

GRIGORY GRABOVOY
The Teaching about God
Managing Current Tasks
26.05.2005

Hello again
the topic of my seminar today
This is my Teaching about God
Managing Current Tasks

in this topic i show
how is it necessary
Firstly, highlight the area of current tasks

and considering this area
try to take into account current tasks
it is necessary to divide them into substructures

i.e. what is the Macrosalvation system
what is what is your personal for example action

and it is desirable to definitely practice in this topic
exactly in real time

i.e. when you work according to the current tasks system
these are the tasks that you solve

considering that there is
a certain principle of universality of action
i.e. you must be able to solve problems
and including how to build

For example there is a strategic future there yes
build a tactical structure
i.e. in current management

it turns out that in the area of current tasks
the structure of future events naturally enters

when we talk about structure
it is there, for example, that Infinite Development
it turns out that the current task of a person
after all, there is also a region of Infinite development

and this is the selection that results

this grain, so to speak, of Eternity and Infinity
looks exactly like a grain by the way

for example, if
golden in color

if for example you ask yourself a question
and why does grain look like this on the ground
how does the structure of future events come about ?
from the grain grows wheat, etc. and some plant

then we can see that the forms that we have
as if they are organized for a reason

Well, if you consider how God works, yes
He also creates an image of information.
but for optimal actions
He must realize this image on a physical level as well.

it turns out that the grain itself really does look like that
on information

and that's why it turns out
to bring closer, as it were, the structure of Eternity
in fact, Eternal development
here
to the area of current tasks
we must highlight the final form
Well for example, the shape of the grain

and the approximation of this form into the current action
well, it turns out to be some kind of add-on
you are always doing something
this grain is under your control all the time
like some kind of golden glow

it looks like, for example, the management sphere
or there is some level of an oval type
rather similar to the level of a certain control ball
a small ball that does not have clear boundaries
but the bulge of this light color
these are current tasks

i.e. current tasks differ in that
that it is not a fixed sphere, for example
it is not a fixed structure for example
if it is flat control

it is always the existence of some dynamic area
which means as if
or pre-action
to the current task area

or aftereffect
that's why it's always a moving system

and by the way, highlight the area of current tasks
precisely on Perception
quite simply due to mobility

i.e. any person
who is just starting to practice
can look at the information in front of him
if he has a problem
that means, well, having seen some fixed yes systems
in the form of problems or tasks not necessarily problems
Well For example there are positive tasks as an area of information

that is precisely the dynamic region
this is the area of current tasks

and the ability to highlight this area is also important because
that as soon as you transfer control
on yourself
then you control in the volitional management already

i.e. control over this area
gives real control in space-time

there is a special situation here
what is in the current time
People may have different situations, for example
and at the same time a person must be able to
always solving some of my own problems
and control the systems that come there
or there are outgoing, passing, etc.

and it turns out that this is the control
behind known systems
This is one of the areas of the current task
usually tending to the root system
and there are unknown tasks, for example, tasks of the future

or tasks of the past by the way of an unknown type

this is an interesting area that is currently
precisely in the area of current tasks
always emerges as an area of that
that in the past of something you kind of
maybe well as if they didn't notice or didn't pay attention

pay attention here
there is such an element in management

that a person over time
starts as if periodically at high speed
how to comprehend what is in the past
like something well, I missed it
that it was not a significant event as he considered it

in the current tense
this may not be a significant event either
from the point of view of current time
but the event seems to be approaching

and that's when we start looking
as God does

For example, in this case, he does not distribute control
For example there is infinity in minus or in plus
It simply brings the tasks closer to the level of Perception.
and makes them compatible
it is with a favorable one that is necessary
future development

i.e. you always need to do it this way
so that any information that comes to you
it would have been there and not just in the form of a conditional action, yes
would be
it must definitely be there
especially in the case of Macrosalvation
creative feasible
in a positive sense for you

