

GRIGORY GRABOVOY

A course of lectures at the Russian Emergencies Ministry Agency on monitoring
and forecasting emergency situations on the topic

**Irrational methods of prevention
global catastrophic processes
posing a threat to the entire world**

(2)

14 21.09.2000

And considering that now
and we are talking about that
that from the upper level i.e. from the upper sphere
you end up in a kind of lower sphere
and there Salvation is accomplished
a specific individual or object

then access here is direct access to this object
not at the causal level
i.e. not because the thought is in the form of a causal connection
gets somewhere
and then she controls through the common sphere

there is another principle
instant control principle
which is based
on the regional autonomy system

i.e. you structure your Consciousness in this way
what is the area for the act rescue management
becomes autonomous
i.e. it becomes isolated

and then any of your Thinking
towards what should be normal
leads to the normalization of the area
this is the first

and the second
if you even get there
here in this area
then since you have the setting for the Norm of all events
initially everyone has it
then you still standardize

i.e. the task is
first of all, get there
secondly, already manage there

from the point of view there
it's like you're solving some kind of problems
somehow you think, build a system in the form of images
you can build simply in the management system

for example, a nuclear reactor could explode
what is needed for this
for example, so that from the point of view of developing processes there
so that it doesn't explode, something needs to be done

Firstly, there is the usual point of view
why it can explode
and what needs to be done

which exists within the framework of, for example, a nuclear power plant
or within the framework of any system
any reactor, not necessarily a nuclear reactor

but your task
highlight the management area
i.e. not something that is known , let's say, to everyone there or to some person

your task at the moment
identify what you need to do
to stop these processes as if they were unfavorable
or just take it to Norma

That's why positions exist
when you take information as it were
from the inner surface of the control sphere

just tune in as if you were watching
well being in the room here
I can, for example, look at the ceiling or at some point
and see something there

and then I can unscrew the light bulb there, for example
or some kind of lampshade

the same
you tune into the system from within

and take information from it
i.e. as if you unscrew this light bulb or lampshade
make it safe for everyone

when you take information
and pull it inside the sphere
to the center of this sphere

then here is the global superstructure system
according to the Macrosalvation system
and private

they are at the transition point
in the center of this sphere
connected
to one infinitely distant point
from your Consciousness

you need to remember this term somehow

i.e. this point is infinitely distant
from your Consciousness

so since you work in the field of Perception
and there is a point of the area of Consciousness
area of Perception
any other point

you must determine for yourself
what area is
infinitely distant point or region
from your Consciousness

and at the same time place
this area is geometrically
well, let's say in the same area

i.e. you actually designate it
that this region is infinitely distant

although we do not introduce the concept
physical or temporary removal

and as soon as you entered
this area

then you get
already getting it in general
a real device or a tool
for instant control

i.e. tuning into this area
you get instant login to any system
which means that it already takes into account
the presence of a global sphere of control
that you actually went through it and harmonized it
information

and in this area tuning into this area
and placing it as if in this area, well, in fact
some event
you normalize it

i.e. the whole action takes , well , some milliseconds

working on some elements
which relate specifically to the Salvation system

must be kept in mind
what you should absolutely clearly state here
see and know
that we are talking about managing Reality
and not at the experimental level
which you can create there or not create

and when you look at my protocols there
there are jobs, let's say, in aviation, etc.
I just worked in production
and these are just protocols they were recorded
as results of the work

i.e. in fact in any case
you will see that i am just that simple
worked for real management
and that's all

and so when you work
with real control
there take into account that Reality is like this
what do you mean you can control it
but on condition that it is precisely in the direction of Salvation
what should be used there anyway

and it's better not to allow the most basic principle at all
i.e. the use of something that needed to be saved

and therefore the meaning of the training will be your
that you any of your events
and those that you need
events of your real life
you will have to do it in the same way as I explained
means to transform
in the form of some, for example, optical elements of Perception

and already control this optics
and see how it helps you
let's say solve your problems

i.e. training can only be that
what are you really doing and what do you need

because in this case
you are here
precisely in the system of real information

that's why the control that I said
at events, so to speak, of some specially created ones
in order for training to somehow improve
it is not very advisable to do this at such events
need to do on those events
which concern you personally or everyone around you

and in connection with this
you will be there all the time
in the system of real management
at least you won't create unnecessary areas

but having learned to manage
in the system, so to speak, of its real events
you still have to understand
that any moment of Reality
which could be next
it can be completely different

and it is clear that Salvation
any other physical object
this is something else

but the point is that there may be
completely unknown phenomena there Reality
which you also need to save yourself and others, etc.
Maybe

so the goal will be
learn to have
such a state of mind
in fact, as a certain work of the Soul to perform
in which you will definitely be able to save
to save and to rescue as if in any situation

i.e. we are talking about this in this case
on the development of Spiritual status

and therefore when we speak already
about the Spiritual status of management
then this whole thing is built on the level of thought
peripheral system
although the thought certainly contains
The spiritual component is natural
and even through the General Communications System

but then the management will already be underway
due to the pulse system
which the Spirit can reproduce

so here is the Spiritual
this state is a certain state
This is a state management technology

so at this level I will finish that part of the lecture
which was in the form of a monologue
means that as an independent, so to speak, homework
to the next lecture

will need to be found at the optical level
at the optical system level
transitions
This means that everyone can do it in their own way
from thought control technology
where is the thought
is expressed in the form of elements of clear Perception
and is controlled by Consciousness

i.e. Thinking is an algorithm

which can be in the form of images
transferred to the control system
you get control over images, i.e. real events

this is what I told using the same mirrors as an example
and transmission of information

as homework
you will need to develop a method yourself
let it be there literally half a page is written somehow
and this can be in the form of mathematical expressions
in the form of phrases, etc.

how to build such a system
at the level of Spiritual Administration

the concept of Spiritual Administration
it's the same, the same area of Perception
where are you considering
not work for example thoughts
and the work of the Spirit

at the same time management
let's call it state management

state management

to explain this more specifically
I will now explain one of the facts
I had it in my practice
this is communication and real work with pilots

I was doing diagnostics on the TU-144 aircraft
which stood for a very long time, more than 5 years
it was a joint program of the Russian government
and in my opinion Boeing NASA etc.
there were some other scientific developments there, so
a flying laboratory was tested

and that's how it turned out
that the second pilot was Veremey Boris Ivanovich
he is a famous test pilot
so here is a specific case from his cases that he told

first one for example
Veremey himself Boris Ivanovich

he ^{must} have been in a similar situation once
that the plane started to fall
the engines stalled

and yet he ^{did} n't eject
but managed to lift the plane

and that's when the parameters were calculated
when the engines started again
and when he ^{sort of} came out of the dive
and the plane ^{began} to gain altitude again

then physical parameters
which would ^{ensure} the rise
at such a height point
it was no longer there
i.e. physically he could not have done anything
even if the engines started
he couldn't lift it at all

it means that the control parameter was applied

the second one ^{means} there was a case
when he threw up on the flight ^{it means}
a very large number ^{as if} from a glider
the glider in principle could not fly in such a condition

but nevertheless, as he explained to me
he concentrated and seemed to replace
missing physical abilities
^{means} with your Consciousness
He landed the plane nonetheless

another one of the cases
who is already talking about self-government
^{so} the plane was being tested
Veremey Boris Ivanovich was also a participant

the plane was tested
^{which means} which one when landing
^{so} it somehow hit the bank of the Moscow River
and the cabin just flew off about 150 meters

so, well, the lower part fell off, the cabin flew off
and there she stood, ^{well,} sort of like in the shape of a cone
the foundation of which is on the earth

and one of the pilots is not Veremey Boris Ivanovich
there is one of the pilots
as he told me
He climbed out through a small window with his backpack
that's what it means in the cockpit it's small
You can't even take a backpack out there
nevertheless, when this group arrived, it was basically rescuers
he was already walking with a backpack, so outside this cabin

and when they asked how he was
he says "i got out"
and everyone is watching in general
that he climbed out through this little window
but in a normal state even a backpack is from there
how did he manage to deform and crawl out
these are again opportunities for self-government

