

GRIGORY GRABOVOY

A course of lectures at the Russian Emergencies Ministry Agency on monitoring
and forecasting emergency situations on the topic

**Irrational methods of prevention
global catastrophic processes
posing a threat to the entire world**

(3)

14, 21.09.2000

The next part of the lecture
will develop as follows

those formal expressions
which are presented for management
this will be as well as independent work
taking into account further listening to the audio recording
according to this lecture
or the lecture material will be printed later

means that regarding the development of the lecture
which I will give now

First of all, it will be necessary to highlight
status of information so to speak in your Perception
and try to do it specifically in the training version

means to pawn

well, actually a certain mechanism of work
in the control space

i.e. we are talking about that
what I will give Laws of information connection
which, as I will repeat again,
you will mostly listen to audio recordings

but it means now when I speak
try to follow the thought
then according to the control space

i.e. if you concentrate your attention somewhere
a certain information space is created

then for what reasons, for example, is it the manager

and that means first of all
consider geometric elements
for example, the space that is created around you
This is called spatial control

you can think as if in any space
but if you think around yourself
or in some geometric plane
in relation to your body
This can already be called a control element
if you think in terms of the control system

and the second part will be implied
in the development of control technology
when you build a system of connections
at the level of understanding

and then you don't work
in a specific geometric space
but you manage because you know
some axiomatic or legislative things
in the development of your Consciousness

and that's why here consider
continuation of the lecture that had already begun
from certain formal expressions on interrelations
with what I will now speak in verbal expression

and try to divide again
control areas on spatial
i.e. near yourself, near your body
And
in the area I will call them so access areas
through understanding any Laws or connections

often here on the second part on the access area
It happens that when you think about something
then it seems like you are solving it
or spontaneously some situations
either because you think so
that they were supposed to work out that way

so when you think
and you get a situation

for example, including without any physical action
it's going well
just watch carefully
what do you know then

and when you are already working technologically
i.e. you are already starting to work
through control areas
here it is advisable to highlight, if possible
at least at first it means
the geometry of the area you are working in

so i'll start with geometric control areas
using your Thinking
which is located
in the area, so to speak, of your physical body

for example, by selecting a sphere with a radius of 5 meters
in the center of which you are located
and then bringing this sphere closer

i.e. as if reflecting it into the internal content
and selecting another sphere with a radius of, for example, 1 meter
you can create, let 's say, an area
which will be quite easy to manage

and yet laying out the events
in these two areas
you can get control
almost the same as the informative part
i.e. not realizable at the physical level
as well as the physical part

therefore the first task
highlight
mentally
two
spheres

the first sphere has a radius of, for example, 5 meters
not necessarily exactly
Well, what do you think 5 meters is for you?
and then about a meter

the centers of the spheres are located

for example in the geometric mean center
in the geometrical place of points that's what I'll call it
of your physical body
Well, it's approximately in the heart area.
may be shifted closer to the center
and approximately in the center, so to speak
in the geometric location of the chest

when you look at a sphere with a radius of 1 meter
First of all, we should consider this position
what is the sphere that means comes from the boundaries of your body
to the outer part
she will be considered for management
only from the chest point of view

from the point of view of the back this sphere exists
but you are in this management situation
you don't do it

because this is a control area
and touching that sphere with thought
which will remain on the back side
in the form of, for example, a certain segment of a sphere
required only in some exceptional cases

for management means information
to formally apply that system of formulas
which I have just described
you should do it first with that part of the sphere
which is located from the level of your chest

now first of all there should be some kind of legislative basis
enter
before you start driving
the first management structure is that

what is your physical body
is
element including the element of your Perception

and in connection with this
since you can see with your physical eyes
only your body
that's what we're talking about now

just about your body as that
what you can only see with your eyes

no information is known there
let's assume in the form of morphology in the form of anatomical levels
are not considered in this case

the principle is used
when for example a person was born
and he has no knowledge
and no additional ones
or something like atlases of body structures means

but nevertheless he must be able to manage
external Reality or internal

this means the content of management
it must be absolutely correct
that's why I built , for example , this sphere with a radius of 1 meter

therefore in geometric form it will look like this
your physical body and that part of the sphere
which remains external
but it doesn't go inside your body then
she will be the manager

the first element in management
the following principle will be

it is necessary to highlight the area of Perception
in this small sphere with a radius of 1 meter

in fact you take a segment of a sphere
segment of a sphere
and select that part from it
which corresponds to your Perception

so the selection of this part occurs as follows

you tune into your physical body
and look at that signal
which when tuned to the physical body
comes from the level between the eyebrows

it turns out to be like a straight line
or so to say, beginning to develop, that means straight
which concerns a small sphere
with a radius of one meter
and how the light is reflected
I'm speaking now in fact
about the optical level of your Perception
gets somewhere on the inner surface
outer 5 meter sphere

and now when from the inner surface of the 5 meter sphere
you get a reverse reflection
on a small sphere
this is the geometric area of Perception
which suits you specifically

and this is the geometric area of Perception
she is not simple
because changing in it
mentally changing the structure of the event in it
you can manage a specific event
to save people

so that's why I did it now individually
everyone can do it themselves
and identify the area of individual Perception

at the same time on a small hemisphere, so to speak, or a segment of a sphere
which will be on the side of your chest
this means it will be some specific area
for each of you

but we can say that it is a unified area
unified
which in principle can be used by everyone
how to manage

so it is at the intersection
diameter of this sphere
which passes through its center

and in general if you take your body
in the form of a projection onto a plane
in relation to your movement, i.e. forward

then perpendicular to this plane

here is the intersection actually with the sphere

this is also the area of Perception

but this is a generalized area of Perception

there you can select your segment

for example, having tuned in

or any segment of the physical body

for example as I explained

between the eyebrows you can consider this path

or having tuned in

let's say from some point of your physical body

i.e. from any cell

but necessarily the outer part

Now let's move on to the second part

this is individualization

or does it mean the perception of the internal content ?

what is, simply put, under the skin

from the point of view of information

so when we talk about management

it's about management

all elements of your Reality

including those elements

which the physical body contains

and considering such a principle

that the physical body is, so to speak, a part of the Soul

then we can consider

construction of the physical body

from the point of view of your Perception, it's like the opposite

i.e. we are talking about that

what you should be able to do in management is always control

the structure of your body, for example, physical

or the structure of your information

so when you work

and the rescuer must save himself in any case

then you must through Perception

always play

area of its own implementation
i.e. actually build ourselves
at the information level

so this is how we build ourselves
it should happen the same way the Creator did it

i.e. you must from the element
which relates to your Perception
i.e. you found
area or individual
or took a generalized area
and allocated a segment there

i.e. a sphere with a radius of 2 cm, for example
highlighted in this generalized area
small means some part of the sphere

