

GRIGORY GRABOVOY
Unified knowledge system
1996

International Human Health Program

Recently, the world has shown great interest in the work of Grigori Petrovich Grabovoi, who heads the "International Program for Human Healing". The healing method includes: diagnostics, information processing, and a recovery process. Grigori Petrovich Grabovoi carries out all cycles of work using his abilities of clairvoyance and remote information control. Additionally, digital diagnostics are performed.

Grigori Petrovich Grabovoi says: "I see my task Not only in healing. I produce regeneration (restoration) of matter regardless of its original state. This proves the illogicality of destruction, shows the technologies of salvation and implements the fundamental principles of ecological safety of the world."

Since Grigori Petrovich Grabovoi restores after biological death, cures from stage 4 cancer and stage 4 AIDS, when many organs are also destroyed, he, naturally, heals from any diseases. Thus, Grigori Petrovich Grabovoi implements the principle of non-dying, as a method of preventing a global catastrophe threatening the whole world. The restoration cycle can be carried out remotely, without distance restrictions.

The program also includes the elimination of man-made disasters that are becoming global in scale, as well as event management, with the conclusion them from a critical condition.

The system of creative development

This lecture is aimed at having a normal perception, including preliminary knowledge of subtle structures, to be able, through the element of knowledge, to have initial data. Naturally, the level of

each person and the level of the audience of listeners are taken into account.

First, we will primarily talk about the geometry of the form of information. *I consider an external event, including the future, as a certain form of information.* The elements of the addition of the form are intertwined, like a mosaic, on the structure of DNA. Carefully examining the protein form of matter organization (for example, the structure of DNA) and the non-protein, for example, stone, we can derive a law that the reflection of the protein form has the form of oscillation of the crystalline structure (for example, stone) of the non-protein form.

That is, oscillations of the environment of the inanimate form of matter, from the point of view of man. Although this is conditional. Many people "correctly" perceive the world. "Correctly" is conditional, since the points of view are different. I proceed from the orthodox definition of the living and the inanimate. I deliberately limit some areas of information to simple forms for quick understanding, without reducing their information content. This is due to the orthodox understanding currently defined in secondary schools, institutes and other educational institutions. Therefore, some concepts introduced by me take into account the existing level of perception in associative form. But, at the level of the spirit, it is understandable to anyone, since salvation concerns everyone.

Secondly, I give knowledge at the level of knowledge of the Spirit.

I immediately note the law

of radiation of

the crystalline structure of inanimate matter has a vibrational form of information comparable to the vibrational form of information emitted by living beings.

Therefore, it is necessary to move on to the definition of what a living being and inanimate matter are. In this control system, such a concept does not exist. When managing the external environment and, especially, ahead, *there is a concept of managing the external volume of information, where only interaction with a certain reactive environment is determined.* And the system of control speed is determined by the degree of reaction.

For example, if you look at future events and consider them in the form of a certain geometric structure, it is clear that the structure can be disassembled by some elements. When analyzing or creating

a structure of events, you can find what can be done at the level of consciousness now so that the structure is proper. To cure diseases, the task is to reconstruct the disease information and construct health information. Considering specific examples of health restoration by translating information into forms, you should immediately generalize the result to cure any disease. Because on the basis of the principles of translation into forms, it is possible to build specific methods of managing any events, including healing any diseases.

For example, it is necessary to restore the gastrointestinal tract.

This is the original information form. It has a cylindrical character.

The base of the cylinder is on a flat sheet and has a diameter and height of 2 cm. In a future event comparable to the conditions of the tests, with the condition that it is necessary to prove - the gastrointestinal tract is restored, there is no cancer, no tumor, the information is spheroidal and is geometrically located on the plane and space opposite to the sheet. That is, the sheet is the center of symmetry: on one side - a sphere with a radius of 2 cm, on the other - a cylinder with a radius of 2 cm. Why do I enter these numbers? I explain the structure. To understand that *the sphere is an element that is an absolute coordinate system*. In the space-time continuum, it can be compacted if viewed from afar. If closer - it can delaminate. That is, this is a mechanism for studying reality at the level of human cognition systems. When you understand this, you can watch events both from afar and close. You already have the analysis in your hands.

To see what stratification is, I show the method of stratification of knowledge. Here you explore your own process from the point of view of past events. Here the element of the past is reflected. *The method of restoration is that the element of the time interval of the past time must be correlated with the space of the changed tissue, and removed from the information in the future*. This information must be removed without violating the construction of the event level, without destroying any new object of information. This *can be done by increasing a certain positive level in all events of the macroenvironment and microenvironment*. This is a system of development without destroying external information.

For example, there is a book on the table with practical methods of transforming information. A source of positive

information comes from it, since it restores some structure through some element. Let's say I take the book, leaf through to the paragraph on spiritual knowledge, and look at page 52, the third line from the top: "... awakening through detachment, departure." This segment of information says that one can have an awakening by detaching, moving away from an event, being an external observer. Thus, to evoke some restorative force. It can be called a form of information of an indefinite quality, positive for a person. A person can be detached from optimizing it, analyzing, measuring, and so on.

Thus, *it is necessary to find such sources that positively restore and act on a person.* It does not matter, it can be a memory of past positive events, or one of the methods of reading books - I take, for example, and immediately find this line, and so on. In principle, you can look at such an element now. I give you page 52 line 3 again. You read it, and I observe how the information of your cylinder changes. The syllable "pro" remains outside the third line. I show you only the 3rd line. If we analyze in your case more deeply, only "... awakening" remains. The syllable "pro" remains above (line 2). There is plasma, there is protoplasm. Or, for example, traditional knowledge and proto-knowledge. There is a system of proto-knowledge here, that is, a system of archival doubles. Here, at the information level, you always contain a canonical form - an archival double of your health. The goal is for your archival double, that is, the protostructure, to be activated and take the level of the real structure.

One of the elements of control *is control through the system of activation of hidden control structures.* Why is computer visualization of some information links done? Because perception is oriented. If we are talking about representations through chakras, then the action takes place *at the level of Nirvana.* This is the merging of mental external structures into one absolute point, where all rather complex and simple knowledge is concentrated, and the process of excitation of vital forces begins. *A person gets into the control structure and begins to control through external sources.*

If we look at Tibet from a special position, we can see how the space, the color of the space, the layering of the space are changed there. *There, the canonical areas are simplified in understanding. There, if we analyze the colors, we can understand where the force that restores is.*

Based on what is shown, mentally take the structure of the sphere behind the sheet, which is a reflection of your program, but already in a modified form, brought to a canonical form. Then build a positive event, also forming the process of thinking. I am not talking about what you need to eat, go somewhere, because it will take a lot of time. *It is easier to learn to think faster than some information progresses, accompanying the disease.*

Therefore, based on this structure, you begin to look for what a spheroidal form is. You feel it because it is logically understandable. If it is logically understandable, then it naturally exists. Many people have been living for over 100-150 years lately, and they have no problems. It is clear that, for example, there is a certain structure of human initialization in general information. Thinking allows you to independently initialize the side of non-destruction of a person. If an organ is removed, this changes the initial positions.

The fact is that I had data when people came with removed organs. Then, after my session, they did an X-ray and found the organ in its place. Specifically: growth of the ureter removed during resection, the emergence of lung tissue, regeneration of the stomach, growth of removed teeth in adults, and so on. There is no need to deny the possibility of restoring the tissue structure removed surgically or as a result of injury. Although it is unusual for orthodox medicine, but the results of restoration of previously removed or destroyed tissue of the body after my sessions are proven by examinations of such patients by X-ray, computer tomography, even in real time of operations, when surgeons observed the restoration of organs during the session and the conclusions of doctors. With my practical results, I have proven the possibility of complete restoration of destroyed matter. Which proves the need to develop along the path of creation. *Let's follow the path of complete restoration and present this area in a canonical form, in the form of a completely complete restored structure.*

There is a concentration of attention to solve this problem.

Consciousness comes into contact with the human body and the external environment. Physical matter, as well as the human spirit, forms reality in the order of general interrelations. Therefore, concentrating on areas of the body, you can change reality in a generalized way, and, therefore, harmoniously in the entire area of creation.

I explain one of the management techniques. Naturally, it can be

developed for an infinite number of applications. For this practice of knowledge, the following technique will be more effective:

1. Concentrate on the index finger of your right hand from 10:02 pm to 10:04 pm, that is, two minutes, imagining the result you need.

This can be done by anyone who creatively manages with the help of my knowledge.

I just tied myself to this starting system, and it's unified. You can use any system. *I work with the elements of understanding and the elements of your reaction that I follow.*

2. The second element is concentration on sorting through colors:

pink, yellow, green, red, blue, violet. You take these colors and mentally start sorting through them. *The most stable - fixate on it for five minutes. This is your training. It restores the sphere of necessary events in the future.*

How does it restore? You should guess. It is desirable to understand and understand constantly. You should understand how I think when I restore. Then synchronization occurs and you achieve results faster.

Working with control information

When working with control information, there are stages when the relationship of control functions, that is, the relationship of your control structure with the actual physical processes occurring, is determined by the primary positional orientation.

Stage one.

It is defined as follows: when managing, it is desirable not to have painful sensations. Strive for normalization of the condition, although with various tumors there are strong toxic effects associated with the dissolution of tumors and removal through some cellular tissue structures. Nevertheless, it is necessary to use the same management system so that these effects do not exist, so that there are no toxic reactions. When managing events, it is necessary to have a norm of your own event positions.

Model of extramuscular information output

This is a practical model. The information structure of a splitting tumor is output to extramuscular tissue. *It is imagined that you push the split tumor tissue between the muscles and output it to a space in which there is no information skin.* Logically, the skin should be on the way. When you output the tumor to a certain space where it is transformed into a non-tumor environment, you put the information of exactly this transformation there. You should not be interested in the fact that there should be skin and the like. A completely different point of view on the body. Some painful phenomena that pass through the peripheral nervous system outside the brain are caused by the dependence of the cellular structure on neurosignals.

