

GRIGORY GRABOVOY
The Teaching of Salvation and Harmonious Development
**Gaining knowledge on structuring
through Thinking**

Lecture 2

In this lecture
according to my system of Salvation and harmonious development
I show you the connections that allow you
at the level of the World Organization
create through optical systems
which you can simply imagine
any elements of Reality
from the point of view of their creative development

and at the same time these optical systems
may be just that
your structured thought

i.e. thus putting
into a certain system
your thought
and giving it functional properties
periodically as if visiting
well, like a website on the Internet, for example

you can unlike a website on the Internet
constantly increase in a structured manner
increase control

and the purpose of this lecture is
provide knowledge on structuring
through your Thinking

for example, you don't have a pen there, you don't write
you don't need to remember at the memory level, for example
you just have to look at it with a clairvoyant level
and see everything that is there

it's like you put some kind of diagram on the table
as soon as you enter it is all lying in front of you

you don't even need to remember it
especially since she is always with you

and therefore this is the principle in knowledge and management
I'm putting it here

Of course this is one of the private principles
i.e. structuring is not an end in itself

rigid control system
for example, there is a plant, organization, state
where everything should be on paper

and everything is structured or there is a mathematical calculation
this is still a private type of control systems

because besides the states of factories
and absolutely precise technologies
there is an external Reality all sorts of galaxies comets
which are not part of the governance structure of these states

and they can, in principle, move towards the Earth
there are some potential problems there too
from them can arise i.e.

and your management is the general management
so the structure is the one I am giving now
structured management
This is private management

that means because if you need
you go beyond this and manage chaotically

i.e. this must be understood
This isn't, for example, **system-wide** or something
structure in management

because as I explained
you have to manage even with elements
well, cope and manage the elements

which do not have certain characteristics
i.e. you may not receive
full information or no information at all
but must manage

then your management methods
should be unknown
including for your Perception
the unknown controls the unknown up to this point

and that's why I'm going to give it now
it is a private management structure
which simply allows
to always do certain things in a systematic manner

so that's when i said about the concept of "unknown"
the unknown controls the unknown
this is about you just creating an impulse
with unknown characteristics

you directly embed the information
that the characteristics are unknown

you will see their optical distribution
and this impulse acts
example , they are treated in the same way
cancerous some tumors especially carcinomas
directed to the area for example
which is considered unknown
i.e. undifferentiated

and at the same time the manager sees
how to shift an event
i.e. reconstructs

but the characteristics of the impulse
which you declared unknown
That's how you fix them
at the impulse level as unknowns

another question is what if you want to later
you can because Salvation technologies are action technologies

then you can come back to this information again
see what the impulse was
what were the connections that you called unknown

here is an elementary oxygen molecule
and you called her unknown, i.e.
and then manage yes
i.e. draw conclusions, etc.

that's why in the structural system that I give
the unknown block started with it
it is located as a private system
again more general system

structured system

and therefore it turns out that the system is structured
includes , as it were, chaotic management in fact

because before the appointment is unknown
your impulse level
input vector

it is also unknown, it can be changed in different ways
there is no structure there, etc.

see only the end goal
and here to direct the control impulse
depending on the final goal

i.e. then you go ahead
and generally speaking should not plan
because planning ahead
it turns out that you are recording a negative status again

there is a kind of connection here
you shouldn't make the status worse
so some things
you exclude from your area of knowledge

this is a special system that says that
that when you exclude from the field of knowledge
negative events
they don't happen
i.e. your knowledge is what is happening in the World
now in this position

and based on this status, for example
so I'm starting to build this skeleton foundation
of this structural management system

so your thought
must contain the first element
unknown characteristics
those. chaotic characteristics
this is a private task of a structured system

just like the other way around when you work
only with unknown system
you can only work with her
as if completely disregarding the entire structured part

i.e. the only task left for you is this
and speed of action
what structures exist
this may not concern you
i.e. control from an unknown impulse

and at the same time you know when it's already analytical
you add and expand Consciousness
that this is just a special case
more structured system

and I'm just repeating myself
and at the same time your structured system of thought
is in that area of knowledge
where negative events do not occur

a kind of skeleton appears which is called
i.e. form
the basis of your thought form
which is associated with the thought form of movement

where there are no negative events, for example
and where you manage chaotically
from the system of chaotic controls
it is always possible to create a structured system

for example, chaotic movements of atoms
create the table we see
as a control system
i.e. in the form of a specific form

so when we suppose the Creator laid down the movement
then by principle and similarity
just like the Creator does
He named all the processes simultaneously and spontaneously
developing Infinitely developing

and at the same time they are in a specific place
and here the concept of "time" is born

i.e. movement is in this case
time
from the point of view of Perception

and when you build such a form of thought
then the management of this structured thought

should be there in terms of time
where the movement takes place

but there is another form of governance
where you have direct access to the control space
and you just know the time

i.e. pay attention to this
time you know through clear- for example knowledge
or you just know that it is at this time
but at the same time you perceive it as static

i.e. your Perception
allows you to perceive time

like static
as well as movement

and that's when you combine statics and movement
you do the same as the Creator
you create your own body

so that's why you can create
not only there physical
physical including for example informational body
movement of the management structure

