

GRIGORY GRABOVOY
10 Technologies - Health Formula

Education system - structuring C awareness

Lecture 9

In my education system
I consider first of all
Spiritual connection
someone who receives an education
with all the elements of the World

that's why I have an education
starts even before the baby is born

this is my education system
which allows
parents or relatives
or just acquaintances

transmit knowledge telepathically
in the form of thoughts
even before the baby was born

and this already forms a certain environment
which allows
very quickly without illness
cope with the period
when the newborn still has incomplete immunity

in the future this education system
applies to the first month
the first years of a child's life
and thus in a 12-year cycle for each year

I have an education system
which gives in fact
ability to manage
to a person
at every stage of his life
at the same time when the first and 12-year cycle ends

then the second one begins in many ways
with similar education systems

with similar elements of Thinking

all this allows
for a person to be in that environment
when the environment is no longer like that
as if it were not controlled

according to my education system

At the same time, I spread my methods
in a variety of directions
in almost all areas of science
for the development of society

this happens because
that I give structuring of Consciousness
according to its system of Salvation and harmonious development

due to this
when people get an education
they can accordingly
get it absolutely in all areas of knowledge

more specific areas of knowledge
which I teach

This is an area primarily related to
with those structures where it is necessary to save

these are Salvation technologies
these are the structures of Salvation
for any person in fact

when he can
being in any unforeseen
or a pre-calculated situation
encounter the elements
which need to be quickly brought to a normal level

and education at the same time
applies practically
to all spheres of life

·
but if we talk about technology
more expanded and more refined

then this is education in science
education in politics
in economics in sociology
in almost all areas of human activity

where there is already developed technology
and in those areas where there is no technology yet

there I give
actually a methodological base
in order for a person
could create his own methodology
and according to this methodology, in fact
he can create a new structure
or its development
or the development of the surrounding
according to the system of Salvation and harmonious development

due to this
when I give lectures, for example
in any field of science
then the same elements that are often already known are used
which are in this science
but I'm kind of adding

methods of structuring Consciousness

on the same principle
I give lectures
practically not only in science
but also to other areas of human knowledge