This is especially important, of course, in that case
when you are treating any disease
there and then For example there another person might need something
in quick help yes

and then it turns out that you must definitely
this level of conventionality is there
there would be a positive situation
This is definitely something you need to go around

i.e. there must be a situation where you in any case
for example, you cure him
or solve your problems

for example, you are healthy, then you need
solve other people's problems
some of your plans, let them be positive
but these plans take time

i.e. these are not problems, it's actually quite the opposite
may bring you a sense of joy
but it still takes time to make a decision

and so it turns out that you translate
from the area of current tasks
an area that is not problematic, so to speak
towards more of a right-wing control
This is where managing current tasks comes into play
what matters is just symmetry in control
i.e. more towards the right hand

and when do you start working
more in this area
then they start these very current tasks
draw a very strict control grid

i.e. from them one can enter the structure of that
what to do now
This is how generalized impulses are formed
or the combined impulse of man yes

you can see why it is here now
such a concentration of control or attention

because the areas of current tasks
form a rigid enough
Well, it looks like something cellular, coarse-grained
some kind of cellularity some there closer maybe
at the first world level as a honeycomb
such information

by the way, it has a very blurry color like this
what's interesting is what the current means
although on the one hand they are clearly defined

it would seem that a person has
well if he doesn't have to remember everything yes
or maybe it will pop up somewhere
that there are some earlier tasks, etc.

but nevertheless it exists
area of some unfixed system of action

what's important is that when a person does something
the following arises
i.e. the system is not finite

and God built this system of development that way
what's in the current task

some third tasks are added all the time

if it means thinking about it
how are they added in general
why do people need them at all ?
At the moment these are exactly the tasks

then we need to analyze
that he wanted more than that anyway should i do something early
Human

and by the way, practically with the proper level of attention to oneself
you can always find your primary action
that it was you who initiated this event
at some level

for example, you made a certain control
unless of course there is some extremely negative event
but at least there is some
maybe even if it has some status
Well, it's not at the level you'd like here.

Well, nevertheless, you can always follow it
that you participated
here in an extremely negative event
a person does not participate for himself

and well , according to the constitution, yes it is defined
what a person can do to himself
there is no negative impact there, etc.

i.e. it turns out that we have the status of that

that God did not initially make the negative event

then the question arises
where does it come from anyway

Well, it 's clear that for example there is a lack of knowledge
a person must comprehend and then he will go around
some problem areas of management

but nevertheless it turns out like this here
what if you do the control like this for example
what well as if the area of so to speak negative tasks
which exists

Well, it starts to change somehow in structure

we need to make this area manageable
and make it so that when they are implemented

if you don't waste time on them there, for example
they seem to pop up somewhere on their own
so that they are still useful
for the strategic level of development

i.e. in the area of the current task there is such a line
She is somewhat remote in management.
as a forecast phase
looks like a forecast, it seems
but in reality this is information again
not quite even, well let's say a related option
only to the forecast

namely as a space of action
but a space that works in the future

there is a very interesting area here
which you can kind of feel on the controls
what is in the structure of future events
there is a system that can be used
as a system of access in the management of future events

well, like for example there's a long one, like a spoon, let's say
and you are like this with some kind of spoon
or something with connection
you can work with future events
but being in the space of current time

i.e. transition to the system of the future

not by way of management but rather by way of a mechanical method
by simply what you go through
on the linear optical principle

i.e. one part is here in the current time
and the other one just sort of rolls over into the structure of the future
and begins to vary future events

and what's good about this system
what do you take and hold on to all the time
Well It's like you have your finger on the pulse all the time
in this case we are talking about
that you are constantly in control of the situation
from the current time

so in the area of current tasks
there are problems and solutions of this type
that you control multidimensional processes
processes of seemingly smaller dimensions in fact

i.e. having just one optical line
it is possible to control the multidimensional future

because the future is not just three-dimensional
and there is about space time yes
there are still many development options

and here is the root level
namely, management of current tasks
is an exact sample of the variant environment
so that the option immediately becomes the only and precise one

especially in the Macrosalvation system
Of course people are forced to do this
i.e. a person has no right to make a mistake
if, for example, he is saving a nuclear power plant there, etc.

and according to the background of what a person is
it is not always possible to find oneself in such conditions
it does not always diagnose nuclear power plants, for example
Well, except for those technologists who do it all the time.
and they get used to it For example

and if he starts to collide initially
then it's unusual for him
even for technologists who take a long time to diagnose

