

GRIGORY GRABOVOY
The Teaching about God
**Control over the future
through the area of future events**
27.09.2005

Hello again
the topic of my seminar today
This is my Teaching about God
Control over the future through the area of future events

in this topic i show
special method of event monitoring
where it naturally enters
and pre-event management

at the same time I consider
the process of accessing future events
through the structure of future time segments

i.e. there is, for example, a simple way
being an element of Consciousness in the present time
simply perceive future events
as a projective glow

but in this case it is a completely different way
it means that we take information from the future
and already as if we are transporting it to the current time, then

therefore, given that the task of management
is full control over the situation
in any aspect of time
then here this method, in general, looks like a special method

therefore, it is necessary to clearly distinguish here
this is the position of the edge
where are you in the present time
perceive future events

and where does the control take place
for some future level of development of events
through the neighboring areas of the future

it may be more distant future
or closer more closer yes than the event itself

so the technology itself

it is regulated by the control task
that's when you choose the area

to a greater extent
the method that I am currently considering
this is control through more distant areas

because the structure of the Infinite quantity of some
Infinity itself
it is still a more distant substance

therefore the glow is external
this is usually a glow from a more distant area

to apply it in a purely practical way
well in his specific life there
must be considered
management structure in this way
what do you consider the state of the body
to the level of one's own Perception

for example, a person can perceive an organism
by some impulse of Consciousness for example Yes
in some kind of automatic mode
i.e. not without differentiating, for example, some states

but before the Perception of the body
what is the person's condition

for example God before his own Self-perception
what condition was he in

God has every situation
it is His own reproduction in Action

it turns out that He is a state before Perception
He himself reproduced it somehow

and this is where it arises
element is quite universal well quantities
in Perception
because here on the one hand in this state
you can create Reality
i.e. it is not fixed yet

on the other side
it interacts with the created quantity yes
for example , there with the physical body of a person

that's why this system
Well some informative action
from Infinity to the present time
This is a special system of action, so
where we consider the state close
to the state of the physical body
to the level of his Perception

it means the value that comes from Infinity
it's pretty clear yeah
at the level of human logic, generally speaking

and therefore it turns out that based on this
we see that in order for us to get specifically often into the future
For example there a day ahead or 100 years ahead

we can proceed from that
that the more distant the future we consider
the more stable the processes are
at the control point

i.e., in fact, the same control structure, yes
that we are moving from the present to the future
that's basically what makes this process different
that the distances are approximately equal

i.e. if we are from the current time
we want to make a sustainable process in the future
we must constantly, as it were, reserve our path
walk the same area several times
then we take some stable picture
for example in the future

and if we measure these well as if geometrically even
distances as if these actions yes
on access to the future
from the current time
or from some distant future

then the further we go into the distant future
the more precisely we control this area

and it turns out that if further
we are starting to come to that again
what exactly is the level of the Image of the One God
there is the Physical Body of the One God His structure
begins to visualize

the same thing a person seems to go from himself yes

from your physical body

and it turns out according to the level of form
where Similarity is an element of control
we see that in the structure of the future
so that there is an exact event
signal coming from the Infinite quantity
or coming from the human body
it should go the same time

so in order to stabilize
the structure of the future from the future, i.e. through the future
through a more distant future
you just need to make an effort of will
some level of special Perception
usually Spiritual Perception
where the Spirit is realized
as a structure of the development of the Soul at the Infinite level

it is at this point that you begin to create
element of simultaneous achievement
impulse from Infinite quantity
and from your physical body

i.e. in fact you see the structure of some statics yes
recording events by the physical body

because the impulse coming from the physical body
it falls, for example, into the structure of a future event

and as soon as he gets there
i.e. the goal has been achieved
the physical body must react somehow

i.e., as a rule, this is a special level of body reaction
where the body is as if Well observes and records
that the impulse emanating from the body
he reached the level of management where he became fixed

