

GRIGORY GRABOVOY
The Teaching about God
Unified management system
25.01.2005

Hello again
the topic of my seminar today
This is the Teaching about God
Unified Management System

in this topic i show the technology
when depending on the management objective
a person must master that control system
which is generally necessary
for the performance of this or that action by the manager
through Macrosalvation

and also consider the technology of knowledge
when any control object can be mastered

ie in this case the control is as follows
that when for example a person has
well let's say a certain area of management
which looks like this in front of him let's say
in the form of a specific area yes
for example we can highlight
take a region of any shape
for example let it be a sphere

and we need to consider
how should the control be done for example
so that this area was
in the area of as it were managing future events

ie we must in any case
future events to be realized so
so that any intermediate system can be mastered

ie formally this means
complete unification of actions
as in relation to the object of action itself
as well as in relation to the object or to the mode of action

ie a person must be able to learn
virtually any control system

depending on the management objective

and at the same time well this is a kind of learning process
must be universal
ie he must understand
that he can master almost everything he needs

generally speaking with Eternal development
this is a fairly common option
ie a person can for an Eternal number of years
master any control system yes
any specialized system social etc

ie in fact this means
that man is absolutely universal
should generally react
for the whole system external internal

and be able to to a greater extent due to the structure of the Soul
to straighten out as it were the entire Infinite Reality
in front of you like this
what is he mastering
everything he needs first of all yes according to his personal desire
and also masters everything that he has to deal with for example

and based on this
this is precisely the level of some kind of universalism so to speak Yes
the unification of action is such
that he generally speaking should be able to obtain in advance
the control system is actually in front of you
those before the start of action

and considering that the system of action
it is actually as if it is Infinite
ie we have development into Infinity of events

it turns out that when a person
Well for example being in the event phase
somewhere like that well here specifically yes
to the event level
starts to react
with some remote event
then this is exactly the transition
actions yes remote event

per person
you need to watch your hand more carefully here

ie well time does spin in Infinity like that
what well as if in the form of some kind of ring at first
then comes the folding in the shape of a figure eight
this type of Mobius strips
there is a one-sided surface

and we receive in the source as if Yes
that a person has to face an event
which is like well it "grew" if you can say so
in quotes of course "grew"
to all the Infinite space-time

ie formally working with one event
a person is forced to practically overcome
resistance of infinite magnitude

and then he himself must have Infinite meaning yes
his body must have an Infinite system
like well an appropriate reaction or something
because Infinite Environment
creates an Infinite level

and therefore here in order to prepare the event as it were
ie a person needs to master
in fact all phenomena that exist yes
in the subject of management

and by analogy with how God does
He is ready to take over management there at any moment
ie He sort of approaches the event in this way
that He has a resource methods of management etc

therefore here God Himself is Eternal
therefore for Him this is a natural Action
ie for the Eternal level the action is always natural

originally Eternal
He always chooses
one precise single Action
which no longer exists as if in the system of options yes
and exists only as one action

that's why a person needs to strive

at the time of such management
to be Eternal exactly
at the level of the logic of knowledge

and here it is absolutely clear
that for example the person who is watching
on Reality
there is a horizon
and for example he sees some kind of development system in this horizon
it still connects with a certain Eternal value

even if a person looks at the horizon there
he still thinks
that there is some kind of boundless space beyond
ie even his vision touches
with the Eternal level of external control
in relation to him

he knows it nonetheless
where should he go and how should he move and what should he do

ie the Eternal structure does not seem to have any effect
on the autonomy of his decisions and his behavior
well except for some physical restrictions
if these are mountains he can go around them for example there well
so when we
or vice versa climb a mountain

ie this is what happens here
that the level of internal decisions
he is formally not connected at all
with external system

but for God it means an internal and external decision
it is still a single value
He does it in one moment
all Actions in this World

and God has a passage somewhere
where He carries out
this is the influence in one impulse
to the whole Infinite Reality
both internal and external

ie He has a level of control so to speak
over the internal and external Reality

and this level of control consists of the fact that
what he manages to master
from a human point of view he manages to master

the entire control and management system
before the situation arises
but that's how it is in human logic

and for God it is generally speaking one and completely
control option
where you have practically well let's put it this way
that level
which in fact constitutes God Himself

ie God as it were is precisely in the system of knowledge
in the system of some unified Action
He knows Himself
ie He sees Himself

ie His knowledge is expressed in that
that He takes and looks at Himself in fact
here from the point of view of human logic

hence
so that a person can master it universally
any action
he must perceive himself in any event

and that's when he's in the center of this event
as if a worked out event yes
sees himself
it means it is universally ready
overcome some intermediate systems

