

GRIGORY GRABOVOY

A course of lectures at the Russian Emergencies Ministry Agency on monitoring  
and forecasting emergency situations on the topic

**Irrational methods of prevention  
global catastrophic processes  
posing a threat to the entire world**

(1)

14, 21.09.2000

According to the system of Rescue from possible disasters  
and according to the system of harmonious development  
I start with that  
that I declare the concept of the principle of approach  
which I built to prevent disasters

the principle is based on the fact that

that all phenomena of Reality  
are perceived by humans  
in the form of some images  
in the form of a certain level of optics

it can be written like this  
that any phenomenon of Reality  
perceived by human Consciousness  
in the form of optics

in the way I said

any phenomenon of Reality  
can be perceived  
in the form of certain optical phenomena  
or optical system  
I would call her that

and in connection with the topics  
that it is the person who needs to be protected  
from global destruction systems  
then the most direct and safest way  
is the development of Salvation technologies  
based on human Consciousness

in this case any technology will be dependent

from the initial level  
from which they come  
i.e. from the desire of a person

and you can build it like this  
that these technologies do not destroy man

This concept is scientifically substantiated  
I defended it as a doctoral dissertation  
This at work  
"Applied structures of the information creation area"

it describes why if we create  
based on one's own Consciousness  
then these technologies do not destroy  
in the event that they are dependent on Consciousness

On this basis I built an instrument system  
First there was the defense of a doctoral dissertation  
which was called  
"Fundamental Definition of Optical Systems"  
she is in front of you

and that means using these definitions  
for predicting earthquakes and disasters

in the application in a specific  
it was for production facilities

as for the generalization of this doctoral dissertation  
then in fact we are talking about that  
that this approach can be used to  
to defend there  
not only production facilities  
but also any other objects  
which have, for example, a primary Norm  
this is the health norm  
The norm of any integrity of an object

I built a device on this principle  
which is on a crystalline basis  
allows for prevention  
and really profile and prevent  
for example, a certain type of disaster so far

in this case they were tested digitally

these devices  
in earthquakes and at some industrial facilities

here is a patent, in principle, you have it, then you can look at it

This means that the principle of this patent is based on the fact that  
what is such a concept as registration of optical phenomena

and I explored the properties of light  
if we consider the process  
less than  $10^{-17}$  degrees of a second  
then in this case it turns out  
what are the elements of future events  
they are rigidly fixed as if  
for those elements that exist in Reality

i.e. by measurement  
real optical phenomenon  
we can do  
predictive phase of a future phenomenon

and the forecast is not probabilistic  
and the forecast is direct

i.e. due to the fact that we receive actual  
in fact, this is information  
about those real future phenomena  
which can develop

in this case i used  
when constructing this device  
facts of my work  
in the area of irrational I will call it that  
technologies

irrational technologies  
these are technologies for sensory information acquisition  
technologies certain predictive  
technologies for using special mathematical apparatus  
in which the apparatus itself is modified  
depending on the event

and due to the fact that this system allowed  
really prevent  
in my specific practice  
specific accidents of aircraft, nuclear power plants, etc.  
various industrial facilities

and including any changes that are dangerous in the human body

all the material I'm talking about  
it already has a fairly extensive practical basis

what I will read to you in this lecture  
this will mainly be used  
as already known facts  
and what currently exists in the form of theoretical provisions

so now we'll move on to that  
so that you can write out theoretical positions

at the same time, your lecture will not be just a lecture  
in the form of meaning understanding  
some theoretical or practical foundations  
in fact it will be simultaneous  
training on structuring Consciousness

I have a course called  
"Structurization of Consciousness according to the system of Salvation from  
disasters  
and according to the system of harmonious development"

in this case your Consciousness is considered  
as a control system

From an optics point of view, it's quite easy to understand

when you have  
some event in your Perception  
in the form of an optical system  
example , what is the sensory control principle based on?  
or so to say impacts

then any optical phenomenon  
by the system of general connections  
it is related to any other

so your task  
to restructure this optical phenomenon  
i.e. actually determine the event you need  
for example, Rescue from disaster  
you in any way  
change the structure of your Consciousness  
and get control

I have given these lectures in various fields  
which have an increased, so to speak, danger in production  
This is aviation mainly for test pilots  
then at the Gagarin Air Force Academy , etc.

i.e. where required  
a specific level of management  
which sometimes does not depend on that  
the existing technical staff can allow, for example  
or there are simply no funds

then you only have to count  
on the possibility of remote control  
the support of which is one's own Consciousness

in connection with this, the course that I am currently teaching  
it will be based on an orthodox, i.e. known, basis  
where can i use

Let's assume the known physical and mathematical descriptions  
or some engineering and technical objects

and also on that  
what will you receive now  
completely new information  
which you will apply  
approximately in the same version  
pilots and astronauts do, for example  
but with all this there will be practically no difference here

because I also taught courses in the field of microelectronics  
I am the head of the postgraduate department myself  
so there is such a state enterprise for advanced research  
It's called the Scientific Center in Zelenograd  
and actually, people work there in microelectronics

it would seem to be a fairly passive area  
from the point of view of any dangers  
however, the area of Perception is exactly the same  
like the astronauts have pilots  
and the acquisition of the material proceeds at the same speed

i.e. you need to understand  
that we are talking about the structuring of Consciousness  
therefore you can apply this structuring  
already at a practical level  
wherever you want

and in principle if we speak  
about the principle of information  
That  
each information object can be equal

This is one of the Laws of Information Distributions

then it turns out that you can be anywhere  
through Consciousness to control it  
so that there would be no, let's say, nuclear explosion there would be no catastrophes

in fact, the Salvation course that I am now giving you  
it is based on the fact that each of you  
receives a specific tool of Salvation  
which can be reproduced by you personally

we are talking about a set of technologies  
this is meant as I explained  
irrational spectrum of technologies  
where does it come in  
and sensorics  
and logical control  
and mathematical apparatus

so when will you be  
these lectures to read or for example to apply them  
the main task will be to  
so that you have  
a very specific practical mechanism  
and they worked with this mechanism  
in the real conditions of your life

this is actually  
managing events towards their creative plan  
management of any level of development, etc.

i.e. we are talking about that  
that mastering the material and your practice  
it will be at the same time

so after the first lecture it means  
all controls  
which you have done, let's say, through your Consciousness  
or found something  
in the field of methodology or in the field of concept  
this will be needed in the form of a report after the first lecture

there will be a second lecture next Thursday

i.e. everyone should write something short  
at least on one sheet  
and to me in the form of your thoughts or specific practice  
put on the table

because the practice of Salvation speaks of that  
that many things need to be done very quickly  
then after the first lecture you will be practicing

I have mastered this technology  
in the area where the pilots work  
in extreme conditions in the field of test flights  
so considering that it was possible there  
transfer this technology  
you will do the same

and there is a certain principle  
that any technology  
when a specific goal is declared  
and your goal is to save people  
must be adequate

adequate goal of saving people  
is sometimes instant control

in connection with this lecture  
structurally it will be presented exactly like this  
what you will have to  
to be able to, for example, through one's Consciousness  
or by means of any systems of mathematical technical  
save a person

and by purpose  
an ideal goal that must always be followed  
this is the salvation of man in any case

i.e. even if it seemed as if  
the external signs of information are as follows  
that preliminary information is received  
about a hopeless situation

however, it means management  
with the same optics  
which I said about  
this is the management of a specific Reality

in this regard, it means you can write it down somewhere  
what is this lecture  
this lecture  
this is a specific methodology  
management of real events  
based on the structuring of Consciousness

to consider  
how does such management take place  
First of all, it is necessary to describe the system of connections  
and actually define this system at the same time

to determine the system of connections  
need to find reference points

reference points  
these are the elements of information  
which for your Perception  
can create an algorithm for your management

First of all, I will now determine  
the device itself  
which should be with such a formulation of the problem

the device that I will now present  
in the form of certain mathematical descriptions  
must satisfy  
conditions of reactivity to the developing situation

i.e. for example in the principles of quantum mechanics  
there is such a thing as a measuring instrument  
it can be rougher or change the structure of Reality

in our situation when it comes to saving people  
we must obviously define the task adequately right away  
and manage any system  
and therefore you need to have access to the system

therefore the control apparatus that will be described here  
it changes depending on  
what is happening in the changing Reality

i.e. if you start work  
and this work, let's assume, led to that  
that some part of the work of Salvation has been accomplished  
the instrumental apparatus may change

and in connection with this it should be immediately noted here  
to fix somewhere very specifically  
what is this change  
must be fixed in a symbolic series  
which is initially static

i.e. any processes  
occurring in static equations  
they can be different

and at the same time if we talk about that  
how to apply a specific equation to control  
then we should get in this mathematics  
in fact, the control you get  
under the same system that, let's say, the human body

it has one form  
but at the same time you have a lot of Thinking

i.e., to put it simply  
Multivariate Thinking  
multiple or multivariate actions

i.e. one form contains many functions  
or an infinite set of functions

i.e. with this approach, formal mathematics  
or in a symbolic form  
or in the form of specific mathematical relationships  
which I represent  
she will be clear

and therefore it is necessary to rely on it  
from the point of view that you will simply learn in the future  
elements of development of this mathematics

and everyone can, in principle, make up  
your own methodological base for yourself

so when we talk about the optical system  
then first of all we must describe  
at least two levels

i.e. if we take, let's assume, the first level  
and we will fix this level  
as a border between  
Perception

And  
Reality

1  
|

then it is obvious that there is, for example, a second level

level two is there  
where are the connections between Reality  
and between your Perception  
generalized according to the system of common connections

1  
|

2  
|

so we can write here for example

at the second level with a certain coefficient (k)

