

GRIGORY GRABOVOY
The Teaching about God
Control pulse control

Hello again
the topic of my seminar today
this is my Teaching about God
Control pulse control

in this topic i show
how the primary impulse
which is formed as a management
any management
how it is brought to implementation
and at the same time we do, as it were, external control
for the impulse and carry out the bringing to the impulse
before implementation

due to the fact that this topic is specific
associated with any level of management
It is advisable to set your personal goals immediately
and try to form
primary control impulse
which is brought to implementation

here comes the question
where is the immediate level of implementation ^{yes}
what we see on the information as implementation
logically it is clear that it is possible to achieve some goals
and generally speaking on information
it is some specific optical medium

and therefore in this topic it is desirable all the time
form , for example, the level of tasks and look
how tasks are projected
to a specific optical link
in the space of Perception

i.e. it is desirable to specifically outline the task
at every level of management

so now we need to formulate a management task
i.e. to build it
everyone must build individually

it may be one main task there For example
or the one that is desirable to be realized

maybe it is not considered as such a main one
but for example in the distant future
this task is very appropriate

i.e. maybe the level so to speak yes, such a calm one
strategic management
there may be a dynamic level
i.e. immediate control
or, for example, those tasks that are closest, etc.

so here it is absolutely necessary to work it out
as if the technology of constructing this primary impulse

i.e. if we solve current problems
while all other and our own problems are being solved
and other people's tasks for example

that's why you need to see clearly here
that depending on that
how do we build this momentum
so this is the area where the impulse is reflected
this area will continue to be built

because in fact we need to do something
bring the task momentum forward
to the level of problem solving
and to bring it to the level of solution
we need to know generally speaking
where is this level located

i.e. you can want to do something, for example
and, for example, carry out some kind of management
and at the same time the level of solution is in optics
Well for example in some specific place

for example in the case of healing
long-term tasks
i.e. they go towards permanent health for a specific person
i.e. this is optics going to Infinity
and localization is precisely the implementation
this is usually a reference level well as if a lever principle

i.e. this is the level that goes back to the person

because a person always compares
your body as if well in canonical form
and perceives to a greater extent
especially when first treating another person
namely, personal structures , cellular ones, etc.
or personal experience yes

so it turns out that the tasks are ideological
or there Spiritual tasks are the Infinite structure
and solving problems in optics
it can be a reflected or supporting structure

that's why in this system
to control precisely the control impulse
this is how God does it, for example
It constantly correlates and somehow brings something to a conclusion
to the next solution level

depending on how a person perceives
next level task
this is how the impulse is realized

and considering that God also created
and a person
and all other Reality
then the difference here, let's say, is that
what does it mean in case of human action
here the control space is more linear

i.e. for God
the coordinate system is multidimensional in any Action
and a person can choose for himself
one system and work in it

and in principle similar to how God works
this will also be an effective level of management

that's why there is this diversity
This is the area that controls the control impulse.
this is also a plane as it were well, some kind of structure
which is expressed as one optical wave yes
like a front of light

and at the same time it is diversity
just like God does
It is any particular finite value
gives precisely the multidimensional meaning

it turns out if I, for example, I take it there, well, there's some kind of glow
it by hand into this area
then this is this glow coming from the form
Well as if in some logical model yes
some light from the hand
getting into the support area

By the way, I show it all the time

really a management area
where most of the impulses go
at the primary level

it's like more on the right
there is a body part there

and when we speak
about control of the control impulse
we should see this support area
i.e. light moves in this model
as a system that has a number of rods
and we move this support rod
all the time we seem to be pushing this light
to the sales area
It is precisely Spiritual that we know that it exists
our goal
and it turns out that we work at the external level

therefore in this control system
we are talking about control over the actual control impulse
and constant correction of this impulse

i.e. in the information space
we have quite a lot of time
Here we are, for example
someone needs to be cured there
we form an impulse and begin to lead it
into the management structure mechanically yes
into the structure of Infinite Development
i.e. the health of this person is practically healthy
it is a linear system

in the collective Consciousness this is a fairly simple area
it is the same for everyone

the concept of "health" for example yes a normal system of events

it's always the same control system
i.e. expressed at least there by some group of words