Previously, when the process was organized, matrix forms were defined, that is, the information of reproduction of altered cells. It has the form of a non-cellular structure. Where altered cells appear - typical for cancer cells, the environment of their reproduction in one of the variants has the form of an unchanged tissue structure. This means that a cell can be organized from the fatty layer of intermuscular tissue, sometimes from muscle, less often from bone. But the surrounding cells do not change at the time of this organization. Therefore, when a cell begins to move along the information areas of the body - along the tissue base, through the blood, through the muscle structure, through the capillary system, it can stop somewhere. It can organize a compaction area around itself due to the fact that there are so-called drain cells and source cells. Drains, when there is compaction like tumors. Sources, when there is tissue loosening. The information structure changes. Including the molecular structure of the surrounding cells changes. The nucleus of a healthy cell shifts, and other processes arise that also need to be known. But they are related to blood diseases. However, when there are tumor processes, the blood is subject to changes. Especially if there was a concomitant resection. To manage any events, it is necessary to transform the information that is in the intersection with the information of normalized cells into the information of intracellular events. Then the organization of the norm of macroevents occurs through the norm of microevents.

Stage two.

Now we are talking about how to restore the tissue structure if it is removed.

When restoring tumor structures, it is necessary to know that one of the accelerating factors of restoration is the compensation structure of organs.

The information structure is the primary structure because the restoration of cells throughout the body must occur at the compensation level. The body must be in the information canons, at least when working with it. There is a neural connection from the brain to the structure where there is a matrix form. It was organized earlier. It is necessary to understand one of the following forms of control of signals and cells. I do not give material for comprehension. I give for understanding. At every moment you need to understand something new. Comprehension is the final moment. The technique of access to information is such that at any moment there is a method, and it can be comprehended in different ways, by different criteria.

You need to have starting knowledge. You can develop the starting structure yourself. I give the following system: *if a person decides not to die at all, then he will have to constantly think about something.* This will be the theory and practice of knowledge. Speaking about the fact that Jesus predicted the era of the immortal, including the era of the resurrected, the question arises about the space-time continuum of this reality.

Where, when, in what creative way? Where are the archives of the information that needs to be restored, in what space?

Technologically, the issue of resurrection and immortality in the physical body is solved at the level of specific practices. An example, when I give the vibration of the word "immortality" or "resurrection" to an audio recording, then a cancer cell is destroyed. It turns out that these words are positive. From this alone, these processes should be studied. But when people come with the absence of tissue structure (not on X-ray), then it appears, then this is already a process of tissue restoration, regeneration. And if you go deeper into the structure of understanding, it turns out that it is possible to extend the effectiveness to all other organs, if a person understands. The one who understands this faster, solves the problem with greater speed.

The structure of restoration of organs that have undergone the stage of removal of resection.

For now I am talking about the level. This is not quite the matrix

level, I will explain what this is connected with.

This can be the level of your thinking and understanding of yourself.

When it comes to what should be restored, there are criteria of resistance of consciousness. They are determined by the fact that there is a very powerful sphere of information: when resected, organs, decomposed tissue are not restored.

Why do I use mathematics? Because it is difficult to deny the formula. It's hard to push it away with anything. It can be written, put on a sheet and that's it, it's ready. And at the level of thinking, there are some arguments for a person that it is impossible. This is a very serious factor. For example, I conducted a phenomenon on the emergence of fabric. For the publication of materials in a newspaper. I materialized fabric (two objects) in an apartment that I did not know. We drew up a protocol, wrote everything down, certified it with the newspaper seal. There is a key element in this phenomenon: you cannot traumatize the perception of witnesses who are observing materialization for the first time. *The experiment can be conducted when everyone is focused on the same thing, when they allow the emergence of fabric.*

As soon as everyone allowed it, two elements arose. At this point, in this space, a substance arises. It can be functionally inorganic.

When a structure that is absent in the human body appears, it can be functioning. There is no logical, deterministic problem in the matter that has arisen. Here is the problem of entering the tissue structure at the level of its functioning. For example, infinity. If a person does not have a part of a lung, then it is possible to project a structure that does not collapse in principle. There are similar historical facts. I am a practitioner and I work in practice. *When restoring the form of information, at least at the level of thinking, when you have information on this fact, you must be able to translate the form of information into reality. The main element here is the element of admission,* the element of the existence of this point of view. As soon as you admit this point of view, it is much easier there. Restoration will be by phantom. But a person must understand what he needs to do for this to happen. There is a level of different methods. I give, basically, what, in my understanding, connects many aspects.

There are events of the future. They have an infinite series. This form of information, where an event contains an infinite number of future events, is future information. Because the past is limited by

the moment of occurrence. This is a rather complex psychological and social criterion. And the future is quite unclear. The activation of cellular structures is built on this element of incomprehensibility. The future event is an element of information compaction now. *In order to create an organ, tissue or the entire organism, one must think about the system of activation of the contours of consciousness at the moment of human perception. The contour of consciousness is a spatio-temporal concept.* I immediately translate into specific terminology so as not to describe many points at the level of geometry. These terms are understandable anyway.

Further, when we talk about *how to compact the tissue to the level of absolute health, we need to find those time interval constructions and those time spatial constructions that we create from future events.* Figuratively speaking, it is possible to get healthy tissue in the very next second if we approach the system of non-destruction of the external world correctly. You can also observe on the CT scanner how the tumor tissue goes away during my session. This process may not be long. The question is how to do it this way. Of course, having initially achieved the normalization option, so that the stability is infinite in each structure. This infinite line of future events also has the property of pressure. Pressure in the present. I have broken it down specifically by intervals.

There is a diagram: future, past, present. The option is such *that the dominant axis of the infinite spectrum of future events is quite controllable. The source of the informative structure during measurements is the point between the eyebrows. On average, a person has a 5-meter segment from there.* Everyone, including at birth. Length variations of the segment are ± 2 mm.

This information line is controlled.

It is technologically translated into a vertical planar structure by concentrating attention on the index finger of the right hand from 10:00 p.m. to 10:17 p.m. This is a system of enhanced concentration.

You concentrate once and a kind of double space is created, and you concentrate on the same finger a second time.

It turns out to be a duplication system. You have two information areas corresponding to one hand. The first, really existing, one. You enter information about the second, simultaneously creating a matrix for the second, and begin to create tissue.

This is the technology of creating tissue. With such technology, an event that is perceived as one outgoing beam (of different thickness up to 1-2 mm) is immediately projected during measurements onto the area of the created matter. It is necessary to know how to translate this planar control system into your perception in space.

You walk, eat, observe something, and this plane is constantly restores you. It is about creating some information structures that are constantly being restored textile.

This is one of the elements of space-time view control.

Having this idea, you can avoid falling off the mountain. Here is the principle of levitation. The level of inflexibility: fell - levitation. There is a survival system. We must strive for it to be absolute. Then many processes are easier to understand. When in the ideological sense there is a desire for this natural survival and tissue restoration, many processes are easier to understand. Mathematics is a science that operates with infinite series, therefore mathematicians are close to reality.

This material contains reflections, methods and concrete practice. But there is *one of the laws according to which*

Thinking is already a practice of management.

Even more than something physical.

There is one goal - there is a problem and it is necessary to solve only it. Thoughts of a philosophical, conceptual, and technological nature must be applied until the problem is completely solved.

Mechanism of output of matrix active cells

There is a mechanism for the removal of matrix active cells that reproduce altered tumor cells through increased filtration of bile. In fact, an isomorphic form arises. The phenomenon of isomorphism at the information level, when the cell is separated by natural structures of removal. In the intestines and organs there is a system for the removal of bile. And the currents that are placed in this bile shell are not fixed and are effectively removed.

The specificity is that *when bile is excreted in large quantities, an element of weakness appears.* This is an inactive element. It is associated with the main functions of the body. It is secondary.

There is an optimal process of bile excretion for the body. When there is an excess, an element of weakness appears. But, in any case, there is no need to have any complicated phenomena, even in well-being. One thing is an objective process. It is desirable not to have unnecessary phenomena in well-being. The main thing is to solve specific problems with a fairly accurate correction to reality. It is necessary to solve real problems and really diagnose their exact solution without any conventions. Based on this, it is necessary to understand that *there is an information center of a person ... I correlate information corresponding to the concept of such a center with information of the micro- and macroenvironment at the cellular level* - one of the positions of understanding the concept of Kundalini. In each cell there are certain microprocesses that are determined by the structure of the functioning of the cell and there is an interaction with the entire external environment, including segments of the cell itself.

Ultimately, a certain point appears where there is nothing at all - emptiness, infinity, and interactions at the level of visual perception that are undefined in statics. Because *if you break a cell into a million elements, then each element interacts with the entire external environment, with each element of the organism. The same can be broken down into a million more. And a feeling of light emptiness begins, that is, a certain white color, and the concept of a source appears.* The concept of Kundalini is translated: Kun - from, dalini - coming from the light, ancient Arabic translation. In the Indian interpretation, Kundalini is energy, a power characteristic. I explain at the level of a glance, earlier in time, having arisen in Egypt. Thus, the human information center has one of the projections in human consciousness, called Kundalini. It is possible to determine other projections and bring them to known names, or to new ones, knowing the law of consciousness:
the movement of thought is meaningful in the thought itself.

If we consider that this is the source of everything, then we can understand that the source, including tumor processes, is determined by the light spectrum. We need to understand how other structures are restored against the background of the white spectrum - the energies of white.

To derive the structure of understanding white.

Understanding white and white energy are different information structures, information forms. I am talking about understanding white, because everything is visible on white. If we consider the organism at the level of the white color structure, then any change in the organism's information is other colors. I am giving you the structure of primary diagnostics, self-diagnosis. Fast-order processes are tumorous and require constant diagnostics.