You apparently can't see it  
here I will most likely tell you

Here

$$\begin{array}{cc} 1 & 2 \\ | & | \\ & f(k(p)) \end{array}$$

function simply of space (f)  
some coefficient (k)  
well , we take a function from space

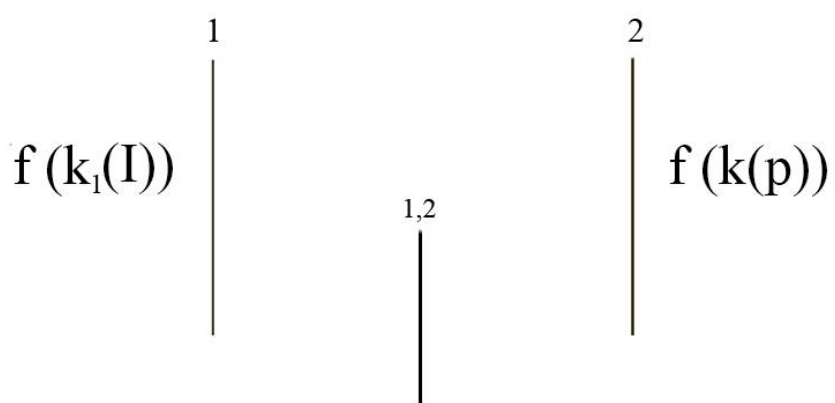

if we are talking about Perception  
then we take the same function  
and we write it down with a certain coefficient (K 1 )  
but it will be

I write a function of (I)  
individual function

i.e. your specific function  
which you can change  
because you can change your Perception

due to this  
if we consider  
any element of Reality  
which is located at the junction  
between these two elements

then Generalized function  
must contain obvious

in the form of an Implicit Region immediately means  
these two positions at once

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(k_1(I)) & & f(k(p)) \\
 & | & \\
 & 1,2 & \\
 & | & \\
 g = ( f ( k ( I ) ) \cdot f ( k ( p ) )
 \end{array}$$

i.e. the function of individual Perception  
I put the multiplication sign here  
on  
connection function  
in the Generalized Information Segment

however, if we want to find out  
how does it develop  
The law of change of general connections  
for this concept

then we have to put some degree there  
I will call it x to the power n (  $x^n$  )

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(k_1(I)) & & f(k(p)) \\
 & | & \\
 & 1,2 & \\
 & | & \\
 g = (f(k(I)) \cdot f(k(p)))^{x^n}
 \end{array}$$

i.e. here the quotes are closed by x to the power n (  $x^n$  )

so if you consider  
 elements of your Consciousness  
 i.e. how do you make decisions  
 then some decisions happen as if involuntarily

i.e. you make decisions  
 because you think that this is what needs to be done

so here is the research of the issue  
 why are you making this particular decision  
 in this system  
 basically let's say so  
 in operator and functional form  
 is engaged  
 I can say such a word  
 that part of mathematics which depends on degree  
 i.e. x to the power n (  $x^n$  )

the concept  $x$  is modified  
depending on that  
what parameter of Consciousness do you enter there

although now I speak somewhat so to speak  
Well, in general, it's closer to what I did in the patent there  
there was quite similar mathematics used there  
in a crystalline system

because the crystal system  
built in the same way as Consciousness is built

and so when you work  
for example with this parameter  $x$   
you will see  
that depending on that  
at what point do you decide  
parametric series  
which comes from the implicit function  
it will change all the time  
even for the same process

let's assume  
you have there in his mind  
chair table or pointer  
or any generalized object

i.e. all phenomena that, for example,  
you do not describe at the moment of Perception

that's when you assign  $x$  to a fixed system  
i.e. you determine the coordinates  
space, let's say, and time of the object

then you have  
Infinite Region Management  
 $g$  in you tends to Infinity

i.e. in fact  $g$  is bound  
with that Infinite row  
which you, for example, do not perceive  
during the period of rigid fixation of Consciousness

the thing is that my course  
it implies that certain things  
you will have to know  
in the form of possible multiple listening

and then I guess I'll do it this way

if now in this reading mode  
there you can't write down, so to speak, in detail  
but it's better to listen to what I'm saying now

then I just write what is being recorded on the microphone  
I'll try to transfer it to audio recording  
and you will have some amount of audio cassettes

then you will still have to  
that's what I'm saying listen carefully

because for example those controls  
which I write already in finished form  
they have a very detailed formal appearance  
in this presentation

and many concepts that I take  
for example from the theory of implicit functions  
Let's assume for proof  
of this functional equation  
equations of quantum mechanics were used

since you may have different ones  
education systems  
so from the point of view of, let's say, mathematical education

I will try to use it here  
only those final formulas  
that you need in a functional application

and in connection with this, what I say in words  
it will actually be when listening  
for you analysis

from which systems of orthodox known equations  
this is received

in particular this particular equation  
derived from the theory of generalized functions

but since you have as I said  
there may be different mathematical education  
and that is not the goal  
apply , for example, knowledge  
let's assume some higher mathematics

in this course

then referring, for example, to specific formulas  
the main thing for you will be  
apply this equation  
in my management practice

so in connection with what I said  
that the usual functional Laws  
reflected in the conditions of this Reality

then, for example, taking some equation  
let's assume the propagation of ultrasound  
and mentally saturating  
i.e. concentrating on this equation  
and extending the thought to a specific object

there were experiments very specifically  
for example, the temperature rises from ultrasonic vibrations

i.e. in fact  
Consciousness replaces the structure of the physical process

or Consciousness succeeded with radio waves  
remove let's assume information  
let's assume specific words, etc.

i.e. it turns out that you will work  
according to the given system of equations  
to manage the processes of Reality

in this case, if we have before us  
the information that there are some signs of a disaster  
let's assume the possibility that  
what is the nuclear process that occurs in a reactor  
may cause an explosion

then in this concept  
you define the parameters  $x$   
so coordinates  
let them be ordinary  
for example a nuclear reactor  
or if it is better even this exact  
or at least an approximate position  
of this process

i.e. you tune in with Consciousness

that this nuclear reactor is located somewhere  
this will be your formal area  
as if based on which  
you will change this process  
in order to prevent a nuclear explosion from occurring

then you have to identify the element  $n$   
i.e. what is the power  $n$  for you

$n$  as I explained  
it can be a fixed number  
and this determines the meaning of events in the current area

i.e. when you make a decision  
you from the point of view of this  $n$   
you can change different situations

i.e. actually increasing or decreasing  
Speed of Thinking  
you can change the situation accordingly

so from the point of view of Perception  
in fact, it works here  
there is nothing complicated for your work

your job is just to determine  
in this formal mechanism  
direct control of any process

so direct control happens as I explained

I entered the area on purpose  
where these two parameters are connected

although in the elements  
each parameter  
exists  
any other

i.e. Perception on one side  
on the other hand, if we put a vector form  
let's assume there is a development of Perception

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(k_1(I)) & \longrightarrow & f(k(p)) \\
 & | & \\
 & 1,2 & \\
 & | & \\
 g = (f(k(I)) \cdot f(k(p)))^{x^n}
 \end{array}$$

Let's just draw some vector here

then it turns out that it still exists here  
and this area  
and the area of all external events

so when it comes to management  
about the individual control function

you see  
at the intersection of these two elements

feedback system

i.e., in fact, it is a feedback system  
which allows you  
in real time  
change the characteristics of the current process

that's why I entered  
this is a boundary condition

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(k_1(I)) & \longrightarrow & f(k(p)) \\
 & | & \\
 & 1,2 & \\
 & | & \\
 & \text{-----} & \\
 g = (f(k(I)) \cdot f(k(p)))^{x^n}
 \end{array}$$

considering  
 what i try to give  
 in the most general form possible  
 the words that I say  
 as we said  
 You will then listen to it on a dictaphone

and your task now is to identify  
 here is what exactly from your point of view  
 will be needed in order to carry out management

to be identified in all coordinates of this system

i.e. because  
 what we are talking about is that  
 that this function g

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(k_1(I)) & \longrightarrow & f(k(p)) \\
 & | & \\
 & 1,2 & \\
 & | & \\
 g = (f(k(I)) \cdot f(k(p)))^{x^n}
 \end{array}$$

she means she describes  
real Salvation of any system

and in connection with this  
if we change the coordinates of Consciousness  
we can achieve this in any case

this is the ideological formulation of this task

i.e. when you are listening to this lecture now  
you have to focus on that  
what needs to be done

explanations that I periodically provide  
you will need them  
in order to know the details in the future  
or let's assume to use some mathematical apparatus  
for analysis

using for example tensor analysis

I showed it at the time  
 what does it mean when we take  
 let's assume a function of events with some coefficient k  
 then when we write  
 Communication System

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(k_1(I)) & \longrightarrow & f(k(p)) \\
 & | & | \\
 & 1,2 & \\
 & | & \\
 g = (f(k(I)) \cdot f(k(p)))^{x^n}
 \end{array}$$

then this is the Communication System  
 equalizes the coefficients

I wrote the coefficient k here  
 and here the coefficient k

although here the coefficient k is 1

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(\underline{k_1(I)}) & \longrightarrow & f(\underline{k(p)}) \\
 & |_{1,2} & \\
 & & \\
 g = (f(\underline{k(I)}) \cdot f(k(p)))^{x^n}
 \end{array}$$

those. there is such a parameter  
as unification of the Communication System

i.e. we must find in each event  
a reference point that is universal

and this is the reference point  
is your own Consciousness

so when you see here  
the same coefficient  
this means that in this system of equations  
when we start looking for a degree  
we get a constant of the same type

so in any development system  
i.e. in any deterministic system  
i.e. cause and effect  
or direct irrational development

always a need to create  
well, actually, a kind of steps

i.e. those methodological conditions and those levels  
which will allow you  
build the next management system

so that's when it happened  
in this system of equations  
then that would be if we had written it down  
the entire Communication System  
then we would get the conclusion  
why does it turn out this way

