10 Technologies - Health Formula

Concentration of the unifying type

Lecture 5-6

In the concentration system
according to my system of salvation from disasters

I introduce the concentration of the unifying type

These concentrations allow
firstly, decide simultaneously
questions of concentration for similar cases

for example, the cardiovascular system
if there is acute heart failure
or cardiac arrest
as well as respiratory failure

they are recovering towards health
when there is concentration
on the little fingers of the hands and feet

we need to convey this desire for restoration
to the patient

when we consider
benign and malignant processes
here the concentration is done in this way
what from the little finger of the right hand
the signal goes
on the little finger of the left hand
then it is sent to the patient

so i showed here
that there are unifying concentrations

and these concentrations
allow knowledge to be transferred

i.e. from the principle of concentration
unifying type
it is possible to transfer knowledge in this way

so that the one who receives this knowledge
could apply them in his practice

the objective of this lecture
is the transfer of knowledge
by combining concentrations by one-time type

if we consider
for example sepsis (blood poisoning)
or disseminated coagulation syndrome

then here is the concentration
on the big toes
and this is a unifying concentration

it is transmitted to the student through that
to pass on to the patient

and the signal is already to continue
on the little finger of the student's right hand

thus this type of concentration
allows you to not only restore
but also to do so
so that the knowledge that you have
who have already been cured
this knowledge could be passed on to other people

and other people
they could already be distributing them
accordingly, where they need to go

I can give another example
circulatory disease
as well as rheumatic diseases
where the concentration is produced
on the thumbs

while transferring knowledge to the student
is carried out
through the little finger of the right hand

This concentration allows
thus carry out treatment
and knowledge transfer
to transfer knowledge
was also a treatment

in fact my methodology
structuring of Consciousness
is training
where is the learning action
is simultaneously knowledge

Concentration of the unifying type

Lecture 6 (continuation)

Concentration of the unifying type
according to my system of Salvation
which allows

at the moment of concentration
transfer knowledge

I will start with an explanation of the disease
gastrointestinal tract
and diseases of the kidneys and urinary tract

here the concentration is carried out
on the index fingers of the hands

and knowledge is passed on
through additional concentration
on the thumb of the right hand

in the future
concentration on diseases of the blood system
and endocrine and metabolic diseases

can be carried out
using concentration
by digestive system
and kidneys
and urinary tract

but at the same time adding
little finger of the right hand

so i introduced another element
where adding just one concentration
leads to healing
the following spectrum of diseases

when I consider occupational diseases
or acute poisoning
then concentration should be carried out here
on the thumb of the right hand
and the big toe of the right foot

while transferring knowledge to the student
is carried out through
big toe of the right foot
and must also take into account
thumb of the right hand
consistently

what is meant here
that even consistent
or parallel simultaneous transmission
does it matter

from the point of view of that
how widely knowledge is disseminated

i.e. those who have learned to manage
with the help of this concentration
for example from the fingers indicated by me
or related areas
or sequentially

we must take into account what happens
different spectrum of information dissemination

to cover let's say business
or cover the management of events of the widest spectrum
it is necessary to use
dual-pulse system

i.e. reflect the signal to actually transmit knowledge
and immediately
and consistently
simultaneously

with some practice
this happens over time

if for example you start doing

at the beginning of each hour from 22:00
and finish at 23:00
then it turns out that control is carried out
at regular intervals
