

GRIGORY GRABOVOY
Structuring of Consciousness
Management technology
usage based
sparse systems and structures of Consciousness
Section of the Teaching - Healthcare
(17)
01.11.2001

Good afternoon
in today's lecture
according to my system of salvation and harmonious development
I show the technology
built on the use of
sparse systems and structures of Consciousness
and on that property
that by connecting these sparse systems
in motion of the connection
you install the control system

the principle is quite logically simple
it consists of the following
something called a sparse or instantaneous system
in Perception
is revealed in the first iteration

in the second iteration
a possible second system is revealed
and a kind of bridge is built
between systems

and in the process of building a bridge
you do the management

so when it comes to
about such a control system
then by the level of Macro access
the first property of this technology
is that the very principle of construction
on a developing system
This is the principle of almost instant access
because in Consciousness

element of development
it always means a situation that is related
at the level of physical, as if Perception
with the first degree of novelty level

means "first degree of novelty"
I introduced this term in this way
what if you for example Well there you perceive something for the first time
then let's assume that this is at the physical level
first degree

if you saw something completely new
let's assume with physical vision

if it is a correlated model for Consciousness
specifically for the level of Perception
by the first degree of novelty

then it will be a system
such a construction of Reality means
and not just construction but management
simultaneously control the construction
and construction

and therefore such a construction
where in the concept of "construction"
includes construction management

that you have development of Consciousness
in Macro Access systems
and in the systems of general communications

i.e. in this case I mean
what the construction involves
all the system there are unique private peripheral
in general, all possible connections at once

here's how to build such a model
where the level of construction affects everything at once
we need to do it so that
just like the Creator does
could you differentiate the picture of that
what are you what are you doing

i.e. differentiate i.e. perceive

and be able to direct at the same time

and in this lecture
perception and direction
will be revealed already in the Spiritual Characteristic
which characterizes two quantities at once

this is perception
control element
And
while cultivating such a state of Spirit
and within the limits
logical phase of Consciousness
that you have two quantities
in one Spiritual status

hence
in this lecture Spiritual Management
is a system level of control
in which the state of the Spiritual status
is built on a platform of logical premises

and that's when _{you} consider
properties of the Spirit by distribution
then I am stating this here as an axiom

what is in the Spiritual characteristic
spreading
Spiritual components of management
there in the first iteration
in the first iteration
in the first iteration it is meant
at the closest distance
physical distance
to the Soul

be careful with this term
precisely in the distance
from the point of view of physical space

that's exactly how the distribution happens there
first of all, the maximum access level
plus control in one component

and secondly, _{it means} access is happening
exactly between

initially identified system
i.e. the support system of the Spiritual reaction
And
all other systems

i.e. on optics it looks like this
as a primary impulse of glow
then some scattered impulses

and between these impulses
interaction occurs
by type of common connections

i.e. the first impulse
more pronounced glow
it ^{kind of} illuminates all the others
this is the management level
which occurs within these rays

so now I'm trying to come back
from the logical phase to control
and do it like this
so that the Spiritual and Logical phases
coincided

then the growth of the Spiritual phase
it will be ^{like} a development
just a logical phase

at the level of inner knowledge
which is quite common to all
from the moment of, ^{let's say,} organization

then ^{for example} birth ^{yes} on the physical level
and development
if you trace these optical systems
these are the ones I just named
at the level of Perception of Salvation

you see
that there is a fairly familiar picture
that when you logically enough a lot
^{then} you know
then gradually you develop
some spiritual status
which has some geometrical effect

in a location near your body

or in the space of Perception

where is the concept of "body" well for example, it does not appear
as an object on which you focus your attention

here is an example of a constant

but nevertheless there is some such area
which is exactly what it means in this case
that this is a logical phase

logical phase

transformed

in the Spiritual phase of static control already

and here is the Spiritual phase of static control

this is some kind of image some kind of form

which is what carries it out

simultaneous control

what does that mean Well for example, logical phase

i.e. if you pay attention

what happens when this happens

then the Spiritual phase always rules through the past

through the past which was

construction of the phase itself

hence

control stability in this case is maximum

because for the Spiritual construction

control through the past

taking into account that in the Spiritual construction

exists to a greater extent

for example up to eighty percent

future control information

is precisely stable therefore

in the logical phase

information of the future

sometimes it reaches about one percent of the whole

in the control phase

those. please note

here are the control ratios

and if you are engaged

for example, in a targeted manner
i.e. set the goal of Macrosalvation
or Salvation of all
from Salvation we suppose there from a nuclear explosion and a macro explosion

then you need to get the logical phase
for example, up to one hundred percent control
from the point of view of the future faction

and here is this iteration that I just said
it allows you to get it

so getting it in this case is quite simple
it looks like something like an hourglass

if the lower base
hourglass so to speak in quotes
this is the grown Spiritual phase of management
then the upper part
this could be a logical phase