The Creator recreated Himself from that
that He created Himself beforehand
this principle is multidimensional

when the question arises
but how then did He first create ^{yes}
and then He recreated Himself

but He could first create the form of information
some clearings of space there
and then create a form based on them

i.e. having only one created element
even the most basic one
having , as it were, the primary thought of Salvation
you always manage to save them
only one thought gives birth
all manifestations of all technologies

thus I showed that structuring

from the point of view of ideological design , so to speak
it should be like this then
you have formulated this thought in this way

and then you need to build it directional
for example, for your specific tasks

for this you first do the Macroregulation level
i.e. to the very top, the optical apex
some kind of light cone, for example

i.e. it is like a form of light
but which does not spread there like the light from a light bulb
it just has a concrete form in your Thinking

and in this or maybe there may not be a cone
is some kind of cylinder there

but necessarily of a certain height

At the very top you build a management system
in the form of, for example, a sphere over a cone

Means let's assume that the cone has a base of 5 centimeters
the sphere should be, for example, a centimeter there
less than base

and at the same time the projection of this sphere onto the base
must provide the basis itself
as if the light spreads out like that
that the point of contact of the top of the cone
gives the very basis

then you are mentally transported
on this basis
you can even, in principle, somehow imagine yourself
or just raise this base
that it constantly tapers to the top of the cone

that's when it narrows
along the borders of this
the upper boundaries of this cone mean
time grows and is automatically transferred
to the center of the sphere to the center of your superstructure

it turns out that you are in all coordinates of time
introduced an ideological superstructure

i.e. they did it up and then down
and obtained in projection inside the cone
all your events that you want

i.e. you can see there
there for example home work
the specific patient you are treating
or specifically do event management

and then you will see what it is
The reality that exists simply
Well, other people actually see her there
i.e. it is called clairvoyance

from the point of view of let's assume
physical event of collective Consciousness
clairvoyance is a generalized Reality

i.e. in this case you received
through the cone and the element of the superstructure that I mentioned

by systematization
the systematization in this case is broader
more than just a form
the form also contains this as I explained
action in the form of a small sphere
control action

i.e. the control action I am just
I did it simply as an analysis of generalized relationships

when you listen to this part of the lecture
you will see
that this is just an analysis of generalized relationships
which gives this governing sphere

i.e. the wider you spread your Consciousness
the more precisely you control

and it turns out that if you, for example, take into account very accurately
and you know all the private connections
you can see those intersections of Reality
when subtlety

i.e. understanding of some special process
gives all Reality yes
for example, it gives precise control
for example for this period of development

Well, let's assume that there is Einstein's theory of relativity
it gives a lot of effects

and this is like an understanding
one element of communication
different elements in Reality

or let's say washing powder
which you suddenly understand
what is there washing powder "Ace" or whatever they call it
he washes better

and why?
because you suddenly have a profound understanding
that's why
that's why it washes better
not because he is there
but precisely in terms of chemical composition or in practice

then the intersection of these Realities
when did you realize "why"
at the level of a kind of deep understanding

Spiritual understanding
gives again a complete picture of Reality

i.e. the inner surface of this cone
under construction
from such elements of your Spiritual Perception

i.e. they are like some kind of posters
or there are certain segments of information
are glued
from the inside of this cone actually

and here is this Spiritual information
which serves
or a generalization ^{yes}
i.e. understanding a large number of connections
and from this awareness

or from understanding some very precise specific tasks

for example , you watch ants move
or how dew flows down that plant
and from this you understand

penetration into the structure of the World

i.e. these are the systems when you
in one you understand everything
or from everything you make a precise understanding of one thing

i.e. these are the systems
you mentally cut them out in the form of screens
and place it on the inner surface of the cone

so you built
inner surface of the cone

so here is the outer surface of the cone
this is a control grid, let's say

mentally cast a net
and received a certain information framework

each section of this information grid
means a specific event
inside there will be all the events of the world
inside this cone

or your control events
what do you want to cure there to manage some event

and this is your task
it's just that in management
to look at the surface of this cone

and mentally if you suddenly see
that there is some kind of non-standardization going on
for example, the patient has some kind of disease
and some event needs to be done
you will see it right away
with such a design

what is the surface area of the external mesh system
changed
and that's all

and you just mentally bring it back to normal
i.e. mentally, as if by an effort of will, you concentrate on that
so that there would be a normal grid, as if not distorted

and then inside you can directly observe

how, for example, health is restored
so certain events are returning to normal

and you do all this in it
as harmoniously as the Creator does
because you have taken into account the principle of the Creator
well, about disseminating information to Eternity

i.e. information must be Eternal
and each of its elements
and develop endlessly

this is where it is located in this design
this is for homework
you will understand what I said
dissemination of information into Eternity

That's enough for this lecture
it is very rich

and try to make such an element
from the end of this lecture
return to the beginning of this lecture

and look for example at the information of the next lecture
and what you need to learn from the next lecture

i.e. now look at the future
this is what a cyclic system view is like