and it turns out that we are leading there
we are constantly changing these support systems
at this point
The main thing here is to find a reference point
here in lighting engineering

and it turns out that, as it were, the light technology of Thinking let's say so

it turns out that finding this reference point

this is the main task in this correction system

because in reality
we don't need to consider
there are some specific events there
but you need to solve your specific problems

here you need to try to remember the task
as it were, to form it anew

the task is developing
you take it and sort of pull it up yes
adjust further at the next level

depending on this reference point
or as if it rises
or varies or the amplitude changes
gradually you find a support point quite firmly

and here it should be noted that the reference point
in fact, this is an element of the future
where is the Spiritual Administration
there the knowledge of the tasks is sort of pushed here
but already coming from you
that's exactly from your personality from your physical body
by the way, to a greater extent

why is impulse control a
it is a load on the physical body

and based on this you can use it for yourself
i.e. the load so that
light-optical there is some pressure
if we put a structure into the control parameter

For example there are regenerations of some systems
if there is a problem with a person's health
if there are no health problems, well, event management

i.e. we put into the impulse
the impulse increases, the pressure increases
from this a person still receives benefit in the current time

i.e. in fact, the person does not spend
Well, here there is the concept of "some energy" there
in this case no waste occurs
formation is taking place
Well, it's probably closer to work there
Well let's say with an autonomous level of light
where light simply takes on the form of stability

i.e. there is no flow
and due to the fact that the pressure
here is the next level of events
pressure increases for example
we take and this pressure that comes to us yes
we arrange it in this way
that we benefit from this

is obtained at both ends of this control segment
there is a benefit both in the direction of the manager
and in the direction of the object and control

when do we start
bring the level up to speed elements
i.e. first I talk about that
that in statics you can watch all this calmly
If you have time, you can look at where this impulse is hanging
sort of locate it with your finger there on a tactile level
you can kind of scan the thought
see what coordinate system of thought gets into

thought can be broken down into a coordinate system
i.e. well, for example, to break the globe
in the coordinate system

exactly the same can be done in a planar version
and see what parameter of thought is constantly touched
this level

and from here diagnose
By the way, can I have the manager's condition?

i.e. improve the parameters there at the same time
and see why exactly a certain thought
i.e. here it is possible to identify such a diagnostic system
as diagnostics through human thinking

This is a rather unique diagnostic system.
because it is actually a thought
this is an inviolable level
then in which if not well there is no need
let's say we prevent some kind of terrorist attack
or let's assume if a person really needs help there
then Thinking is visualized for
for those around

i.e. there is such a concept
how can you consider any idea there
well really if you need help
this idea can be considered

no other parameter of Thinking
he is his own personal and creative and does not bother anyone
No one has access except God
i.e. I'm really talking about it
that someone there might take advantage of it
this is so in general, it's practically unrealistic

so here it turns out
that when you do diagnostics
through the structure of Thinking
you work only on the structure
possibly negative
or those events in which you need help
they may not necessarily be negative

maybe the person just needs help with something
then comes the scanning of the structure of Thinking

and then you can see how the person translates
Infinite Future in the Reflected Essence of Thinking

i.e. thought is one level after another
a thought is naturally not necessarily an event

so when do you start finishing
Thinking from the event
this is where the most interesting stuff happens
in general, in this management moment

what is the external level of management for this task
leads to the fact that Thinking, for example, yes man
physical body and distant structure of the event
these are very interconnected governance structures

i.e. here it turns out that we have
Well, that's how God does it
for Him, both current time and distant time are the same
basically the same level of management

i.e. for God what to do local management
that there is something global there
in principle it is the same action

the main thing here is technology yes
the main thing is to be able to do it technologically in principle
select control
and be able to somehow transform the event

so by analogy
if we want to control the impulse

we must make a very clear distinction
first find the coordinate system
where do you find yourself in this
in this impulse of control

i.e. where is the information of your physical body located
and this means instant control over the body yes
Well, basically it's like self-healing
if a person has a problem

or is it a stabilization of events
if there are any tasks

and it turns out that next
it is the control of the external system around you

when you start seeing in optics
external system
then it turns out that
the concept of "seeing" is not that complicated
this is often perceived very quickly
i.e. one or two transitions in control
it is immediately obvious that this is a very simple training situation

you are working on some task all the time

and this is the light of this task
he is basically such that you see him very clearly
where is the work there personally you yes
of your physical body there
there is your personality
where is the external system of circumstances

and this external parameter is the so-called yes
what do you do anyway
it's like a dividing line
which determines the structure of tasks
the structure of connections in general

