

GRIGORY GRABOVOY
The Teaching about God
Spiritual Vision in Eternal Development
19.09.2005

The topic of my seminar today
This is my Teaching about God
Spiritual Vision in Eternal Development

in this topic i show
how it is necessary to develop
such a concept as "Spiritual vision"
as the ability to see with the Spirit, i.e. in fact
something that we can, *so to speak*, see at any distance

there is such a thing as "controlling clairvoyance"
and yet Spiritual vision is more
a more natural state of man than
technologically speaking, *yes*, expressed *yes*
controlling clairvoyance

so here when we talk about that
that we are considering a complex of concepts
such as the vision of the Soul *for example*
or the same Spiritual vision

here you can see that it is the vision of the Spirit
what is Infinite quantity
This is the most practically adapted vision
from the point of view of both actions in Infinite Control

and the very essence of Infinity
in the *very* substrate of vision, *yes*
or even the Spirit, *so to speak*

i.e. she carries within herself the optics of the Spirit
structure as simultaneous
as if the level of information concentration
about what's going on

and simultaneous action

i.e. in fact, on the one hand we see
if you look closely
what does the Spiritual Vision movement look like in general

that with B infinite very high in principle speed
i.e. the movement of some photons is visible

if you ask yourself the question
and what speed do photons have?

speed is infinite

nevertheless we
by the way if we understand we see a linear flow
towards, for example, concentration
where we look

and at the same time
At this point we know about everything

knowledge is also a super-fast impulse
Infinite in speed
which practically overcomes the same thing
but as if on another level, on a more logistical level

i.e. the level of coverage of Reality, understanding of Reality

and it turns out that if we comprehend Reality
then this is the Infinite system of knowledge

i.e. the very level of understanding Reality
this is an infinite quantity

when we take some amount of information
we are trying to take it under control
at least consider
this is also an infinite quantity
i.e. emanating from you is also an Infinite quantity

and now if we start to look
how the next element of vision is reproduced
i.e. how does the next impulse of vision occur at all?

for example, we noticed something
some kind of control was obtained
and then from the point of view of vision
a continuous quantity is generally perceived by a person

just as you continuously perceive
for example, the body yes
integral quantity

and if we begin to consider such a process
as a continuity
from the point of view of visualization of the concept of "vision"

i.e. an infinite quantity that has no

as if discrete systems
just think about it
how is visual information distributed in general

then it turns out that from the point of view of well , let's say yes
some elements in development

Here

Well, here are some final items
we need some level
just kind of make selections from this information

and here is this sample
which determines a certain completeness in the impulse yes
means some kind of integrity or autonomy

This selection is actually produced by the human body

Well as if in automatic mode

i.e. the projection is going on
specifically on the structure of the human body
and this impulse is a completed level
as if in the first iteration of vision

i.e. when a person looks into external space
First of all, he sees himself, it turns out
but at Infinitely High Speed

so it turns out that from the point of view of optics
the body itself
this is in space-time, so to speak, on a global scale
in the absolute sense
this is also a value
possessing Infinite speed of reaction of movement

because if you think about it
This is how God perceives His Body

He perceives it the same way as everything else.
i.e. His Infinite in speed thought
corresponds to the Body too

i.e. the Body, although it is, for example, physically expressed

like a normal person
has the same as all ordinary people
the speed is precisely Infinite
from the point of view of the things related there in space and time
quantities

so it turns out that we have
a certain set of events

in this well in Spiritual vision
when we know
what is and where are the criteria of Infinity
in the indicated quantities
well, in such as the physical body
some problems tasks
or some visualization systems
there is no concentration of attention

and so that the event would be favorable
you need to be able to allocate in a timely manner
in Spiritual vision
the event itself

but still mainly influence that
so that this event would turn out more favorably ^{yes}
or is it exceptionally favorable ^{there}

that's if the predictive vision is highly developed
i.e. here is the light going into the future, it is wide

then you can just do the right movement right away
then the negative status of events ^{does not} affect him

The world is at peace
and you bypass negative events
this is how your any physical Reality is formed ^{yes}

but there is such a status
that a person may not pay attention to something
or he just has a lot of things to do
For example ^{there} a man must save
from some problem of someone ^{for example} many people

this is how he should save
^{for example,} he must solve this problem in any case

it turns out that this is the negative status itself

it is connected as if at the beginning of time
not specifically with this person
to save or cure a disease

so what about the external system?
and yet he is here
in your desire to save, for example
forced or so to say let 's say in my work
which does it largely on its own
everyone who is involved in management

and here it turns out that interaction
with a collective level yes
with a collective field of so to speak information
with collective movement
it happens in such a way that here it emerges
exactly the specific path
where can such a comprehensive approach be implemented?

