

GRIGORY GRABOVOY
Teachings on Salvation and Harmonious Development
Technologies of Reality management at the Creator's level
Technology of building elements of Reality
(8)

In this lecture
on my system of salvation and harmonious development
I show you the technology that means
the construction of any element of Reality
occurs

as the emergence of this element
in a given place

second
interaction
with neighboring elements of Reality

and the third
is the projection of all external elements
into the area of this element
in terms of its origin
i.e. creation

so when I look at it this way
the process of control
the first principle I'm talking about
the emergence of an element for example in an area of some kind

an element is a tissue maybe an atom
let's say a molecule or a cellular system

and at the same time
if we for example in the form of an element of Reality
we take a more extended system
like an event or a person

then the principle of emergence
is an act already connected
with the manifestation of the Creator's Will
i.e. emergence
it is so and it is what the Creator does

and thus it turns out
that when we talk about emergence
we are manifesting the work of the Soul to the maximum degree

so for example if we talk about percentages
that's where the Soul manifests a hundred percent

when we talk about the creation of a given element
through interaction with neighboring elements
i.e. on the principle of direct connection
for example there are other cells near a cell

then we're talking about structurization of the Consciousness
into that area
where we take into account
Consciousness of the external so to say existing area

and in doing so the act of the Creator
it is extended to the fact
that the outer realms were created
once upon a time and by someone
including the Creator

In this case it means that in many ways so to speak
already a spiritual structure
and plus the mental i.e. thought principle of control
the level of prolongation of Consciousness
in areas that are so
that one has to realize
what the other element perceives
and how he even perceives Reality let's say
how he perceives it
and how it interacts

that is to be if you can call it that an element of Reality
including the other

i.e. the principle of
of prolonging one's own Consciousness
to that state
when your Consciousness functions also one hundred percent so to speak
as if another element of Reality
another element of Reality from his point of view

It could be an animal
it could be the same molecule
or it could be a group of events

and yet in all of this
your Consciousness encompasses all of these elements
just as for example the other elements are aware of themselves
that is you are at this moment
in that element of Consciousness
you're not different from the external information object
that you're connected to

So you can develop spiritual characteristics
by comparing and developing
of the adjacent elements of Reality so to speak
with which you directly overlap

with the notion of adjacency
in relation to time
can be the management of future events
that are well close enough in time

like in the next few seconds to the next minute
like up to an hour etc
i.e. the adjacent event can be
including the time characteristic

Then the control which is realized
from the projective component of all external relations
then there arises the necessity to realize
not for example that element of Reality
that you have
in terms of interaction with it

i.e. if I pick up a tape recorder with my hand
or picking tomatoes in the garden
I'm basically feeling with my hands
or if I'm thinking
in the next second
I have a logical connection of development
in the event part

but if all the external connections
I have basically what I mean by that wave
that I perceive on the Consciousness
this wave comes as a cumulative wave
as from the element of generalized connections

but in this element you always have the same task
to create a control element

in that form
and in the form
in which this element is realized

so it turns out that the general situation here is that
that you have to get in any case
from any of the three for example types of in this case control
to get the same thing

and so on the comparison of exactly the same thing
what is the same
that is to say that we can get
the same element of Reality
in different ways

you have to do that as a practice in your own right
to consider that Creator principle
that says
that it is possible to receive the same thing in different ways
and therefore
there are basically an infinite number of ways to create

and from the technology of obtaining
of one element of Reality
you can get the entire external Reality
or any other reality

that is if we consider
the principle of the Creator's self-creation
that principle says
that it's enough to know
the element of self-creation
in the structure of one's own Consciousness
or Spirit
or Soul for example
then all of external Reality will be constructed
as it can be or as you want it to be

just because the ways of the external
to achieve the result
can be infinite
which is sort of the reverse of the principle of construction
based on the logic of cognition

so it's a practice in its own right
plus my explanation

and then there is
the principle of researching the field of cognition
i.e. how cognition can develop the world
and can make the world manageable

because what we've got here
only an element of cognition
and this element allowed us to draw conclusions
that characterize the situation
that I've just described

in the part that I was talking about
about the three elements to create the element of Reality
Here this part is kind of left to your practice
and in the tasks of understanding this part
so it's also the task of understanding the connection

why for example I moved to the element of cognition
Well in principle having distinguished
some three elements of the construction of Reality

i.e. understanding can be multiple
when listening to a lecture it can change
there's for example one understanding
or a different connotation etc