2 cm is as I explained
This is a generalized area for all systems of Perceptions

and from there they began to reproduce
the structure of its development

into the structure of your development
enter
all elements of Reality
including naturally including
there is your internal content, so to speak
what is under the skin

that is , having only analytically
this is how the device is built
you must know
functional connections
you must know your own regeneration system
and the system including the Spiritual Administration

when you can tune in
just a state
already be a savior

i.e. for example, have you noticed that sometimes it is enough
have a fortune

so that something negative doesn't happen

so that's when you build
your information structure
it's not just physiology
this is a connection
your level of information
with condition
with Spiritual level
with target level

and therefore, it means that we are talking about that now
that by tuning into this level of Perception
and do you perceive it now the way I say it?
how exactly is your practice

i.e. you work practically at the same time
It's best to work with me
i.e. let's say I say
try not to lose your train of thought

then the next element will be that
what are you reproducing
from the area of your Perception
reproduce yourselves

so in order to reproduce
you don't take knowledge from the morphological atlas
or from the knowledge known from TV

you must have knowledge
about information distributions

what you are in information always
such as they are

in changing
when the world changes
information links can change
you must actually reproduce yourself always
in that Norm
well, in which it was originally laid down

therefore you can only receive knowledge
from the point of view of that

how will you build yourself
and how should you build
i.e., simply put, all your processes must be controlled

if you save anywhere
you must first save yourself

i.e. you must be controlled
at the level of all connections
if somewhere some fire should not reach
or some problem should not reach
your supposed physical matter

thus it means from the realm of Perception
the task is to build your own development
i.e. your own body

so the construction happens as follows

so you are considering
i.e. this is how you form Perception
that as if in reality you are mentally looking
on the inner surface
large sphere 5-meter sphere

so having examined the inner surface
in the form of Perception
i.e., having actually created an element of Perception
which already registers in fact
inner surface of the sphere
you get
if in functional form, well, actually, the function G_1

i.e. the generalized level of Perception
what could he be like
if you yourself are part of the generalized level

and when you look at this surface
as if by Perception
then Perception
if we consider it as an optical system
then this means you are sending
or, more simply, beams of light
or the impulses are as if coherent

how does a laser beam produce
or sometimes point impulses of the quantum level

i.e. you immediately see a piece of the sphere

then you can understand right away
what you get in the inner sphere
get it
some points in the form of reflection
inner sphere
which is in front of you with a radius of 1 meter

so these are the points
which are obtained under the conditions
infinite number of reflections
on the inner sphere

this is the structure
which is manifested in its original form
in the form of elements that you perceive
for example with eyes
you can touch yourself for example
these are elements of external Reality, including
which are registered by your physical vision

so having fixed this system
you can follow all the connections
and for example notice
what if you concentrate
on any part of the sphere
spheres means which one turned out
so this section turned out
from reflection from the outer sphere
then you can self-regenerate yourself

but at the same time for self-regeneration
you have to go through the same thing in your mind

i.e., taking as an element of Perception
inner surface of the outer sphere
you should get
reflection on this small sphere

and naturally, with an infinite number of reflections
you will get the whole small sphere

i.e. get yourself completely
well, in the form of a certain level of information

but ^{that's} how the task is
direct target management
you naturally need to highlight
the function is precisely the function of Salvation

i.e. you must highlight
in this whole little sphere
first of all, at least a series of impulses
and designate these impulses
that's what it is
your entire information structure

i.e., in fact, the second task
is a designation
the first impulses you traced
as a generalization of the area
for all your reproduction

and one of the Laws of Dissemination of Information
is that
that the designation can be Reality
in case you
adequately reflect Reality
from the point of view of Thinking, for example

Having considered this Law we can say
that the Creator created the World
practically including designating
any situation
or pre-assigning some situation

and in this regard when we speak
about the process of self-reproduction
then in order to speed up
self-regeneration system
or do it like this
that in the process of some destructive actions
you and everyone around you were saved

you have to find that one impulse
who will be the manager
from the point of view of all possible situations

the impulse may be located
at the intersection
optical element
with the inner surface of the sphere of a small sphere
precisely with the inner surface of the small sphere

so when we talk so much and talk about that
that everything needs to be seen and followed
for example, find technologically

so the next element in all cases
i.e. a unified element
is
access
to the outer surface of the outer sphere
by means of the actual diameter of the sphere
which goes through the center of this large sphere
and goes up
in fact, one can say
if you are standing
well, to put it simply, along your body

i.e. dividing in this way means the coordinate axis
that the center of the sphere is inside
or better yet, even near the skin
somewhere around 5 cm from the surface of the chest
and drawing part of the diameter up along the body

you will receive
that the intersection of this diameter
With
the outer part of the sphere
exactly on the outer surface
this will be the point of actually assembling your body

i.e. then
and the builds are based on the principle of not dying

i.e. all external events are laid out like this
what if you have
information about some problem around you
the same fire, some possible earthquake, etc.
some kind of destruction, so to speak

and concentrating his attention there
you can count
that you harmonized the event
i.e., for example, they reduced the strength of the earthquake

such specific experiments were carried out
at the Institute of Seismology of Uzbekistan at one time
and very specific results were achieved
which were transferred to the crystal system
what such concentration
it was possible to reduce very significantly
from a nuclear explosion, for example, an earthquake
so that's why the situation here is like this
that everything I said you will do and look for
all these points

since the diversity of points as I explained
gives a completely general picture

then the second level
you just assign those points on a small sphere
which means they will be
elements of your organization

and when you move on
then you find the area
from the outer surface of this already large sphere
where in any case you can gather yourself
informative
and therefore
and really physically

i.e. it turns out that for the treatment of diseases, for example
yours or any other person
you can use this principle
concentration at this level

and if you want
concentration means you for some time
hold your attention at this point
that's all
There are no special methods of concentration here

in the management methodology that I give
the point is that you work only on logic

i.e. you do not use any trance states
you don't use any special states
you work simply logically
logically how do you think
you just create for thought
certain areas certain structures
in the space of Thinking
that's all

Thus
structuring Consciousness
you have to manage the event

the same can be done
to control, for example, some processes
for example, I managed processes
here in scientific works of electrical conductivity
on conductive paper, etc.

in principle it is possible to control those processes
that you will set for yourself
for scientific research
or to get the necessary information

and therefore one of the Laws of Information

that there are static areas
unified for all
under control and perception of which
in fact, when concentrating, it means on which

you can get
comparable
dynamic levels of information development
result

instead of tracking
multiple signals via optics
between two spheres
just concentrate
only on the outer surface of one point

so in order to concentrate
You can do it as I explained

just perceive
and is it possible to obtain it technologically?
all external relations information
but for this you need to have
special access to this point

and this special access
what I described in functions for example G 1
generalized control function
in P 1 in the generalized control space
says that at this point
can actually be concentrated
well, as much attention as you like

so taking it as a postulate
that the Creator originally created means so to speak
at least one of the areas
but in reality, generally speaking, all areas are independent

then it means you have the same independence
which was originally created by the Creator
and which one do you want

simply put, it's real
access without your consent
There is no information for your information

taking it as a post-payment
and using for example the principle there for example G 1 from P1
then in the form of a constant arises
your development process

i.e. you can actually, due to your development
changing the structure of thinking
or target levels
you can sort of re-designate your development
in the direction you want

and here is this principle
it allows, for example, on the basis of the same optics
if in an infinite number of connections
actually implement
any control system through Thinking

i.e. if you do it long enough
then you should achieve the result in any case

but again applying the Law which means
that you can just assign and not think
for example, long enough
then this is "just assign"
can be expressed in a specific way
access technologies after all
to a specific control system

so this is a specific access technology
in this case will be the following

that means looking at the physical body
in the form of, so to speak, a geometric object
you can along the vertical axis of the body
rise in Consciousness
to the intersection point
so this vertical axis
With
outer sphere