Nuclear power plants are not always a problem
you can do a diagnostic for 5 years
and for example, don't come back to a specific nuclear power plant

there you can in principle go to 10 and to Infinity
if the nuclear power plant never has problems with it
why pay attention to it at all ? For example

then it turns out that in connection with that
that some events are changing
we need control over those well for example there is a nuclear power plant there
which seem to become problematic
thanks to the level of the combination of events there, some kind of there

and that means it's not that it's problematic
and how to mature in information
often they are not problematic

but they simply have a systemic level
well, that is, there are different principles for obtaining information
and it turns out that we have to highlight
in your Perception
system

when these current tasks
begin to transform
into the system of control over a multi-variant future
and get as I said one option of action

and that's when we get one option for action
simple, as if mechanical
he looks like even
as a mechanical level of information dissemination
current time

i.e. well for example, there is some kind of plate lying there
by the way it looks exactly like a plate
For example there it looks like a thin plate
in the form of a ruler

has a certain density
this environment
and it puts forward the structure of the future
and the option is fixed
choice of path yes

it looks really simple

but in reality it is a person's choice of path
and it must be absolutely stable and precise

if he for example Well, he makes a choice now.
he then goes along it
especially the situation in that
that the system can be modified later
only under conditions of seemingly powerful external control
in relation to oneself

i.e. then you are already in control
not the situation in front of you but in the future
and as if at the nearest level

if you want
chose the path
and then you want to modify it
then you need to do external control directly on yourself
near yourself and near the physical body

and this is already a contact of such a higher order
i.e. you have to put more resources into management
invest

so of course you can always modify and improve
but nevertheless there is a fundamentally radical point

where is this grain of choice, as it were Yes
such a grain central solution
looks like a concentration of light
this is fundamental

i.e. choose the right element
this is in the area of optical control elements
this is the choice of the correct concentration of light, in fact
i.e. to concentrate the light correctly

therefore I moved on to that
that light is possible but generally speaking it is necessary
be able to concentrate

i.e. for example I need to make an exact decision yes
I want to light up some area there
take this light and make it more intense
at this point

for what reasons are these

Well, I think that at the moment
this is the most optimal control there

I just see it
that this control is like the only one yes
I'm looking at what if I want to manage differently
then I have to consider the next layer

then in this case I'm looking
namely the area of current tasks
which we seem to be constantly conducting

i.e. we must perceive them
as a system of current action

that's why I take it and think that these tasks
Well, first of all, it's clear from the information that they exist
I just highlight them in the information

i.e. I don't even designate them as existing
they already exist yes
I just highlight them where they are located

then it turns out that I should have
some knot
concentrate some light
who would show me
next level
Well, there I can look and see the result right away, yes

and for a person, for example Well, let's say we act similarly
It's quite simple in terms of technology

i.e. any person can concentrate on the future
try to raise the signal
and see this next enlightened area

then it turns out that the enlightenment of the future
as if the Infinite Future light does not
he can be absent-minded
that's the peculiarity
we are always choosing the structure of the path
where is the current level a fairly dense level

and the future is multi-variant, diffused light
you also need to be able to get from a scattered level
as if the docking of a dense level with a diffuse one

and then I just concentrate the light
somewhere
as a rule, it feels like a certain distance
in management
and physically this is what it looks like
for example, at this point there are about 55 centimeters, for example Yes

I'm starting to do the management
and from this level from 55 centimeters
for example, I concentrate light

and here is the light that I concentrated
it begins to shine into the system of future events
and by analogy, light has the same property
such systems seem to recognize each other

and by analogy of the interaction between the elements of light
I understand that there is a current light here

then from here too
from a stable here is the present yes
I define a sustainable future

so I went and molded the structure
closed the system everything
all Infinite future
recorded as a stable system

because that's all for just
I have highlighted the area of current tasks
concentrated the light

and got a certain bridge, this node and transition

Well, I started with the fact that there is a grain in the future
and in this case it is concentrated light
it's not exactly grain
but the properties are sometimes somewhere close

why sometimes because it happens
that it is enough just diffused light
and you immediately understand with practice

i.e. the area of the current coincides with the future
and you are already in the future, as it were

the faster you work in the structure of the future
then you don't need to go through
via the current tasks only area

because we work in the information space
it is possible there or through the future there or through current tasks
in principle it's generally about the same

but for strategic systems
especially if , for example, you are treating
from some complex serious illness

or if by the way you want to do exactly resurrection yes
so it turns out that here
this is precisely the long-term future
there is a very distant future there
it works quite effectively in that case
if you take, for example , a very distant future
and you get a stable signal
because in the future this situation will be worked out

this is the easiest place to implement well how to consider
where the interaction of all events occurs yes For example
how will events look in general
How are people supposed to get used to them anyway ?
to some event