Before going to bed, concentrate on the lobe of your right ear and tune in to the system of perception of white.

Any deviation from white in a dream, without excessive expenditure of mental energy (without complications in a dream), can lead to monitoring of the state of health.

Control is already a solution to the problem. This is the calculation of the occurrence of the next cells, prevention of relapses. Another point is that *negative information should not arise even on mental level*. Information about cellular structures that do not correspond to your healthy body, should not arise even on information. Therefore, if we talk about *how to get out of tissues of tumor structures, it is necessary to think about opening information channels*. For this, there is a perspective of the sky.

A person perceives from his shoulders. Around ready reacts to the contour of blue color, and from above - to the sky. This is the opening of the information channel, while the sky is felt as the exit from the head of information about cells.

The exit path must be controlled. There is a trajectory of movement of the cellular composition at the level of the thought process, where intersecting cells give a segment of the secondary matrix. There is a delay in events at the level of matrix forms. Flying out cells at the information level should not intersect and should not give shades of light. There is a need to control light pulses. When viewing, an interesting picture appears. The main thing is that they do not intersect. It is necessary to organize small parallel systems of contours. Determine a separate contour for each cell. Imagine several circles and cylinders at the level of the contour around the head. *Each cell should be output through a separate cylinder. In this case, the cylinders should not intersect. This is a model of the brain.* When there is an approximation to matter, this is a model of the brain. When working with external infinite structures, this is exactly

how the brain works in a model form. It works at the level of non-intersecting signals. *Understanding this structure significantly and qualitatively speeds up the thinking process and the process of reproduction of tumor cells does not have time to enter the information of your body.* Thus, simple understanding already protects. On this principle, you can protect from any negative impact. Your body begins to react faster to external information than to tumor information.

A tumor is a certain intellectual force that has its own informational power, its own laws of distribution, its own target functions. You need to overcome it. It is necessary to have a mechanism - how to overcome it.

By using my information management framework, you decide which method to use.

I am introducing specially simplified versions. This is one from points of view. But this point of view allowed people with stage IV rapidly metastasizing cancer to completely heal *from* cancer after my sessions or mental appeal to me. You must choose a point of view at the moment.

Try to use any methods, even little known ones, but having positive structures. How to use? The control system is in front of you. Your own thoughts are with you. And I am now telling you about the system of thought space, about how this system intersects with reality and where it can be used for control. Where does the idea differ from control? This can be understood.

Event Management Structure

Methodology of knowledge based on a specific appeal - cancer plus life disorder.

Work process.

This *information, formulated as a problem, exists at the forehead level.* Between the eyebrows, in the middle, there is a point. If you draw a ray perpendicular to the forehead surface from it, then on the ray there is a sphere with a radius of 2 cm. In this sphere there is an informative source of problems. When problems are formulated, they are located there at the level of geometry, a little further from the skin of the forehead surface. *In order for these problems to be realized, there is an upper information center above*

the person. This center is located *above the level of the head surface also by 2 cm* vertically. There is the lower point of the sphere with a radius of 5 cm. The sphere is arranged in the form of seven segments. The first segment is directed towards the nose. If you connect the information corresponding to the problem with the information of this segment, its solution begins. I give a technique for managing events and cognition of external information. This structure allows you to manage the situation quite quickly, if you also understand the technology of concentration. The concentration technology is when a person does not follow the geometric connections considered, but *solves problems through concentration*, for example, on the little finger of the right hand from 10:00 p.m. to 10:03 p.m. How is this done? At night, let's say for three days, information is mentally stored that in advance you are concentrating your attention with the simultaneous goal of solving the problem. The attention itself does not need to be specially concentrated, do not look at the finger. But you should decide that your attention will be on this finger for three days from 10:00 p.m. to 10:03 p.m.

I call this control system the coordinate system of time. All the concepts that I give special definitions allow you to control at the associative and logical level already based on the perception of concepts. When you start doing this, in some cases, a sensation arises in these time intervals. That is, any disease has a time structure. Therefore, in order to • restore the body from an illness, you need to be able to work with the time aspect of this Process. *One of the elements of getting rid of an illness or some kind of life disorder is the extraction of information of the corresponding time from the general form of events.* Each event has a form. This is logically clear, it can be considered through clairvoyance, or seen from digital information processing. In order for a future event to have a canonical form corresponding to health, a positive state of affairs, you can use the element of extracting time, which determined the negative element of the event in the present time. The scheme is quite simple in logic. If there is a certain illness, then it was formed over a period of time. If there is life disorder, then it was formed in stages. Once you made a decision and something did not work out. The time when it was formed, and the time that specifically led to it. Thus, time is divided into a number of parallel processes. One time forms one situation, the second time element - the second situation, and so on. If something is formed in the world

at each moment of time, then each section of the process has its own time.

I propose to switch to this model of thinking in a specific case - adenocarcinoma. *It is necessary to be able to omit the time configuration that formed the process.* This time configuration is extracted from future events. The process of extracting these configurations is carried out by transformation. It is not that it comes from somewhere and moves somewhere, *it is simply transformed into a positive time structure.* The process is based on concentrating attention on the little finger of the right hand. *You can use concentration of attention on the color range from 10 p.m., once or twice an hour.* Try to imagine all the colors most clearly, *this is the principle of harmonization and canonization of the information structure.* The logical connection is quite clear. I give a system of event management. Events, health - this is the final necessary element. To manage events, you need to know the specifics of the interaction of your information with the information you manage.

When I give knowledge on an audio cassette, the cassette must be listened to for understanding. You can also implement the task by concentrating on the result while listening to the audio cassette. When listening, it gives a positive result, and also restores within a radius of 27 meters, if it is in the house or with you. Many apply it to sore spots - the pain goes away. It needs to be carried with you. When replicating, the form of the information that is embedded does not change. On the remaining part, you can record any other information, music that you like, and listen to this tape. Everything said is also applicable to videotapes with my methods and results.

Canonization of events of any level

You need to find a mechanism for knowing your perception. You are engaged in a system of knowledge between reality and management. The solution to your problem, for example, healing, is a system of knowledge: to make an event such that in the future, with any research, there would be improvement and normalization and under no circumstances would there be deterioration. *You must understand where to get information from, how to manage it.* This is a management technique at the level of understanding two structures.

Vision is a system of hidden processes.

You are engaged in the theory and practice of cognition on situation management. The problem that you knew then, after listening to the recording once, changes, the information level shifts. *With the acquisition of new knowledge, you have a new form of information. There is a certain volume of all information with a radius of two meters (at the time when you came).* You received new information - the radius increased by 1 mm. Consequently, you think in other constructions in many ways. This is practice, and you need to understand specific practice. The form of information is mixed. Now your active point of information is a geometric area - an extension of the index finger of the left hand. If you draw a straight line along the nail of this finger, then at a distance of 2 mm there is a sphere with a diameter of 2 mm. Now this point is the most active. It needs to be canonized for today. Each time I give you a method of cognition. And the method of cognition is a non-static structure. At each subsequent stage, you must learn something new so that the speed of cognition is higher than the speed of the disease process, or the speed of the process of development of some negative information. Information must be used directly. You have a process, and in order to have healthy tissue, you need to use the information in two ways:

1. The path of knowledge is already restoring.
2. When you begin to concretize knowledge, you begin to apply it.

For example, you start to manage this information along the extension of the index finger of the left hand. You felt that the sphere there was normalized, the sensation comes later. This is a very long-lasting feeling. When it is felt, it is long. You must see at the level of logic - to understand. I give a picture of understanding. *The meaning is that the speed of thinking is higher than the speed of the disease reaction. A protective environment arises in a person, through which the disease information no longer passes.* As soon as it stops passing - that's it, there is no disease. The person takes tests, which show the norm.

How to make your thinking speed faster, than the exchange of information of another environment? Theoretically, the conditions are all equal for all objects of information. *Disease is also an object of information. Some affairs are also an object of information.* In the future picture of life, during events, some object will be a priority.

The one that will occupy this point in space faster. For you in this system of event management, it is important to develop information exchange with the external environment so much as to understand how to quickly occupy the point where there is no disease or problem, yours or someone else's. This is theory and practice. I looked at how the dynamics are going. You have already transformed a lot of cells. You must increase this process. The faster you increase the speed, the better for you.

Question: "Does the concentration on the little finger only apply to adenocarcinoma?"

Answer: "No, it is an event management system.

Adenocarcinoma changes the shape of the event ahead. It has its own canonical form. Let's say, ellipsoidal, if we are talking about a 20-year period. The event corresponding to this finger, when you were 20, had an ellipsoidal shape. This is specific, I am not assuming anything here. This shape has already begun to change. You must deal not only with the future aspect, but also understand the reason. Why did this happen to you, at least at the level of the information form?

You need to apply the scanning principle.

You sit comfortably and imagine all the events of your life as a form near you. It can be different and diverse. You start scanning it with your brain. The information is contained on the computer in a file, on a sheet of paper, or in a form. You need to scan this array and find where it has changed, if it is easier for you to work in general, start with the macrostructure. Scanned the array, found a change in some area, understood why. Found dark content, threw it out, inserted light."

Question: "How can I understand why this happened?"

Answer: "You may not understand. You can at least go by sensations first. You feel that the array has been changed - it is wrong there."

Each person has a system of canonization of his life, a system of internal diagnostics, that is, the norm of social life, health and everything else. You strive to find your double, where everything is normal. With its help, you scan. The double is your events that you build yourself. I am engaged in the objectification of these questions. Therefore, I also give you how to work with the form using

sensations. Sensations can be different, but as an additional means of monitoring the state, they are unified.

The body is a sealed environment. We must look for an entry point. On the kidney may not have carcinoma, but the kidney can be a conductor at the information level. All organs, all cells of a person are in the information sphere. In the final form, it should be healthy. Many people may not get sick.