and if they are twisted many times in Consciousness
for example, make it so that they
this is the number of these twists
was directed to infinity

then from the fact that you change in general spatially
location of information near you
you get that system connections
which are further away
they seem to dissipate
and begin to have an average value

i.e. it is logically very easy to understand
if you mix too much
well, like sugar in a glass
then gradually the grains disperse
they are no longer visible as grains

the same principle
with a large number of connections
with a large amount of action
you get such control

but the most important thing is what you get here
this is what you actually do

already control of the Soul

i.e. the principle is this
what do you do when you start doing this
working mainly with logic
gradually the logical phase also dissipates
and you can follow it very clearly
that the Soul is already working

i.e., like at a certain level
a kind of automatism
It is the Soul that works

and that's when you return along this line
on the factor of its presence, let's assume, in the physical body
you can see it very clearly
how the body is constantly organized by the Soul

and that's when we talk
on the principles of complete self-organization
subject to harmonious development
this is the second iteration of this lecture

where is the principle of Macrosaving direct access
consisted of unification
phases of the future and phases of the past
I just didn't say anything about it

once you combine
and the future exists
therefore you saved

and the principle of unification
this is a kind of top that spins, yes
action of the Soul

i.e. in this case I
the first principle gave
as a system of action
without describing the details of the action

second principle
principle of self-regeneration
this is where you find the control coordinates
which means those that come from the Soul

and you just set these coordinates like this
so that they were well for example functional
from your point of view
which exists
in terms of, for example, viewing what you want to restore, yes
for example in yourself
or in the environment
simultaneously

and that's when you ask the question
in itself and in the environment at the same time
you see
that there are completely direct and unambiguous connections
characterizing
that your condition is completely determined
in a certain part
I'm not saying that this is at all
but in a certain part of Perception
determined by the state of the environment

and well, well for example, if someone has some external disease
or there are environmental problems

and in accordance with this
for example, ancient Buddhist, well, technology , so to speak
she just showed the way from the Soul
where the logical phase is present
as a control phase

and that is why she cultivated philosophy
it is the principle of non-destruction
generally speaking, any entity
which existed

and as in this case
it's quite simple to understand
that this is directly related
with the personality of each
who, let 's say, was reproduced
and who can react like that ? let's say

and here it exists
the second level means this substructure
I introduced this concept
what is " ability to react" yes

let's say if you take a stone there
we can say that he is not reactive
in relation to plant growth
which are far from him

but if for example we start
compress space mentally
then we can say that well how to do it
extrapolation of a possible event

if the stone is under the plant
then it affects the plant for example Yes
somehow during growth

so here is the concept of "extrapolation"
this is the action of the Soul
expressed in logical phase
in case you are watching
again on the trajectory
first finding the Soul

i.e. the governing element of the Soul
that coordinate path that I mentioned

and this is the control
Now I'll complicate things a bit
at this point lecture
This is a phase shift control
where there is an infinite number of connections

pay attention
that I myself am the logical principle of control
presented in a diffused phase

i.e. information about management
you can just take
as soon as you see a diffuse glow

as soon as you take
precise information from a scattered area
so you can take accurate information
from any concentrated area
logically it's very simple

so this transition too
when can you take information

from the scattered area
in this case, management is created
from any concentrated area
correct management
This transition can be repeated many times

and consider the following fairly simple principle
which consists of
what if you for example look at any object yes
on any environmental system
and at the same time bring this system into the optical phase
then it turns out you can create an optical phase
make the controls correct

simply because you create it yourself
you don't have to move anywhere at all
within the limits of Consciousness

next level
you don't have to look at anything at all
and simply create an element of optical glow
and do management through it

and that's when you have two methods like that
optical glow from an object
or from some object of Reality
plus the glow you created
you will start watching
what is the difference between the information phase for you

then in the second case
when you created the glow yourself
the reference point will be your own information
well what you represent as an identified element
something in the control system
for myself personally

and that's when you're on this channel
come back to that again
what does the Soul do
when organizing your body

then you get
that management is actually intensive
and the time aspect of this management

it is beyond the borders, so to speak
normal perception of time

if we can split time
there do for example milliseconds
then in milliseconds the logical phase
It seems like she won't have time to go any further

less than a millisecond
if we ask the question
that we should have time to remember something during this time
then it becomes complicated

but when you go down for example
Well let's assume in 10^{-19} seconds
then clarity of Perception comes again

here is a training on how to get a clairvoyant phase
namely the phases of direct control
phases of controlling clairvoyance
may in this case consist of
what if you want to get access
to any event within your Consciousness
then you kind of internally
then you mark the point
or there is an area
or border boundary area
a boundary, for example, a hemisphere or a certain plane
which means
Well, is this the maximum time fragmentation ?
where access becomes difficult, for example yes for you

for each one, moreover
this may be a subjective characteristic
so you go into such a fine fragmentation
where do you get enlightened again
and you see the whole Reality
well, as if in a kind of frozen state

this is the primary phase
in the first iteration of clairvoyance
when everything is visible well as if frozen pictures

that's when you pass
between these two phases
you get control and access

at any event
again from the point of view of that technology
which I announced at the beginning of this lecture

i.e. management technologies
between dual-pulse systems

in this case, two-pulse states
where in the form of the state of the primary impulse
I gave the coordinates, which means the minimum level
after which the complication of Perception occurs

it's logically very easy to understand
just ask the question to yourself personally
what time is perceived
and which is already more difficult to remember
there is a number of actions
let's assume it is that fast