It's easier to take an event and implement it in the future
by combining different situations
receive as if an event is already prepared
that everyone got used to it and there are no problems

and obtain the projected phase in finished form
here
i.e. to educate in fact the collective Consciousness
there
and here we already receive a harmonious phase in management

i.e. you take the system of collective tasks
by the way, you can output it this way
to the level of precisely collegial, calm management

i.e. at the level in general for example, public opinion or something
there are practically no events
Well are there any situations of addiction there?
to some new control systems

because often the novelty of management lies in the fact that
what do you have anyway ? like the spectrum sometimes of that
that you need to do something yes definitely

and in the collective Consciousness

For example there is no element well there or what, wide?
in this area

It's just that in my management practice, for example,
that's when even there they were just curing stage 4 cancer
It would seem that the man is alive, he just got cured
nothing logically special about it

that's the only thing that cancer is considered to be
well or a difficult to cure situation
or there in orthodox medicine
there is not always a curable option there

then it's like this phase in the collective Consciousness
it hits the Consciousness of that too hard

For example there the notary certifies and it seems to be very difficult for him to get
used to it

I remember the first elements, so to speak

but human consciousness is like that
that in about half an hour he got used to it
and for him it was already becoming a household matter and work
here come the cured ones and he kind of records them but
but at first the tension is very high

and here we are
then I did a very simple trick
I just brought out information about future events

and already the next people in line
who registered those cured of stage 4 cancer there
they already came calmly
he practically didn't react to them
how he reacted to an ordinary person

i.e. it turns out that here it works out
that the output in the system of adaptation to future reactions yes
working out the situation in the future
this is a very strong, so to speak, prerogative for solving problems
Now

i.e. in current tasks

it's like some kind of axiomatic principle
need to highlight the lines
that help you solve the problem
there
adapt the system may be unusual
or a complex system
to current options here

i.e. from God's point of view, all systems are equal
super advanced civilization
is equivalent to a civilization of the usual type yes
Well like one that is not man-made, for example there
Well, not always technogenicity means development

and this is this conditional situation
it just equalizes all systems and connections
Thus
what you have almost always
from God's point of view
if we consider it in Perception
then He always looks at equally

so it turns out that you are leveling the playing field
there
and come to the level of calmness there equality
here

especially useful in technologies, for example there are resurrections of people
it sounds a bit unusual for many people there
what's there For example there if they look at the resurrected man
it's sometimes unusual especially the first time
although these are ordinary people and

but there shouldn't be any addiction here
this is an ordinary person, i.e. he is no different

hence
With so from the point of view of the collective Consciousness
all people are equal this is the principle of equality
so it works
that the normal logical phase very quickly takes
i.e. it's not like she 's forced to accept

a person who has not encountered such a process

and in the collective Consciousness
this is becoming a normal fact, in general

by the way, it doesn't even raise any questions often

but what if such situations were worked out more often?
in the phase of collective Consciousness
and bring here a ready-made solution
there is just more detail there, yes

unlike healing, for example there is stage 4 cancer
this is generally a fundamental question
the cure is still the person didn't die
and this is a completely different process

conventional treatment i.e. there it is as if
what to treat one disease or another
in principle this is a typical option

and precisely at the resurrection
after all, there seems to be a certain level of the boundary there
and here it is a different type of process
and it turns out that there is simply more work there

if any task is complicated in principle
in a person

then it turns out that you can do it
through a distant image
area such current tasks of the future
for complex areas

pay attention to what is connected with a person
it has a spectrum of universality

i.e. both here and in Infinity it is one status

but if it's a difficult task
this is again an area of current tasks for the future

and by the way it has the same shade
here is the plane of the current task
there is a plane there

By the way, you probably often paid attention
that often the areas are very similar
i.e. you work all the time
almost on the same surfaces

a person gets used to some surfaces

and he does something on them all the time

pay attention here
what many do almost always on the same
sometimes for many years in a row
on the same platform as if information

and the platform is often developed there
from studying somewhere in schools, institutes , etc.
just from teaching anyone

and this platform is like some kind of cornerstone
or a supporting platform
it has a form that is stable for a given person

if we try to somehow lift this platform there
and approach it from the inside as if yes from the inside
then you yourself are visible

i.e. you see it everywhere
what were you doing
where were you at the moment
i.e. you see yourself from the outside from the point of view of that
where your gaze meets God's gaze

the touch of your gaze on yourself
and the gaze of God
it just feels like contact
Well as if some kind of such rays of planes

and this is a very peculiar vision
i.e. vision where you look at yourself for the same amount of time
how much for example God is watching there
and this time flies quite quickly