Well, if you think about it
Why did God create the concept of "goals" in the first place ?
then "realization of the goal"

it's very clearly visible here
what does the goal mean, in fact it is very clear
as if it delimits the positional structure
management structure primary structure

if we need to track the control pulse
we must perceive at every level

where is the manager himself located
it is clear that the manager is there
in any case, yes, the element of Consciousness is the controller
is located where the physical body is located
i.e. it is a priori clear

but here you can say so
that the body is such an absolute coordinate system yes
any control comes from the body, for example
so any management comes from personality

then it turns out
that the body is the absolute level of control

and it turns out that God created the physical body
physically manifested in a precisely manifested way
to show that control has already been exercised

that's when the meaning arises
what meaning did God put into the structure of the physical body
as an accomplished level and forever more
implemented level of management

and here it is very clearly visible
that this ideology of God can be traced
where God gives people the knowledge of Infinite development
in His personal Action

i.e. a person in any personal action
maybe well , by doing it somewhere
some management things even
or just thinking about it
see the structure of some grain
which basically characterizes
level of its further action

i.e. it turns out that God practically shows
how is there management there is thinking
make it a Macro-creative task
i.e. Macro precisely by creative action

it turns out that here you can practically see
that God sets tasks yes
At first, he sort of solves problems for a person
solving them realistically
and then shows the person how to solve them, yes, in fact

well, if we, well, how does a person manage, for example
i.e. we can see how he decides God yes

your own tasks

then we get the next technology
only lead to the same thing
because in principle, well, God can solve problems
at your level

and it turns out
that we still need to see a certain aspect of the level
i.e. to master the technology

in this case, mastering the technology
this is control over the external signal
which comes from God
just in general basically the same thing
this is some kind of control
not even by the impulse itself
and management for mastering this impulse

so it turns out that the management itself
means by control over external impulse
this is, in general, a special task
which actually boils down to this
that we can put a lot of meaning into this management

after all, the concept of "control of external impulse"
this is among other things
and also the task of understanding the management there in essence

what kind of management can there be?
Well, you can constantly adjust it
bring one task to the level of implementation

and is it possible to introduce one optical glow
and control can be carried out through another level altogether

i.e. the ability to control the level
it's more of a management choice

and we can create momentum
Well for example, so that there would be no explosion at the nuclear power plant
and at the same time to get out in addition to the direct linear impulse
get out through the structure there are human relations
identify some kind of industrial conflict
go through a completely different level

i.e. resolve the conflict then there will be no explosion yes
and the explosion itself, well, we set a goal
and this option was realized

because we decided to go another way

that's when we control the situation as if from the very beginning everything
all the time, and even through external scanning
for the state of the impulse and for its implementation
i.e. we restrain control
then we can add a sufficient number of other moves

Well, if you compare it like that
for example, this is a chess game
which always wins
but the figure moves
there is another game going on around her

one figure it doesn't go anywhere yes
some kind of unusual step

and as if with a significant movement

Well let's say this is the management yes

For example there are some chess pieces or checkers there

this means we have a change in the structure of static systems

i.e. chess and checkers are

Well, a game by certain rules, so to speak

and here playing in this form as if yes

we will have to bring a different meaning to our actions

let's assume there is some party that is trying

restructure well let's assume this disease yes

that means some other person even

we need to cure him in any case

there are especially situations

when well for example, this is the case with the same nuclear power plant pilots

when healing is necessary in any case

knows he doesn't know agrees

or I don't agree with some positions there

he needs to be cured to save other people

and it turns out that here the management argument is like this

that you are sure to bring the impulse to fruition

i.e. you have no choice yes For example

as well as in the structure of Salvation of all

you must definitely save everyone

you have no choice there is no choice to experiment there

it is necessary to save, for example, civilization from destruction

i.e. the work is done in one go

there is no possibility of repetition

there is no way to collect statistics in principle

such that

and what will happen in these conditions or in other ones

we only have the opportunity to save

and that's why it turns out that here

it is precisely the structure of a passing impulse

here is mandatory for implementation

This is actually quite a useful technology

which is being implemented

regardless of any circumstances or time

Well, there are some there
some kind of influence systems yes
on the management structure
but here it is the same as in this chess
where the work is done only by the figure that wins yes

this means we are building another form for the plan
i.e. a different meaning in management

we think several moves ahead, for example
and we go through the management
Well, let's assume the structure of development there
some intellectual properties
control system
i.e. we can increase the intelligence of management , so to speak
some kind of increase system there
there viewing of some events, etc.

