

GRIGORY GRABOVOY  
Structuring of Consciousness  
**Combining adjacent fractions of information**  
**Sections of the Study – Politics Sociology Economics**  
(19)  
29.11.2001

Good afternoon  
in today's lecture i show control technology  
based on the principles of combination, so to speak  
neighboring factions of information

where the term " neighboring " means  
what do you  
First, define the area  
secondly, it can simply be on Perception  
as a neighboring region

while at the controls  
neighboring area  
may be quite far away  
from the geometric level of the first fraction

but nevertheless the concept of " neighboring "  
or a nearby faction of information  
is as defined  
and perceived

and on this principle the method of management  
which is being built taking this technology into account  
it is constructed as follows

i.e. first of all  
need to define the area  
which is primary  
i.e. what do you define  
as a primary area

i.e. in this technology  
it must be very strictly defined  
namely the primary area  
what do you call the first area  
in relation to which the action is performed

this area  
it is methodologically determined  
from the following principles

primary region  
should be immediately targeted  
oriented area  
This is defined as  
or an information constant  
or you just set the target of the primary area  
in management

second  
the primary domain is the domain  
as close as possible  
for Spiritual Management technology  
in the phase of logical Consciousness

and the third  
primary region  
is the control area  
in relation to second faction  
with which the action will take place

hence  
primary region  
already contains the control function  
the second fraction of information

and based on this principle  
the principle of , for example, macro access according to Macro Rescue  
he looks like this  
what can you do management  
from a single area initially designated

i.e. if the primary area already includes control  
which is characterized by the fact that  
that any other area is manageable

then it is clear that from this area  
you can make any kind of control in general  
by macro access including

and as an independent work  
consider where it is implemented here

the principle of Spiritual control  
this is how the question is put

and from the logical phase  
go to Spiritual Administration

then when you start doing management  
already applying the concept of the " second area "  
you see the principle of expansion of Consciousness  
in terms of optical things

i.e. in the optical range you are considering  
how is the expansion going, as if the growth of Consciousness  
a kind of such criterion can be given  
if for example you pay attention there for a long time  
how does a plant grow  
then you can see that they exist in Perception  
of plant growth

the same thing needs to be revealed  
in the structure of one's own Consciousness  
and on the Spiritual principle  
determine the position of the Spirit  
in relation to the practice of growing Consciousness

in this regard here in fact  
Next Link Identification Framework  
next fraction of information  
goes through the concept of " growth of Consciousness "  
in relation to the next second fraction

if you consider, let's say, the structure of the body  
and consider , for example, the function of the liver there  
in relation to the structure of the stomach, for example  
it is the functional property of the liver  
in relation to the morphological structure of the stomach  
and this refers to healthy stomach morphology

then you will see  
that functional systems such as the liver  
in such a position  
they have as an example a ruling faction  
have , for example, the morphological state of the stomach  
stomach cells

and in this regard you just pay attention

that such a principle can be extended  
for any phenomenon there  
including the phenomenon of external Reality

for example, you want to consider the principle of this  
that when your Perception reacts  
for example on a plant  
then in this case  
how to make the plant manageable

if you do for example  
as if Well in general, this is how it is understood  
optical range fractions  
mechanical transfer of Spiritual status

then how can you manage  
for example, by moving a finger or let's say there is a feeling of well-being  
to a certain extent  
you can also control  
and for example, the plant and the external environment

i.e. the transfer of the Spiritual principle  
means on means comparative action by control  
gives Spiritual control  
but already physical objects

let's assume it is possible to manage information objects  
then only the Spiritual faction of management  
will be more sparse in the optical range

as a diagnostic  
this can be highlighted  
Information Structures Management Faction  
or can it be physical?

in this case, please pay attention  
that control of physical structures  
just means  
it means simply a greater speed in Perception

at that time  
as management of information structures  
you can do it at a lower speed, for example  
works in the field of Perception

and now  
by means of such kind of peculiar link layers, so to speak

I brought it about  
that I am considering the second faction  
in relation to which the action takes place

i.e. two-fractal  
two-fraction for example yes information management

right here right now  
the main point of this lecture  
in this fragment  
consists of  
that in control through the second faction  
the first level becomes  
it is the structure of the growth of the Spiritual component  
in management

i.e. as soon as you get close  
even here by logical link path  
to the second faction of management

because i'm talking about  
there are no clear-cut things now  
in management

then the main structure of the presence of this faction  
is an optical characteristic revealed  
growth of the Spiritual component  
your Perception

i.e. how the Spirit itself actually grows  
at the level for example, optical range

let's say you perceive  
artwork  
but at the same time if you perceive the Spiritual faction  
i.e. the spiritual status of this work  
then something peculiar happens  
Understanding Spiritual Growth  
of this work

and this is already the second faction  
she should grow the same way  
as you considered for example The Law of Growth of Consciousness  
when moving towards it

of these two Laws

gives exactly logical thinking  
in the projection of Perception

this is the postulating sign  
It is advisable to remember it  
and calculate actually <sup>yes</sup> calculate  
logical phase of Perception

when you are already working in the logical phase  
<sup>Well,</sup> with such a unique root system  
then inside the logical phase  
a similar mechanism starts to work for you  
the same one I just brought you to

and as soon as it starts working  
you see that <sup>well for example</sup> logical phase  
as a reflection of the physical  
generalized principle of Reality  
in the collective Consciousness

<sup>for example,</sup> wood, stone  
any structure is external  
including a person is generally speaking  
static phase of the logical <sup>system</sup> of Consciousness

and once you start working  
within the logical system of Consciousness at such a level  
what in the two-fractal projection  
the second fraction is another state <sup>for example</sup>  
I was talking about the Spiritual state  
and about the state of growth of Consciousness

but the growth of Consciousness  
The Law of Development of Consciousness  
there is a Spiritual fraction Spiritual fragment or Spiritual essence  
there is also

if we look at logic  
then the growth of Consciousness includes the Spiritual level

and the selection in its pure form, <sup>as it were</sup>  
<sup>well,</sup> in quotes, the Spiritual component  
this is what you get when you go deeper  
<sup>as if</sup> a more general fragment

the same

if you look at the physical level of a person  
for example, you need to restore a person's heart

then the functional connections of the heart  
with the whole organism  
Well let's assume functional  
this is the movement of blood for example

and if you have  
level of functional logical connections  
then restructure the connection  
you can do it with this two-fractal approach

in this case the second approach  
it is not as if it is fully declared  
or present in the first system

i.e. if we are talking about the physical body, for example  
then the Spiritual component of the body  
For example Well, let's assume it can't be examined with modern microscope tools

and if we talk about how the body is built  
at the level of Spiritual positions  
then we can say that it is built  
because there is such and such a Spiritual component

i.e. reproducing the Spiritual component  
from itself  
and so if we delve into such things  
The laws of the structure of, for example , physical Reality

then the concept of control of physical Reality  
or there social Reality  
they are therefore reduced to the concept  
formation of links of collective Consciousness  
which are decisive  
in relation to some specific  
local event construction

for example, if you teach math there for a very long time  
Well, a person who knows Russian well , let's say  
then after some time  
some mathematical laws suppose  
will be similar to the Laws of Combination  
in his Spiritual view  
for example, any syntactic systems of linguistics