but at the same time with all this
you get there
on the inner surface of the outer sphere

if means let's say so assume
that the sphere itself is very dense
then you still need to overcome the contents of the sphere
and that means concentration
there can be quite a large number of events
and then move to the outer point

so here is the overcoming
so to speak, the entire density of events means
so to speak, the boundary levels of the outer sphere
can be done at the expense of
first
it is the awareness of all the elements of connections
between the inner and outer sphere

so I introduced this term
as awareness of the elements of connections

awareness can be different
you can
to somehow imagine something to think about or to somehow perceive
this is also called awareness

i.e. you just need to tune in
because I give the technique of Spiritual control
tune into the concept of awareness
in the form of, for example, an element of Perception

and then you get it
all elements of connections
which are projected
for this your development for example upwards

it turns out that Consciousness is structured in this way
as soon as you introduce the concept of awareness
you can realize this logically clearly
including that such a point can be
on the outer surface of the sphere

i.e. you have found a transition in your Consciousness
when you are not going not overcoming
concentration of all events
you get there right away
to the point of its assembly

so that's why it turns out
that by introducing, for example, a term that is quite familiar to you
but having considered its geometric meaning
you can get
access to direct level
for example , without going along such a long cause-and-effect path
even if it's milliseconds
but this does not always need to be done

i.e. to speed up access
you need to have such a status
that your Perception is already the controlling level

i.e. when you perceive
you are already in control of the situation
to the level of her positive decision

and then it turns out

move, for example, even along the axis upwards
this will still take you some time

therefore the next part of the lecture will be
formation of control perception
with primary access elements
information
to this area

it looks like that
what if you have some form
then this form always forms
the same element

Well, let's say some machine stamps bricks.
the mass that gets into the stamp or into the coin stamp
will always be in the form of a coin
or in the form of a brick

i.e. the principle here is the same
that all external information
which hits
into the form of your Perception
must have a positive status
Salvation status

and to form such a level of Perception
you need to solve the problem the other way around

in fact, from a formal point of view
here is a matrix system of equations
it's done quite simply
it is isolated there
in simple terms, the determinant of a given matrix is sought
which would satisfy specific conditions

conditions are indicated
as external there are initial boundary conditions
any real process

let's suppose we do it this way
so that the drying tree grows
the man was cured
there was no fire there was no flood
or something like that

some negative status

i.e. in order to solve this problem the other way around
you should get
projection of all external events
on the statics of your Perception
and for this you first need to fix the Perception
and highlight the target level

Well, it looks like some kind of channel, like a hollow
along which, let's say, all the liquid flows
and it is precisely in this hollow
the main flow is being formed

i.e. you form your Perception like this
that all external access elements
to the outer and inner spheres simultaneously
express themselves like this
that they necessarily fit the segments
which mean your Perception
in the right perspective

hence the first point
this is the formation of your Perception
means in relation to
to the management of external Reality
and precisely for the purpose of Salvation

and the second level
binding
all elements of external Reality
with elements of Perception

and again in this way
so that management is carried out positively in any case
for you and for everyone

why did i say
that the connection of all elements of external Reality
including in this way
because the formation of only your Perception
means only half the solution to the problem

needed at the finishing stage
signal from external Reality

To control and correct consciousness in this way
signal from external Reality
so that it would be such that it would be used
elements of your Perception

i.e., to put it simply, control is carried out
at any level of information development

like on a dynamic
bringing the signal to the form of your Perception
and on a static one
i.e. the form of Perception must be controlling

This means that to solve this problem it is necessary
first highlight
I will call it that in Macrosphere
this is in a 5-meter sphere
select the upper hemisphere

Consciousness Perception
you select the upper hemisphere
in fact it may look like this
that you kind of remember it
for a while
and keep it in mind

then you highlight the inner part
the inside of the lower hemisphere

you got it that by highlighting
the outer part of the upper hemisphere, for example
and the inner part of the lower hemisphere
so you actually have something wrong with the ring
some kind of disconnection
in the form of the thickness of this sphere

so that's when you move with Consciousness
on the bottom part well, just to put it simply, you perceive
I call moving Consciousness a point of Consciousness
by the bottom part means internal
along the bottom of the hemisphere
for example from the outside
then you get to a certain thickness range

so this is exactly the thickness range

this is first of all all the information
about the principles, methods and possibilities of your self-assembly
these are the areas

and secondly information
which determines
the structure of your Perception
according to the Norm of External Events

i.e. in fact, to achieve the Norm
you don't need to take any bricks or anything like that
and build technologically as if in the form of some kind of technology

it is enough to just conduct Perception
or accentuate the point of Consciousness
on the outer surface of the lower hemisphere
and bring it to the border of the joint

Moreover, this can be done either instantly
or take from the lowest level of the sphere and lead
once you get it to the docking level
you receive an already formed Perception

why is this happening
because by dividing the outer and inner regions
you get actually
both the external and internal part of the event
of the same level

i.e., to put it simply, if we consider
how does a plant grow or why
how informative, for example, the table is arranged

you may have the information
let's assume that which says that
that the table was assembled somewhere
this will be only private information

but from the point of view of the organization of the World
how it works

for example, how everything works
from the point of view of the concepts of "gravity"
or there "construction of matter"
and from the point of view of fundamental manifestation

let's say True Reality

that's when the question arises
what is two-factor
i.e. at least two impulses are two different impulses
or even better, three
defines the information object

and here is the definition of the information object
is
first of all, movement
i.e. sliding along a hemisphere

and secondly
or if you found a neighboring object then thirdly
any one next or two minimum
and better yet, more
points of your Perception

i.e. by adjusting the points of Perception
in the target level of this task
you get it right away
management objective
i.e. event optimization

the second part of this lecture
is that you configure all external events
by movement means information
from external events
through for example the outer hemisphere Macrosphere
so that they are in the process of movement
as if superimposed on that
that you have built this form in your Consciousness

so here is the construction of the form as I explained
it may not be just a geometric shape
it can be two actions or three

movement of the element of Consciousness
along the bottom of the hemisphere
and that means docking
with any area
which is a docking
by division
external

And
the inner part of the Macrosphere

so when you build a form
forms can be different in Consciousness
they can be objectified for your Perception
but may simply contain technology

and that's when you look at technology
then you already reveal a geometric shape from it
or you can not identify

and here is the element that means
let 's say you built one like this
This is the understanding you have
and you can select the shape

but if you don't highlight
you just have technology
which is contained in different places of Consciousness
but it manifests itself in the form of a form

i.e. if you observe that
how the world works
then it is arranged in the same way
that certain things are manifested
for example, phenomena of the physical world

and certain things are not always manifested
let's assume that air can't be seen with the eyes there or it's a vacuum
It is considered that this environment is minimally informed

using this control
you can immediately determine
how to identify movement structure
firstly towards the element of your Perception
and how this identification can occur

i.e. the first principle
selection
equivalent areas of information
in all elements of external Reality

why did i say for example "in one"
"in everything" element of external Reality

because you are the whole external Reality
can you describe it in general terms
as one element

some unified element
from which all its manifestations arise

therefore, identifying equivalent
or let's say the same
with a certain sense of Perception
areas
actually brings all Reality
to myself
i.e. to the same element