i.e. these are specific facts of management
which manifest themselves
at the level of acceptance of any spiritual positions
or work in extreme conditions

your task
these elements of Reality
translate into logical phase
and through logic do the same thing
and not as if the very first very first rule
do not allow it to be applied

and the second one can be done
not only in relation to
not only can a person do it himself
in relation to oneself

this can be done
in relation to anyone
remote at any distance
object

so here's just from specific practice
so the data that I provided

then look there was a protocol
he also wrote about my work
for example, on the same TU-144

look at that too
in connection with these cases
look at this information

This I'll bring you this material next time

and think about it
what if it is possible to implement
and practically
and theoretically
and instrumentally
and plus it is proven, including by fundamental mathematics

it is possible to carry out control
through the structure of your Consciousness

and this is an element
which can prevent at any distance
actually a disaster ^{then}
and in its global understanding

then it might turn out like this
what is this element
in the system of different states ^{means} different
logically it could even turn out that way
different political systems
different destruction technologies ^{for example}
produced either by terrorists or states

he may be the only one

i.e. therefore if we talk about real Salvation
then the technology of developing one's own Consciousness
this may be the only tool
through which people can
from the point of view of endless reproduction
save yourself

This is where I'm ending now
my part , so to speak, in the form of a monologue
so as I said
we still have about half an hour
so that if you have any questions
you can ask them

QUESTION:

Grigory Petrovich

is there from your point of view

some limitations, let's say, of the applicability of the method

some indications contraindications

Well, let's say a little more about the conditions

and for what order is it preferable ?

or is it absolutely universal boundless

with infinite possibilities method or

or does he have some specializations

some branches of implementation

this is this

GRABOVOI G.P.

of course it's like you said the second time

it is absolutely limitless in possibilities

management method

because it is based only

on a person's own Consciousness

and at a certain already proven level

which has been proven both mathematically and experimentally

where does it say

what if you rely on your own Consciousness

and it's in this book

"Applied structures of the information creation area"

then since Consciousness is involved

in the element of, as it were, unconditional development

which from the Creator this element exists

where everything should develop and should not be destroyed

what happens in this technology

aiming at Salvation and harmonious development

you are at this point

at this point any technology

she saves she is harmonized

and at the same time it is built on

in principle, the usual logic of Thinking

just for example you can think in one place

and not to manage

but you can think in some geometrically different place

and then manage

but the geometry is already determined
understanding knowledge of the Laws
or sometimes just straight geometry

and it turns out that
when is your base point
this is Consciousness
then you can't destroy anything

i.e. it is actually a technology of creation
and it is impossible to destroy anything with this technique

it's like building a house, it's bricks
which is completely different
this is not an explosive device this is not to blow up the house

and that's why it's like I explained it
what is especially important here is that
that's like the second third part of the question
that there may be a special understanding
This is how I expressed the question

in the application and development of these techniques
this is what is good for students and future professionals
in that it is
there is a need to develop such a position
in any direction
scientific or even practical

because now due to that
that the technogenic development system is progressing very much
and there were already I explained it like this
elements of self-launching of nuclear missiles including
self-starting systems were triggered
There are sometimes computer viruses, etc.

then more and more arises
necessity for the real salvation of people
the need to assign control functions
on the very status of a person, in fact
i.e. on his Consciousness

and therefore here are interdependent technologies
emanating from a person
it could be that way
and so in many cases it will be so in my opinion

well, true, in a slightly more distant future

what exactly are these technologies
ensure the eternal reproduction of life
what is the goal

and therefore, as I explained
This device, for example, makes materialization
we did a general scan
all forms of information
she is reagent

let's assume that something is in the database
I highlight
in the form of an image of a shape
and you can immediately see it from the change in shape
what happens in Reality

I have the same thing, I have a diagnostic system
which allows
just a morphological atlas of man
it has a certain form of information
well, in the form of some kind of optical radiation
as if fixed in geometric form

if you take a picture of a person
and identify this component
then the imposition of just forms
any cell is immediately visible
completely painless method

and we can also impose
here is an element of Reality
as if the information of the whole world

and this is done through this device
the substance is built up, an overlay is made
and nothing was pulled out from anywhere

i.e. it is a system
which in a deeper understanding
is based on the concept of collective Consciousness

i.e. all external Reality
it can be considered
as a system of different levels of Consciousness

including the Consciousness of the Creator there
plants, animals, people, etc.

and if people, for example, learn to change Consciousness
according to the system of this development
then we can develop, including, so to speak, those technologies
which do not require special or any special requirements
resource provision

because what is materialization through this device
We didn't take the substances from anywhere

or there I am I did this at Moscow State University
when or just I'll bring this later
protocols of work there materialization

I don't sharpen this item
i.e. I simply materialize it at the expense of Consciousness

and I think these are the technologies in this regard
in my opinion, they are simply desirable
as widely distributed as possible

I've just been in practice for many years now
since 1991 I have already started to study on a scientific basis
with the involvement of high-level academics
including well, also the USSR Academy of Sciences of the USSR

and in general through various decisions and practices
it was proven
that the management is completely creative
no destruction occurs anywhere

I later defended this explanation as a doctoral dissertation
this means Well, this is not a doctorate, it is a degree in physics and mathematics
and there was another doctorate

so it's exactly in what I explained
this is the element of Consciousness
which is connected and which contains
only the creative component
when we declare we stand only on it

there is a precision system there
when I digitize from the side here are the video cameras
and I watch how the event element goes

when a person sets, for example, the task of Salvation
then it only hits this element

i.e. as if on the element of creation
in fact, information about the creation of the World
on the development element

so I think this will be a more complete answer
which I think should be applied as widely as possible

basically who is studying here by the way
I have
he then I think should and this will be the goal, so to speak, of yours
still pass on this knowledge

especially since if from the point of view
application of certain mathematical constructions
maybe for some people it is complicated
those who do not have a mathematical education

but these technologies
how this part of the lecture is already the third, so to speak, the third half-pair
I just read it in words

and then here it is I have many students from different specialties
what is read in words they use for control
and that's all

i.e. someone can know in the form of formulas
someone in the form of just what you explain
what does such a thing exist
and then you can use it

it looks like a person came in there, for example
well, let's say somewhere in a bathhouse with a sore throat
he came out and didn't have a sore throat
a man meets there and looks
that he doesn't have a sore throat because he went to the bathhouse
but for example he doesn't know that a bathhouse cures a sore throat

if you know
just know
then it can be both transmitted and taught

i.e. this principle is exactly the same
I have been convinced of this many times

working there especially with pilots and astronauts
that ^{for example} they sometimes intuitively used
this level of Consciousness
sometimes no matter how much they used it
because they thought that it was ^{just} their thoughts, their Thinking
and there is no need to pay attention, ^{for example}

but when it was translated into a technological base
they then made such powerful results
I have a lot of pilots who were simply written off

firstly, they have already been written off, and sometimes they have
They are only prepared sometimes on trial basis for 15 years there
Well, it takes a long time to become a professional

so they didn't just regenerate themselves completely
they also
then now basically that's all that I had
they all fly
although many are already at a very significant age
in order to fly

so that's what I'm thinking about for the future
it is desirable to build
their own methodology for transmitting this information to others
if possible

QUESTION:

*we can also say that it is some kind of dialectic of development
Well, maybe a more simplified one
when we say imperfect systems
or there are some elements of the system
they die there, they can't stand the competition , let's say
or there are some food chains there
ecosystems there are some other systems social systems here
then as a manifestation of this interspecies struggle
now the dying out of some, for example
Well , new cells grow there, old ones die there, etc. , etc.*

*and well anyway in the biological systems there
and some social ones
they have such a toolkit
which deals with the worst there with the outdated
with which it already becomes harmful, let's say
and development comes through struggle*

*I'm not even talking about armed struggle
which is generally built to do the opposite
she goes somewhere through the looking glass
i.e. anti-evolution is going towards minus infinity
if we say here we can consider that here is plus infinity
there is improvement going on there and some kind of harmonization*

*but how can this be understood in this regard?
or maybe these are just some highlighted ones
some vectors of improvement here
and forgotten or not taken into account
that there is always something nearby
or is something always a perfect form
she's imperfect somewhere
she is in some kind of opposition here*

GRABOVOI G.P.

