

GRIGORY GRABOVOY
Teaching in the field of politics
Predictive control
02.12.2005

Hello again
the topic of my seminar today
This is my Teaching in the field of politics
technologies of the political party DRUGG
Predictive management

In this topic I show
how can a member of the political party DRUGG
using predictive management technologies
engage in political tasks
for the implementation of software solutions
party congresses and generally speaking carry out all tasks
which are set out in the form of ten commandments
and are essentially programs of Eternal development

in this regard, predictive management
implies precise knowledge of information about what is happening

and therefore this knowledge
should be implemented in this way
that a person, being in conditions of, *for example*, political agitation
must clearly understand what is happening around him

i.e. he must be aware
at the information level
at the level of future events
what will happen
in each specific place
for each specific action
and at the same time fulfill almost all points of the program

i.e. the control task in this case is as follows
that when even realized
for example, some one point of the program
management is still being carried out
almost all parameters that are in the program

i.e. it is implied that we definitely give
management comprehensively

and in this regard it is absolutely necessary in my opinion
periodically when one of the tasks is completed
view all others at management level

and considering that we have the task of Eternal development
involves a wide variety of management issues
including questions of resurrection
questions of the prohibition of death for the living

then it is necessary to introduce additional control
in order to stabilize the collective Consciousness
and be able to rely simply in this situation
on the structure of the truth of knowledge, *so to speak*
the structure of the simple truth of their personal positions
and at the same time try to do it
still, if possible, as calmly as possible

because in any case we will introduce this control
in any case people will follow us
such a prognosis is completely obvious even logically

and therefore I think it is necessary to work quite calmly
there, no matter what conditions are developing around, *for example*

and so that the conditions are right
as optimal as possible
then it is necessary to consider it
cause and effect relationships
First of all, it is still an information level
i.e. the ability to see specific information
and here is the most important thing that is needed
this is the training of every member of the DRUGG party
the same technologies

i.e. the ability to convey very quickly
technology practically
in general, which is often considered unknown
i.e. the ability to see future events
may not be widely known to people yet

and in connection with this it is necessary
stabilize Perception again
showing some examples, *for example*
more or less that simple
comparatively simple or comparative examples
in each case it can be a completely different position

different approaches to presenting information

however the level of explanation
level of some agitation
so that a person can predict
and did it anyway
it is necessary to carry out

therefore, for propaganda purposes, it should be used
next level of management

since this course is intended
for almost any party member in the future
who will agitate and lead people
then the task is this
that it is precisely for the task of, for example, universal Salvation
some special capabilities are often required

example, in order to act calmly and confidently
often need to know the prognosis
to the level of some obvious moments

so that this obviousness, well, in quotes or without
let's say it better without quotation marks
means to realize
although it can be in quotes yes
i.e. it is possible to work as if speculatively
then only information is perceived
Well, the person doesn't check
but he is convinced yes

this can be created does not correspond
may be a verification factor
but a person knows at the information level
confirmation of your actions
Well, this is each person's own internal detection.
which recognizes Reality

but generally speaking, as it were under standard conditions yes
standardized so to speak
any person gets into a situation
when he has to prove that
what he does is visualized by many people

Well for example, there is a cure for a possible incurable disease, yes
in orthodox medicine it means
or a prognosis that is confirmed, for example, etc.

therefore, in connection with this it is necessary
here's how to explain it so that it's understandable
why does a person do this

and here again it matters
propaganda of program points
For example there Eternal development implies
a certain management structure
especially in the field of politics
absolutely clear postulates are necessary
very clear positions of explanation

based on this, here is the management task
this is the ability to output within the limits of program control
his own, so to speak, personal activity

and understand at the same time
that work in the structure of political governance
this is a protected job
because politics implies
free expression of creative interests
they can be different themselves

for example Eternal life resurrection
in this case, according to the program of the DRUGG party
this is software control
and in this regard, any criticism is already a political action

and that's why we need to understand here
that in connection with the fact that the Salvation policy
also has the right to be
not only the politics of some general phrases and about humanity
and a policy of concrete actions
it is quite possible as a programmatic action

I think that it is necessary in each specific case
describe the technology of action
as a way to attract the next party members
how to work on each specific point

for example, we say that it is necessary
actually distribute
up to ten percent subject to GDP
immediately since 2008, from the moment I became the president of Russia

and it turns out that we have to do this
absolutely really fast specifically ^{yes}
we need to prepare for this we need to prepare people for this
work with the apparatus of officials who naturally
or they don't know or generally don't mean it
what is possible
collegial or collective use
material goods of the country, ^{so to speak}

so it turns out that here
management should be reduced to this
what you need to know and see a person's reaction
if we are talking about the withdrawal of nuclear weapons
here it means you need to be able to explain positive characteristics
why exactly on Orbuta ^{for example}

because it is precisely in orbit that it is impossible to return
weapons back ^{for example} and it is safe there , etc.

i.e. you need to find
these are exactly the special characteristics
and each party member can even form some such level
substructured for each program item
how will he explain

Here are some typical recommendations
but they are not at all tough
You can vary the recommendations

the poet's main task
it is to be able to choose in each specific place
specific control systems
and what should a person do
taking into account certain circumstances, ^{so to speak, yes}

i.e. possible criticism in the press
possible counteraction
from the oligarchic foreign structures, as a rule, etc.

and in this regard, here we just need to clearly understand
what line even works

and when working on this line of control
there **against** ^{yes for example, a party member}
or if there is some kind of obstacle
we need to find another internal motive

of some other person, i.e. for what purpose this person is a certain
does for example counteraction yes
it can be any person, legal or natural
some country, etc.

therefore in each specific case
except for there, let's say, control at the physical level
because there is control at the physical level
know what will happen where
we still need to see what lies behind the physical level

in this regard, the methodology is as follows
this is the definition of the management position first of all
where for example is the position of the physical body
and generally speaking, sociability
at the level of a particular task
this will already be an investigative option

and the first level of management
it is to recognize favorable information
introduce favorable information
above the level of events, so to speak, the event field of the manager

for this purpose specific management is done
related to the fact that the first element
it's overhead
well, just above the physical level of a person
approximately there at a distance of 20 cm
so-called glow point is considered
let's call it "level of control means by human events"

and at this level they introduce is introduced first
level is positive
Well, it works out for a manager

i.e. a person introduces for himself
first a positive management plan
and only then does the recognition of information begin

i.e. in fact we must bring the manager to that
what is information recognition
will always be as positive as possible

and under no circumstances should it be
any sharply negative information

Moreover, we must guarantee
that the person who set the task of Eternal development
it means he really should really Eternally develop
i.e. it should really not have

Well as if there were some tough problems
except for those that he might come up with himself

that means and with all this
execute programmatically
everything that is connected in the conditions there as I said
possible media criticism
everything that is connected with processes, for example
organ regeneration
resurrection
complete recovery, etc.