and that is why Consciousness is structured in this way
that you can receive at any point
as if unpacking any elements of events

and here is the imposition already
not only the level of Perception
but also any level of Consciousness
on developing events
and in the way you would like to see
event transformation

calls control
on the development element of this level

and so when we talk about that
what we want to form for example
incoming, in simple terms, form already balanced
then this is first of all a kind of unarchiving
level of one's own Consciousness
where it is already contained
from a single-element base
similar positive decisions

and we are talking only about , well, actually
in the enumeration of those overlay options
which would be known to you

and therefore we are talking about such an understanding
as actually accelerating the speed of Thinking
or the development of elements of Perception

for adaptation
events
To
your form

in connection with this, here is the acceleration of Thinking
in fact, it's quite a formal level
expressions of this ideology

but if we talk about the essence
this is the development of Perception to such a level
so that any speed is available

and this means selection
special access channels

i.e. do not develop the speed level
so to speak, in an infinite number of ways

and selection from infinite areas
specific level
which would immediately mean accurate
and contained Salvation in any case
such a postulate

so here is the highlight in your Perception
this level and formation
consists in the fact that
that you information of your Perception
already modeled
in relation to optimization

i.e. in fact, you should already have an optimizing form
i.e. you have already passed the first level of formation
forms of optimizing perception

and the second level
formation of an optimizing form
input level information

in this case all external events
they are separated by the Macrosphere

i.e. they are sort of separated from you
and you look at them as if they were a screen

being inside this sphere

and when you get through this screen
a kind of filter
then you, from the point of view of programming, for example
you put some gateways
which is precisely what regulates
according to your Perception protocol
certain events

Well, this is somewhat of a level, let's say
which is used in programming
in fact there are things outside the protocol
for example, the state that arises in this case

so here are the concepts of state, i.e. Spirit
or the concept of Spiritual state
in this case, the manager of the Spiritual state
for Salvation

determined by that
that they can be in a state
so called
well, instantaneous or infinitely distant
from your Perception
connections
when the state determines
external domain management

and here is the level of Perception
before for example event management
in that Norm as I explained

i.e. when Consciousness
firstly it forms
external impulses
plus Perception is already formed

then the imposition
Forms of Perception
with a normalized level of incoming information
creates a spiritual state

i.e. when, for example, you want to watch
how to apply Spiritual state

it means, well, let's say, a certain mood sometimes
or let's just assume some structure
which is not expressed in the form of combinations of Thinking

This can be roughly compared to that
that for example you are watching a certain movie
the condition may be different
you can think one state can be different

so having highlighted the form of the state
i.e., having singled out, so to speak, that component of Perception
where you do not record the movement of thought forms

and bringing this, for example, to the Spiritual aspect

you can get control
through the state
which does not fix thought forms

i.e. in fact it is management
when you can manage

just for example by tuning into a positive attitude
or contemplating a certain combination of information
but which is not determined

so I'll call the management through this
control through a state not containing Thinking
is as follows

so this is the form that is called
state management
not containing elements of Thinking
and this management consists of the following

you are technologically at the level of Thinking
you impose
into the optimal form of Perception
which you can already assign at this level
or get from the previous level of lectures
on the form optimized optimal form
which will result from the movement of information
in your direction in the direction of Perception

when did you produce these two elements

then we need to connect them
connecting already at the level of Thinking
elements of external information
with the form of Perception
you get state elements

which may have the appearance of, for example, a glow
not have, for example, any specific type
but with all this
an important feature of this element
is the lack of technology of Thinking

i.e. lack of form management technology
lack of technology, let's say, formal expression
associated with the space of Thinking

the next feature of this element is that
what you form yourself
through this element
Space of Thinking

i.e. that's what I told you about
what we do first is spheres
this refers to the level

when you are
in the area of the space of known, so to speak, representations
from physical vision
let's say with your eyes you can tell
that there may be a sphere near you

and according to this ideology
when you work through space let's say
where you do not trace the elements of Thinking
you can build the space yourself
inside which you can put any images

and through this space
you can move on
in the purpose of the internal structure of your form

i.e., simply put, you can build what you have
beyond physical vision beyond the level of sensations

i.e. this means the formation of an internal level

for example, organs of interrelation of organs
and the formation of such a level as, for example, feelings Thinking
with elements of external Reality

i.e. I'm talking about that right now
that next part which I didn't talk about
but which means what you have inside under the skin under the form
which you can perceive
you start building it

and for this you need to determine
what you do not perceive with physical sight
i.e. something that you can only assign

so the appointment must be correct

and in connection with this, this correctness or something
in the assignment of the content of the internal form
it is defined as such
that you are working outside the space of Thinking
and assign the condition yourself

therefore having done in this lecture
all these actions in sequence
you come to that
that you assign connections within the body

and that's when you start to designate
how do you think the body is structured inside
and how do functions happen in general
from a management point of view

then you get it right away, quite clearly, and
elements of external Reality
from that perspective
in which they are maximally optimized for you

maximum optimization
when trees grow there cars are driving
and how would the World be structured without catastrophic events
this is also an optimal organization

i.e. you get the Norm
i.e. the norm of all events can come from
from your inner content

and by the way, this is a very intensive way of development
there is no such thing as controlling clairvoyance

i.e. when you tune in
through this area to its internal content
from the point of view of information links
you can see the phenomena of external Reality

i.e. let's say I'm diagnosing an airplane there
but I shouldn't often move with my Consciousness
towards the location of this aircraft

I just need to focus my attention
in state space
and I will immediately see all the differences from Norma

i.e. I perceive
because the norm is that I paid attention
actually on the state space
i.e. I built an internal structure of relationships
from the point of view of the external Norm

and when for example I look like this
then I get a diagnostic database

i.e. for this I don't need to ask myself the question
and how is the plane arranged in principle there
no need to deal with device detailing

because the Norm is embedded in that
that you regulate yourself
building both external and internal information
and defining, for example, at the first level by the Norm
internal structure

the next step is
Definition of Norm
external structure of information
means the definition of the Norm of the external structure of information
in relation to the physical body

The norm of the external structure of information
in relation to the physical body
it's called

projection of your Consciousness
for reproduction of information
from the internal state

with this internal state as I explained
what you build is called
without using the apparatus of deterministic, so to speak, Thinking
i.e. Thinking consisting of known images

the next element is
creation of the apparatus of Thinking

the creation of the apparatus of Thinking includes
creation of any element of Reality
perceived Reality

and this creation happens
according to the principles of branching of your Consciousness
on all elements
both internal and external levels

as perceived now
and in the non-perceived, for example, in real time
or you can perceive it in the future

and you find that point
where you don't have for example time or space
distribution of information

so here is the concept of access to information
already determines the purpose of the information

i.e. for real control
you should anyway
information means to form in such a way
so that it is manageable everywhere

therefore your task is
having entered this area of Consciousness
assign a time interval
which would suit you

and here is the principle of appointment
This is largely a preventative principle.
which allows you to deliberately create areas

in which catastrophic events do not occur

i.e. in fact I brought you out now
to the level of Consciousness
who takes part
in the development of the Reality of all Reality

as I explained
what if we think about how it works
for example, a person or a table, a tree, etc.
at the information level
and not at the level of cause and effect relationships

let's assume we look at every second
what for the Substance that creates
everything is clear
what a second ago what a second forward

then on what laws, for example, does a person stand?
why don't the molecules of wood fly apart there, for example?

