Literature Studies Concentration

Lecture 8

In this lecture I will tell you
as per my Salvation system
concentrations must be carried out
for the study of literature
which allows, on the basis of facts,
based on specific methods
manage events

in event management
the whole spectrum of events is included
this is healing
these are completely different matters in personal life
in business, etc.

I am reviewing 3 volumes of "Management Practice. The Path to Salvation"
and also the work "Applied structures of the creating area of information"
as well as the work "Unified Knowledge System"

working with this methodological volume
The following concentrations should be made

when you are working with page 240
actually 240 - 252 sheets of the first volume
you should use
Page 22 of the "Unified Knowledge System"

difference in concentrations for healing
from concentrations on learning
consists of
first of all
that the moment of learning a person perceives

then it is necessary to create
parallel level of concentration

and if we consider the process
related to direct control
then the concentration concerns

directly one person
which is the one who has problems

that's why the training is different
in cross-level concentration

and when we talk about that
what to use for example for concentration
for simultaneous
and training
and management

then you can take it
Volume 2 is 261 pages
and volume 3 page 488
my work "Management Practice. The Path to Salvation"
factual work

and combine
from page 18
works "Applied structures of the creating area of information"
as well as with page 14 "Unified Knowledge System"

the combination also occurs
through concentration
and through these concentrations
already read all texts

then it will work out
what do you have in concentration
reading text

remember
and you use this area as well
as an area of concentration

Thus
I gave the use of literature
in concentrations of a very wide range
event management
according to my system of Salvation