some completely extraneous quantity
which is related
exactly with your physical body there
with your vision with your action

it turns out that when you, for example , are treating diseases there
look at the structure of future events
then if we recognize the movement of the optics
in the form of photons in the form of Infinite systems

you can describe specific connections, for example
how, well, let's say, located in a certain place
so the control system is like this
such as there is concentrated optics
gets into the Infinite System there
how to become Infinite

and we study this external system
we begin to see
how the human physical body is generally structured
from the point of view of adaptation to any possible value
there are, for example, some future events

and now we begin to see
what is this adaptation
this is a layer that is like well it mixes
there are different systems of events

and it turns out to be some specific value
i.e. for example, there for a person to be cured
it must be some neutral layer
inform that an impulse is passing through it
throughout all space and time

and this impulse means health
but at the same time if a person visualizes
the magnitude of the number
through which the control passes
for example, this is how digital systems work, yes
where the number is not a carrier of information
and it is precisely as if the substrate is a support system

or this is how words can work
which describe Infinite future processes
and at the same time they draw from the future
some local part, etc.

you can see how
this is exactly how the distribution of information is built

where there is some kind of substrate and some kind of action

if we start to sort of separate these systems
and consider what
and the backing yes
i.e. the carrier of information of action
Well as if some kind of textural content

target content of information
all this is an element for example one
in the outgoing impulse of action
it turns out that the physical body of a person
in this case it is practically the same level
which organizes the movement of future events

at the level that there are many impulses
they start to come down to the control point

we have more accurate
more concentrated management
and ultimately if the concentration is high
events still happen

so it turns out that if we

for example, we have a control problem like this
what you need to bypass in Spiritual vision, let's say
some problems are one task
and if the problems still have to be solved, influence yes

then this is a different task
where Spiritual vision actually allows a person
influence the situation in a controlled manner

i.e. the ability to change the situation in a timely manner in future processes
if the situation is for example there Well, it is considered that she is a problem there

and at the same time it is precisely the management that comes from the
possibility
let's say in some situation of some kind
where required for example
well, the use of Spiritual expanded vision there
from the possibility of using vision

to gain some kind of experience
for example, experience concerning that
how to spread this vision
For example there in the Infinite magnitude yes

here it turns out that if we have
for example, this problem of spreading into Infinity
we must do every segment of management
Well as if independent
simultaneously located
there Infinitely there close to man
and at the same time universal

i.e. any finite systems of space
we must move to the Infinite phase

then we can well Means well, let's carry it out
some process analytics
which occur, for example, in the development structure
there for example Spiritual vision

when we start to look closely
from the point of view of the direct control system

it turns out that here the analytics itself rests on that
what do you see specifically your own path
on information

and your physical body
at that level it means it merges
so with the information level there is information there yes
about the physical body
where will it be located what will be its tasks

if we consider the process more discretely
and we simply consider future events
which unfold in this way
that in the future, for example, the position of the physical body
it's more of a control part yes
your structure of personality works

then here we can combine
the concept of "first impulse"
where do you see the structure of personality for example

then you can move on
Well there for example the second impulse
do as an investigator
and now there is a unification of two impulses

at the level of Infinite development
shows
that you can do the management in this way
to avoid some negative events
you can proceed from
from its own autonomous system of understanding events

i.e. if we take and somehow comprehend events
then it can be understood in different ways
that's exactly the understanding that is targeted there
there is a quick solution to some problems
when there are especially urgent actions

it is precisely this understanding
also an element of Spiritual vision
vision of the Soul
where exactly is the Soul's vision parameter, let's say
added to the concept of Spiritual vision

or even vice versa Spiritual vision can be added
for example to the vision of the Soul

and here we see that different types of optics, for example, yes
in Perception
The soul of a person, for example

Spirit

some kind of radiation of the physical body
or just a physical body

these are levels that interact frequently
not at the level of any intensive actions, for example, yes
aimed specifically at searching for some specific system
those. search for example or some specific situations?