if we do not consider the concept of gravity

then for this Substance
every next moment is a moment of assembly

and the question arises
and how then does this Substance collect the table yes
every second either a person or a tree

then from the management point of view
appointment appointment
as if a harmonious harmonized phase
i.e. like a small delta
which is constantly being added
to the area of development harmony

it is quite manageable
but it can simply be assigned

i.e. let's assume to control a future event
and say that this object will never burn there
you can set the control phase
by designating this area as an add-on area
over all information of the object

Let's assume that the building of the Ministry of Emergency Situations did not burn down
is displayed above the information
over the same sphere, in fact, over a person
the control element is displayed what it is
just a thought
that it won't burn

and is placed at this point
to the very top ^{there}
and that's all

we get additional control
for fire prevention, ^{let's say}

you can do the same thing
and in relation to the fact that a person does not get sick
or if there is a disease
means to put information about the absence of the disease

therefore the next level of management
is the destination level
in a special area of Consciousness
where the state determines the structure of the information

i.e. any element of thought
you have to pledge it yourself
any element of Reality
you have to create it yourself

and that's when you create in that form
in which it will coincide
^{for example} with the current Reality
or it will profile some changes
in the current Reality

then you will be in control already
well, practically all processes of Reality
which might be inadequate

the question is
that, ^{for example}, some processes are happening somewhere
but for some reason they still happen
and how to manage them then

and in order to manage
and them too
you must then highlight each segment of Reality
from a communication point of view

in other words, to create in the information space
well let's say some sphere all information
create blocks inside a small sphere
and assign management to each area

in this case we are talking
about the system of salvation from a possible global catastrophe
and therefore the control in this case goes
primarily for management in order to prevent
as if macro-destruction of the entire system
in fact, we are talking about management by Macrosalvation

but if you want to spread
on the system of connections we assume
where, for example, the phenomena of interrelationships enter
there, let's assume, there are submarines, airplanes, people, etc.
then you must describe the whole complex of events
for each subject of information

and for this, well, in principle, even if you want
let's say to control some part of events
it would seem that well, let's take a few people
then first of all you allocate all the same the management of the Macro-area
in the Macro-region there are elements of control dynamics

i.e. you have to concentrate your attention
to prevent a possible global catastrophe
it takes a certain amount of time to work
and highlight those areas that indicate that
that it needs to be done in any case

i.e. to create system security
and the rest of the time if you have time
you should of course do it then
and peripheral control , let's say
which does not affect the essence of the matter
Macromanagement system for universal Salvation

but nevertheless if you do it
you can profile a wide variety of
including some private accidents, disasters, etc.

but for this you will have to describe
exactly as I said
or, for example, creating on this basis
Well, let's assume a similar technique

means to describe the control system
within each subsystem

and asking the question
for example, to prevent a macro-catastrophe
Of course, we still need to strive for system security
and ideally any system security
is expressed in Eternal reproduction
any element of information

so the next part of the lecture
it's called
management of private information elements
private elements of information
from the point of view of the Eternity of information elements

in this control you can see immediately
what if the piece of information existed
and abstracting from the concept of time
then it already exists at this point always

considering the movement of the time vector
as for example the next element of development

i.e. Eternity comes
from the very meaning of the emergence of information

in the previous information
we can always get closer to this element
and see him at that moment
in which he was

therefore we can transfer it mentally
or recreate etc.

i.e. Eternity comes from the very

the fact of the manifestation of Reality
each piece of information
for this reason alone it can be called Eternal

from the direct access system to any element
including the previous element

in this regard when we speak
about private management

let's say you created an information element
which exists in the past

Well , for example, we laid the foundation for this building of the Ministry of Emergency
Situations
to avoid fires

Well, some situation in the world has passed , connections have changed.
some time passed

to deactivate
i.e. to create this information such
so that the information is linked to the current moment
you should add in periodic viewing
the status of everything that happened around

there is a first element
it is logical to track and add

but there is another element
means to take control
to the level of your own interconnection

but then since it exists
for example, the threat of global destruction
you still come first
you will participate in Macromanagement

and here comes the problem from the point of view of Eternity
in the past element of information development
still, it is necessary to single out the structure that would allow
well, let's say it this way, let's allocate as much as possible
internal management structure
in the object itself
which would be indestructible

i.e., in simpler terms, you find

in the information object
the structure that would create
all elements of its optimal development

the technology is as follows

so you highlight the connecting systems
between different elements of information
which may informatively relate
the object you are working with

let's assume that we have allocated the building of the Ministry of Emergency
Situations
you look at what is possible around it, for example, a forest
from the point of view of fire

but if we are talking about a macro-catastrophe
then you immediately look at the element of possible development
macro of any problem

i.e. you select at least two elements
the third element is there internal communications

these are in many ways seemingly logical elements
but if we consider the status of the information
then you can simply move away Perception
from information
in relation to this building
see all the connections that are present
and find out what it might entail then
for example, well, some problem
it's not necessarily a fire anymore
as if any disharmony, so to speak, any possible catastrophe

this can be done
in relation to any object of information
there to the earth of the universe to the house
and generally speaking, to a bicycle to anything

so that's why when you consider
internal communication structure
then the selection of the level of static events
which do not allow the development of a possible problem
is the selection as I said of the Communications System
but the connections can be different

you can perceive it in different ways
it may even be from different sides
these connections

therefore the goal will be the following principle

unification of the Communications System
from your management point of view

i.e. instead of searching for them, register and manage them
you can do that too
but for this you need to have
developed can be irrational Perception
this is by or, for example, to specifically spend time

exists in Consciousness
unification management technology
from the point of view of your Perception

i.e. you each control element
give shape to your Perception

but here is the shaping of your Perception
first element
this is a comparison with your physical form

i.e. you take the form of information
which the object corresponds to
and that means not using just
Well, actually, the physical form itself
how is it geometric

and what does your physical form mean in the information
what is your physical form for information
what does it consist of

as I explained
if from the point of view of the governing substance
review the process
what is a table there computer person
from the point of view of your Perception
for this information

it could be a sphere there, it could be a cone
well, basically any form of information

and appointing
all your development is in endless reproduction
i.e., simply put, all your events of any other people
in the following form
with which your original form is associated

you can get a unified impulse
from the point of view of the development of your Consciousness

and that's when you have
element of the development of your Consciousness
development reference point
and is a unified element
in relation to any object of information

thus spreading your form
which includes the optimization form of this event
is a unified management level
any object of information

it's quite easy to understand
as you wish
for example, so that something unfavorable does not happen to the object
with the information object
the information object can be anything
including spiritual thoughts of some levels
levels of feelings material non-material etc.

you naturally lay
the control structure immediately into the development of Consciousness

so here is the transition from the development of your Consciousness
to specific management

as an independent work already
it will be such that you will have to do it yourself
to reveal that real area
which, with the development of your Consciousness, is actually controlled

and the second is really manageable in any case
even if you think, for example,
that you haven't had time to master something technologically
or do you think that you need to master something

i.e. this control technology implies
what you must regardless of your Thinking
from how you think
for example , do you think you need to finish your studies?
or do you think you are completely already
possessing management methodology

you still have to be able to manage
in the current element of Reality
i.e. management for creation in any case