or even spelling

i.e. here is the meaning of intersection  
as if different volumes of knowledge  
it comes down to this  
that knowledge is at a certain level  
have a unified character

and that's when you cross over  
to such a structure in the collective Consciousness  
then you find exactly the lever point in management  
a kind of small lever  
pressing on which  
you can get great control

and these so-called lever systems  
in the structure of collective Consciousness  
which I have identified now  
in the form of optical elements  
for example, I didn't describe it in words

this means that these elements are controlling  
according to the Macrosalvation system  
these elements are valid in any case  
and they always lead to that  
that a macro-catastrophe is not happening

i.e. in fact we are talking about that  
what I have now identified  
at the level of Perception  
in the optical range, moreover  
well, kind of like particle regions, so to speak  
which always provide when they are activated  
always ensure that a macro-catastrophe does not occur

hence  
technological path  
Well, that's what I just brought to that  
that these particles can be activated  
this is a kind of algorithm of approach  
to these kind of peculiar photonic ones or something  
images of Perception  
it's like particles of light they are perceived

and among the entire spectrum of light glow  
what is in Perception

this is exactly the way  
it leads exactly to them

as soon as you come to them  
then you can immediately consider a stable base  
in the management as if in a general sense  
system

and when do you cross over  
to the level of, for example, self-government or self-healing  
with external harmonious and internal control

then they form stable positions  
just from a large number  
let's say such so light elements in your Perception  
which form  
for example, if we go deeper into the area of Spiritual Management  
Login  
or logical as well  
the process of sleep for example  
i.e. the Law of sleep development  
in relation to some action

including can be considered  
Laws of development of the physical body

why exactly at such and such a time  
Well for example, a person is in the prenatal period  
let's assume there are 9 months  
why are there any age criteria, etc.

i.e. as soon as you look  
collective phase  
these particles are like Macrosalvation, so to speak Yes  
in the optical range  
you see that they are built in a logical phase  
in projection onto physical Reality  
as certain laws of development

and when you these particles  
you're starting well as if to leave in Consciousness  
as remote points  
and move more towards the physical level of development  
i.e. to the physical manifested level

then you immediately find

principle of organization of the physical body  
from the point of view of Macrosalvation

i.e. these are precisely the achievements  
well, sustainable, so to speak, harmonious development  
this is a famous phrase  
but here it becomes technological

i.e. here you see  
what is it like in this regard  
organism  
from the point of view of functional systems

and when you move on to the organism  
as to the adjective system  
what you need to do at a specific moment  
from the point of view of your Thinking yes  
to ensure access  
let's assume to show clairvoyance

then you will see the development criteria  
criteria for selecting target control systems  
in order to ensure a specific goal in management

i.e. each goal  
you can choose in this case  
not in a logical way  
and due to unique lever systems  
i.e. as if tuning , well, as if tuning the body  
as an external system  
in relation to the management function

and so as soon as I got to this point  
external system  
in relation to the management function  
then the spiritual status of a person for example  
how man was created  
what does it consist of on a material level

it is manifested in that position  
which can be seen very clearly  
here in this position  
here be more careful if you work on your own

both from the point of view of the Spiritual organization  
i.e. from the point of view of the Spirit, man was created

i.e. the mood of the state of the Spirit  
why is it exactly like that  
and why is the body like this then

from this position  
as soon as you get to this point in the lecture  
can be seen  
as the Spirit is simply the Spirit in its purest form  
organizes a person

when will you develop this structure  
and from this point you will move to the outer  
in relation to her  
you will see how the logical phase of Consciousness  
organizes a person  
i.e. physical matter, etc.

i.e. when you start  
these structures generalize and transform  
in the form of an action here is a target action  
then you see the total projection system  
which represents, for example , the physical body  
and plus development goals

due to this  
as if having decomposed the control system  
well, no way as if this is what I presented  
human regeneration mechanism  
due to different structures of Consciousness

there is the structure of Consciousness  
corresponding to the supposed Spiritual system  
or just the Spirit  
structures of Consciousness  
corresponding , for example, to the logical phase, etc.

you see that multiple organization  
the same cell from different systems  
or self-reproducing  
or contained as if within itself  
declares precisely the structure of the Soul

i.e. here is the Soul in this form it appears  
well, in something like this let's say highlighted by your Perception  
view

and at the same time here is the control that comes from the Soul  
i.e. the Soul which in this case  
is a control system

so this is how this control occurs  
what is in your Perception  
is starting to take shape  
and this is immediately visible even in the optical range  
endless line of development  
namely the Eternal structure of development

when do you start  
for example the Eternal structure of development  
distribute  
on a specific projection of the case of some case yes  
let's assume including treatment of some events there  
treatment for example another person

then you see  
that the system that is defined  
such as the physical body  
logical status Spiritual etc.  
the whole system is in the form of this kind of substrate or something  
this already glowing optical system  
which I was talking about  
this is the system of Macrosalvation, so to speak

this system is represented in this case  
in the form of the Soul specifically

and specifically your Soul  
which already works in this case  
on the same principle  
that the next level of development cannot be destroyed

and the glow is exactly the same  
as I said about particles in the collective Consciousness  
which when activated in this way  
in the lever principle they work  
that a macro-catastrophe is not happening

i.e. in this case  
this is the uniformity of the glow  
or uniformity of the level of work  
from the Creator  
Soul created by the Creator

and a glow that has the same level  
but this is an application system  
it was not the Soul  
namely the collective levels of Consciousness  
i.e. the organization of the next level of development

hence  
next level development organization  
has approximately the same spectral range  
like Soul  
next development in the future

why is it often the future picture  
it's very easy to see and it's like Well, it's completely clear  
no need for example there is straining  
to turn on the logical phase

because  
characteristics according to vibration even characteristics  
they are one and the same  
components of the future optical glow  
and the current, as it were, optical expression of the Soul  
in this case it coincides

and when, for example, you do management from these positions  
then control, for example, by a direct access system  
in any in any level of events  
can be quite simple

enough spectrum  
optical spectrum of Soul control  
output to the control system  
it is necessary in the configuration of the form of light  
in the future  
and just kind of impose  
Well, let's do some synchronization