maybe it's the whole system of this integration
can be built
at some one level of management
and then the level that is near the control
it starts to be realized as if immediately
in a single impulse

in the treatment of many diseases there
must have
as a control impulse for example instantaneous yes
and the impulse is prolonged

i.e. to be able to highlight in the management structure
precisely in Spiritual vision
fixing systems that are generally accepted yes

change this negative system, for example
you need to go to the control on the information plan, for example
into some system that is
well, it's quite well known
For example there is a system that is generally acceptable
air for example yes water outer space

and through this system you can already enter
into the structure of human thinking
and transform Spiritual vision into an adaptive version

so how can such control be possible, for example?
to do to every person
to see that there is collective management

i.e. it is enough to get the exact impulse once
you are entering into a collective resonance

i.e. in order to do this, collective management is obtained
doesn't necessarily mean Well how to dock call
there are some external more powerful control systems
then coordinate them

can be done based on natural levels of action

so it turns out that if we, for example, set a task
use Spiritual vision simply as a tool
which develops as if by itself
and yet it always exists
somewhere develops into Infinite time

then this is possible
but when you give an active control system
when you give a structure it means such an action
what can you clearly show means

Well, what level of information did you bypass, for example? Yes

those. development was not allowed
some terrorist attack negative information
or you acted on some information
through some kind of control logic, for example Yes

that's when you start to see
these are the ones, actually
informative or real physical things
which are also information
which begin to interact
in terms of the next result

then it turns out that it is precisely Spiritual vision

more developed and aimed at the overall result

i.e. the focus is somewhere in one place, for example Yes
but it is precisely the focus on such a general result
This is the level that allows a person
precisely when moving towards a better result
to be able means how to make a decision abstractly
regarding, for example, some logical models , yes

and here Spiritual vision can very usefully show
development structure for any situation for the future
then it becomes easier to accumulate control
and for example to achieve completely specific ones there
control options

and this option is precisely the option of seeing with the Spirit, so to speak
he works most clearly
in any external global systems
or there are relatively large systems

although it can be applied in a particular case
right there for example control
there is control over the region for the area

and here you can see that it is she herself
wear and tear of the control system yes

i.e. there is a certain resource in the control system
but we applied some impulse
and then you need to apply the next one as if
impulse in optics
photonic fatigue begins to wear out

for example, there is such a term
then here is this next level of control
it is still the system that speaks about that
that the next management already exists in the future

here we need to clearly define
that the control coming from you at this moment
this is the current management

and the next one already exists in the future
and there comes even from another source of the future

here it turns out that we see from one side
continuity there
Spiritual vision with the physical body
and movement in terms of general development
through the physical body of a person

including this is a status, as it were, personal yes
the one who does it

and therefore we can consider as if the status
exactly like the Eternal Spiritual development
so that in Spiritual vision
status for example negative type

i.e. influence in some negative way
for information
it doesn't show up at all
because the Spirit is a universal value

and the Spiritual level
it means quite simply
like, well, almost exactly that level

where there are no problems of a legal nature
there are no other problems at all

because when we start thinking about it
how to apply this system of knowledge
very specifically there in the applied aspect
to your personal actions

then the universal part is this one
I have just said it to a certain extent
it becomes just one of the segments of information
and that means this part is universal
In general, it has practically no effect on that
how do you choose your next system
Well, let's say applicability yes Spiritual vision

i.e. it looks like you
at the point of contact with Reality
have some amount of information

this volume of information
practically speaking, it increases
due to the contact system, for example Yes

and if one of the volumes starts to become isolated
it turns out that this is where it arises
some kind of dissonance associated with that
that to a certain extent management
precisely in Spiritual vision
need a high speed system

and the isolation itself does not allow one to isolate oneself
systems that are there yes

as a control system

and it turns out that if we start
to further develop such vision
so that we can see the details of the events
For example there are details of current events around
or there are future events

then here it exists
well, a special axiomatic technique, so to speak
based on certain axioms

i.e. everything that was said in today's lecture

exactly up to this point
this is some kind of well introduction some kind of level of management
where we start to analyze the system first

and then we need to come to concrete action
and here is a concrete action, after all, too
well, practically speaking, let's say a certain level of information
which allows you to work
as with the future events system
so in current and past events

and if you continue to go at high speed
and get into the formation system
Well as if here are the systems of development of the future, current and past

you can see here that this is actually the level
well, which arises when turning to God and in believers