As a result of this lecture you should
identify each one specifically for yourself
and also identify a unified area
where are these control areas located

for example in a small sphere that is near you
in the Macrosphere
or let's assume in the control structure through the state

in the state management structure
since there is no need to use Thinking here
you must identify this area
in the form of a state

thus the training will concern that
that you must make real management
through the development of the structure of one's Consciousness
for the unification of any information object

unification includes the creation of information forms
in which the object is always reproducible
i.e. there are no problems with it
creative object

and here you can get some concrete practice
this is already close to being the same as the first lecture
any part of the lecture is actually a control element
you have to get real control

as a practice it is necessary to take
Firstly, the tasks that you face
the more you practice on personal tasks
the more you master this methodology

you can engage in a controlled level
for example, in a group it is especially convenient there
engage in control management level

well, for example, there you have some kind of event
either joint or separate
want to implement
apply management methodology
and watch the event come true
in the perspective you need

i.e. this practice can actually be daily and constant

when you look at what you have
control on each element
or at least ideologically
precise control always

and you should be able to do this as a result of the course
then in principle it can be considered
that this will already be yours
well, actually daily practice
which will gradually outgrow
to a certain status

i.e. every decision you make will already be
from the point of view of Macrotasks
for the purpose of common Salvation

This is where I end my part of the lecture
now I think you will also have a break, well for example 10 minutes
and then we will discuss with you the questions that you have

QUESTION:

*The information itself, how would it be more correct to say what it is?
or is it some kind of building material
which is used by the Creator
or how it could be defined
because we manipulate it so much all the time*

G. GRABOVOI:

Yes, it is clear from my point of view I am looking at the process
well, in fact, the same way as the Creator creates at the same level
and that's why we're talking about that here
that I initially introduce the concept of Consciousness

but information is like an element of Perception

i.e. I do not consider information as the initial level
I think that information
this is already an element of a certain revealed Reality

and in connection with this
in my understanding, for example, I can designate
area as informative
while introducing information functions
i.e. what is information for me

but I can, for example, work without introducing this system
for Perception

let's assume here in this part of the lecture
which was here today
I just described the principles of management, so
where we do not use the elements of Thinking for example
well, elements that relate to the concept of thought

and therefore we do not define Reality in any way
including we do not define it
as an informative Reality

and now by the next lecture already
there will still be more materials there
for example, related to the work, let's say, here is a crystal module
earthquake disaster forecasting

there in the crystalline environment
a component is specially introduced
which carries undefined functions
these uncertain parameters are measured

i.e., simply put, a non-informative area
She is the manager
after she goes through the feedback process

but at the same time I have it on the whole element of movement
I don't define it
i.e., in simpler terms, functional parameters
well, they are measured as two plus or minus distant points

and therefore, with such a mathematical problem

the parameters are undefined anyway
because they are like infinite
they get closer to each other there or are deleted

mathematically it could have been done
here is what I did
and even introduced the crystal form
which register this area
but which is uncertain

so I still think it's possible to understand the information
initially there is a concept of management there
the concept of creating, for example, an informative manifestation of Reality
and then we can determine this

I have this attitude towards information

QUESTION:

*Well, and some unknown volumes of information
they are much larger than those that have been identified*

G. GRABOVOI:

yes, but the task is worthwhile
managing unknown volumes too

in this regard, management and information
these could in principle be things that
in fact, the information comes from management

or is this concept used there
or this concept does not apply
because here we need to identify this rather

the task is actually very simple
a person has Perception
or there any object of information has
the form of reaction is what I can call it

and within the framework of this form interaction occurs

because in this form we can
what goes into this form
this is already a changed structure in any case

and therefore often direct control

it just harmonizes first
and then reveals some informative components

because there is another principle of management
if the information is recorded in the form of information

but then it should be fixed
in a favorable, in the most favorable form

i.e. I even have it in my math
there is one of the cycles associated with the quantum-mechanical truth level
where the element of light passes into the Macrosystem
there the system is generally reduced
which allows information not to be realized

in other words, a negative level of information
until it is optimized
it doesn't show up in any way

this special technology
which allows
for example, some negative status of an event
not to fix, to put it simply

so that
if it's information then someone can read it
and someone can use or record it, for example

but in this mathematics there is technology
which allows you to prevent information from happening

and for example I used it for stabilization
for example, well, for now, for now, in two nuclear reactors
to stabilize the process
in a special control system
Well, I kind of got her there at two stations

so basically this is my concept of information
if it is problematic then it should not be detected

so it turns out that I work in areas
to the level of their informational manifestation

from the point of view of Perception of one person, for example
or there are recording devices

or all people or some objects of information

QUESTION:

*If methods are created for real help there Saving people
why, let's say, this is the first thing that came to my mind
not to improve the ecology of say Moscow from exhaust gases
just like that, remove some processes to make them what
management
so that we don't breathe*

G. GRABOVOI:

Now I'll answer, there's something else
as an answer to this question then

First of all, I give you the Salvation system
first of all, from a possible global catastrophe
This is a fairly special technology.
it's the same as taking into account, for example
interaction of many, for example, satellites
because of which, for example, a global catastrophe could occur

i.e. these are superstructure technologies
it's, well, let's say, a more complicated level
which implies taking into account all connections
not only satellites, for example, but also external Reality
there are some comets, etc.

because I came across that
that it is possible to control macrobodies
then the purpose of your education
is Macro first security system
and plus detailing
i.e. distribution to private levels

of course, extend to private levels
This ideology can be
i.e. for example the same crystal sensor
crystal module
which is used there
to prevent earthquake disasters
and not just prevention
with a decrease in magnitude there first

can be used for example on the same machines there

in the form of a two-pole board where
or stick them on the same buildings
such a model has already been made
the building outline is closed
if it collapses, then there is already an indication within an hour
if the perimeter contour is destroyed

but you can also, for example, set it up for a certain zone from somewhere
and in principle clean some environment

but these are peripheral projects
which may well be involved
when will they be
basically first of all
we need to solve the problem of Macrosecurity of global security

and in connection with this
it was even suggested to me at one time
this comes from the level of, so to speak, the Moscow mayor's office
at one time they awarded me
there is such an order of Saint Stanislav

there is, let's say, a manager there
the award ceremony is taking place at the city hall there
and there is a manager there who was involved in construction
and at one time I proposed an ideology of this type
what is being done is actually the same crystalline module
but it is displayed in the form of a special arrow-shaped structure
means over the territory of, for example, Moscow

and then by indicating by continents
by means of concentration of Consciousness
you can manage there, harmonize there, clean up the ecology
and it has reached this level
it's just that they offered it to me twice
generally make this static structure
so that I could make a drawing there

basically I jotted it down there and sent it
and they actually recently he came out and asked
here's something else that can be added

i.e. it reaches the level of real embodiment
that here is how to create such a system
where everyone can take part

Well, it will act symbolically
and at the same time completely specific
We did an experiment in Novosibirsk
it really cleans
for example, it normalizes the ecological composition
the composition is not only there air soil we suppose
by microelement base
for the purification of the Black Sea there was used in certain places
such are the same crystal system

i.e. from the point of view of Macrotasks when all people participate
Well, in principle, this can be posted even on the Internet, for example
but as if in the form of a model solution
which will also work

here we are probably talking about that
that just who of you will have such an opportunity
to work more closely on the private application
while maintaining the main task
System Macro Security

please can this be used
but in real time
it depends on what needs to be done, that is, a working project
then there are first sketches, then work, then implement it
in principle, this needs to be done specifically
although of course it can be done yes