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(\underline{k_1(I)}) & \longrightarrow & f(\underline{k(p)}) \\
 & | & \\
 & 1,2 & \\
 & | & \\
 g = (f(\underline{k(I)}) \cdot f(k(p)))^{x^n}
 \end{array}$$

This can be obtained using tensor analysis

i.e. it turns out that when you get control  
and in this case we are talking about  
well, actually about the control system  
true in the application, so to speak, to a two-component system

and at the same time the parameters  
system control parameters  
which is a person

should always be, let's say, at a more control level

and in the ideology of, so to speak, obligatory Salvation  
the control system of which is a person  
should always be in control of the entire process

in this regard, here is the concept of the "second level of constants"  
This is actually an ideological task  
which in formal mathematical form  
is expressed as the alignment of the coupling coefficients

considering what I described again  
in a fairly generalized form

then the connection coefficients are actually the same  
for your Consciousness  
specific elements of fixed events  
these are some specific events  
some specific elements  
which events can supposedly be supposedly organized

and in this regard, when you find these elements  
it turns out that you are registering  
i.e. you react to events  
here at this level of boundary conditions

$$\begin{array}{ccc}
 1 & & 2 \\
 | & & | \\
 f(k_1(I)) & \longrightarrow & f(k(p)) \\
 | & & | \\
 & 1,2 & \\
 & | & \\
 & \text{-----} & \\
 & g = (f(k(I)) \cdot f(k(p)))^{x^n} &
 \end{array}$$

where we have some generalizing component

let's assume that through Consciousness we can say  
that yes, there is an external Reality  
there are fixed phenomena of external Reality  
but it is possible that something else exists  
which, for example, we did not describe  
from the point of view of a one-time Perception

so there is a principle of operation of this mathematics  
which speaks about that  
that you can control those objects  
information about which does not exist

i.e. management of objects that are not informative

and in connection with this  
since a whole series of events can be like this  
that we don't have information  
so to speak at the level of some registration systems  
or we don't have information there, let's assume, in Consciousness  
let's assume a person sleeps there  
or as if the systems are turned off  
as a result of some electromagnetic impulse

nevertheless, the same task remains in its entirety  
you still need to save yourself and others

that's why this math  
it describes the management of those systems  
whose functions are not defined

and when did i do it  
for example, here is the same patent for preventing disasters  
or, for example, built mathematics  
on the fundamental definition of optical systems

this property was originally laid down  
and not only because it is Reality  
i.e. naturally there are systems  
whose functions are undefined  
and we are talking about real salvation  
so we must know these systems

how to manage them in this sense  
and later you can decipher them

but that's the point  
that systems with uncertain properties  
they can be an accelerator of the control impulse  
or vice versa, even an instant access system

why the other way around  
because the acceleration system  
it is a vector that is directed in one direction

$$g = (f(\underline{k(I)}) \cdot f(\underline{k(p)}))^{\mathbf{X}^n}$$

if on the contrary we build mathematics  
i.e. we solve the inverse problem

then at this point

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(\underline{k}_1(I)) & \longrightarrow \bullet & f(\underline{k}(p)) \\
 & | & \\
 & 1,2 & \\
 & | & \\
 g = (f(\underline{k}(I)) \cdot f(\underline{k}(p)))^{x^n}
 \end{array}$$

there is already management of this system

this turns out to be a vector-inverse problem

from a mathematical point of view it turns out that way  
 solution in physical understanding  
 a process that is directed in the other direction  
 simple even vector

and so when we talk about that  
 how to manage  
 still processes that are not declared, for example

then it is enough to put here  
 the same function g

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(k_1(I)) & & f(k(p)) \\
 & |_{1,2} & \\
 & & \\
 g = (f(k(I)) \cdot f(k(p)))^{x^n}
 \end{array}$$

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(k_1(I)) & \longrightarrow & f(k(p)) \\
 & |_{1,2} & \\
 & & \\
 g(g) = g((f(k(I)) \cdot f(k(p))))^{x^n}
 \end{array}$$

then it turns out that if we set this function  
then we get a closed system, which means implicit connections  
which is organized at this level  
with the same parametric  
at the level of invariant systems  
so let's say values  
which have basically the same function

i.e., to put it simply, we have  
invariant system of equations

and if somehow we change the coordinate system  
then the base level is always preserved

it turns out that by constructing mathematics in this way  
we can describe phenomena  
with which the object is associated

and the phenomena with which the object is associated  
this includes the phenomena of the entire external Reality

those. virtually all phenomena of the World  
This equation reflects  
as one local area

and all external phenomena  
in relation to, i.e. to, the boundary conditions of these phenomena  
is a description

$$\begin{array}{ccc}
 & 1 & 2 \\
 & | & | \\
 f(k_1(I)) & \longrightarrow & f(k(p)) \\
 & | & \\
 & 1,2 & \\
 & | & \\
 & & \\
 g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}
 \end{array}$$

i.e. translation of this Implicit system of equations  
in system 1.2

and then you get practically concrete  
specific event area  
in which in any case  
you achieve the act of Salvation

then it turns out that the tasks  
which, for example, are not defined functionally  
i.e. for example you don't have

let's assume some specific coordinates  
to define an event

these tasks are solved as consequences, i.e. as conclusions  
in this system of equations  
in the appendix to the General Communications System

considering what I just explained  
what can you do math  
which takes into account all the phenomena of Reality  
and considering that in this mathematics  
component of your Consciousness  
it is described

i.e. you can change the structure of Consciousness  
naturally change all connections

then it is clear why it means changing the optical component  
i.e. changing the intensity of Thinking  
and so it turns out  
optical reproduction of your Thinking  
you can change to Reality

i.e. change there for example, slow down there  
speed of the process suppose  
in some radioactive form

or we can assume, strictly speaking,  
manage any system  
in relation to which there is harmonized access

the concept of "harmonized access"  
that's actually speaking  
elements of Reality that do not need to be changed  
i.e. there are roads, cars drive, trees grow, etc.  
but this is also a large amount of information

and elements that need to be accessed

so, to highlight it right away  
what should be correlated  
i.e. so that some destruction would not be carried out

then we need to consider it then  
a system of direct, i.e. unconditional access  
when you hit an element of some kind  
without any time at all

i.e. you  
you need to do a reconstruction of the event  
and reach the structure of Salvation  
you do it right away

in this regard, then look here  
there is a patent for this device

there is here, so to speak, a way to prevent disasters  
there is such a phrase and device further  
for its implementation

so here is a way to prevent disasters  
it lies precisely in this technology  
which I just told you

it means that due to the fact that the technology is based as I explained  
on the real Laws by which Consciousness is structured  
which have been tested in practice

for example, I diagnosed aircraft at various stations  
or controlled from a distance  
material concrete structures

then for understanding, here, for example, is a descriptive version  
how does this patent work  
how does this device work  
and how does the method work in general

it is enough just to translate everything that I said  
to specific expressions already  
suppose "Fundamental Definition of Optical Systems"

but since in principle it is here  
and the only thing I could note here  
You'll have to read this later  
I will distribute in larger quantities

Here it will be necessary to note the following

what when you have  
for example, a management structure of such quality  
that it works under any conditions

then the question immediately arises  
that those conditions have been created  
which must necessarily be harmonized  
with all the development information  
and they should be the same  
that you must provide mandatory management

i.e. here in the Salvation system  
mandatory management level  
it is therefore mandatory

and here it turns out  
that when you save someone  
you should know for sure

that you will save in any case

so the technique accordingly  
should be built in this way

in this regard, the method  
it is largely based on this principle  
i.e. you must be able to  
means to apply and generally use  
such technology that is created in such a way

and he takes this method into account  
the possibilities of your Consciousness

I'll explain briefly  
This device is built on the basis of crystals  
it was a calculation for diamonds or rock crystal  
and the principles of its operation  
they are actually, as I explained, similar to those  
by which your Consciousness works

in this regard, any element of Perception  
in the form of an optical element again  
registered by a crystal system  
is being transformed

and that means here it is necessary to note what I said  
principle of harmonization  
i.e. the device reduces the strength of the earthquake

the tests were carried out on  
in due time  
nuclear explosions at testing grounds during the Soviet era

and at the same time the decrease means magnitude  
it was recorded in principle so that several times  
and at the same time quite in harsh conditions  
i.e. it is outside of the physical Laws as described

i.e. the wave from nuclear explosions spreads  
from underground nuclear explosions  
and at the same time it means on some element of movement  
extinguished several times

and it doesn't happen  
any special transformations

for example in the soil

so this is the function of this device

this is a reduction in the strength of some problematic consequences

and the second means fixation

if it means, for example, that the device's resource is insufficient

that's why I'll explain it here now

how does this device work

and it will be clear schematically

how your own Consciousness can work

so that you can, for example, cope with the process

the thing is that since the Laws are of the same type

then it turns out that we have basically

here it's more like a training device of its own level or something

by which you can build your own Thinking

This is of course one of the models

i.e. if you consider another system of equations

you can get

i.e., simply put, another, for example, some kind of instrumental embodiment

but nevertheless, an important component here is

what if, for example, you concentrate your thought in the form of a cone

and let's say enter it on the third crystal of this device

then the decrease in force, for example, in magnitude

increases sometimes

in general, even in an incomparably large number of times

there, so to speak, in logic, for example, decimal divisions

there are  $10^{17}$  times

if you apply concentration of thought

i.e. the device depends on your Thinking

and in connection with this, since experiments were conducted

and such content

it turned out to be the concept that

Well, it comes down to the concept of , let's say, "biofields"

although I generally try not to use it here

any concepts that are not defined

but nevertheless it can be considered

that there is a biofield there

i.e. considering that all known systems of Reality  
for your Consciousness they exist

then Thinking is a structure that is divided  
on what you perceive

let's say if you perceive the biofield  
that means from the biofield  
or related to the biofield  
maybe your Thinking

but if you think in categories  
let's assume an event plan  
then your Thinking perceives  
already precisely the elements of events

i.e. your thought will not only be a biofield  
and fix it

let's say I have digital registration methods  
when the thought is visible

so maybe it is  
characteristic of the intensity of thought radiation  
in general, even completely different