because all points of application
Means impulses from the human physical body
always a fairly controlled process

because the statics of the physical body
exactly as a static value
the physical body all the time at the level of Similarity
records all impulses
which has a nature of this type
that the action has taken place

and then it seems like nothing needs to be done, yes

so this is exactly the translation into the Infinite sphere
this is what comes from the point of view of control over the future
from future events

then we get an imposition
the impulse from the body gets through
into the structure of future events

and from the Infinite is captured
some Infinite system
and is carried out there into the future yes to the Infinite

so it turns out to be an exact event
Here we see and control
when phenomenon what does intersection mean
and the phenomenon of, as it were, capture and transfer into the future
these are practically simultaneous phenomena

i.e. everything happens at high speed
then we begin to differentiate future events

i.e. we begin to see that the future
it's just the rate of differentiation of events

i.e. one thing we do is go from the current time
another matter from the future tense but in a targeted way
what we need to capture is the element of current time
and lead to Infinity

and that's when we start to see this system
as a system well in action there on an Infinite scale
then in principle the situation is as follows

for example, a person needs to improve his health there
or rejuvenate there
or make it so that well the situations were more favorable
he or another person

and so he starts doing management, for example Yes
from the point of view of the target task
here is to highlight the goal as such in the future
like anyway
you just need to take and enter the future
take the goal and sort of implement it
without naming the goals in more detail

i.e. the principle is this
that some fundamental things
are being introduced into management
and then comes the management, well such
that some goal exists as just information

and when we start working here like this
so that the details of the event are completely clear yes
at the level of any Perception

then this is where that element of the external environment arises
which is precisely what is actually characteristic of that
that all elements of external Reality
they kind of come together at this point

and mainly
these are approximate elements of some Reality

i.e. to track
that you definitely ended up in the future, right?
Well exactly what you need
after all, you can manage and regulate the future

then we need to consider
that from the external elements of this design, yes
this picture of the future
streams of light are constantly flowing into the inner element

then it turns out that you are exactly in the structure of the future

this way we can differentiate and understand
in what way well continue to act yes

here you are in this structure
and then what to do next
i.e. why do you need to be in this structure

then you start to see
interaction of this structure
for example with you at the information level, etc.

i.e. it turns out that the value of the future
she well this is in action
what do you see structure well let's say yes to all Reality
that Reality that you want to see

and here you just need to bring in
it's your status
element of your Consciousness to the control point

how instantly can you capture
a certain status that denotes
here is the concrete Reality
in that future and in the present time

this is when you already fix the current time
then consider that the future is stabilized
there won't be any problems there
even if some circumstances change yes
from the current time to the future

so of course there is another way of such control
i.e. not from the Infinite Future
to do as if control management
behind the structure of the future
and from an earlier time
i.e. for example , there are minus some seconds, yes

then the question of interaction arises here
this area with you
this is where you are at this moment yes
in the control space

because according to logic
management is generally a level
some space of action

and that's when you start to see here
what is the reciprocal value
gets into some space

which exists well like a space of some kind of reaction yes
on the thought
on human movements

here is precisely the control procedure
for example , you set specific tasks
the same level of health improvement of a person, for example

they are identified as tasks
which exist simply in information
initially

i.e. not just as some sort of local problem, let 's say
So this person has some kind of disease
which needs to be treated urgently, for example, yes
or for example there is simply no disease
but some events, yes

and now it is necessary
those events that are not favorable
remove from management level urgently

then it turns out
that here is the transition to management
where at the level of future events
there are some universal quantities that have not yet been named
This is the most convenient level of control

i.e. you enter the management structure like this
that you encounter systems
which are not identified as known yes or acquaintances

and it turns out that then you get there
into the structure of that perspective in the collective Consciousness
where are you well there you enter control for the first time yes
for the first time you take and install the system there
Well exactly the one last time
for example YOU well how would it be located
that you didn't start to deal with it

