

GRIGORY GRABOVOY
Teachings on Salvation and Harmonious Development
Technologies of Reality Management at the Creator's level
Irrational control technology
(7)

In this lecture
on my system of Salvation and harmonious development
I'm showing you the control technology
in which control is achieved
at the expense of let's say causally unconditioned information

i.e. for example if in physical Reality
one lever in a rigid connection
causes another element to move
like throwing a rock
and it's visible as a flight path

then in this control
I'm showing a control technology
which means a thought-form
located in some point of space
causes control through the Spiritual component
in principle in the point of space where it is needed

Therefore the task of this lecture
is to control at the same time
both the space of Thinking
and the space of Spiritual reproduction

i.e. that's what the transition here is going to be about
that simultaneous control
it's exactly what it means
that you have to build an area
yourself to build it with your own Consciousness
which is therefore mutually acceptable
for both the space of Thinking
and for the space of Spiritual control

and such an area you can build
if you formulate several times
purpose
on a Spiritual level for example
I mean kind of feel or extend your spirit

to that goal
and formulate it logically

and these two two you know constituent levels
or two waves let's say two actions
do if in one infinitesimal point of space
in one infinitesimal point of space where
it is more convenient for you
like in front of you

you get
a generalized element of the collective Reality
that will control
both the thinking space
as well as the space of the Spiritual component
and you get a logical thought

So let's say you need to perform a manipulation
like curing someone
or get a control event
through Macro-regulation naturally everything happens
in this technology

you can calmly dictate somewhere like a dictaphone
what you want or just visualize
an image of what you want

and then this information is just a matter of time
into this infinitesimal point for the Consciousness
point

So you're just activating your Consciousness in such a way
that you think that this point in the Consciousness
is infinitely small

so the entrance to this point
happens
by unpacking that area
So you're unpacking this infinitesimal point
as a sphere

and you unpack it in such a way
that once you start unpacking
and aiming for the center of that point
the sphere starts to expand infinitely

So this is the principle that the Creator has built

in the construction of Macroreality
in terms of microprocess control

I.e. suppose you enter
into the area of controlling
a cell
or a molecule or an atom
so it would look to the Consciousness
as I've described
you can basically shift
very distant elements of Reality
like a comet flying to a big Earth
or even some galaxy for example

I mean this connection is built on the dynamics of the Spirit
in terms of your Perception
like in the mental plane like in the thinking plane

and when you look at the Laws of Connection
of thought and spirit
you can find these sources of energy
that when you touch them
you can regulate the Macro Processes

and then the fixation of only one personal image
like there's an enlightened Earth
which is purified and which is stable
it gives you complete control
in the reproduction of an infinite number of events

i.e. in this case I first said
that it's enough to have two or three opinions
at one point
to form an image
but it's going to take some time

and if you've already done it then you've already done it
like in math
if you know how to build a formula
you don't have to remember
you don't have to remember all the time
just the formula

It's the same here
In this case it's only necessary to enter the image
to the same point

but just the input technology will be different

so you're not going inside
this infinitesimal point
but you kind of cover it and the sphere of your image for example
like there's a stable so pure Earth
it has this point
center
and everything

also around this area
all the events can be arranged
Well let's say the same treatment
at a particular point in space-time
like in Moscow or wherever in Washington or New York
or any other place

and also it is possible by the realization of these events
immediately see what components of external relations
the Creator has put in place
so that the event can be realized more quickly and optimally

For example you are being treated in Moscow
event area
Well let it be for example a sphere
and you can immediately see for example in the form of the Earth

you get to work in a coordinate system
in a coordinate system
in a coordinate system
in which the mechanisms of transition are involved
from for example a thought form
to the spiritual component

and there is the principle of similarity and the principle of sameness
in the control systems in the world

if you have made at least one transition system
then you can even implicitly always take into account
all other transitional systems
for example from Spirit
to Soul manifestations and so on

and so working with that kind of let's say
level of understanding of the situation
you're immediately engaging a lot of the transitional systems
that build the very Reality that you're working with

as an independent work
see
how the Reality
that you're working with
but by other systems of the same or similar type