It's very easy to calculate this time
you can look at the clock
and ask yourself a question there For example
Well there in a millisecond
or divide the second into three parts and start over

this is the amount of foliage on the tree
how much can you remember, etc.

and produce a very clear optical glow
where do you think
what's going on is it's getting more difficult

i.e. I'm not saying it's difficult
because with the help of management
take this border and disperse it

but that's where it gets tricky
where voltage is required
where do you see
what is the pressure of the Soul
control from the Soul
starts to act
into this optical form

i.e. pressure

it is from your physical body
begins to press like a kind of float
push it into a level or something
well, more information
and less resistance

i.e. the pressure of the Soul
I reveal how exactly the optical parameter
which is not registered in the optical phase
in this case

I'm just saying
that we work on logic
and at the same time pressure
just as a control element
I enter into this control system
without saying anything about what is happening

this is the level of information dispersion
between two optical pulses
is contained in exactly this environment

i.e. an environment that does not have
as if in the first impulse of Perception
for now I am talking only about the first impulse of Perception

pay attention to this all the time during the entire lecture
I say all the time that we talk
about the first iteration about the first impulse
and we won't go into details yet
as if in a logical phase of control
like next time

here in Salvation technologies
you often need to be able to do it right away
in the first impulse
All

that's why it's often necessary
first impulse of Perception
look at it from very different angles
just to get instant control

and here is instant control in this case
this is exactly the environment that is located
before the first impulse

and in connection with that
what ^{did} you just say
that you can this environment
feel see ^{for example} and receive
even a certain unique configuration
in the space of his reaction

here is the reaction space
this is not the space of Thinking
it can be any space
^{for example} Souls of Spirit
or the space of recreated Perception
some element of Reality
which may not be related
with known with known ^{for example} systems yes

but this is space
enters the space from the Creator
Anyway

and that's when you work with this space
it may be just very close to the Creator
but it may be so
that there is a lot of information there
and the path to the Creator
it is just laid out through the knowledge system

pay attention
when you will listen to this lecture
that space which is not designated verbally
this is the control space

and moreover in the form of a form
I showed it several times in this lecture
approximately in the area of the hand ^{for example} Yes
and towards yourself

and at the same time this space
^{that means} it works
as a direct access Macrosaving space
^{well} and all the characteristics for direct control
but at the same time it may not be described
what is the advantage of working with such a system
when you are on the Spiritual level

for example, you reveal this status

the advantage is that
that when you sleep you don't pay attention
are you driving or reading a book there?

i.e. active management
you may have it in another area
or can we consider that you are resting, let's say

this space
is the controlling space
and you get something that is located
between detected, for example, scattered signals
this is management

and it's just one of the principles of management
which relates to management
through the unorganized or through the indefinite
space in Perception

and that's when I told you again
that you split, for example, impulses in your Perception
so it means this way
what they characterize, for example, a time interval
then the transition means Well for example at 10:19
or we can take 10, let's say 10^{-200} degrees of a second
if you want

but the more you take
the closer you see
that iteration is approaching
back to basic level

i.e. to what is for you
logically more acceptable
in Perception

i.e. the logic starts to work like this
what do you mean you get your control back
so that you logically
you start to receive accurate information

and pay attention
that the information is clairvoyant or let's say clairvoyance

she looks like this in this technology
like a kind of drop
well, close to a drop of water for example yes according to configuration
which falls under the force of gravity
and that means this is a drop, that's what it is
which is a kind of loop
what is the first action at the beginning of this drop
and then a kind of thickening goes below

the impulse of Consciousness passes upwards
and it closes as soon as it means after a drop
here comes a drop flying
and the information before the drop is as follows
what does next wednesday mean
for her it may be different yes

from the point of view of the level of the drop itself
which does not contain, for example, a control system
and moves under the action of gravity

next space
is an indefinite quantity

and if we work by analogy
with a known environment for example Yes
the drop moves under the force of gravity
you get
well, a kind of cellular system or a cellular approach
in the principles of distribution of impulses of Consciousness
where each cell represents
a certain principle in the structure of Consciousness

and here's how it would be if we transferred
what for a drop for example yes it represents space
from the point of view of the general reaction of the drop