Means well if in physical models  
as a type of diffraction grating  
and if in Spiritual models  
it's just a logical overlay  
by form of management  
and management is done  
due to the knowledge of the functionality of the Soul, for example

and when you well look through

there we assume the same thing again  
artwork  
that is the spectrum of the development of the Soul  
why the picture for example there is some kind of Eternal  
or sculpture

because the glow was synchronized  
in this concept

and it turns out  
that all the time the expression of the essence of the creator is there  
who, moreover, staged the events in such a way  
that they are synchronized  
with the developing events of the World

and moreover  
this picture is still gaining experience  
and experience also passes on  
go to her in large numbers, for example  
or sculpture

that there is this glow here  
the principle of this imposition that I have now reflected  
just look at well there on the canvases we suppose the painters  
such great ones

and look how it is reflected  
it is precisely this management structure  
where is the accumulated experience  
already as if recreated by the material environment  
conveys positive status there let's assume  
there is a healing effect  
when viewing

and that's how it is as soon as you  
consider this characteristic  
then making it a local system again  
just like here by analogy  
I have already considered the work of the Soul  
such as a fractal system

that you can any system in general  
by level, moreover, Macro access  
and direct access from your Consciousness  
make synchronized  
i.e. any object of information

let's assume there **any car** is like that  
which is considered an inanimate object  
make it animated in this sense

i.e. participating in the process of the same Macrosalvation

i.e. the meaning in this case  
that as soon as you  
do applied Spiritual management  
in relation to any object

for example those pictures <sup>yes</sup> I gave an example  
who work there for restoration  
which <sup>seem to</sup> attract the following meanings there For example  
thousands millions of people etc. etc.  
which give exactly positivism  
next event status

then here you will see  
that as soon as you start thinking like that  
then the next event status  
is produced on the basis of, <sup>for example,</sup> this technology  
and <sup>that means</sup> the reference point is  
<sup>for example,</sup> the composition of the past

i.e. what is information from the past  
from the point of view of the diagnostic system of Perception

but there is also a glow  
which comes specifically from the Creator  
presence of the Creator

and when <sup>does</sup> synchronization occur?  
then the movement towards structure  
which is based on the past  
in the volume or speed of your Perception  
increases infinitely

i.e. the speed becomes infinite but static

this is quite an unusual condition  
but this is a state  
this is <sup>like</sup> a fragment of a photo fragment  
or as <sup>we say</sup> optical fragment  
it looks like some kind of frozen photograph

in management

just combines as if  
at the level of material space  
combines simultaneous presence  
Souls  
Spirit  
and Consciousness  
at the same time the Creator  
this is external control

and from here you can  
through the logical phase for example there in Consciousness  
through the Spirit  
or through the structure of the distribution of the Soul  
This is exactly what you can use  
structuring the Soul  
as if simply distributing control  
by phase for example identity

as I said, for example, make an identical form  
inside the information corresponding to the Soul  
and you get control  
for example in external Reality

and when you these controls  
for example, you highlight it as a kind of static phase  
united in one physical space  
you see how the space is organized  
around a person, i.e. in relation to a person

this point of view  
it concerns only space  
in relation to a person

for example, here I am saying  
there is such a space in front of me  
which I described  
but I speak in relation to me  
specifically to you  
to the form of man

if i want to know the functions of space  
in relation to for example there to the tree  
functionally in the Perception of a person for example  
they are different

and I'm not talking about the functions of the processes themselves yet  
I say that I'm talking about them

but if we go down for example  
in the function of space  
then we can unpack the system  
For example there is a clairvoyant  
direct management development system  
just at the level of input logic

as soon as you entered this space  
you see it right away  
what is clairvoyance in principle  
for example, in control, controlling clairvoyance

what is it  
for example direct access to any event  
just in your logical level of development

i.e. synchronization is in progress  
your logical level of development  
what you represent as logic  
and what you do for example  
With  
the fact that there is direct control  
with such training

and as an independent work  
Now look at the sphere  
for example she is in front of me  
at a distance of 2 meters for example is located

height above sea level  
means horizontally vertically  
for example let it be a meter  
it is a sphere with a radius of 50 centimeters

there is control within this sphere  
which is characterized by the fact that  
that this control is familiar to you  
i.e. it is a natural control for you

and the shell of the sphere  
i.e., strictly speaking  
the surface of the sphere itself

this is what you need well as if to - to master yes  
i.e. to - to understand in the control system  
to make the control for example as follows  
for example in the development of Perception for example Yes

and take it and do it like this  
carry out such transformations  
so that in the center of the sphere  
so they were identified  
all concepts of your Perception

i.e. do it at the same time  
as I say  
you do it right away

as soon as identified  
all concepts of Perception  
from inside the sphere it begins to grow  
well, a kind of lotus, so to speak, like nirvana  
such a geometric shape  
which means it is characterized by  
that she has infinite access  
in a single-space environment

i.e. in a visual version  
we have a kind of single-space environment  
a kind of growing lotus flower  
and on the other hand, every point  
it is an infinite connection  
all of them spaces

and when, for example, you enter into the concept of such  
in such a concept  
" infinity reflected in one form "

then you see it right away  
that for example any human cell  
this is also a form of infinity

for example, coming to the human cell  
Well, you look at it from here and from this position  
i.e. I am now changing my point of view  
you see how it works  
Spiritual structure of man  
with t points of view already personality  
i.e. multi-purpose and multi-component level of personality

and not, for example, simply identifying the system  
when the Spirit, for example, organizes the body  
creates

and when will you finally impose the system  
when simply the Spirit creates the body  
plus you are looking at a multi-component system  
then you are already beginning to see the work of your Soul  
just watch

and that's when you start  
observe the work of the Soul  
then surveillance technology  
it should consist of  
to see  
as in this case  
management , for example, extended to information  
let's assume according to Macrosalvation, i.e. according to Salvation of all

as in this case  
it means it is activated by the Soul  
at each iteration  
for example the next period of time

i.e. how does the Soul do this work in general?  
at the current time

and when you look at these systems  
you can them on a logical level  
help  
i.e. to bring up well fractals of information  
make some areas more highlighted  
some areas there for example translate  
to another management disposition

and thus  
build a management structure  
at the logical system level

when you logic in this way well how would you install it  
in this system that I just talked about  
you will get what the logical phase of control  
even when you for example sleep there  
or when you for example  
Well, you don't specifically make control systems

then your logical phase  
it will be in a peculiar way  
as if trained in your Perception  
logical phase  
that you will work constantly  
in the field of Macro-salvation  
i.e., at a conscious level  
from the point of view of today's lecture

then the degree of this awareness  
it will still increase  
because it will be possible to consider  
some nuances  
some dynamic transition systems for example  
personal for example Yes  
development, for example , to the level of , let's say, some technologies  
which would practically lead  
maybe to well, sort of a certain level  
the next thing is structuring in management, etc.

i.e. here we need to try to work in this way  
so that the words you reproduce  
we connected with the form of management  
at the level of Spiritual Administration

this is exactly the training  
which will need to be conducted  
from the logical control phase  
consists of words  
which you speak on information  
docked with that  
what do you do in information management

and even if you do the management  
in the form of control systems  
which are formed well formed in such a way  
that these are not words  
and just control in the optical range  
expressed and which you understand

it should still fit together  
as if with the second fractal  
which is  
or a fractal within the first system  
but in a different, as it were, reflective system  
or fractal means which

in principle it can be created by you specifically yes  
it is possible to introduce such technology  
but it can be very long then

and there is another simple one in this context  
management principle  
related to that  
that a future fragment of information is sufficient  
because the last fragment  
it is controlled through the future structure

and therefore if you for example go out  
only at high speed  
on information of the future  
with t glasses of spectral correspondences for example  
in the optical range of luminescence  
in the work of the Soul  
for example a future event  
from the point of view of Macrosalvation

that past management  
often it's just that  
what is matter  
in management

for example, what does the information of the future consist of?  
if for example you look and lay it out  
by level well how to unpack the archive so to speak Yes

then the information of the future  
consists of fragments  
in this in this level of management is meant  
It is held together by fragments  
which means which are completely specific  
are fragments of past events

and one for example well, a simple description of a past event  
for example, the ground there a second ago was also ground

but if, for example, we consider the spectral level  
then if you tune in a second ago  
and for a second, for example, forward into the future  
then the spectral characteristics are as follows  
which is clearly visible  
that the Earth which a second ago  
it has a different length

in information at the optical level  
this is already closer to the line  
whose growth goes to infinity  
infinity is the past

