**Combining three disease sections
at one concentration**

Lecture 7

When transferring knowledge to a student
according to my system of concentration
should be distributed

when there is a merger, for example , by two parameters
if 2 sections of diseases

in this case I will tell
on unification by 3 levels of diseases

these are infectious diseases
this is drug addiction
and alcoholism

looking at the spectrum of these diseases
one can come to the conclusion
that the concentration is already on 3 diseases where
infection
and alcoholism
and drug addiction
stand on the same level

we can consider this principle
that control by 3 parameters
may happen
only at one concentration

for example, when concentrating on the little finger of the left hand
management of 3 diseases in 3 sections is carried out

and when we translate this
on a dual-pulse system
then you get diversity

i.e. here we are already managing the event
i.e. the concentrations that I give
on disease management

towards their restoration
can be translated

to manage any range of events
by increasing the number of disease sections

i.e. first there were lectures
at 2 concentrations
for 2 disease sections
now there are already 3 concentrations
3 disease sections

and it turns out
that the transition from one level to another
provides control over events of any spectrum

.
I'll tell you now
on the management of nervous and mental illnesses
as well as sexual disorders

this is where concentration occurs
on the thumb of the right hand
and on the little toe of the left foot

in this case it is necessary to consider
that the transition to a two-pulse system
i.e. management of 2 diseases
for example, for skin and venereal diseases
and tuberculosis
if we consider these concentrations here
then we only get
little finger of the right hand

logical and associative comparison
with any range of events
including business management
management generally speaking in any structure of affairs

and the transfer of that information status
which allows remote control
I call it distance independent control

Thus
translation from one technology to another
allows you to receive
specific methodologies of knowledge

which may be in the future
used
to manage virtually any situation
towards the Salvation system