this is precisely this element of the World
as if an external element of the World
transfer to Consciousness
what in human Consciousness corresponds to this for example

then you will see
again an undefined area
characterizing the following element
what's next element
Consciousness is developing well as if all over again all the time

i.e. the simplest characteristic is the very first one
that each element is the following
it's like a new system
in reactivity

because if there is no control
the concept of "gravity" for a drop
this is a rather conditional concept

nevertheless
then the principle of novelty
as a reagent area
it is quite clear to everyone

and here we found it
one common level , so to speak
which characterizes, generally speaking,
well, it's an absolutely general principle
in the system of collective Consciousness

what does accessible to the Perception of many mean
element
this is an objective element
for any environment

i.e. if from the point of view
for example, tree reactions, human reactions
space following the flight of a drop
this is a space of novelty for the drop

from the tree's point of view it's basically the same
because a drop can hit the leaf
and the tree perceives
as some completely external element of influence
Well as if it came from nowhere

i.e. this novelty
coming from the properties of the tree
react to a drop falling on a leaf, for example, a tree, etc.

and at the same time, although the drop breaks
but the principle of novelty exists
as an element comparable reagent
i.e. if the tree looked at the drop

through your Consciousness, let's say it this way

and combining these impulses

we get let's say so

faction of the collective Consciousness

which characterizes the element of Reality

which is reproduced

it depends firstly on comparable methods

i.e. those who participate in active management

but for example the principle

that the stone is under the tree

and it affects the tree

and there are elements that participate

according to a system of, as it were, common connections

within the limits of human Consciousness, i.e.

and within the limits of, for example, the reactivity of other systems

and at the same time

the principle can be very schematically put forward

for example on a sheet of paper

take draw a circle

and say that here is event A

at one point inside the circle let's say inside the circumference

and event B at another point

naturally, we have well as if an opportunity

draw a straight line

or build some space there

connect these dots with a figure

i.e. how can I say

that every event

connected to each other

if all events are inside the circle

Well, it's quite simple to explain logically

so this is the logical phase of human Consciousness

within the flight range of a drop here

within the development of the event system

of this external system

is concluded in that

something that can be done logically

the drop exists as an element of action

in the system of general connections

, she's flying . as if
seemingly independent of Consciousness
and that's when we have this connection
in the logical phase and flight
again in the logical phase of Consciousness for example
we denote this by action

then within the action we get
often quite a scattered system
it looks like this
what is the primary impulse
it exists in the form of a question

and the final impulse
requires analysis to answer
again, a scattered system is obtained

but in action while we are doing the action
We understand what is happening

i.e. on a Spiritual basis it is clear to us
as soon as we get into the scattered system
we kind of have a lot of parameters to manage
and then we get that element
What

in order to understand
have to take action
some elements of analysis

means that scattered systems
did not lead, for example , to the analytical phase
and they worked just as instantly
such as Well it works instantly
Spiritual component Spiritually revealed form

you can use the principle
well, a kind of transformation of scattered systems
straight to the logical level
that means with the primary level
control glow so to speak

it consists of the following

what is above the scattered system
you put it on purpose
just a powerful , intense glow
which you implement
due to some kind of volitional impulse

for example, in creative processes
a lot of preliminary data
often some creative level emerges
well, are they discoveries for the purpose of creativity?

and at the same time perceiving
sees usually quite clearly
and more and clearer, more or less strong light

here is the transition to this phase
it could be the other way around

i.e. not through scattered systems
get glow
which can occur at different times
and without control for example Yes

and can it be highlighted?
strong logical phase
which would be well as if neutralizing the actions
on the analysis of logical systems
and led straight to management

because you are managers
you can do it right away

but the level means time
which is required in order to implement
for example this system yes
in creativity it can be different times
For Salvation this must be made manageable

this is the time
that's exactly what needs to be done
so that it is inside this luminosity factor

and this is done in the following way
primary impulse
of the most optically revealed
what are the phases of Perception

which is very easy to find
you just have to focus on the task
optical pulse detection
in the maximum phase of glow means

and then move on
to any other scattered impulse

two pulses just compress
and insert it in the middle
of this optical glow

then you will get targeted correct control
it can be quite strict
is that correct enough?
but at the same time you definitely get into control
where scattered systems are no longer needed
because they require some kind of analysis

but they are present
what do you mean in the form of some kind of control superstructure
they are present

and when you take, for example,
set such a task
that all phenomena of the World
well as optically detected systems
it means they are built close to you
like this
you get your own physical body

here is this exercise
you need to work it out yourself

i.e. the principle is very simple
that you are simply setting a task
then all known information levels
which generally exist in Perception yes
which you see there with physical sight and hearing
in general in the form of certain concepts

all these elements
are diffused glows
and so you build an organizing area over them
according to the same principle that I have just indicated

i.e. you set the intensity of the control level
and enter by compressing two elements
as if a central control element
inside the glow