Means Well as if at a certain interval of development or something

and plus in one point  
it's still a future fractal

and it turns out that if you are in the structure of Consciousness  
come in  
from the point of view of this management model  
then you can get control like this  
what do you want  
just using  
information of direct control, i.e. future  
without relying, for example, on the cause-and-effect system of the past

since the cause-and-effect system of the past  
as I said  
in this case it may be  
simply an organizing environment

if you unpack any future event  
then as if as well as pictures of sorts yes  
specific events of the past are revealed  
they may just be mixed up  
according to the two-fractal system thus  
what could it be for example there  
one event taken from one time  
there is something else from something else, etc.  
combinations can be made  
generally speaking, an infinite number

and if for example you enter  
how these combinations are organized  
you still end up in the same particle again  
Means as I explained  
the particle there is an optical particle  
providing Macrosalvation  
that's what I called her

i.e. in the past it is also revealed  
as soon as you ask yourself the question  
and in general how are these fragments put together ?  
and when you do for example control of this type

that a piece of the past  
with the Macrosalvation glasses  
layering on the future  
you can do it  
direct logical control sphere  
built  
on the already fundamental principles of direct control  
and knowledge of this level of development of Consciousness

and do it now  
as a work such a connection  
control point from the past  
let it connect  
with control from the future  
and do it in front of me

and I'll have a look  
and how then does the logical phase develop  
how does the control logic develop in this case

just watch  
and I will watch you

if in this management  
Well how about listening to the next level element  
in logical development  
that is a situation that is well known to everyone  
what is a controlled target  
i.e., knowledge of, for example, some educational material

so this is the goal  
becomes manifest  
i.e. the material becomes as if known or understood  
it means in the case when you are all the time  
you impose it as if from the point of view of past knowledge  
you want to get let's say future knowledge yes

This is a fairly simple logical construction  
mastering some material  
he must provide an element of the past  
well, some familiarity with that design  
which is obtained in the future  
some kind of acceptance on a spiritual level

and then it turns out in the logical phase  
you get logically sound management

i.e. you understand that you got what you want  
i.e. the logical phase is as if enlightened

and this exercise is based on that  
what you get is the development of the logical phase  
in relation to the management objective  
but through external control  
as if a second fractal environment

those. management position  
is divided into the control environment as such  
which may contain a second fractal  
and the second area of control

but also  
you can control from the second area  
which is not contained in the first

these are sometimes incompatible concepts  
or even incompatible

but how does it work out here?  
that so many characteristics immediately arise  
firstly, in the management that I mentioned  
and secondly you can receive  
so this type of control  
which may determine  
in each iteration of control  
the mandatory attainability of Macrosalvation

as soon as you sort of technologically study  
these structures of development of Consciousness  
you see it right away  
that Thinking based on these principles  
allows you to make a thought  
Well as if infinitely stable  
in every phase of existence

and if for example this thought  
make it very stable  
from the perspective of existence in a past event  
then you can do the same  
as if by projection glow  
as if shining a flashlight, so to speak  
it means somewhere far in the past  
you can do lighting like this

to cover future events  
it would be more stable  
again according to the two-fractal system

and as an independent event  
well, that's something you can do yourself  
make such control  
for example, consider the control design  
some which you want in the future means to realize

and in this way  
that management needs to be more sustainable  
because you have certain visual systems  
which you perceive from the perspective of past events  
it's as if you're saturating them with light

but pay attention  
what can be done just by remembering fragments  
some information  
make them more saturated  
and gain more sustainable management in the future.  
or receive in general  
control structure in the future

i.e. due to the fact that you simply highlight  
fragments of information from the past

and thus  
try to collect the control  
which will be implemented in the future  
and consider how fragments are then  
all the same , the past is combined  
Why

i.e. find the laws of combination of fragments of the past  
from the point of view of what they are  
For example, the laws of future development

and try for example there asking a question  
if there is gravity  
a second later she exists again

this is the connection " in a second "  
how is it implemented at all  
here from the point of view of this technology

i.e. how to ensure then, for example, human health, yes  
if we assume he was born from the beginning  
and in purpose he is healthy

then the next thing to understand is " in a second "  
it could be a specific technology  
which provides real health  
from the point of view of the organization of the material  
according to today's lecture

and today I'll tell you more  
except for the part that was just described  
as a lecture  
I will tell you about the meaning of the part of the Teaching about the section of  
the Teaching  
which relates to the management structure  
in politics  
in sociology  
and in economics

the thing is that this part and section of the Teaching  
which exists  
in the structure as a control system  
This section is designed to unite  
actually, in general  
political  
sociological  
or economic processes  
from the point of view of the primary link

and here from the point of view  
for example, if we take a two-fractal system  
according to today's lecture

then having, for example, a control task  
for example, by purpose of developing society  
where is there such a concept  
as a politician let's assume Yes  
or sociology  
or economics

then you can use  
mutual displacement as it were  
various fractal systems  
for example in the light optics of Perception  
what moves then by the way

on a specific interaction mechanism

for example social levels

political

or for example economic

i.e. if you look for example

that the two-fractal system in Perception for example

gives from the point of view of analysis

or generalizations of development

some element of Reality

then according to my teaching

for example if I say

about management in the sociological aspect of understanding

First of all, I'm talking about that

that in sociological terms it is necessary to ensure that status

when the personality is fully manifested first

by personal freedom by creative freedom

and this personality is defined

in the direction of future development in this way

that the whole society is harmonious

at the same time it develops

sociological status

as if in a two-fractal level

at the bi-regional level of governance

in this case it is manifested in that

what when personality

which is part of, for example, society

in the information sense

does personal tasks for example

however, as I said

that regions can be completely autonomous

in fractal environments of control

can do his personal tasks

but at the same time interact with the tasks of society

for the purpose of harmonious development

and when a completely free person

does the same thing as the whole society does

for the purposes of, for example, Eternal Development

then the criterion in this case is

namely the strengthening or target criterion  
in a social sense  
is precisely the Eternity of development  
what does a specific addition give  
these peculiar particles that I was talking about  
from which information is generally constructed

i.e. the criterion of Eternity  
in this case  
this is a sociological principle of the direction of development  
in which here is a two-fractal system  
i.e. and independence  
and following the action of the goal  
is combined on an ideological principle  
for example Eternal development

if we consider, for example,  
principle well let's assume political  
then politics in a two-fractal system  
is built in this way  
that a political decision, for example, of one row  
must contain  
let's assume a political decision  
some next row  
or be interdependent for example on certain goals yes

if the one who is elected to a political role  
starts setting goals  
it turns out that they must combine in themselves  
as previous goals  
political ones, including at least somehow take into account  
and create the next level of development  
from the point of view of any processes  
which the individual, for example, considers necessary  
declare

