decide the process of event reproduction

i.e. when the Creator set Reality  
He would solve the problem anyway

if you do Reality  
just like the Creator does  
and that's how it should be done

then consequently the next element of Reality  
is an element that is not designated  
it can be absolutely accurate  
you have to build it anyway

These ones <sup>well,</sup> about five minutes of this lecture  
I tried to describe <sup>the</sup> boundary conditions  
for an area that is unknown

in this regard, if possible, this section of the lecture  
listen specifically <sup>well</sup> maybe several times  
to catch where you yourself are manifested  
<sup>for example</sup> in a management situation  
with an area that is unknown

thus setting the boundary conditions  
as the supporting conditions already

It is clear that your Perception  
i.e. that you perceive that element

so what does he have to do with it  
what do you consider with Perception  
area as an optical element  
and you think that this area  
it is an unknown area  
from which to manage

but it turns out that  
your Perception is an element of boundary conditions

i.e. the point is  
what is a spiritual position  
under this control when you do not perceive  
optical level

and it works here too  
the same principle of boundary conditions

here you have to implement it this way  
to select the control area yourself

and there is a logical one  
i.e. the principle of Perception that you build  
because your Perception of this area  
there is already information content

i.e. if you even say that yes there is  
area whose characteristics are unknown  
this is already a manifestation of some kind of Reality

and here is the task, generally speaking, in this case  
work  
just on the mechanics of this approach

i.e. designating this area for oneself  
reveal it somehow  
those. Well for example you can model it  
let's assume well in the form of a sphere  
there even bring it into canonized form there

or any you like  
or just leave it as you perceive it, it's easier  
this may usually not be a clear image of something

in this regard, let's do  
so practical  
joint lesson now

i.e. for example, here in front of me in front of the table  
together  
everyone should put it  
image that is unknown  
at the information level

but this image  
in any case, it saves from a possible global catastrophe  
or restores  
or controls all events at the same time

here are three positions  
or you can add "and" if you want

i.e. in connection with this here  
everyone puts such an image  
in front of me on the information

it could be  
well, let's assume you can install it to make it more compact  
there in a radius of for example a meter in a radius of a meter

and then it turns out that there is a certain image  
which is now standing in front of you

this image  
it is, well it works collective image  
which each of you created

it accumulates in one place  
and it turned out that we have  
let's assume this kind of control

and in connection with this  
based on the fact that this management  
designated as being under control  
in terms of your Perception

then you can consider it specifically  
because you already know the composition of the hall  
you can look around there  
well, for example, clairvoyantly  
or when you came in, did you see it with your eyes?

look what's in this management  
means  
Consciousness of each  
shared consciousness  
your own  
well, that is, three positions

and highlighting these three positions  
you can in principle build Reality  
parallel, in fact, as if a projection level  
application of Reality, for example, on a table

i.e. table  
as a manifestation of collective Consciousness  
but the collective Consciousness of all

nuclear bomb  
as a manifestation of <sup>everything anyway</sup> collective consciousness  
but of collective Consciousness  
originally laid down by someone, for example

and the collective Consciousness of others  
Who wouldn't want it to explode, for example?  
in this case this is a collective consciousness  
not activated that much  
so that it doesn't explode <sup>let's assume yes</sup>

and the goal of this training  
is

highlight  
from the area which is undefined  
that characteristic  
which decides in any case  
your questions about management

and at the same time she solves problems in this way  
that you have level control after all any events  
including the most private events

or even the seemingly smallest ones

i.e. in principle the task still stands  
management of any events

and in connection with this now just once again  
build this area again  
as I said the first time

i.e. a region with uncertain characteristics  
in front of me she is compact  
this is your collective Consciousness for this hall

the task is as follows  
you need Consciousness that comes from others  
i.e. another part of the collective Consciousness  
should be connected here with these tasks  
for example, universal salvation from a possible global catastrophe  
and systemic harmonious development

everyone should connect  
the entire collective Consciousness  
including the Consciousness of all future development

and in this regard when you say  
Consciousness of all future development  
you will need to go out  
to the area of infinite development  
and consider what kind of collective Consciousness everyone has  
with infinite and Eternal development

i.e. the task is to consider the whole of Eternity forward  
and consider how this Consciousness  
manifested  
including, if necessary, the Consciousness of the past

in this regard, when we look at Reality in this way  
the task of designing on Consciousness  
is in this case  
definition of those characteristics  
what do these actions mean for Consciousness

so for Consciousness  
these actions are  
what

Firstly, in the optics of Perception it is very simple  
you immediately see the area that denotes this

i.e. for example you can immediately say  
that for example the infinite development of all Eternal development  
this is for example a specific segment of Consciousness  
which is at a specific distance from you  
and in the form of optics it looks like a line, for example  
and that's all

so it turns out that the task is actually not difficult

another question  
when you transfer control not only logically  
but also put management at the level of Spiritual development

then the Spirit as a supporting support  
How as a system that also builds  
Perception  
in this case it is manifested as an element of universality  
i.e. what is around

for example, in Perception you can highlight  
some optical element  
and if you highlighted it  
then everything that surrounds the optical element  
can be seen as a manifestation of the Spiritual  
again from my Consciousness

i.e. the Spirit can be defined

and in connection with this  
can also be defined  
presence of the Soul  
or the work of the Soul  
Soul Management

and then you can through definition  
adapt to that  
what does your Perception mean  
when you have such a task  
and how do you solve these problems through Perception

i.e. the research mechanism of Consciousness is as follows  
that definition allows us to find the Truth

through the next iteration

i.e. having determined what the Soul is in manifestation  
you have some kind of design  
which means this action

and then in the next iteration  
well for example do it again  
and approach the Truth, the Truth of the Soul  
or as Truth at the conceptual level  
or you are really in the Soul  
and at the same time you see it as a revelation  
what is really happening  
at the level of building your own Consciousness

then it turns out  
what you see through your Consciousness  
but at the same time you see how it is built by the Soul

this is already Soul management  
which occurs at such a level  
what are you doing this management  
while simultaneously considering yourself  
in many positions

i.e. this is the position of Consciousness  
Soul position  
position of that  
that the Soul reproduces among other things  
and Consciousness  
and the Spirit

and the most accurate way of orientation  
this is a direct contact with the Creator