i.e. it turns out
that in the system it is precisely the recording of future events
It is very important to highlight as if
as a dynamic action parameter
for example, there is the action of the Spirit
and the level is closer to the physical body, yes
this is the level of the human Soul

and so if we start working
on such management structures
For example there is the Spirit
Soul
physical body

then we see that here, in general, in the management phase
precise control is related to the fact that
that some details need to be taken into account
which have been known since earlier times

i.e. for example, the situation is such that not everyone is okay control systems
they are like Well Is a little time enough ?
may be of an earlier time
control systems

here is the ability to get out
into the management structure in this way
so that from the near future
also make a fixed level
i.e. from for example time minus a second yes

we need to see the space in its entirety
how does it even function
here is the space of time here in this case

i.e. if we take control
for example in minus second
and we get there one geometric image in Infinity
if we take minus two
it turns out like the next second and so on.

then it turns out that we
Well, in fact, we are laying the ground ourselves, yes
control
and this is generally the correct value

if we assume that in Infinity we
we consider management as follows
that we practically see
that Infinity itself well how would it be formed
at the level there may be such systems of representation
at the level of mental representations
i.e. a person somehow sees what is happening

and if for example he sees more
and there with Soul

physical body

then it turns out that the Infinite quantity
which forms
this is precisely the stability of future events
she is such that inside the human thinking
inside there is every thought
there is a level of knowledge transfer
and with super-fast transfer of knowledge
and a person either remembers there or not yes

when we begin to see
that this is exactly the kind of classic
sustainable future system
It is precisely in management when a person can see
and visually what is happening there
at the level of the manager there, for example, clairvoyance
and at the level of Thinking
i.e. when a person sees that some thought
it can be either favorable or unfavorable

then as if synthesizing
here material or there immaterial
so to speak in the usual sense

Part
at the level of long-term management

we see that the non-material structure
during long-term management
all the time it starts to make its own level, yes
as if Well some kind of even counter-control sometimes
sometimes it's just an accompanying management

and we begin to see
that this is so it happens at the information level
we are beginning to see that it is possible to influence information
through the co-development of different systems

and here it turns out that we can then do it
consider management in this way
what is the level of co-development

for example, like God who originally created the World
He still created a system of co-development
in certain designs yes

For example , humanity is developing there
but in principle it would be very problematic there
or there wasn't enough space
there is no such thing

so it turns out that this is precisely the principle of co-development
principle of cooperation there
it is still being laid down
to some primary level of information

and this is the primary level
it exists in this level of the future
where do we take control
through the next segment of the future means

and when we, for example , consider such a position
For example there we will consider the future there in three days yes
some control element

and we will consider it in management
the entry point into this future
in about four or five days more

then this means income up to the management structure
it is often a very long time

i.e. so that there is some kind of signal

coming from the future
reached some specific control point
from the point of view of Thinking this is a long time

and then we begin to see
what does some color mean yes or is there light?

i.e. you can make some kind of personal classifier
where can you see
or is there a socially useful option there

where can you see
how does the interaction take place
there are colors or light coming from Infinity for example
at the current time, etc.

and when we start to consider
control in this way
what we actually need to create

the management status is like this
that precise events are needed
and not only one but all the exact events around are needed

it turns out that the future is built mainly
at the level of the primary reference points
which a person allocates
in the form of for example Well some information
which might be useful to him

and here, for example, to take advantage of it
this information
can be considered
how can you even improve here
for this technology, for example, it is quite significant
often human health
due to the fact that this precise knowledge of future processes means
always guarantees means
Well greater optimality there exactly in action yes
minimization of some adverse effects, etc.