and when you start working in this regard there
well then For example there is a simple example yes
if there is some machine that plays chess
there is a set of moves
if you make some kind of original move
considering that the task is simply to checkmate
then the machine starts making mistakes yes

which means he skips moves
for example, she catches some moves or catches some figures there
while skipping the mat

i.e. it turns out that if we have
management task
achievement related
well, exactly the control impulse
our task is only to track the implementation of the impulse
while working on the entire Macrospace

how does God achieve private control, for example?
working with all systems at once
i.e. for Him any concept
i.e. God gives everyone practically direct control over everything
i.e. personal He sees everyone

and at the same time for Him
and Macro work is also harmonious in principle

here is the Macro level and the private level

he is at the level of Perception
does not make ^{one} equal in a personal sense at all
For Him, personality is always personality
but at the same time He really is
each individual is given unique attention
only this particular person

so it turns out that the management is being brought to completion
at a hundred percent level ^{yes}
i.e. He doesn't lose anything in the form of a signal of ^{some} kind

otherwise some person might consider
that God didn't pay enough attention there
not really
God pays equal attention to everyone

and it turns out that this level, if we consider it like this
it is precisely the control that comes from God
then the Spiritual level of God is realization
it is the realization of Infinite development
there are all the personalities at once
and a specific person too

if "all" is understandable
one or several people
learned to live infinitely
and then for everyone this information is ^{generally} more realized ^{yes}
than for someone who doesn't know about it at all

i.e. it turns out that the concept is precisely "for the aggregate level"
typical ^{as if} control ^{yes}
a more implemented system in this case

then one of the axioms of this control
create as many control systems as possible
parallel following ^{there} third
from the future, from the past, etc.

and it turns out that when we have in the aggregate level
somewhere the control system is carried out, ^{let's assume,} faster
then we realize the goal ^{as if} we reach it then and faster
i.e. the selection of options is actually underway

but so as not to search in a variant environment
there is no time to waste there

and immediately get specific control

the main thing here is that there is something very simple
a mechanical technique in general
field of implementation
at some point you can move it here
into the task system

Now pay attention when you
This is a very subtle technology.
when do you work
in this system you can almost always learn
bring the implementation field to the task level
it means personal tasks have been accomplished

how a person should walk confidently knowing
that he achieved control there yes

enough field of implementation
i.e. this is where you lead the management
it's starting to get closer
and at some point you take it
drag and drop into the task field and that's it

and it turns out that the system that emerged
she is actually in the realized action

God also acts
He created space time
from the same impulse

i.e. any element that grows through it is obtained
as a control impulse
always has a realization
in principle it has one or another implementation
but we have a task to implement it as we need it
i.e. we must change the form

this form is the level of the solution here
and in the primary form it is immediately clear how to solve
the pulse shape contains the solution

and when you start to perceive control
Well in fact, the structure of the so-called organism
or the structure of some special questions
i.e. for example questions there of Eternal development

this is a question often at the primary level
how to work with such an area of information
is new yes

and it turns out that technologists often
who is engaged in the dissemination of my Teaching
and the application of the technologies of my Teaching
the task of interaction arises
precisely with the Infinite Environment
and in some personal understanding

and it turns out that when we have
this task as a mandatory access system
then no other system can influence it

i.e. there can be different systems
as if destruction and there is counteraction, etc.