i.e. you know how to manage time here
leaving this control
you have time management technology

therefore one of the areas
but in general it is quite developed
as if Macro-area of current tasks
it is a time management system
through well like self-perception or self- diagnosis
although this is not a diagnosis in the direct sense
and this is more interaction with yourself

this is how God does it, for example

He interacts with Himself all the time.
then the question arises
how does he interact at all

i.e. I make the control counter signal
this is my signal again
and it turns out I have to somehow give yes
here's some information for people
how can a person who, as he thinks,
Well, the investigative level of management
as if in a Macrosystem

i.e. it was first created
although in fact the principle of self-awareness
he often does this in a similar way
matches
with the full spectrum of how God recreated himself

i.e. the person is simply not open, he often thinks
that in the collective Consciousness that here it is
how is he that he has some kind of existing fabric yes
it exists and that's it

but in fact he can create it

i.e. therefore the principle of this creation of contact
how God interacts with Himself
principle of the next creation
this is the assignment of the current task area

i.e. God appoints the area for Himself

i.e. in fact it is not just His Thinking
This is Event Structured Thinking
and those that others see there are already people for example

it turns out that based on this
you start to consider well such an area yes
can see this area and perceive it
at a certain level of interaction
plants stones some other system of Reality

but when people see it, it's already a solution to the problem
because then you can transfer it to this area
where self-interaction occurs

i.e. interaction of a person with himself
a person sets current tasks for himself
and they are also solved by yes

the fundamental principle is solved
autonomous control area
develops into an Infinite System

i.e. a person is with himself as if
Well perhaps in some kind of internal dialogue
even if a decision is made

it means that man is initially absolutely free
he can only make decisions
which he himself sets for himself in essence
into implementation

and it turns out that according to this principle
he starts interacting
and expands into Infinity yes

and here in Infinity
this area is exactly the current task, yes
it allows you to control
fast-moving sudden situations
or situations that need to be resolved
Well there for your own benefit yes

if for example you have no time to study
or do you think it could be
it's just a minor problem
but you have to get benefit from it

so then it turns out you're leaving
here in this actually superfast region
which in general Well, let's say it's called a region
there is instant action
there beyond the current task

although it turns out this is the current time
we are now acting
but we take and separate it as a system of ultra-fast action

i.e. we act so quickly
that we do not attribute this action to any area at all

by the way, God does the same
He interacts with S.O.B.
on the creation of matter
when it does it at super speed
the region does not have time to decide
where is she
and space arises

i.e. the following method of creating space
such high speeds that it is not recorded
in some time interval yes
this system

this means that space is born in the structure
Well as if a high-speed output of time or the absence of time

and that means this internal platform
which we recognized
as a system for example there are current tasks

and it turns out that we can always
change any information
because the information comes in time
from the point of view of Perception

and that means we have a kind of elementary key yes
by the way, it looks like a key system
reminds me at least

so key control is simplified by the way

if you need to move matter
bring it into key form
the matter will be more pliable

so or there on the key shape
you can put some kind of media and pull it through
Well for example, there are even some actions that can be done
there to do with physical elements, etc.

and it turns out that we have some kind of key form , yes
there is such a concept as the grain shape
in general, this is also a key form
some key image yes

and this is where we bring out the control
and then it is clear that any information can be modified

you can create the meaning you want
of course in the best way for everyone

and you can, for example, make acceleration there
in action
there in verbal expression
in Thinking
i.e. you need to think and speed up the speed
so that the speed is higher and spread to everyone

can you think of one thought
well, there's some positive thought there
in a particular problem
but without further considering its practical significance

you can, for example, cure one person there
means spreading this signal at high speed
on all
then cure all the others for example
Well, who do you perceive in management?
simply because you are just spreading the seed
i.e. you reach super-fast speed

you can simply form the initial impulse
cure
spread it at high speed
By the way, this is a very powerful treatment technology
for those who are even starting to study

increase signal speed
and that's all

in a normal state to go into Reality
you just need to consider it
in a normal, as it were, state of a person
well in everyday life in that state of perception
in which all people seem to just go about their business

and then just translate the thought
in management in Reality yes
but I teach to always work simply in a normal state

i.e. a manager from my point of view
Well, that's what I think
and practice shows that according to my technology
you can always balance