so to speak, at the political level  
two-position system  
in which the target function is, as it were, at the political level  
also contains a first level substructure

from the point of view of my Teaching  
is exactly that level  
well, the development of political technology in the future  
which already ensures at the political level  
as unity of purpose

and at the same time, as if first of all, that  
what at the political level  
the person is independent

i.e. he chooses completely independently  
what does he want for example  
and what kind of political system does he want to build

i.e. under the condition of free choice  
still developing at the political level  
very specific creative  
as if a political technology for the development of society  
or the policy of development of society  
which includes  
like freedom  
and on the basis of freedom  
general target development plan

i.e. a policy of complete freedom  
so let's say it can be determined

creative policy of one goal  
but complete freedom of each political component

when we look at this design  
there the level immediately matures  
which is well as if by a volumetric level  
inside such a logically constructed words  
phrases

and here is this volumetric level  
it is characterized by the fact that  
what connections are there really?  
infinite set  
but they are not revealed in the political system  
for example, in the form of specific frequently asked questions  
as if of a technological type

and in connection with this  
here you can get the technology  
from multidimensional or multisituational models  
in politics  
if we just reflect  
to a certain level of Consciousness  
famous what is needed for example Eternally develop

and receive  
from uncertain political situations  
very specific benefit  
in each subsequent iteration of development

those. no matter  
who is standing there for example, in power, so to speak Yes  
what political currents  
let it always be useful for example to society people

and besides, let it be useful to nature there  
For example there are some next levels  
which will be reproduced  
for example in a social sense  
and what does the social status of development depend on

from the economic point of view according to my Teaching  
the economy is distributed in such a way, so to speak  
in the Consciousness of people  
what if well everyone knows the characteristics  
what does more economic opportunities mean  
can give more for example Yes  
in the area of some, for example , material possible actions

but according to my Teaching  
each one is created independently  
created by the Creator  
and the amount of funds  
it should not be decisive  
in terms of direct control  
for example, because Well, the person who is there  
or he is a child  
or he doesn't have any special financial resources  
can still do the management  
and I really could have saved myself

i.e. the purpose of management  
should not depend on economic levels  
from the point of view of Macrosalvation

and that's when we start  
connect this with that  
what is happening now for example Well, in a real system, let's say so  
where there is as if well the final factor of development  
including even states

that is the economic principle  
Well like this two-fractal system  
consists of  
so that what is located  
as a substructure of Eternal development  
i.e. the final system  
for example, development of the state

and also as a system  
which for example Well, it determines the next stage, yes  
unique support design  
what does development give in the future

when these systems start working  
exactly as local systems  
here in a two-fractal system  
this means it is already a fractal, i.e. the second system  
which is not a manager  
the control system is primarily the same  
which is based on the construction of Eternity

then here you can see that the Spiritual status  
here you can catch and examine  
what is the Spiritual status of economic development  
which can be quite unusual  
in terms of well or what? as if applicability yes  
for example, to some completely private local matters

but in reality  
as soon as it is revealed  
Spiritual status of economic development  
the same one works again  
two-fractal system  
where the component is the multidimensional component of the Spirit  
containing such logical information  
but not on a logical level , I suppose  
is legitimate in the control system

and already as if from this level  
you do management related to that  
what when you do management  
for example, in the logical phase  
and at the same time the one who, for example, well, not having it there  
sufficient amount of financial resources, so to speak  
can also save there on the Macro level  
and have the same direct access

even through economic channels

in the social sphere this results in  
that there are, for example, such levels in society  
or what about information distribution ?  
when every person  
let him not have enough funds  
may affect the Salvation macrosystem

Well, the structures there are kind of unique , so to speak.  
there, under some ministry, like, say, the Ministry of Emergency Situations  
or completely independent of the state system  
nodal systems  
where information is provided it is processed  
and you get control

i.e. at the logical level  
as if the Spiritual status of management  
it translates into that  
that financial support for freedom of expression  
should not be an obstacle to Macrosalvation

another question  
that this same specific person  
he may not implement it there, of course  
there are some financial levels  
maybe he just doesn't need them, right? For example

but from the point of view of the economic level  
according to my Teaching  
the economy must be a saving grace

i.e. every member of society  
must be able to  
through economically distributed systems  
Firstly, it is really possible to save  
i.e. to participate in Macrosalvation  
without infringing on freedom of participation

and secondly, it means that it is desirable for it to depend on him  
next economic disposition  
as if in the next spectrum of development

and again in a two-fractal system  
we get  
from the point of view of such an economy

that actions are as if of a primary target level  
determines the next fractal  
i.e. the next development plan

and then we get  
with this approach, it's like an economy of Macrosalvation  
sustainable development economies  
what are such positions  
such as there is a sociological aspect  
political  
or for example economic  
they intersect simply in unity of goals  
for example just Spiritual goal  
namely creative development

in following the canons of Eternal development  
as an ideological goal  
which determines such systems  
creative laws

we get very simple projections  
as if well, quite understandable in logical language  
expressed in words for example  
in the form of some school technologies there  
kindergarten education systems if children go to kindergarten  
or other prenatal systems  
at the telepathic level of control

according to knowledge  
which in principle almost every person can do  
having set such a task, for example, in well , it would seem like this  
may be in macro areas  
in a general sense, such as politics, for example , let's say  
or is it sociology?  
Well, economics is more specific often  
has a manifestation in terms of management

but still making the economy as if it were Macroeconomics  
we can in concrete actions  
influence specifically  
on politics  
on the economy  
on sociology then

the main thing is to integrate everything  
and get a kind of connecting knot

how can we

Firstly, to move from one system to another  
from the point of view of external and internal management

and how, being here at level

there well some household ones

Let's say you buy something just in a store yes, watching programs

how should the system be managed then

For example there is no development of creative

political power economic

or for example do it like this

so that the sociological system of development of society

it was really like that

which would ensure the endless development of society

and in connection with this

just try to practice

based on target presentations

for example such a section of the Teaching

how to manage

in politics

economy

and sociology

having attached

for example, the specific structure of the lecture material

on a two-fractal medium

fractal in this case

can be considered more

how exactly is factionalism a separate model

but also fractal

as a self-propelled system

consisting of the Laws themselves reproduced firstly

secondly having Laws

in relation to the external level of observations

i.e. static Laws

and when you look from this position

and just ask yourself a question

how to do control in this case

control mechanisms at the Spiritual level

they will become immediately

Well as if more manifested more famous

when the goal is known and the mechanism is known

which, well, it would seem, was proposed

just in a universal context  
it is not necessary there, it is only assumed that it is controlled  
in politics let's assume Yes  
or in sociology  
or in economics

this control is correlated  
to any level of target management  
including health restoration

and creating unique unifying transitions  
here by means of superposition of light even masses  
light forms  
you will be able to determine the laws of dependence  
for example, how is it even possible  
to balance the country's economy, for example Yes  
to get normal health of people

as a sociological criterion to determine  
from the point of view of these systemic laws  
which are obtained by superposition  
just even light forms