but when we know that the impulse itself
it is still an element of Eternal development
control impulse of some kind

then it is clear that no matter how the situation develops
in information in general
the impulse will always develop
it means and precisely to be realized

because it works precisely on a personal level
For example there are your tasks there are other people

and it turns out that the wider we can make the impulse
in application, yes, precisely in Macro application
of this impulse
the more precise its achievement as a result

i.e. often to implement
some particular result of someone
very strong management needs to be carried out
for peripheral tasks

why do i always remind you often
that it is desirable at least periodically
Macro management should be done at the goal level again
Well, exactly what you should do is this Macro-region of some kind
bring it out as a goal after all

at least take into account

what does your control impulse mean
interacts with this purpose

when do you start to see it
then it is clear that no matter what the conditions of distribution
of this impulse
you always bring it to fruition

and for example there is a task there to save all humanity
from macrodestruction or even from local destruction
and generally speaking, to save every person from destruction
i.e. to give the technology of Eternal life and Eternal development

this is a task of the same kind in principle
because if you can solve the problem
so, well, fundamentally
it turns out that since there are no macro-problems there
why then does a person have any limitations
naturally there is no such thing either

because the structure of Eternal development
this is generally the goal of management

and if we can achieve this goal
bring it to the level of implementation all the time
then it turns out that a person lives forever
and we really can
technology allows us to view events
consider some control systems

that's when I said that i.e.
example, this is what is needed in this technology
take the initial target
i.e. at the beginning you set some goal
look when i talk about target alignment
precisely with Eternal development
the target begins to transform
into a very small local part of the Macrosystem

and it turns out that it's not that big
then it's even easier to deal with it, yes it works

i.e. against the background of that
that you are taking control of the Macrosystem
target control
for the control impulse
This is, in general, a fairly peripheral and simple task

The only question that remains is the actual receipt
such a favorable reverse impulse
that you have achieved this goal

and that's when you already receive favorable information
at the level of the Soul there
or as if you perceive by the Spirit yes
there with a physical body
means certain information Norms

it turns out that when your personality is already
moves to the level of confidence
this is such a scanning, as it were, lateral control
from your personality
over the fact that the goal was achieved and you implemented the
management

also one of the axioms of control
high speed of implementation
due to the fact that you kind of touch
to the control impulse
and this impulse instantly turns into implementation

this is the main thing here
where you should be with your personality
touch this, this sort of control element , actually
or there to the area which is called the goal of management

i.e. find a moment here , like there, in principle
some game with any ball
find the point where you need to apply effort

and here is the main thing to identify
the coordinate of the solution again

i.e. it turns out that here is the coordinate of the solution
determines with a veto the impulse of interaction for this purpose

and it can be done
at a certain, as it were, mechanistic level
and get a binding decision
and you can get it
at any point in space-time

because the fundamental solution is obtained

when at any point in space-time
we get a solution

by the way, this is one of the properties of diagnostics
how much control have you achieved

you should take this if possible
some separate blocks of information space
and see
the solution is contained
in each segment of this space

it looks like some kind of grid structure
pulse of the same shape and the same intensity
is inside everyone

well, like a cube, let's say Yes
in the center of each volume

and it is clear that this solution is a harmonious level
Well, of course we are talking about that
that there is some kind of creative level
you invested in management
received
and from here comes exactly such a level even
you could say flashing light

not just like a normal glow yes
that's exactly it, it's brighter, it's like it 's in the form of lines, but
but still it is a specific point
radiating that you have a result

and this point is located at any point in space-time

when you start to pull these points together
because it should be everywhere
i.e. wherever you lead, yes, management
not only in the level can be
there are some geometric control centers there
but in general it should be everywhere

and here is the search for this system
so that it is everywhere yes
you can stabilize the control
having received one two three dots
or knowing in advance due to a distant forecast
that everything is fine anyway

then it turns out you should have a tactical level
bring to the implementation level
and try to understand
why do you need some situations
that are happening there around you
or in the system there is a Macro level

i.e. if the Macro level is clear
that the more people work
the more manageable the level becomes
Well as if for people in general yes

i.e. this situation is somehow more understandable , actually speaking
then here from the point of view of your personal task
when you start doing management
from you for example there in Infinite Development
then it turns out that the management level itself
which, for example, you are implementing
as a system of remote communications there
it exists in essence, so that it can be concentrated
these are the control centers
where you have the center as a kind of characteristic in general
what you did yes
as a kind of fixation that you have achieved control

and then you take and tighten these centers
into one particular control area

yes it becomes clear to you
control distribution mechanism
what should you do next anyway