considering that this is a practical task
any contradiction as I said now
it will still be a counteraction
at the level of the political system

therefore work in the political sphere
Well, it's much simpler
what I consider in the general educational context

especially by modern standards
they are going quite well now
well, rigid certain pressure systems
to educational institutions to medical
for example, now the payment of VAT and so on and taxes is starting there

so it turns out that I think
that the most progressive and fast
the scope of management in this area
this is a political sphere
Moreover, it gives control to power

and based on the objectives of this management
above this sphere is built higher
another sphere, about 2-3 centimeters
this means that this is already the sphere of specific events

at the same time a person can see this sphere
It's like it 's over your head
but at the same time you need to see a little further than the image
you can say a person by the way

here is how to do event management
and consider your own questions
just working above the human level

although it's easier to work with yourself, *so to speak*

and further, since the management is collegial
all control systems for members of the DRUGG party
they apply to all people
i.e. any person who wants to engage in management
can do it

it's just that in this case what I'm saying now
in the form of political seminars, in fact
this concerns the execution of the program
Our program is still political

in this connection it turns out
what should be implied here
when you do management
you need to do it softly enough
i.e. to consider that other people also have the right to master
material
and expand it at the slightest opportunity
for all people

that's why the top sphere is a little higher
this is an area of more, *so to speak*, such generalized management
where other people see
that they can also take advantage of
in general, you could say it at the system level
any political system
if they work in this system
i.e. it's even

there is a level of universality in politics
political knowledge it has the property of transmission
general-creative tasks, *so to speak*

so in principle it is really possible
there are not so many parties, that's the logic
because the structures there are general-creative
they often look the same

and therefore if we set the goal of management at the Macro level

then we can say that in the case when we are talking about that
that the DRUGG party will mainly rule
then it is quite real
and consider that, for example, it is necessary to somehow specifically limit
membership in the DRUGG party
I think it is not advisable

and then you get the third level
i.e. another third sphere
above the second niche there are about 3 centimeters again
there is a level of universality there yes

example, there is such a level in the program
voluntary dissemination of the Teachings of Grigori Grabovoi
can be brought to the level of universal knowledge
and work already at the level, so to speak, the highest
where there is direct contact with God

i.e. God shows by doing management
how should a person act in a specific situation

so we have outlined the image of a person as a whole, so to speak
which has, as it were, three levels, three spheres of control

now he can do the first level
by recognizing the situation

i.e. taking a situation i.e. information about the future
should start well best of all
at the level of, so to speak, a mid-horizontal system
well, approximately from the corresponding level
there to the left knee
i.e. as if lower to the plane closer to the plane of the earth
i.e. the collection of information begins
from the level that should practically be
quite calm

pay attention here
what information if you start moving it
for example from top to bottom
on the physical body of a person

then in the field of political management
she becomes more, so to speak, calm
and favorable systems
there they start more well is it better to develop?

i.e. in political management there is
special technology
which separates
control area
from the socialized area

because in politics it is often required
direct quick solutions

in this regard, the most direct and quick solution
Often a person has it when walking there
the knee joint bends yes
the fast action it has visually
here it catches the signal and thinks it's fast

i.e. and therefore it turns out that we take
the fastest positive information
it is related to the physical level of a person
a person takes a step, he bends his leg , for example
and it turns out that we have a connection
with physical level
and informational
future action

in politics the management level must be advanced
so the next step is
for example, this is where the right knee joint bends
the man goes forward yes

i.e. control that resembles
forward movement of man

therefore information collection
is conducted in front of the image of a moving person
for example, the manager himself
well it doesn't matter, as I said, you can use it
image of any person
generalized image

and the information fence is removed
about a centimeter away from the moving person
at the level of the knee joint
and begins to slowly rise upwards

if the information is negative maybe yes

i.e. it has a certain property of negativism, perhaps
the man hasn't recognized her yet

then from the level of the person's navel, so to speak
there is an umbilical level, let's call it that, yes
level means well, primary contact
there, so to speak, with the mother's body

i.e. the level that can be generally said
level of the primary plan even before birth
there is another level

before conception

i.e. the most basic level
where in the production part
God sets a task for man

i.e. let's say it's primary
as early as possible, so to speak
each person finds it for himself

from this level the movement begins
to correct information that may be negative

i.e. information is raised, for example Yes
from the left knee joint
so not reaching well for example there is the left rib
vertically
in this case the information should not touch there let's say
human body

i.e. work only with the area in front of you
necessary
well, 10-15 centimeters

then there is a correction from the body
i.e. the information is corrected
i.e. how the correction is done

for example information on properties on properties
it is perceived as information
which, so to speak, is not yet ripe
in order to visualize it
for some reason it is not satisfactory
quality of a person

i.e. it can be

or rise too quickly too sharply
it means that someone is pushing it through Yes
to the level of access in Consciousness

or it has the property of some kind of beating
those. the form has been changed i.e. Well for example, a white sphere
but some dark areas do exist there
you might not like this

i.e. the signs as I said are the following
or it will rise too quickly
for example , there it looks like this
although this is generally a fairly accurate situation
on information

if it is visual there
you can feel it just like the movement of some kind of wave

and you can kind of look with your eyes
rises up
for example more than
somewhere around, well, about 3 centimeters per second, let's say Yes
this is how you can do it for primary knowledge
how does this even happen

because people who will be working for the first time
they will need to see something and know something
political education implies
the simplest methods of achieving knowledge

that's why we say that we work specifically
with areas near the human physical body
for example in this case as I am explaining now
when something else is needed
then we will talk about something else

this means that the information goes further up
if it has, say, too high a speed
for example instant access to the left edge
we see such a level

then you just need to bring it back a little bit
well, sort of moving away from the body
and return straight to the starting point
and start recognizing it again
i.e. do not allow visualization of the event

that's how we made the next impulse
the event has stabilized yes for example
Well, it usually takes seconds.

A person usually always has
some seconds or milliseconds
i.e. if you don't like the impulse, you have to return it

if there is at all much time there let's assume
day for example Yes
i.e. some urgent matter it would seem
we must react immediately
still aligning this positional level

or if, for example, there is a lot of time
then you should take it altogether
some kind of universal control method
for example, concentrate on the chest level
identify the sphere there in front of the heart
center the direction somewhere in the middle of the chest
and bring out the norm with a glow

i.e. bring it to the Norm until the information
visually I do n't like it, i.e. this sphere won't be cleaned
and or for example it will have the required speed
or will move

one of the good ways
when information does not move in your direction
only you control the information
you are in charge of it

there is a sphere, you take it and you yourself are already stretched out
in access level
to some point in front of you
and only then open it

i.e. the first principle of predictive management
we should have only extremely useful
for the manager information
means for the universal Salvation and Eternal development

for example, allow that
that some information
which will start shifting the speed there

there is the Eternal development of man
we naturally can't ^{yes}

we are obliged to guarantee
that Macrosalvation will definitely be achieved
which is the real information
I see it in future events

but any person should be able to do this
he must reach a level that allows him
speak accurately about predicting future events

and in this regard I believe that it is necessary here
to look for, ^{well}, some kind of, ^{so to speak}, precision in management
i.e. to understand what the consequences in management may be
view future events system
maybe for strategically distant plans

because there is still such an option here in terms of time
^{example}, we looked at what the event is ^{now}
it doesn't lead to any problems

further you need to look
time spectrum of this event
perhaps which is beginning to be visualized

if there is any negative context there
^{Well for example}, indefinite ^{yes} ^{now}
in the form of some specific negative action

it turns out that we still need to build in parallel
some such action
plane of time

i.e. time moves from the event away from the person
i.e. the plane that goes
^{let's assume} from there a person's legs go there
in the direction of movement ^{yes}
it means towards the future
then it turns out we need
time to represent as a plane

and make this plane infinite
coming from Infinity, ^{for example}, towards information
which can be located in principle anywhere

i.e. the meaning is this
that we are doing some actions to harmonize
then we take it out and start checking the time
won't there be consequences, for example, negative ones
somewhere in the Infinite Future

and here you must guarantee the presence of
super fast from precise information
which take signals from the Infinite Future

that's the point of it
that the source speaks about the future
it goes from top to bottom at a very high speed
but it takes the information that is in front of you
i.e. from your future