i.e. in this case you are if  
at the level of contact with the Creator  
and all the knowledge that you perceive  
This is knowledge from the Creator

due to this  
technology of obtaining knowledge from the Creator  
is that you can positionally  
enter into a state  
when knowledge comes specifically from the Creator

and in connection with this

For example if you need to get control  
mandatory management for example for Rescue  
it can naturally happen in any case  
you just have to ask  
positional characteristics of such control

returning once again to the task of construction  
still, if possible  
that Reality which is undefined  
let's build it together again in front of me

so, for example, already this time  
Reality is more clearly formulated  
i.e. it has  
absolutely clear optical characteristics  
and is located somewhere around the floor  
so here it starts to grow upwards

in the first moments it was mainly  
impulses that were  
well, approximately in the area I mentioned

in this regard, it is clear from three times  
what is the task of development  
is to construct an objectified Reality

what is the objectivism of Reality

in that it begins to manifest itself at the level of Perception

and that's when we talk about the tasks of the Creator  
then the objectivism of action  
those. canonism of action  
how to do it  
it consists in the fact that, for example, the human body is built  
which must be reproduced eternally

i.e. the task of Eternal reproduction of man  
this is a task of natural development  
and one person, for example

i.e. every person must be Eternal

in this case it's just me doing it

three repetitions  
and revealed the Law of Information Development

so you should try to do it yourself  
such events so to speak conduct  
either in a group or individually

control as much as possible  
how is the growth of information going

but when, for example, you have already built this information  
then the situation is like this  
what anyway means to receive  
specific application control action  
from this element  
you should as I said in this part of the lecture  
what to define the level of infinity  
in the reaction of this element  
for specific events

but it looks like it  
that from this area simply just  
some segment is highlighted  
which is designated as the element of Eternity

and this segment falls into  
into that area of information  
which needs to be supplemented according to your management goal  
and it only complements it

i.e. you need to highlight in this case  
the purpose of management is such  
what is management  
for example, adding an optical element to the control level

i.e. you highlight the management goal  
if this is a diagnosis in the form of some optical value

i.e. in Perception it can be  
For example some informative light image  
or even there myself, for example Human  
which you see in Perception

and the task is, well, in this case, treatment if  
this is a complement to the optical form

or directly output of the control pulse  
into a specific area of a physical person even  
for example in the area where you get recovery

this is where the problems are to be solved  
how should you do it  
in case means exactly in the ideology of Eternal development  
you have to do it yourself

i.e. you must each do it on your own  
be able to output the control level

but as a rule  
The world is structured in this way according to the level of governance  
what is your next move  
which is directed towards this impulse  
it is correct

i.e. now I have brought it to this  
that to build management in such a way  
that any action you take  
this is the right action

and that means it's canon that you're doing it right  
is that you are  
at the canonized harmonized level  
i.e., for example , there is no global catastrophe happening there  
and then everything happens more harmoniously  
from your management point of view

here it is still a question of choice  
what do you consider the controlling impulse  
for you

it is possible to develop your own Soul  
i.e. one's own knowledge  
this is a more important task  
than for example there some actions  
connected through Consciousness  
matter control  
there are some kind of teleportation movements of matter  
there are materializations  
knowledge is often the more important element  
how to do this

because in the control system  
what is important is  
prevent, for example, possible global catastrophes  
prevent diseases

and the task is not to manifest, for example  
and knowledge

therefore, the practice of manifestation  
i.e. so that you have practice and you watch  
how to do it technologically

need to work on management  
on a physical level  
and on the informational

i.e. what can be manifested on a physical level  
can you do this

but generally speaking the main goal is  
information level management and such  
to avoid possible problems

and therefore although informational purposes are more important  
try to control it on a physical level anyway  
analyze correctly if necessary

since I have already come close to that here  
how to do technological management in this case  
then I'll just enter it here

Axiom  
it consists of the following

What  
your control  
outgoing from your Consciousness  
hits

V  
the point of your Consciousness

you are doing the management  
in your Consciousness

in any case and only because

What  
within the limits of Consciousness everything is controllable

and from here the task of projection is simple control systems  
on Reality  
is that you should  
connect  
with Reality  
only a segment of Consciousness  
which denotes the commonality of all points

as points of primary impulse  
i.e. for example, where do you do the control from?  
in this case this area is unknown

as well as areas of management  
i.e. projective components  
another element of Consciousness  
means that only his  
you must translate into Reality

in this case, Reality is  
for example, if a person's health or some event  
then physical Reality

and then it turns out  
which you also manifest in the form of optics  
where should this happen

highlight again  
besides the main purpose of management  
and just mechanically  
only with such a maximum fast super fast speed  
enter this projective point into this area  
and that's all

then it turns out that the area that was unknown was  
and was uncertain  
Generally speaking, it is not even needed

because we are watching  
on its projective component  
to another point of Consciousness

and the other point of Consciousness is both defined and described

and we can do it as many times as we want and for as long as we want  
we can analyze it

therefore this is the construction of Consciousness  
which I have now looked at  
it is such that it exists  
There are actually many ways

but in this case I considered one of the ways  
when Reality is built on impulse as I defined nature  
putting infinite characteristics into the impulse  
achieving management goals  
or completion of the form

this is a direct, well, kind of frontal control principle  
the control is , well, relatively straight forward, so to speak  
when you achieve control anyway  
by this technology  
where is the element of Reality  
from which you departed  
as from the point of departure  
then he is unknown

but the control happens anyway  
and here you can even have  
super speed control

because  
distance  
from unknown area  
To  
areas of management  
it is also unknown  
it can be as small as possible  
or be in the management area itself

i.e. in fact this principle gives super-fast control  
but for sustainability, in fact, for duplication  
this method of simultaneous let's say level of implementation

be careful here  
as independent homework  
consider the simultaneous level of implementation

what meaning do I put into this concept

or just communicate with me here via telepathy  
after this lecture for three days from 10 to 11 pm  
there will *actually* be another part of the lecture but in telepathy

You can ask questions there  
related to that, this is the meaning I put into it  
in this concept

there's just nothing here  
I am looking at the general point  
i.e. in Consciousness you can put a point of reflection  
and that's all

and it turns out  
What  
area of the unknown  
area of the famous  
is reflected  
to the point in the area *that* you simply assign

this area  
as I repeat again  
translate at very fast speed with super fast  
in *means* the area of *actual* Reality  
also designated in Consciousness  
you just highlighted it

it turns out to be control

so in this case  
this is management  
from a region with unknown characteristics

in certain cases  
This design is very quickly learned  
i.e. it immediately becomes clear and very simple  
this management