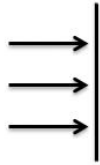

i.e. to talk about that  
that Thinking is precisely the reproduction of the biofield  
with such a level of instrumental measurements  
it is forbidden

so here I want to describe now  
how does the signal separation structure work  
which means it will also be used by you  
in order to build your Consciousness in this way

This is called structuring of Consciousness

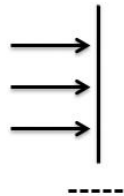

i.e. knowing these Laws  
you must be able to manage

so if you have  
well, for example, let's assume three vector signals again

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

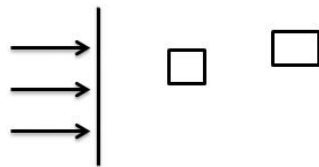

we will call it so that it is a boundary region

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

and these are three vector signals  
which come from some problem

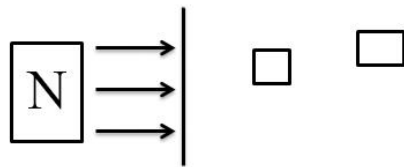

in this case, before, for example, a crystal system  
consisting of a number of crystals  
they are located differently

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

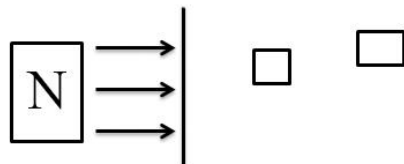

so there is a map of the area

and for this terrain map  
 the distribution is thus focused  
 using laser amplifiers  
 that information is localized, for example  
 and it penetrates through the crystals  
 and is distributed like this  
 actually isolated there if in mathematics  
 that means level  
 which speaks about the state of the Norm of the object

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

so let's assume we denote  
 well let's say some object in the form of N Norms

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n})$$

then this object

if we take for example

Well, let's assume we apply the equation of mathematical physics  
and describe mathematically

then we can assume any system of equations

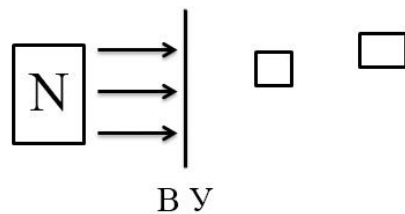

describe well in a cylindrical area

which speaks about some system of Reality

then those elements of information

which go in relation to the perceiving level

for example, I will write that this will be the perceiving level

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n})$$

they are connected, well let's say so  
with each point of this object

from a mathematical point of view  
this is basically a particular solution of this equation  
in a specific area

the area there may be different  
increase, etc. decrease

therefore, having, for example, three vectors of Perception  
which you register with the help of your Consciousness

to intervene and change the process  
towards Norma  
i.e. get the inverse vector

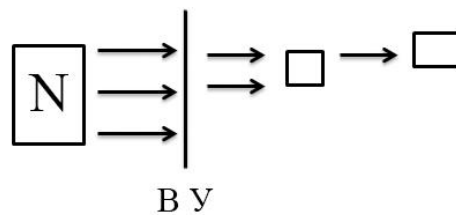

as I explained it is enough to use  
system of indirect connections  
i.e. not necessarily deterministic

and can a solution be found  
in the area  
whose functions are currently undefined

but the function of this area is, as it were, already realized in that  
what is this Norma

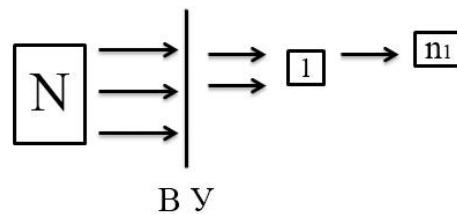

i.e. Norm of boundary conditions  
this is a function of indefinite domain

and so when you look for example  
how do these three vectors go , let's say

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

then we can, in principle, mathematically, as it were, distribute  
let's assume for one crystal

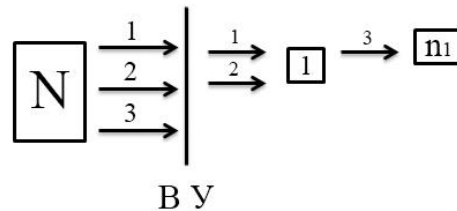

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n})$$

let this be the first crystal  
let it be some kind of crystal n1

in general, there are seven crystals in this particular device

so but as I said  
what is the arrangement of the crystal system  
depends simply on the solution of the equation  
That's why I'm writing the n-dimensional version

then it is clear that the distribution of, for example, these two signals  
per crystal  
or if we even designate them

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n})$$

let's assume it will be the first second third vector  
this is the first, the second, this will be the third vector

then if we, for example, the first two vectors  
elements of your Perception  
and elements of the general Reality  
hit the first crystal

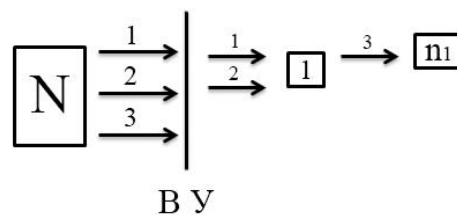

and the third one, let's assume, is a vector on the crystal, some  $n1$

then all elements that are between for example  $n$  vectors  
we can assume that they got there  
into some intermediate environment

so that's when we talk  
about this certain intermediate environment  
then it's just mathematical

and accordingly by applying the substance, i.e. crystals  
 we are in the concept of this certain environment  
 and already specifically formulated in the form of an element of the Norm

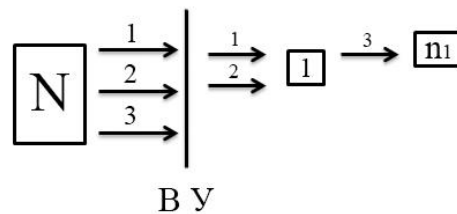

i.e. Salvation in any case

$$\underline{\underline{g(g) = g((f(k(I)) \cdot f(k(p)))^{X^n}}}$$

we see right from here  
 specific real events  
 which can modify this Norm

so when you solve a system of equations  
 let's say in the intermediate region  
 between the first and some n-th crystal

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n})$$

then you get the parameter that says that  
 what if the device detects  
 illumination for example like this  
 that some k-th component follows  
 an earthquake is starting there, for example  
 or something could happen , for example, in a production facility

because this patent has been tested  
 and for any possible emergency situations  
 at production facilities

there are just different degrees of radiation intensity  
 changes

if in case of earthquakes  
 it has some one coordinate  
 then if the device is configured  
 on the production facility diagram  
 then the intensity is just different

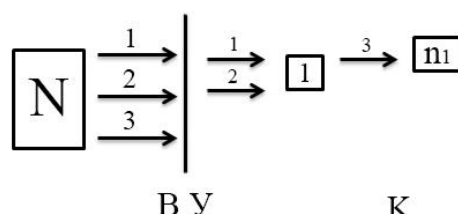

and here is the change in radiation intensity  
 can be recorded in seven days  
 what will happen in this object

and when you look at this diagram, for example  
 then you can build it right away  
 and the structure of one's own Consciousness  
 on standardization of information objects

here in this case

let's assume that we have some k-th component

Here

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{X^n}$$

then just take this very scheme  
 and let's assume that we have isolated the k-th object  
 or by linking it with the Norm of Events

you will receive in fact

it means the distribution in your Consciousness of that Norm  
 which leads to a successful outcome

i.e. no destruction occurs

i.e. it could be

or warning information means diagnostic type  
when can action be taken

if this  
it is not possible to take such measures due to time  
this means it is direct control through your Consciousness

in fact in this case as I give you  
elements and logical and mathematical  
and levels of direct control  
which I attribute to the irrational realm

then your task is to build the structure of Consciousness so  
so that the communication elements were like this  
Here's how I explained it now, for example

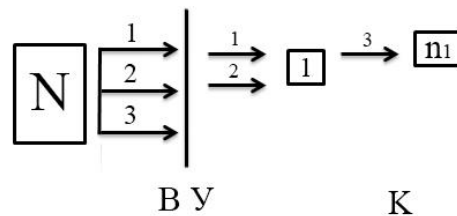

and so when you these elements  
at work you even see the device repeating  
then you find some legislative levels

i.e. a system of Laws that would explain  
why is this scheme designed this way

and when, for example, we designate  
1 - for example, these are elements of , let's say, past events  
2 - Current events  
and 3 - for example , these are elements of future events

then in this case we are talking about  
about Optical Communication System  
and as is known optical elements  
they can demonstrate most clearly  
Communication System

by combining these three vectors  
some let's assume system  
I will call it the Optical Communication System

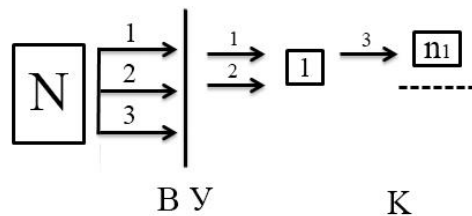

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

we just connect geometrically

then we get that the events of the current time (2)  
including dependent in a rigid System of Connections  
from future events (3)