It's better to look at the future in front of you
here in management

once you have determined that the signal is bright
i.e. it can be determined optically
i.e. the signal coming from above
falling within the management sphere level
Is it light
so this is stabilized information
which is possibly negative yes

next
would have been could have been negative
from the point of view of the logic of events, for example

further near this sphere
you are building some kind of spheroidal screen
it means where the concavity goes away from
from you

i.e. it turns out you are watching
on the inner surface of this screen as if
well, conditionally, he can watch from anywhere
well just to know what's going on there

and then you begin to review the events
around yourself

i.e. before moving on to the review of events, let's say so

you need to first align the information
for example, near the physical body of a person

align information
by the influx of all information constants
due to the fact that a person appears near him
at the level of information in general

i.e. to see what the person has in general
maybe for example there the next day
there for the next one, there for a million years, etc.
anywhere
just to see that it is stable
it is precisely the stability of management as it were
it is achieved due to the fact that you control
as if a close area of information

i.e. it is necessary to teach managers
control the area that is closer

i.e. for example what I said
can be directly described as an algorithm
and show that we have reached the level
which requires control of an infinite amount

and here the harmonious phase of development begins

from the point of view of the Infinite magnitude
always negative information
can be aligned
i.e. there is always time, there is always opportunity

and if it is possible to align
there in a matter of milliseconds, let's assume
then naturally you can level it out
if there is more than there a minute for example
a person or there are several hours

then it turns out that formally
if a person does management before going to bed
regularly the next day
then definitely the next day if he wasn't lazy there
he should have the most favorable

in fact, from a technologist who is constantly

as a rule, always favorable
well within the framework of his own positions
what is favorable yes

what in general
the thing is that there is a certain Norm
which is completely clear and obvious
this is good health for example
there are normal events and tasks are performed there yes For example

Here is tracking of some simple parameters
allow you to make a forecast for the next day

i.e. it turns out that in order for in the current time
look at the position
at some point in the future tense of control
need to look a little further
at least for a day for a month for example
and the investigative signals that come from this time
optimize in this way
for example, for a member of the DRUGG party

although as I said this is management
refers to any other person
but then he should in principle somehow be a supporter of the tasks
which are included in the party program

and here it turns out that this already matters
that we still work according to tasks and goals
which are the goals set out in the program

and therefore once in the party program DRUGG
the goals are stated specifically
in the form of specific areas of information
then they are revealed
and a platform for solutions emerges

and in connection with the fact that this is still political management
and there a solution is required, as I said, a very specific one
then the areas of management are also very specific

i.e. this is basically, in essence, again, quite enough
Well, you could say it's small , I guess
here in terms of information content
region

i.e. here are all the phenomena of the World
there are some different pieces of information
there for example with various elements of the World
this is just part of the information that comes out
she is very specific
and it is precisely in this information system that we need to work

by the way, then it turns out to be much easier to work
as I said it is legally justified, etc.

therefore it is necessary to identify
this piece of information
basically just lifting the controls a little higher

i.e. if earlier we talked about that
what does the signal that goes mean
from , for example, the level of the physical body
and suspends the negative part
he leveled out, for example, the signal may be negative
brings out higher
higher somehow further
we are already starting to manage
based again on positional tasks
tasks, then, are precisely software ones
for example at the level of a person's rib
the very bottom edge that arises

and then the management begins
for specification and detailing

i.e. after we have one or two levels of management there
where the second level is
work within the framework of the party program
This is a team effort

i.e. he is a more protected person
understands that he is engaged in political work
and not just assume there Well, the person who calls
for some common cause, yes

in this case it is a specific policy
and therefore it turns out to be the second level of stabilization
is precisely the level of the program

you need to pay attention there
that in the first case it works itself

from your physical body
and the second level is the level of collegial action

because here the generalized solution already begins
i.e. you can sign documents, you can hold rallies, etc., etc.
and this is also a factor that ensures
the accuracy of a particular person's work

and in connection with this
the second level it determines the well-connected system
i.e. in this case it works as if
Well, it turns out it regulates itself
the entire management phase

at the second level he understands
what can protect him here for example there is a team there
collegial action is possible
well, that's what we do at the DRUGG party congresses
at extraordinary congresses

i.e. it turns out that we
Well, for now, extraordinary ones
and then there are the usual exits
the numbering will still be preserved by us
although they will not be called , for example, "extraordinary"

nevertheless, from each congress to the next
we are performing some specific task

and therefore it turns out that we gain experience in variation
this experience should also be taken into account
must be taken into account all the time
as far as possible the current experience of the party

and then the visualization and detailing begins
now we are moving on to the spectrum of main events

i.e. the preparatory level includes
there are still certain management phases there
preceding to visualization

and now the visualization should consist of the following
management should be done like this
so that with good information of the future
the person simply saw details that match
Well for example, there are his positions

which is best for him there, it doesn't distract him too much
from solving, for example , party problems and personal problems there
well, it's also connected with the party in this case
although we have such tasks
that these are simply the tasks of human life in essence
Eternal life, by the way

so it turns out that he should track here
still the events that are already there
in a positive future plan

and this is already a higher area
this is an area well at the level of there for example there
at neck level there is a chin
Human
i.e. well, we have risen to the level of such calm control
when a person looks, he controls some field

we must try to put it under control
directly on the field of view of physical vision

the man looked
the controls may shift slightly
but it doesn't move far, let's say

the controls are best to hold
at the level well there in the heart somewhere higher
and then it is already stabilized
and you control the control field
due to the fact that you simply detail the events

This is where the main element of detailing begins
i.e. drive to control
some control segments, i.e. specific ones
those. action on the line of God for example
lines coming from God
man's conversion to God
it could be prayer it could be technology digital there

there, according to my Teaching, it is possible to make management through
spheres
and it turns out that we bring management specifically
to specific elements for example yes

let's say in the area of political management
Our goal is universal resurrection

for well the majority of people except Christians
if for believers this information is often primary
or some people think that it is impossible
and for us, for example, this is generally a common social task

then it turns out that it is the management itself
should be built on that
what a person understands technologically
that he must do it somewhere

i.e. the task of managing the general resurrection is set
as a task, well, which he will come to and which he will implement

the task of prohibiting death
actually obliges a person
control the structure of your own events
from this point of view

i.e. it must be in any combination of events
stay forever alive yes

i.e. it turns out that this is also a certain specificity
in human perception

i.e. if in the usual sense

People don't think so, for example

those who are not familiar with the technology of achievement
elements, for example, self-healing, healing, etc.