Yes, now I will tell you my point of view
the thing is that I was doing
Well, now here I am, this work is completely finished
in a formal form
and in the form of, so to speak, experiments
with a certain level of substance

so here is the concept of "harmonization of development"
so in this case it is the following

i.e. firstly, because everything is built on Consciousness
and Consciousness is actually built this way
what can materialize i.e. create

in this case it is of course necessary
understand here right away from the start
that the first criterion is
this is the task of real salvation of people
where for example one should not always expect
that political groups will agree
and in general, in principle, this should not be expected

if we are talking only about Earth
Well, theoretically they can come to an agreement.
but an external threat, for example, with systems of implicit origin

nevertheless
a person must survive

then it turns out
that he can create something logically instantly
ideologically this can be created through Consciousness
there are different boards there

this is a concept as if only an element of Salvation

and that's when we look at this element
and we begin to touch upon what existed
until, for example, global nuclear destruction
worldview
when people developed there were wars
and in principle we can do more than just analyze
we just are what we see
that similar systems are also developing
some interspecies problems were going on there
in the animal world, in the plant world, etc.
but one thing
there is a Thinking component here after all

It's one thing when we consider this, for example
from the point of view of evolution here is development
where the struggle suppose it leads
to a certain positive change yes

and that's another matter
when we change the conceptual basis
i.e. we are in connection with that
that there was a threat of global destruction
I believe that the conceptual basis should already be that
what needs to be created
real conditions for real Salvation

and then it turns out that you need to give
we need to determine the mechanism that could save
at least if one is saved there
The Earth remains, which means the Earth does not explode.

and this
Private related to General
gives a different idea of development
where the element of development is, first of all, Consciousness
which is aimed at creativity

and then an element of, well, let's say, the so-called struggle
is

maybe it's not really a confrontational struggle anymore
or generally speaking not in general in the understanding of the struggle
as some kind of conflict

and if we understand the struggle as work on development, for example
then here the element of work is replaced by that
that while developing, we still don't destroy

what is important is that
that in the conditions of great technological growth
devices built on the basis of Consciousness
they are there do not destroy
and any development technology
built on the basis of its Consciousness
it guarantees in fact if it is ideally developed

Eternal reproduction of life
which is what was originally established

so that's how it is
what if for example we have
actually existing types of development

and the concept is still
do not destroy
then here is the ideological level
and by the way a very specific system
in further development is that
that here is an object, it simply evolves

let's say when I was there for the first time I was there quite a long time ago
it's through the security council in Russia
the task is set , for example, to neutralize a nuclear weapon
nuclear bomb

according to this concept it means
it turns out that if from the point of view of even formal equations
it does not include the destructuring component
let's assume the destruction of the nuclear bomb itself

but it includes a component
as if the Norms of the existing space-time
and the bomb, for example, does not explode

so we managed to create a system of so to speak parallel
Well, they are not quite parallel.

a variety of screens
placing in which
it's a bomb, well, in fact, you could call it that
that it undergoes some kind of evolution

if you put a bomb there, for example, for a thousand years
it will gradually fall apart and that's it
so the same thing is happening here
It's like we don't blow it up there

this is more
at one time I was given it there by Gorbachev
this piece is when they cut the missiles there
I just made this system of equations then

so here is a special technology, as it were
which would allow disarmament
or display any information objects there
into the sphere
where it actually begins to evolve
but evolves without being destroyed
evolves as if towards
favorable for all
i.e. it then becomes inactive
this bomb

and what's more, I found a system
when did we place it
Well, it's true that there were experiments in Novosibirsk
so it's a radioactive emitter so to speak
placed in this screen system

then we even received, as it were, from harm all possible harm
received benefits
that here is a radiation system accumulating on the screens
gave transformation
and even in general they started to receive
there Ferrum was obtained, well, iron, to put it simply
what we need for example for construction

i.e., to put it simply, these are the objects that are possibly dangerous
they can be introduced, as it were, into the system of their own evolution
well, as if speeding up the time parameters
and then they
we don't touch them
i.e. conceptually we do not destroy them

but if a bomb is being prepared
it wasn't originally planned there
that it must explode
She's kind of preparing just in case

but there is also a parameter there
if I describe mathematics
I do exactly that, strictly speaking

there is a parameter that, for example, if it lies for a long time
well, let's say somewhere in the damp
then it starts to sort of disintegrate and rust appears

and these are the parameters that are modeled
and it turns out that any system of so-called weapons
it may be when making, for example, a political decision
transformed in a certain way

the question is of course about protection
existing as if protection
when for example when it comes to Salvation
Of course we need to think about how to defend ourselves then

but it is really possible to control matter at any distance
and also based on one's own Consciousness
This is the maximum form of protection

and from any object
including from objects there not just some bombs there
in principle from any object
including objects of unknown origin

QUESTION:

*Well, there are some relationships here
between here Consciousness Management
and the execution of this management order
technical execution
i.e. there are technical solutions here
or it doesn't matter it's already happening
somehow it doesn't matter at all how
and for, say, someone who deals with man-made matters
including man-made creation, let's say*

Well, there are chemical weapons here too

*there are, let's say, some organophosphorus compounds
complex molecules
they are cut into many components there
into smaller molecules that are, let's say, harmless
or there might be some other different variations*

*or or let's say transformation
let's say some very dangerous high-risk element
which is aimed at large-scale destruction
well, the same nuclear weapon of some kind
the ammunition is super, there is hydrogen, there is nuclear fusion, let's say
and this is his transformation
well, some kind of performance is assumed here
or does it not matter at all
this is a black box where at the entrance
here is some order and some kind of management system
I don't know
and at the output we will say some desired result
let's say a safe product or something else*

GRABOVOI G.P.

I'll explain

from a management point of view

Of course any level is important

so that it would be generally controllable

i.e. this is the main task of any management
especially management of the Rescue system
here it is important of course not to have black boxes at all in principle

i.e. for the control of Consciousness this is the advantage
that by building devices we can enhance their actions or their, for example,
does it mean to neutralize their action?

and here I still think
that the main task of any management
is means determinism
i.e. logicity or at least perceptibility

only of course
if we manage an unknown environment
i.e. still first and foremost
I think that regardless of any devices
It is always necessary to create all the prerequisites and conditions
for the development of each person's Consciousness
so that he could save, for example , personally somewhere there

because well okay
if there is a device base
does it always work then

but nevertheless the instrument base
there it strengthens some elements
and can help or even do things for a person

but I think in my control system
Of course, all elements need to be made under the control of Consciousness
and not create any levels at all
wherever Consciousness controls the situation

then we definitely guarantee
that in this case, in an ideal case, so to speak
and we must strive for this
Moreover, it is possible to prove experimentally
that it can be done like this
both theoretically and practically

it's here after all
conceptually, this is an intervention in any sphere
for creation
if we are talking about, for example,
about the system of global possible catastrophe

global catastrophe
it could theoretically start it is possible to start
because somewhere the program won't work
for example, self-launch of some rockets
and then we get the beginning

with the help of Consciousness
it is possible to restore the software package
how to restore
maybe you will have to know the microelement base of the processor yes
how to understand it and how to supplement it

i.e. I am still suitable from that point of view
that it is better to manage not some specific tasks
and here are the students who are here now
are studying this technology

of course the main goal will be

manage any system for rescue

situation can they have in practice in general
it will largely depend on that
where to put efforts in general

therefore, we are still talking about access in a targeted plan
need to
but access should still be possible, let's say so
infinitely developed or something like that
those. I still wouldn't separate

although of course this technology
allows you to make some private instrument implementations there
which means that they need to be developed

that's why it's good when students study
each can develop their own technologies there
or teach others there
for example, implement it in devices there
in some of my own methods

but nevertheless positional
positionally it's always my way
This is how I think based on my data
explain
what needs to be done in management
as if in understanding even that
that here is information that creates matter
including, as it were, the matter of the information itself
even so