when we start to consider
this process as completely generalized
i.e. acting on any external system

then it is clear that well some such level
which develops as if even within itself
so this level is like this
what we are beginning to see
structure of the future
as a structure that is often completely unchangeable
this is where it starts
how purely could such a philosophical question be
and how then to influence the structure
if the structure of the future for example [...]
Well we are in any action
for example we come to the same thing yes

then here is where it is important to know
in what case do we get such control
when a person first of all
he himself wants to change something there
it changes
if not, then the structure is generally unchanged

and that's when we start doing management
in terms of providing assistance

what is important to see here is
what exactly is the level of desire , actually ? another person
or some other environment
this is very necessary for Perception
level

because if we for example
we consider management in this way
that in Infinite time somehow changes
Wednesday there interactions

then it turns out at any time, wherever we are
the ability to work through the Infinite magnitude
Firstly, it allows you to prepare in advance
to the structure of future events

i.e. we can assume that management can be considered in this way
what is the spectral value there
which is located
It is in the Infinite that there can be time
or there partially in the future tense

it can show and give general data about that
what to do in a specific management area

and that's when you start to see the future
like for example there is a stable value
this is where the effect begins
which can be applied
in order to consider well such a principle

that all the elements of the World
should be on the same level there yes management

then let's consider the principle of interaction
For example there with pets just with animals

this is how it interacts
knowledge of the future
with the fact that there is an animal there yes For example
and not a person
Means Well or there at the same time as a person

this is where it's important to see
that in the future human information
very clearly highlighted
i.e. she has it there

as if a somewhat autonomous level of control

and that means when we talk about that
what needs to be done , for example, treatment
it turns out that if we start
to do something like management
what we use for example there is treatment in some cases

then here you need to see it clearly
Is there a sufficiently active system nearby?
Means well, to which you can simply tune your body
and the person becomes healthy

i.e. the ability to use as if
future events thus
what you start to say is, as it were
Well apply the control going
as if from the Endless Past
and the Infinite Future

i.e. actually well how does a person usually work
at the level of there Perception of the physical body
only in this case
if you use a control component like this
where there are precise control characteristics
i.e. precise knowledge of the future

Of course you can use it
more intensive way of self-government there yes
there is self-development

so it turns out that if we, for example,
we are making this structure of the future
absolutely clear and understandable
then in principle it turns out here
that the management is going for example

from you
into Infinite magnitude
it also becomes completely understandable to control

and with all this we begin to see
that based on the management structure
what do we suppose Well we identify
as a completely understandable quantity
from the Infinite Phase

then it is clear that this is a clear value
what suits you
i.e. your own state yes in Infinity

but in science it is very clear
from Infinity some element of light
passes
to the level where management takes place in the future
but you, being here, perceive all this
so the light goes to you too yes

then it turns out
that it is precisely the uniqueness of your image
allows you to work with Infinite quantities

it means the entry point into the exact structure of the future
it is also the ability to work with large volumes
Well there For example there in social media

and that's why it turns out
that from this one can clearly see
that the structure of the future contains at the same level
Means Well some events
as well as the structure which is manifested for the future
there in the present tense yes

i.e. the future is a large segment
and we can say that some element of the present tense
it may not be significant

and here the question arises
from the point of view of equality of any control element
there is not even any element of information

you can see it here
that it is precisely the flow of some kind of unique energy there is life there
how are events made in general
it means it is carried out at the level of Perception
human body
and the Soul of man at the same time

i.e. there is a level that allows you to work
Well at the level of, like, there are more of these, or something compatible technologies
with more of these comparable
with precisely with fast modern
level of development of civilization

when the physical body

and Soul
interact quite synchronously
there at the level of some future promising events

when do we start making management like this
that future events are becoming closer
now the management begins further
after we looked at
point from Infinity
and a point, for example, approximate
to the structure of future events

for example, it's day three there
we looked at the day for example there is the fourth one
starting from the fifth
and for example there is a second one yes
and began to approach the third day

and here is the structure of the association
of these approaching systems it is like this
that when we revealed a personal image there yes
in Infinite magnitude

then here is precisely the combination
leads to a combination of images
i.e. a person begins to see
that his physical body begins
Well as if being there means being informational more manifested

and it turns out that as soon as we start
visualize this system
then it is clear that the status of the body
here in interaction with the Infinite quantity
he is quite specific
it has infinite social functions already

because once you fix
future management system
then we need to consider
completely different aspects in action in management

you have to try to see

management structure so
for example, how will it really happen there ?