If possible, do not simplify this control  
and those difficult areas that appear  
what does spiritual development mean  
come back to them again

i.e. in this part  
although I made it as simple as possible

and she really is like that  
Don't oversimplify if possible  
well, development of one's own level of knowledge

i.e. if you want to look at some other area  
at the level of analysis  
consider  
this is a special explanation for this part of the lecture

that is, the part that concerned the lecture part  
I'm done now

if possible, do the control projection again  
in front of me  
from unknown part  
you have it already in a very specific way in the hall it's just now taking shape  
and already provides a control system

so that's how i am now I'm getting started with this  
that I start answering questions

in this case the answers to the questions will go  
in the development of this lecture, but not directly of course  
i.e. nevertheless, the answers must be considered  
as a continuation of the topic from the point of view of the methods set

although the answers will of course be such that I will enter  
including other management methods

i.e. in this case the lecture part is decisive  
in order to further  
when you work with practice  
it was clear to you right away  
like this for example said now  
can be used as a *de facto* job  
with some specific situations

Thus  
the first answer means it will , well, first of all, concern of course  
the information itself  
but in fact in applied in one of the meanings  
although I will try to open  
the fundamental meaning here is also the meaning of management  
from the point of view of those methods  
which were presented in the lecture part

so the question is this  
*how to deal with negative information*

the thing is that the concept  
work with negative information  
it is first of all such that it needs to be defined here  
if possible immediately element  
in order not to record the negativity of the information  
i.e. this is the fundamental goal of management

therefore, well, actually, it's easiest  
from the point of view of methodology, we assume management  
with a dual-pulse nature  
in this way, well, as if to illuminate in Consciousness  
these two sources

or inside yourself  
and from outside  
so that they understand the concept of negative information  
or they exposed it that way  
that it disappeared immediately as much as possible  
yeah well at least on Perception for starters

or create the maximum amount  
interactions of these two segments such  
so that they can restructure the information

i.e. to set such a movement through Consciousness  
you can set it to automatic Consciousness  
what just to set the target program meaning or something  
into these two sources  
and they have to restructure the information

and here's a continuation of the question  
*what does it mean to disband information*

consists in the fact that  
that for example there is a form of information a certain form  
which generally speaking it is desirable that it not be fixed  
i.e. perceived as an unambiguous rigid form  
realized in future events

the main thing is that this cannot be allowed

and then disband

i.e. you can simply mechanically change the shape  
i.e. to break the form is already different information yes  
due to, for example, two sources

or, for example, introduce the spiritual meaning of knowledge  
which itself will disband the form

i.e. the point of knowledge is set as the control point  
in this form  
for example I see a voice recorder  
and I want this information not to contain negativity

then I try to understand the system  
this is what i need to know  
if I look at the recorder  
to get  
disbanding some negative information

then I suppose I should know  
for example, that photosynthesis can be in a closed system  
i.e. it is not necessary that there is constant presence of light there  
how to do it yes

so I find how to do it and then I see  
that the negative information has dissipated

i.e. I did not use the direct method  
method of cognition  
what kind of negativity can there be?  
in terms of this kind of dictaphone  
It wouldn't even be called negativity here  
I just wanted what I pawned to be  
according to the purpose of knowledge  
and with the speed of knowledge of universal Salvation

This is exactly the speed that was obtained here

for example I did it now yes  
in principle I could have done this after the lecture  
there in an hour make one general impulse  
I would solve the same problem too  
or in real time

so although in real time  
I'm still solving this problem

another question is what about control  
for all information  
when you shift you do control  
you still shift and disband the negativity  
not only the one you perceive for example

and you can participate at the same time  
in all elements of Reality  
and at the same time gain control only seemingly at home

and in continuation of the question  
*does this mean*  
*substitution of negative information with positive information*

the thing is that, in fact, from a logical point of view  
yes it's in the same place  
the form works as a positive system

i.e. the question can be considered this way  
what could it be or a replacement  
i.e. mechanically in Consciousness  
you can perceive it as a replacement

but on the other hand you can do it without even touching the form  
as I said, to consider that element of Consciousness  
which contains any shade of meaning  
by management objective

i.e. you don't have to move anywhere, you can stay close to yourself  
and at the same time work from only one point

and then it turns out that this is not a substitution  
and the transformation of the semantic level  
which you invest in management

now the second question  
*how to build a child's structure taking into account his/her will*

Well, the thing is that first of all we need to build, in my opinion.  
the structure of the child in this way  
what should you give first of all  
status of complete personal freedom  
in the future  
well and in the current  
or in the past

i.e. to reveal the freedom of the individual  
in the conditions that the child should do more  
what do you want for example  
or socially necessary things  
and at the same time, well, here it is written "taking into account the expression  
of will"  
what he wants

and it turns out that the structure should be built in this understanding  
it should be done this way

with the help of my technology of control through Consciousness  
structuring of Consciousness  
that you first highlight the glow  
i.e. the optics of complete free will  
this is the deification of the child's actions  
i.e. well, a super-creative path of development

i.e. you highlight this information  
then enter the social norms information  
well let's assume it's some kind of contour in the form of a cone  
closes the primary superstructure

and then introduce a system of expression of will  
as an internal system yes inside the cone  
and plus your parenting tasks

then it turns out that the management  
it's just tracking these forms

i.e. if somewhere the cone there began to change  
there let's say you see  
that somewhere his will is being suppressed there  
or he feels a lack of freedom somewhere  
just add control there

but at the same time you can enter there very specifically  
see what makes him feel unfree  
What  
there is an unpleasant smell there  
or the actions of the parents there  
or someone on the street might be discriminating against him in some way

it may not be an action  
or maybe just someone's gaze

which, for example, infringes on the freedom of its development  
then the task is  
again in a creative context  
do no harm to anyone there are no problems there

