

GRIGORY GRABOVOY
Methodology of healing
Technology of working with undefined areas

Lecture 4

This lecture is related to that
to manage through structure
which does not give in
at the first impulse to control
through Consciousness

i.e. in fact we are talking about
what should you manage
those volumes mean
access to which you may not know
at the moment
or consider that he demands there
very complex analysis

in order to manage
remote structure means
which has no characteristics
then first of all it is necessary
adapt your Consciousness to that
what does it mean on the element of your Consciousness
there is, so to speak, that trajectory of thought
which already contains information about the object

but this trajectory is like
well as a carrier of information for you
in this case it is not designated by a specific outline
and it is not perceived in its entirety

and the question arises then
for what reason is it not perceived

so the answer is that
what orientation
your Spiritual
and the body structure means
and your Soul
including Consciousness
is given by the structure
how events mean inside you your personality

which includes all the designated concepts
related to you

and the structure of the World
i.e. any external events

and therefore your task
find, well, let's say instantly
as many points of contact as possible
on this event
the properties of which are not very clearly defined
those points that are clearly perceived
as structures of the external world
and you too

i.e. actually find
Generalized Points of Perception
what at first glance
you don't have full information
as if to make a decision

this could be such a task
that for example you need to make a decision
according to the configuration of events, so to speak
which at first glance
may not be very desirable
for you

those. they don't need to be decrypted
they need to be brought in immediately
into a positive form

and secondly if you think
that decryption is not needed in this method
because you need to take quick actions

i.e. in fact, this technology is aimed at that
to speed up the decision-making process
and real action
not because you
seem to have full access

in fact
given a certain amount of time
you can find access to everything you want
according to this technology that I give

but often detail
something means no need
because your Consciousness does not need to
had the same points
as a negative event for you

i.e. no need to fix it for yourself
and that's how the world works
if you can't help but fix it for yourself
then this can't help but happen

i.e. because
that everything in the world is connected

if you are one segment of information
don't let me in
then this doesn't happen in the world anymore
this one is also one of the management techniques

and that is why we are talking about that
what should you
points of socialization
i.e. the points of connection with the outside world
see
then you will perform the first action

i.e. in accordance with the elements of development
creative development of the World
you will set yourself up then
having looked through the whole world

and when you consider
perspective of your Soul
just like Mira
and the whole personality, so to speak, means

then it will work out
that you took action at the same time
already on managing this event
at the level of its harmonization

and then it's already in front of you
will open absolutely clearly
all structures of information links
corresponding to that area
which you looked at
but these structures

will already be adapted and harmonized

i.e. they will no longer represent
a problem for no one
as if to the maximum extent
it will already be done

and then if suddenly they still have

problematic characteristic
repeat this action several times
until that moment
what if you need to restructure
very specific negative ones
event components

if they for example
in the first-second impulse it means they don't disappear
or they start to approach there
or delete there

but in any case we need to find it
and then restructure the negative events
already according to the parameters even negative

i.e. well, for example, such actions
still lead to that
that this relief of this event is emerging

then you'll just have to peel it off
like a screen
i.e. remove this information
negative component
and disperse it
and that's all
according to the actions defined there
which you can do

now by specialization
so in this lecture I am already laying down
specialization in Macro-Area Management

so here is every action
will take place
it did pass
it's just going to happen now
through Consciousness

through the structure of the Macroregion

these are the control areas

Well, initially with all the connections

such a field exists everywhere

just access to it

is carried out through special techniques

this is about healing

clairvoyance

matter management, etc.

matter control

teleportation is meant

this includes materialization

levitation, etc.