in this way you kind of illuminate
space around you
first around yourself

and when you kind of illuminate
you have information first
which seems to be starting to get bigger
it doesn't seem like it at all visually
it really starts to glow more

but the concept of "seemingly" refers to the fact that
what for logical phase
it sounds like it
what else do you see with your physical vision

but if you start working with this system
you will also see the glow with your physical vision

these these these these concepts they are
as if they themselves will take and unite
logical and physical vision

and then you will get
roughly the same principle
how does a person organize himself in general

and therefore the whole Reality

i.e. the principle
when some elements happen
Well as if by themselves

this principle is embedded in the Spiritual foundation

and when you start deciphering
this principle
understand its mechanism
then that's when you go back
from the body
and move in the direction

each phase of logical glow

i.e. therefore

Element of Perception

which means the logical phase

here in this technology

from the point of view of the Spiritual Organization of Management

it becomes very clear

i.e. the logical phase in this case

this is so as if tending to zero

logical glow phase

if we have, for example, universal access technology

i.e. we can say

what if we have all the phenomena of the World

then the logical phase can cover

just to say it axiomatically

for example, like I said

Well, on a piece of paper are all the phenomena of the World

i.e. the appointment takes place

and why does it tend to zero?

because because the appointment

this is an element of the action of the Soul

i.e. you wanted, you appointed, for example Yes

the logical phase has manifested itself

that's exactly it

but if for example it is not manifested

then you get something like that and that state

that this glow may not be detected

hence

Minimize glow

here at the level of Perception and in the logical phase

this is the level of action of the Soul

potential action of the Soul

in relation to the next level of development

while listening to this lecture

be more careful here

i.e. tending to zero

this is a positive characteristic

and that means it is just a characteristic
which means it speaks about that
that in one element of space
there may be many people here

if you ask yourself the question
why are people different and there are many of them
Well, that's quite an unusual question

so then here if we for example investigate
in general the Laws of development of space
then optical refraction is like
here's the next level
says that the more people there are in general
the more elements of Reality
the more stable the Reality
and how would I just take from a larger level of development

but if we take
that each next element
is built from two adjacent elements

let's assume there are two optical levels yes
we have identified two common optical levels
connected them with rays, for example
By the way, they are even very easy to connect
they seem to connect themselves
any two levels

then these two levels follow
they definitely start
bend space
and give birth somewhere to the third
not necessarily here
and in any other place

hence
as if the number of subsequent births
here are the elements of optical luminescence
This is the Law that leads to that
that there are many people who can do this

and their number is increasing

at that moment, for example

Well let's assume if we take the habitat

less active systems

let's assume trees

then there may be fewer of them yes

due to the fact that it is clear that people cut them down, for example

which by the way needs to be prevented

and still create

habitat of all systems

maximally developed

this is a special technology

means the organization of spatial systems

depending on the meaning of the goal of the collective Consciousness

and the more we organize

this Wednesday

i.e. such a concept as "development of life"

the more life we get

in any

within any system

and the quantity is kind of functional

certain life or something

functionally identified

this is what it is, well, this is exactly the area of knowledge

revealed, let's say, in the form of a substrate of life

substrate here development

it means the area where the concept of "life"

clearly visible

in the form of an informative concept

and once you see this concept

you can do it very easily

first of all, introduce it into the human body

if this body for example Well, it needs restoration, yes.

in adding life development

or create new lives

i.e. as an independent practice now

based on what I've brought you to now

do this exercise

i.e. the concept of life

which I have now shown in optics

collect in maximum quantity
right here in front of me it's just
from the level of your logic and Spiritual levels
and direct them to the Salvation of all
i.e. do it right here
i.e. first here
then on everyone

and you should see
that the amount of life increases
in front of me

specifically in this room
and it will become more and more
this information
every next Salvation
causes more and more of this information

i.e. work and I'll watch

in this case when I showed
human organization technology
from , for example, different optical levels
i.e. from different systems of Reality

then at a certain level of a person
human information has not yet been manifested
in the form of for example Well as if creatures yes
that's exactly what you see
at the level of physical perception
let's assume in the form of a clear form

but at the same time the form of a person
contains
in each iteration of the outer level

so here you need
get now later
as an independent work
from life information
from just life information

in this case
we have revealed the information of life
in the form of well as if sparkling optical spheres
which have infinite content within

by the way, if you go inside this sphere

and as homework for example
do such an action
from the information of life that is revealed
during this lecture
and is , well, a certain essence of this lecture
technological essence

then you try to build already
everything else

i.e. here is information about life
build a human body
build a system of social distribution
interrelations
reactivity on time
why does a person react to time like this, for example

why with this information
Means Well there are vegetation areas there
are distributed in exactly this way
and let's assume the stones are like this

the soil is located like this
and liquid water for example in a different way

i.e. let's assume there are continents
i.e. build from this information
trace the logical connections and Spiritual
of all Reality
from life information