The disease information, the information array, is introduced into the sphere through the contact point on the outer surface. Your contact point was the right kidney when you were 20 years old. The information started going there and gradually reached the point where the primary cell arose 10 years ago. Then this cell began to dampen impulses in the right hemisphere of the brain. And then the brain will lose control over the area of adenocarcinoma occurrence - a completely foreign tissue. I mean your model of information exchange.

In the canonical form, a person does not have a disease. A disease is external information. Somewhere you let it inside the object of information, which corresponds to the healthy you. I am talking only about the form of information. I am not saying what it is connected with. This is not the essence. The main thing for you is to get rid of the disease. Of course, *if getting rid of it requires knowledge, for example, strong teaching, then this must be taken into account.* But in this case, I am talking only about the form.

Question: "How should I present the little finger: in its natural form or as an X-ray?"

Answer: "You need to imagine it mentally, or look at your little finger."

The time I give is characterized by the greatest activity of information sources that correspond to a person in exchange processes with the external environment. This time is optimal for control structures.

In order to obtain the necessary result by concentrating at any time, you should use conversion values for the time of arbitrary concentration. Conversion values are determined based on the laws of development of your knowledge.

Next control: you look forward with your inner eye. You see an object of information corresponding to the rainbow. You must tune in to the entire visible color spectrum. And then go without effort. Now

it is enough to imagine the color at least for a moment. *This is a system for managing events of any level, canonization of events of any level.* I give it is tied to your problem and from the point of view of your knowledge. Disease is one of your problems. You formulate and act on any problem, which means you manage.

Additional recipe: (system of small concentrations)

- 1 tablespoon of St. John's wort;
- 1/3 teaspoon baking soda;
- 200 g of boiled water.

Stir, let stand for 3 days. Filter, let stand for 3 days . Moisten a bandage (cloth) and apply a compress to the middle of the foot at night for 10 days in a row. The composition is stored in the refrigerator for 7 days.

This product is used for tissue ionization.

Method of managing a situation at a certain time

The method is based on the fact that *in order to manage a situation, it is necessary to know information about the future, and what happened in the previous stages.* How the control elements of the previous stage affected the situation. The situation can be objectified through instrumental control tools, if it is, for example, a disease. Or through the norm of the situation, if the situation is an event. Medical tools provide information about a person's condition. Many diseases develop quite dynamically. Therefore, it is necessary to know how the situation is managed and be able to diagnose your own management result. At this stage, I provide a management system through diagnostics based on my results.

The first element.

Concentration of attention on the hands and feet from 10:00 p.m. to 10:05 p.m. This is a closed-loop concentration, that is, diagnostic concentration, carried out as needed. You need to look at the nails of your thumbs. *Concentrating on the hands and feet, look at the nails of your thumbs* and see, as if with your inner eye, that there are some intersecting segments going from these fingers up. You can imagine your hands arbitrarily - your imagination works. *Imagination is the system that controls the structure.* You mentally feel how these segments move, intersect. They can move very dynamically in different directions. Where they intersect, remember

this point (the segment coming from the right finger intersected the segment from the left finger). They necessarily intersect somewhere within a second. So if you concentrate for 4 seconds, you can already control four organs. This requires practice. This is an objective process. You need to understand it. To understand means to record what comes to mind first. Where they intersect, there is some kind of glow. This is the center of the organ that has a change. Video equipment records this effect.

Question: "How can I determine which organ?"

Answer: "First you see the center of the organ, it glows.

Then try to lower some soft waves through the right, left hemispheres and feel what kind of organ it is, understand in accordance with the anatomy." If you do not know anatomy, then I give the following view of the body. *The body is divided into 10 sections, by segments.*

There is a system of scanning the body through visual observations. Starting from the left little finger (left to right), the body is divided, starting with the legs and ending with the head, by segments. You can concentrate on these same nails. Do not look for these rays, the second element, but simply concentrate only on the thumbs and then on the feet. In which finger the sensation arises, such a segment of the body has changes. The segments are as follows: the little finger of the left hand corresponds to the lower segment (0.1 of the geometric length of the body reduced to 1), the little finger of the right hand - the upper segment, and so on. The entire length of the organism is taken: below - the little finger of the left hand, above - the next finger, and so on, into 10 parts. As soon as you feel a tingling sensation on any fingers, activation of skin reactions during concentration, transfer your attention to the corresponding segment of the organism. With further detailing, you can determine an organ, cell, microelement, and so on. Elements of detail are determined similarly to elements of the entire organism. If you perceive a finger in a different way, for example, as in an X-ray, or in any other way, against the general background of unchanged perception, then this is comparable to sensations on the skin of the finger. A finger that makes itself known reflects a change in the corresponding part of the organism.

The second element.

Dynamic cell system.

In order to remove a cell or redefine an event through concentration on a finger, it is necessary to first find in which zone the cell or event indicator is located. And then try to remove the cell through the urinary system, transform the event through any external to information about the event.

Continue concentrating on the thumbs, and not where the negative information was found. All other processes are involuntary. The right little finger, if it gives you an indication (heats up, or other sensations) from 10:00 p.m. to 10:17 p.m. - this is a diagnostic procedure.

At the same time - a correlation procedure that restores you.

By means of this concentration, you can bring out the cell, everything inappropriately changed in you, at the information level. I see how the withdrawal is carried out, through which cells and methods. If this is interesting, you can observe yourself according to the diagnostic system. When you have looked, again go to the concentration system discussed above. This is a method of objectifying cellular structures. After a week, check yourself, see what has changed. Do diagnostics at least once a week. You can do it every day or more often. The more - the better. Diagnostics and control begin at the moment of concentration, and are realized immediately and during the following time. In 10 days you will have the first structure of diagnostics and control of the body and events.

The basis of knowledge on the division of the organism's phases on information

Drug addiction is considered as a problem. As in all other cases, the methods obtained for solving one problem are applicable for solving any other problems. Therefore, special attention should be paid to the development of spiritual impulses of information management by means of logical and associative perception of my texts. In relation to spiritual management, any problems are informationally equivalent.

Definition of information

Any objects of reality are information. Information is perceived as an abstract or concrete value. It can be felt, and sensations can be

transformed into future events. *If there is some knowledge, it can change the reality ahead.* For example, if there is knowledge of resistance of materials, then it is possible to calculate the strength of a structure. A musician will be able to play according to notes, etc. This knowledge is for managing the information structure. At the level of logic, it is enough to understand that any information is contained in a form. A book has one form, a table another, etc. The volume of a video recording during computer processing also gives the form of information.

On the logic of comparing information structures, I give a system of understanding the control structure. What is the control structure? *In this context, the control structure is, primarily, your perception.* A book, for example, can be perceived quite simply visually (if you have vision), or by hand, or by sense organs (cold, water, liquid). *In the system under consideration, it is necessary to perceive the control structure only at the level of primary cognition. This level of knowledge goes in parallel with the fact that I work on a hidden level.* Some call it the subtle world. I call it a hidden, implicit level of work, which is not defined by a static concept. I give this method so that when restoring a situation, managing this situation by you, including those who listen, read, and begin to help (my materials can be replicated indefinitely), the event is restored to such a level that it can be managed in the future. Then there is a constant (independent of any processes) stability of the result obtained.

This event has an unregulated structure - drug use. The person himself must also understand that this is not the norm. Events must be aimed at ideal recovery when there is no motivating reason. I am talking about the level of management in a specific situation. But this is also a general management technique.

Let's consider the organism from the point of view of different positions:
sensation of the organism and control.

First, let's consider the coarse-grained position of perception. When you look at a person, you can differentiate him as a coarse-grained system. At the level of sensations, if you mentally run your hand over the person's information, you can feel the granularity. You feel it, according to the crystal transformation scheme. Informative transformations have the property of mobility. They can be moved

mentally and at the control level in the same way as a pianist plays and feels the keys. They can be soft. They are not amorphous, but they bend as if they are on a green and soft pillow. *This is sensation training - access to the human control structure.*

The second is a system of schematic lines, when a person is considered as a cavity system, having information sources to some planes dividing him vertically. You must understand that I give tied to your perception. But this is a general control system that works in any case. Any person can use it. In each cavity there is a certain control system that corresponds to all external and internal processes.

Additionally, there is a matrix form of division By horizontally, i.e. perpendicular to the vertical axis of a person. Some cells appear. They are open from both sides. The principle of knowing a person from this position is penetration into the cells by consciousness from the side of the face and exit through the other side. When you go through each of the cells (they can be divided into a million), you can find connections between different structures. For example, how the heart is connected with the liver at the level of information areas. You can do these studies from 10:00 p.m. to 10:07 p.m. You are in a state of rest and are studying a person. As soon as you have found a connection, then immediately management by canonization occurs. This method of management says that finding directed connections is already canonization and optimizing improvement of the problem information.

The path is the path of truth. Therefore, when you find it, you begin to manage.

In computer processing, this is the so-called system of dynamic flashes, i.e. when your consciousness is flexible. For example, a person does not want to give up drugs, and you must go faster than him with your thought process so that the control is effective. In this case, control is the speed of thinking. When considering this human structure, you must understand that this is only one of the control models. There are other models of access to the control structure.

Now let's consider how to transform the situation so that it is normalized. *The norm of the situation is safety not only in terms of health, but also in terms of all external structures. All external information includes safety of the macrocosm, macroobjects (so that a meteorite does not fall to the earth, etc.). Therefore, when working*

with the structural form of information of the protein environment, which is related to a person, it is necessary to understand that macrostructures are necessarily involved. At the same time, a person is the center at which certain processes occur, including the processes of perceiving oneself, the external universe, illness, social life, etc.