Here we need to engage in fundamental management
so that it would be possible to influence with Consciousness
including on systems of development of society, for example
in social terms
creation of some special response structures
for example, a special type

Well, actually, Mikhail Andreevich
today this is what you showed
this is just a system of development in this direction
creation of technologies of the widest spectrum
starting from the general analysis
and ending there, let's assume, with completely private levels

so I think that here of course
the principle of generalization and transfer of knowledge is important
Well , it's still a management principle
still at the highest level

Well, basically, for example, if I
I just carried out this management through WHO
World Health Organization
there I carried out work on managing the actual
it's also like a control element there
on the structuring of Consciousness
according to my system of lectures
which by the way is registered with WHO

I grew it there
Well, let's assume that someone there had some problems
there were situations when part of an organ was missing
WHO there are medical problems there were metastases there
there were a lot of cases there in general

when they were there, well, there , doing the necessary orientation
in general, certain systems
there I entered parameters such as
even the patient orientation system
for example, in the space there in the ward

in short, the doctors did everything
and so I prepared a patient, for example
he was put on a CT scanner
The organ was visible in real time as it grew

but sometimes we just couldn't do it very quickly
sometimes not so fast

and here is an organ, for example, a cut off ureter
By the way, we also recorded this
this is in the clinic in the FSB in the clinic

then that means a piece of lung that grew there
which was simply absent

i.e. it turns out that I'm looking
for example, I perceive through Consciousness
how is an organ created at the information level

let's say there how the Creator did it

and I build the same optical ones

like, for example, in the form of some elements of the design's optics

I put it in a certain space

then this organ appears

i.e. it turns out that I don't even need it

think about it

like, what's happening in a chemical sense, ^{yeah}

what chemical reactions what physical

that's the advantage

that everything can be translated

into a specific visualization

in a certain way

optical ^{example} image

and knowing what I can mentally add to this image

I receive expression in Reality in that

that the organ has grown

there were cases when it happened instantly

and then I also made a UN protocol there

a decision was made on this matter

there I registered in the form of a certain ^{topic}

also related to management principles

but this system is ^{generally} no different from that one

to grow the board somewhere there

i.e. in principle

I only designate the space of Thinking

I am completing the form

and some kind of thing is being realized there is a material substance, ^{let's assume}

Now I have done the same work

there, ^{for example}, computer technology

the program identifies the form and complements

but the truth is that a computer is ^{actually}

possible to grow one microparticle there

and that's all

in fact, he doesn't really

Replica:

so we can say

tumor remove metastases?

G. Grabovoi:

yes you can

here it is important that firstly, if we are going to clean it up for sure
so that the system would be oriented towards that
who does

I had a group there at UNESCO

and actually speaking well this is also the WHO system again
World Health Organization

that's when doctors and patients completely obeyed
to me

Well, actually, they didn't do anything there.

for example, some injections, for example , anti-cancer ones
malignant process stage 4 cancer was

Well, it's true that they are in hospital
the only thing they did there maybe
some kind of cleansing procedures
and that's all

but there they set the orientation, that's what it was
and yet I'm still from the group
they gave me groups there
the first period was until I would say until 1995, I think there
I brought them all out

i.e. I restored all of them that they gave

then when I got it in practice I basically

Replica:

in which center?

G. Grabovoi:

Well, this work took place in Geneva

in Geneva then yes there they are like a medical center

Reply: *I thought in France*

G. Grabovoi:

No, in France, by the way, they just offered me
one state program

through UNESCO to the news

according to the principles of complete regeneration, so to speak

simply put, here is the entire theoretical basis
which I actually have

I either make a theory
then I confirm
or I take theory from practice

so when i achieved the results of full regeneration
there in many areas in principle it turned out like that
the main element was actually that
that the structure of Consciousness is sufficient as if
make such a construction in your Perception
for the element to be realized
and that's all

and here's the truth, this technology can still be transferred
on instrument systems
so that those who, let's say, have been doing this for a long time don't
they could have done it first through devices
but then it was like this
as I did in the lecture today this device
explained

build your Consciousness according to this type
but already work on the basis of Consciousness

i.e. it is still an instrument system
I still consider her as, well, constantly, kind of dependent
so that the development of people in particular would be Eternal

QUESTION:

*Grigory Petrovich, but there's a problem with the genome
You know, the genome is being decoded now.
and if it is decrypted completely
the genome code will be deciphered
then in principle the problem of Eternal youth can be solved
how is it considered
this is your attitude to this problem*

GRABOVOI G.P.

Well, I think that this is still a great achievement
that it was possible to obtain the genetic code
so more or less close to reality and

I'm actually doing it
well, really, based only on the Consciousness of the individual

the same principle of reproduction there

I have many cases there where very elderly people are already there
they are transformed and get straight
their wrinkles disappear, i.e. they are restored
That's why
but they do it there due to knowledge, there due to technology

from a genomic perspective
after all, this technology, well, let's say it is largely instrument-oriented
but there is such a component in general in the information

if some Reality appeared
for example young people who can restore cells
due to special activation of the gene, let's assume
instrument activation

then in the World there exists a system of sorts of information flow
this information will be spread
explicitly or implicitly

and here is such a well, as if they were still as if
researchers discovered
what if even one nation is there next to another
somehow I found that they are there for a long time
they seem to be starting a generalized feature
due to, as they understand it, some kind of biofield system
or knowledge transfer

Here I think it will still be useful
from the point of view of the general concept
it means to achieve the same thing through Consciousness

because basically this device
it's very simple now when I look at it on digital
and I show these rays directly

and when a person understands
that Consciousness can be structured in the same way
he basically gets the same thing but through Consciousness

then just now I explained it in a lecture
I had the work done quite a long time ago
so, there was also a name in the committee on science and technology
and there, let's assume, they took some formulas

Here the ultrasound heated the temperature somewhere there
at a great distance

people concentrated through Consciousness
and the same thing was heated
but they concentrated on the formula

i.e. and of course it is clear
but when, for example, we did it with ultrasound
let's say they broke some element
Consciousness
didn't crash _{yes}

i.e. then I took a very long time
we were doing this, there were still academics of the USSR working
Begmatov was a very famous mathematician in his time

and here it is proven
that it does not destroy in any way

Reply: *Consciousness never*

G. Grabovoi:
Yes
Well, because that's the concept there

Consciousness participates in the System of General Connections
basic level
I touched on this a little bit in the lecture just now

it is laid down that everything should develop in a positive direction

and that's when we talk about creation
in this concept
we _{kind of} take this position
in this area of information

it is only reproducing
i.e. there are no destructive elements there

and the devices are built like this
it is clear that people will not be destroyed in any case

Question:
You said that _{well,} everything is restored matter
Consciousness

but it is known that energy does not come from anywhere and does not disappear anywhere
and these are the thoughts that we determine with Consciousness
i.e. it's like some kind of new type of energy
to be taking away from ourselves
i.e. we actually lose energy

GRABOVOI G.P.

the thing is that I don't build the concept on the concept of "energy"
in the sense in which they ^{say}
that "energy forms ^{some} kind of situation"

in the physical sense, yes, there is the concept of "energy"

from the point of view of physics
here here
Consciousness reproduces energy

i.e. let's assume people who know
well, for example, methods of regeneration, i.e. rejuvenation
they themselves build their body on the basis of their Consciousness

i.e. they build young cells
then by the way cytology is done
and these cells are directly visible minus 10
and these cells are visible
some got minus 25 years

I had a whole series of cases
people
just had ^{it} certified by notaries at UNESCO
they just felt them
took the passport there stretched the skin, etc.
i.e. ^{well} as if visually they looked much younger

i.e. all this is done at the expense of Consciousness

i.e. you have to look here initially
a more fundamental principle of the structure of the World

for example, considering such a principle as, ^{well}, let's say
The creator creates information, etc.

but the Soul , let's say, is an element of Consciousness, you can call it that
Consciousness can create

That's exactly what I'm telling you here
what creates Consciousness

and that's why it turns out
the overall safety of this technology
because that's all we're talking about
What
creates Consciousness
but not about what it can , for example , have a kind of restorative effect on

this is a completely different technology
and Consciousness does not have special access here

i.e. here we need to distinguish
this is not an energy flow technique
This is a technique for creating energy

QUESTION:

*Well, the fact is that you created devices on crystals , so to speak
he is like a transmitter, i.e. some kind of
as I understand it, well , you gave examples
with the same pilots
who came out of emergency situations
just like concentrating your thoughts here
without any of this device
and so we will, for example, stand with this device, yes, here
i.e. we should already have a positive attitude
but already in the most positive mood
already as if this very same thing is like bioenergy
it already has some positive effect*

GRABOVOI G.P.