and when will you build
you will pay attention
what if you build very quickly
and for example Well there you improve from time to time
then the concept of "destruction" of some kind
the concept of some kind of "destruction" or "absence of life"
more and more will disappear

at some level

by the way this technology
can be used effectively

for recovery for treatment
as if building from information already Reality

for example, including the human body and health

you will see
that the question of the existence of destruction of some yes
it's just a matter of understanding
and in general the speed of construction
embedded in the phase of logical thinking
Spiritual level of realization
or control from the Soul

i.e. the destruction system
in this case it is perceived
like lack of technology lack of knowledge
as if it were precisely the full realization of life information
everywhere

and as a result of this
this is a fairly direct path
where can you show that the more knowledge
by the action such as the Creator acts
the more you do management
at the level of, for example, Macro Access
on the distribution and spread of life
the more you can have generally speaking then
very specific evidence
that knowledge is the definition of infinite development

this is true knowledge
where there is knowledge of infinite development

i.e. it turns out that the essence of the problem is quite simple
you just need to have the knowledge
and then development will be endless

this is in this case
it can be simply proven technologically
at the level of continuous training management
which I just mentioned

in this case, training is practically
every action must lead
to real results

those. not an action in the form of someone
Well there is no formal training staged there
which is also good in principle
but this will not be the true purpose of management

but the action must be done constantly and specifically
in relation to Reality
which is controlled and managed

i.e. to that Reality
which reproduces the whole Reality
let's say it like this

i.e. at its core, it is always work on the merits
in this training

if in others it is acceptable
for example, logical digression
or there are formalized iterations
in this case you always need to work on the merits
be more careful here

and with this I will end my lecture
exactly in this part

but now I will tell you about part of my Teaching
about the section that pertains
to the health section

so in the health section
principles of my Teaching
is
principles of human self-organization
generally speaking any Reality
based on
if for a person it is Consciousness
then for any other elements of Reality
in this case it will be
or the method of reaction
or it is a structure within the human Consciousness

then be more careful here
because this transition speaks about that
what from human Consciousness
we can build any Reality then

so when I talk about healthcare, for example,
which means it is built on this principle
then the first axiom
is precisely in the target action
What
a man must be built
with precise knowledge of the technology of building oneself
and all Reality

and be able to recover as much as possible
due only to the structure of one's Consciousness

and also restore everyone
also due to the structure of one's Consciousness
or raising the level of collective Consciousness
in the direction of, for example, Eternal Development

I named the directions, for example, Eternal Development
consists in the fact that
that even in private development
need the element of Eternity
contain as an ideological basis

and it is not necessary to formulate the goal in this way
it's enough to set a goal
well, some kind of local control
for example healing
but at the same time Eternal development is implied in action

here is every action
from a health perspective
in my Teaching
it includes precisely the target action in Eternal development

however, this is not always the case
for example, it is pronounced in words or described in some way

but the essence is informative
for example the optical essence of action
just like the Creator does
is focused precisely on this

if we consider certain well let's tell the facts
from those known for example in treatment
then pay attention
where the body is being built

here are just the results
which, well, certain ones are published by me
or do the students have them?

look at this information carefully
what is body building
building for example the cellular level even
happens on the same principles
as the Creator does

firstly, because that's how the question is put
secondly because
what is the real speed of development
i.e. the real speed of the recovery cycle
it is being implemented
when principles are upheld
do as the Creator does

and at the same time the task means to do as the Creator
it is also contained in that
what does action mean
and do as the Creator does
First of all, this is technology
secondly, the level is largely axiomatic

that the Creator directed everyone towards Eternal development
for Eternal Life
although it is also evidential
by many factors

and there is a very simple level
as if logical phase
or something in understanding the technology of my Teaching
under the health care section

these phases consist of
which is quite clear, a simple enough truth
if this is how we approach this issue
what if at the expense of Consciousness
we can restore for example well even one cell
or to cure some minimal disease

that's natural
to extrapolate logically
so this situation is given for that

that then everything can be restored

at least in the body it is for sure
but since the principle is universal
and therefore the entire external Reality

i.e. here is the principle of self-healing
i.e. the principle set out in healthcare
in the section of my Teaching on Health Care
it just reflects that level

that as soon as you do
for example in relation to the physical body of a person
you comprehend all the Laws of Reality
that are around you
and healthcare in my understanding
it consists of
so that they are taken into account accurately
all event structures
which are related to the human body
and are at the informational level, for example

i.e. real healthcare
this means at least it means natural
it does not exist in this case
global potential catastrophes

secondly, there are no local problems
which may lead
For example well, let's say to some traumatic events
i.e. event constructions

and thirdly, this is actually
as if to interact organically
with the first two levels there
this is a healthy state of the body

i.e. the concept of a healthy state of the body
in my understanding
in my health section according to my Teaching
this means the Norm of events