Well, you won't cause any harm with this technology.  
you just enter it there  
information on compensation of these systems  
in his Perception

he didn't like someone's look  
then you enter and complete the form with themes  
so that it doesn't affect his development, for example  
at the same time you do it very specifically  
and that person also benefits

why this system can't be harmed  
because, well, first of all, there is a target level here  
this is the universal Eternal development

and technologically optics it does not create problems  
i.e. the optics are, well, kind of weak optics  
in the diffuse level of Consciousness  
for example, it does not intersect with any other one, first of all  
i.e. there are such elements there  
when you take a closer look at this control system

then that optics is, firstly, nonlinear  
i.e. not like the light falls directly  
but it also does not cause harm, for example, ordinary light  
but the optics there are even more sparse

i.e. they are optical elements  
firstly, they can be remote  
far enough apart  
secondly, you reproduce them with your own Consciousness

and Consciousness  
the meaning of exact reproduction  
when you only do fine control  
if you do socially constructive actions

and therefore there are many duplicate levels  
when you complement for example, the look of that person  
well let's assume correlated yes shade

you are not harming him  
and on the contrary, you may even have a look  
because something hurts him, let's say  
then you restore it, etc.

in accordance with this  
Well, in principle you can go deeper  
into that person's system  
or whatever he said if he didn't like the smell  
accordingly, the smell there must somehow be restructured, etc.

so that's what I think from the point of view of this technology  
as I immediately noticed  
the main thing is the main thing  
this is to fix the first element of the action  
this is freedom of personal development

now, so to speak, a sub-question  
*i.e. how to build the structure of the future child*

Well, the question is from the point of view of the information structure  
I already talked about it, but from the point of view of the sub-question, let's say so  
structuring can still be private  
*i.e. you look at every event  
if you need it*

but the point here is that what is important is  
give freedom to the child's development  
*i.e. use only the Spiritual level of control, for example  
when you do not violate his free will*

and you don't control it  
every private action  
through *for example* the clairvoyant level of the approach

*i.e. every person should also be independent  
and at the same time you provide the opportunity  
act independently  
not controlling the behavioral structure of events means*

but on the Spiritual level of contact  
you know that everything is fine there

*i.e. the task of , well, structuring , so to speak, the future  
child*

is to provide freedom of action  
I think it is unnecessary  
then there is no need to exercise control there  
for physical actions movements  
the main thing is on the Spiritual level  
see information all the time  
that everything is absolutely fine  
i.e. to find such a Spiritual level of contact

and in the future apparently  
if you think you need to consider the event part  
i.e. to structure the future according to the event part  
let's assume there is an exam or some social events  
or something specific at all

then naturally you can  
detail events to the maximum level  
which you need

at least to the cellular level  
or level of connections  
including connections with infinity  
with the entire external array  
or internal  
there are no restrictions here

the main thing is that you set a goal  
such a universal creative development  
in this case, the applied private goal  
in case of structuring the future of the child  
here is an important point in my opinion  
which speaks about that  
that only by doing for the child  
in general, generally speaking, for all children  
who, to put it simply, is still developing at the social level

performing a particular management task  
for him  
you can know right away  
which is often not necessary to consider  
Macro control arrays  
because you are already doing this task  
because you manage for that  
who else is not so socially developed or physically developed

i.e. management for the weak, well, sort of weak, yes  
this means it always covers the level of Macroregulation

and in connection with this  
why, for example, is there such a common opinion  
there let's assume we consider  
the presence of highly developed civilizations  
they do no harm there  
for example, those who, for example, are not yet developed

the point is that the general social principle  
or is this general Law of development that  
that control still occurs through the Macroarray

the next knowledge they are already like that  
what can't be restructured  
there a weaker system  
well, it's like knowledge of Eternal development

and it turns out that Macromanagement is happening there  
precisely according to the principle of control over the child

i.e. can you somehow detail this ?  
and see that the principle of control to the child  
this is actually the principle of Eternal development

because it is enough to give  
systemic development well canonized  
to create development for the child  
and then it turns out that the Eternal Future is  
already a stable process

in practice, for example, in my practice  
It worked out like this for me  
what do the children who came to the lectures mean?  
and often they also slept  
they mastered the material very quickly  
which is well, practically, well, for example, adults  
while solving other problems  
for example, they may have been more involved in Macrosystems

and in connection with this I think  
what is quite important here is that  
what if you hand over the control system to a child  
then the main thing here is to understand right away in the future

that you are laying down the elements of Eternal development  
here in your control impulse  
i.e. it is very important for the child

and if for example let's see how it goes  
child development  
when you already give the control system from Consciousness  
what is important here in my opinion is that  
that you can then pass on further yourself  
like a special target or something

By the way, Andrey Vorobyov is in the hall this is my student  
he did it this way here  
what about my daughter, well, not so much, she went to lectures a lot  
and at the same time managed after a certain level of lectures  
this means that she didn't listen to the entire lecture continuously, for example  
She did it completely professionally  
started doing materializations

i.e. when I did the control  
and did these digital analysis methods  
it turned out like this  
that professionalism was precisely that  
that for example the management structure was like this  
as if it were necessary to study the whole system  
practically according to the materialization system from the beginning to that  
level  
when it's regular it always works out

i.e. the child's Perception is located  
at the level of contact with the information of Reality  
at such a level that it works  
he gets this whole complex at once

here of course it mattered  
that there were simply genetic data of their own  
in development

but nevertheless it still works here  
General Canonized Law  
for example, in my opinion, this is  
if you structure the child's future  
then we have to take into account that the children are still there  
in more direct contact with Reality

and therefore it is possible to structure it well, quite quickly , so to speak  
and you can do it often  
or constantly  
or often even enough for example  
just put the information you want  
it is being implemented very quickly

so this is my answer to this question  
according to how much it is necessary to do materialization there  
or treatment, for example , what to teach a child , let's say

there is one more nuance here  
precisely from the point of view of Macroregulation  
that the child is closer to the information  
external internal so to speak Reality  
to control information

that control is from the child  
going there through the same materialization  
always concerns Macroregulation

because the child definitely goes through it  
Macroregulation level  
to ensure future events of their own  
it is genetically determined in a child

up to a certain level of growth this always happens  
because the child is always in control  
designates a future element of development

so it turns out that it is something for an adult  
for example should contain  
well, for example, logical status  
for a child it contains a natural status  
well, as for your own management

so this is the answer to these two questions

the next question then  
*tell more specifically about the methods of working with situations*