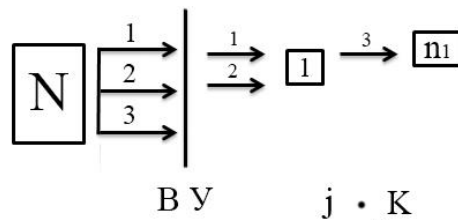

in this regard we can say  
what is this crystal

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

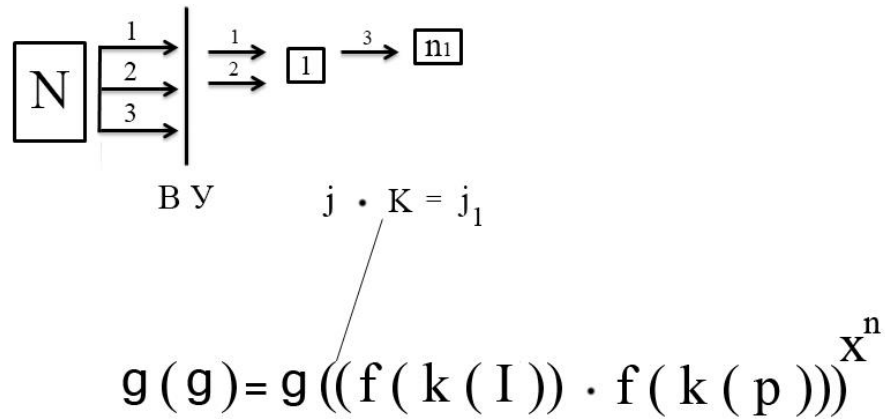

it simply records events  
future development elements  
and that's all

so when we measure intensity  
some intensity  
then let's assume the intensity is multiplied by K

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

in registration systems  
 immediately indicates the presence of, for example, some kind of problem  
 and getting this intensity  
 in the form of intensity for example  $j$  1

the device starts working  
by the principle of equalization k  
as I explained here

i.e. equalization of the coefficients of the Norm

and this is the equalization of the coefficients of the Norm  
it happens like this  
that the concept k which I identified as  
as a possible problem

it is not carried out from the point of view of your Consciousness  
because your Consciousness is oriented towards the Norm

and then it turns out  
that when you are in the form of a thought  
there we assume in a conical form  
on any crystal

let's say you form a thought like a cone

and you think that this thought is  
at the entrance to some crystal

then you can enhance the parameters 1 2  
i.e. the norm that was identified  
in past or current events

and this Norma  
she is on the General Communications System  
propagates back to the object

in this way the strength of the earthquake can be reduced

and due to the fact that this device  
it depends on your Consciousness  
then accordingly if you concentrate there for a long time  
you reduce it significantly  
less is less

these technologies are already  
let's say in the version that was tested  
so it worked  
not only <sup>suppose</sup> to reduce the strength of the earthquake  
it was possible to reduce it there  
source of radioactive radiation  
and a very powerful one at that  
there is the power of laser radiation, etc.

it means that at one time I just studied for a long time  
protection of various space objects  
from destruction including laser destruction

and in connection with this this technique  
it actually allows certain elements  
well let's say those that, for example, may arise  
or suddenly or not suppressed

if for example from laser radiation  
it is possible to build a system  
Well, let's assume thermally expanding graphite  
which is expanding greatly  
and the laser radiation is basically extinguished

that is, systems  
for example, there is some kind of flying homing dummy  
just mechanical type

and if the registration was done correctly

then no false targets  
they do not shift these blanks

so it turned out that having built  
for example, a system based on a rigid connection system  
for example, elements of the so-called control  
through the means of, let's say, an investigative instrumental organization  
i.e. the devices are connected only in that case  
if the blank is not deflected

and in conditions of, let's assume, an increased level of communication  
when we are forced to do something like that  
that take into account completely different communication systems  
to ensure just one level of security

i.e. to ensure that if that's the case in essence  
life in real safety of one person  
we must take that into account  
let's say the satellite system didn't work somewhere  
so that there is no self-launch of, for example, a nuclear missile  
somewhere we have to take that into account  
so that the explosion let's assume some explosion of a nuclear reactor  
did not cause homing again, let's assume, of missiles of other countries

and there were already options for self-launching rockets  
which were possible well how to stop

i.e. the technique can work regardless of that  
whether a person wants it or not

i.e. technology reaches the level of an uncontrolled system  
well, as you know, in reliability theory  
naturally in a multicomponent system  
absolutely stable  
build it in principle  
according to such a theory it is impossible  
with this technique

therefore, management is the consideration of all factors  
first of all those  
which can actually provide, for example,  
life to a specific person  
under the conditions of the supposed existence of the globe

so if we talk about management  
then we must definitely speak up

about real governance from the point of view of Salvation

and in this regard we are talking about that  
what as I explained  
instrument - oriented systems  
but which means they only work in that case  
if that thing is moving there  
towards, for example, a satellite object

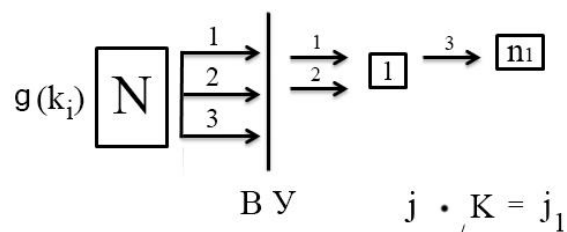

or, for example, the possibility is growing yes  
nuclear explosion at the reactor  
but we need to know for sure whether it will explode or not, yes

because if we do anything  
and other systems will start up  
just like I explained  
on the task of protecting a space object

it turns out that we can situation  
to over- or to press, i.e. to make stronger  
the situation that actually exists  
for example, it did not require additional control  
or it could be controlled later

i.e. here is the problem of solution accuracy  
in each specific case  
this is a special task  
taking into account all connections

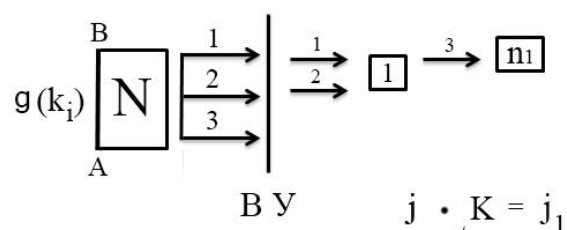

and this is the accounting of connections  
it is produced therefore  
at the level I will call it that, so  $k$ -th element  
of this crystal module

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

which is precisely what chooses  
 Norm of the event  
 in relation to  
 to all events  
 which exist from the object  
 which you are engaged in

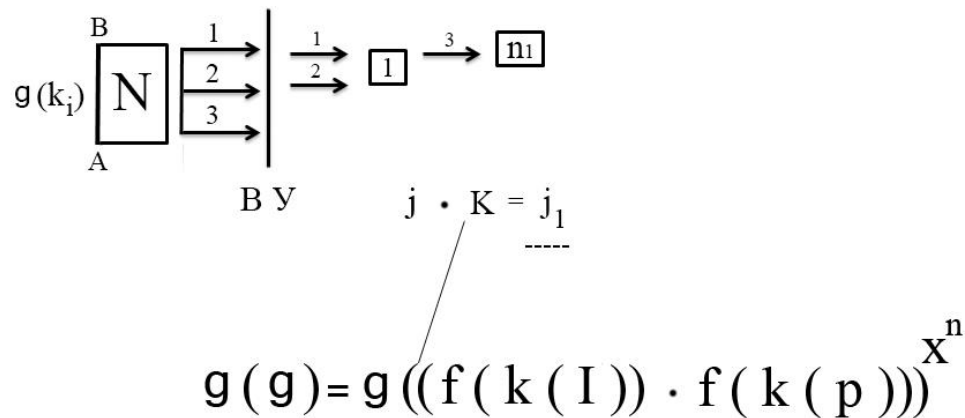

those. kth element  
 he actually has well, some of the same thing  
 functional reproduction

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

I'll call him like this  $g$  from  $K_i$   
 but it is implied  
 that  $K$  in this case is already a functional series

and if I designate  
 in the Norm of events for example area  
 this segment is a specific  $AB$  segment

if I describe as g from K ;  
then we immediately get the exact solution  
under controlled conditions

i.e. how can I say it  
we can, for example, slow down the nuclear reactor later  
or we can not put protection on some object  
because the object is basically safe anyway  
i.e. the same blank, for example, flies by and that's it, etc.

i.e. this is what is called  
level of quality solution  
which allows us  
to judge the situation that has arisen with absolute precision

so these are the functions of this device I consider  
any technique  
which is in harmony with the person  
consists precisely in that  
so that you receive  
human controlled decision

i.e. the devices should not destroy anything, for example  
and plus provide communication  
with all external Reality

i.e. let's assume if we take  
something on the left  
if we consider it as an environment  
then it can be an infinite number of connections

so here  $g$  from  $K_j$  -you are harmonized with that  
that no object on the left is destroyed

and so when you do harmonization  
i.e. the force decreases  
nowhere in instrumental measurements and calculations  
no gain was seen  
for example, magnitudes in some other region

i.e. that is why the situation here is as follows  
that I made such a digital analysis system  
which allows you to make registration  
by all so to speak external phenomena

it includes , so to speak, digital processing  
all of outer space  
monitoring the planet's surface, etc.

and at the same time I mean on the basis of my  
formulas of general Reality  
made the theory of wave synthesis  
which, when strengthening, for example, this  $k$ -th component  
for example, a laser radiation sensor

we can Norm of events  
to fix even more  
but with some kind of instrumental amplifier  
let's assume the same coherent laser beam

and it turns out that when the laser beam  
at a certain setting  
describes a certain trajectory  
already filming in measuring instruments in indicating instruments  
means processing on a computer  
information