QUESTION:
The same testing when it already exists

G. GRABOVOI:
Even testing when it already exists
to implement this you need to do TEL yes for example
identify stakeholders

This of course needs to be done
but in principle it's mostly techniques
which come, for example, from the Ministry of Emergency Situations for management
of this type, yes
instrument control towards ecology

I think they will spread
but this is still a different task for the organization

the task of involving the city hall there
although they go for it

in general, they even want to do it
but for you to do this
I'm actually working on the synthesis of nuclear reactors there
and let's assume that we'll deal with the design and finishing
sometimes it takes quite a lot of time

I think this is exactly what you need
master the technology of spiritual control
in fact, control through one's own Consciousness and therefore
what does it mean when you translate this
to the level of specific incarnations
in some places, that is
in some manifestations there are some like this in production
in the ecological environment in ecological safety
people will encounter this

of course support for system security level
through Consciousness-based management
will be much higher

and in general I think in the conditions of technogenic society
that systems are being created, for example , like biocomputers and biorobots
control through Consciousness
should be a priority in many situations
when it is clear that there is no development of technology
cannot destroy a person

QUESTION:

Another question

*I would like to know our macro-dangers in person
list them please*

G. GRABOVOI:

Well, that means from the point of view of macro-hazards
for those who listen to my course
is primarily a reconstruction
failure to record information about a certain danger

this is just a continuation of the question about that
what is information

i.e. the task of your development

is the creation of that information area
when I don't record

but of course as with any information
there is a certain so to speak statics of information development
which exists now
and which needs to be reconstructed, so to speak, yes
you have to put some effort into it

so from the point of view of reconstruction
is first and foremost already in this position
this is a reconstruction of information about that
that some volumetric physical formation
for example a comet or a large meteorite
can get to Earth

i.e. from the point of view of this management
here's why it's important to make an effort
also in one of the first, so to speak, queues

because large comets may not be encountered
for example, nuclear weapons or some other weapons

but it can be moved by the element of Consciousness
this is the first

so the second one is of course
creation of real conditions not declarative
but still I'm talking about real management
when you can, for example, not call but do
and they will follow you

means creating real conditions for system security
i.e. it means the orientation of people's Thinking
on the basis of means of one's own Consciousness
in terms of the creative component , so to speak

this is real management
from the point of view of, for example, complete regeneration of the body

i.e. I have
then you'll see
materials on full body regeneration
when, for example, destruction is incompatible with life
however, regeneration was recorded

well through research

i.e. simply restored people

and at the same time it is part of the technology that implies
what when can everything be regenerated
there is no point in destroying

i.e. the creation of forms of Consciousness, more so let's say, stable
than possible methods of physical destruction

and of course this
there is now a need for prevention
in global destruction systems

i.e. there are tasks that are completely obvious
to create the same neurocomputers now
who can already, even though they don't have access yet
as if to the cells completely
but at least isolated
they reach the prepared cell

so, well, to put it simply, the cage is placed between the glass
in some medicinal solution
these neurocomputers can already change their structure
for example, erase information at some distance

and it turns out that if this technology develops
she's just starting to develop
it turns out that the task is that
to prevent the development of those technologies
who would reconstruct
Eternal reproduction of human life

and that means you have to do it
if you are dating if you are not dating
it means to reconstruct that information in any case
which may seem problematic to you
not necessarily information from some computers or technologies

if you notice that a mutation is taking place
let's assume just one plant
and this mutation, for example, indicates that
that the planet's nuclear core is splitting
means you should be able to collect information

i.e. each of you may have specific personal tasks
in which you can participate
well in the Macrosalvation system

QUESTION:

Another small question like this
human regeneration yes there is a complete renewal of the body
but in general a person lives only once or how long

G. GRABOVOI:

From the point of view of the tasks of Salvation, I will now explain this position.
at one time, when still according to biblical stories
Jesus spoke about salvation and the one-time level of meaning in life
it was implied that there was
precisely in the elements of Salvation
that level
when after one of the manifestations yes
There is also the concept of reincarnation, for example

there is a concept like well something similar there
migration of levels of Consciousness, let's assume
some different techniques including those in science fiction films
or already known technologies
associated , for example, with recording certain changes
transmission of forms of Consciousness

the point is that for the task of Salvation
Here the priority of human life in the physical body, and in one
the best thing is to live permanently in one body
is an ideological task

then well here it is very easy to understand
having made creating value
the human body is such that
namely, even the ideological essence of value
his healthy body was above for example the systems of destruction
it is clear that the destruction systems will not be effective

i.e. therefore from the point of view of that
how many times does a person live
from the point of view of Salvation, we need to achieve that
so that even one human life of any person
there is not necessarily a person there, there is no creature
it was given higher priority than other destruction systems

example, on financing
on the political organization of society
by social structure, etc.

naturally the question of protection arises

but here is the technology that I propose
allows through the development of such forms of Consciousness
people there or even information objects
because it was even possible to transmit information
for example plants animals

these experiments were conducted in Novosibirsk
when it means by means of telepathic transmission of special methods
the animal begins to heal, for example
there the animal begins to clean the water there
the plant purifies water contaminated with microelements

and it is the plant itself
another to whom the information was not transmitted does not do this

In other words, it is possible to teach
in fact, if I may say so
transfer certain properties to Consciousness
including any elements of Reality

and that's why I think that this is the concept of life
now already in conditions of macro-destruction
it comes down to the fact that of course
a person should best not die

then the ideological essence will be proven
well, that which does not need to be destroyed
as if not by postulate
and already somewhat by force

the fact that information, for example, is still different in my opinion
to the possibility of macrodestruction
for example, before the creation of global destruction systems

there the information of course branched out into different levels
including the level of reincarnation
which at that moment he was interested in
from the point of view of human development, for example

and I have encountered this in practice
that the level of reincarnation i.e. development
when it is considered that Consciousness passes
The soul is actually
and part of the Consciousness that has already been formed
it passes from one body to another
this practice has a certain level
factual verifiability

because there is, for example, a lot of information
I took it back in the day
how through a special state structure information
associated with the Indian government
At one time I carried out a number of works there, etc.

i.e. there is factual information here that speaks to this
that the level of reincarnation was factually determined
but that means how much is this technology now
for example, it is necessary or there needed
so here the question is already that
what is needed now in the elements when it is needed
let's assume that saving is not declarative
after all, the value is primarily of one body
in which a person is located

having created such a kind of informative layer of Thinking
we can say that the nuclear button will not be pressed there, etc.

so from the point of view of this up to the nuclear level
there this information was very widely developed
Now it is becoming less and less developed
in order to really save people

from the evidence
right down to the composition of the blood there is a microelement base
generally speaking it matches

here in the reincarnation version
I did a lot of research
using special information in governments

because I diagnose so to speak government planes
and in different countries
so, regarding the so-called safety of these aircraft

and therefore in connection with this arises
a number of additional works of some kind
and I have a certain way out
for information in different countries
which concern, among other things, the principles there
the same reincarnation