i.e. I will repeat this technology once again specifically
that by bringing the impulse to the space of implementation
often it is an instant action

then you need to pay attention to see
as inside as some kind of diversity
there is a center
it glows with a separate light synchronous with the target
that the goal has been achieved

and then you take these centers and tighten them
just by sheer force of will
found a few there

took it, pulled it and moved it closer to themselves

and here is the difference between individual centers
and as if in a tightened manner yes Well as if concentrated light
we made the light more concentrated

because the closer we are to God
the more concentrated the light is
and the information distribution system is more understandable

and here at this level

between the scattered as if
and concentrated light
it is scattered in the form of specific points

the entire technology is completely visible
what to do anyway
you can determine the day there date second
what should i do at this moment

if you have time
Well, of course, we are talking about the implementation of the primary goal
then you can calmly as much as necessary
increase control

if time well let's just say you don't have that many
or there are seconds or minutes counted there

then you should clearly set the time parameter
how to make such a kind of whiplash
i.e. set a time limit
what it looks like is just a fixed emission of light
and what do you have there, for example, so many seconds, yes or microseconds

and have time to calculate during this time
all control parameters
Well, to read means to react to them
and sometimes even up to counting systems if there is time
more

then it turns out that they were allocated from the control area
another more general over-controller
and you just let go

here the control element is
selection bringing closer to the physical body

but without touching the skin by the way
here we need to monitor a certain level

because the closer you get the more pressure builds up
the body has the ability to glow
of a certain optical
so if you enter close
then you spend time resisting this impulse

and therefore this is of course not a problem
and in principle this can often even be used as a method

For example there is some kind of wellness there
if a person has any problems but

but then it should be set as a moment of healing
take into account that you should improve your health with such an impulse

and overall they brought about an impulse
you just have to see it
this is what's interesting
releasing the impulse yes you can see it later
how was he in the system of connections at all
you and the controlled object

because while you hold the momentum
Well, there is a powerful light burning near you
so to speak from the side of an external observer

and this difference
where is the impulse itself
and where is your control system for example?
It's quite difficult to tell the difference
in the normal phase in the collective Consciousness
follow up
Well, for that person who is just starting out

I'm talking more about that
so that a person can accurately diagnose the system
i.e. it must work in a simple coordinate system

if the technologist already has the ability
diagnose the system as if in the Spiritual
Spiritual is actually a Spiritual environment
within the Spiritual environment
then there are no problems, he immediately sees where it is happening
distribution of information

but in general it's a fairly uniform light
because the idea of management and management itself
often does not differ from the practical
from the primary control environment

for example, if you ask this somewhat philosophical question
let's assume that God created many elements of Reality, yes
This is the kind of question that needs to be formulated as a task of cognition

then it turns out that
how can you even tell the difference between God's impulse and that
and what is the difference in each specific case

we can say for sure here
that there are levels where everything is absolutely the same

because God is one
so his tool is basically universal, yes
exists

so he can universal system
make local
Why does it exist universally?
He can control any system.

it means the higher the level of management
especially since mono level initial yes God has it

and it turns out that this is leveling
management level
as if closer to God already
when the concentration is already higher
this is actually the main thing in this topic
Control law
where the increase in concentration of control
gives
is controlled by an increasing number of systems

and in this way you build up
one level of management and the next, etc.
increase the controllability of the impulse already
which one well as if it doesn't present any problems for you at all, for example Yes

and reach the parameter of complete confidence in control
where it is clear that the level that you initially deduced

there definitely won't be any problems there
i.e. it was realized

and then you have time
when can you there well how to relax so to speak
look into a stable coordinate system

for stability is actually rest
i.e. this is how to define the concept of "rest" yes
in this area
it's just to bring the management to execution

if you, for example, do not bring the management to completion
your system is not stabilized yes
although you may actually realize the event
due to the fact that you simply did it right yes
but didn't track the impulse completely, for example, yes
didn't track where each light element went
what level did you get to

so it may be you don't even have to but it's better
It is better to periodically bring the management to full control

where did that specific beam of light go anyway
which came from you
where is he
what is its source
what connections
what contacts etc.