So I've delineated the field of cognition
from the point of view of your Consciousness
and it's this area that characterizes
path
that you can only do by cognizing something
i.e. having generally speaking
even registering systems so Perception
let's say it could be vision
or it could be a clairvoyant element

but as soon as you perceive
Perception itself can be immediately controlling
in my technology of salvation
because for example the Creator when he realizes i.e. builds Worlds
or when He originally built the world in general
in the context of the absence of time for example
where all future events have already entered
the wave of Perception
created an already controlled Reality
for example in the Creator's Perception

so it turns out
that cognition from Perception
is control
Again this is largely a logical principle
of unpacking information

and it turns out
that if we have for example a situation
as in the case of the Creator
you can see
where there's a control on the wave of Perception

that is to say that this control is such
that if we look at it for example
in terms of the optical model
so the awareness of the current event is such that
that the area of control
is running later and later in time
and you have time to take control

So functionally
it's kind of a simple enough problem to understand
but as you're in the business of
creating all the elements of Reality
including so the awareness of the control area
then there's an intermediate area that's created
how to control
then the control impulse is introduced

and all this happens
only in the initial control impulse
which is when you perceive something there
either by physical sight
or senses
or clairvoyance

and that's the basis for the stability of the Macroconstruction
i.e. the whole world

Then you see that when I said sustainability
from the point of view of the whole world
then you can see with concrete examples
for example take a tree
and consider the process of photosynthesis

then let's say it's just light
It would seem that yes the optical element of Reality

in contact with each other
gives rise to the principle of the birth of life

like plants which means that as such
have an energy source

here having similarly examined
your system of Perception
you can see
that if you as information
you have eternal life
you can reproduce the information yourself

Now that's a logical progression it would seem Yes
I've been building a logical or near-logical process
all the time now

but this part of the lecture has to be practiced on your own
even though from one point of view it's completely illogical
this information
but from another point of view
I kind of approached it on a logical level

Here you have to be careful
the contact between logic and the irrational
kind of non-logical plan of Thinking
I'm conducting it here
and in principle I want to make autonomous
the logical area of control

provided that when we work there
there is an extension to all say irrational
i.e. external areas or internal

i.e. in this case the logical type area
where thinking you already have control
of some distant or approximate
basically any physical informative reality etc

i.e. in this case the control will consist in the fact
that you're just thinking
in the realm of ordinary logical thinking
and that propagates
in terms of the stability of the whole structure of the world

so when you're looking at
exactly the impact of the impulses of the external design of the world

on the control logic
you can see
that the logic is formed as a combined value
of all the external elements of the world

combinable
i.e. the value that can be comprehended
over a certain
well a short period of time maybe

which is why I've introduced in this lecture
an obligatory function
of thinking it through to the level of understanding
that you here by the effort of your Consciousness create this area

and when you for example introduce the principle of management
from the Soul
then this construction already exists in the Soul
at the level of an equilibrium kind of harmonic system
in connection with all the elements of Reality

but since my technology is applied in essence
in terms of Macrosalvation and individual Salvation
and in any combination of events

to make any combination of events controllable
and more like this so that each subsequent iteration
would be more harmonized with regard to the fulfillment
of this Macro Task of Salvation

and provided that in fact
not always in any situation
in any region of the world if I may say so
or in some area
this information can be favorable

I mean there may be a rescuer
that he's the only one operating there or there's a few of them Yes
and yet the next iteration of it all
should improve the position and under the circumstances
that as soon as the rescuer is announced yes
in an area of possible destruction
he shows himself
and from here there should be a wave
of seemingly even greater compression there
rather than acting suddenly yes