or some cases when systemic cases
it doesn't even matter which ones
namely, management associated with helping other people
then they may not perceive these situations at all

i.e. for example you make management
by Eternal development by Eternal life
at the same time, not as a manager for other people
who, for example, don't know this yet
are no different

he is wherever he wants
does whatever he wants
just at the management level
he must actually enter into his area
i.e. a fragment of Consciousness
which corresponds to its action

information that provides this

i.e. prognostication implies the presence of periodic
it means exactly this kind of action
when we have almost simultaneously
that we must ensure the implementation of the program
Well, it works for ourselves

and in connection with this
moreover, providing for those people
which we know there
which means Well, they might, for example, accept it
due to the lecture material there
and just in the form of advice and in the form of a lecture
what should they do?
Well For example there party members are obliged to live forever, etc.

based on this they must control
situation to the level of solution
they think it's some kind of long task
that this needs to be studied and needs to be put aside somewhere
until the time for example there is training in this process

but the point is that the concept of "Eternal life"
implies that as soon as a party member began working
he shouldn't die now
All

i.e. another option
because otherwise they will say
what is this what kind of program is this
when a party member and suddenly if he starts having some problems
then naturally the question will be to us yes

i.e. we perceive each point of the program linearly
this means we don't make any exceptions in the program
that suddenly someday someone somewhere will learn
and then he will live forever

or there, or a hundred people or a million learned
they are the Eternal Living there
like there, well, let's just say that they don't really develop anymore
or maybe it's just that the sea is knee-deep there they live peacefully
Well, maybe they will walk on water there.

but the question is that it's not about miracles

not in the manifestation of any special abilities
the thing is that we have to be sure
that another person can do it
he just lives there quietly somewhere

Well so let's say in the village yes
and yet he knows how to do it

here is the task to prove that it is harmonious
striving for nowhere without getting into any excesses
a person must learn to do this
must learn to live forever

so it turns out that this will be a very straightforward task
which is very easy to follow

for example, for provocateurs it is enough to introduce them into the party
are seriously ill people there
let's assume add some there, strengthen it somehow
their negative development yes
and say what and where then is the execution of your program
All

if a person gets into the party
it doesn't matter what condition it's in by the way
we must ensure that the person does not die, etc.

i.e. for each point it is necessary to guarantee
what is written in this paragraph
Naturally, no exceptions or concessions can be expected there, yes
and we should not go for this under any circumstances

i.e. any explanations must be given
only from the point of view of that
done or not done yes

and it turns out that there is still such a mechanism here
some there let's say a person says well
what do we have and resurrection technology
but this is an extreme case

we are talking about the resurrection of those who have already passed away

people who collided
even with the information of Eternal Development
should not die

not to mention if they might not even be party members
but if we are responsible
for the fact that they were confronted with this information
i.e. this is a colossal number of possibilities
if they don't use it
then it turns out that it's again
We are doing propaganda somehow incorrectly
i.e. these are some shortcomings in the propaganda of this type of knowledge

this is where responsibility comes in
for propaganda for accurate and quick reporting
Of course, every party member has it
and that's why in politics one often has to strictly ask yes
with the implementation of specific directions

and here the question will arise of course
to the manager to the party member
which should convey
in the form of a political task after all

and to convey it as a political task
some information to bring it to control
It is often easier to alternate management with social tasks
those that people might like for example Yes
options for de-privatization there
options for distributing growing GDP, etc.

and based on this, you need to be able to combine
as I said management in all aspects
then that's how it is , well, politics translates into politics, yes
then the conclusion is precisely on the private life of a person
the next level is already happening here
there is already a level there of the Infinite level
where is the element of privacy
implements management
through the political structure
to achieve their own, for example, private tasks of Eternal development

here we have moved again to the private level of a person yes
private level of a person
then the party again private level
well, some level there, "eight" for example

Next we must spread this "eight"
well from vertical to horizontal level
but it is as if it is not physically placed on a horizontal level, so to speak

i.e. another phase must grow
this Infinite development
which is based on the collective knowledge of people
and the ability to transmit information

so the next step in forecasting
it is the ability to see
how do you convey information to others

because when you consider
yourself at the prognostic level
you should see ahead
what the other person gets from you and how

i.e. you should see
how do you transmit information, for example, firstly
how
and how your impulse interacts with another person

i.e. based on this
it turns out that we have
Well as if such a system of knowledge or cognition
what's in the future
the impulse you transmit
as a contact impulse i.e. when you perceive yes
it should not differ from that
how do you perceive it now

well, for example, for God Perception
there now or in the future Infinite
it's the same thing, generally speaking

and therefore the structure of the accuracy of knowledge of the prognostic type
is that you just remember everything
its more original state
when did you perceive this information

Here's how to make sure
what do you mean you got the right information
well if it's not written there for example there in the notebook
but simply to see ahead prognostically
and then consider that yes it did coincide yes

you can just remember the physical image
and here he appears there, for example Yes

or you can just kind of transfer Consciousness
in the primary view structure
for example, you look a day ahead
and transferring to the point where you were looking
look deep into it they saw it in what form
any event yes

in the control aspect the event changes very quickly
and therefore for a manager with high speed
he can determine what event he saw
or is there a connection of events exactly at an earlier time
if it is as if in a viewing from the past

and here is a view from the past
this is a glow from the physical body

because in essence the physical body is at the intersection
many from the point of view of logic
elements
this is the past there is the current present

Well, if you ask yourself the question
where do systems intersect?
then in principle this happens at the level of the physical body
intersect
and the body reacts somehow yes
For example there people can grow old, etc.
and in connection with this, so that a person does not age
i.e. a received health information
i.e. it turns out we have to give control
when a person works when he has time
even if there is no time there is some special

I still have to try
when he remembers it
and it's better to do it systematically
and a party member should generally be obliged to do so
at least there with some regularity
should give the information about that route
which provides him
for example health
Eternal development
and favorable events

i.e. periodically, maybe at least once a year
it is not necessary to do it often

but is selected on the basis of information
precise route control of movement and action

i.e. the meaning of management is as follows
so that there would be some positive events
for example, there a year ahead
you just need to look through
some specific area
where a person should be physically
what should he do now
there in two days for example Yes
literally there for several days often

and having passed this section correctly
Well, let 's say there is a certain weight
to a person
or it doesn't matter there are some barriers
the man passed correctly
and ended up there, for example , on the other side of the road

and it turns out that well, there's a simple example there
railway crossing, you have to get through it somehow
and it is not known whether there is a road there or not
a man finally goes and passes there
there is a road there, a regular car road

i.e. it turns out that here we need to find
control options that provide
further strategic events

and these options in the current time need to be seen
often such recognition helps
when a person is in difficult conditions

i.e. there is a set of complex conditions
for example, a person does have
how to get through them
you need to see the path you need to take

maybe these conditions themselves
should not necessarily influence them
you need to go through this section
and then everything is favorable again

because the conditions work
well, sort of in a negative aspect

if they reach you informatively

the easiest option
go by information
if possible, well, without attracting
some negative status if possible

and as a rule if on information
you manage to escape from negative management
as if external
then the control doesn't really work

this is what you get for the information
then you get at the level of, for example, physical implementation

another question is what is needed for example for a political party yes
for example for a political party
if there is some kind of counter argument
this is already called "political struggle"
but it is acceptable up to a certain point
there must be a certain scenario for this fight

well, i.e. we should, as I said, for example, show
what is struggle
there are some opposing forces
perhaps yes in society
which seem to appear from somewhere, for example

then we show that we are
We defeat them with correct behavior
and we are already getting to the level
such a stable, for example, such an approved management

and it turns out if we follow
even here, well, the previous management strategy
at the same congresses

then if we consider, for example, the option
which was under management
well, some criticism that arose
in the form of negative publications in the media
but then it turned out that according to these forecasts
for example, about a boy
the goal of one of the goals
may simply be a misinformation of the forecast
in order not to convey information

and it turns out that here from the negative phase of control
in the eyes of people we are starting to cross over
precisely in the phase of positive management

because it turns out that all the media
as if in this big company
worked disinformation
and at that moment the real goal was
hiding the forecast for the boy
i.e. so that people simply would not be saved, etc.