and the multi-variant future is like this

what does it allow there
for some time for example yes, don't react
to your control system

and yet still
in a multi-variant version, as it were Yes management
the initiative structure still matters

i.e. for example, the more people there are
work at a particular level of management
the faster the effect

but one person can also work comparable
he just needs to do something at the right time

then it turns out that based on the equality of systems
what can we say that the future is the distant future
allows well to form in fact
control system so that you start to think
and see well in reality, for example, some manifestations of the future

the question arises then about that
how does the material get there
if it is from the future to the present time

so in each case
individual control is needed here
For example behind the situation
and most importantly to attract
structure exactly as if Macro usually peacefulness here
i.e. this kind of Macro-creation allows
to go further and further into the structure, for example there are substances there yes

and that's when we start doing management like this
what we want to accomplish
access point to control
from any level yes actions not only there on the sand we suppose
if we do the management there, let's assume by the sundial , yes

or not in any other system
and we need a universal level
Means implement in management

then it turns out that we must first of all consider
all structures of their own development

at the management level

if we want management to be more effective

and here it is exactly
development into an Infinite system
any of your impulses

i.e. once is enough for you
some impulse ^{suppose} to realize the exact
and you can develop Infinitely
with an accuracy of up to the level of realization of this impulse ^{yes}
how can it be unfavorable

i.e. it turns out that based on such a management system
the exact future is a system of frequently mutual connections
mutual ^{as if} movement
different control systems

i.e. the interaction itself can be like this
that you start acting like this
what else can you assess the situation
not only there is the future in time ^{yes}
more distant or there closer

but you can also perceive situations geometrically
which are located ^{for example} there on the right and on the left
from those structures that interact
with the structure there is no time ^{there}
corresponding to the machine

and that's when you start here further
here is the structure of the exact future to analyze
further on from the point of view of ideology and tactics

here you see that you come to yourself
i.e. to the structure of the primary principle of the human Soul
and you start to see
what is there Spirit that can look like
in the form of, ^{for example}, specific manifestations of this kind
how is the living body physical body
it is the human body

then here it is seen that the Spirit begins to possess the property of those
^{Well} which the Soul possesses all the time
i.e. the ability to reproduce an action
for a person ^{yes} for myself personally ^{for example}

and here's how it goes, and such a coincidence ^{yes}

at the level of the Soul of the Spirit

there are some other personality systems there
then we see that the person
if he begins to look at this light
coming from Infinity to current events

begins to see this light in himself
then he becomes such a person
at the level of the technologists there
good enough means so let's say included in the management
Human
he can show it next
how should management be done
for example at a fixed point in the future

that's when I talk about some practical examples
It is advisable to consider it directly
how does optical distribution work in general
when accessing the segment of the future
for example through future events yes

and here there is such a line in management
that over time the distance seems to decrease
to the level of meeting with well as if With those people
which we assume also work
in the area of control over the local segment, yes

but you don't talk to them
as if there is no physical conversation
and you just do joint management
there at the level of telepathy, let's assume

that's when you start to see
the combined action of all systems
let's assume at point means as if Well Infinite
and at the same time there is local access

it turns out that it exists only there
primary yes light of creation of some information of matter
and it turns out that based on this you can
working with this primary color or light for example
already consider what forms of work exist then

and that's when we see
that the form of work can be different there Yes
by structure of action

it turns out that we can do it quite well
to see this rigid structure of the future like this
Well which for example related to the current time

there, for example, along the line of a person's specialization

but you can see it in a completely different way
here, for example, in the form in which
let's assume that some kind of thing is perceived, well the other side yes

let's assume we need to consider the position like this
that the future provides in any case
structure of action