Well in this case I can  
as a specific application  
tell

for example, from the three-volume work "Management Practice - the Path to Salvation"

work on the TU-144 aircraft there were test flights

and you just need to look at it as an analysis  
specific evidence there Veremey Boris Ivanovich  
he is a distinguished test pilot

it says there that I gave a forecast for refusal  
pitch angle failure  
and therefore, according to what the experts later established  
it turned out that if there had been no such forecast  
then the plane would have crashed upon landing

the thing is that there is a refusal here  
that's when I was doing the work  
Now take a closer look  
example, for a specific situation

the plane is the same optical sphere  
let's assume that it is from the point of view of prognostics  
in the future

those. I'm building an arc in Perception  
which goes as a starting point from the takeoff of the plane  
and that means it hits the control point which is already landing

i.e. along this arc  
I consider the whole spectrum of events  
concerning this plane

then I look at what arises near this arc  
in fact, well, let's say nuances  
changes from Norma

the first change is assumed in principle  
which could entail  
this is what the engine was replaced  
delivered from another TU-160 aircraft

and accordingly it was immediately clear  
that there are already questions

and then I looked at the pitch angle  
i.e. in principle the angle of direction

will be unknown due to the failure of the device

when the decision is made there by the pilot  
he makes a decision based on the instrument readings  
and this information was immediately visible  
somewhere in the first part of the arc  
how will he accept

here is the peculiarity  
that it would seem that the arc could be mechanically broken  
there are several parts and say  
What  
at the beginning this is the initial period of flight  
and in the end it's like final period of flight

in fact, in concrete practice  
in this arc in the first third approximately at that distance  
the pilot's decision-making information was located

why was she there

because I'm looking for this defect even before takeoff

i.e. information about the future is obtained  
well, it's like some kind of velcro got too tight  
if I pull on the chewing gum there  
then she is pulled there  
where is there another reference point

i.e. my presence is my search  
dragged this information closer  
although logically it should have been further

and it turned out that it was immediately clear here  
Well, I just looked at it as  
some things  
I just see it as a plot  
to see more psychology of pilot behavior

because if it's really a degree  
well, just like this device showed  
then they should have kept it  
speed and even reduce

If not, they should have increased the speed.

from the calculated above  
even higher than the technical specifications  
operation of the TU 144 aircraft  
because the engine was from another plane  
and the refusal could be like this

what does simply mean  
they really have such a landing angle  
and perhaps this is how the pilot makes his decision  
that perhaps the device itself did not fail  
if the landing angle is like this  
then he should change the speed  
then he would obviously have crashed

but since he, well, the crew would basically be there  
they wouldn't have had time to discuss this situation upon landing

and therefore it turns out that in this case  
here in this third of the first arc  
so, well, in fact, it's like a segment of a part of a sphere  
and so in the first third I enter with Consciousness inside  
I just enter with my Consciousness  
inside this particular situation  
and I look at it  
how should we proceed here

i.e. then it is absolutely clear  
as a deviation of some kind, i.e. near this part of the arc  
appears  
completely specific means optical component let's say  
which has nothing to do with the Norm  
which is immediately revealed by the task of Salvation

you will encounter it later in practice  
that this is generally immediately apparent

and you can see it right away  
that it is related specifically to a specific device  
Finding it further is no problem  
because it is enough to enter  
in the information of the entire aircraft  
and you can immediately see where this device is located

if you follow the development of information for example  
as a system of unpacking archives

then I just went in <sup>there</sup>  
and unpacked as if further further further

and at the same time I found this device  
which was specifically named there somehow  
I think it was called pitch angle

and SO ON  
there is also a device called  
basically they are  
in principle there is also a system of other devices  
I also pointed out one there that they simply removed  
it's like a small thing that had no relevance  
but she could have been principled later

in general in diagnostics of equipment  
there is a need in this case  
just make decisions on the merits

this <sup>is like</sup> a principle, it is no different  
from what, <sup>for example,</sup> you diagnose  
any situation at all

i.e. this principle, <sup>for example,</sup> of this same arc  
which I suggested  
it is implemented <sup>there</sup> to the machine  
<sup>there</sup> or to your own movement  
the movement of any other person  
it is enough to close two points on the plane  
and consider the spatial domain

for Perception fast enough  
to examine the differences in three dimensions  
and translate to work in three-dimensional projection

multidimensional projection is often used  
if you need to materialize the board there <sup>How</sup>  
or make it so that it can be controlled remotely  
no disasters occurred

so in this case  
because they knew about the pitch angle  
then they just increased the speed  
I think it's twenty percent higher than the calculated one  
and it turned out that they didn't break

although when they  
there was a landing anyway, right next to the tail lines  
practically next to the canvas it was all the same

i.e. it was the most minimal level  
which allowed the pilots to be kept there  
well, including this car

means the point is that specific methods  
they are often determined by situations

and one of the situations, for example, is at the Kozloduevskaya station  
this is when there could have been a macro-catastrophe at a nuclear power plant  
management actually consisted of two periods

This is the first one when I arrived in 1995  
at the invitation of the Bulgarian National Television  
to Bulgaria  
and at the same time the first question that the journalist asked  
and he is just a journalist from the outside, from some newspaper  
at Kozloduevskaya station

i.e. this turns out to be the first manifestation of Reality <sup>yes</sup>  
this means that Reality turned out to be external  
i.e. invitation from Bulgarian national television  
there is the first element of Reality

The second is a journalist's question  
which, by the way, was later published in many newspapers  
what did I say that there have been no particular problems for two years  
well plus he gave some kind of diagnostics  
which was confirmed  
There was a representative from the nuclear power plant there  
and that's all  
and this question, well, it seems, was removed

I said that  
they were very concerned about the problematic issue in general  
about a possible Chernobyl-type disaster  
and they kind of wanted to close it down

but that means about two years passed somewhere in 1997  
about a month later the information appeared again  
that measures must be taken

but considering that there are many different things to do  
this one just about right in about three days  
I made the control and transmitted the information