and here we begin to see
that the structure of the action is also determined by the fact
what exists
well, something independent from computers
control systems mean

and yet a person is able to control everything
all external systems

i.e. this is the level of Spiritual vision
must be absolutely absolute
i.e. axiomatic or something

all external control systems
can practically be projected
like through for example there is a negative level yes
so it turns out through positive
well for the system itself

and so in order to display the structure in analytics
as if there were some positive aspects in management
here it turns out that we must identify the fine links
where are the representatives located anyway
these actions

i.e. in the conditions why they, for example they don't work there
for example, in some cases, let's say broadly
there at the beginning they do some of their own events

and although here, well, well it's up to everyone to work in their own way
but I recommend earlier if possible
to leave the system without your own actions
there in some place there
into some kind of system of future events yes
i.e. you start doing something like profiling the system
i.e. you send your information element
at the level of specific actions, yes

you can even view it
if a physical event occurs
some kind of exit there, some kind of movement there
well, at the level of thought form

and that's when you start doing it further
those. profile
then you get a favorable impulse
it is caught somewhere in this place, well, about 20 centimeters away
from the chest
where does the management related to that begin?
what does the action of people mean yes in
towards the development of Spiritual vision
this is practically what these people are
for example, they are watching what is happening there
and they start to do this sphere, for example, like this or faster

i.e. here is the ability to show in Spiritual vision
there is something instructive here or something
educational moment related to that
what if for example there is one person who has
a system of such visualization and such vision

then the second person must, as it were, necessarily possess
on the principles of equality
and if there are a lot of people there then it means accordingly
managing this situation is much easier yes

if for example the collective Consciousness is used
then it turns out that we have

as exactly such a target use, or something like that
in the collective Consciousness
this means we have a very specific mechanism
which does not depend on external control
and which can exist autonomously, as it were
in any system yes

i.e. we receive what is with Spiritual vision
you can find some autonomous control for example
and through this control work as much as necessary
i.e. for example there on macroregulation
for some specific tasks

and so if we start to analyze such a process here
what we need to understand is what is actually possible to do
with the simple development of Spiritual vision in specific situations

then it is precisely the preceding, well, such a fundamental base
where the axioms act as there
very simple concepts

so here you can see very clearly
that is for predicting future events
you need to be able to correctly take into account the concepts stated
fix control at one point
how to stop pause at one point
where the impulse coming from the body is minimized
and is fixed at some point

and near this point
the following control occurs
i.e. the next level is searched for, etc., etc.

and thus until the control level is closed
on the cycle of the initial action

and that's when we start to trace
as if the entire Spiritual level
it turns out that in the very impulse of such Eternal development
Means well it is in this impulse
firstly, both external and internal values are yes
from the point of view of the Universe

here in the very impulse
we can detect a clear gradation
corresponding for example there are forms of Reality
both in the past and in the future
i.e. a kind of mirror image that gives in the future
For example there is one level of events favorable

and at the current time, well, something needs to be fixed there, yes

if we begin to see that movement
Well let's say in your management this is the level

which allows you to see details

then in principle it is already clear from here that then
from the point of view of external influence, for example
if details are visible
then there may no longer be any external influence yes
or it won't be exactly

here it turns out that this is Spiritual vision
this is the path that allows a person
at the technology level it means making a precise decision
by management
and to receive such an answer means
which has an infinite speed of propagation

i.e. the answer received
if she accepts the personality correctly there
it starts to spread out there to those places
which for example there this person knows yes
from the point of view of assistance in management

when do we start working
from the point of view of Spiritual vision
in the conditions of existing tasks yes
attraction means well those people
who, as technologists, work on management

if we start working together
it turns out that none of the systems
there is no external counter-control there
he won't be able to do anything anymore

well, that is, Spiritual vision united on a Spiritual basis
This is the most powerful system of action in general
based on the fact that from the point of view of information
that each next level
it is reproduced at a favorable level, so to speak Yes
more stable than even the previous one

then it turns out that here
it all comes down to compliance
just the technology of work
with such a concept as "Spiritual vision"

i.e. the ability to develop so much

what you should do is practically

to see the situation accurately through Spiritual vision
right down to the specific physical elements

and at the same time be able to manage the situation
which on the Spiritual level it is as if a little distant yes
from tasks, for example, there is a logical level

and when we start to analyze this situation
then we see that there are quite a large number of situations
that's exactly what's happening as if not needed