In this regard, there is an idea of the undying of the protein form. *According to the predictive nature, protein tissue does not die, does not collapse.* This has been proven in physiological experiments. *But if there is a narcotic effect, then an element of curtailment of the further path arises.*

The structure of DNA, or the layer structure of protein, differs from the visible structure. *Continuous layers are visible.* They go to infinity from the point of thinking, from the starting point, if we take human information for thinking. Thus, *under the influence of drugs, they begin to roll up, like carpets, and come to a point.* The phenomenon of tissue structure parallax occurs. The cell begins to expand. For example, in the brain. It increases in size and requires the next dose. That is, the compaction of information occurs at the level of compaction depending on the drug. *It is important for you to transfer this structure of compaction to the level of creative compaction.* When the compaction is *positive decisions in life.* Canonize future events. Let it work, earn money regardless of drugs. You need to replace the input source. *From the side of infinity, insert the source of typical life.*

At the level of simplified modeling, this is concentration on the index fingers of the hands from 10:03 p.m. to 10:04 p.m. (1 minute). Training: 5 days of concentration, 1 day of break, another 5 days of concentration.

This concentration leads to what I said. Simply reading what was said optimizes the event.

Modeling the situation ahead comes down to the fact that a person begins to have future positive events as a source of information, not the drug environment. In this case, we are talking about the drug environment as a conditional structure. In some cases, it is a disease. In other cases, it may be something else. *I call all this conditional information structures (drugs, disease, problems, etc.). They are all neutral.* I introduce the concept of neutral

processes, where each point of view is neutral, each structure is neutral. Knowing this,

we must use any point of view as one of the segments of information. Because if it is a conservative system, then when making a decision in the future you can stop at this system, and it may already have developed by that time.

This is the law on the development of the form of information.

Since everything in the world changes, then what I told you, in a second is generalized by the events that happened in a second.

*Therefore, any information develops, including the one I am giving you now. There is direct access to this information, as well as to any source, since I gave it to you for awareness partially. Partially in a wordless version. Here the need for combination arises, when you need knowledge instantly. A system of fast knowledge, when something is done in advance, without focusing on certain arguments of a person, models of a person, for saving a person. Then what you listen to is a guarantee that *you are already using knowledge at the level of secondary nervous structures*. That is, you can already, without remembering it, change everything. This is *the path of building up information of such a plan, when the subconscious works*. I use the concept of consciousness and implicit information, which is not related to knowledge. I give the path of building up knowledge through an implicit structure. You must understand that everything that is accepted can also be accepted from the point of view of positive knowledge (which helps you).*

Knowing this plus step-by-step orientation to modeling. For example, there is a coarse-grained modeling structure, where it seems that the person you are asking for is standing at the top.

*And below (under the model from this person there are some rays) there is the same person, but smaller. Where specificity arises from your point of view, turbulent vortex flows (with computer processing this is clearly visible), where they begin to close, in this zone the organ that suffers is outlined. *This system is diagnostic, but it is coarse-grained. That is, the grain of knowledge is outside knowledge.**

Philosophical approach - asegmentary structure. Therefore, there is also a layer structure. For example, one of the layers is human skin and all organs are searched for on the skin. You consider

that the skin is a surface, and *you focus* on the entire volume of information corresponding to the skin, *and the first knowledge that comes to you is problems*. They can be associated not only with the disease. A person walked and injured his hand, for example, this can be a problem with such a planar modeling. Macrocosmic structures, the impact of radiation, a meteorite, etc. can be visible.

A reference point helps a lot when diagnosing equipment. It is clear whether there will be an accident with the equipment, etc. There is a so-called system of cognition - a system of target bindings, when you form the external world according to the object's movement goal. The situation is as follows: the world around you - you form it. If a person moves on some kind of transport or lives in a technocratic society, then from here one can understand the laws of safety functioning: how equipment should be safe, how chemicals should be safe.

The next training - you need to think. I have the following system: after one information processing, you can make a forecast protocol (the function is calculated - how much work needs to be done so that there is normalization of events). In the future, you can find out the processing data and see what is required to write a forecast protocol.

Optimization of future events

Properties of this material:

1. *Operating radius* (event optimization) *up to 71 m. It is sufficient* to have the text of the material within the specified limits.
2. *Contains a restorative system of knowledge* of a hidden implicit plan for changing information canonical areas. Knowing what has been changed at the information level leads to conscious compensation. Restoration occurs over time.
3. *Methods of managing* specific information at the level of specific actions.

Patient's range (starting point of information, list of altered structures):

1. Thyroid adenoma.
2. Diabetes mellitus.
3. Itchy skin.
4. Cardiovascular pathology.
5. Uterine fibroids.

6. Mastopathy.

7. I immediately introduced the additional structure of the lymphatic system.

This management structure is unified. I will give a practical management method. Theory has a practice of cognition. This apparatus can be used not only for this problem, but for any other. *At the level of optimization of future events, it is necessary to consider two stages from the point of view of the device of information corresponding to a person.*

1. The first stage is *information about future events*, when a person is considered *as a system of horizontal flat layers*. In fact, if we consider it in more detail, for example, a day or more ahead, then *a person can be viewed as a form of information that has the format of a person*. Information double in a layered version at a horizontal level. Information archiving compaction system .

2. The second stage - consideration *of information from the past is accepted as a system of vertical layers*.

3. At the level of *the present time* of real events perceived by consciousness, there is a perception of information *in the form of crossing* (cross-shaped structures in different areas above, below, etc.).

An event at the information level is constructed in such a way that the intersection of these structures can be accompanied at the level of perception, objective measurements, and instrumental measurements by the following positions.

When the human consciousness works, i.e. perception is active and can be focused on events of the past, future or present. It is necessary to really assess that at this moment there is precisely this time and the person is precisely in this time, specifically by activating attention. *At any other moments (80% of the time}, structures of dynamic consciousness arise when it is scattered*. There is no concentration in time.

The concentration system that will be given is based on the fact that there is a crossing of many processes that relate to the future period of time and the past. When these information doubles are combined, a structure for building a foundation for future events arises.

In this position, it is necessary to understand that *the time interval is the interval of a given time zone*. If a person is on the way, That the reference will be the time zone of the given area.

Therefore, the coordinate system *selected in relation to the time of the locality and it is necessary to practice according to this method in accordance with the locality where the person is.* Time intervals are quite conditional from the point of view of perception. In ultra-fast processes, for example, the electron spin, there are some positions that indicate that the time coordinate has changed. Therefore, it is necessary to take into account that, being aware of *time, we perceive only as one of the points of coordinates of the binding of consciousness to certain social factors for the outside world.* When we talk about information management, we will be talking about managing any form of information in which the concept of information time, including for stone, solid matter, any element, is absent. Therefore, it is necessary to be able to transform the time structure.

To manage events, one must be able to transform the time structure in the direction that information will be formed in the future. *One must be able to separate this area. The area where time exists from the point of view of our perception, and the area of other information objects for which this environment is neutral.*

Let us assume that for zinc, magnesium, iron, which are found in the body as elements of matter, the concept of time is excluded from information areas. Therefore, in order to have access to this information area and control iron (Fe - ferrum - a chemical element) - increase the concentration, especially with thyroid adenoma, it is necessary to have access to this information area. Therefore, I give the specifics of access to information. *Access to information is the ability to approximate. It is necessary to have a unified system of access to any source and drain of information.* The source is the zone of active selection of information areas. Drain - where it is visualized, at a hidden level, information areas enter. *I propose a system that on the trajectory of the path from the source to the drain to find the entry point of information.* At the same time, even if we have the concept of time, and the structure of iron is separated from this concept, then at the transitional stage it is possible to enter the information of iron, magnesium, zinc and other metals, substances, any process in principle. *I specifically introduce the time system only as a person's perception.*

There is a second way, the so-called parallel approximation way, when at the information level we consider what time is for a person, and we consider an identical process for any other process of

an information object. *Approximation of combination occurs at the level of identical geometric structures.* For example, for a person, time is an area in the form of a parallelepiped in the thyroid gland area for one of the perception levels. And for a stone, the same area characterizes the position of the stone in space in relation to the geometric environment. I am talking about practical structures confirmed by research. *Combination in order to understand the control structure*, for example, to see, to understand the internal structure of the stone. In fact, this is the development of irrational vision - clairvoyance. *Clairvoyance processes provide the ability to control. In order to understand, you need to be able to combine the concepts of time of your perception structures and other information.* The new point of view that I give is the system for accessing control. All this is measured digitally and it is visible - unified.

Next, I give a system of combining,
when you bring your information level (the event level of the future - horizontal layers) to the present time in order to build the events of the future. At the same time, it is necessary to take into account the events of the past. That is, the past double must also be here. A structure of this nature arises: you ate something earlier, more active substances, both organic and inorganic. They were not combined with the information of your body in the past. In the future, you do not yet assume this structure: what will you eat in 2 ... 3.50 years. Therefore, these structures from the future are called zones of assumed information (the diet will not include, for example, hydrogen sulfide and other inedible things). On the other hand, in the past there is definitely an organic and inorganic structure. Let's assume that the event must be constructed so that you are examined and there is absolutely nothing - a healthy person. The diagnosis is just a state of health. And there is also an external infrastructure, i.e. event level (so that the machine does not have accidents, so that there are no problems in principle and in general in information structures). Therefore, it is necessary to take into account here that the information structure of the control order can be tied in the following way. Let's say there is a certain person - a partner, maybe visually tall, a powerful person. But his information can be projected 5 years ahead onto a zinc-containing substance that was once used in food. Information can intersect in a completely uncertain way, from the point of view of logic, with past or future moments. It is

necessary to understand that I give the theory of knowledge and the practice of knowledge. This is one of the points of view, one of the ways of management. On the basis of this approach, it is possible to build a large number of ways and structures of management. I give already tied to digital processing of mathematics and what is tied to perception.

Three positions were considered: future, past, present.
Structure their combination gives an informative structure of the correct form in the future.

