

GRIGORY GRABOVOY
Methodology of healing
Technology of using the axiomatic system

Lecture 2

This principle that I told
by axiomatization first of the area
refers to the fact that for that
for Consciousness to function
and therefore reproduced, i.e. brought in action
it needs to be based on something
this is Consciousness

therefore this principle of axiomatization
this is the principle of construction
support area in fact

such a support area
can be constructed identically for other processes
not only for healing
but what is built here is related
in general to all processes including healing

application technology
of this axiomatic system
further it is already based on that
that you should configure the information like this
so that the cell can recover
or the body was restored immediately

if there are any complex lesions
some, for example, may have completely different people
who you know or don't know

and therefore the situation is related to that
that the technology of applying this principle
consists in the fact that
that conditionally distinguishing these three axioms
in the form of some three points or areas
it doesn't matter where they are located

in order to restore the body quickly
three axioms must be mentally combined
if some process there is very strong

like there's a big acute process there

if the process is chronic
and requires detailing for restoration
need areas of these axioms
can you do it?
every axiom
write it out, let's say, briefly on three sheets of paper
and then mentally combine them

in the first case you just
superimposing one on top of the other
and in the second case you thin them out

i.e. in chronic processes
they should go as far as possible
separated from each other in Consciousness

and here is this principle
it means that
that we received some information
let's say, unfavorable for a person
that there is some disease, let's assume

then if you think
that it is not an acute or complex disease
as if from a forecasting point of view
then you dismantle these axioms
you distance them from each other as much as possible
in your Consciousness

so that means
the first axiom can be found
closer to you
but the other two
can be as far away as possible
precisely in Consciousness

i.e. in fact
this is what it looks like for technology
you just imagine
what are these sheets or volumes of information reasons
fly very far from each other

at some point they disappear from view

i.e. in fact
you have derived the health structure
which is located
between these three axioms
i.e. the basis for organizing this health

that means what concerns
the concepts of "materialization" or "dematerialization"
"cell restoration" is the materialization of the cell, as it were

then this principle works here
that the two axioms are compressed
for example, first and second or second and third
but necessarily consistent
to the Infinitely Small Region

i.e. you mentally take them and squeeze them
until they disappear
or will not become infinitely small for you
then the cell is restored

so if I continue to tell you
on the methodology of using axioms
then we can say that such a technique
can be expanded and distributed
you can feel it
and try to do it
my own so to speak methodological system
well, let's say, our own, built on knowledge of principles
which I have outlined

all together
this is already called principles
fundamental treatment technologies

stage of clairvoyance
what is called "clairvoyance"
according to this system is based on that
what is the perspective of seeing real events
either in the body
or around
must come from you

i.e. clairvoyance does not mean this
that you have to attract something somewhere to yourself
Well, let's assume something is happening in the World
there is no need to try to get this information from somewhere

clairvoyance control comes from you

i.e. you must see a person

wish internally, as it were, health

i.e. make it a system

more adapted to the world means

i.e. to actually derive the structure

which will be real

but the structure should come from you better

so if you have

already as if a graduated structure

i.e. a distributed, so to speak, structure in Reality

where there are diagnoses of some events

then what you want should come from you

and be superimposed on this structure

and only then will it take shape

in the form of an impulse of Perception

i.e. you need to regulate your Perception

and in contrast to the concept of "clairvoyance"

that everything is stored somewhere there

I give the control structure

which allows

first do

and then improve

i.e. first make everything better

and then you can constantly improve

and so, based on this

the concept of "clairvoyance" in my Salvation system

it implies the presence of action

at every stage of Perception

so using for example

this axiomatic level of three axioms

can these axioms

imagine so to speak endless balls

the surface of which from the inside, well, as a general system

the surface of each specific ball

you see at the same time

i.e. imagine

that every information about every axiom

contains
in an infinitely large sphere
but when you look
from a certain point of its
well, inner world so to speak
The world as if representations of events
you always see from the inside
all three planes

i.e. you always see it without fail
at least one fragment of this one ball

but since they are Infinite
and it would seem that wherever you look
you see them but from the other side
if they are Infinite
then some quantities
can be located far away

so when you solve this problem
i.e. this is a training for developing the quality of clairvoyance

first you see one ball there
you understand how to see it
then he appears
some area is so generalized
which is not clear what it is

some kind of glow
it can be divided
in circles
on colors
on the rainbow
to the sounds

and then it begins
already the second ball
it is fixed

and at the same time
as if a third ball appears
after some time you see them
how everything is in volume at the same time
so you know that they are Infinite

i.e. this is a multidimensional level
which allows you to already record

Infinite number of events
at the same time in one point

and therefore it means
this training that I just told you about
it refers to what you should
It is imperative to do training with a specific goal in mind

i.e. let's say you need to make a diagnosis
then if there is time
you do training first
then what after the training
you perceive
from a person located there at any distance

this is already a controlling diagnosis

you did the maximum
to downplay his painful, so to speak, condition
or factual
and only then fix it
in terms of what has changed

but then you think further
what to tell him and what not to tell him
to this person
i.e. the word should also heal him

can you say the diagnosis is improving
as if his state in Infinite time

and it turns out that if a person knows about his diagnosis
then this is not a characteristic for you
should not be
that this diagnosis is the main one

i.e. you must be
constantly a manager at all stages

when you develop it means
that clairvoyance that I just told you
it gives that here is a narrowing Infinite narrowing
what did i say
areas of information or its reduction
turns into a concrete technology
where does the Infinite number of reductions go

a B Infinite expansion
also gives technology where you see
what is Infinity for expansion

i.e. your task will be
it means to identify that range of issues, so to speak
that hierarchy of the system of Consciousness
which would ensure
control over such concepts
as Infinity in Macro level
and Infinity at the Micro level

i.e. Infinite expansion
and Infinite fragmentation i.e. reduction

this will be for you
as an assignment for the next lecture

because there is no need to ask questions now
these technologies will need to be
just play it a few times