For example there at the general resurrection
it turns out that well the action is like this
has a macro meaning
Infinite level yes in management

it turns out that based on this
if for example we can clearly see
management principle
when you see it means in the structure of the Infinite Future
structure exactly for example there is Eternal development of each yes

then you are already on the right path
and then you start to encounter those phenomena
which for example at an earlier time you could see it there

then the question arises
and where are you? items that we assume not taken by you
into circulation
but they were there in the past yes
how they will be transferred to the future

from the point of view that, for example, if there
Let's assume that we introduce such a hypothesis
that you can immediately take and move
let's assume there there in some segment of the future
or there of the past, etc.

and that's when we start to consider
management structure such
so that for example your personal condition
it's not like anything so let's say in a negative direction
did not determine the structure of the action there

on behalf of for example there well party organizations yes

if we are talking about the levels of the future
how exactly in application systems

and that's when you start to work in this system
then you can see what it means well significant share of responsibility

falls specifically on you there in the future
what are you doing

here we come to the point
what is the point of fixation of the future
this is also a kind of accounting of events
within the framework of some dialogue yes
the events that happened there

a person can be at the level of dialogue
to somehow implement the idea means about that
what if in this dialogue structure
includes regulation of events
where all phenomena are clear
then this is one technology
this is level well concentration of attention, etc.

if we start then well make it easy to manage
in large regions, as it were
at the level of, let's say, just some local flashes of light

then it turns out that well if we compare this
with the human body, let's assume
it turns out that based on the control action
you can see
like this is a somewhat universal status
control variable
when you work through the structure of the future

and at the same time if you work well on local systems
then it turns out that this status can be obtained
if for example you are doing this
in the form of some kind of well concentration or something management

i.e. it's not about status as such, yes
here is a person in action
or about man as such
it's about what you can see
that at the level of action of Infinite quantities

the status option itself becomes like
well quite extensive and indefinite
because there are similar systems
becomes Infinite quantity
in management yes For example there are cars etc.

and when you start making management like that
that you should also consider ideologically
just like now i said yes tasks of civilization

it turns out that the management naturally reaches
up to the level means primary action

that's when you for example there
implement some tasks
and we need to consider external management yes

then it turns out that in this case
management reaches the level of well consumption let's say yes
This is precisely the control impulse

and then we get the development structure
when it means in order to make management
already from the point of view of that
such as Yes God makes the primary control
you begin to see that through the structure of the future
actually easier to make this control
because that is where all Reality is organized

and it is enough to just enter the structure there
and it already arises here yes process
Well a good plan or something management

so the thing is that if we consider
control system as a system of action for example
well there through a more approximate impulse in time yes

as I just gave an example
what if there is a third day then it is minus two yes
the second day will be for example or the first

and here we see that synchronization
i.e. the action is ongoing
from well For example there is no external control of this kind
that there are earlier interests there

then actions have a nature
here are the connections of different ones for example Yes thoughtforms
for a single purpose

therefore, based on this, we can clearly say
what if we assume Means Well in the collective Consciousness
i.e. we will lay down a management structure in a single goal
right there, for example there are ten commandments yes management
something that can be presented in the program, for example

and we begin to see the structure of the future
in the form of for example there are private events
then here the circle is already closed

we start to see what is happening constantly
at the level there Well let's assume there are employees there
who work in the organization
it's just that when the situation is connected with another building, etc.
distant yes

and then it turns out that if we start
just consider physical control
in the form of some buildings, etc. in the future

then inside each of these systems
Well i.e. inside some building
there is this status
that you personally can suppose to modify the management
but with all this, the very status of these certain structures
it still persists