Well , and then this is how it was published in this Russian newspaper  
they were inspecting this information  
i.e. we looked at what happened there

it turned out that if measures had not been taken  
there would not have been any diagnostics given there , for example  
then the explosion would have been one that would have been a problem  
from the point of view of a possible macro-catastrophe

therefore, considering that there is still a problem with the explosion  
there was a situation concerning  
information on the development of the planet

because it means the situation is related to  
well, such levels of possible macro-catastrophes  
there is a future Reality it gives a control index  
in a more saturated form

i.e. Salvation is why I give it in lectures  
that Salvation is always possible  
because external Reality  
very clearly defines the characteristics of the action

there is something there that the planet could turn into dust  
i.e. to fall apart  
this happened around 2000 because of this fistula

then this Reality she focused very clearly  
corridors are unique in terms of control  
Here's what to do now to prevent this from happening

there was basically a uniformity of actions  
i.e. a completely clear level of management  
who had no other options

so here in principle is this  
management of real Rescue systems  
i.e. when you actually save  
it is fundamentally different

from the control system for example

but connected  
with some hypothetical experiments or tests

and as a rule if you look at my materials  
then I just do my usual work  
Well, for example, it is being designed  
like aviation experiments  
although this is a real rescue of planes or healing, etc.

i.e. in management practice  
I only give very specific management technologies  
only real processes

and therefore in the future you should also try  
Well, it's best not to get involved  
there we will assume with some options for testing the repetition

because the task of management  
is the attainment of real Salvation  
and from systems including those of unknown nature

This cannot be achieved by repetition  
by means of systematicity

the main task is that spiritual state  
that possibility that possibility of reason  
that level of Soul that allows  
to be saved in any case

and this is technology  
plus concrete practice  
for real Salvation  
in fact, simply by the real standard of living

why am I still translating all the time by the way  
for management  
if possible, with our own events, including private ones

because it is a kind of practice  
which allows you  
Well, to achieve great results, to gain experience

and then you are more prepared  
than if you are just doing it  
there, for example, are systems for saving from possible disasters

and at the same time you think  
that your daily life is something else

in fact, you are in control anyway  
that's why I try to make sure to transfer control  
to private management

of course that's another question  
how fast do you get your control  
many have tasks of the Soul higher than their personal tasks  
then they do a lot at the Macro level

I have a lot of students  
They do Macro Management well  
at the same time and often quickly reach  
specific control systems  
there in private tasks

but for example when interacting with them  
that's when I we somehow analyze the situation  
I see that for them this is often not a task  
there to do something quickly  
Well, generally speaking, this is normal  
but nevertheless, I still give control  
for specific tasks  
so that you are constantly in practice

after some time you will get used to it  
and then it will be natural for you  
constantly control the whole Reality  
least at one level

at first it might be  
somewhat tense situation  
this first period sometimes drags on for years  
until a person reaches the level of constant control

and at the same time it means he already knows very clearly  
what is his control system  
can quite easily prevent  
well, a possible global catastrophe  
That's for sure

and I think  
that the point is exactly that

to simply increase the amount of practice  
this is the main meaning

so now the next question  
*Is it possible to restore it myself?*  
*removed surgical (in quotes) organ*

the point is that the meaning of management  
is management to the extent  
up to which you need it

and giving the status of universal Salvation  
for example, by restoring an organ to himself  
you can pass this technology on to everyone

Of course I think this can and should even be done  
if that's all the more so he has  
well, the consequences on the surrounding tissues

and in ideology the goal of management  
is a complete restoration of tissue  
including that any instrument systems that do this  
they are just doing a job  
in fact, the rise of collective Consciousness through training

but I think the goal is  
to do at the expense of the person's own Consciousness

second question  
this means *the meaning of the christian church now*

well, I think that any canonical religion  
for example, what is manifested as the Christian church  
where there are such commandments as "do not kill" etc.

they always have  
well, I think it's fundamental, the main meaning

and therefore in any environment  
there under any development systems  
I believe that their importance does not diminish in any way  
and in the future it may increase naturally  
because this is the principle that is implemented here  
well, as a canonical principle  
for example the principle "thou shalt not kill"

this principle must have an even more capacious meaning  
in the conditions of the system there  
developing system such as global destruction

and that's why I think that as a supporting basis  
in many ways you have to take advantage of that  
what has been accumulated, for example, in the Christian church  
from the point of view of sustainable development

and at the same time I think that it is necessary to keep in mind  
that any canonical religion  
well, how truly canonical is known

many now canonical religions canonized religions  
whose main task is, in principle, the same task  
human reproduction  
Eternal reproduction of man

but of course they are distributed there by regions  
by representatives of believers

and yet, by the way, it is a Christian church  
here is also the question of Eternal life  
factually demonstrates

in this regard, here I consider  
there is a certain unifying meaning  
here is the Christian church

That's why  
the thing is that if we consider  
principle of further development  
as an element of the Eternal development of information  
uniformity in views still appears  
when there is uniformity in religious manifestations  
there in the plan of Eternal development

i.e. everyone will have their own opinion  
but it means uniformity in terms of such Laws  
like there for example gravity is a law

and then in this case  
it is a collective Law  
for everyone

that's why I think that  
I think we should support it in general  
any canonized directions  
aimed at creative development  
not only the church there  
and in general some social movements  
personal manifestations, etc.

and at the same time try to be as visible as possible  
help as much as possible

because the point is that, for example, in my technology  
I lay the main element  
this is the achievement of the Salvation of all  
and in any case

then it turns out that we are here  
we have no private manifestations anywhere at all  
not in a specific person  
not in a specific state for example

everyone must be saved  
then everyone should have technology

in the conditions of that  
why, for example, does such a process exist?  
related to possible there and what is happening  
destructions

for example, there are various destructions  
and no, let's assume there is no such action  
that everything is there instantly saved  
and it seems like there's nothing else to do

in my opinion the answer is that  
that it is the Creator's plan with complete free will  
if there is no complete free will  
then this turns out to be an unstable system  
generally speaking in development

by the Creator's plan  
with complete free will  
enable sustainable development  
and this is only knowledge

that's my opinion

destruction there elements of destruction  
This is what I'm looking at  
how is it still the lack of knowledge to a greater extent

and in connection with this  
if you consider  
how can we <sup>further</sup> develop  
building is generally fundamental  
and for what

then they should build in my opinion  
based on knowledge alone  
For what  
so that it would still be Eternal  
because that's the main point  
it is still Eternal development

if we are talking about management  
I think it makes sense to talk  
only about such management  
which leads to Eternal development

otherwise we use  
only <sup>some</sup> kind of evaluation systems <sup>or something</sup>  
and it is precisely the precision in Eternal development that gives systematicity

i.e. the absence of weapons systems <sup>there, let's say</sup>  
which could destroy  
special protection technologies <sup>there</sup>  
self-defense through Consciousness  
or through special systems  
which cannot destroy the Creator, etc.