The perception of any person is yes
if there

Moreover, a person can always have his Perception
so set it up the way he needs it

after all, he is a manager, he can always take control
to the desired angle

There are complex technical systems to master, for example
what are the problems of identifying phases in information
compare these phases with those well as if by a process
what does this correspond to in technology

get just an image
and this image is knowledge
or there is language in general or to draw out some situation

i.e. there is a situation
pull out the task
it's easy to adapt to it
and the solution is obtained not because you are there
you are investing too many resources

although if necessary you can invest the resource
but you are responsible for the whole civilization
through the Macrosalvation system

and it turns out you are always working
as if at the level of constant control over the Macro-situation

according to my Teaching
man always works through the Salvation of all
it means at some internal level
Well, as a rule, this is the level of the Soul
or the Spirit beyond such developed into Infinity

i.e. there is no talk there about the development of the Spirit
there in terms of some creative tasks

but you can just take any person
and mechanically simply stretch the light of the Spirit into Infinity

Anyone can do this
small, big, adult, etc.
I specifically separated the small and the big
from the concept of "adult"

so when do you start working
let's assume in management
it turns out that if we make this separation
Well, maybe , well, he's tall, but still young , yes. For example

then it turns out that we
rejuvenation technology by the way
we find in the growth structure
because the area of current tasks
always stands out in the solution

Let's look at the height of a person
it has a small size and grows
but his age there is not very big, for example there it means

and when he increases age
he's constantly increasing his size somewhere
concentration of current tasks

This means that the rejuvenation system is very simple
walk along the same trajectory
just take and make current tasks sparse
past tasks

and the past is seen here as if from a different side
Well as if from behind, let's say, yes, of our own

so you take and thin out this area
and that's all
rejuvenation is mainly on the skin by the way
here in this technology

because in many technologies
rejuvenation of internal organs first
because when a person works
it works as if from the inside
and work is rejuvenation

i.e. many people perceive it
that the work is somewhere in outer space
and so the signal should come from here

and very often it is because the person works
Push
this organ is somehow rejuvenated

i.e. at this moment he is not somewhere there
the signal seems to create
and he creates them, by the way, also through the current tasks area
here's the inside
it works mainly from the signal start level

and already traces with Consciousness
Well, God created Consciousness
and He also tracks the signal
but initially God always creates the signal
in yourself

it's just that God has a difference
that He is both the initial and the final
as if it were one thing for Him there yes

so it turns out that for a person it's simple
here he needs to logically connect it
and that's all
then it turns out it works
under the same coordinate conditions
and the same has data on management
precisely in the area of current tasks

and based on that if we want
for example here already means yes here about rejuvenation
this topic if we consider it further

then here in this system
you can get more external signs
on the skin
well, it is generally accepted that a person gets younger
when well as if on the outside it is not necessarily only skin
It is precisely by external signs that a person becomes younger

but of course this technology needs some improvement
as if rejuvenation of internal organs
it's about the same
that the internal organs become younger first
then it becomes visually visible

and here it's just the opposite

and how when we start doing
Well like scanning such an internal transition
from one region

to another
there is internal rejuvenation external

then we see again
this is this system of translation of information, yes
into the structure of decision-making as if within oneself

i.e. a person is somewhere at the organic level, let's say yes
inside yourself
makes some decisions about himself

i.e. the organism is
as if such a system is quite self-sustainable, yes
autonomous and this is clear visually

and when we start thinking
but the organism
Well as it is generally accepted
that he is in some kind of automated mode
sometimes it works
and some level of solution is coming

here we need to realize where the physical body works

in this area of current problems
needs to be clearly highlighted
as if the structure of Thinking is precisely
well, related , so to speak, to the physical body
should I highlight the area of thought ?
which corresponds to the physical body

and when you start to highlight
then there are some concepts there
some other type of body, well, mental, etc.

I don't really share
in my technology we just work with Consciousness, yes
fraction element of Consciousness

but here is a selection from the thought
area that corresponds to the physical body
does exactly this action
as an action of combination
physical body
with this element of thought

but the thought, although it is as if we take some element
it's all interconnected anyway
and we still have a universal level of interactions

and here the sooner we start working
how to think through and solve more options
then the faster we enter , as it were
in integration with the Infinite level at the logic level means

and it turns out that from some level
if you have a lot of very, very specific tasks
then there is a level of just viewing state
so where are you actually there line of tasks
or there are implementations of tasks
create due to the fact that you are on it
and look
and create

i.e. you work the same way as God does
it is precisely in the action of Infinite development
you don't just watch, but all the time you seem to add something

this is the additional part
this is the development of, for example, your physical body
state of the physical body

and then it turns out that you always
always control everything that happens around the body
at a certain level
exactly the current ones, exactly those kind of close ones

but by the way they look like current tasks
because there is always some movement going on

and when you start to see
what is really an area
which always controls your physical body

i.e. when you see it, in essence
and at least once or twice worked
It is clear that you personally cannot have any problems
some real ones there , well, with health , etc.