Well, it does affect if you proceed from the point of view of bioenergy

and that's what we're talking about
that I give you the practice of event management
and not there is the concept of "bioenergy"

you must see the event in Perception
but you see, any person sees
he sees suppose assumes there

but when you think or tune in
in the desired area
you don't get a one-time impulse

as it happened with the pilots
in an extreme situation there
and you get the technology

but in reality, everyone is a rescuer
he should, well, in the ideal sense
in any case, save, i.e., and from any situation
does he have a device or does he not have a device

so the devices basically just help
for example, those who simply work with devices if they

Now you are learning from them
sometimes you have to learn this
there is a certain number of hours
or maybe the person doesn't even know that this can be done

i.e. still for those who know
I think it should be recommended
always develop your own status of Consciousness

so let's assume I had situations
when people were buried in mines it means
and the Ministry means headquarters, I think they call it that
there is the Ministry of Fuel Energy and Mine Rescue Operations
they actually invited me there

and that's what I said today
when it collapses
he can't do it for a long time after that
sometimes it means that some serious problems arise

and so I'm long well as if you were filling it with information or something
structured Consciousness in this way
that there, in my opinion, it was crushed for three days
they pulled it out anyway and without any special face-to-face confrontation

Reply: *compartment syndrome*

G. Grabovoi:
yes squeezing
but there one was very crushed

here is the principle
I always say
that of course it is necessary to work in real conditions

i.e. how not to make yourself any extra work is work
this is ^{what} you need to work on, just decide what you have as if to create experimental conditions there specifically
it will then be a completely different direction
development of experimental base

but nevertheless in this process
I once made this ^{very} useful thing
Before that I did something else

so he just took two fish
one fish ^{means} I didn't have any effect on it
structured to another
so that it would be ^{fresh} and not fall apart

they were lying there, ^{well}, there was a distance of 5 cm between them
and so it turned out that way
there are 2 small carps
the one I didn't act on
Basically, it smelled rotten ^{there}
everything began to fall apart

and this one I acted on
she just dried out , ^{like} in a microwave
and without a rotten smell it still dried up
it turned out like dried

i.e. it was ^{sort} of possible to support it
non-decay system
but due to convective recoil there
of course it dried out

i.e. therefore I also did the same there, I restored plants
who at one time carried out a lot of work in aviation

and then when I had this case I had appeared
when the miners were buried

I just remembered that you can keep it
simply put, why am I saying this?
here's a small fact, like an experiment there
still, ^{like}, some kind of type
maybe ^{well} it was maybe one or two experiments
I also did something with the radio wave

but basically you just need to work in real conditions
not experimenting just saving
and that's all

and therefore
but there I really did it for the chemical
for the university's chemistry department
I didn't even really experiment
so there too the results were generalized
from these fish

and here I am when the same technology
I just used canning for the first time
there was no development of pathology there

but the truth is they were pulled out later
when they quickly in two days he was strongly pressed
it was practically just pressed against the bone there
there were two slabs

and in two days he almost regenerated
well where is he really in a week he was already walking I think
although when they examined it and looked at the deformation zones
it was impossible of course they died there

and then, in principle, there is such a question here
when you see some Reality
you still transform

if right now there is an opportunity in the instrumental sense
apply technology in a vacuum
It was at Moscow State University that I conducted work in a vacuum
Well, you can make oxygen there

but these are like devices, how much oxygen can they make
and suddenly they crash there

I started doing the same thing with these experiments
after I made oxygen in a vacuum
simply through Consciousness

i.e. that's what I think
that it is necessary to develop Consciousness according to the Salvation system
and already as if helping people further
who may not be very active in this
Of course, it is still necessary to make devices of this type

i.e. to expand
but this
but nevertheless these are already devices
in fact, they can be very effective
but they should still always be dependent
from the Consciousness of man
that's what I think
i.e. from the possibility that they could be controlled there
so that they don't destroy etc.

Question:

we say that let's say if we know how everything is built ^{yes}
i.e. well, this is actually scientific knowledge already, am I right?

GRABOVOI G.P.

in this case we are talking about science of course yes
i.e. here is the structuring of Consciousness according to my system of Salvation
it's science

and for example I give lectures there , well, in graduate school there
They are registered with the UN
They are taught in various institutes now
it's true, here abroad, including now in two places

i.e. what we are talking about here is
that science is that ^{well} within the framework of the idea of Salvation
what saves

Reply: *it works*

G. Grabovoi:

It saves , it really works

because I have both practice and theory
and plus there are also certain types of instrument implementations
^{where} conceptual things, open things, enter

then of course it's natural science
but it can be somewhat unified in my understanding
because that's her job
solve the tasks of Salvation in any case

and what can be found there?
or physics
either chemistry or literature
or the social structure of society

Mikhail Andreevich also told me this today
what is actually happening here
Emergency Monitoring Agency
in fact, all tasks including tasks of resources there
tasks of distributing some technologies there, etc.

in the tasks of Salvation it is necessary
well, even logically you have to know as much as possible
and it's better to know everything

that's why she doesn't deny this technology
everything creative that is created
neither physical nor chemical models
naturally if they are needed they should be applied

but it must solve those problems that really exist

i.e. in any case you need to be able to save
and to this ideal task
which I proved can be practically solved

you just need to lead people

Question:

*Well, that's what I'm saying
that it's time to cancel the prejudices, for example, of those same people there
those who read something there deny everything, for example, yes
that children in school should already be familiar with this fact*

GRABOVOI G.:

Well, I think so

I just gave my educational program

It is now also registered with UNESCO

and is distributed in government colleges

for example in London now and then in Canada

here they sent, as I was told, somewhere around 8 thousand schools

now they want to transport it there

methodology of education where there is a very simple system

instead of, for example, me taking this book and reading it there
there are 10 minutes, let's say, if you look closely
or maybe from a different level of attention
maybe I'll read for a day, let's say

but I can just take this piece of paper

there or even 5 leaves
and take this image to reveal in the form of optics
and you just pass it on and put it on you
I see a detector where you receive from the spine
I took it, put it down and that's it
and you analyzed

other people to the Salvation status, for example
myself and everything
then I don't need to pass on knowledge
through such a long reading for

I passed on knowledge at one time
for example, there was a situation at a nuclear power plant
when I instantly transmitted the knowledge system
the operator pressed the required button

there were situations in aviation
i.e. as I take, let's assume first
I had situations in aviation
when I looked at the catalog of the flight manual
I copied it straight from the sheet
they had knowledge
they kind of started moving there
in general, that's what you need in these devices

and there was a situation when, for example, there were no catalogs
for example, about the nuclear power plant
there, so to speak, the reactor showed an excess of pressure
and here, in simpler terms, is the leader
he fainted, in other words, he was unconscious
and the operator remained
and according to the time criterion there were 2 minutes left there
everyone started running out and it was as if their floodgates started closing

so how could the operator transfer knowledge, for example,
theoretically, take him there and teach him there
that he should press the button there
maybe he needs a year to learn

Well, I have a concept of direct access.
I considered the information as if it were located
this system of functions
it's right there in the books, actually

and just like that in the form of an optical sphere

took it there put it to him
and then he says it as if well, like there's some kind of impulse there
his muscles just twitched and he took and pressed a few buttons
and that's it, and the situation began to sort of disappear