Well I just came up with this Law of Control
from the logic of God's Action

because really for example for God
this element is quite simple
that's from the point of view of this element
to pass on knowledge to a person

because God always puts things in the world
certain development systems
so that they are indicative
why is there some kind of relief of some mountain yes
mountain anyway for example if necessary

and he perceives it there
well some element of action
which allows him to penetrate as it were
to a greater extent into the inner essence of this mountain

here to make a decision
the person is actually on the information
is part of the inner system of the mountain
he perceives the essence of the mountain as a whole
then he decides whether to go to it and climb it or not
ie it is no longer an external sign

because "to understand" is like listening to a mountain or a locality
this is a different concept
"listen to the horizon"

and this is this level of management
this level is like a universal control
he talks about that
what is in the unified management system
should always be taken into account
deeper ie dynamic meaning
any static phenomenon

because if we have
there is even some kind of dynamic phenomenon there
ie we have dynamics in information
then we can in this dynamics
how to choose an area
which is currently motionless yes
or a segment that for example does not move
ie take and suppose cut out from the dynamics
some point even to determine

or even reduce the time that much
that the movement does not have time to take place
then it will be stillness

ie minimizing the time of action
this is a more static value

then we kind of cut out space yes
if we minimize time

and it turns out that if we want to know
The Form of God

we need to reduce time to zero in fact
then we see the Form of God

and the Form of God well that is an ordinary person yes
Human shape
but the Form of a person spread in the Spiritual plane
on exactly on the Eternal future development

ie in reality
primary level of form
it is
The spirit of man
and the Spirit of God who
it's like in Infinite Distance
and in the form of approaching a person
ie God spiritually strives for man

and with Spiritual aspiration
man receives knowledge of God

that is why it is the universal level of control
consists in this case
what you actually have on the Spiritual level
complete versatility
when you see you perceive
God's movement towards you
those the movement of the Spirit of God to you

and when do you start
this is the level of management that needs to be implemented
as a system of further action
then it turns out that from the purely pragmatic point of view
how to universally prepare for example a person
to be a healer yes

example he thinks that he should be there in the future
there for example to cure someone
or not everyone there at all it doesn't matter
then he must learn

then he must put himself
in the situation it turns out that such a person
who must master the technology of healing
what should he do first for this

so from the point of view of movement
this is precisely the technology of the Spirit of God to man

he should be able to recognize
Spiritual and status of action

Well it's clear that healing for example is a spiritual action

then he should do for example
some technological control systems
ie first he must study them
but he has to get them somewhere

For example there in my Teaching
many of some technological approaches

so but here the question is technologically hindered
into the entity structure
this is where to choose the right solution yes

for example a set of solutions
or there's like some kind of mountain there's space
any information
but you need to know the inner meaning there
how to listen to the system

and in a static system this is understandable
there is a horizon of physical Reality
but in a dynamic one
in knowledge
how to choose the exact path of knowledge yes

to make it universal
professional how to come to action

and it turns out that in this case
knowledge itself carries a mechanism similar to that
how does the Spirit of God move in general

here is the movement of the Spirit of God
this is in general knowledge itself in its purest form
but the truth is if you look from the outside it's like

if you enter into knowledge itself yes
into the process of movement itself as it were
here inside move synchronously

then it's like stepping into a waterfall there
and see only water
and if you come out from the side

you can see that it is a waterfall

and here is precisely an outside point of view
point of view of the individual

a formed personality is always external control

ie the physical body of a person
it is always external control

ie God didn't need it as I said then
It is carried out from the point of view of a person
all the time as it were he manages to do external control