I collected such completely objective ones
which in the form of research institutes
institutions let's say I saw creation
for example, well, I had people from the Security Council
including representatives of the State Duma
different levels of government, so to speak

and there were still many evidentiary facts collected there
with all this

let's assume people who do not have sensory perception
they just remember
and who has sensory
can look either clairvoyantly or irrationally, so to speak
they can generally remember the reincarnation level

in reincarnation levels there are
principle of matter translation
as if the most enlightened
the facts that the yogi was assembled from burnt matter
It turns out they were even filmed
i.e. i.e. he collected, simply put, fabric

and so it turns out that the concept of reincarnation
it is not always like a complete decomposition of the body
sometimes it is the use of the same body elements
the same cells of the same, for example, any components of the body

and at the same time the act of birth also looks different
because that's what happens there
not birth by suppose
just like biological growth
and birth due to the development of the function of Consciousness
the one who was transferred as if
in the space-time element

and that is why here there is the concept of reincarnation
where the body is somehow different
and there is the concept of reincarnation , well, like a transition or something

to another space-time region
when the cells ^{seem to} take
let's assume ^{that} something remains
there are some hairs left there, nails, teeth

and tests were done
and this coincided to such an extent
that ^{it seemed like} it was even taken from one person

i.e. well, I myself still use all the points
including the point of view ^{of} the usual methods of analysis

REPLICA:
copying

G. GRABOVOI:
yes, just copying
Well, to put it simply, it's as if
Well, you cut your nails there, shave there, ^{for example.}
and when they take a hair test
generally as if from one person
i.e. there are no differences at all

and it turns out that this is the system
even has a material embodiment like this
including there close images like here external images are close
or in general it seems absolutely possible

and therefore
I generally use any ideology
as equivalent

that the exact proof is mathematical
what is there thought there ^{suppose} a hypothesis or theory of reincarnation
any ideology for Salvation
I still use it equally

and that's why I used it to treat myself at the time
it works effectively
system of reincarnation understanding
It works ^{for example} for the treatment of people effectively

let's assume that even if the metastasis is large
then if you apply control
through, ^{let's assume,} reincarnation development

let's say change information in the past
why does a person experience this metastasis, for example?

here are the metastases, they literally disappear instantly
I saw it right on the tomograph

if you use a different design
for example, management through future events
then the metastases can slowly disappear

i.e. when will you practice
look
you can tune in to that information
did a person have in terms of reincarnation
and this can even be used for management

here from the management point of view
This system has proven to be effective

i.e. this is how I, for example, cured including stage 4 cancer

although I have healed in other ways and using many methods
built events ahead where he lives
and that's all
for example, I didn't even do reincarnation

sometimes only by reincarnation

those. here is the reincarnation version
it showed effectiveness after all

REPLICA:
You can go by different paths

G. GRABOVOI:
Yes, sure
and so it turns out that I still think
that from the point of view of my management practice
this ideology is like any other
it is acceptable from a management point of view
I'm still speaking in a practical sense

but I say there is evidence
as in my practice a lot
when i mean i influence

for example, on some, simply put, reincarnation
in other words, for one of the incarnations
I change something in the event information there
here he is cured man

or here is material evidence
which means there in the form of witnesses of these different materials
I took it from different governments
in the form of a supposed coincidence of analyses
but this is in the forms when the body molecules are transferred

in other words, he sort of collects molecules with his Consciousness
then drags into another Reality
and from a small form it's easier, like, it opens up
and that's all

In this case, consciousness is present as in an adult person, in fact.
the child has this

but in such forms it is necessary as it is considered
you need to have a certain level of enlightenment
or know the technology then

that's why I still have work in principle
where is it written about collective Consciousness
you'll watch it later

the development is still largely determined
collective consciousness
if in the collective Consciousness
it would actually be possible to count
that many techniques are used
Well, many would use them

I think you still need to choose the equipment
which one you need more at the moment
and it will be clearer to you what to use

If you want, use it
control techniques, for example, reincarnations
if you want to use the technique of just direct control
it's your choice

QUESTION:
Do we always have the right to intervene?

to the past event
we will never get away with this

G. GRABOVOI:

I'll explain now

for example, well imagine this situation, yes
there were once such, well, like the very basic forms of airplanes, yes
and let's assume it is necessary for the salvation of people
take some supersonic airliner there
and fly to another continent
to save

here's if the question arises
is it always necessary to intervene
maybe, after all, the same question arises in principle
If is it possible to somehow use a supersonic airliner
although it may be the only possible level
to save people
at the time when, for example, airplanes existed , well, there in the 20s

naturally the question is this
that for the salvation of people
we need to use a supersonic jet
to transfer them, for example , to another continent

i.e. the position here is the same
for the salvation of people here
in Macro understanding
in a private understanding
you can always use it
Well, I consider any to be creative.
in any case it is creative
if you are used on the basis of Consciousness
it is always a creative technology

and she won't give you a negative status anywhere
because it looks like
and specifically is work
when a master gains some specific baggage or experience

i.e. the more situations you solve
for Salvation and for management using any forms
including changing information about past events there or future ones

you become even more prepared
to possible, so to speak, some problems
from the point of view of global security, for example
or there is private security

so only the variant is used here
gaining experience and management
and the choice of control forms is completely different

if you use the past
there change reconstruction of the past
then when do you do this
you look at the perimeter anyway lever

i.e. to change something in the past
we need to know what this will lead to in the future
know for sure

and so when you kind of use the point of Consciousness
and penetrate into the layer of the past, let's say
you always know exactly what it will lead to in the future

and since you work
on the element of the general creative plan
then you still end up in the coordinate system right away
only there

because the path depends on your attitude

REPLY: ()

G. GRABOVOI:

Yes, you work creatively
and then there is such a space
where everything is only creative
this space really exists

and therefore it turns out that you don't have any problems
when you set the goal of saving all people for example
and it is not necessary that there are people there at all, just Salvation

and if you don't set this goal
you may simply not get there

even if you just forgot there were distracted that you are saving

for example, you save, you save, you see many results
then it kind of becomes automatic
and the thought that you are a savior sometimes does not arise
well, as if this is your , well , actually, level of work
and there is a lot of very external information on the radio etc.

if the entrance starts again
you see that sometimes you need to add something special
elements of awareness
that for the sake of Salvation you would like to bring this to fruition
to the information level
then the exit opens before you

I'm telling you about the levels of the world's structure
and the device is only creation

if you
let's assume the technique of destruction
it can't be implemented here at all

because I speak in general
at the level of the growth of matter in general
and the growth of information organization in general

simply put, as the Creator does

and when you look at the information
as the Creator does
almost everything will be much easier for you

i.e. I think the task is, for example, even in modern religion
this is to show the way how you can see the tasks
which the Creator imposed, for example, by creating

and for this you have to be
well, first of all, be attentive
secondly, try to understand that it can be done

I'm telling you that this can be done
I do this specifically
for example, I restore organs there
which were generally cut off, etc.
or were destroyed there on all fours

i.e. therefore, in principle

and the creation of organs is no different ^{there} from that
to prevent a fire there
or else extinguish the earthquake there

it's all unified

so your access is at the creation level
still only positive

and you can interfere wherever you want

i.e. when you set Salvation as your goal
You have no restrictions in principle