I.e. a kind of war so to speak
or a kind of warfare
in which the detection of an enemy for example a rescuer
should still cause an improvement in his position

so strategically it's a task
which logically it's not very fulfilled
in terms of combat strategy
because detection causes at once
the enemy's attention and resources

but in this case the task of your Consciousness will be to
to find such a logical transition
where it would be realized again independently

So in many ways I'm just going to tell you here
the principle of disposition
which in one of its manifestations
this principle is manifested in the fact
that you change the plane of Thinking
to the plane of events

and then Reality is transformed in such a way
that everything that is embedded in Thinking
like the goal of control
it causes the enemy to be there
because he didn't recognize
or he's afraid
or he did something wrong

and why I'm talking about well in a probabilistic way so to speak
a variant of work
with the possibility of an adversary
What we need to do here again
to allocate the logical part of the control
so that it works in a kind of irrational way

I.e. logic says one thing
that this may not happen for example
but nevertheless you have to use the information
to twist it in such a way
so that the logic works irrationally
and you increase your position on the contrary
and improve the overall situation including your own

i.e. when I talk about the notion again
of the behavior of a logical principle

in this system
in this kind of staging task
then if possible observe

for the development of an element of logic
under these circumstances

just set the task the same way Listen to this
and enter the element
see how the autonomous
logic
and how it kind of turns over you know
layer of information
to get to the Soul's task
i.e. to achieve like Salvation anyway

and when you see the control
you can basically get that kind of control even
that for example when I do digital processing
on the basis of let's say objective diagnostic tools

and when it is seen that for example one of these victories
has been mastered
and a cancer cell has dissolved or metastasis has disappeared

then this is exactly the principle that occurs here
that a logically sent thought
in the conditions of collective consciousness
that this is impossible
it still works
as a system of peculiar inversions or something
transformation of spaces
like changing the direction of the communication vector even

I mean it's enough to change
the communication vector of a Reality element
and we'll get control in the target impulse
which you lay down vectorially

here I've already approached
to the boundary system
where the irrational layer i.e. the external Reality
interacts
with your logic

i.e. it's enough to change the Perception
vector type

i.e. to change the control optics in principle
through proper stabilization
correct stabilization of the control level for example
and you get that the whole external wave is immediately controllable
i.e. that Reality starts to be controllable

for example in terms of chemical processes
it often happens that it's enough
in chemical catalysts of some kind
especially in the field of catalysts
to introduce a seemingly small element
and the catalyzing reaction starts

The principle is the same here
you don't need to cover often the whole system
It is enough for example a certain catalyst
with directional properties Yes

It depends on what element of the crystal we introduce
and what we get

In this respect
Suppose when I was defending a paper
it was from the Institute of Physics of the Earth
so there were a lot of questions related to
how it turns out when they register in practice

that such a small crystal
dampens a large wave
like a big earthquake magnitude
and what is the meaning of the control element here

then the principle
the principle is exactly the same
I'm just a target function
like a human logical plan
I put in
well or in the target plan of a person
I just put it into the space
where the whole macro wave so to speak
it just scatters in a kind of reaction
where a catalyst works
which scatters for example this area

and it turns out that in this case
what is most characteristic
here is a very interesting contradiction

with the physical principle
phenomenon
there are no cracks so when passing through
and almost like a powerful reduction of the wave
there are no cracks

that even if it passes in that place at that velocity
like cracks are usually there
from underground explosions
they're still there
and when they put this sensor in there were no cracks

so it's like there's a harmonization phase
harmonization phase
which preserves a kind of norm that's generally accepted
like the Earth without cracks

and it turns out that if we have
this kind of control characteristic
then this all-encompassing nature of events
it comes from the area three
that I mentioned at the beginning of the lecture

the projective part of all the elements
creates the element of Reality

when this property is embedded
into a crystal
it basically just functionally
works out this algorithm
and it turns out that the Earth for example does not crack
in the zone of wave passage and in the zone of damping
if we take some element locally as it were
for control or transformation

and it turns out that working with Consciousness in the same way
For example basically all the devices all these devices
that I make or develop or that have already been created

they are built
on the simple fact of observing the work of Consciousness
and that's it