You don't have to answer the question there
but you just have to pay attention to it
and watch
kind of observe the Reality

when you've built this area
it's in front of you
you see that it's highly concentrated
and addressing
like a particular patient or a particular event
in a particular region
causes an obligatory change i.e. some kind of movement
on this sphere
For example this planet Earth can be seen

in order to cure
let's say from a malignant process
somewhere in the Far East
it is often enough to activate the tree
for example to remove the matrix from the active state
without changing the state of the tree
to transfer this matrix into a cell
i.e. to restore the tissue

i.e. it will be immediately visible like in a movie

i.e. in this case it is called
real time control technology
when you're working with something
you can see how the fabric is changing locally
like in the Earth area

but you can immediately see
take the upper sphere
all the external information of the World
and then work on the changes there even in galaxies for example

then the whole Reality will be in front of you
completely locally
in a small and convenient way

and you can see that your goal
as soon as you set a goal
where and what you want
you can see what you need to shift

either in other galaxies
or maybe on the surface of a planet
or maybe inside
or somewhere in just one cell

but you as a manager
you're working with a very convenient design
that is stable
sustainable because you've
first of all you created the area yourself
and secondly you're working on the area of transition
like from thought form to spirit

and thirdly
because this area gives birth to those Spiritual projections
that are not connected with for example logical
cause-and-effect trajectories of some kind

then any control you have is controlling
because there is such a Law in management

that if you control
for example outside the calculated or outside the known area
by relationships
then your control is accurate

and in this case a spiritual manifestation for example
so it is such
that either the spiritual component will manifest
at the bottom of this structure
or on top of it
you don't know exactly

please note I am now introducing
a whole new control parameter
that if you're working in like a new area
with your own tasks
the control always goes to the address

it's because you don't have any additional constructs
that need to be discussed
that you have to interact with

and that's exactly what management is in this case
that the transition
from thought form to the spiritual realm
means is expressed in the fact
that the consequence of this control
as in the case of the cube
can manifest itself
either above the head
or basically anywhere else

and it turns out
that when you enter the control parameter
what you want in the target
then you can look and see
where the manifestation is

but then it's coordinate control
It's accurate too but you have to see the relationships

I mean if you hit that area
you have to trace
the coordinate systems to the object of control

and if you're just inputting an idea
and you want some design to be realized there
things can change instantly
and you can get precise control

hence
in this case we're talking about a state
where the will solves the question of precise control
in any case

and here here the act of the Creator is in the fact
that the manifestation of the act of the Creator
caused for example the birth of Reality
but the Creator could only manifest the Will
once

and in doing so the whole of Reality was created
including all events of the future for example

hence
this control technique is based on the fact
that you actually re-create Reality

and this is your created Reality
it is thus connected
with all the external information
that it starts to be stable
and the event for example is realized

hence
in order to create Reality anew
you have to isolate the area
where Reality has not yet been created

The technology that I'm showing you now
it says that you create this area on purpose
through transitional areas

where a mental characteristic
causes a projection of Spiritual control
but this projection is for example chaotic
that is you don't specifically track it you don't track it

and because you're in Consciousness inputting the characteristics
that you don't track this control
for your element of consciousness
that's in contact with that
with the boundary of that control
inside well technically it's an unknown

I mean you're either falling
into the realm of spiritual manifestation
or you don't

and since you may not
then you immediately distinguish in this spectrum
an area of unknown Reality i.e. uncreated
and that's it

and all you have to do in that Reality is enter
what you want
you'll always get into the coordinate system
simply because it's the easiest to access
which is the fastest You don't have to go around anything
or hold your attention on something

You just have to formulate it

and through the system of common links
it'll still get to the exact coordinate

it's enough to pass the next moment of time Yes

So herein lies
the technology of building the management of the past

When I said about
what you did there you left a thought
and it started to hit
It's kind of like a super-fast control

in case there's something out there somewhere
a nuclear reactor could explode somewhere
and there's an urgent need for control