I just have a number of works  
related to the principles of construction of technology  
which does not destroy the Creator  
and <sup>well</sup> these are more monographic works  
but I think that soon I will be publishing  
there a number of special monographs  
you can look at the technique <sup>here</sup>

next question  
*what is a generalized image*

the thing is that I read questions selectively now

and I choose questions that give control  
closer to the topic of this lecture  
That's exactly how I imagine it

generalized image  
if we set some management tasks  
then it could be an image  
which includes a number of systems  
relating to a specific event

i.e. the event is there  
I left the conference room  
and there he sat on the car  
and went

for example, they include three actions there  
conditionally named proposals *yes*

I went out  
got into the car  
I went there

a generalized image of this event  
three elements of the event  
i.e. if each form is one of the forms  
this is how we have now constructed the generalized form in fact  
when they built the unknown element  
from which to control

then it turns out that  
it is the image that is generalized  
if three forms  
move them somehow  
or fold  
then it is not necessary to fold it mechanically  
It is possible that the contact of these three forms  
or there is an infinite number of forms  
or some specific forms  
will cause a completely different form  
or even another manifestation of Spiritual knowledge

there is a principle of working with information  
when can you receive information  
only by generalizing the information image

generalization means, respectively, consequence  
i.e. look at the object of information  
you set a generalization task  
it turns out that you see a generalized image  
as an image that firstly exists  
and in that part which is unknown

i.e. how can the image be generalized  
i.e. well, remove some specific characteristics

and for this it turns out that it is enough to have  
even a specific image  
and add to the image  
management that we built with you  
i.e. this is an image where the characteristics are unknown

then you will get a generalized image  
but a generalized image is a more stable image  
from a management point of view

so it turns out that we added even what we did not define  
we still manifest, i.e. we get the opportunity  
get a more stable area anyway  
and this more stable area is more manageable

because the more generalizations  
the more opportunities to manage the system  
i.e. more signs  
and more login elements

therefore it can be considered  
from the point of view of today's lecture  
generalized image thus

so the second question is next  
Means *characteristics of control action*  
*when working to prevent possible disasters*  
*self-healing*  
*event management*  
in brackets

I did it this way on purpose so that it would be clearly understood  
what is the meaning of the question  
and I give a generalized answer  
for those who are sitting in the hall

individually for each  
and also so that in the infinite future the answer would be understandable

i.e. I build it right away  
three structures of at least control

if possible in the future  
use this control position immediately  
when answering questions , for example, to those you teach  
or just chatting

it is written in brackets  
*instruction command*  
*request wish*  
*precise indication of the point of application*

the thing is that these are the characteristics  
those elements expressed in words  
which may change  
not only in what is indicated in quotation marks

i.e. this can be in principle  
any verbal construction  
especially in preventing possible disasters there, for example

the point is that the word can be found  
based on information  
here if you want to use for control  
word  
I mostly give control  
through the Perception of Optical Elements  
because it's easier and faster here  
you can achieve control without words

because it is an optical element  
gives that spiritual state  
which, when realized, gives control

well if you look at something with your eyes  
you get the impression

I also build according to this principle approximately  
so let's say almost similar  
control when I give images for example  
and then you have just Spiritual Management

because you enter a Spiritual state  
and then there is no need to even construct optical images

you are a manager at this moment  
if you build a word  
the word consists  
from a number of optical segments , for example , yes or from one  
but as a rule this word often even consists  
from many segments of optical  
because the word carries meaning  
behind the meaning there are also optics, etc.

i.e. it turns out that there is some kind of superstructure on top  
and then a whole periphery of consequences  
which says that the word is used either here or there  
and how does it look from an optical point of view

but nevertheless I always admit  
that a very long path is also possible  
for control as a sequence of words

in ancient Tibet there were 416 words  
in order to treat literally even one scratch there  
they even went for it  
so that for example, well, in the form of something like in the mantra sign  
they read

i.e. there was also nothing like that there  
what is less important there, what is more important there, let's assume

so the situation here is that  
what to find the word yes or there are 500 words  
how much do you want  
and what to call it  
how to perceive

then here are the characteristics of the control action  
if still through words  
although here it is clear that the indication can be displayed as optics  
and act through it

but better in the intermediate part  
do not build as if directive optical systems

if i put this as an instruction or as a command yes

then I will have another link

i.e. it is better to manage directly  
without contact  
with the definition of intermediate control systems

Please note that I didn't come to the answer right away

i.e. therefore, this is what to call it there  
exact command indication  
for myself  
it's better not to call it anything at all, it's better to manage

when you look at the table for example  
you don't tell yourself  
"Now I'll look at the table"  
and then you look at the table

it's the same here  
so you just watch and that's it  
or you do something and that's it

I have a management principle like this  
i.e. do but do not name if possible

so if we do call it  
because I think so  
that in the Salvation system this can be fundamental

i.e. if you think that an instruction should be made  
do it then

and then how to know  
that there should be an indication there or is it still an exact indication  
or a request, for example, a wish even

which is typical by the way  
the question here is constructed correctly  
in terms of different positions  
for example, right up to a request or a wish

this is the situation here  
what is the main thing here in my opinion  
identify that optical system  
how a word is born from Reality

then you will need to look  
how do you generally construct a word for yourself personally

i.e. here to see the word  
you need to look at your system first  
this is a necessary condition  
when receiving information words

so you consider yourself  
consider the word information as such  
and the word must be considered  
necessarily in absolute projection

i.e. you should consider the word like this  
that the word is as if it does not depend on anything without connections

and this optical information  
it flows in quite quickly  
into your own information  
because you see the word

and then you look  
how the word starts to work  
well, no way in fact you i.e. in what element the word is manifested there

there is such a concentration on the fingers  
you can just do the word yes  
you look where the information is words  
from which part of the body does it start to shine

it's very simple you're just  
look at yourself, as it were  
and it is immediately clear that the information has entered you  
and it starts to light up

then the organization of the word will be  
that firstly, you can immediately realize this word Spiritually  
here is the first element in Perception  
already the output parameter of the word  
is the primary Spiritual awareness of the word

word in information first always according to my technology  
Spiritually realized

i.e. what is the difference between a word, for example, and an image  
that Spiritual awareness always exists beforehand  
i.e. where the word doesn't exist yet