This is a system for instant knowledge transfer
if the Salvation system needs it
this needs to be mastered, well, this needs to be mastered, but

for example, in school in regular schools now
I have been running one school, albeit in Uzbekistan, since about 1992
there many children began to take first places
and in the deaf and dumb
first places began to be taken in international competitions
because the information is embedded in principle
at a straight level

and of course these are not even really prejudices
I recently read an article also related to the forecast, so
and there were recommendations by the way recommendations
They said and sent it to the Security Council

that's what it 's considered a legal fact
It can be established according to the law
world class there
if it happens three times it is considered as a fact
twelve times is like a systemic fact
and this should be registered

if you showed it 3 times or 12 times
what can you do there
so to speak, to diagnose a car or something

and for example for the twentieth time there
you give it to some department
what can you diagnose
and they don't take any measures

then from the point of view of legal laws
you just need to take 12 protocols
and they should, generally speaking, then somehow explain themselves
why them

i.e. it's not exactly prejudice

according to International Law
let's say I take it there several times this happened
I take there, let's say, a collection of that
that I diagnosed there myself and some technical things
sent to some region

they see that i did it
I give there summaries of both International Law
and they are obliged to respond to this information
because that means if I think so, let's assume it's necessary , yes

another question is to what extent
I only did this a few times
when it came to the systems I was talking about
when maybe
the problem of the global destruction of people
how I would use it then

and so in principle this is how people simply need to be explained
if we assume some private

and recently there was a kind of initiative group there
there scientists enter academics enter
there were also some launches of stations
how could they not have taken the information when these missiles fell
although she was
and they say, well, in fact, it means that these are resources
they started talking there as usual
"taxpayers pay you
and you don't take this information"

Well, to put it simply, they have those who have information
She was sent there through official channels
and when they don't take from them, in general, maybe
of course the question is for them naturally

but when there is no possibility of a global catastrophe
Of course, it's such a question, as it were
for them it may be quite conditional yes
under this legislation

but when it comes to something big
that a large number of people could die
as if in a global sense
that's how many times I gave it and they reacted instantly
I've never had it happen to me that at least once I had it like

Well, someone didn't take the information
although from another country
there were people from other countries several times

that's why this technique
and somehow convince there
but even the existing normative acts of International Law
allow distribution already now
if you, for example, can do it technologically
let it even be done sensory diagnostics
and you think that this could lead to very large casualties
they are obliged to consider

but I usually do it differently
I if here this concerns me, I kind of show it first
then somewhere I give some kind of confirmation
in general, in such a rather soft form

in this part of the lecture
according to the disaster prevention system
and by the level of safe development
I will tell you about this technical part
which must be done after each lecture
after mastering any level of material at all

be sure to distribute
information from Reality into conditionally two parts means

the first is what you perceive
and what is needed mentally or with the help of these methods
change and receive that in Reality it will not come true
for example, some kind of disaster or problem

and the second is the management of the real process
if suddenly you got information
about some problem
Well, for example, it is necessary to save somewhere

then you should highlight
part of the incoming information
and the part for example that should be converted

the thing is that since I give
management of any process
including processes that relate to past events
you must

manage incoming information as well

i.e. do not fix the negative plan

which you receive

for example, at the first level of access to information to you
and modify it to the level of minimization

let's assume a ^{specific} situation

for example, I receive information there about that
that such a problem arises at a nuclear power plant
that there could be an explosion in principle in ^{any} case
Here is what I have from my specific practice
or there by plane, etc.

then I start changing this information

I'm restructuring it

and ^{that means} I bring it to the minimum level
that this is either a mistake by the dispatcher
or someone misunderstood the information, etc.

In reality, this is how it mostly turns out

i.e. the principle of managing current events

this is a restructuring

already static information already known

so that's why the meaning of Salvation is also

in each iterative step of your actions

it will be the same in that

to minimize the process at every step

for example, already fixed destructions

so this principle is very close

to the regeneration system

i.e. restoration of the organism, ^{let's say}

i.e. treatment of diseases

because in the practice of Spiritual management

in the practice of irrational methods

i.e. direct access to tissues

there is the same principle

a system that is called, ^{for example,} a disease

this is the information

which has a certain speed

^{for example} speed and functions

and your task at each level

minimize this area of information
this turns out to be a treatment then

then if this is a process connected there with materialization
which needs to be done
or, for example, on the contrary, remove the substance if there is a lot of it
for example, the combustion process and something dripping
I have had cases in my practice
and the board is flooded, so it needs to be cleaned
it works out

i.e. that's when you work with that Reality
which exists in you precisely in the practice of Salvation
methodology arises at the level of Perception
fast enough

in this lecture course in this part of the lecture
I will describe the Laws of Connections
i.e. the equation that was in a generalized form
with whom you had to work and will work
it concerns the unified access level

now i will distribute access by significant areas

the thing is that in every area
have their own communication system
from the point of view of your Consciousness

and you can know these levels of communication
manage already at a private level

what I will write
this is like a fundamental methodological basis
in the future for any element of your Perception
you will be able to develop your own management system
for example, by this type
or use the one that I say that I will give

so considering that
for example, having considered
all phenomena of Reality in this way
what does it mean to single out one of them
some logical existing connections

can be applied
the structure of Consciousness according to the Salvation system

and management for Salvation
in relation to each part

one thing to generate momentum
which, for example, exists outside of you
and which needs to be created anew
this work can be methodologically very voluminous

if you technologically work out the work
in completely different areas initially
which are logically known

for example, this is medicine, predictive management, science
for example, management in politics, let's say in sociology
management in medicine or in economics

including management
all the known levels of Perception that exist now

then in many cases you will do it almost immediately
i.e. without using any special system or something
for the development of, for example, a completely new methodology

i.e., simply put, the more special cases
you explore on your own
so you can be more prepared

then in the future when you look again
practical materials
There is a 3-volume book called "Management Practice – the Path to Salvation"
I have

and there are completely practical materials there
which relate to specific management cases
and there they are divided into regions
for example technology
control of certain phenomena
for example, what does rewriting programs mean?
without using the keyboard there
erasing virus without antivirus program
then comes treatment

i.e. divided into several levels
according to the system of possible manifestations of Reality

then that practice will be used by you in this way
for you to watch
how i did it
and tried to do the same
not necessarily the same but similar

so now I'm starting
in fact, the detailing means the general level of management
by any sections
which I will represent here

The first section is called predictive management
or predictive management

in this case
predictive management
implies the allocation of a forecast phase

in this regard, the formal apparatus of mathematics
it will depend accordingly
from this formulation of the problem

for predictive management
First of all, it is necessary to highlight
phase of the future Reality
so I will introduce such a term as for example (G_1)

$$G_1 (G_1) = K_1 (G_1(\Pi))$$

i.e. I reproduce the Implicit Function
which determines the coefficient
which I will call

K_{1i} - ta
predictive phase reproducibility coefficient

i.e. all possible options that can be
and this coefficient
it defines the function G_1
as a function of the space of your Thinking

so when you use the concept of Thinking
then in this case
here I will dictate to you now

$$(\Pi \circ Y) \quad G_1 (G_1) = K_{1i} (G_1(\Pi))$$

G_1 from (G_1) i.e. the implicit function is equal to K_{1i} with index i
 i is lower than 1

and in brackets is $(G_1(\Pi))$ from the space of Thinking
(P) in this case it is the space of Thinking

so because I didn't put it here
in this case, the sign of a specific sign
then K_{1i} from i can be firstly a function
but K_{1i} from i can have a multiplication sign

so that's when you research
for example, the space of Thinking
then you see that many connections
which you perceive even logically
can be either functional at once
or they can be like connections
associated with such an action as multiplication

let's say if you see there

look at some element of Reality
such as fire

then it's clear
that it could be a functional dependency
i.e. the coefficient K can be
simply a system described in functional form
your Thinking space

but you can consider the fire deterministically
i.e. a set of burning trees, for example

then you put the multiplication sign here
and still get it in the implementation
the same control function

so as I said in the last lecture
all dependencies that lead to this function
can be explained, for example, by tensor analysis

we are only talking now
about a specific application
these functional connections

roughly on the same principle as I said
what if we take let's assume the equation of ultrasound
then when concentrating on the equation
it is possible to increase the temperature of the liquid, for example
due to ultrasonic vibrations

i.e. these are practical formulas
which remember
or which are viewed on a sheet of paper
it is possible to practically reduce the temperature , let's say
or extinguish a fire, among other things