This is a very important control system
that is detailed and explored
in this lecture

that you just send a message
to this area
and that's it and the control is triggered
because in my practice it always works
when it comes to some problematic situations
possible macro-destruction situations
a nuclear reactor explosion etc

and they physically register directly
how instantaneous the reaction becomes

i.e. it's a rather powerful system
due to the fact that in the physical planes
often things that have not been explored much
they can be very energy intensive

and suppose one of the discovered properties of the same vacuum
that at large forms
the vacuum begins to sprout
at large volumes
that is when you take a sent microparticle and examine it there
a large volume of vacuum it causes
that the vacuum sort of starts to transfer properties
inside the particle

and that's the problem by the way
for the Earth as well
that a large mass of external space

causes a change inside the nucleus
in these vacuum bubbles

and it's mechanically traced
that the result is a seemingly ordinary system
as neutral as a vacuum
it can be functionally very powerful

because by the principle of similarity
gives birth to itself

and at the expense of just a large array
well let's say one of the variants of the development of the area
Macro-area
more and more properties are transferred to the micro-area inside it
even if this macro-area seems to be a vacuum Yes

and that's why in principle this technology is such a way
that it allows to prevent for example the growth of these bubbles
inside the planet in the core of the planet and so on
this is by the way a technical problem
which also has to be solved

And at the same time as I explained
it is possible to displace the movement of a big comet
which is flying towards the Earth
or some other macro or micro problems

and that's when I said that it's enough to put a thought in your head
and to kind of suspend it a little bit
to get into the actual flow of time
it will spread out through the coordinate system
exactly where you want it to go

but if you go into that system
of let's say unconstructed Reality
you put a control i.e. a thought
and then you take it and you use your Consciousness
and then you put it
into the realm of say the past
and then you connect it
with a manifested element of spiritual control
like a thought-form

then you can control the past i.e. change the past

So because here

as soon as you with your Consciousness
introduce the element of the past
you're basically creating
a new Reality of the past

if you fix it normally
i.e. you sort of seamlessly connect it
with the spiritual manifestation in the past
then it turns out that your Spirit has already seen it
and you got the Reality that really is

at one time I did such a control on
Well as certain solutions to problems
I used to tear out parts of the lecture from the audio lecture
for example while keeping the duration of the book texts
Let's say the texts of the books were taken out
while keeping the number of book and page lengths
which is amazing

I mean but nevertheless when we were looking at
except for the control samples
they were taken from a large number
of sort of control copies

and this is the same kind of control technique
just past processes

The spirit realizes more quickly the Reality
that you're building from yourself
So it influences the Reality of the past

and then you get past process control

to move into future process control
It's quite simple in the sense that here
where the management impulse
begins to approach the manifestation of the spiritual plane
kind of in the Reality that you're building
you just set the task of the future
and that's it

that is the area of your impulse coming from you
and the area of kind of manifestation of the Spiritual Reality
from the mental control
that you're already controlling here
in these two cases
you already control

it is such
that you're just putting future tasks
you put between them
as a kind of a spacer between the two contacts

then you get into future process control

Well future process control is more of a goal-oriented process
I mean you kind of fix this spacer
or this inter-contact level
and you get for example sustainability for future tasks

it's like cure again there
event management etc
that's one of the controls

in the Creator's tasks is that
and the Creator really does it
that He unites all the processes
in one control area

as an independent job
to do what the Creator does
to find one common control area
for all those things that I've just sorted out
at the level of technology
there past future time
and respectively the current time

The current one is done quite simply
two areas are simply combined
the past and the future at the level of the goal
a mental goal
what we have laid down as a management
primary control so to speak