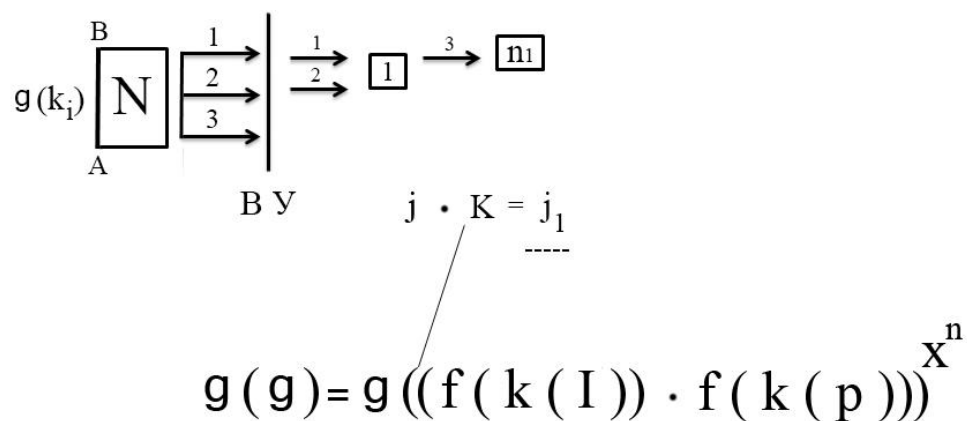

we can strengthen this norm

in a reciprocal manner  
and with all this  
get that decision  
which, well, in a particular case we should have  
from this system of equations

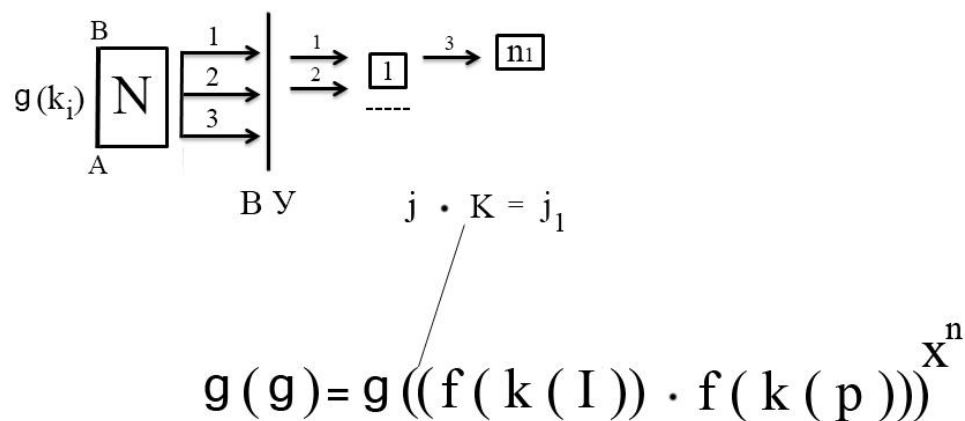

thus we have this  
in the form of a system of equations  
as an implicit function

so in this case we can already describe  
some similar harmonizing laws  
how is your Consciousness  
so let's assume the instrumental phase of the development of Consciousness

but at the same time the structure of Consciousness  
as a registration system  
which is laid down here

and as a control system

it is an add-on to the device

and when any system is built like this  
 you can always count and know  
 having laid down, let us suppose, in the structure of Consciousness  
 element of this device we assume there from the picture  
 and having laid down in the structure of the image of a person in the device  
 we can say that it is harmonically adequate

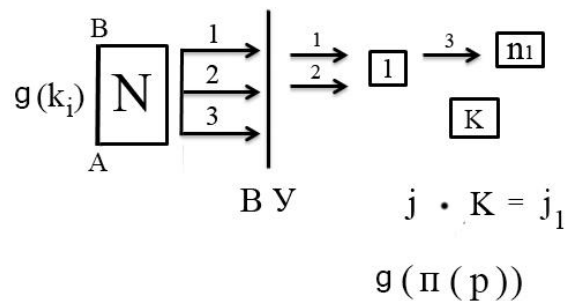

this is the concept of "harmonic adequacy"  
 this is a fairly specialized area of knowledge  
 but from the point of view of the Salvation system  
 this is the future development of information

and therefore, as the future development of information means  
 must be perfect  
 either individual or general  
 and sometimes both individual and general

then everything that is there  
 between individuality and generalization  
 this is also a level of harmonization

so from all possible points of development  
this level of harmonization is being built

and if we take for example  
let's assume the same function  $g$   
only as a function of space  
but the space of your Thinking

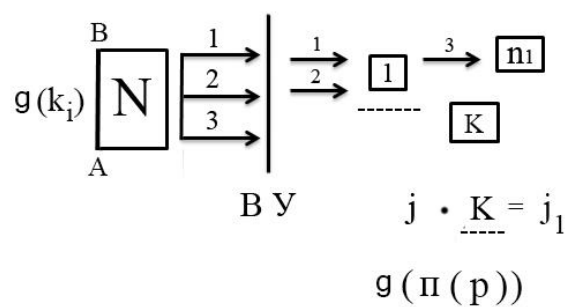

$$g(\pi(p))$$

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

i.e., designating Thinking  
in some space  
from the point of view of Perception

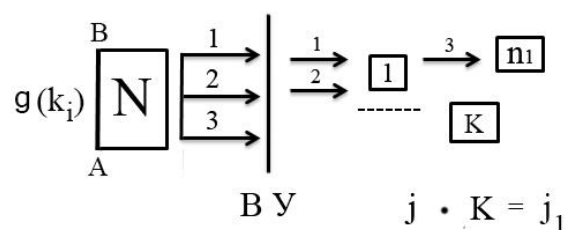

we get that this coefficient  $K$   
i.e. some kind of non-Norm in this case

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

some difference from the norm  
has approximately this combination

Well, for example, I'll write it like this  
(const) constant any constant let's say  
divided by K

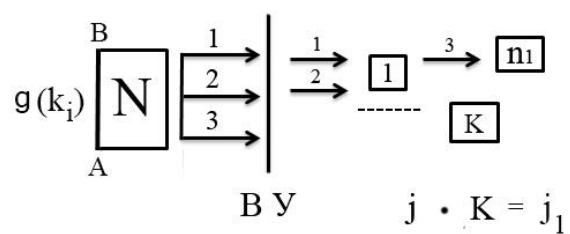

$$g(\Pi(p)) = \text{const}/K$$

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

and if we are for the subject of this constant  
we take the perception of another person  
or the integrity of any other information object

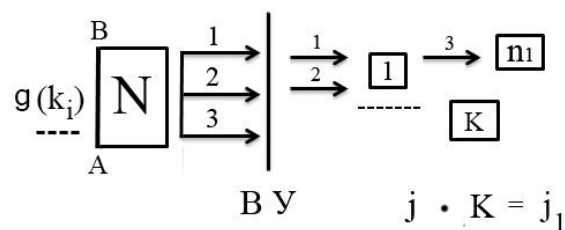

then as soon as we K  
in this case we got in this expression  
functional connection  
dependent on a constant

$$g(\Pi(p)) = \text{const}/K$$

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

but the variable part is K  
if we define K as K<sub>i</sub>-ta

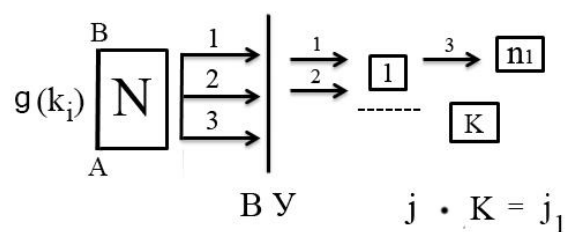

$$g(\Pi(p)) = \text{const}/K$$

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{x^n}$$

so here is the system of definitions of existing connections  
 in the system of equations  
 namely the definitions of connections  
 then you can get it  
 multivariate  
 infinite number of solutions

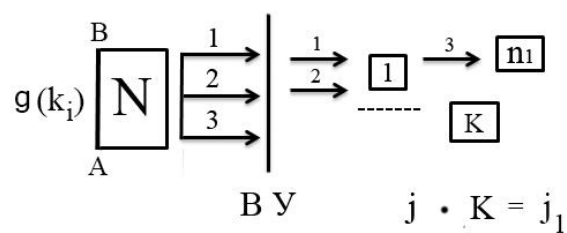

for example, I will return to the same thing again  
 a person can think about whatever he wants  
 i.e. to define his Thinking as he wants

the same thing defining this element  
 i.e. defining the space of Thinking already

$$g(\Pi(p)) = \text{const}/K$$

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{X^n}$$

$$g(\Pi(p)) = \text{const}/K$$

$$g(g) = g((f(k(I)) \cdot f(k(p)))^{X^n}$$

in connection  
with the space of events for example  
in the form of a completely fixed area  
for example, human forms

and putting the component  $K_i$  there  
and translating  
True, there is a special solution there  
in the field of theory of functions of a complex variable

translating this  
into the system of implicit functions  
can be proven unambiguously  
that any decision  
from the point of view of adequate harmonization  
or simply harmony and the system of Salvation  
it is always feasible

i.e. it turns out mathematically formally  
I proved it in mathematics  
that you can always save

the question is only  
in the application of technology, i.e., in fact, in knowledge

and it turns out that if we  
for example, we even talk about building technology

that is, a fairly simple principle  
here is the understanding of what the technology should be  
actually speaking from the point of view of safety for humans