I mean it's not like I'm actually inventing
an element of some kind
in terms of it existing autonomously

I'm just asking the question
in terms of how it works
like this or the way Consciousness works

if it works
I'm basically just building on a physical model
and it's implemented

and it turns out
that the technology of constructing the external Reality
on the principle of working and controlling through Consciousness
it is such that it is possible to build
well in principle it turns out that any generally speaking
necessary quantity or in general in principle any
elements
that function
from the tasks of human consciousness

therefore they're developmentally enhancing his tasks
i.e. therefore they do not destroy
the human being as a carrier of Consciousness

and that also includes the task of other elements of Reality there
animals there plants there
because being seen as part of human Consciousness
in a certain manifestation
we can thus preserve
and give a corresponding impulse to the development of the World
where logic influences all irrational
i.e. seemingly uncontrollable processes of Reality

Here I have specifically reached the boundary here
where logic
it would seem that I could already give
the technology of the mental plane
gives control to external elements of Reality

and in principle many astronauts have it
especially there or test pilots
this technology gave control in any case
so as soon as they
on the boundary area begin to work

a kind of peculiar arises
the principle of clear systematic control
due to the fact that they see the docking boundary
where Consciousness immediately influences

and it affects Reality precisely

but as it is the task of the rescuer is such
that someone who doesn't work in space for example
or in extreme situations
should be able to do
first to maximize Macroharmonization
and then for example to do private control

which in principle the same astronauts do
but because of the lack of time
they have this link there very compressed
and they work as if sometimes in a rigid functional form even
building a system of screens in front of them
or a system of volumetric spherical elements
and controlling

In this case you can naturally do it
but it's more important when you have time
I've specifically switched to this
to the concept of for example the Spiritual Principle of Awareness
I mean I've shown here the work of the spirit
basically in the same area

although I didn't say for example any special things
but nevertheless I showed how the Spirit works

I mean it's important to me that you also see
how the Spirit works
from the point of view of let's say spiritual clairvoyance

Well more simply with the physical vision of the body
you can see for example in a mirror
the neighboring eye Yes
It's the same here
with the element of the spirit to see and the work of the spirit
So the task of lecturing in this place
is the element of spiritual control
to see the work of the spirit

from the point of view of the optical system
it is a very simple task in fact
that the element of some carrier
can be just that
that a neighboring element
will be visible or overlap
as at the level of photons for example

but for the Spirit to work
you have to be able to see
at the level of personal Perception

And so I've come to the notion
as personal Perception

which is the Perception of your personality
in the place
where you're supposed to perceive

It turns out
that you have to realize personality
It's usually basically an instantaneous self-characterization
that arises
in the staging part of even this question
If we're talking about having a personality perception
you immediately identify your personality for example

and usually you bring it out completely
and then you start
like maybe some parts
to look at on purpose Yeah

In this case we're talking about
that personal Perception
which is a volitional characteristic

i.e. why you make these decisions Yes
at a given moment

Here I for example see it
as an association so a component
for example of the Spirit of the Soul of the Soul of the Consciousness
Well basically all the elements of Reality
not only those that relate to the personality
but also those about which the personality
at the moment does not let's say think about
by virtue of its setting principles

i.e. once a person has done something
but he thinks that he doesn't have to think about it Yes
I mean that it's normal
or it might be of interest to others
and he has other tasks

and it turns out that personal Perception
applies to these questions too

i.e. that you wouldn't for example at this point in time
to a personality characteristic

well some kind of training in school some kindergarten some elements
that seem to be already mastered
but they form a general area

and this is the task of Perception
so on a macro-personal level of understanding
including those elements
which for example according to the theory of Buddhism
are reincarnation elements
according to genetic levels
these are some material elements

