

GRIGORY GRABOVOY
Teachings on Salvation and Harmonious Development
Technologies of Reality Management at the Creator's level
The level of building the Laws of Reality
(3)

In this lecture
on my system of Salvation and harmonious development
I show the level of construction of the Laws of Reality
in terms of their systemic relationships

i.e. you must view any process
as a process that exists at the level
of already absolutely well largely static Laws

and when you do this process
you have to be like for example in the far horizon
close or not so close
to consider on the basis of which carrier base
so you're doing something

therefore
considering this kind of practice
that when you're practicing together let's say in a group
or when you're practicing on your own

you can consider a situation like this
that a particular practice
is practiced on a certain systemic level

I mean there's a practice that's been done
and what it really means is
that it actually showed the systematicity and the unambiguity
of this action

why I'm specifically explaining this topic in this case here
I'm specifically explaining it or even identifying it

Everything in the world goes through well sort of once
from the point of view of universal connections
but your task
to identify a situation from the point of view of future development
where everything has to go through one time
from the point of view of the Law that carries it

a dynamic Law

A law that changes dynamically

and at the same time the systemic nature of it is clear

i.e. if we consider the Creator's task
here are all the events in the world
or just you are driving a car somewhere
and the Creator creates everything
in front of you everything around you
how He does it

because all events in principle
in terms of future development
must be in every method
singular

and at the same time there is a system base
That's the goal of this lecture
that when you worked
you are always on an inner spiritual level
better even on the level of the Soul
you were always connected and actually connected
or even controlled there
the level that is legislative
for this action

For example you have practiced
that you've looked at some of the problems around those people
you know the people around you
identified and helped those people
and in doing so for example there was first a tactical position
then the immediate actions so to speak
then the distant elements
then strategies

I.e. help at a level that is quite remote
if you consider these compositions
if we consider the level when the situation is known to many people

then we get a sufficiently closed sphere of events
where tactical actions are included i.e. the immediate
actions that are not included in the analysis
so it's kind of external situations
Pay attention
first the immediate
then external

then the ones that are known
and then the strategic ones
because strategy
is based on known compositions as a rule

so in this way you
having shown once the practice
immediately did it on a certain level of the Law
at the level of sort of supporting Laws
of the construction of the event system

then it turns out from the point of view of the closedness of this system
how does the construction of the World take place in general

when the Creator for example gives some single impulse
and some closed system
for example there's a society of plants
they begin to multiply
due to the fact that systematicity is embedded
in this single impulse

So when I said that you have to necessarily
control the law of the way of so to speak construction
on the basis of which your control takes place

it's about for example expressing it in the form of a form
is about
that you are actually constructing the outer sphere of events
that you control
if the events are focused
to the center of the sphere for example
In geometry it's expressed this way

So you're a way of constructing
on certain systemic relationships
you see it
as the outer surface of the sphere
and the control is on the inside

so in order to control the inside
you must of course pass
through at least one of the boundaries of the outer sphere

and then it turns out that this point of contact
of your Consciousness
with that boundary
it first of all interacts

with all the points of the sphere

and you govern with a bearing Law in mind

so the purpose of this lecture

is to technologically

first of all to pass through the Consciousness

when you build the impulse of control

in the form of a sphere

through the sphere through the surface of the control sphere

and pass into the center of this sphere where the focused

well the event that you're controlling

For example it could be a Health Norm

of someone or yourself

The norm of events etc

and with all of that

pay attention to the practice

that when you're practicing

especially in a group

you see completely static Laws

that you've actually made yourselves

and can be done without agreement

and thus revealing the next type of Laws

of the next element of Reality

i.e. for example if we build Reality

there are static Laws that always exist

at the level of events

and at the level of logic

and yet the logic is such that

that the logical manifestation of an action

is a projection of existing Laws

on the level of Perception

and to the level

where Consciousness meets the Soul where it is born

With this formula be careful

study it

I mean there's a few times you listen to it or write it out

when you see for example

that Consciousness is manifesting in a distant area

I mean you see that there are in the world

certain objects of Reality

you often see it being built by the Creator

so there's a level of creation
where you think
that you imagine that there's an image somewhere
that you've seen before
but there's a certain specificity to that image

Look at it closely
is the presence of the Creator
He is either building this image anew in your memory
or He's building Reality in physical space
anew

So look
or in the space of information

see how the Creator
is constructing the images
that you've had in the past

and so when you form
the outer sphere of control so to speak
through which you pass into the center
this outer sphere of control
it must necessarily
affect the level of your Thinking
but in the center of this sphere
through the impulse of Consciousness

i.e. the impulse of Consciousness is traveling at such a high speed
that it kind of exists everywhere
on the sphere
and inside the sphere

This is a special control position
the speed can be adjusted so that
that the process exists almost simultaneously
but call it speed

and see what happens in control
from the point of view of this area

more practical
this technology is that
that in terms of just practice
"more practical" means an application to practice

that by manipulating some element of Reality
to consider the supporting structure
in terms of the organization of its connections

i.e. to consider always
on some sort of let's say infinite half-plane
going downwards or sideways for example anywhere
and that in this sparse informative half-plane
there are all the laws governing the system
that you're dealing with

So you're deducing
even if we consider the center of this sphere
you deduce formally events on a certain plane
and this plane which is at the bottom
is what organizes systematically these Laws

Well for example those Laws that have organized themselves
they begin to control the situation
and you have to control the supporting plane as well

i.e. the task of this lecture
is to learn how to manage
not only the events that are necessary
but also to manage let's say what is sufficient
manage
a system of connections
and the system of laws
that shape these events

and so you must here
as an independent endeavor
to bring these Laws into the outer sphere
through which as you pass with your Consciousness
you touch and cognize
either one status of this Law or another
either tactically or strategically
or for example there is some dynamic in the form of speed processes

i.e. as a result of this lecture
Well the materials you are studying are mine
you have to use them let's say
with the application of what you already know from this lecture

i.e. every next lecture
is an addition to the already known level
of knowledge

and so when you're managing
just by direct technology
that's one thing

but when you're managing
that means looking at
what you're managing
and the volume you're managing
how it's managed
That's different

although the general management techniques
they're universal unified
and you can extend
to the control of external systems as well

but nevertheless when you set up a task like this
it's clear that you're managing shall we say more sustainably

and for Salvation you have to manage at all
in the task of Salvation
only absolutely stable

so the task of absolute sustainability
the obligatory achievement of the results of Salvation
of oneself and all
it is such
that this is achieved after
after you have actually in the diversity of control
of all external systems
you choose the point
that will necessarily carry out your project

and then it turns out that the impulse of your
unitary impulse of Consciousness
can be such
that all the designs
that you've learned

and that's the state you have to achieve
where already on a spiritual basis
that impulse just exists
you just go into that spiritual state
and you're being controlled
just because you are in that state
it's called a system of Spiritual Control

and everybody can master it at the moment
when he does the control
and has some spiritual associations or states

This is the end of this lecture
as a practice
trace those discrete elements
that I haven't covered
but which can be very long
if you put words in there

but some of the moments between lectures
I've purposely made them discrete
and well where there's not that direct continuity in the presentation

but the challenge is to look from the outside in
and discover the system of connections
according to what laws this connection functions

and in general it is desirable to discover in principle
how to control
including fundamental laws
at the level of information
how to manage this level of information as well

this as an independent work