when you already have this mechanism  
and you receive, for example, specific confirmation  
Well, in practice it can be done there  
provided that Reality is also the governing one  
it changes quite dynamically

i.e. tracing it in concrete Reality  
you will receive specific  
Well, first of all, it means the state is in control , or something  
which allows you to really participate  
in all processes of the Macro level  
including economic, social and political

and at the same time make sure that  
as it happens in the current iteration  
this management

to be assured as if by that  
what do you think is logical there for example or by diagnostic means  
you see it simply in Reality

so here is this two-fractal system  
you as an independent work

take part  
in systems of such Macrocontrol  
that's how it would be in an economic sense  
political and social

and try to get  
exactly adequate results  
from the point of view of what you observe  
how does the control change for example  
and affects the Macrosystem

i.e. this control  
It is necessary to monitor  
that this management  
even if it touches there for example, macrocriteria there

let's assume there in some specific area  
the situation needs to be improved yes For example  
from your point of view  
well, in the sociological aspect or in the economic one

let these be large areas, like macro areas  
make management  
with t glasses of vision for example there is a two-fractal system

and see how the influence occurs

because according to the system of salvation and salvation of all  
Managing the Macrosystem for the Salvation of All  
or there by the local system  
this is basically in a unified plan  
one and the same

well, from the point of view of a kind of peculiar force  
or so to say time  
which must be spent on this management

the main thing in this management  
It is absolutely necessary, if possible, especially at first  
control that your management is actually implemented  
according to the Laws and tasks of Eternal development

as soon as you start to consider  
what is going on  
you will immediately consider such a coordinate  
or something in Spiritual Perception  
that the freedom of your personality is such

well , are there more degrees of freedom ?  
since you can influence, for example , the level of Macrosystems

and look from this level  
how to build this  
from the point of view of a two-fractal system again  
how to build for example control  
Well, not necessarily  
only on economics, politics, sociology

and build on some other systems there  
that interest you

i.e. to make a kind of transition transfer of the model  
but also on macrosystems again  
better preferably on macrosystems

This is where I end today's lecture.  
there will be a 15 minute break now  
and then answers to questions

I'm starting to answer questions now  
one of the questions that I will now, well , I will express  
this is a somewhat general question  
it was transmitted even earlier  
and here he touched on that  
what does it mean *if we have a generalized control system*  
For example there *various*  
*principles of management*  
*various methods*  
*then how are these systems* For example there  
let them be in some cases private and completely specific  
Well *translate them*  
*namely in the unified management system*

i.e. *how to do it like this*  
*so that a set of methods of principles or control systems*  
*worked well as if fast enough*  
*and perhaps in some cases*  
*without any special adherence to the algorithms*

and more means to activate  
Spiritual component  
which contains the main experience  
which is immediately realized

that 's the point  
so I'm already answering this question  
what does it <sup>mean</sup> exactly  
that you need to master many methods  
desirable  
which <sup>means that</sup> a spiritual component is already being created  
manager  
which is realized instantly  
at virtually infinite speed  
all accumulated experience

and here is the principle of management  
in a combination of many methods and techniques  
this principle should be the same

i.e. to accumulate the management goal  
as a target that has been identified  
<sup>for example, in the optical range, among others</sup>  
or in the target  
just like in the situational range

and thus accumulate this goal  
what does it <sup>mean</sup> to have control coming from the Spiritual level  
containing <sup>, for example, maximum information</sup>  
based on management experience

this management was carried out  
<sup>as if at maximum speed</sup>  
by the minimum means, <sup>for example optically, etc.</sup>

in this regard, you can apply this  
again a two-fractal control system  
i.e. a two-regional system

at the same time  
the first area is like this  
what it contains at the level of development of the Spirit  
the second area  
and control is carried out  
already in the action dynamics

i.e. if you, <sup>for example, pay attention to that</sup>  
how do you do the management  
<sup>Well as if in various situations on a Spiritual basis</sup>  
then almost all the time  
there is some work some movement

Well, in a word, you always work in motion.  
mostly  
when you do something spontaneous for example  
especially fast control

and then here's the work  
of this two-fractal system  
revealed as work in dynamics

i.e. in the desire for example of the management level  
from the Spiritual System  
to the level of target systems  
i.e. the correct optical system  
containing the management objective

and here in the dynamics of movement  
it doesn't have to be light dynamics  
it is not necessarily a distribution  
for example, an optical beam

namely, in the conscious dynamics of movement  
make control by two-fractal system  
it is possible in this way  
to get in the area of Perception  
understanding management processes

i.e. through understanding management processes  
make management

and then you will be  
well, to satisfy the goals that I outlined  
i.e. direct firstly  
secondly, it means the fastest possible control  
thirdly, dynamic management

i.e. to achieve that  
so that according to the technologies of two-fractal systems  
be able to manage at almost the same level  
just understanding the process

and since there is technology  
when any process can be understood  
then control can always be implemented  
at least at the level of Macrosalvation  
it's always

so now the next question is such a practical one  
what does it mean here the question is  
that *the task is to prevent*  
*a certain person has prostatitis*  
*and treatment of prostatitis and maintenance of normal*  
and this is how the question is formulated  
that *maintaining a healthy prostate in humans*

and the thing is that here is the concept of " prevention of prostatitis "  
if we talk specifically about the prostate, for example  
and apply again the two-fractal system

that's the easiest option  
as if in the second fractal  
to lay down the absence of this information at all  
For example yes, prostatitis itself

and then the concept of well prevention  
consists in the fact that it is simply  
attention is paid to this at all

i.e. the second fractal is completely absent

there is a goal formed logically  
and the second fractal on the control system  
he doesn't exist  
i.e. it is like a goal  
already the absence of prostatitis itself

if, for example, prostatitis is detected  
then treatment for example of prostatitis  
according to the two-fractal system  
I think this may be so  
what is the first target fractal yes Prostate norm  
and the second one will be generally speaking in this case  
look at this information more carefully  
how to be at home in independent work

in the second case  
this is work with the spine  
i.e. the second fractal  
this is information about the organization of the spine  
how is the human spine created

and then normalization occurs  
according to the two-fractal system

now the third question

Means *maintenance* Means *in the norm*  
*prostate in humans*

so the point is that if we talk  
oh well as if the system is connected with that  
what is for example this is normal oh

i.e. the norm after treatment  
this is when there is no relapse yes  
and the norm leading to complete recovery  
under the terms of the control period after treatment  
i.e. when there is no relapse  
or is it normal when there was no prostatitis

i.e. division of the norm  
again according to the two-fractal system  
you have to take this into account right away  
that there are two levels of norm yes

the first one is  
often in control diagnostics  
healing occurs immediately

then you need to look at it  
did the cure occur?  
or was it just a normal prostate

in case of such branching  
those. bi-regional characteristic  
information arose

here as if in the area which is  
area of possible relapse  
you can just apply it  
again a two-fractal system  
where is the second fractal  
this is decreasing as if to an infinitely small point  
the level of information about the absence of relapse

i.e. compression of relapse  
inside the first area where there is a norm

and when i Here for example I declare the word " fractal "  
i.e. something that works by itself

then here the level of management comes down to this  
that two areas  
each of which has, as it were, an independent  
from the point of view of the Spiritual aspect  
state of the art