I had situations
when I specifically took a book by Igor Samarin
which did not burn at temperatures above 1000 degrees
which was measured by sensors, generally speaking, later during the study

i.e. we are talking about that
that special conditions can be created
through your Consciousness
which compensate
let's assume the possibility of changing matter

and you can save the object or reduce the fire

I cite the fire as a special case

therefore, in predictive management

I will write it so that instead of let's say numbers I just write
(P O U) predictive-oriented management

and it turns out

for predictive management

for example it will be formula 1

at a private level of management

we have the following system of connections

$$(\Pi \circ Y) \ G_1 (G_1) = K_{1_i} (G_1(\Pi))$$

as i explained if you want to use

you either need to remember it

and how to output an array of information

to the control zone

where as a forecast

for example, you can either see or know or guess

or have logical information

about the spread of fire

it doesn't have to be fire

it can be any element of Reality

but when you look (P) space

which can be said

what is this space of Thinking

then you can within the spaces
build any compositions
for example, to prevent the spread of a disease
with a forecast-oriented phase

prevent let's assume development
some kind of catastrophic situation
let's assume an earthquake, etc.

so that's why we're talking about that here
that depending on that
how do you change your structure of Consciousness
i.e. actually Thinking including
you get the appropriate control

then the following formal apparatus
I will write for this level
How
Research
(H I)

doing scientific research
or generally speaking any problems
which are related to the formal expression

the concept of science can include
including philology and, for example, natural medicine
not only for example those things
which are expressed, for example, in a physical and mathematical expression
i.e. any area that can be described
which can be called science
refers to this at this level of management

so in this case
the formal dependence will be like this
I am writing a function of three values
which is equal to the reciprocal value
To 1 from i

$$(\Pi \circ Y) \quad G_1 (G_1) = K_{1_i} (G_1(\Pi))$$

$$(\Pi \circ Y) \quad G_1 (G_1(G_1)) = \frac{1}{K_{1_i}}$$

so in this

In case K_{1_i} from i is implied as a function of $(G_1(\Pi))$
from G_1 from the space of Thinking

so I specifically described it in words
because then it will be clear
method of matrix so-called permutations
at this level of management

i.e. it will be possible to change and receive
complex meaning for generalized situations

so since I broke it into 3 components

$$(H \cup) \quad G_1 (G_1(G_1)) = \frac{1}{K_{1i}}$$

for example one function
let's assume we take space
and break it down into 3 components

but we introduce 3 components
because we think so

so if we introduce
3-component Thinking
in relation to any process
for example in science

then any value of Reality
we can consider it described
in a 3-component system

although we if we want
we can also write it in 2-component
but then one solution may be more extended

if in 1 component system
then this system can tend to an infinite point
for example, maximally large and infinitely distant

which has a lower degree of adaptation
for example to your Perception

that's why the Law of Perception exists here
which speaks about that
that the further we remove the complex region (K_{1i})
which depends on the function of your Thinking

i.e., to put it simply, we divide one by this number
by doing so we increase the detail in your Perception

so if we take
1-component region

let's assume we describe the function G_1
then here there will be, for example, not one but some number n
which increases in quantitative terms
reproduction of your Thinking

i.e., to put it simply, we should always have
constant
we must have a strict constant
for implementation
in any case of the act of Salvation

so when you put into Thinking
3-level layer
you any scientific I will call it management
management in science you can get exactly

i.e. let's assume you decide
some formal task
Well, let's assume using the differential equation method
or by some other method

then you are solving this problem
you can increase its stability
if so, you will build this equation
according to how you think
i.e. according to this strict scheme

sometimes it turns out that your decision
can have both a formal appearance
which you have in the differential equation
you can also apply
the same differential equation
if you spread the element of Thinking

i.e., in simpler terms, what you are replacing
with your Thinking
and what would you like to receive

then it turns out
you get additional coefficients

differential equations

for example, I solved problems this way
related to the protection of objects in outer space
where it was impossible to test under experimental conditions
but nevertheless later the experiment when it was already carried out
he confirmed
what are the coefficients that I entered
in differential equations
they turned out to be fair

but I entered them
initially using the Law that I outlined in the work
"Applied structures of the information creation area"

What
any structure of Consciousness
can be translated
on physical Reality

and then according to the Law of this translation
in this case, in a particular case
for research management

this Law may specifically be that canon
which implies choosing a single option
in scientific research

because as soon as you fix your Consciousness
at the level of future control
then you can get absolutely
a clear and unambiguous picture

Well, let's assume that you can have it right away
answer to the problem being solved

then you'll look at the 3rd volume
experiments
which were carried out for example for answers
in the field of chemical reactions
for answers in the field of mathematical equations, etc.

there, moreover, it was always the case when the task was set
these were works on chemical equations, for example
Rostov University hosted

that the process was not yet known
he looked like he was about 3 months old
using fairly complex technology we received an answer

but due to such a methodology of Thinking
the answer comes immediately

so this means this system
it's actually getting an exact answer
which allows, among other things, not to conduct
complex scientific research

in case you need to analyze a sample
or make a quick decision to save people
such technologies will be needed
to increase speed
or sometimes there is simply nothing else

let's assume for some things
in outer space
there is simply no other way to obtain information
because the calculation methods are known to mathematics
orthodox let's assume they don't work there

I will call the next level as
level of governance in politics

so considering what is there
information of political content
and I through predictive and scientific management
I made the next level which I called
management in politics

so that's when we look at
political management
which is actually a kind of synthesis
economic or ideological foundations

then we can say
what if for example political systems were equalized
then there would be less chance of that
for a nuclear war to start

i.e. when we consider
the entire area of management
from the point of view of this area

political governance is
solving very specific problems

i.e. if you are engaged in, for example,
resolving rescue situations throughout the region
then you still see that some kind of situation is happening
which could theoretically affect you
will be associated with political management

let's assume if they develop
different states differently
and so they can be confrontational

then your task at the level of Perception
will include political management

so in this area
I left it here on purpose
open scientific management space
so in this formula

in order to enter
and move on to political governance
in a situation like this for example

Space of Thinking
but we will call it (P_1)
in the formula for scientific management

$$(H H) \quad G_1 (G_1(G_1)) = \frac{1}{K_{1_i}(\Pi_1)}$$

so when we talk about politics
then politics is the structure where they are used
for example methods of scientific forecasting

political economic
and including the concept of personal ideology

if we described all the elements
in the form of an index (P_1)
i.e. the space of generalized Thinking
this is the reaction space of an object, for example, external
and not necessarily just your Thinking

then for political management the function G_1

$$(\Pi Y) \frac{G_1 (\Pi_1)}{G_1 (G_1)} = K_{1i} (\Pi_1)$$

from P_1

I will write it as divided by G_1 from G_1
will be equal
to the same coefficient K_1 from i from space P_1

so space 1

i.e. G_1 from Π_1 G_1 from G_1 will be equal to K_{1i} -ta from Π_1

so in this case
when you consider
the equilibrium area of the so-called phase of Consciousness

i.e. when you perceive
maximum amount of information
for example per unit of time

then index (P_1)
index of the generalized level of Thinking so to speak
he means its development

if we assume it happens
some kind of conflict between states
starts to be a manager
in relation to
let's assume to your level of management

and therefore the management in this case
is carried out through the index i

index i
it was specially introduced for that
to compensate in the coefficient base
any development of the situation
i.e. if you select the index i here
i.e. you assign it equal to 1 there or 100
basically you find your own number for each situation

then you manage macro arrays
which includes, among other things, that ideological structure
which can be called political management
and where management sometimes depends
just from a person's personal opinion
or from that situation
when this person determines management

let's assume the president might find himself in a situation
when a decision needs to be made by any country
and in this case its solution can be
or dependent on the situation
or your own
or take the situation into account
or he may not know

however, in the macro array of information
via index i
you can balance
general situation
taking into account again the level of predictive and scientific management