so if you want to ask for example

the same levitation parameter in the body yes

then you definitely need to configure the cell

on which it will be set

because the levitation parameter

must be on the same cell

or even on the molecule of your body

and then move along this parameter

and it is not necessary to inform the whole body

i.e. it is easier to remove the parameter from the molecule

and again, as if to have an attraction and that means

but then you will have to know

you will know how to balance

in distant regions of matter

let's say the world is arranged like this

that the situation is approximately the same everywhere

for the distribution of information

so that you don't end up somewhere very far away

or in difficult conditions

what is meant is

it can be absolutely

another structure of the World

you should contact

for example, to the Earth as to its native land

or to the solar system

and that's why you need
absolutely precise coordinates
in fact, just imagine
it's like looking through a magnifying glass there
on a very large map

and now you need it
remember the orientation of the entire map
and here in the magnifying glass to get to the right point

this is quite a task
it's like levitation technically
sometimes it comes down to knowing the trajectory
and in knowledge of the control system

so that's when you control the Macro level
then through it means when you enter already
into the system of Microprocesses there any
or event processes
by specialization
you must do this
how do you mean how would it be done
if you were internally free

i.e. you have to do it
on the feeling of inner freedom

those. let's suppose
there is control of the Macroenvironment
when only you mean well you have
a feeling of inner freedom
you are already approaching that level
where in nature is it so laid down by God
that you have maximum control there

so the management will consist of this
to the Infinitely Remote Regions of Consciousness
for you
connect with Infinitely Close
in a discrete interval
event interval

the essence of this management is as follows
that exist in Consciousness
Infinitely distant regions
there are also infinitely close ones
to your Perception

so they should close
these areas because
what for Consciousness
Infinitely distant is the same sphere
as well as Infinitely Approximate
and is located anywhere near you
or further
or closer

these two spheres
need to connect
in the field of discrete events

i.e. to consider the event
divide it into discrete lines
i.e. not connected to each other

and sequential deterministic parts

i.e. not when one follows from the other
and what in the event you take a separate segment

for example you went to the store
came out
one event
came back another
and not because
what did you think came out walked

i.e. all this needs to be excluded
and leave it there for example
came out
entered the store
and in this area
where did you get off
this is also a certain sphere of information

connect
Infinitely distant
and Infinitely Close Regions
three spheres in one
and it turns out
what you control through the Macro level
by its specific private action
this is what your specialization is called

that means what concerns
i.e. it's like the maximum
what can you do
at the level of individual data

but specialization needs to be developed
i.e. it is necessary to increase our own methodology
and develop yourself

so what do you need to do next?
it is to apply this technology
which I just mentioned in my specialization
to processes
clairvoyance
healing
remote control

and try to apply it to that
so that means to engage in that principle
this is what I didn't say

since all the information can be known
including instantly you can know

then the question arises
how my technology that I laid down
means working with undefined areas
perceive
as well as a system of instant access to information

Well, in general the initial answer is very simple
if it is clear that this is an undefined area
then there is already the first answer yes
i.e. something is already clear
and any answer can be revealed

i.e. that's why further on
we need to use this principle
because everything is manageable
a somewhat paradoxical principle
then what does it mean has no name
also controllable but just faster

because if you for now yes for example find the name
let's say there's a nuclear power plant reactor there
somehow the graphite content increases
the whole sentence needs to be taken in

some time passes

but if you do a momentary impulse
and you level the situation without knowing
but as if already at the first sign
what does this have to do with a nuclear power plant
you improve it first
and then you decipher it
what did you do

then it turns out that you don't need to listen
this is how to perceive a whole sentence
and you did it first
and then we looked
what is this undefined area
was in front of you

i.e. therefore in terms of my technology
area having information
and the area that is not defined
in the form of an information constant
i.e. which is not designated
have equivalent meaning

i.e. the area about which you have no information
she is not worse than that one
and you can be productive with it too
and even work more efficiently

that's why it exists
translation principle
areas of information about which we know
into an area so that it is perceived as unknown

for example you have
a very large array of information
and you will have to work with her for a very long time
but you know that to solve the problem
you need to solve it in this form

i.e. click on the anchor point of the form
and the problem will be solved

you take a large array
translate into this form
click on the dot
and it doesn't matter what happened next

besides the first properties of information
she decides immediately

i.e. you enter
in a system whose properties are unknown
but the problem is solved harmoniously by means of this form

i.e. therefore here are my concepts
well in the Salvation system that I give
here the concept of "information" has the meaning of action
and it doesn't matter what is contained in the information itself

i.e. therefore here is the principle
I need this as a task
realize
and try to use it more often

This is where I end this lecture