Moreover, it must constantly give the same form. A problem has arisen - it must be leveled. So that there is not just no diagnosis after some time, but so that there is no diagnosis at all under the condition of infinite life. It is always necessary to work at the level of infinite processes. Mathematicians work with infinite areas and lead to results enclosed in a canonical form in the form of an equation.

Knowledge-based optimization system

There is a structure of cross-shaped intersections. An introduction was given to a specific training on this problem (diagnosis). The structure of intersections of past and future events is formulated if we take a parallelepiped in the thyroid gland area. It is changed in shape. The intersection of horizontal and vertical areas gives a parallelepiped. Width - (coordinate from a person) 2 cm, along a person - vertical 3 cm, length 4 cm. The parallelepiped is highlighted and is visible during digital processing. Its edges should be in direct vision, and around it there should be a sphere with a radius of approximately 8 cm. Moreover, the center of the sphere should be at the intersection of the diagonals of one of the maximum planes in the center. Therefore, there is now a certain shift in the geometry of this zone. The zone is mixed in such a way that the sphere is deformed from above by 2 cm. One of the sides (small) of the parallelepiped along the upper right edge, if you look from your back, is reduced by 1 cm. That is, two zones of deformation of this information from the canonical level. To bring to the canonical level, it is necessary to understand where the intersection of horizontal and vertical layers gives a spherical image.

The system of spheroidal thinking is the process of the fastest information processing and exchange. Compensation of information

structures occurs when, for example, this sphere gives a higher speed of information exchange than the system of planar structures, such as stratification inside a parallelepiped. If we consider stratification inside a parallelepiped as a series of simply horizontal and vertical layers, that is, find areas of combination of future and past events, and focus on the fingers of the hands, for example, the index fingers from 10:00 p.m. to 10:05 p.m., then *there is a projection of this structure onto the outer sphere, and the boundaries of the sphere begin to straighten out.* That is, in fact, concentrating attention on the fingers at a given time gives control over the situation ahead. *The perspective of this method is based on the fact that knowing the time and place of concentration of attention, you can control the situation.*

But there is a structure, for example, *when a person sleeps.* Works with consciousness inactively. *At the moment, there is a structure of rubbing certain herbs into certain areas of the body.* It is necessary to take the appointment for rubbing herbs now. *This is again a system of event management, where not just the restoration of the tissue structure is taken into account, but namely, the optimization of events.* Some tissue structures are desirable to restore so that the event ahead is optimized harmoniously. That is, in order to quickly restore tissue, it is necessary to understand the entire previous course of events that formed this tissue. Because *each cell of the tissue reacts to all external information, all external infrastructures.* Including the Chernobyl explosion and everything else. Therefore, it is important to understand: in order to restore information, canonize, you must be able to correct your structure without damaging any information structures. This is the concept of self-knowledge of the control system.

Resume

There is an information background, an information logical double of an implicit plan (hidden), which determines the reality of an event in the past, future and present. *In the present, it is a system of cross areas around the anatomical body. In the future, these are information structures of a horizontal plan, in the past - vertical.* When crossing, they can give certain parallelepiped zones. They can have deformation changes. For example, according to the

diagnosis or some social, financial situation in life that needs to be balanced or optimized. *In order to optimize, it is necessary to reach the speed of thinking of a greater characteristic, a higher frequency.* That is, clairvoyance, to control a wider area. For this, there is a system of concentration of attention. That is, *attention to the fingers gives spheroidal projections.* In practice, we reach zones of thinking that are greater in intensity. A more accurate process, as it happens in the area of the spinal cord, brain, cellular structure, I give in specialized courses.

We must try to understand the methodology at the level of fundamental laws of the world.

The structure of communication between certain organs

There is a fairly clear connection at the level of certain geometric structures between organs. It is traced quite simply and can be recorded in statics in the form of certain information spheres. But there is also a connection between organs, the so-called point structural form, when periodically in some time intervals a luminous image appears (which is recorded in the optical range). If the process is observed, then it is objective. These impulses are sources of information. According to the color perspective: light tones are sources, dark ones are sinks. *The process corresponding to the thyroid gland is the process of macrocontrol over the functions of the cellular structure, over the organs.* The specificity of these microimpulses that originate from the thyroid gland is such that the emergence of a logical deterministic connection is not traced. There is simply a certain embedded function of manifestation of the angle of influence of the thyroid gland and this function is temporary. If we consider this *point impulse every 5 minutes in the area of the right collarbone (there is a scanning impulse), then this is the functional property of the thyroid gland. I have just taken the collarbone and, exactly, after 5 minutes, a picosecond impulse of 10^{-9} sec appears. This is information about the thyroid gland.*

When the tissues begin to undergo changes in volumetric composition, then this impulse begins to distort. It begins to take a zigzag lightning form. Normally, there should be straight rays. The thyroid gland control structure is periodically emerging rays that arise in different cells, in different organs. Scanning occurs during measurements. In order for these rays to work normally, this

information must be canonized, reduced to rectilinear rays that go to different organs precisely from the physical center of the thyroid gland. There is a certain training for this.

The training consists of concentrating on the index fingers and thumbs of the hands and feet from 10:17 p.m. to 10:27 p.m.

If there are intersections with different perimeters, you just need to write them down in a table and at least read them. It may be problematic to simply control a complicated structure for the first time. Therefore, you can first read and gradually this will become normal, and reading will compensate for the training of parallel thinking. Why am I talking about the concentration system right away? Because the conditional connection between this concentration and these impulses is quite simple. It consists in the fact that *the thyroid receptors appear as static sources. It is in these tissues: the index and thumbs of the hands and the big toes. It is in these volumetric tissues that these receptor tissue characteristics appear as receptor-emitters.*

When you concentrate, you simultaneously direct all these rays. In the first wave variant, such a property is visible. I do not specifically explain the deep structure of connections, so that you, as an exercise, can think it out yourself and build your own structures.

Question: "Which fingers should I concentrate on at the same time?"

Answer: "On 6 fingers. Index fingers and thumbs. *Imagine that rays go simultaneously to all these fingers from the thyroid gland.*

If they intersect (the secondary thinking system), it is possible to imagine a multifaceted form. That is, different trainings can intersect at the same time.

You can then prescribe it yourself. But not earlier than in a month."

Question: "Can I see something?"

Answer: "I am giving you a system of irrational vision. What does this vision consist of? First, there is what I say, which can be seen by means of objective control. Then, when you know this, you begin to practice, for you it becomes the norm. But this is a physiological norm, among other things. That is, the informational norm turns into a physiological one. *The goal is for you to know*

where geometric changes occur at the information level and lead to norm. Once you have brought it to the norm, your physiological correspondences should be normal according to the canons.

Everything depends on the speed of your training. I give you time for the first month course. You do what I say. This is a system of cognition. Having a starting base, you can develop it as much as you want. Now you have come with your problems. And in 20 years they can change. You must have a tool in your hands that would allow you to manage. I give one of my points of view, as a theory and practice of cognition."

Question: "How far should I keep my fingers?"

Answer: "You don't need to hold them, but imagine them. I give training in control without moving your arms and legs. You can do any activity, but try to control them."

Question: "I thought I saw a ball. Could it be?"

Answer: "This is an irrational vision. You perceive correctly. You begin to see spherical segments. You have a fairly correct path. With digital processing of information, what you feel, it all becomes objectified. What you begin to see is the control system. This is what I achieve, generally speaking."

Question: "What I see makes me want to look at it again."

Answer: "You should know for the future that there is a shift in time for some objects. That is, at some point, in some space, an object exists. In another space, it may be of a different shape. *You should be aware that repetitions are not necessary.* Let's say there may be repetitions with a camera during video recording. The same shape. The same clothes. *But information areas are very changeable.* Therefore, what you begin to see is your area of representation. It exists. It can be measured. That is, any form of mental activity, form of representation can be measured. You can even draw blueprints this way. The mental structure is measured. It is transferred to scanning (plotter) and the blueprint is visible. This is the practice of objectification. What you see is your control. There is a control structure, and there is a neutral type. I am giving you the control structure. What you see, you see correctly. Therefore, you should develop not on repeated images, but on the development of your

own system of information control. Develop your spirit. It is advisable to concentrate more in the area of the cervical spine."

Question: "Should I just imagine, feel this department?"

Answer: "You don't need to hold them, but imagine them. I give training in control without moving your arms and legs. You can do any activity, but try to control them."

Question: "I thought I saw a ball. Could it be?"

Answer: "This is an irrational vision. You perceive correctly. You begin to see spherical segments. You have a fairly correct path. With digital processing of information, what you feel, it all becomes objectified. What you begin to see is the control system. This is what I achieve, generally speaking."

Question: "What I see makes me want to look at it again."

Answer: "You should know for the future that there is a shift in time for some objects. That is, at some point, in some space, an object exists. In another space, it may be of a different shape. *You should be aware that repetitions are not necessary.* Let's say there may be repetitions with a camera during video recording. The same shape. The same clothes. *But information areas are very changeable.* Therefore, what you begin to see is your area of representation. It exists. It can be measured. That is, any form of mental activity, form of representation can be measured. You can even draw blueprints this way. The mental structure is measured. It is transferred to scanning (plotter) and the blueprint is visible. This is the practice of objectification. What you see is your control. There is a control structure, and there is a neutral type. I am giving you the control structure. What you see, you see correctly. Therefore, you should develop not on repeated images, but on the development of your own system of information control. Develop your spirit. It is advisable to concentrate more in the area of the cervical spine."

Question: "Should I just imagine, feel this department?"

Answer: "You feel your cervical spine to the thoracic one. That is, you can understand at least geometrically. You just take one starting point and concentrate your attention there, and then you

begin to see this sphere again. This is a system of greater objectification of the process. You can feel it. Many people mentally move their hand. Then a digital measurement is made and it matches.

The thing is that these areas are quite objective. They have increased pressure, sometimes they have a temperature perspective, a color perspective, etc. I am giving you an understanding of the world of managing this hidden matter.