Primary management can be many things
including solving the problems that I'm talking about
I mean it could be healing
or it could be just tracking the spiritual impulse
in the space that you're building

in this way
having this technology and asking the question
to find one generalized area of control
like the Creator does

and as a homework assignment
you have to do what the Creator does
by looking at His work

means you can manifest the world
that is all around you
and that you are building
and that contains
all the harmonious elements of this outer world
or inner world
to quietly project into any area
that has not yet been created
such as manifested Reality
neither informationally nor physically

so when you look at a certain infinity
that is really infinity it exists
as information to Consciousness
as a kind of pressure system
where there may be different properties of space time
but there may be a property
that as if space-time doesn't physically exist there
Then you can
or informatively not even there

then with this technology
you can construct what I said
make an instantaneous projection through Consciousness
to get a new or the same World or development of the World
in any element of Reality
Then you will be protected from the elements
Well let's say the unperceived elements of the World

What is the peculiarity here
is that by the Creator's design
all objects of information are given equal rights
and so it turns out that where the World is not yet manifested
in general well as if not created in full measure
physically or even informationally

these elements of the World
begin to influence what has already been created
The same principle as a vacuum influences
on for example space within physical matter

then in principle this technology is at the same time
is both a technology for the defense of existing Reality

and reproduction

And when you look at for example
how to clean up ecological problems
like pollution etc
you'll see that pollution is also information
how it's constructed in general

it's usually some kind of destructive elements
that belong to the elements of the unrevealed Reality
for example even in the informational plane

and then you need
and they work on such impulse-spiritual
like spiritual systems
as ways of reactive components of spaces there
that is they manifest at certain points
and build some kind of destruction
like a virus or some harmful
for example for health

then in relation to the fact that this is a manifestation
of a kind of space that is not fully manifested
which has equal rights as it were
you can derive these rights
bring
to the level of your tasks

which is a normal part of development for people
including the development of this space
which in principle is not functional
it's like a kind of monolith that basically possesses
so let's say small characteristics
but according to the principle of equality of any object of information
begins to transmit a destructive component

Therefore here is the principle of transmission by reflection of these techniques
where you create space-time
allows you to fill these spaces
and create a Reality harmonious in all planes
for Eternal development

and in principle this is actually this task
it is quite specific in terms of its solution
because it is these unrevealed systems
they may present the maximum problem now
from the point of view of the fact that let's say nuclear weapons

is also based on the principle of deconstructurization

and the synchronized operation of these systems
seemingly man-made on the one hand
on the other hand existing somewhere in the distance
it could be a problem in the sense
that this amplification
amplification in terms of kind of destructive
i.e. destructive development of Da Reality

so to break one element at least
I mean where the system is wrong
to make Reality
is a very important task

and the main thing is that Reality will be such
that it will be connected to your will and your will manifestation
and therefore you can assume
that you know what's going on out there

So as a homework assignment
take a look
all the information
for all space
all time
generally speaking all elements of Reality
see where you need to add your willpower

and if the Reality is unusual
or connected to certain images
just be more careful in terms of analyzing it so to speak
and since you're aiming for the goal of Macro Creation
you won't have any problems anywhere
Just remember the goal when you need to
is to save everyone
and mastering these technologies

then you've got a stable platform
and a lot of real help in general

so when you're working in that way
kind of informative inspection of the objects of Reality
even though it may not be long or as long as you want it to be
You can't take too long
Basically we have looked there
For example for several days in a row
for some time even if it's short

formed an opinion and made a decision
In principle you can move on

which usually means you can go into more detail
you can sort of delve into informative events

but the task is still in many ways
and sometimes mostly even
the solution of concrete events
manifested
for example on the physical plane or on the informative plane
but not in terms of the search

so in this case the search for external objects
is a private task
that shouldn't take much time

The task is basically to manage the objects
that you need or that you form
to manage something else

The technology is basically this

and search is a search engine
I'm actually minimizing it a little bit on purpose
both in terms of tasks

because the search engine
what I just said
is basically a cognitive element
when you're
the controlling element of the moment of cognition
when you consider that you're
in terms of the specific target management
you've done everything
then in principle you can do it

Well you can do it now
As a rule when there are a lot of real tasks
there's less opportunity even in terms of time
to do search engines

but in principle if you have time you can do it
but still these are the systems
that they should be tested all the time
on the real management of existing tasks
That's the main thing

Even when you're doing search engines
as often as possible put the thought in your mind
what
and for what
and how to apply it
for example to specific tasks