because there is no objective phase of communication
between for example there with the right hemisphere of the brain
and the cerebellum yes

i.e. the ability to advance management in such a way
what we are practically beginning to see
how does an impulse arise for example yes in Thinking
how it develops
what it will lead to in advance

as soon as we see this structure
then it turns out that in the future
if we want to apply it there, for example
it is precisely the specific type of management there
Well, it's more like, let's say, an external souvenir looks like this
if we take there we give someone a control system
for use yes

but you can get your own control system
already in a specific version if we
Well, we'll transfer almost all systems
into a system of complete control over the situation

then it turns out that we
well at least if you get there perfectly
then we have
at one point as a local event
so it means element well which one we correlate
there with the system of all future events
where exactly your specific part is revealed yes
favorable for you

and when we start to look at this
what can be done with Spiritual vision
from the point of view of there Infinite development
it is very clearly visible here

that the first task is on the Spirit

complete the tasks that you need and move on
to gain further experience further management

so it turns out from the point of view
a current analysis of the situation
ability to work with Spiritual vision
this is the ability to work actually often
quite a large level, well, the Macro level of management
and with a lot of people

so it turns out that if we start managing
to do it there universally and according to Macrosalvation
in this case this element already exists
we need to do something like this

i.e. there is universal Salvation, it is clear if it is done
there some number of times
and then naturally there is a level
independent work of a person

and here is the ability to work through its structure of actions there
through its further management structure
so this is a level that is generally similar
he is on some kind of self-education system there

when the ability to work
it is also a vision of the situation
and at the same time the ability to distribute it into segments
so if you take the atlas of the Russian Federation for example
then here you can distribute it into segments
right now we are there in Moscow and in Russia

the ability to identify a specific point of information transfer
and at the same time you should see clearly here
that's the next step
this is the step where there must be absolutely precise knowledge
there are all the controls that are happening

and if for example we are considering
control system in this way
that the system of Spiritual vision itself
it is a system of the same thing as if with sight, yes, as with eyes, yes
Means

then it turns out that here is the transition

from the vision of a person, well, ordinary physical vision
to vision yes let's say of the Spiritual plane
at the same time, of course, physical vision is completely preserved
here is this transition in the plan there is a description of the task

it is built on a logical level very simply

what is the level of this transition, actually?
this is still a collective level of reaction
in the collective Consciousness

and that's what happens if you think about it
and conduct statistics in management
why is this still Spiritual vision
it is necessary to connect with the Macro level in some way
personally or another person

so this is the level of interaction between people
we start to pass on the next yes
i.e. well, that means if we consider the principle there
namely distribution in management
from the point of view of the beginning
i.e. from the end as if further

when we start to analyze some system
what is such a system in prognostics

then it is important to apply the principle here
for example, quite deep there, delving into there
into the control system according to the full scope of action
where is the question of Spirituality in vision
it is considered as a question
which is located as if
there near some regional systems of buildings

and that's where human health is
This is more of an ideological system

why, by the way, many drugs are now being made
there with two substrates yes there they advertise it
what does that mean exactly, that's the second footboard
Well like a footrest
it basically gives a level, as it were well secondary system

and here is the signal wire through it
in Spiritual vision
should not change the signal

that's how it happened

for example in analytics what if the signals don't change
then Spiritual vision is exactly like that
that they need help
and the vision of a specific person
so it will spread to the desired point yes

because after all it is after all
anyway, some information is being spread

and when we begin to see
what is in the concept of "Spiritual vision"
here you need to see first of all
that often the discrete meaning of management
flows slowly, well, there faster in the usual system
let's assume there are some external events there

here it is clear that the concept is precisely "Spiritual vision"
this is often a personal concept
i.e. it arose somewhere at some point yes
or there is a variant that arose there in some book

and when we start doing management
there is a general level for one task
it turns out to be collective management
maybe completely as if Well, counteract
any other opinion
than there are tasks of Macrosalvation

and if we consider here
the management process in this way
what itself for example there is a controlling clairvoyance
this is the allocation of specific items there in management yes

and in Spiritual vision
major complex level of action

and therefore it turns out that based on the Spiritual plane of vision
you can see events as if without entering the system
Well, let's say it's secondary, yes

i.e. skill in one point in one place
keep control all the time
as far as it is necessary