so the question is of course in other people
how to extend these areas to other people

how to make your sustainability

allowed them to live indefinitely etc. yes

that's how God does it, he gives knowledge there
some people perceive and begin to give to others

i.e. the more people perceive this knowledge
the more effectively you spread to everyone
wider yes it turns out

then the task is in the area of current tasks
there is a very clearly expressed
it is precisely the educational principle
of this space of action

i.e. you must show it absolutely clearly
how do you convey information
Well as if at least to myself

how a person, for example, studies some subject
he often, well, quite as if acts as some kind of analyst, yes
actions of his

i.e. he looks at the knowledge he receives
being there, for example, in a physical body
and perceives knowledge as external
well, some self-esteem but no external observation

self-esteem is there
but the actions do not go beyond the control impulse yes
i.e. he looks and counts
That's how the teacher will look at him, yes
if he takes an exam somewhere there at an institute

and for example, he is at the same time
in the area of just one's own, as it were, Perception
something like this , somewhat localized, or something like that
here in the space of Perception precisely

it turns out that based on this you can immediately understand
that a person simply sees what will happen to him in the future
at a certain stability in the current task

the future is starting to come here
in the form of a specific identified signal

i.e. in fact, this is a technology of controlled clairvoyance
In fact
and of a prognostic type
not in real time but in future processes

and based on this we can basically take control
Well, some of them are like peculiar lines
they open up
and you can take what you need from the future actually

i.e. there are still some linear, well-known options
which are clearly expressed by that
what if you go to the store
where do they sell it for example there is knitwear
this word is written conditionally
that means there is mostly knitwear there
there, for example, come up with something there are spare parts for cars
it's complicated
Well, for them, maybe in village stores.
such a combination exists

but these lines of action, for example
there are absolutely clear
Well, at the very least, they are included there
the whole range that is possible
This is an extreme option, but purely logical

it turns out that we are seeing the birth of logic
i.e. where does logic originate for a person?
Well for example, a person should often be asked
if you have time, for example, questions

on some fundamental management processes

it turns out that in this case
still, I give often to a greater extent
applied control systems

but if we make it so that they are
and fundamental in knowledge
then we must know the root of any situation

and we often come to this conclusion in management
what we see is that how I do the management there
there at the moment of the seminar I do the management
where people participate who listen who will listen

and it turns out that here I start working in this way
that something very useful is revealed there
is it a system of action for other people?

for example there in this case
we have identified the following situation here
what how to reveal logic
these are the lines of the logical plan of behavior
where do they come from for example yes, a person has

Well, there I am, as I said there
on the map there are comparisons of things and stores
what is here that really goes in
into the realm of ordinary logic

but now if we want
means to make everything logical and understandable
logic is a very convenient management tool

and that means we need
For example there for unusual processes there
for processes there may be not only unusual ones, well

by the way, here is the process there for example resurrection
from the point of view of the Christian faith there already
we are talking about millennia of faith
On the contrary, it is the most fortified
i.e. a huge mass of collective Consciousness
developed at the level of the real fact of the resurrection of Christ

it turns out that based on this
this is just work on a collective level
it's not that difficult there

but precisely if there is some complex task
in terms of uniqueness there
or in terms of some kind of super complexity

here it can be initially identified
in the control system
then here in the area of current tasks
we have a nomination structure
this logical phase, as it were Yes
creating a logical phase
as a mechanical system
i.e. we can build logic like some kind of constructor

for myself

and having this model
have already an exact solution of a logical type

this is very important
because it's one thing to view the controls
due to the diagnosis of Spiritual
then everything is clear

but the speeds are very high
and a person has to, as it were, Well, it's often necessary to pull
the structure of Consciousness
following the signal as if diagnostic yes
gets distracted for a while
and sustainability requires constant, as it were , rescanning
well, there is no return to the situation