I was just talking about this in today's seminar
from the point of view of the dynamics of action
ie I didn't just show it there at the level of the Spirit
dynamics

and so it is possible as if at the same time with me
to manage this as if it were a past event
at the beginning of today's lecture

then we can actually work Spiritually
as if at any time at any time

and it turns out that when for example
Well this is such a complex structure
control spaces
begins to be built
let's assume as a system of further human action
then we begin to see and recognize very clearly
that a person is basically in his form
already controls all systems from the start
just like God

ie the form of a person is
level of as it were preventive control

and ultimately the whole world comes down to man

ie to have time to do something
it is often not necessary to run ahead there for example yes
and for example put on a helmet to get on a motorcycle

and sometimes it's enough to just see
how does the world move in general

in your direction
to your form

and then you start to see feedback
how do you control
its actual physical form yes
control
processes of external Reality

and this is where it comes in
exactly the ideal level of control
looking at your form
you first get to the inner world

to perceive form at all
you first need to go through at least the level of Perception

the level of Perception is always
well some place let's say geometric
"spatiality" is how one can put it
purely well roughly approximate
however it is close to that
where Spiritual action takes place

so that a person perceives himself
he must understand first
in what space does he perceive himself

and it's very familiar to him
on in this space Yes
and as if some kind of "kitchen" of such actions
where exactly mentally
well that is it is not the physical action that is being implemented

and from this action
through the system of Perception
the following action appears as if

ie for God this is precisely the allocation
non-physical status and action
where is the process of Thinking
as for Himself there to teach people and for God Himself

and also here in order to teach a person
this is a very important process in general
namely the universality of action
universality of knowledge there

and generally speaking training

because if you can prove it
that any non-physical process
is being implemented
through the physical body of a person

Well I mean creative yes
then it will be proven
what is clear is that it can be implemented
any universal control system

Means Well it's like a billiard ball and a cue
if you prove that the action of the cue
always sets the ball in motion
then it turns out that we have some kind of Law yes
which connects the cue and the ball together
at the point of exactly hitting the ball

but at the same time we may not consider it at all
neither cue nor ball
we can just hit the point
and calculate the force and mutual pressure
and conclude that some kind of blow occurred
universality of action

we don't care what the cue ball is
what is important to us is precisely the pressure element at this point

what is universalism
this is a sample some kind of point sample yes
in the system of Reality

and now imagine
you need to take some action
There are infinite quantities in this World
and you actually carry out Consciousness
you are sampling your action

ie you practically find yourself at this level
well in global yes macroreality
and you take yourself as if you were pulling it out
and put it in the position of the solved system

ie universal control
it is the ability to work with yourself
even by means of external discrete ones

as if mechanical actions

in information take yourself and put
to the level of a professional figure
but this is also God's work
He also makes it so that a person has time to overcome
He knows how to do some kind of misfortunes
in good situations yes there are great things happening there etc

but from God's point of view
He points out to the person
but man still acts on his own

but at the same time
from the point of view of an external observer
this is the Action of God so to speak
but at the core of the Action
ie it's not like God moves a person by the hand
and specifically the basis of action that is visible to everyone yes
but at the same time a person is absolutely free

and this is his point of view this is the original one
human freedom is the Reality of this World

and from the point of view of well there in the collective Consciousness
this is the level of some kind of platform
because any action for example in this World
it is manifested optically
and it turns out that all possible actions
this is some kind of optical platform
where a person is as if stable

ie it relies on for example there on the material carrier
to the ground
moves along the ground there on the sidewalk or there in the elevator etc

and it turns out that when we
we close this particular action again
on the personal principle of a person

ie well let's just put the question this way
what's more important there
external collective management
where it is initially clear
that's quite a lot of information yes
that this is the collective management of the Earth there
including God Consciousness

there is all Reality
and man is on Earth
then what is more important

this part of the management is for a person
or is it still a special case of the person himself ie

the answer is completely direct and unambiguous
God is One He was originally one
so what's more important is the private level of the person himself yes
primary

ie man exists
in his system of knowledge
and perceives in fact
by and large only your own actions
from the point of view of that precisely on today's topic
where it is necessary to achieve precisely the universality of action

ie to achieve some phenomenon
a person should rely only on himself
he can count on others there to set the task etc
but he sets the task

ie there is some point that
in the Consciousness of a person which speaks about that
that a person is at a certain level
he decides everything himself
for myself there for others in general yes
for example he helps or does something for others

and when you start to see this point
in fact there is no independence or decisions there
personalities
human
again we get the physical body of a person
but already in Infinite development

ie this is specific information
the point is there in the physical body yes
but this is exactly what it looks like

and when you start to work let's say
from the point of view of God's Action
it turns out that God also relies on Himself

for example if you ask the question

and how then does God for example create an analogy to that
how do people act yes