this is one of the control systems yes
which speaks about that
what we may use the information
because we need it
so that in the future people will still be saved

and it turns out that we must understand very clearly here
that's how information really works

absolutely definitely a technologist who works , for example
in the area of well protected let's say there are airlines there yes
there is no legal liability there
for predicting the future
Well, if it is an accurate prognostication of course

mismatch of prognostication no problem
you can't say that the person there unscrewed some nut himself
i.e. it turns out that there is no legal liability here
for defect

in social systems they can say
that a person for example Well, he is an accomplice
if he tells the information accurately

and here you need to be able to vary
between precision

for example, in my aviation system
100% confirmation
specifically by the names of the units
in reality it makes absolutely no difference, absolutely definitely
This can be transferred to the social system

but then if you name a specific house

which is attacked by militants there
then for procedural things
this means knowledge of information
so it could have been mined
only through intelligence

because the concept of "prognostics" does not exist yet
well, to the fullest extent legally
at least in the Russian Federation

that's why I said it
it will be enough to make a request
to any of the subordinate structures
and the information will be given simply
that such a thing does not exist
what does prognostication do

Of course we will prove that it exists
we can show a lot of information
on this matter
and of course they still won't really accuse such a person

but nevertheless it turns out that the management is like this
what we need to start from the management level
so that at any level of prognosis
at any level of prognosis
so we had practically well let's say SO
that even if a person gives
accurate information accurate absolutely accurate
if it is necessary for example yes in some cases

but at the same time he does not suffer socially in any way
i.e. one of the levels of management
this is to ensure social regulation
event-based rationing
even if it gives an absolutely accurate prognosis
as if other events not only their own

and I think here with this information
you just need to work on it specifically
i.e. the person came to the point that he mastered yes
some technology
what I said is the output level of predictive systems
per person

and it turns out that he brought the management to that point

what did he start predicting?
then we need to make it so that this forecasting
was socially secure
i.e. safe from the point of view of its social events

and as a management
I suggest we go through it very quickly now
all these systems

i.e. take basically any information as I explained
from the side of the knee joint, ^{yes}
at the level of the physical body

and raise it up to the level of the Norm
and enter the phase of accurate forecasting of future events
For example there from tomorrow

and so that the information that you transmit to the media
there in the media
no matter how you say it
even down to the plane number ^{there}
however, it must be positive
regardless of what ^{they} might say
that it was some kind of complicity
possible prompt contact
with possible criminals there

nevertheless, despite all this
we need to make sure that this is not said
even if no one asked for proof
what they said, the forecast, they took and did it right away

when you are already in the party you won't have any problems
for now we still have to do the management for some time
so that there is no such status

i.e. therefore let's make such control now
as a training control
as a specific management of the real
and then I will continue the technology
at the level of specific methods
how is this done at the methodological level

methodologically i.e. specifically
applying management methods already
which are simple and understandable to the public

must see
that the previous picture that can be painted
in the form of access to the methodological basis
i.e. specific direct action
It is better to briefly describe this picture

this is what i just said in the form of sequential access
to the control field
where is any prognostication
after all, our task is to convey information
to others
don't just do your own thing
control system naturally

and be able to convey it to others
if it if needed in words
then to convey means

that's why here we need to prepare the field methodologically
when a certain combination of events
transmitted information
beneficial for everyone you pass on
and for the manager himself, the party member
who in such and such a way looked at the future event
Well for example, according to the methodology that I just gave
and at the same time he handled the situation correctly

so the first method of control
on political management
is as follows

manager party member
a person who simply deals with tasks
DRUGG party program
then I should consider external information
which comes to him
in the form of just blue color

i.e. a certain volume of blue color
having aspects of Infinity
begins to approach the person

at this moment he restores this information as it were
i.e. it fixes the structure of the Consciousness of the Spirit

if they ask

how to distinguish the Spirit for example
then you just need to mentally say
mentally pronounce the word
"Spiritual property" "Spiritual control"
All

Soul management is simply said mentally simply
"Soul Management"

Over time, a person begins to recognize
The spiritual spectrum is precisely
in the light aspect
and the spectrum of the Soul

then precisely at the Spiritual level
we stop this blue color
and we begin to consider future events
which approach a person
First of all, these are his personal future events

i.e. next to the person on the left side is considered
level that corresponds
the nearest current time
at the time when it is located
for example We look at tomorrow
for example there at 12 o'clock

then we look visually
on the physical body of a person
located at that time
the blue horizon is further away
precisely in the silver spectrum
well on light white sometimes more in a silver shade

we perceive on the left
what is happening near a person
who's passing by?
i.e. we start to disassemble
human physical level

then further
because we need a forecast for example for a day yes
or there for a day for a month is the best option
look around you periodically for a while

then you need to determine

vector going from the future to the side
that it is stable

here you are in tomorrow
what about a month ahead
i.e. how stable is your position here

because if the signal is coming from the future
means projecting to the left side
usually near the human body
it looks like some kind of signal lights
similar to the northern lights variant
but only in silver light
but that's the subtext
that there is multi-layered light near a person

and it is from this light that we need to draw the event part
events are reflected in one phase

for example , with God, events happen everywhere
that the event is near Him
what's in the distance
For Him it's just one event

and it turns out we can see
multi-level event
i.e. a multi-phase space generates one event

and then we can already from the right side
visualize the physical level
what will be at the level of a person
physically, for example, there in a month

and here comes the capture of the main plan of events
from the future, well, local
and the intersection of the main local plan
gives a line of conduct where it is immediately reflected
what needs to be correlated in ten days
such and such a situation is better now

this means that we start moving towards ourselves
look
but will we make it or not?
Well, we included this in the management plan, yes.
even if we don't make it, we know
what to say now what to do

i.e. we are preparing on a physical level
come to this task but without being distracted by the essence
from the main task of self-study
man in the party
for example, the task of Eternal development for the population
prompt resolution of population issues, etc.

i.e. here you need to understand
what is this event
well, kind of a negative one
it is desirable to recognize earlier
by way of its strategic line, i.e. further
and tactical behavioral level

here is the first phase of management

as soon as we connected
blue background it seems to be released
i.e. the blue background is the stabilization of the control phase
on the strategy of behavior
i.e. ten or a month, or ten years in advance
you can clearly understand what is happening

for example , there I looked ahead as a child
and saw future events there
Well, any person has seen this by the way, naturally, yes
some of my own events

and I because of the large amount of information
separate , often glimmering, reflections could be seen
if there is a 20-30 year horizon for example, yes or more

then it turns out that we should be here
see a very distant event

i.e. it turns out that if we assume that we are doing management
at maximum distance from oneself
then we can build a remote event there right away
on their projection onto the current time
it should be fairly calm and uniform

i.e. it means if we
Well let's assume there is some event
which is now the signal level yes
there a man went fishing there as a child

some event has passed
sound color can simply be territorial
the person is somewhere
this is a fixing factor of the current event yes For example

here we turned on the phone sound
this is a fixed event at the current time yes
all how else to recognize an event