Knowledge of the laws and forms of management is already managing physical reality. This is not an end in itself - managing only physical reality. You can manage external structures according to macro understanding. But, the most dynamically controlled form, for example, diagnoses or some personal affairs of an event plan.

Therefore, you need to coordinate in practice. Conducted a set of exercises. Looked in practice, what was achieved in what time. Again conducted a system of adaptation, correlation of your knowledge.

This path can be very fast. *The advantage of consciousness is that the process can be monitored literally continuously.*

If you, say, take grass, then it acts only locally for a given period of time. And even then it acts locally. And each function of consciousness always acts at the macro level. In this regard, *you should try to sometimes enter the compensation system.* That is, is there any point in drinking some grass, or compensating for this process through new knowledge. *There are processes that, in my practice, can only be optimized through the system of knowledge.*

For example, when the process is complex - destruction of the body, then only the system of knowledge acts. Grass is of little constructive use here. *Therefore, to restore health, you need to enter into training and correlation in practice.* Although in practice, training can solve all problems. Even correlation is not required. *The main thing is to know what forms are located and where.* Nevertheless, I logically think that it is desirable to set specific tasks, see their solution and see in what time the solution coincides with your practice. Then you need to develop what is called clairvoyance, irrational vision. You have these elements after the first time."

Question: "What knowledge do you need to have?"

Answer: "You need to have a primary principle. A person, if he has no knowledge and no improvised means to save himself, then he

only has the principle of his own thinking. The principle of his own thinking at the level of logic can build machines, for example, etc. But, in this case, we are talking about salvation in a specific situation, managing yourself and events. Therefore, *you need to understand that we are talking about the fundamental meaning of being, where there is management of the external situation through the system of the inner spirit, inner knowledge.* Therefore, first of all, when concentrating, you need to proceed from this, that this is a power characteristic. It is based on certain hidden laws that are objectified. You can look at the digital analysis. But we will talk about the fact that a computer is only a local part of observations. Moreover, the calculation part. And you need to be able to understand all your external information structures. Concentration should be included from taking into account all factors. A problem is posed - concentration is done. One of the methods that I have just given is solving some problems. But, in the future, it is necessary to understand that it is desirable to lay development in concentration. Even now, it is necessary to understand the subtleties, the angle, the approach: from which side, at what degree, etc.

Question: "How often should I work with your materials?"

Answer: "Preferably at least once a day. But, you can as often as you like. People came after diabetes. The eye is practically Not saw. The man listened to the audio cassette several times a day - the eye was restored. In other cases, healing occurred due to the presence of my texts within a radius of five meters. Almost always, they mentally address me. These are specific cases. Due to the intensity of work with my materials and repeated mental appeals to me with specific requests, the process of restoration and optimization is accelerated."

Question: "I listen to audio recordings of your lectures, read your materials and you help me?"

Answer: "Naturally, I work with everyone who mentally addresses me, reads my texts, listens to audio cassettes with my knowledge, watches TV shows with my participation, and so on. The deeper and faster you understand my knowledge, the more practical methods you will have, the fewer problems in the future."

Question: "I have always been guided by the past. I can't think about the future at all. Only yesterday I felt a little bit like I was in the future."

Answer: "I understand. I will give you a specific training. Let's say it's 22 seconds now, and now I see it's already 25 seconds. Compare your two states in terms of concentration on your fingers. At what time, how do you concentrate? It would seem that this is the same type of perception line. But there is a difference for the thyroid gland, where there is a point of combining events of the future and the past at the level of geometry. *In order to feel yourself in the future, it is enough to simply focus your attention in the right zone of the thyroid gland. Or concentrate your attention on the little finger of your right hand. This will be your state of the future, somewhere around one day.*"

Question: "Do I need to understand this feeling?"

Answer: "Yes, it is possible in the form of information. This is training in the form of future information. But in reality, of course, you will be here. There is such a structure of denouement as a tangled form of information. *The denouement of information is going on in the tangled form.* It is visible in the figures. When you enter the form of future information, then each angle of the connective tissue, when you reach this future, is visible as the untying of a tangle. It is visible how it decreases and twists. *In the area of the right shoulder, this tangle is a sphere with a diameter of 14 cm.* It decreases and this small tangle passes through the stomach, heart and reaches the thyroid gland, and there goes into the subcortex."

Question: "Is the cell less important?"

Answer: "In this case, we are talking about it. It is always there. *It cannot be said that the cell is a less important tissue. I* always treat any information neutrally. I simply show the mechanism of how the unwinding of the future aspect occurs. That *is, working with the future is working, among other things, with the form of information.*"

Question: "Am I laying something in the future with my emotions?"

Answer: "If you express passivity, you get passivity. There is a problem, you transform it, solve it. Try to find the optimal management structure. Use different angles of the current understanding and state to quickly achieve the result of management and salvation. There is an element of such a plan. To develop the system of irrational vision, you need to concentrate on the feet from 10:00 p.m. to 10:05 p.m. *In fact, the activation of the subcortex of the brain occurs. This is one of the elements. That is, many questions can be solved through the concentration system and specific answers will come.* You have access to information. You do not just see the form, but also receive specific answers. Information is dynamic, it can be changed, transformed. Just as you can receive the necessary answers."

Question: "Is a person born with embedded information?"

Answer: "Naturally. There is a lot of embedded information. It can be changed. I am giving you a method of management without harming all other parties."

Question: "What is heredity?"

Answer: "Heredity is also an informative structure, where there is an event level. You pay more attention to the information that corresponds to your health. This may not only be your body. It may be the ecological environment, external events, etc. Heredity can also be transformed by the same methods. The law is that

the more you restore the hereditary line, that is, the healthier you are, the healthier your future generations will be. That is, you only do good. There is no concept of dragging diseases. If you have improved even one elementary property, one cell, you have improved everything everywhere

I give development according to the law of universal connections. Therefore, improvement in one area always entails improvement everywhere, and occurs through the corresponding improvement of all connections in the process of work. In this regard, my knowledge determines the creative structure of management. Therefore, it can

be distributed without restrictions. In this case, the principle of salvation is fulfilled, which says that
*the more of my knowledge is mastered,
the faster the practical principles of salvation are realized*

Points of view can change. You can go to another angle. If you want, look one way, and if you want - another. To enter the information area in an intermediate version, there is also a certain training: from 10:17 p.m. to 10:22 p.m. Concentration on the index finger of the right hand. There the path will be more correct.

It is advisable for you to work step by step. There is a level of organization of the form."

Information structures

The property of declarativeness of information structures, representative, when the primary information structure is perceived by some tissues of the organism, or some substance related to a person. This structure can reflect information, but not correspond in form to the control structure. There is a need for a root control structure, where the main matrix canonical form is preserved under any transformations.

That is. the basic information structure that controls in any area of information. The declarative representative structure can have the same form, but its difference lies in the configuration of the form by the internal projection. I mean the internal projection - it's not like taking a sphere and cutting it in half and looking at what's inside. And the internal projection from the point of view of the perception of consciousness. *I give everything only from the point of view of the perception of consciousness.* Therefore, here we must consider exactly how your perception allows you to see this projection. That is, if you approach a certain sphere of information, then upon contact, the internal projection can appear as a homogeneous environment, equal in different directions, that is, the basic form. And it can be presented as a kind of diversity in the form of a cylinder going upward. Or, for example, there is the so-called Mobius strip - all the time moving along one side and there is no intersection with the other side. Some such infinite structures are visualized during the objectification of some corridor structures. And there is

contact with the control structure. It occurs only at the level of a high-speed reflex. That is. when you look at information, you control only in the interval of their dynamic movement. At this stage of perception, of course. I speak only for this time, this place, for the expansion of the system of conscious perception.

If we consider such a structure as a disease (information of a disease, an undesirable direction of an event), then this information is dynamic. That is, the structure of accumulation of information is guessed and then some of its next changes - characteristics: destruction, transformation, etc. This dynamic structure at the level of high-speed reflex perception of consciousness, control consists in being able to understand in a timely manner at what point to start controlling. The system is such that it is possible to start controlling in a high-speed version on a static one as well. It is enough to find a system of concentration of attention on the subcortex. Since the subcortex is an area not visualized by physical vision, an approximating structure on the organs is given. These are the index fingers of the hands.

Concentration from 10:45 p.m. to 10:47 p.m., two minutes.
Concentration plus the dynamics of green.

Not the idea of green, but the so-called concept of the dynamics of green. How green is formed, how it changes, how it moves in the hidden world, and what form of information corresponds to green. That is, this is the structure of the study. This will already be like an assignment. Any form of information must be studied from the point of view of the dynamic structure. There is a concept such as green. You should think about the questions and answer them. What is green from the point of view of information? Where is it located geometrically? How can you control this dynamics if you change the form in order to change the event ahead, etc.? The same method can be applied to any other event. I am talking about green from the point of view of the data present. It is advisable to understand that it has the structure of the primary output until the next stage. *You can go to blue, purple, etc. And work with a complex of colors for the constructive formation of events, when you can decompose color elements and get an event of the desired spectrum.*

On the required spectrum - this is already the event you want. But it is more familiar for formation. If you first consider in what

spectral range, in what form the event is ahead, and want to extract some segment, and replace it, *then you can just mentally change the spectrum and the event is formed*. This is called the spectral structure of the formation of the event plan. But you need to be able to form an access system through approaching the basic structures. It can be found immediately. *But there is an opportunity for improvement at the logical level and an exit on the structure of knowledge. That is, I give knowledge and this compensates for irrational methods*.