Well a person can delegate something to another person
to do something etc

then this is the concept of the so-called "re-guaranteeing"
this is the creation of man
which will further do on a personal level yes
some action

the difference is that God gives a personal opinion
and this is the Action of God

if suddenly one person entrusts another
then it turns out that it is a human action yes

and when is Divine Action
Well let's say it's entrusted
that this is his personal action his personal choice

and in this Action
It could be anywhere
and it turns out that He doesn't have to
there to receive some kind of physical task
He does it himself

and that's when the principle of personal freedom
is combined with necessity or a task
this is this universal action in management

this is where it starts to arise
it is precisely the root as it were fundamental status
already this level of universal control
where do you start to see
your personality is so developed
well let's say intellectually morally there ethically
what do you see that any system
can you increase it there as much as needed

for example you need to increase your knowledge in some system
so they took it tuned in and saw
what is needed for this from the point of view of knowledge of God
that it takes some time to master the technology
spent mastered

wanted to make a selection of the path yes

in development namely multivariant development
So they chose it right away
because you already have that choice

ie you don't do long searches and don't analyze there
and just go along this road
because it's natural for you

ie what could be new here it would seem
so a person has a certain number of actions
let's say for example there are a hundred options for freedom during the
period of action

he can do a hundred different actions
in one hour
and then it turns out that he still can't
it is physically possible to make a million there yes
ie he doesn't care
number of options for physical action
this is a specific number of options

and therefore in order to achieve one option
which is the most natural yes
then the difference is actually small
what to do first hundred
and still somewhere among a hundred the real option will pass
or is it better to do one option?
and it will pass immediately

ie in the universal control system
Of course it's better to do it in one version at once without going through it
and we can save the world in any case
only through specific real management
without going through the situations

ie we must be able to immediately recognize
from the point of view of unified universal management
how can we for example
well actually how to recognize the True signal

and then the control is truly universal
when we have almost such a level
that your own impulse becomes universal
when you see
that your physical body is there
your mind intelligence
can always reach at the right time

the required control criterion
for you
and for everyone around in general
for the salvation of the world etc

ie it turns out that the very universality of actions
it simply comes from that
that you can do it
you yourself are such a person

ie any action of yours is universal

Well if you paid attention naturally and freely
for some event for some task
you do this job but you do it like this
that no one is forcing you
ie it happens naturally

and that's when this level of naturalness is worked out
then it is clear why Reality is so natural and external
air there water earth planet in general

ie what is the level of this naturalness

and in that something is considered natural like
certain living conditions yes
this is still a level of implementation
a certain well quite serious plan
from an intellectual point of view yes for example actions

because there are so many phenomena of Reality in life in general
it turns out that here it is very clearly manifested
almost the only mechanism there Yes
for human life in civilization

and it turns out that if we follow
this very structure of the whole Reality
vice versa to yourself

ie we will try
in every phenomenon of Reality
highlight the path
to some universal point

ie at what point of control
all phenomena are initially equal

so we just take
some phenomenon of Reality there
for example there are sheep grazing somewhere there

let's start moving from here
into the structure of the primary point
where all phenomena are equal

ie we assume that through this concept "sheep graze"
real physical life ie it is not a picture
ie they are grazing somewhere specifically at this moment

and we need to get to that point
in which phenomena will come from all sides

then the kettle boiled there
For example the rocket didn't explode there etc
ie you start moving in one direction all the time
precisely the universalism of the primary impulse
from any phenomenon

and this is where it works out
that remote ie strategic phenomena
which are very far away as it were yes from you
there is a very long way to go in terms of prognosis
It is they who create universalism as if developing
this kind of potential energy so to speak
where do you study able to learn
any management

ie a infinitely distant energy let's say
or is there an event space?
this is the level that allows you now
do the management accurately