Diagnostics by Soul is a stable phrase
Well as if as if on a phraseological level
this is even a certain phrase there is a certain Perception
usually this word is fixed
which is later recognized
as in the current level of management

i.e. even the phrase does not immediately appear
and it turns out that it's time again

and the problem of stability
this is again a separate task
because the Soul is the level of self-knowledge

and when you come back to this place again
there may already be other tasks there

you solved this and what next yes
there are already tasks there

generally predictive of some future
you decide there
By the way, you can use this technology
watch the Soul
what your Soul decides at this moment

it turns out that logic is often very good
and very well indeed as if the necessary level
constant monitoring of the area of current tasks

i.e. this logical phase is enough
put
outline all tasks
and so logic is constantly in control
at the level of well as if some kind of system
so focused
and at the same time, well, a feeling of some kind of tension
as if it exists
that you are constantly
in interaction with these tasks
and this is already management

i.e. this is the correct habitual Perception
because the usual perception
it is often precision in management

if something is not usual
we need to think about why
that this is either very good or there are some problems yes

so if it's very good then why
i.e. why do you need something very good

i.e. it is best that I certainly do not call
there are very many things to detail there
and relate to something
maybe with unnecessary caution there

but nevertheless any unusual signal means
requires some analysis of the situation

and that means Well, the easiest thing is to just take it and understand it exactly
what is easiest to find there
just look at the information
see where the signal is from
recognize
what part of the future is this

what is there if it doesn't bother you too much

or in principle how do you like it or does it all the same
well , you recognized the signal and move on

and so to sort of recognize
this is the signal at the level of a stable plan
unpack it well

again we have to single out the fraction of the future
translate into logic
and also work in the area of current tasks
but already there, as if in Infinity

i.e. we take the structure known to us
here is the mechanism of the current task
we transfer it, this system by the way
when transferred to Infinity it decreases

and by the way, that's how the management works there
that it is enough to start working with the word at the beginning
the word works as a universal system
and always has a creative meaning

pay attention here
what is the level of management where the word always has
only creative meaning
any word

this is a very unique area
but she is actually growing up
from the current task area

because in the current time Norma
any word spoken in Norma
it still doesn't produce anything negative

and when we, for example, output control
here in the logic of seemingly Infinite processes
then it turns out that again there is some kind of nodal point
Well some kind of edge or level of rigidity of action
means the level of self-knowledge of a person
in the area of the current time

i.e. why do we set tasks
and who wants it for example
is engaged in self-knowledge and self-management

and in the educational process
especially at school age
For a person, this often happens as a necessity

and if you think about it
what is this interaction with real life
and what is ordinary education, some kind of school education

then it turns out that yes, at the school level of education
it's like a volume of knowledge
and this is precisely the management of Reality
this is how a person can manage Reality yes
at any time

then here is a combination of known knowledge
How axiomatic does such a principle sound?
as an axiom, and such a specific one at that
by combining known knowledge
with the scope of the following tasks

there is precisely this logical phase
which is emerging
it actually folds into a sphere
and such a completely flat sphere
there is even more future in the beginning

means that this sphere is already a favorable future, as which

this future is already visible through the Spiritual there
some kind of mental diagnostics

this area is starting to work
at the level of Infinite space
i.e. the sphere turns into Infinite space

once you go into this
in general, it's enough , well, it's kind of like a conditional sign, yes
looks like
in fact, it is a specific coordinate system
this is a specific space

transition of the sphere of the future
in the field of current task management
into Infinity
this is actually the solution to all your problems
at the moment, taking into account control over future events

and when you start to see this situation
then you see that
on logic
on the Spirit for example Yes
on Perception
what do you perceive in this state

by the way, you can perceive the entire space of action
physical space

so you can see calmly
your promising future there
which in its creative aspect never changes
it is here that the creative aspects never change
when you are already working in the area of the current task

very interesting quantity
that work with current tasks
does not change the strategically good future
because this is the property of Infinity

then it turns out that you will definitely achieve this here
maximum result
at this moment
i.e. it means you have stable management
you will always make the management
if only this transition could be made

and making the transition as I said can be very simple
at a certain distance from space
as if external control

and the transition of this sphere
in the area of Macromanagement

in technology by the way
to work here more focused
in this technology is it more or less fast
and just try to work

then you will be able to do this technique quickly here
this technique is quite universal

controls
and there are small and large tasks
the main thing is that this is the usual area of current tasks
she is very familiar

as soon as you work it out
This is the most powerful device for understanding control

Thank you very much for your attention

I'm finishing the seminar for today