Well, for example, take this postulate  
What  
God created man  
but man cannot destroy God

the same thing, this principle  
having created technologies that include technologies of Consciousness  
i.e. the form of a person  
its reproduction  
everything related to a person  
and laid down in the management structure  
of any given device

it is possible to create technologies  
which react to this system and do not destroy

in this case, a chip has already been created  
which means it was used truth  
when transporting certain objects  
but in any case it does not destroy the object itself  
i.e. it is transformed and acts on the whole system in such a way  
so that the object is not destroyed

currently within the framework of the Ministry of Emergency Situations  
This is Mikhail Andreevich Shakhramanyan's  
work related to this is being carried out here  
to transform the signal  
and receive information for example

but the signal conversion is in progress  
based on the fixation of thought forms

so thought forms are obtained in this way  
what if you have thought forms  
let's assume related to that  
that it is necessary to carry out some act of Salvation

then these thought forms  
they are being laid down  
so let's say in your future in your information  
and it turns out that in accordance with this  
you get a real solution  
not only because you  
for example, something, well, as if they did it  
have determined something  
that means and therefore so  
but also because it existed

i.e. having initially laid down something  
in the future this could already exist

this is the technology that is used in this microchip

i.e. if you, for example, pawn  
as an element of light  
to save a person there, for example  
or save the system  
ensure harmonious development  
pawn now

then the answer comes to you in this microchip  
as if from the future

but in reality this parameter is measured later in the future

in this part of the lecture  
basically I'll be giving you now  
methods of structuring Consciousness  
which are mostly described by words

and therefore under structuring  
implied  
like on the same principle as I explained

if  $10^{-17}$  degrees of a second  
light works like this  
that each adjacent element  
events  
or it is a future event  
or the past  
or current  
interconnected as if separate blocks

it's the same as taking it there  
to place, so to speak, in a rigid system of connections  
several, well, conditionally some rigid elements

if it happens anywhere  
there in the future the element will somehow be deformed  
this is according to the rigid lever system  
transmitted at the current time

and the same thing  
not only can such a branching be possible in the future  
can be had at the current time  
Well, and of course you can have it in the past

therefore it turns out  
that changing the structure of Consciousness in the current time  
you can manage processes at any time

and this is from the point of view of time

but the event part is included in time  
means any space

space means informational  
where there is physical space  
or the space perceived by you, so to speak

i.e. in this part of the lecture I will use that  
what does it mean to distinguish between the phenomena of Reality  
to those that you perceive  
and those that you analyze and manage

those. in fact, the distinction itself  
only occurs within the level of Perception

Perception is an element of Reality

means analysis or conclusions and management

since you are dealing with the system of Salvation  
and this course is exactly on the Salvation system

then according to the structuring of Consciousness the distinctions are as follows  
what does not need to be recorded  
as if the negative status of the event

and your Perception should be like this  
so that immediately at the moment of Perception  
you were in control  
i.e. they immediately received a management decision

and at the same time the structuring of Consciousness  
in this General Scheme of Rigid Links  
she is like that  
what if from the point of view of optics  
or so to say optical system  
you could say the optics of your Perception

here we are talking about just that  
to complete a certain form  
or fill in additional  
or it could be internal intensity  
some optical object

if it can be imagined like that  
if we need to get  
reflection from a certain sphere  
then with a light source  
through a row of mirrors  
reflection in some place

we are just that  
or rearrange the mirrors  
or increase the intensity  
to get in the reflected beam  
the required intensity  
that's all

because I give Perception  
which registers, for example, the phenomena of Reality  
there are such concepts as, for example, clairvoyance, extrasensory perception  
and similar concepts including Human Thinking

then when you think about it  
or in general if you just ask the question  
what they are from the point of view of Perception  
all these phenomena

then for example a clairvoyant he sees something  
in sensorics something can feel  
but to translate into a visual image there  
although clairvoyance in sensorics goes  
sensorics can be a subdivision of sensorics

if you see the future, there are also some optical elements  
just simply or some images signals  
consider in your Perception

that's why it turns out  
that any system of Reality  
can be translated into an optical system  
for your Perception

and when you think about it  
for example, what lecture to go to or what work to do  
you think first  
then you produce something physically  
suppose you go

i.e. you implement this control system  
which locally means what do you think  
does it affect you  
in this case

but according to the General Communications System  
even if you think about the physical meaning of this phenomenon  
while you're walking down the hallway to some lecture

it means you meet someone on the road

and it turns out that you change  
in the structure of local events something

it's in the General Communications System  
manifests itself in a certain way

it turns out that any event gives  
a parameter of a certain trajectory or something  
or development dynamics

trajectories from the point of view of, for example, quantum  
quantum of optical element

it turns out that in order to change an event  
you need to arrange your system of Thinking in this way  
i.e. to derive the optical range of Thinking  
to the control area  
so that these events become manageable  
as you need

and therefore sensory phenomena that are determined by that  
that remote control arises, for example  
if this is a treatment

or let's assume if this is a decrease  
means the intensity of the source of radioactive radiation, etc.

then you work only through your Consciousness  
and here are the intermediate connections  
they are carried out directly and almost instantly

so that's when I started describing how it happens  
such influence

then here they appeared in your Perception  
areas that receive signals  
from the control element of the World

having looked at how the world is arranged  
and perceiving that element  
where Information creates Reality

having set a task for ourselves  
consider  
that section of Information

where Reality is created

you <sup>will</sup> find it right away  
that there is a special level in Perception

well, actually like a detector  
which interacts  
with this particular element of Reality

where if you change your mind  
this is going on  
or on physical  
or to informative Reality

and therefore here in the structuring of Consciousness  
according to my system of Salvation  
you will have to see  
a very specific connection

what does it <sup>mean</sup> to arrange the thought  
to the management level  
you must gain control

i.e. for example if necessary  
prevent an explosion in a nuclear reactor  
if necessary you can do that  
that even <sup>well</sup> generally speaking you need to do that  
to set a goal

Salvation in any case

I had some in my practice  
what was there in the falling plane I was increasing the boards  
which burned out

this device when it is expanded  
I <sup>mean</sup>, I 'll bring you this article  
in the journal "Microelectronics"  
it was published last year

there at the <sup>same</sup> location  
for example, some element or board  
above the third crystal  
we actually received the materialization of this board  
or some element

i.e. the device can build up the substance

and therefore as I explained  
structuring Consciousness in the same way  
you must be able to build up the substance

example to save an airplane  
or if something burns out  
Means you must manage  
in other words, any information objects

in this regard, the situation here is as follows  
what is the element that I described  
as an element of Perception, i.e. in the transitional area  
which means that it is the one that determines the management

it must be revealed in your Consciousness

as soon as you identify it  
then the problem arises  
distributing it in this way  
in your element of Perception  
so that management is positive  
and destruction was not allowed

so from this point of view  
control can occur  
firstly, directly through a formal mechanism

let's say you take the formula  
which I wrote as a function  
and then you define the event in the parameter  $g$

if this parameter is described by you  
then concentrating just concentrating  
on the  $x$  icon  
and introducing  $n$  there from one to ten  
you can normalize this event

i.e. this is the most simple level  
when is the formal part  
where Perception connects with Reality  
highlighted as a formal mechanism

some types of formulas as I explained  
there is wave propagation  
are subject to the same Law  
i.e. working with formulas, even studying physics

you can feel and experiment with all of this

so when we talk about that

how should your Perception be  
from the point of view of your Consciousness

where Consciousness implies  
a more general form of your personality  
information form

then here it is clear that all that is needed is just  
to highlight the elements of connection in Perception  
between your Thinking  
and where do you think, i.e. the space of Thinking

and communication elements  
between  
by your Thinking  
And  
element of Reality

i.e. for example where is the element of Reality located  
in your own space of Thinking

so if you think about it  
what do you think sometimes  
and let's assume that some situation arises from this  
which you would like to happen

then that means you were  
in the field of event management  
and correctly thought through this situation

if just Thinking  
which does not aim at, for example, management  
then it may not be in the control area

therefore the task  
management of Reality and real events  
will be means including  
and the organization of Thinking  
in the field of event management

so when for example we talk about that  
what needs to be done is to save people

according to some specific manifestations of some anomaly

then first of all the question arises  
about the Salvation of all at once  
from the point of view of preventing  
let's assume the most obvious elements of destruction

such as, for example, a global catastrophe  
from a large resource, let's say nuclear weapons

so when you structure  
Consciousness according to the Salvation system  
first of all it is necessary  
create that optical background  
at the management level  
which would take into account the general status

i.e. you must always work with the consciousness of thought  
that first of all it is the Salvation of all  
for example from the most primary possible  
for example, possibly known situations

such as, say, nuclear destruction  
or some global catastrophes of the next order  
including those that may not be known now  
at the level of logic

when you put your thought like that  
you immediately enter the management sphere

i.e., in simpler terms, you set the optical glow  
in this area

i.e. if you imagine that I have a certain lamp  
a system of mirrors is installed  
then I kind of turn on this lamp with this thought  
i.e. I start to use the control system

then further as you are located  
in the General Communications System  
i.e. each person is interested in it in his own way  
so that there wouldn't be a planet being destroyed in a second

then he participates  
but that means not always consciously  
which means he doesn't always set this task for himself

but nevertheless in the System of General Connections  
one way or another he is involved

so the second task will be  
identification  
individual characteristics of their own  
which means which would determine  
still an individual direction  
your specific Thinking

in order to convey already  
from the emerging sphere  
information further  
like, well, to the next level, for example, to the mirror  
which is located at a distance of 20 centimeters, conditionally

so why exactly 20  
because as soon as you put  
a specific fixed number, for example 20 centimeters  
you immediately fix the interval  
i.e. well, you make some kind of reference point

according to the formula that I showed here  
this is actually a parameterization

i.e. you set the parameter  
set the parameters in the system of equations  
which also depend on the initial boundary conditions

to solve any physical problem as you know  
we need absolutely correct initial and boundary conditions  
to obtain a quantitative solution  
we must therefore record