Here is, for example, lecture material
there is, let's assume, a variant of accentuation of choice
you can remember that it was some day
and how can I physically remember it?

for example, there is a phone sound
once they turned it on or did something there
some kind of signal was implemented
this will be the memory of the current event
Well how could it be as I said physical image
geographical image in childhood, etc.

and further recognition of the current time
we can see from the current time
that's what we perceived then
what was fundamental for us

The soul always comes out on a certain spectrum
and sees visualizes these events quite clearly

from any point in the past the whole future is always visible

if we see only one fragment, for example from the future, yes
directing the structure to childhood
i.e. we remember
some favorable area of action
then it is clear that everything will be fine, i.e. it is obviously clear

can you find such areas in humans
which is not necessarily childhood
there are such areas that are obviously clear
that the whole future perspective
will be completely favorable

here is a man
in a completely calm position
periodically

maybe he is always in this position

Well for example, a person always has some areas of the norm, yes

then if we understand the vibration layer

that everything is fine there

then everything will definitely be fine in the future

no matter what events happen

obviously everything is fine

we need to achieve one hundred percent certainty

that everything will be fine with the person

even if something difficult arises

and this level if he has no practice for example

there is overcoming something

but we don't require a person to be promoted there in any way

we, i.e. I believe that no suffering is needed

I just need Eternal Life

i.e. a person should not go to suffering

we need to technologically move towards Eternal life

the one who came there the hard way

well then he understands what he overcame there, etc. yes

Well, what about those people who were just born?

and begin to walk the path of knowledge

they should not have any complex problems at all

there that would influence that

that they will understate the speed of development

those. they need to create those conditions

which guarantee favorability

how did the man there learn the multiplication table

he can tell it all the time

he can clearly understand that this is a rigid system

and here it turns out that we must guarantee

this is exactly the path of knowledge

and fixation on some

well let's say acceptor such fixing points

should be completely obvious

and here is the next control

this is the use of completely obvious

points of previous control

previous events so to speak

and for example, this is how it is with God
How He Created the World

He created it first
one point of favorable there for general development
and then the detailing always leads to this

i.e. the primary point of creation of a favorable phase
all the time it develops from her
i.e. everything favorable is found
on hard connections
with early favorable systems

they can be different
favorable in human understanding
this is, of course, a completely different position
however, there is one common root
this position is acceptable for a person

and here is the level of acceptability ^{yes}
in this case it is moving forward
as a logical phase of control
i.e. the person must then mentally say ^{yes}
that he controls Consciousness
i.e. the person says there "I control Consciousness" in this case

i.e. in the first case it was the Spirit who worked
with outer contour structure
Infinite ^{level} of blue background

and the second method is Consciousness management

and here it turns out that in the management of Consciousness
there is a next level of control over the situation
in this method it is necessary to show
that there is control
past events
current events
and future events

and here is the management of the past that needs to be done
Well, control via phrase
that "I control the Soul"
exit to the structure of past events

fixation of past events at the Norm level
i.e., for example, improving past events
at the level of fixed control

i.e. you need things to be good for you
change all unfavorable systems
past some elements
which were unfavorable
by controlling the Soul

in the current level you need to make control
With Spirit and Soul
i.e. the person of thought pronounces
just says a phrase
that "I control the Spirit and Soul"

and in the future tense he must learn to see like this
or just talk there
that he controls Consciousness, Spirit and Soul

and pay attention
quantitative presence of the Soul is higher ^{yes}
in management

i.e. it turns out as if we
Well, all the elements of time are compatible
then the Soul controlled the structure of past events

and based on this it turns out
that the growth structure, ^{so to speak,} of past events
outgrowing past events
into the future ^{yes}
depends on the level, for ^{example} Well, let's put it this way
there is a pure state of the Soul
with such pure thoughts
man builds the future it turns out

i.e. the purer the thoughts, the purer the Soul
i.e. which controls in the previous phase
and the Soul, ^{well,} it's usually there
in fact, it is crystal clear
the only question is
to what extent does she recognize the correctness of her actions ^{yes}
in the future here
a signal ^{of} the future
how it fits into the management structure

There is a spirit there
or Consciousness
or the physical body of a person, etc.

here it turns out that with the initial idea
there is a crystal clear human soul
we have some vibration difference

difference generating

for example, structure well there is no time for real events
which intersect with the past

for God there is no such vibration
and it turns out that for Him the past is an aspect
as the Infinitely distant quantity actually
from which it grows there
current time
and the future is just like a projection reflected
multivariance

why are there so many events
how can God build different events on the planet

many variations
and the element of the future is like a light-bearer
light coming from the future

and the past as a system that kind of generates yes
because it relies on past events
each event next

and it turns out that in order for the manager
for myself I clearly recognized in the future
he needs to see more
it is the light of the future time

and then it turns out that it should be fixed
on the state of the Soul

and it is precisely this fixation
on the state of the Soul
this is the level of accurate prognostication
taking into account all distant strategic events

i.e. this moment consists in the fact that
that a person transfers himself into the system

Well as if some united time means

and it turns out that based on this
when this moment is recorded
well, with some of the following properties
space-time
from the current time he begins to recognize
almost all systems of events that occur
in the very distant future
in general, for all people, let's say so Yes

i.e. it turns out that in order to accurately understand
your point of control in the future
with this method of control
for past, current and future tenses

here it is absolutely necessary, well, practically so to say, to identify
very distant events
due to stabilization at the level of your Soul
which seems to look forward prognostically

here is the control point
it is located a little further
as if it fits more with future events

the light of the future is coming
well, for example, from the right shoulder
it comes from above

and a distant future event
is simply further away from the person
physical body of a person
and here is the control point

then it turns out that we have
that the light of future events shines upon him
as if from the Infinite future as if in space
and in the Infinite future from man
well, that is, he draws the future from himself, in fact [...]

and that's when he starts
see yourself in that future
i.e. this is the thread of light of the future
she is connected to him with a person

then he understands that he has stabilized

Now we can start looking around

i.e. he can then begin to examine the physical difference
where is it located

well, for example, take a look at a month ahead and
for example , you don't have any plans, and you don't have any special plans
the person has some details there
he decided to look at himself just to look
what will happen there anyway

as i said first he should
there are already many who will already be in control
First, stabilize everything as much as possible
and already see the best option
and then the choice of solution begins
how does a person make a decision

in general, a person makes a decision
still having a predictive signal from the future

and it turns out that based on this
you can see
where are the events that happen anyway
some absolute, well, stabilized, let's say, forecast
it's not very far there a month ahead

there is an absolute forecast there for many years ahead, for example Yes
which does not change