this level of management  
he means approximately the same  
synchronization level  
with all external events of the World  
or there are internal events  
For example , a person of a spiritual nature

that each element  
it has its own development algorithm , so to speak  
and that's when we talk  
about the development of the two-fractal system  
or there is a bipolar biregional system

i.e. two areas  
which have their own development algorithm  
and at the same time they can have  
and the algorithm is different  
which is self-reproduced by them

for example some area  
has its own algorithm  
which, generally speaking, may not be related at all  
with the first system

and at this level  
I'm talking about a two-fractal system

i.e. in this case  
we mean by system  
means the second fractal and the second region  
still an independent self-developing system

but at the same time I speak on a Spiritual level  
that in some cases the second fractal  
this is the second area or sub-area  
you could say a subset  
is part one  
those. dependent on the first  
for example, on a Spiritual basis you put this information

then as if working in such a field  
you get multidimensional control  
where is the increase in the number of reactions or something  
quantities well as if measurements  
where measurement can be called  
for example the structure of Thinking  
approach or as if Well, there is a lot of variety

multivariance arises because  
that two are equal  
and seemingly infinitely free systems  
make a common management system

it turns out that here you have  
as if all vectors of an independent system  
work by and large  
infinite iterations  
work towards your goal

and it turns out  
that when we talk about a two-fractal system  
and we transfer this, for example, to the prostate norm

then here it is as if there is an infinite norm  
you can enter it from the status, that means the norm  
which is precisely for these reasons  
works two areas  
manifested into infinite areas  
exactly in this norm  
so these elements are sort of manifested  
that are not manifested in a way that is dependent on them  
namely, through free systems, so to speak

and here we must pay attention  
what's in fractals  
or there subregional subset systems  
laws of connections are on the Spiritual level  
you install it yourself

if you detect a second fractal in optics  
for example the second system  
how are they related  
or completely dependent there  
or partially dependent  
one area from another  
you have to do it yourself

and now as an independent work  
take this problem, for example  
that exist in the hall there  
and in general on the planet in the World  
in the form of one sphere yes  
and make control by normalization

and take the second sphere as a second fractal  
make the second fractal the second sphere  
it would be stability management

and then look  
this is how the first sphere depends on the second or not  
where they intersect  
in each specific case

if this is the whole world  
if it is a private problem  
or the task of the hall today  
the task of all those listening to this lecture, for example

see how dependent systems change

i.e. connection with the second sphere  
how its location changes , for example  
in relation to the first

work now  
and I'll watch

if possible  
when you change control objects  
for example, look at the second sphere  
or let's call it something else  
for example we call it ovem  
from the point of view of the related subset , for example

i.e. the first set  
more general management objectives  
the second is subsets that are somehow related  
here are the Laws of connection, they are different

and having made a system of various controls  
you will see  
how are the Laws of Relationships themselves created ?

and when you for example, look  
that the creation of the Laws of Relations is also management

then generally speaking your personal one arises  
infinite number of degrees of freedom  
already on the Spiritual level  
when you can do the management calmly  
generally speaking, the one you need

you need to simplify communication  
simplified  
for example, it needs to be complicated  
complicated, etc.

Be careful here  
this is a key point in general  
for example, from the point of view of the application of the technology of today's  
lecture  
that this is the way out  
to receive  
infinite number of control systems  
and in an infinite set, so to speak  
possible positive solutions even

i.e. positive solutions positive techniques  
there may also be an infinite set  
create as many of them as you like

and based on this  
points of the criterial organization of the World  
i.e. what is named  
as points of obligatory Salvation  
that really exist  
optical regions  
they can be logically demonstrated  
i.e. fits into the logical factor  
only for one purpose  
even here For example there is a personal management goal

i.e. how to do when Macrotasks  
work for personal management purposes

when is the logical factor  
as if it could absorb  
Well, this one For example there is a management system for the Macrotask

then you get  
that in logic it is necessary  
exactly e as if absolutely and in time  
it definitely works

i.e. it is like an element of compression of this area  
which always, for example, achieves Macrosalvation

as soon as you compress according to this principle approximately  
as I have just shown  
you get already correlated and precise control  
on private tasks

so the next question is this  
*how at the cellular level of genes*  
*bring out True information from the Creator*  
*and clean up* for example in brackets *to clear*  
*from distorted information*  
*cell or genome*  
*Can you give a specific example?*

Well, the thing is  
what if we look at the cellular level  
for example, the human genome gene in complex  
and not necessarily only a person

then when we talk about that  
what, for example, we want to do this  
as it should be from the Creator  
from the perspective of criteria systems

that is what is best in this case  
consider the level of cell organization  
from the Creator himself  
or for example gene

and if this is the organization of the gene  
then for example in the first fractal  
at the first level, as if approaching Perception  
to consider in the Spiritual plane  
approximation

to consider means that everything is clear  
select the fraction that means  
what is clear about this system  
at least to that extent

in which, as if with this speed, it is immediately visible  
knowledge about it on the Spiritual level  
what does it contain for example yes information

but maybe not everything is formulated in words  
and is not broken down into control logic, for example  
namely on the logical status

then you have the information that was revealed in this way  
relate to logical status  
here is what logic has information from the Creator

Criterially, it is often simply visible  
what is the Norm of an event  
there is a health norm  
and for example the Norm is Eternal development

and then, as if comparing  
for example, the Norm of Eternal Development  
as the managing level of the set again  
connected set  
you get that, for example, if we take the concept of " fractal "  
this is a fractal system  
then this may be a special case of the concept  
" connected set "  
i.e. set is the word many there are many fractals

and when you look  
based on this let's assume from this  
i.e. parallelizing the same concept  
in applicability  
and getting a different logical meaning

you see that the Creator is manifested in the same way  
and in your actions  
those. your actions  
also means that there is , generally speaking, your learning mechanism

you can learn  
just by looking at how you act yourself

pay attention  
answer to this question  
I keep the characteristics here  
Well as if with multiple fillings of semantic shades  
I do it this way on purpose

so that it can be seen  
that the Creator is present there  
where, for example, the action from the control occurs  
may be very distant

i.e. this is the level of true information from the Creator  
should be identified here  
as a level including the management environment  
management environment  
may also be true information from the Creator  
that's exactly what development is all about

and in connection with this  
you need to be careful here in that regard  
that's what when you work  
precisely with information from the Creator  
that is the criteria  
Well, the simplest criterion  
this is universal Macrosalvation  
and at the same time Eternal development  
which means which is in the optical range  
it is possible to identify  
what should be done in this case at this moment yes For example

and here is the action of the Creator  
from the point from the point of view of learning  
and for example the translation of true information  
maybe space too  
where is all this happening  
action as space  
like static

and in this regard it is training  
this is how space is arranged  
this is training  
your personal action  
draw attention to yourself  
this is training

and when you move for example  
for example, in this direction  
that's exactly the concept  
enter the true information of the Creator  
means to configure often  
the space of your knowledge

i.e. the action of entering information  
so-called true there yes For example  
to the cellular level  
this is what you are in the space of Thinking  
you understood correctly