For example, you changed the information there solution
and the building is preserved

you can see it here
that the intersection of information of one building with another
this is one category, i.e. quite passive
from a human point of view

and the intersections of human interaction there with human beings
this is an infinite quantity

it turns out that it is the glow
from Infinite magnitude
towards the physical body, for example, means
This is still a preliminary level, yes in action

i.e. means Infinite quantity

has means well some kind of such structure
how does the next action mean
gradually implement some series of events yes

here is already a selection
already according to special series of events

i.e. Infinite quantity which realizes
namely a special series of events
perceived well as some hypothetical yes as if the value

and so to get it means
some kind of real management system
Here we can consider the following process
what based on your task

you are any element of Infinity
you can do it
as if infinitely distant
from you yes
and close
in principle also infinitely close
it is not necessarily average there approximate

and here we see that based on this
already precise knowledge of future processes
this is what we do
already in a somewhat integrated version

i.e. the first option from the Infinite level to the current one
second option from example there is a minus of Infinity
also at the current time

and so, based on the fact that we are the time of action
as if we choose ourselves
it turns out that the action can be correlated in the same way
and in relation to the physical body of a person

i.e. here we can see very clearly
what is the structure for example external control there
it is often the structure of his own light there
well which he is more or something early time
I used it somehow in the personal construction system there

it turns out that based on the structure of the task
so that means in the management of the segment of the future yes
For what purposes, for example, is it needed?

Well for any purpose

what is important here is through this level of Macro-creation
go through Macrosalvation
and see what is in this system of action
we actually see only what it means
Well, it is expressed as an ongoing action.
and from the Infinite magnitude
and from the final yes
i.e. having an autonomous level, for example there is a physical body

not in terms of there being a "final" time
namely, that a person, for example,
has an autonomous physical form

and that's when we start to see
the structure of time already
how to get it out of here yes the structure of time itself

here means such a situation arises
that we are in the current time
we still operate with concepts, so to speak
time in the future yes

and here is the time of the future
has a different concept in development
i.e. well for example, time looks different there in five years
even on information means

and when we start working in that
that we are kind of pushing the management forward
out of phase means actions i.e. out of time

then it turns out that precise access
precisely into space
it is possible in principle, for example Yes for a while
but there is an element of action, for example, there is some kind of video camera,
etc.
will demand or will somehow manifest itself there
as an active action system

and it turns out that this is how it means we are engaged
it is the construction of those events that we need
it turns out that the construction
from a time close to man
where we are well we are working
through the structure of the absence of time yes

we leave only space

then here are the actions in this element
they are such that a person begins to see
that initially as if Yes there is something in front of him
as a next action task

and then it turns out exactly like this
level well such interaction
where is the next action level practically
this is so there is a higher initial value
which also passes into Infinity

Here we are considering
just the structure of the human
Well as if from the point of view of generalized information
management
it is precisely human control
where the criterion is clearly outlined, absolutely clear
according to the so -called management principles, yes
guaranteed future, etc., etc.

this is precisely the guaranteed system of the future
which I just mentioned
for every person
here is the structure that allows
find structure well the same for example Yes Houses
and some place
and project it into a specific place

that's why the more people
they work in the system, for example, there Macrosalvations
the easier it is to find the structure there
some kind of place or management, let's say

and that's when we look at this process
for example God created yes Reality
and it increases Reality
He originally had to create Himself.
it turns out like this at the system level for example at least
which controls yes all processes
at the control logic level

so here is the transition of logic in the event structure
in the Spiritual phase
here, in general, the level is not clear

maybe it's time here
although it is precisely the structure of the substance
this can be very clearly seen in time

and that's when we start working
for the tasks that are needed
as a solution to local problems, for example

then it turns out that based on this
we start doing management this way
what does light going at the same time mean
from for example the structure of the past yes
from the structure of the future there
almost without intersecting
Well on some kind of monochromatic control system
no intersection means is coming
into the structure of the Infinite Future yes
and the Endless Past

then here it arises
specific management structure
where there is no space at all
there is no such thing as active action in general

and now having considered another component of this event

in the structure of the absence of space
at the control point
although we work yes with the concept of "space"

we see that the position is well as if at some level
Well as if environmental influences
or there are actions there are interactions