and that's when you get this Infinite or something
such a unique energy
you start moving towards yourself
then you get what
well the control that you get here
due to such a point of view of such management
so to speak primary

you see
that the universal level of control
is also that
that any contact

external environment
with you
this is still the primary universal Law

and it consists of this
that the external environment first warns as if Yes
there is an object of control there is a person
in one form or another
and then some development of the environment occurs
meaning all events in general

ie it always exists
preliminary warning action

therefore in universal control it follows
this is a warning action
find
from a human point of view
and from the point of view of that
how is this action for example a warning
Well as if it is being implemented
there is a different level of perception yes
another subject of action

and when you start to see
that this individual level so to speak
which exists for example in humans
Well he in his own words is so manifested
both in the particular case and in general

then you start to see quite clearly
what is this so-called
preventive action yes for any event
this is generally speaking a whole mechanism
which always allows a person
to rectify the situation

and it's logically clear
before the action happens
exist in event systems
some preliminary elements and information
as a kind of construction
which is actually how it is built
that she is still
some preliminary information
about action

for example take all the phenomena of Reality
and describe them in specific areas
or some kind of geometric figures for example

and when you start to see
what well as if in this world exist
well let's say such unambiguous harsh phenomena there and in the
environment
as an opportunity to examine events there element by element

then this pre-control and pre-event environment so to speak
allows you to see clearly
that all universal systems are external yes
eventually they come up against it
into that element of Perception
which you perceive
and physical vision
and Spirit
and Soul
as if by the whole level of personality

and then it turns out that based on this
if we have
Well as if such a fairly universal and external environment
which seems to have a universal status

and your reaction is also unified for example Yes
you so to speak have precisely defined the management
or introduced a certain thought into the management so
that this is how you perceive Reality

that is exactly complete universality from different sides
this is the level that allows you to watch
behind itself as if from outside

ie external universality
versatility of pre-control
control and target docking
with pre-control etc
there is still a goal
and there is also a concept that exists before the goal

for example if you ask yourself a question
does a person have a management goal
he wants to go to the store
but there is one near the target
a lot of other information possibilities

For example he may not go to the store
he can do something else altogether
not connected with the store in any way
and there again there are a lot of opportunities etc

and it turns out that when you act for example
do management
well something that you absolutely must get for example
next control

then for example there in Saving the World
it is absolutely necessary that there be
the next element of the development of time
ie the obligation of action

here you need to know how to start a signal
between the phase there is pre-control
and the next action
so that you can manage
not only for example the following action
but also the pre-control phase
ie until the next action

ie you take it and kind of close it
one possible design
to the control system and
Well that other design is already clear to you right?

ie in the pre-control phase
you are introducing exactly this intermediate filter
which connects exactly two levels

from the Infinite number of pre-control system
you highlight the only one development
and naturally already in the control system
you have this development it is clear that it exists

and so in this way you take and enter yes
by logical action
some conscious element

but this conscious element
this is the universality of knowledge
universality of control

ie this is your unified action

this is the sphere that contains
all the phenomena there are of your Reality

all your possible actions
and contains not just in the form of a logical value yes
and so that you can understand at each level
what are you doing
and why

what you do and why you do it seems not so much "seemingly"
but generally speaking it is always logically clear

but you you have to see
internal as if deep meaning
from the point of view
exactly well practically the Infinite development of humanity
there is Infinite development of any element of Reality

and then it turns out that there is unification
it is the ability to be aware at the same time
To the world
the beauty of external Reality yes
the beauty of nature
the ability to recognize love there in time so to speak Yes

the skill is universal
ie at the right moment even independently of you
so that love well how would it manifest itself

that's why I introduce the concept of "skill" yes
what else should you be able to recognize
that your love it seems to have another property
that you still need to be able to show it
ie it needs to be generated from oneself it turns out yes

here pay attention to what is in this management
universal control
love can be generated
from the physical body

ie how does love arise in a person?
where does it come from anyway
from a logical point of view

Well it's clear in space and information
It is given by God

but here is where exactly it physically comes from

and when for example we ask such a question
it turns out that the design resembles