when you start to see this structure

then it turns out that there really is Spiritual vision there
It was observed among those who are mainly in management there
spent there
more like optimal for Macrosalvation
point of view

when we start to consider the question of that
what is in Spiritual vision
there are those details that I actually cite there from experience

what does it mean, clarification is still required
there for example, I can there , for example , there in Spiritual vision
get the first control system
any there as a practical example
I give some examples

then I can get clarification
due to the following information system there
it turns out that I work with individual information
when working properly
Infinity is there for example it increases

it turns out that if we start asking ourselves a question there
who is there or for what purpose
there is a Macrosalvation management

it is clear that there are quite a lot of weapons
for example if you use it there
here is how a segment of the collective Consciousness

there is a concept there are a lot of weapons somewhere
there's a nuclear buildup there

if we consider that this is a system in the collective Consciousness
exists as information
here's how to bypass this system

for example, it is possible through Spiritual vision without touching
and just moving on
and it begins to disband behind you
i.e. go to the point where the negative system is disbanded

so here is the axiomatic level
next
in Spiritual vision

Well Means Well, I postulate the following information
what does it mean the faster you move in control
the faster you develop ^{yes} in management
the more accurately the optics are observed

and that means

Well or something so pronounced related to statics
ongoing processes
from the point of view of Infinite development

and here you can see that if we, for example, apply
Spiritual vision
as a system ^{we assume there is} Infinite development

where we control the structure of the Spirit

then here we see

what is the structure ^{for example let's say} a general resurrection
as an ideological and practical task
which will be achievable there in any case

here is the level of Spiritual vision, there is insight
where do they get unique ^{knowledge}
church ministers

This is a system that allows you to cover
Well, it's practically a regional level there.
just some kind of information area system
to make it clear

that there is external control ^{there, it is two-way} ^{yes} For example

and a person who begins to practice Spiritual vision
from the point of view of the logic of control processes
he's starting to come to that conclusion
what is very important in Spiritual vision
element ^{there well, there 's like a contact,} ^{yes}
with the same level of Perception
i.e. with the same level in principle, ^{as it were}
development of another person's vision ^{yes}

using another person's vision

at the same time, the person himself
health becomes more favorable, better
while in the presence of
^{well,} there is some preliminary information about that
what is there as a result of the action based

on the application of the structure of Spiritual vision
and get some situations

and these situations are reproduced
right next to a specific person
then the question arises
what is in Spiritual vision
It is important to be able to correct the situation in advance ^{yes}
conducting there the structure of action by the Spirit

and that means we just have to strengthen it
all the information relevant to that
Well, that's how the influence occurs
specific information ^{and} on a specific person there

and that's when we start to see

this is the level
already ^{as if in reverse} ^{and with} such a Spiritual vision

then it is clear that ^{in general} the structure is like the action of information ^{yes}
into Infinity
that's how quickly you learn
^{for example,} the information you need

i.e. acting in Infinity
I said that Spiritual vision
it is the ability to quickly master information
constantly improve
the system of external and internal perception

then it turns out that you are gradually moving on
on the structure of Spiritual vision

and based on this we can clearly say
what when you start
think with the Soul ^{and} look with the Soul

then Spiritual vision is always a little further away
than the structure of the light of the Soul

and when do we start
^{well,} just hold some meetings
let's say something like that, ^{of a mental nature}
with these control systems

i.e. we begin to react to them there

we start doing management this way
what becomes visible
that there is a possibility of action there
by the way well as if some kind of negotiations
at the micro level, yes

because we have access
in understanding
and in control of any system

here the next aspect arises
what does perennial systems mean
which operate as sustainable management systems
after some time they may lose their management structure

that is why it is advisable to consider it here
what is in Spiritual vision
this is exactly the structure that is kind of original yes
coming from the level of, for example, your level there of the Macroworld