Well, maybe absolute and for a year
absolutization occurs somewhere around a year or two ahead
and then this is definitely the structure of the forecast as a rule
which practically does not change
well, in a favorable sense

so it turns out that on average a person in about three years
it is the structure of stable systems that is visualized
what relates to the concept of "absolute forecast"

and it turns out that this is the signal coming from there
absolute forecast system
when he already begins to examine the event
this is the next method of management
which is characterized by the fact that
what should you detail
what is near you

i.e. you are in this method of management
in fact, you are transferred by Consciousness, as we say
into the structure of your physical body
and look at the events from the physical body
i.e. don't look with your eyes

and look
well, that is, not like just with your eyes
there you perceive what is happening
and your impulse of Consciousness
can come out of your future physical body
from any level
maybe there was an impulse from the skin there, for example, on the legs, yes

but you should see the same
as you see with your physical sight
i.e. the transfer is control
management is replaced
on the structure of visual perception

Well, in principle it is possible in the present tense
try to see there too
how does vision see through the skin, for example, the legs
but by the way it will be more difficult then

At the present time there is an expansion of space

and in the future there is no expansion of space
space in the future has
one-dimensional quantity in fact
for one event
i.e. the sparseness gives more room for maneuver

here we are in real time
expansion starts immediately
try it now through the skin of your leg
look
around what surrounds

a wave begins to be felt
which, for example, for a technologist who works
well on the Perception of the Wave Principle
the wave movement begins
i.e. it becomes visible

and it turns out that in order to recognize
that you work exactly in the future tense
you shouldn't change, you shouldn't have any feelings
at the current time in this regard
no wave processes
related , for example, to the viewing level
through the cellular composition
shouldn't be
this ensures that you are looking accurately

as soon as the vibration started
there is movement on the body part
then something needs to be thought about
why did you get the signal
then you probably ended up somewhere in the current time rather

i.e. here is the ability to maintain control in the future
in the real future
this is a special task
which is characterized by the Norm of the state
absence of wave vibration oscillations
in the current tense
if you are working with a task of the future

By the way, this guarantees absolute safety
when working there with the nuclear power plant
look at any atom there in the reactor
but look at the future segment and that's it

and when you
based on the fact that the multi-variant future
then here is the simplest option
for example when I started diagnosing
there are schemes of nuclear power plants
then jumping forward literally a second
guarantees absolute lack of access
i.e. no temperature reactions are transmitted

i.e. in principle it is possible to do this in real time
but then comes the loading part
i.e. current time i.e. how to say
Current time information
starts to bend ^{yes}
i.e. we are forced to take up some space

and work in the future is a very comfortable job

there is no need to increase anything there

because we work
in one piece of information
and real events are like this

Well for example, a person is in a library working with a reactor yes
by map

and at the same time in the future we can work
with a hundred reactors
Space is Infinite
and the storyline is one

and it turns out that it is not affected
with its own line of events
We just need to work ahead and that's all

for practical work it is desirable to work like this
Specifically, you can work, for example
how the future is perceived
for example human skin

there to consider the structure
little finger of the right hand
when working with it in the future tense
how does he perceive space

the space becomes more
more as if wider
and the load part, by the way, becomes smaller

i.e. even working with fabric but in the future tense
gives another aspect of a kind of expansion of the wave
on the contrary, there are no fluctuations, there is expansion

so this method is that
what are you working on in the future
being in the current time including
this is also one of the aspects of this management method

and from this you begin to see
the structure of their own events there
which are controlled
in one of the variants of space-time

and then you just kind of keep this option in your memory

and if the occasion arises, you kind of fix it, yes
insert into the management model

i.e. it is very convenient
you make several behavioral systems
you work them out and keep them as if in reserve often
if you don't have time to do it now

well, that's what you need to do there
some kind of phone call yes
you have no time
have you processed this information
recorded there, for example, the transfer of information
well let's say there is something connected with Macrosalvation
you have time you remember later

and when you already make a call you have already worked
you don't have to re-work it

i.e. this situation is connected with the fact that
that after you work on this part further you will simply recognize it
and turn on the control and that's it
connect with physical action if necessary
well, that is, if physical action is needed at all, etc.
i.e. this also applies to the health system

i.e. you are viewing the control system
in front of you
far ahead of you
and then you put in systems, for example, rationing
well, maybe you're tired of some situations and you
you just see it on the information
what exactly needs to be added here is control

added
and then this happens
just take control and bring it to yourself
i.e. if necessary
then it turns out that you can
the health system should be turned on and worked out in advance

and then you just come to this event
but then somewhere it turns out that you are helping yourself

by the way, then you can help yourself
but quite a large number of times

if the same as any other person
you just need to build it up over time all the time
the same control segment

it all depends on the amount of time
and if it's you, how would it be easier for you to react?
to your information

if another person
then he should understand you exactly, if possible

then it turns out that in this aspect of management
the next method is immediately visible
which speaks about that
what if we take into account the collective phase in management
what other people do
then control, for example, past and current time
can be withdrawn
in the structure of only current time management

i.e. find at the control point then the past
for example, there won't be anything negative there
if there was a variant of negative unnecessary information

or is the system of the future like this
that you start working only with future events
without affecting any other systems

i.e. the following method is based on that
that you work for example only in the future tense

as I said this is achieved by
that the past is simply pushed back
line of the present
and you just take and mechanically take control
only in the future tense

you need to pay attention
that only the future tense without docking
with the past
and real
is located to the right
i.e. it relates more to the right side of the control
in the right field in relation to a person

where the past is the future and the present

are docked
it's to the left, i.e. closer to the level of the heart

so here you need to choose
where to work
because access to work is only with the future
for example it is often easier

but sometimes it is necessary to use
like this, let's say, left control fragment
in order to mass information
i.e. the obligation to achieve
was this system feasible? Well. as if at that moment
in which you want
or at least at the moment that is favorable
and for example he is not very [...] consequences there
if this negative option would lead

i.e. here we still need to control the interaction
between different systems

if you compare this system there
for example, it would seem to be the simplest option
what if a person is somewhere in a quiet place
and now he has such favorable, calm events
as in life yes
if he doesn't stand out there
and for example, he is not actively involved there
in some processes of Macromanagement

actually a point of location on earth
in this case
it is clear that it does not have any special significance

the most optimal place for a person
generally speaking, it turns out to be the safest
the most convenient in many ways
this is precisely the management of Macrosalvation
it is active management in society

it turns out from the point of view of activity
she is the best for a person
from the point of view that he then controls the processes
according to the World Order
he works socially and he does something
so that for example there would be no macro-catastrophe there, yes

so it turns out he is located
in a much safer place
than the one who tries somewhere out there in the silence
or somewhere far from civilization
be

because then in this case the processes are not controllable
and he really is this person
if there is someone like this, *for example*, who is trying to distance himself
it actually has an even greater load
event-based, *as if* not of a structural plan

i.e. it turns out that he doesn't react quite accurately *or something*
to the primary task which was given specifically by God
for example there is Eternal development for all
this is a socially often popular path

and it turns out that for party members
it is important to show
that the desire to wait out some time somewhere
it's not actually functional
and it is impossible to say that it will be quieter or better there
because here, in essence, a person is obtained
encountered Macrosalvation information

if it can be done in a collaborative environment
i.e. to teach people to others
if this is not done then it is internal tasks
still, in essence, it still doesn't solve it
he starts to miss them
pressure is starting to fall on him
external event system
and it can't be said that it's easier for him
in fact, it is often much harder for him

and therefore it turns out that active management
it doesn't mean that it's necessarily hard
often, on the contrary, this is the easiest position
for a person