I called the next level
social management

means social management
so in social management it is implied

that you are dealing with that status
which determines not just, for example, people's lives
let's assume in a social aspect
these are any everyday elements of their reality

but also the interaction of people
as in private, for example with animals and nature

of course political management
affects this status
but we are speaking in general terms
i.e. in the macro setting in the area in such control
the formula primarily expresses
more work for each individual
in relation to, for example, the manifested environment

i.e. this is the ecological development of society
These are, for example, processes related to reproduction
i.e. with the principles of, for example, the Eternal Reproduction of Life

and here the most important thing is
autonomization
i.e. selection of function (G)
i.e. the functions of your management

as functions of the related
with the area of unified i.e. General management

where is the quotient
implies the inclusion of control
behind the entire array of information

including the area of political management

's why I'm writing this here
What
function (G) from the generalized control formula
is a function (G₁) of the generalized space (Π₁)
and it's all the same

$$(CY) \ G(G_1(\Pi)) = C$$

constant

so in this case i.e. (G) from (G₁) from (Π₁) is equal to constant

so when we talk about this approach

in the field of social management

then we immediately highlight the status C of the constant

i.e. each individual

investing in the space of Thinking

for example Eternal reproduction of life

and plus putting individuality into the G function

i.e. the principle of individuality through a generalized function

we can achieve security of development

any object of information

from the point of view of social reproduction

taking into account again almost all control elements

which are stated above

if we consider this system as a matrix

$$(\Pi O Y) \ G_1(G_1) = K_{1,i}(G_1(\Pi))$$

$$(H\Gamma) \quad G_1(G_1(G_1)) = \frac{1}{K_{1_i}(\Pi_1)}$$

$$(\Pi Y) \quad \frac{G_1(\Pi_1)}{G_1(G_1)} = K_{1_i}(\Pi_1)$$

$$(CY) \quad G(G_1(\Pi_1)) = C$$

then let's assume changing $G_1(G_1)$ with C

i.e. simply changing in the matrix system

means the arrangement of the terms

we get

what is the constant in the prediction-oriented equation

i.e. what you should get in any case

for example Salvation

why is the forecast made

you must save

depends on the space in the generalized control G_1

and the space of your Thinking (P)

at that moment

your control space G

is therefore a constant

but at the same time it depends

as Implicit Function

from the area of generalized control

thus as an independent work

is to obtain conclusions in a similar way

for example, making a corresponding rearrangement

so to speak at the matrix level of the solution

permutation of terms

and perhaps if you have such an opportunity

get the solution in matrix form

it means to get , for example, a specific number

from the given system of equations

so the described structures , let's say

which are covered here

in a general or specific form

mostly

and the side that refers to

to the physically manifested Reality

and the side of informative Reality

you can therefore expand and get from it

or, for example, get it autonomously

through a specific equation

or just create

the system that I will describe

as Spiritual Administration

Having considered, let us suppose
development of any element of Reality
we can consider such a status
something that is perceived by sight
and what is perceived, for example, by Spiritual vision
irrational or clairvoyant
in general any spectrum of Perceptions
which do not belong to the physical spectrum, so to speak

then the elements of the information are supposed to be
such as microsystems or even macrosystems
they can be considered
in the form of elements that grow
from the initial region
for example from the area that the Creator created
you can call it that

so that's when i say
about Spiritual Administration
then I put meaning here
including management in the field of religions
Ideological management
management in the area
let's assume conceptual systems of development
both in science and technology
and for example in the area
for example Spiritual reproduction of development

Spiritual reproduction of development
this is culture, so let's assume it's art
and in general any things
which can be classified as art or culture
including scientific research

where there is creativity
where there is a task
Eternal reproduction of life

so in the area of Spiritual Administration
the first principle is therefore
existence of components
Eternal reproduction of life

i.e. in fact the status of the Norm
should be in the information
for all objects

which you might consider manifested

for example, if we consider the development of religion
then the religions are orthodox and fundamental
who generally strive to preserve
the physical world for example

the goal there is
not destruction

and all fundamental religions
which lead to non-destruction
they provide
real and reproduction of life

so here is Norma
i.e. Eternal reproduction of life
in this case it will stand out
as the Norm of Events

so therefore in the area of Spiritual management
in a particular case, this is management in the area of religion
so here it is conceptually and factually
the Norm should be highlighted

in this case the concept of Norm
This is a common mathematical norm

i.e. I introduce the Norm
I will mark it with two such vertical divisions

and I write so that Norma from K_i -ta
it is
With the constant that we got
in the field of social management
multiplied by G of (G_1)

$$(\Delta Y) \quad \|N K_i\| = C G (G_1)$$

$$(\Pi O Y) \quad G_1 (G_1) = K_{1_i} (G_1(\Pi))$$

$$(\Pi H) \quad G_1 (G_1(G_1)) = \frac{1}{K_{1_i} (\Pi_1)}$$

$$(\Pi Y) \quad \frac{G_1 (\Pi_1)}{G_1 (G_1)} = K_{1_i} (\Pi_1)$$

$$(CY) \quad G(G_1(\Pi_1)) = C$$

so, having passed, let's say, the path
from predictive management
where it would seem Norma is present
in the area of your target level

we come then through scientific research
political and social governance
we come to standardization
your Spiritual impulse

so that's how the standardization works
your Spiritual impulse
i.e. management of the area that relates
for example to the area of religious ideas
or areas of ideology reproduction
required in certain cases
a very specific solution

for example, if we instead of this constant C
's introduce some variable component
it turns out that the standardization depends
from a variety of possible solutions

one of the possible solutions
may be negative

hence the standardization
implies
mandatory constant for achieving the result

in the modern world, rationing
i.e. precise tracing of the development ideology
This is absolutely necessary conceptually and practically
thing
which should lead to that
so that you always get an accurate result

let's assume there is nuclear fusion there
if it were possible to pawn
let's say it's timely
structure of development means information
to prevent, for example, impacts on humans
then the synthesis could be considered differently

any scientific research
which exists now
must be considered
from the point of view of development security

not necessarily only scientific
this is any technology
and any reproduction of Thinking

i.e. if you, for example, consider in the future
and see for yourself when you see for yourself in practice
that Thinking is the control level
in physical including events of Reality

that is the Norm of Spiritual Management
comes down to a single impulse
where the impulse creates
variety of forms
forms including, for example, living so-called nature
or forms of all external Reality

i.e. in fact it can be reduced
to a single-pulse system
in the development of which
i.e., skillfully simply introducing the element of time

you can in a descriptive form
get all the elements of Reality

for example, specific experiments were carried out
taking the form of a human initially
and having laid down this form

experiments were conducted
that the doll was simply taken
i.e. well, the form of a person
in the form of a specific physical level of the doll

and in a vacuum this form
began to organize oxygen molecules

i.e. in fact, if we
mentally lay down this form
instead of this doll
we can still get oxygen molecules
relying only on form

if, for example, we consider all the phenomena of Reality
from the point of view of the form of a person, for example
then we can describe the model
for example using my theory of wave synthesis

as a model
developing from a person
i.e. each element of Reality will then be described

so is the model
moving towards the human form
towards taking the form of a human
i.e. it is a dynamic part of the Reality phase

and the static phase of Reality
it is a form that comes from a person

thus any phenomenon of Reality
we can describe it very specifically
at every point of its manifestation

and at the same time completely concretely and precisely
know
what will happen to this phenomenon

and for this it was enough just
formalize the Norm

i.e. the concept of Norm in this case
manifested

for example when we mean the shape of a person

but it can also be manifested
when you mean Norm of Event
any event

let's assume there is no there fire
absence of earthquake, etc.