so the second element is  
the presence of the Soul in the word

i.e. what is the spiritual and mental meaning  
you put into the word  
then you should already see it on the optics  
and trace the impulse of the Soul

i.e. here from the Soul which is located  
for example inside your physical body

and the body is a part of the Soul  
we are talking about the entire information system  
or about the manifested part of the Soul in the body

and an impulse comes out, it touches the word again  
which has not yet been announced yet

i.e. while I was talking about the spiritual part  
then about the word

and then the impulse of the Soul  
and the Spiritual impulse  
which you feel  
because logically, for example, I lead you like this  
although you can choose your coordinates by word control

and in this case I am still only leading to the reproduction of the word

it means these impulses lead you to the Creator  
when you see the Creator you see the word

i.e. and therefore the situation here is such that it turns out  
What  
the word is the path to the Creator  
or a word from the Creator

that's when we have the word for example  
then we must immediately understand the meaning that is embedded in it

and then it turns out

you can make instant control again  
without really getting into it into the system of connections of this word

I brought it to that again after all  
what how to make instant control  
if we are talking about well, about a macro-catastrophe, yes, it is possible

's why it even seemed there  
intermediate construction revealed in the word  
you can, with this reasoning  
bring into the instant control system

sentence there quite clearly  
and then you can write out what is in a specific situation  
did  
I just gave you technology  
which ones specifically they will act there

and they can act for an Eternal amount of time  
the main thing is that the meaning here is  
so that they are definitely included  
the meaning of further knowledge  
because the meaning of Eternal development  
there is always readiness and possibility  
manage anyway

and even if there are very good control systems  
they need to lay the foundation for Eternal Control

This is how I think it is appropriate  
means to consider the information on this issue

and from the point of view of precisely this two-pulse control  
when from the outside  
and inside you  
according to the principle of managing Reality from the very creation

here I think it is appropriate in this matter  
it means to consider such a characteristic  
that the word immediately has well always at least  
two meanings

i.e. the meaning of the carrier, what the word carries and the supporting structure  
i.e. the supporting structure of information

and the meaning of the information, actually, of the word itself

this is as an independent work  
In this lecture you will consider it yourself

so that means

*when creating a generalized image  
two images are clearly visible  
the second one is distant, as if in the distance  
and at the level of the lumbar region  
similar to white fog*

the thing is, well, about that  
that two images in Perception  
there is an image  
and there is a supporting structure yes

yes they can be  
firstly separated  
I just said something about the word  
what does it mean there is a supporting structure

and therefore one image can be considered  
as a structure on which it is located  
for example, a target information image  
and it really is more vague  
second  
or it can even be in the form of a single point

with constant practice in management  
the supporting structure is often  
just a dot in the image itself

and yet here is the situation  
what you can do through Consciousness  
in principle, you decide for yourself  
including the supporting structure

so i think the situation here is like this  
what generally speaking if you see in management  
there are two or more images  
please take a look if possible  
what is the point of such management

i.e. what do you want to get for yourself  
i.e. what does your Consciousness or your Soul mean to build

and why do you see these two images

in general it is necessary to have as precise as possible  
information

in relation to any image after all

and this means that this is how to get this information

why do you have any images

why are you building management

precisely through those coordinates or through those systems of knowledge

If you want you can ask questions on them

having found the positions, so to speak , how to construct questions

if you need it

easy to manage

there is approximately such a status

what if you look with your eyes

Be more careful here

I will now try to convey this on a Spiritual level

such a principle

then when you walk somewhere down the street

For example, I'm sitting here reading questions and giving a lecture.

I perceive with my eyes or I perceive with my Consciousness

elements of Reality

and I build management

then on control

at the level of development of Consciousness according to the control constant

the same condition often exists there

that everything is clear to you anyway

i.e. for example two images arose

and it's clear what they are for

You don't have to give any details

By the way, this is a very important control characteristic

related to the fact that, if possible,

don't slow down artificially

i.e. don't study there for example like mathematics

or as some kind of strict requirement for repetition

science

my control system

if it is not necessary

if necessary, study

but if possible, develop this level of management  
when you understand everything that is happening

i.e. and when you, for example, do the management further  
it's also natural for you  
like I do what I said there  
for example, I understand what is happening  
when I just see there with my eyes  
and it is also clear to everyone who looks with their eyes

this is an element of collective Consciousness  
everyone understands the same thing

from the point of view of collective management  
through my control system  
try to create such links of information transfer  
build

i.e. if you, for example, do management  
think of others if possible  
because it is not yet a universal system

and if you are building a management system  
on how to prevent a disaster and you actually prevented it  
make it clear to everyone

then try to move on  
to analyze the existing Reality as I said  
this is just a normal logical analysis in many ways  
what if it's clear to me  
there are certain rigid systems  
they are understandable because we see them  
in the optical range  
there are doors there, some corridors  
or external Reality in general

the same  
build a system for transferring your knowledge  
what is clear to you and to everyone else

i.e. the task of universal Salvation  
is practically a task including  
ultra-fast knowledge transfer

but also the task of systemic detail  
it can be very long  
but the main thing is the mandatory transfer of knowledge  
according to those Salvation technologies  
which you will find personally  
or you will find out that you have found your partners  
i.e. who do you communicate with, who do you work with  
friends, acquaintances, strangers there  
i.e. there could absolutely be people  
which maybe you are there somehow by accident  
as if it were there crossed paths somewhere on public transport

but there may be systems in their knowledge  
which can be mutually transmitted, well, in general

i.e. the task of the general development of the Eternal  
consists of  
so that a continuous system is implemented  
on knowledge transfer  
or instant  
or systemic

i.e. it's instant  
if everyone needs to concentrate, focus  
because in order to prevent a catastrophe

and systemic knowledge, well, you can call it that  
that when we talk about what everyone can build  
education system  
or somehow individually convey to others  
knowledge

so today I'm on those issues  
which I just managed to watch, I answered

on issues that I have not considered now  
I will transmit it in any case individually via telepathy  
Here's who wrote the questions

and in principle it is desirable in the future  
leave some contact information  
Well, because for some questions  
I answer so I dictate onto an audio tape  
and I just give it away  
if I think it's better this way

that means **that's why I'm finishing for today**

so here it is Thanks a lot  
for listening carefully