I mean everything that's personal
including the fact that there is a potential problem
of global macro-destruction for example
and the personality has to do something etc

i.e. if possible identify in yourself
a set of elements
where it is desirable for Perception to manifest
in the act of Salvation

exactly to make manageable
the process of bringing to your Perception
the elements of external Reality

and so when I say for example this technology
that you need to do on your own
you search for this technology
you go from the logical part
into the irrational area of your own personality

and as if this transition is carried out in any case
when you're the only one who poses the question of finding it

So there is a technology of knowledge
based on the fact that the task of searching
gives birth to a technology on the level of the Soul Spirit

and you can basically look at it from the outside
and see how your Consciousness

like these elements of development it goes through
or these areas of Perception it goes through

and we get then the result of control
which in principle with any combination of the event plan
it is always realized

So in this lecture I want to say this
I've just given a lot of things that are logical
that you have to think about

and in principle there are things that
So everyone had to try
and it was done by everyone in their own way
you have to understand right away the essence
kind of all the way to the end of the moment
in which the lecture was going on
i.e. up to the point where it's like to reach the level of understanding

as an independent work
build on the background of these lectures
for example including this one Let's say all the lectures in a row
but especially the one now

is to build several methodological systems
that would set the problem and solve the problem
to work the way the Creator does Yes
The first system
And in the first variant it is necessary to work very quickly
there for example in milliseconds to solve this problem

solved
Then you can unpack it and see the details

and the second one is here and at the same time let's say the third one
i.e. all other semantic principles
is to find independently
the transition area
for everyone it will be individual in this case
so that characterizes
that state
that Thinking is the control of the whole external Reality
in an area such as the one you're identifying
as the controlling area

where the logical procedure of Thinking
is immediately implemented in Reality

i.e. real-time operation

in this case you will note
that first of all I'm here again reminding you
this is Macro-regulation
if you want to use this kind of control there
to make flowers bloom in winter for example
this general system of harmony does not support this system
i.e. it must be a harmonic control

although if you justify that you need it
for the development of the salvation system there
you can do it

so that's why it's important to choose a parameter here
in which the harmonicity of the area is not disturbed

for example you can do it without any tension at all
to lift a big block there to materialize there
without feeling any tension at all

but for example often if you for example put the thought
that why is it so
and why there is no tension
then you can actually then do the same work
through a lot of tension through a lot of labor

so in this regard try to solve the problem
the way you want to do it
you want to feel the familiar tension
of learning
like you did in school somewhere
there for example in higher education institutions
Here you go you can for example put and pass yes

But if you don't think it's necessary
do it without strain
i.e. immediately do it by just Thinking
in the field of management

So in connection with this often for example situations
related even to the cure of the most serious diseases
on a massive scale
do not cause fatigue only because
because the management area
is exactly in the zone
where the Consciousness is not tasked to experience tension

The same is true for Macro Salvation for example
there's no exploding nuclear plants etc

but if you want to go back to a familiar area
like school for example when you're in school and you're studying your lessons

then basically you're just putting it in as a screen
and you're experiencing it

Then you can say yes you've done a good job you're tired
and you can for example have a nice rest now

I mean like try to do that
why I've touched on this area in this lecture
this area in this lecture several times
because everything depends on your Consciousness
how you set a task
that's how you'll get it on Perception

the task of this lecture is to create elements
including what the Creator does
to form in this way
the structure of your Perception
so that when perceiving any element
has a control according to the system of Salvation
i.e. it has a controlling structure

Well it's like if some balloon is flying out there
let's say physical or informational
a device that is
you know informative or physical
that catches
always sends to a precisely defined characteristic
that ball
That's what your Perception should be

when you sleep
when you're acting
but on information this is the system
in contact with which
everywhere you get a compulsory level of Macrosalvation
and the realization of your own events

which means that in doing so
a certain level of events
must be realized in any case

that is you can choose the spectrum
that from your Soul's point of view
is on a level
that it will be realized in any case
and you have to realize it always
in any case in any combination of events

i.e. you must necessarily distinguish a spectrum
where a certain series of events
you must always realize

so in this regard
by the next lecture you already come to the fact
that Perception is such
that if you
for example you need to form an element of Reality
it's enough to work simply
with the form of your Perception
at the level of either Spirit
Well you can start at the mental level
that is that which is amenable to the form of perception
where there is form in Perception

it's like the next element of Perception
controls the one before it
and the preceding element fulfills
all the things I've said

although actually the task is much more complicated than that
The one that takes over the function of the element
It is a construct
of that part of consciousness called Perception yes which is called Perception
Controlled Perception
and it has many connections
including infinite connections