because he is in the status of *well* harmony
he is calm, he sincerely believes
what needs help
and that's how it is
and then it turns out that there are none

well, some negative motives or something
it is not radically affected
i.e. he carries out one of his specific lines
and he manages to do it much easier

that's why here is this method of control
at the prognostic level is based on that
what you need to understand
that in the world there are no quiet calm ones
or some loud areas there
there is only a task
which is carried out accurately and most actively
or it is not actively running there

i.e. in any case, a person fulfills his task
therefore, from the point of view of agitation of a party member
we say yes even if it is somewhere on the periphery
he still performs the task of Macrosalvation
but if he knows that such knowledge exists
but he doesn't use them
Still, I think it's more difficult

even if he doesn't know
that such knowledge exists
it's still more difficult for him
because then he must recognize them somewhere
and somehow strive for the realization of the already Eternal development

i.e. it turns out that this is the viewing level
when a man sees Eternity
i.e. he sees that there is Eternal development
there is some kind of Eternal World
he still has some idea that it exists
and therefore it necessarily has some fragments

because the beginning of the birth of man
in essence is Eternity in his understanding
So the man took it and thought about it
that's where he was born from
what platform is the basis

Well, it's clear that God created man.
from the point of view of human events
the basis is Eternity, namely

i.e. a person who originated from the structure of Eternity

how can he not know , for example, that Eternal Development exists
he himself came out of Eternity, in essence

and therefore it turns out that this is the management structure
on an event-based understanding

I have to talk again

what yes let's say of course God created everything is clear
people gave birth to a man there

but then again before his birth there was Eternity
and it began to develop from Eternity

and here it turns out
that there are some simple factors of explanation here
in this system of huge information
each is given its own unique meaning

God doesn't have people there who are more developed or less developed
someone did something less or more
everyone is absolutely equal before God

it turns out that every person
generally speaking, a single-valued load
if you translate it to the specific plane
energy
or there are just some kilograms
everyone counts the same amount
so let's say kilograms of these tasks
and you can't say that one has more or that it's more complicated

and it turns out that this is the control option
he talks about that
that then every person can really
it is possible to save the whole world if you want
for example, he is looking for at least some ideological position
that he is ready to do this

secondly, he already saves but doesn't know often

and of course when technology knows
this is something completely different
it's just progress in management

here we are at this level of management progress
the following method is constructed

that a person understands that he is progressing
in management specifically
to achieve , for example, the task of Eternal Development
achieve universal harmony there, etc. yes
i.e. simply carries out the tasks of the party, for example

and then the next level of management
that a person looks at the events in front of him
i.e. as I said
a man who knows what he wants and what he does

and this front of events is like this
so sometimes it's blue like that
dark dense blue color turning into light blue
goes along the line of events in front of a person
and at the point of concentration as I said
strategic and tactical areas
he just looks at his events
through the following structure

i.e. he is considering
how is the management carried out near it
i.e. its own wave means
and with all this
he must consider absolutely clearly
three positions then

line of past events
current events
and also a line of future events
but the future line is on the right in this case

i.e. three lines that converge to a person

but this is often described as some kind of folk technique yes
here is the choice of where to go
although it is obviously better to go into the future
i.e. to the right and to the side

so it turns out that based on this
it would be like this if a hero comes and stands on the road, for example Yes
then it turns out that it is the simplest option
use the event of the future immediately
i.e. it's faster, more pragmatic, more practical

and it turns out that here you need to do the following

as if a technical technological movement

what to consider in future events
immediately a positive aspect for yourself
i.e. it looks like vectoriality i.e. some light
through which through which you should receive
following

it's not you who go there in the first element
and you simply attract the structure of the future to yourself
positive structure

they took it from this road
there they pulled out the canvas that is more convenient for you
and then you start to push back
structure of the past current tense in the future

i.e. it looks absolutely so specific by the way
a fragment of light stands out as a strip
most favorable
you will recognize it by the purity of this strip
even the events themselves are not important
and you work as a screen simply

then he takes and pushes the event back
right at the point where you are
some negative

or there is a layer that you don't need, ^{yes}
here you are driving there in some traffic jams in a car
then you take it and move it away and the plug discharges
or arrived somewhere, got there on time
and now you can use it there
I've been setting myself up for this kind of control all day
always choosing a position to manage
and making the right part central

i.e. from now on you are always working in the future
you get used to it
and you because you work in the future
the control field in front of you is open all the time
until some time
i.e. you know for sure that it will definitely be there in the near future
there won't be any problems
i.e. you get used to working in the future

and then here is precisely the understanding
when a person is already accustomed to working in the future
understanding detailing
how to see an event

so here we get the following
that a person must imagine that he is
just himself and his own physical body
and look at it as if you were looking with your eyes

but then he must do
element of movement of the right-hand element
so that it would be central
i.e. the arrow moved as if clockwise
back then, well, about half an hour, let's say

and then it turns out
what if you imagine a dial like this
That's about how it is, how it looks for about half an hour

back and forth we are already starting to move
precisely in management in this way
what we should see here is absolutely clear
that the future has the following property

that the favorable future is static
and there is no acceleration ^{yes}
you determine the structure yourself

if there is some kind of delay somewhere
look who is pulling and where

i.e. this is very important
and then start managing
from the point of view of fixing objects
seeing yourself in the future

i.e. to see yourself in the future
this means solving the main issues for yourself
it is often a burden for a person
he already has so many problems
and he still has to move something there
there is some way to determine

so as a rule it is necessary to look through
what is most needed now

and spend resources on what is most necessary

i.e. it is always desirable to work with the future
only according to the level of necessity

Of course you can watch it again
review the management structure
but in principle, if everything is favorable anyway
if you made control there for example
in some aspect of the future
better move on
If possible, do not stop the control unnecessarily
there you don't go into the structure of the past
i.e. work more and more with information of the future all the time

that's how you are for the one going so to speak
pragmatically walking already knowing where he is going
human
have you considered such a control system
more like I said with the lighting of the coordinate system

and then the management aspect begins
through the structure, as we say
professionally oriented yes

i.e. you start watching
in what area of management
then you need to add control
where to add control
who are you teaching

and here already
as if in a professionally oriented field
practically, well, let 's say it 's a control option
completely different
here you already need to see what it is
if economic status
can you bring out an economist
then there are no problems yes
you output more output information
economic management plan

if it's for example the health department there
then these are accordingly special universal technologies
and reception

here in the short level that I just said
It would be desirable to show
what is the control that we give
based on specific methods
there are previous very simple preparatory systems
which serve precisely to fulfill the tasks of the party

i.e. this is the control that I just talked about
specific to the fulfillment of the party's tasks

any other control
it may be fundamentally different

you can look at the future but it will look like this
this is not a technologically feasible approach

that's why I just said that
this is the fulfillment of the party's tasks
namely Eternal development etc. Eternal life
so here it turns out
that here too it is important to tell everyone
what is this control for this

and then the details will come
further on there will be a methodology according to a specific plan
or at the level of generalized middle management, etc.

so here's for the initial introductory course
I think this is quite enough
show this part
methodologically written out on the diagram
specific methods for people to apply

and your questions will be in propaganda
for example, in quickly achieving practical management
solved

I think it would be desirable to also provide forms
so that the column is filled in the future
how does the event coincide

that's all
thank you for your attention

for now this is enough