when you start to control this area
at the level of action
then in principle it is always clear to you
what happens there with the process if you treat someone yes
For example there is treatment

if we are talking about resurrection
then it is clear that you constantly have
continuous line of control for resurrection
Well as if the interaction actually
because "control" is not the right concept
namely, help to a greater extent
there is social adaptation of the resurrected, etc.

and when you start to see the distant area
that now, resurrected, he is already in the social system

so to speak, he feels normal, yes
exactly adapted completely
supposedly previous state disappeared

then here we have the realization of the impulse
this is already a general resurrection
here it is very clear
for resurrection technologies specifically
visible
this is this system of connections
that here is the general resurrection
this is still the completion of the primary impulse
until the implementation is fully achieved

so there is another level
level of implementation in full

i.e. if you managed to cure
there is some kind of one disease
then at least this class of diseases
you can then cure it for any person
It just takes time, yes

and if you were able to cure one disease in general
so then what are the problems at all
so any disease is possible, any other too
on the principle of a kind of universal action

the only task is to bring the impulse to fruition and that's it

and it turns out that one experience is often enough
to create, as it were, all such
well progressive Reality of development
that's exactly in the information of the future

i.e. the primary impulse was enough for God
and the World arose

and then the problem of understanding arose
the formation of this primary impulse

i.e. what are its internal properties
that all Reality has stabilized yes
from His initial level

i.e. what kind of light is there

i.e. how transparent is the level of action

you can see it here
that your action is in the primary impulse
it is a transparent value

i.e. when you personally do the action
you work in a transparent coordinate system

if the action is external
it's like external information
seems to fall on the outer contour
and you choose whether to skip or not

and here is the level of transparency the level of action from you
what you do and what you need ^{yes}
Means Well, I mean naturally
in a creative exclusively aspect always

this is the level of a transparent value of some kind
where is your primary action and final action
it is such a direct, as if infinite quantity
which is not perceived
as some kind of problem to master
there is this system ^{or something} through knowledge

because Infinity
This is a normal state for a person
he interacts all the time
on information of Infinite magnitude

if you think about it
how in general in its ^{so -called} mass of information
a person distributes control
somewhere ^{around} ninety nine percent at least
per unit of time
there with the most there can be high speed
sometimes it can be there with the slowest
interacts with information

it interacts almost on the same level
with Infinite magnitude

i.e. Infinite space there
Some kind of endless inner world
microcosm macrocosm etc.

and hence his personal goals
it's like a series of specific, very brightly luminous tasks
in this generally large volume of information

well, like some honeycomb, yes
this is how many bees work on one thing
for example, a honeycomb structure there
and the result is higher
than if there was only one bee working there For example

and it turns out that you can look around
this design
by identification at the Macro level
see this light and see self-organization
the more tasks they set, the better
a person decides at the same time
the more stable it is in control

i.e. God solves all problems at the same time
He gets it perfectly clear
what is Eternal development
This is His only way there
all your tasks are solved at once

i.e. control over control impulses is Infinite
each subsequent system is even more as if Infinite
it means the further she moves forward
the closer it comes to the Physical Body of God

the same thing with humans
the more tasks he does
the more he has
exactly in the implementation of our own management system
Well, it's logical that he's accumulating experience

and on the other hand
he solves some social problems there
health tasks
and at the same time it does it as if for the level after all
maybe even say so Macro-universal

well, i.e. I got the result
immediately if it is issued faster
to the level of Macromanagement
then we get
what goes faster, well, there's a kind of return or something in that level
what to do next and how much

i.e. the goals start to increase
and manage with time
by the way, always face the same problem
that his own tasks are quickly becoming "few" there For example Yes
and he begins to solve people's problems

and often there is a large quantity there
or all the people there together
on some fundamental issues
namely Macro Salvation

so by and large
this is generally what God thinks
any person
He always contributes in a creative way.
to all other people

that's why it turns out
what if we look at this design
then you can see that the root, for example, yes to God's Self-Organization
precisely in the structure of the primary impulse
as well as the whole society
built specifically according to the same Laws

i.e. if we look
How God Organized Himself
in the initial impulse yes
Initial Action

after all, the world is built the same way
any impulse is built the same way
but God was able to overcome there without conflicts yes
without any problems for yourself and for others
His way and made it Eternal