in accordance with this
management is always built there
how to manage

associated with event construction
what is mandatory in most parts
it means work from the point of view of the forecast situation

and for example health development
towards recovery
happens in many ways
Means as if based on the future
at the current time

i.e. the Norm of the Future
it unscrews well kind of the other way around
and along this line it is built
each iteration of the next move

then they are quite simple and clear
principles of each next action

i.e. the Norm constructed informatively
it's just being implemented
due to control systems

and when this control occurs
one of the important features of this section
is a mandatory transfer whenever possible
maximum information transfer
by construction technologies
and according to the systems of that plan
which leads
as to the result itself
as well as to the learning outcome

i.e. in healthcare
the concept of " learning outcome "
it's always to a greater extent
concrete practical work
which is transmitted
either explicitly, i.e. in words
or it is due to the results which are like facts
carry the impetus for dissemination

and if possible
working in recovery systems or something
recovery systems
lay down the information transfer

from one result to another
if possible in this way
so that the transfer is conditioned
by the very fact

or if necessary, structure the facts like this
as if which you have yes

but the target control system
you need to lay it down right away
that every fact means restoration
he must give knowledge
how to restore the current disease
and by recovery technology
generally speaking any diseases

i.e. here is the principle of universality
it is often built quite simply
and is here in a two-pulse system
which I just mentioned
simple enough

first impulse
for example, the fact is revealed
as the greatest optical reaction of Reality

and the next fact
even if it is another disease

through a system of transitional scattered regions
Well as if structured in a multi-link structure
and you can always get
treatment of another disease
it would even seem from the singular there
successful treatment option
or there are regulations of the Event Standards

i.e. if you look at a digital system, for example
let's assume recovery by numbers
then it is possible to identify the transition levels
from one digital system to another

and in principle build it this way
in general, its own digital system

which allows, generally speaking,
and in general already as if well concentrating
on generally proper numerical series
receive current control
not only there are diseases
i.e. from the point of view in terms of their cure

but also the current management of any situation
based on the Norm of simple health

and in a certain situation
you can reconsider well for example situations
associated with achieving a level of cure
according to my technologies from the point of view of that
what if you used digital construction
then how, for example, can this same digital design be
use for healing

For example generally speaking, a completely different disease

i.e. if you ask the question
so you take a look
what does digital design implementation mean
she is like that
what if you start using it
example, to cure another disease

then if we consider
for example, in the form of a spherical reaction level
in your Consciousness
i.e. the correspondence of spheres of different sizes
each number

let's assume there one is one millimeter
two two millimeters etc. yes
so nine is nine millimeters
and zero is space
which contains all spheres

and distributing accordingly
these spheres in this space
to cure another disease
you can impose this as if well zero sphere yes
for another disease
and the distribution of numbers then
in relation to other diseases
it will be like this which is indicated for example

to this disease

it's just a distribution of numbers
we are dealing with the same thing
with only nine digits and a zero, yes
which are also represented as a number

and therefore it turns out that in this case
we have the maximum control system
we are just deducing
Well, let's make it maximum
because we vary the spatial distribution
inside the supporting control sphere

and in connection with this it turns out
that here is control, for example, through numbers
it can be very effective
as direct control i.e. emergency action

where for any situation
you just impose in any order
scattered numbers
exactly such a complex, as it were, current situation

and sometimes you get double digits
sometimes there are multi-valued systems
which are stabilizing
or restorative systems

the stabilization factor is usually
sometimes super fast recovery
is considered as stabilization for example

if we consider a non-digital system
and a system of work through Consciousness, for example
using active substances
let's assume there are herbal medicine drug systems
existing or future systems
which can be implemented for example
well, let's say by man-made means
or by way
using existing elements of Reality

then from the point of view of the collective Consciousness
in this case

we are only talking about certain levels

if on optics
this is optical glow
arranged in one way or another yes
point in space
or Thinking
or physical space

or does it mean if we go further , for example , on the merits
that means it is the Creator's task
in relation to the development of society as a whole
in general the world as a whole
in this particular situation

if we consider, let's say, ancient Chinese medicine
where each element
corresponded to the essence
well, some kind of spiritual structure

then there is this principle to a certain extent
was considered
what is the assigned material
from some means Well there for example an animal
or from some mineral
he matched and was chosen
it is precisely by principle that means that

what's in the communication system
Man - Reality
need to add
to harmonize Reality

when do you work
through the technology of your own Consciousness
you can just do it
generally speaking, just about everything
due to the structuring of Consciousness

and in my personal experience, for example
mean , at one time
Well, I made combinations of certain herbs
quite a long time ago
For example, let's take 1991 as an example
i.e. practically already if you take 10 years ago and translation