in connection with this next element  
is the fixation of the control level

i.e., to put it simply, if it's not very clear to you  
that somewhere further means there is enough illumination  
to pass to the next mirror

then you have to somehow strengthen it  
or illuminate the mirror or darken the external environment  
i.e. reduce external lighting

i.e. this is the fixation of the control area

now we come to what we need to do

i.e. from the last mirror  
which is already moving on  
to the registration level

the concept with mirrors is of course quite schematic  
but it will go like a thread now  
for process matching  
Thinking  
management  
with a process such as that which occurs in optics

so we must from the last mirror  
get the intensity of, for example, a light flux  
which would say that everything around is okay

for this  
so the next level is  
display of one's own status

i.e. there is such a principle  
that the rescuer must save himself

so you are building up the second sphere  
in the form of this status

i.e. the source that comes from the radiation intensity  
you look, for example, at some sensor, let's say, at an oscilloscope  
which registers the intensity

or am I now many systems  
I already said it specifically  
what is there completely different systems  
intensity registration

and I generally speak in the application to this device  
that's why I'm talking about  
it is desirable to somehow internally mean to be aware of viewing

what does it mean when this device is working  
this is roughly how it happens  
optical level detection  
but unlike mirrors, there is basically just a crystal there

so that's why mirrors  
because in crystals

reflection still occurs

so I started to take it apart

it is the principle of reflection  
from some static areas

so moving on to these mirrors  
you can see that they all seem to be taken from the same pile  
which is at the registration level  
where we <sup>measure</sup> the radiation intensity

and that's when we actually already  
The radiation intensity was measured at the very beginning  
when was Norma  
even when, <sup>for example</sup>, no problems occurred  
from some external source that is located  
<sup>let's say</sup> in front of that mirror  
which he us at a distance of 20 centimeters

so if this external source  
begins to change somehow in the future  
or in the current tense  
or even if it was changed in the past  
as i explained about the plane fee  
where the board burned out and needed to be materialized

then the whole package of mirrors  
which is located along the route  
he should be like this  
what was still in the elements of Norma

i.e. the next level of formation of your Consciousness  
this organization is already the next third sphere  
in the first area  
i.e. you are just mentally at a distance of 5 centimeters  
<sup>How do</sup> you think that in this area, i.e. build it

that level is located  
where is the element of fixation, i.e. the element of your Consciousness  
is an organizing element  
<sup>which means</sup> the one that brings you back to normal  
<sup>as if</sup> that which is on the path of development of your Consciousness  
met

simply put, wherever you touch with Consciousness  
Norma should be there

this is the third sphere  
it passes as if into the first sphere

and adds glow  
i.e. your overall illumination is already increasing

but the glow is not simply intensified  
and it turns out to be special  
where standardization is highlighted more significantly  
rather than just a normal flow of information

i.e. it turns out that the standardization  
this is exactly what was originally intended  
in the primary Norm of the object

and now I'll tell you more  
about the Law on Dissemination of Information  
from the point of view of Consciousness

so from the point of view of Consciousness  
the dissemination of information is such  
that you are the final level of information  
for example, if it is presented in a package

for example, you say a word or a sentence

so here it is  
the last word in a sentence  
it is normalized in relation to the first word  
in the area of your Perception

i.e. the norm occurs where you perceive

and in connection with this  
area of Perception  
so you highlighted

closing all elements  
for example on the same first sphere  
you have identified the normalizing component  
which by nature it is simply from the Creator  
there exists

that's why it turns out  
what is the selection  
control level of Perception

this is such a technological process  
which I just told you about

but with all that  
this technological process is actually like this  
that you are already putting standardization into this technology  
in the area of development of your Consciousness  
i.e. it turns out that, for example, the same touch control there  
or if you can call it that

although I call it here  
in this case I have  
it can't be named  
for example, precisely with touch control  
because  
or just sensory  
because that's what we're talking about  
that this technology can be mastered by anyone

we are talking about the fact that there are devices  
which recorded the presence of optical elements  
that actually interact  
with physical or informational Reality

where we assume the informative Reality  
is divided into physical and, for example, let's say, another

and if the optics change  
i.e. Thinking changes  
in sync with this optics  
then Reality simply changes

i.e. it is simply as a type of certain Laws

and how much is this related to sensorics  
sensorics implies some biofields there  
let's assume that some intensity is quite high there  
so apparently they think like this in the theory of biofields there  
that it should somehow increase or decrease

in this case i'm not talking about this part  
manifestations of the human body, for example  
I speak in this technology  
about event information management

and event information  
includes all possible concepts there

including biofield sensorics there are physical fields  
in general, all the absolutely concepts that can only exist

that's why I say  
this is event domain management

and in this regard, when we consider, for example,  
generally speaking any event function  
then the control component  
manifested  
or at a point, for example , the outgoing source point  
or at the point of development of events  
where control impulses  
it would seem that there could be absolutely any design

Well, that's why this is your task  
next level  
as soon as you do this  
revealed  
the element of Perception which is the controlling one  
your task is to manage at any stage of the development of the event

and this means that all sources  
must be configured  
Well for example in one thought there  
the nuclear reactor there doesn't explode  
so that the plane doesn't crash, so that, for example, a person doesn't die there

and then around this situation  
you start to build a position, well built on the principle  
source of information  
or information stock

so by constructing the event element as a source  
i.e. having considered it thus constructed  
that every element of an event is a source  
and from there, so to speak , rays emanate

you will receive what is drained in your Consciousness  
this is how Consciousness works  
will be the Norm of this event  
but which is at a distance  
as if in the space of Thinking closer  
than the event itself that you are working with

space of Thinking it can be distinguished  
for example, by making a conditional around yourself

somewhere within a radius of a meter, having described  
speculatively some such position

in the form of, let's assume, a certain contour  
and work at a distance of 20-30 centimeters from yourself

here in this brochure "Unified knowledge system"  
there are certain points here  
which are connected with the geometry of the work of thought

so, but in this case we are talking about  
on the standardization of the information object  
and at the same time this standardization is generalized

everyone can work it out  
your own management system  
for example, comparing this principle

i.e. developing technologically as I explain  
your Thinking to the management level

and receiving that this control  
it means that it actually leads to that  
what you can control  
as the microstructure of the substance we assume i.e. microprocesses  
as for example by some Macrosystems  
which must be registered by someone or you  
if this is physical Reality

or if it is an informative Reality  
you must  
since you know that you are working  
in the control system  
then you see  
that there could be either a fire or some kind of explosion  
shift the given event

so that's how I have a course of lectures  
according to the Salvation system  
and you are preparing to apply it  
for example in the field of mathematics  
can be used  
in the field of development of any science in general

then I give you first of all  
this is salvation from a possible global catastrophe

this technology  
it may still be special  
sometimes it is just special

i.e. let's assume the salvation of one person  
we need to do this in any case  
sometimes, generally speaking, this is a different level of task completion

but it's the same thing that there is one or all at once  
from the point of view of Consciousness it is the same  
and from a moral point of view

but from the point of view of technology  
Salvation from destruction of all  
This is a special technology

because there you will have to  
pay attention first  
salvation from a possible global catastrophe  
which can destroy everyone

and often this determines  
a certain structure  
your optical level of Perception

so here is the work for Salvation  
from a possible global catastrophe  
this is the next level of definition of Perception

i.e. Perception at the level where you found it  
it means it is divided  
on the element more so to say the upper one  
like an upper hemisphere  
this is salvation from a possible global catastrophe  
all

and the lower hemisphere  
these are already private elements of Salvation

so here's to get private salvation  
at the right time, for example, from something and somewhere  
it must be taken into account in any case  
control of the outer, i.e. upper part of the sphere

for this  
so that it means technologically to manage quickly anyway  
where you need it

and save in time

there are special methods of transition  
from your Perception on Salvation from a global catastrophe  
To  
rescue of local levels of some incidents

so this transition is done in this way  
that you structure your space of Perception  
according to the following principle

there is a principle of cause and effect  
i.e. you think that  
and so it is  
for example from the Consciousness of your being  
also by the way in the area of your Perception

i.e. the concept of Perception includes  
any elements of Reality

but being at any level of this Perception  
a control impulse occurs  
this impulse, for example, in the form of a thought  
something needs to be saved  
something specific  
or informative or already happening or accomplished  
how to fix it

this impulse passes  
into the sphere of global governance  
distributed downwards  
and hits  
as if in the form of an optical level  
for some parameters of a private event

as i already said you are already there  
in the field of management  
any of your Thinking will be the control

and that's when you get there, for example  
into this area of private management  
then speed is important here

so this is the principle of cause and effect  
it can be implemented if you have time for example

but when there are a lot of events at the same time

because I said that it is about Salvation

a person is at the Macro level in any case

i.e. each person participates in the Macrosystem of Management

then you should be able to access the event  
unconditionally

i.e. you should get access almost instantly

for example you see

and immediately from what you are watching  
the structure of the event must change

the concept of "see" means you think in this area

then when you start practicing  
you will understand this

I had a situation at one time

when does that mean I, well, how did I reduce the intensity  
there is radioactive radiation if needed

let's assume from the point of view of matter  
look then I will bring you the materials  
according to materializations we suppose

Now at Moscow State University there are some works  
where in a vacuum it means you can organize oxygen  
due to the work of Consciousness, etc.

i.e. I am engaged in the principles of fundamental management  
where does the first principle come in?  
this is Salvation and harmonious development  
and then these are some specific technologies

here in specific technologies  
there it is brought to perfect control  
there by chemical microprocesses

then look at these protocols  
what it's about is that  
what is the microenvironment  
what is the macroenvironment  
from a management point of view  
in many cases it is the same thing

the main thing is to develop the structure of Consciousness

i.e. put the thought  
to the desired control area