Well as if the next control

what's there from the human physical body
begins to stretch out
this is actually a physical parameter Yes
this is what love is like

and it turns out that yes then it is born
the person is next

and from here it follows
this is when the body generates love
just like information
it is clear why there is a birth of people
for example by gender

but love as a universal control
this is a very powerful control
and this level of universalism in this case yes
unification
this is a personal production of love

ie therefore when you sort of isolated love from yourself yes
it turns out that means you can go further

Well by "highlighting" I mean
some information system as if actions
but which reminds
precisely as a product of human activity
in terms of overall development

ie love is still a certain period
some stage there or product
it is precisely the activity of man as such

ie no other product as it were
in this world well it really turns out no
that's exactly what the Infinite Development Status is

therefore since a person allocates

as a result of action
by the way any creative action
a person secretes love in the form of information

then the unified system is like this in action
what can he do for this sign of love
find similar systems in space in space
and move these systems closer to you

ie by the way this is a very powerful healing mechanism there

this way you can cure very long-developing ones
some complex chronic processes

because having fixed the structure of love
yours yes
there in front of a person for example or many people
if this is for example there may be some kind of infectious system there
ie it is possible to cure epidemics of flu there
and generally any other virus problems
which concern many people

and you can highlight
not only there by location by time
but you can highlight there methodologically
that such and such a category of people should be saved
there for example there are military personnel from bacteriological
contamination

and it turns out that when you see
this is this level
well in fact it turns out that Love is developing
towards unambiguity of action
in a multivariate world

then we get the basic level of unification
is this still the correct arrangement of Love ?
that is precisely what the person himself allocated

and when you generate this yes Love by you
you start to advance to some point
you see that you are now already
you are completely free internally

this is a sign of freedom it is sometimes complicated yes
but it is a sign of uniformity of action
it is clearly shown here

because the location of love is exactly yes
in the information space
in the knowledge space so to speak
in general in space as if physical
this is the level that defines it quite clearly
there is your internal position
those uniqueness of action

Love is always the only line

your system of knowledge there yes
your system of actions

and that's when you for example
if this is a treatment for a disease
placed such systems in the right places
namely the structures of Love for example
there to create Love at the right point yes
such a task

it is clear that any disease
here from a rigid statistical system
naturally comes back to normal
because you kind of normalize
due to the fact that you make time unlimited
in this environment

because it is located even in different points
Love
creates a certain property of space
such as unlimitedness

if you enter this control there
around some disease
then unlimited means it
in principle Eternal time to solve the issue yes
a large huge amount of time

so it turns out that it is clear
that you heal processes naturally
Well It's like you don't even have to waste any effort yeah
without touching especially

ie creation of external control
this is also a sign of unification of action
and such management

which is not something that directly affects it
interests of the information object
but it just shows everything
that this information object
Well as if it is located
as if in some kind of power space
that he is protected there
and he has some absolutely specific things going on
concrete creative actions
first of all for the whole world
then there to him himself etc

if he does something for other people
there is something useful at this moment
so this should also be shown

ie taking into account all factors is also one of the signs
namely unified management

and technologically for example to make the management such
what are you doing there let's say you develop
Infinite future yes
myself
well the environment there let's put it this way
and you act there on the planet on the plants
on some lands seas oceans etc
into a vacuum your control extends

then it turns out that you come to that
that this is precisely the concept of unified management
it is also the ability to connect the particular
ie a concept that is easy to understand and master
and the Infinite

ie Infinity consists in the fact
that in any action there is a connection
some finite quantity and even Infinite

but it was precisely during the docking period
you generally show up
exactly as a complete universal action in fact

because if I may say so
when a person is a generalist there
ie well there is a jack of all trades in one word
and you can do whatever you want
then converting a finite quantity to an infinite one

this is already within the scope of your so-called responsibility then

and when you start to see
this is the level of transition and a kind of conversion
then you see there even once often
you quickly get used to this state of affairs
what is the human body
this is also a certain kind of converter in fact
Infinite to finite
or vice versa

ie the body is always in dynamics
well informational dynamics so to speak
in relation to
between any objects of information

ie for example there is a voice recorder computer
interaction between these systems
possibly means if available
namely the physical body of a person

and when you start to analyze this system
then you can see
like the gravitational principle for example
maybe it will be reduced there or maybe it will disappear there
for a few milliseconds
at the desired control point