We are considering this position
from the point of view of a more active level
or what? fixation in a specific place
Means Well some specific actions

and when we see that any action
can be considered
as an action coming, for example, from an Infinite quantity
but maybe this is also and of course the final system of actions

then it turns out that we can
for example, highlighting quite strictly yes quite strictly
highlighting some structure of events

we can see how this structure is developing

i.e. we see

how, for example, in the event phase

there it is distributed well there in the center of mass yes

this event for example

and that's when we start to see

all these signs including mass ones

in management

then here the principle arises well again the same

which I talk about all the time

there is the principle of universal joy, happiness, universal Salvation, etc.

then here passing through this management structure

we see that it is already quite calm here

you can do management

based on the status of a more distant Reality there

or there is a closer Reality

and then it turns out that we can do it

counter control there for any task

if we don't like some task there

and then we can do it like this

Well of course fully consistent with any actions

there it means Well which are therefore normal

from a legal point of view yes

then here it turns out

what we begin to consider in this case

there is its own control structure

i.e. yourself for example

we constantly see this level

that all the time there is a kind of transfer of control

on the person himself yes

here he is, a man doing something

then suddenly he sees

this is how i am now in today's seminar

showed

all the time it goes like some kind of ball is rolling there

just well still at that level

that a person must constantly

something like to be completed yes

the structure of this additional implementation of some

i.e. the structure of the next action
and what was before , for example Togo
as a physical body yes man arose

then the connection of these two structures
makes it possible to practically
do management this way
that you can already be as if
element of Consciousness in the future yes
at the exact level of the future
practically transmit information
to some intermediate segment
or there in the structure of nature

and then it turns out that there is already targeted management
and already collective
i.e. if one person interacts with another
Well learned there or at least strive there
Means interact at the level of direct knowledge yes
i.e. well refers there to clairvoyance, let's say to clairvoyance

then this is where the next level appears
what is the interaction space
with your management purpose
those. approximate space yes
it's your own super-fast action that turns out

i.e. here I have described many control elements
and if you combine them, then it will simply speed up the actions
same as unpacking yes actions as

how some kind of archive works
and here it works simply
structure well some kind of acceleration of action

and it turns out that means we finally found it there, yes
this point
close to the management area

i.e. in the future tense it is simply an acceleration of the action
so there is no need to look for time there, right specially

and just on everything when you go through the management
you speed up the action so much
as much as you need for sustainable management

this actually replaces vectorization

which is very important

then it's enough to just think quickly
a number of situations
and you get the control context
instead of you observing some kind of precision there, etc., etc.

and that's when you start further
with this conclusion yes on managing future events
come to the system at any
then pay attention to what exactly
structure of acceleration of action
this is usually always a 100% solution to the problem

the main thing here is to simply direct the acceleration
definitely at the level of well specific absolutely

i.e. not just view
what's going on like this
periodically this is an acceleration in action
but it needs to be directed to a specific level of tasks
and then it is clear that the action is outside of time
just the technology of Eternal development
and acceleration of action
this is practically a solution to any problem
for access specifically to future processes

specifically to the management of future processes
there to the creation of some elements of matter in the future, etc.

thus practicing in this lecture
we must constantly try to speed up the actions
before its origin

i.e. not to receive information ahead of time, so to speak
and first do the management
then receive favorable information

that's exactly what I'm talking about there, to a large extent, yes
how did you just listen to today's seminar

and that's why try to work
precisely with different areas in the future

and then change these structures
due to the acceleration of action
no matter where we fix the form

then we often get super fast action
if there is no such rigid fixation of the form, for example, then

This is where I end today's seminar.

Thank you very much for your attention