and now according to the two-fractal system  
where, for example, the second part is like a subset  
you can understand this  
correlate  
on a spiritual basis  
without translating it into words  
you can transfer to management

i.e. do it already  
input of control information for example  
means that it is already really the Creator's information  
and contains the status of creation, which means

then if you look at the other part of the question  
For example there clean up clean up  
from distorted information cell or genome

then here, well, let's assume that we looked at it there  
human prostate case  
this is how the question was put

i.e. not a specific person here  
so judging by the recording  
but this can be considered  
just a prostate in a person  
there will also be a completely specific option  
as if in general terms

if we can consider  
Well, this case with the prostate  
about which we said that he could be  
there the prostate can be healthy for example  
or it needs to be restored there  
or just like profiling

then this case is just about the prostate  
contains, as it were, different systems  
so from the point of view of a two-fractal system, for example

one manager is Norma

and the second one is restorative  
or the following content of the Norm  
it's like a recovery subsystem yes  
or event profiling subsystem

i.e. the fractal begins to split

you have a kind of chain like DNA there  
and in general the human genome can be obtained  
based on simple analysis  
as if generally speaking any cell  
with t glasses of vision again for example same multifractal environment  
when you next area  
make dependent interconnected

and using for example the term  
" interrelated sets "  
you get that here is the concept here " clear from distortions "  
or there " remove distortions "  
this concept is simply just synchronized  
i.e. accordingly directed  
just like the Creator does  
your action

i.e. the action that  
the same as the Creator does  
according to the system there for example creating a recovery

and then you will get  
that this control is not obtained by an external object  
and only your true correct actions there  
for example Spiritual correct direction  
this is already looking for a cell there  
for example people who pass by you  
or restores their genome

or are you doing it on purpose?  
for example, there are some questions there that say that  
what should be done

and in connection with this  
let's take this for example yes, a specific example  
there is a prostate case on the prostate so to speak  
and such a generalized one there  
without specifying a specific person

and the second  
what we have considered at a general level  
let's assume the concept of work  
as the Creator does  
then again according to the meaning of the structure  
many levels of information so to speak  
and its associated subset

we can generalize the model  
i.e. what we got at a general level  
at the expense of there for example, the structures of general knowledge  
transfer to a specific model  
and vice versa

i.e. changing there in the fractal environment  
as if organizing connections  
and that's all

i.e. doing it in one substructure  
one system for example dependent  
and in another system  
On the contrary, it will be independent, for example

well, let's say there is a certain locomotive  
then if it moves in one direction  
at first one, as it were, control system  
then the opposite  
depending on the trajectory of movement

it's the same here  
varying , as it were, the system of connections  
you can vary  
development processes generally speaking  
in any vector environment  
i.e. in any direction

well and when will you, for example , start doing it this way  
what you will see is as if this is free Thinking  
i.e. just Thinking  
aimed at creative constructions  
it is already the controlling Thinking

that is the principle of control  
in this case it becomes very simple, generally speaking  
in terms of the fact that there is a lot of management  
won't require in terms of sensations , or something

some load

i.e. management in this case  
will look simply often  
as a light-optical medium  
but at the same time it may not be load-bearing  
from the point of view there let's assume fatigue  
or from the point of view of that  
that there is some kind of load on the body

and this is exactly the kind of management  
which sort of passes  
in that spectrum of light which is not  
it turns out that it does not reflect  
i.e. there is no reflective wave  
on the cellular structure

such management  
this is exactly the management  
well fractal so let's say something like  
linked set control

when does it mean for example the manifested Spirit  
other control system  
your manifested Spirit  
makes management  
and at the same time the control is implemented in the same way  
as if it happens for example there well inside you  
inside the physical body

due to this  
this element if it were to be developed further  
allows you to constantly  
on the simply reflected signal  
in the normal optical range  
First of all, restore, well, restore  
and it turns out to restore itself

and secondly  
simultaneously restore  
there all the others or someone specifically  
and at the same time  
have no idea of the flow of information or influx  
and do it only at this very point  
in this area  
in this particle of Macrosalvation

activation of which in any case  
leads to mandatory salvation  
well, for example, according to the purpose of a specific management

if you need  
you activate and do this  
what does it mean it works  
towards some level of Thinking

let's assume you decided that it should be activated  
then you contacted her and activated her  
but the work in this particle  
gives only general improvement status

here, pay attention to what is there  
this is the formation of that space  
where everything always gets better  
i.e. there is no negative development status for example

just get into this space  
this means the control space is meant  
at the level of, for example, the technology of Thinking  
this already means to always receive positive management

and therefore often  
for example, the concept of " distortion "  
or some kind of " irregularity "  
it is possible, among other things, to restructure in this way  
what to get into this space

and then it turns out  
optimal system in management

if you pay attention  
how did I get to this space?  
or what? so let's say information about today's lecture

then it arises there  
just the structure of the DNA organization  
it is precisely now closer to the structure of the identified genome  
and at the same time the area of organization  
it is strictly vertically directed  
if from a horizontal surface  
always up  
by information structure  
into the field of optical perception

i.e. certain laws are revealed  
which are functional  
always the same in Perception

and in connection with this  
here comes such a moment  
what when do you do  
for example, general or specific control  
through the Macro Access system, so to speak  
yes, a system of universal salvation

then the transfer of information i.e. the transfer of knowledge  
is carried out often because  
that you are moving in this direction

it's not even always necessary  
for example, to take and tell something  
or create either an optical sphere there let's assume

and the ideological status of the movement  
i.e. the Spiritual status of the Soul is already emerging  
who knows and directs yes

and this is the status he is  
information transfer status  
at infinite speed

and as an independent work  
simply by passing on information to others  
by the way, this is the same position  
it leads to healing  
for example the person you are treating  
or the system you are restoring  
to restore this system

and when you are for example  
in such a status it is the Souls  
then the logical phase is very evident  
and is like a part of the Soul  
it is evident from the Soul

as an independent work  
look  
how to watch from the Soul for example  
with the sight of the Soul

how to watch for example well from the logical phase  
consider the structure of the Soul

why in logical phase  
loading system  
and if you look, for example, with the vision of the Soul  
then there is no load testing there

as if at one point  
located  
and the structure is infinite  
and at the same time we get locally finite  
about the revealed let's assume in the cellular composition

and then it turns out  
that this is precisely a multifractal multiple system  
in this case  
allows you to work with these mechanisms  
already in the applied aspect

i.e. you can  
having entered a certain state  
and developing these states  
up to, for example, the technological level in the applied aspect  
obtain generalized constructions  
transfer them model-wise  
by any of the statuses  
for example, to the levels of control from the Soul  
or at levels of control , let's assume, from logical status

and moreover  
get a generalized  
i.e., as if synthesized control systems  
various control systems  
and at the same time always achieve control  
in a stable phase, for example, Spiritual reaction

as soon as you arrive  
into a stable phase of Spiritual reaction  
then you control Macroinformation  
and control occurs  
from you personally

and when you achieve this status  
then you generally speaking  
so firstly you are really participating

in the Macrosalvation Department  
secondly, you provide technological support  
Well as if a certain platform  
for the following actions

This concludes today's lecture.  
including answers to questions