This level is practically expressed in that
what is in the original structure
forms everything external there
and also the future of space-time means

and you can also watch
how is it formed from the current time
past space-time

i.e. it is possible to influence in this way
on the structure of the past yes
i.e. if we start to integrate
i.e. we begin to collect all collective systems
into one system of action

it turns out that we have a very simple principle
Well as if it were one collective system of actions
it's almost like you can see it
what is in Spiritual vision
or there in the vision of the Soul
there is some such space
actually it looks like space

there is only one system of action here
For example there is the Spirit one movement of the Spirit Soul
it's like a one-time level
often in some urgent action

in which you act independently
i.e. the help of the Soul often comes in complex processes

when you start to see structure

for example, by contacting

Well let's assume if we take such a project of action

other systems of Spiritual vision yes

there are insights if you can turn to for example there in the management

as to Saint Nicholas the Wonderworker

and see what he does at the level of Spiritual vision

and here you can see it right away

what if we start doing external appeal

all we understand

my own experience

refers to a person's personal experience

doing something specific

and here is the first level when you start to see

first place

what do you suppose you are going to do management

then it is precisely in the first information system

it needs to be carefully transferred there into the structure

where Spiritual vision has something like a plastic one

element in optics

and when you start to see

that at the level of Spiritual impulses

you begin to recognize strategic events

this is already the first management plan

where do you achieve that first

what exactly are strategic events

determine the current yes

i.e. you start to see all the connections

and then the future becomes more even yes

less susceptible to some external systems of influence, for example

it turns out that if we have

such a uniform level

then you can transfer information there

Well, an infinite number of times

for example in technology education

when we see

what does it mean to say external and internal management

is accomplished through Spiritual vision as one impulse

it turns out that this is precisely the natural state of a person
often as right ilo has at an earlier time
Well as if such an impulse had been realized
it has exactly the form of an impulse there let's assume

what is happening is still a concept
like "integration in the world"
as a universal system for bringing all information together

then, entering this system in the modern World
it is clearly expressed systemic management
becomes quite a simple element there

and if we consider
let's assume there is control in the computer
then you can turn on the program there, take the password, etc.

and if we consider other elements of information
then here are similar actions
these are actions of management or co-management

those. not visualization but there let's assume
if it is not necessary at the level of physical matter

and ability through means what God does
those. the concept is co-management
but co-management is generally of this type
that you get control as if with any external system

that is why in Spiritual vision the concept of "co-management"
this is the management of the external system there

this is a concept that you have
well, practically the entire full control cycle is there
as a technological system

i.e. it can be seen even at the level of these actions
precisely in working with Spiritual vision

and at the same time this technological level
it works for example there is some specific time there
and then it might not work, for example

so that this level works all the time
we need to consider its structure in the future, that means

and make controls for each level
so that there is specific work there
for example in the Macrocontrol system

and that's when you start to see
what is it that we basically say when we talk
about the system of Macrocontrol

and we get a faster result there
then if we start
in terms of, for example, Spiritual there is Macro-action
to do for example there at the level of one's own insight

Well there are some elements of insight there
then it turns out that it is the most optimal
i.e. the best option in Spiritual vision
where almost all details are taken into account

i.e. you don't need to detail it often
some specific street, there's a house there

namely, to go through the Macrosystem as I showed
you can work locally in the seminar

and it is possible to exit in a certain way
through even discrete systems of knowledge
not discretely related to each other

it is possible to reach an independent work structure
it turns out that in Spiritual vision
an important element is that
what exactly is the exit through Macrocontrol
this is also stability
and at the same time achieving immediately
it is often the instant result

i.e. this is precisely a specific action
as an action proceeding from a local value

where is the impulse well how could such a thing be visualized there
as one
and at the same time global in meaning
there according to the characteristics
This is a level that allows you to work systematically

i.e. to work regardless of external circumstances

because the circumstances are external
they are clearly shielded

if they are negative and may not develop
and the internal system is the question there Eternal
and the question there is convincing other people yes

so that means it's better to work more
external control systems

and apply the internal system
in some specific cases of special

and in this way to get
so clear, as if expressed
controlling for example clairvoyance
through Spiritual vision
not through logic

there in the concept of "clairvoyance"
and through Spiritual vision
it turns out that we can specific systems
implement in this way
that there will be precisely favorable levels of development
for any specific similar systems there

and so if we get the level of similarity
from any information system yes
from any cell from any molecule

then it turns out to be Spiritual vision

it is enough to activate
exactly one molecule
and the whole world will return to normal

i.e. this is precisely the correct position in Spiritual vision
allows for precision at the Macro level

i.e. accuracy in general in general there with future processes, etc.

therefore, as a practice in this technology
try to work like this
so that the future is known for sure
or is it absolutely certain

and this future can be calmly manifested

so in this lecture it is often desirable
namely to do the practice of the prognostic plan
and learn from this and get results

This is where I end today's seminar.

Thank you very much for your attention