and if you want a gravitational well sort of principle
still make it non-influential
there for some kind of work activity etc
then in principle it can be done this way
what to consider
where can you reduce gravity

because the interaction between the elements
it is like a converter
works
human physical body
body shape

and if you have a body shape like an ideal shape
learn to dock with yourself

ie there is let's say conditionally
some kind of just perfect
well if you can put it that way action

in this design

ie well simply put all control systems
they match
and it turns out that you have
well some kind of ideal system of some kind of image
which when combined shows
For example there how to live forever and physical body

ie the ideal body
physical body
overlay is in progress
and it turns out that at each level of management
what needs to be done to have Eternal life
Eternal development

so that's how it works here
what for example the ideal design
coincided yes
with real
at the right moment in time
there needs to be more
unified external management space

ie you must be able to
Well when the body is used
as a converter and information transformation
be able to do so
so that this transformation would be publicly available

ie in my Teaching about God
in this concept
namely the management of the unified plan
it is clear that it is precisely the transformation through the human body
this is what forms
and the body
and physical Reality

ie at this level of management
a person becomes
like how God works
he becomes
and that means here it is well let's say a controlling personality
human physical body
and also the controlling personality
this is the process of transforming space
through the human body

and so if we want to understand this concept then
how does it happen in general
interaction
between the elements of Reality yes

that is internal organs
here is the interaction between them
it's the same interaction
as well as between the external elements of Reality

ie to go through some cave forest etc
you just have to listen to yourself
look
how the interaction of internal organs goes
from the point of view of current time
and you will understand how to go

ie the body actually shows it during its analysis
in such informational analysis let's say
shows precisely the uniqueness of the path
and the path is precise

because the interaction is well systemic
in the internal organs of a person
in a rigid static system
it is always a controlled path through Consciousness

and therefore it turns out that we have
a special set of organs and special functions
so that this conversion process
as if information
through the physical body of a person
so that this process is actually publicly available
it is clear that this process is understandable
well in the very structure of actions

because then you understand it
in the very structure of actions
then you get that in fact well let's say so
you are already in full control of the process
ie yourself

and when you are already in control
then at the next level there is already unification
unification so to speak in management
is what you see

that God also always controls Himself
ie you begin to understand His point of view

and that's when you see
unification in all manifestations
including there the unification of God
as we say to the personality acting yes
there as an object of action so to speak
from the point of view of various macro quantities

then it turns out that based on this
you see that this is precisely the unification
which one are you what does it have to do with the one where you are looking
at it for example ?
that any object is still an Action of God

by and large if you go inside the object for a long time
you will still see the original God yes

ie any level of management
this is still the level of Infinite movement
ie unification is Infinite development in this sense

and when you start to see
that here is Infinite development
this is well in general everything is more accurate let's say yes
more and more there as if it were correct precisely at the level of events
here is the Perception of God
ie you can well sort of perceive God with your peripheral vision
and do the same thing yes what does God do

and when you learn to work exactly synchronously
ie your actions will already be so adapted
to the Action of God
that from the outside even they won't be there
attract some attention

then it turns out that you have reached the level
completely complete unification of management
when your actions yes
and the Action of God
this is even in relation to
to any specific tasks in general
not in general but specifically you learned
so accurate
in some one action even
so that these differences do not exist

then it means you have already really achieved
there is absolutely no unified management there

and this unification is as follows
that of course the event itself occurs

because you are this mechanism
they worked so universally
that it will come true anyway

and this level by the way is very important
specifically for the technology of Eternal Development
because unification
ie a guarantee of the implementation of the action
to look there with complete confidence and firmly
namely even immediately as if to Infinite development
see the forecast phase

ie there are a lot of consequences from these technologies
precisely unification
when do you realize that unified action
this is already in essence Infinite Development

as a management practice
here it is possible through the unification of the action itself
there is no personal action and self-study
just achieve specific control systems
and see what happens in this case

the goal is the goal that was realized
is becoming more and more unified
increasingly prolonged to Infinite development

those even your action yes
creates a level for Infinite development

therefore work in a unified manner
it is useful even from a learning point of view
there is information transfer
to all properties and external Reality
first of all to the person

This is where I end today's seminar

Thank you very much for your attention