it turns out that any system
capable of such a level of development

it is enough just to consider
internal content of the impulse
and a distant goal

i.e. a distant goal is needed here
it kind of mechanically works out like that

bring closer to the primary impulse

and compress to the level of control
i.e. how, for example, to make the control optimal , let's say so Yes

then you need to enter the target
as if inside a certain sphere and in control
and hold this sphere
i.e. so that it has a desirable primary outline
before you have already made the execution
inside desire so to speak Yes

those. realization of desire
in this case, with Macrosalvation
this is the beginning of the sphere of Macrosalvation
within which all the action takes place
then there is already a level of control
and then comes the scope of your tasks

and that's when you see
here is a flow of information and some light
from the level of implementation
inside your sphere
to the primary level of management
this is a very powerful healing level actually

for example, if a person wants
just heal people let's say
and at the same time, well, what does it have to do with Spiritual practice
practice of management according to my Teaching
reach that level
that his method worked systematically there , yes For example
had a fundamental effect on there
namely people in the plan of Eternal development

it should turn out that practically

Well how not to influence the external system
i.e. a person must master another one himself
those. knowledge transfer
maybe there is some kind of verbal transmission there through books
and maybe it is so that personal practice is enough, yes
and then it turns out that another person gets better there

this means there is a need to organize a system
where there is no transition
a flow of some information, some energy
basically another path of management
in this control system

by controlling the control impulse

we organize it here
practically well as if a series of events
which generally allows
at a distant level at a distant level of Consciousness
allows you to form that light
which leaks out anyway
both in the primary area and in the area of the future yes
in the area of practically well investigative

this is the light of space yes For example there or time

if you look at it from the point of view of light yes
space is arranged
then space is exactly shining

i.e. space is like a kind of flashlight
which shines all the time
into specific human events

and when a person even passes by
well, some houses there
you can see these glowing elements
sometimes they are stronger there, sometimes they are slow

if you think about it
why some element of space
shines faster or more powerful yes
at some time interval

that's why the more powerful the oncoming light level is
the more work it means
of your own Soul in this place
and then you need to understand why

i.e. here we need to understand
that the Soul works for Infinite time
Always
and that means the work was done from that
that the Soul knew certain future events
and these are signs of these events
or is it the ability to influence events

i.e. the Soul is all-knowing, as if all-determining

on your personal level

and that's when you start to see it
that's when the healing practice comes in
Well, it can already reach the level
as it were, absolute actions performed there
i.e. it is always possible to achieve recovery

or if event management
then always in the interval as if generally available time
control can be achieved

and the governing class is seen as necessarily achievable
due to the fact that you just work on everything
in fact, with the structure of one's own Soul

i.e. you go as if forward yes
there Well, in physical space you really do that
and it turns out that you work with your Soul all the time
manifested in this particular situation
in the form of this light

it is you who, due to the earlier state of the Soul, obtains
paying attention to this
control what appears in front of you

but that's how the Soul is designed
that from the point of view of the Soul she has no problems
i.e. the Soul does not bring from God means
it was originally created
she can't cause any problems
there to the physical body for example
she can't for example
well, to create some kind of trouble
for the level of human development there

it turns out that when you close the level
into the structure of your Soul
after all, the Soul produces and initially controls
and this is information

where God interacts precisely with the Soul yes
the gaze of God the eye of God so to speak the eyes of God

and then it turns out that from here
when you bring the control impulse to that point
what is the next management level

this is again an action of your Soul
this level needs to be recognized
This is by the way the most harmonious and the easiest
the most correct the most natural

what is the "natural state of man" anyway
this is when he is in the World and with his Soul
i.e. primary level
next level
this is the action of the Soul

i.e. levels
elementary
and levels of implementation
match
The soul has both the question and the answer

i.e. the Soul is located
in a state of virtually Eternal development
and this means the Eternal physical body of man

that's when you get to that level
due to external control systems
you are taking out
your management

then count it
what is harmonious is completely natural
it's like even you don't have any control
they didn't undertake any particularly active work there

you are in control
and bring it to a completely clear logical level
and also to the general

i.e. the Soul seems to penetrate everything
and this is all-pervasiveness
it is expressed in that
what you achieve at the level of the Soul already management

and this is the most precise control
where is the control of any impulse
the Soul itself carries out

This concludes today's seminar.

Thank you very much for your attention