Gradually, this turns into rational abilities, when you can study any other structures from this position. What is clairvoyance? It is a certain system of cognition. That is, knowledge of what is in the future or the past means knowledge of certain aspects of a different plan. I give the path to this knowledge. Knowledge is control in this case. Therefore, *the basic structure can be determined from any structures. The representative is a wave (area), or a secondary wave of information*. There is a concept of a gas-dynamic wave. In gas dynamics, when it is measured, a factor of a secondary event is obtained. Why did I take a gas-dynamic wave? Because the processes occurring at hidden levels often coincide. They coincide precisely at the level of secondary reflected waves.

I have specially transferred you to the wave structure of perception of information. *Because form is static, a more rigid structure, but it can be perceived on the wave one too*.

And now, for example, we need to move on to *perceiving the wave structure, i.e. feeling the waves*. If today you felt a certain impulse in the heart area, it was wave diffraction. You have moved on to sensitive perception. Sometimes you can work with the form, it is equivalent. It does not require concentration of attention to get sensitivity on the finger, somewhere on the body. *And the wave - it still requires time to comprehend the received signal at the reflex level*. But this is already a more sensitive option.

The next option, at the task level, is to be able to translate information in the form of a form into information of perception in the form of a wave structure and receive, if there is time, sensations from the segmental impact of a wave in some organ, at some point, etc. *The process of tissue restoration, what is called healing, occurs at the level of restoration of the tissue-information structure. I am now giving you the transition to the tissue structure. You can go through the basic form directly to the tissue structure, or you can*

through these wave criteria. Then all high-speed processes (for example, connecting to information that has a certain speed) can be transferred to a fairly simple system of training in managing the wave structure, and By decomposition of high-speed sections into sections with lower speeds. This does not mean that you must necessarily strain yourself and monitor the high speed of these substances. You can enter the substructure of large time intervals and study there. For perception through clairvoyance, clairvoyance, including logical, a picosecond impulse (10^{-9} sec) can be decomposed into even smaller intervals and enter the space of time dilation, the level of consciousness. Where *any information, even very small, can be in the form of to see as space and to work no longer with time, but with space.* I specifically give the technology of changing points of view. *Constantly changing the point of view, you can move from one level of knowledge to another.* The system of autonomous mobility in knowledge. This structure is measured as a vertical luminous column, very powerful in level. Sometimes it is necessary to restore many processes in the body.

At this stage, I give you, based on the level of fairly quick perception, three main stages of reflection, which will be formed here as a task.

Question: "I already have so many questions that I need to stop asking them and start learning."

Answer: "Yes, you need to know the questions. Then the knowledge will determine the path contained in the questions themselves. When you listen to my audio or TV programs, read my lectures, try to visualize the areas. What happens at the level of visualization? How do you see it at the level of colors? You saw a part of the sphere earlier. It began to manifest. What is the situation now?"

Question : "I see a purple circle. The purple circle goes down."

Answer : "Correct. I have just given you a system for transitioning to blue, violet from green.

You have reached the violet color. And I want you to be able to work across the entire spectrum, without jumping over a number of structures. I am giving you work not only with color, but I am showing you the ability to manage any structure, through

development given on the example of color, information areas, information forms, etc. I am giving you a learning technology that is transformed into spiritual management."

Question: "What should I do? I can't concentrate at all."

Answer: "Write it down on a piece of paper and look at the paper. Information can be perceived not only as a necessary concentration, but also as information embedded in a given volume, for example. Everything you have to do, write it down on a piece of paper and look at the paper."

Question : "If I periodically feel a lump in my throat."

Answer : "This is the increased dose of radiation you received earlier. *You gradually begin to remove radiation from the thyroid gland and a lump in the throat sensation appears.* It will decrease when you perform concentration. I give a system for restoring the cellular structure. You are also removing radioactive isotopes from the cells. How to remove them? *The most optimal zone of maximum contact with the external environment is the thyroid gland.* You are doing it right."

Question: "Even when I drink, I feel a painful sensation. Could this be?"

Answer: "You are overexerting yourself, you are experiencing a muscle tissue reaction. It is desirable to be able to control any structure, including the state. Find an approach so that the sensations in the throat are within the normal range for the given moment."

Question: "Is it advisable to work at a certain time?"

Answer : "Preferably from 10 p.m. to 11 p.m. And outside this hour - whenever you want, it is enough to mentally project your work at this hour or make a correction leading to independence of work from time. At first, the time interval can be observed in order to understand the connection of time with the geographical factor. The meridian, which passes through the general point of exit to information, works most actively at this local time. Therefore, the reaction to the time constant is preserved. Time is still going and will

go. When you have already reached the secondary control structure, then it will be possible to shift time and you can go to adjust this hour. You can change information structures. Just as you immediately went to the violet color, you can go to other control structures. But this already requires constantly studying my lecture courses from your different aspects of perception. Each repeated study of my knowledge can be perceived as receiving completely new knowledge each time."

Structure of bipolar signals in humans

Let's look at the problem of curing Parkinson's disease Let's consider the structure of bipolar signals in a person, where polarity determines the cyclicity of your perception, both tissue and consciousness. *The first element of polarity, minus (-) factor* (not in terms of something good or bad). When measured by means of objective control at the level of a voltmeter, this gives certain voltage characteristics. *The second element of polarity is the plus (+) factor*, which is also characterized by means of objective control. *The right little finger contains the minus factor structure. This is a structure of decreasing events by density, the extent of propagation. The little finger of the left hand is a structure of increasing events* by unified aspects. The source is the little finger of the left hand, the drain is the little finger of the right hand.

appears . It has different shades of perception according to the color of the rainbow. The most active is pink or bright red rose, etc. The most passive in this spectral aspect is green, blue colors. Passivity and activity - from the point of view of your perception. It is divided into an active stage, where the control information coming from you comes into contact with red tones. And passivity is a blue-green color.

In order to restore information in accordance with a given diagnosis, it is necessary to understand the primary principle. Can manage a situation based on any information source. That is, you perceive something and can use the theory to understand how to manage it.

Between these fingers there is a part of the segment that can be used by you in the future for control. This information arc needs to be found.

You need to concentrate your attention from 10:00 pm to 10:17 pm on your little fingers. At the same time trying on level of consciousness, visualize an arc that connects the little fingers. Consider that information is absorbed from the right little finger, and emitted from the left. If you draw a straight line in relation to the tips of the little fingers, then everything that is above the vertical line is a clockwise process. And what is below is a counterclockwise process, i.e. the division of explicit and implicit consciousness (consciousness and subconsciousness).

In order to visualize the sphere, to understand it more deeply, you need to try to understand how the flow occurs. Why do I immediately give the practice from the sensory plane. That is, you need to feel it, sense it. Through sensations, you can achieve a decrease in signals when external information does not cause phenomena such as Parkinson's disease. At the same time, you need to know the primary inorganic cause. You need to consider the coccygeal spine (geometrically: from bottom to top, the 2nd vertebra). Consider the events of 7-10 years ago according to the origin of the disease.

In order to control this structure, you transfer this information to the arc level (preferably the lower arc). See how the events happened. Try to guess the cause-and-effect relationships of your state and those events. We can also analyze any other information structure.

There is a method of primary transmission, when you perceive information for the first time (not yet seeing, not yet deciphering) and feel that some information environment is going on. You immediately begin to control at the level of objective control means. Even technical devices can already react to the primary impulse and immediately give a secondary reaction. Computer sensors immediately react to the external environment. In humans, this happens through *a system of remote primary signals.* This is one of the points of view on a person. *They are within a radius of 7 - 10 meters from a person.*

When you want to understand how to transform the impulse going towards the arc. you should concentrate on this distance. Listen to yourself from 10:17 p.m. to 10:20 p.m. (listen and look with your inner vision).

When you have an opinion, try to formulate this opinion on one of the angles of the arc. Either on the upper or lower. The upper one

is consciousness, the lower one is implicit processes. And as soon as you have transferred your perception there by an effort of will, you have actually reached the first level of stabilization.

In principle, this structure can be developed, additional points of view can be added. Your process is dynamic, i.e. you can work at the level of thinking with various thoughts, images, based on the following interpretation. Any action changes information. It is only important to understand what kind of action, where and in what place it changes information. Understand that the work of a temporary structure is underway. At the same time, it is desirable to take into account that the result should be permanent. The deeper you master this theory and practice, the faster the recovery processes go .

Method of managing the structure of the gastrointestinal tract and cerebrospinal fluid

I give the practice of managing information, that is, managing events ahead, where one of the components of events is a healthy person.

In this case, I give management of the structure of the
gastrointestinal tract plus the structure of managing the
cerebrospinal fluid. Two structures in this case. And I consider the
problem of restoring the left kidney.

There is information that corresponds to these processes. It is distributed as follows: *the primary information source is a reproducing structure and is at the level of the right hand, no more than 2 mm from the skin.* Such a point that organizes information with the external environment when there are changes in the information structure of the organs of the gastrointestinal system.

At the information level, the gastrointestinal tract has approximately three systems. The real anatomical system is the gastrointestinal system. The second is an information reflection, something that can be understood from the point of view of diagnostics, for example, by X-ray. The third system is matrix, canonical, as if true information from the point of view of the positive event ahead. That is, I consider according to these three factors. Everyone can have several systems, subsystems at the information level. In fact, I am giving you a method for managing this information. This point, which is at the level of the hand, when digital

processing is carried out, emits, among other things, the structure of event restoration. Therefore, the method is the following structure:

1. Restoring self-awareness.
2. The system of concentration of attention from 10:05 p.m. to 10:10 p.m. on the index fingers of the hands.

This means that you either need to look at your fingers, or focus on them, or draw a diagram of your fingers and put it in front of you and look at it. Sometimes, if you are working, passive concentration is done. You can do something, have a conversation, but constantly keep track of these two fingers.

This course is designed for knowledge. The information of this course, passing from general areas to specific and private systems, develops the spiritual, logical and irrational level of creative management. Since the act of salvation must be achieved under any conditions, it is necessary to combine and develop various management practices in the direction of an adequate goal of salvation.