Nevertheless the properties of this segment
must be absolutely controllable

and it has to sort of lay down in such a way
that you are constantly protected
constantly in control
of all external Reality like internal Reality
but internal up to a certain level Yeah
that you want to be in control of
there for example your created element

because if the element is connected to the Creator
or directly the work of the Creator
then you can kind of make that element
basically well you can only make it basically
controlling external events
and not internal events
I mean it's up to you

but what I'm interested in is
the form that everyone has in Perception
that will mean
and that gives birth to and creates the Reality
that you need
just from the fact
that this form is basically lying around you

Well it's a kind of you know figuratively speaking
For example if a tank is traveling
no matter what kind of ammunition for example lead ammunition is fired
they still don't penetrate it
The tank goes wherever it wants to go
But the tank has just such a shape and armor Yes

The principle of this technology is this
that this shape is created
which is exactly the way Reality is realized

but in contrast to this simplified in an approximate version
tasks
you have to make it so that not even a bullet is fired
as if to control all external realities
on this task

pay attention
in this lecture I have built a lot of
Spiritual constructs

i.e. I have built slices absolutely as they stand here
as elements of Spiritual control
I basically said practically nothing about them

i.e. ninety percent or more of a certain part of the lecture
is management through Spiritual characterization
because I gave a verbal picture

I mean there's words and Spirit

they're in the context
that the words form
a certain level of Spiritual control
or the development of Spirit

i.e. the development of the Spirit
in the presence of a verbal level of information

be careful here

and as I explained that the manifestation of the Soul
is in the elements of the creation of the world
so one hundred percent for example
when an element is created
the technology has to be clear from the beginning

So you look at this element
and it becomes clear to you
So I'm saying that the Soul is one hundred percent manifested
where the element is created
and not from like trace connections
or contact ties or external elements

you have to look so long
to this point of let's say lecture
to this point of knowledge
so that you get the concept of clarity
as an independent work as well

because there are many different concepts
in this lecture
and basically these concepts need to be worked through

Try to choose to work through them in an informative way
where you've looked and seen
but it doesn't have to be like you know feel it on your fingers
or to do the same thing for a very long time

You've diagnosed that you've mastered the element Yes
Go on

because there are so many elements of Reality
and you have to feel each one of them
Sometimes you don't always have time for that
in terms of Perception

so if you think that a certain element

takes a long time to master
take a long time

I mean it's imperative that in this lecture
apply
the principle of selectivity in the material you're studying

maybe some of the elements
will seem quite familiar to you
and you don't need to spend a lot of time on them Yes
Don't spend too much time on them Move on

You want to build a technique on your own
that gives you what you need
in the current version
then build it and kind of study that element

I mean that's what I'm interested in
in maximizing your own creativity
as a result of this lecture

as soon as you
such a creative process
it's quite ambiguous in principle
because I don't set you any specific criteria there
or rigid objectives

Nevertheless as soon as you create so to speak
within the framework of this lecture
within the ideological framework so to speak
look around you and diagnose
your own spiritual sphere
i.e. those elements of space
that the more developed Spirit begins to occupy
by means of logical type technology
it turns out that technology is just the structure of Consciousness

i.e. be attentive
and make this diagnosis

and as soon as you will see
expansion and increase of the Spiritual component
for example in the space close to the body
then consider that you are
and that's what it is
you're getting the technique of spiritual control
by controlling

the development of the spirit

and therefore you can structure
you know the information
that we refer to as Soul information
i.e. do the structuring of the Soul

and the further principles are even more profound
it's a very deep external control
and instantaneous input
and a lot of new elements
but which you'll see for yourself
and certain things I'll tell you about