look at this information 10 years ago

basically based on a combination of herbs

I sought restoration

for example, from malignant neoplasms

but in general, first of all

I added the structure of Consciousness

to determine their quantity

and they acted

as a system of, well, additional acceleration , or something

and secondly, here are the systems of a static plan

they still have less

often significant speed

than speed for example

development of certain pathological processes

within the local system

if you look at a person

as a local system

then with such a number of external connections

so the grass should have given

appropriate reactivity to all bonds

to compensate for example

pathology inside

in principle

if you choose the right grass

she can do it to some extent

but in essence

in general, in an ideal, so to speak, configuration

in general in practice

this can only be done through Consciousness

just from that experience

which over the past ten years

for example I have

and so, generally speaking, I eventually

anyway, I 've already started trying

do not implement, for example , phytosystems

although I think they are very , very good

for those systems when, for example, they have not yet been mastered

those structures of Consciousness

which, for example , provide restorative care there
and at the same time a training system

and in principle drug systems
of course they can be effective there
but I always advise
so firstly, since the drug system
implements part of the logical phase of development and Spiritual
Thus
that control is taken over by chemical components

I always advise
for example if a drug type is used
Still, I'll have to watch it
that in this case Consciousness must understand

those. let's assume like this there is a tablet of analgin for example
Well it achieves the effect
from the point of view of all information

if possible
First of all, always do it yourself
but for example, i think
what drug systems
you always have to control better
within the limits of, for example, the following development

because any external elements
this is an element
from the point of view of the global system
or something from the Creator

each object is independent
if used
some external element
then he is from this place
somehow it is removed yes
and moves somewhere

i.e. this is like the entry of any element
inside the local system
it's always a special question

and therefore any use for example
I think it requires mandatory accompaniment

at the level of Consciousness
before that ^{phase}
where you harmonize the movement
as if an external substance

means and moreover
when you, ^{for example,} do ^{well} control at the expense of Consciousness
and in the event structure
^{for example,} you make an implementation
through external systems
^{let's assume} this is food ^{there}
it's not just about treatment

then the accompaniment of elements
associated with external input
^{so} you are ^{like} a largely local structure
which is defined
^{for example,} the physical body of a person

I consider this support to be mandatory
and often it is given in the form of some kind ^{of} harmonics
or some kind ^{of} harmonizations
which ^{means well} in my system
which is exactly what acts like that
so that harmonization is mutual
and also took into account possible interaction
^{for example} with the external environment

i.e. what kind of power supply is used
and how further development occurs

due to this
I think that if we look at medicine
essentially as medicine built
on the elements of collective Consciousness
then each element can be identified
in one's own Consciousness

and be able to implement
within its own structure

and then the principle
when everyone can recover
restore any other
and generally be saved

will be fully implemented

this principle will create real, I think, medicine
which will be able to, generally speaking
solve any situation
related to the construction of the physical body
based simply on human Consciousness

and plus return
if a person left
then in any case the return of man
for example , in the same, well, just the same person
where the Soul builds his own body

here is the ideological concept
my health care system is like this
that should be implemented in the future
all technologies of complete restoration of physical matter
and not only a person
of all physical matter in general

in this case Eternal development
this is already a sustainable development
and conditioned as if
each preceding
and the future process

at the same time
so from the point of view of elements of future development
future process management is needed
i.e. elements of access to the system of the future
and controls for future systems

Well so let's say in general
the characteristic of this section is as follows
although there is still
well, maybe some additional explanation
and they will continue to increase
on the essence of this section
such as healthcare

This is where I end today's lecture.
there will be a 15 minute break now
then answers to questions

I'm starting to answer questions
and one of the questions
which I will be now well how to formulate
it relates to today's lecture
that's exactly the first question
it will be in such a way that if possible
when will i answer it
you spend at the same time as me
a kind of training

i.e. do it this way
so that it would be simultaneous
practice of implementing the technology
in relation to this issue

because it is important to work here
at the moment of today's level or something
answers to questions
simultaneously with the action
in relation to logic
for example to the verbal part of management

so here's the question
how to enter into the physical body of the human organism
microelements, vitamins and any substance in general
necessary for normal functioning
physical body
For example *magnesium potassium etc.*

so the point is that
what about the technology of today's lecture
introduce some element into the physical body
which you have considered
needed for the sake of the health of the body
it can be done in the following way

i.e. take
as well as by primary access impulse
means to reveal the physical body
in the form of a luminous body

that's what's typical here
when you work with the physical body
optical glow
it just can't be
and it would be better if it were

not in the form of a simple glowing sphere
but it is necessary that somewhere inside this sphere
or generally speaking simply
the body you are looking at glowed

i.e. it meant something
that it is better to perceive a person in a comprehensive manner
there is such an axiomatic level
at a certain level
especially on high-speed flows
You always need to perceive a person as a whole

and even manifested by Perception
elements
better to consider
as elements well comparable to that
what do you mean you observe with physical eyes

's why you're identifying
the glow of this man

and then on the second level in the second phase
from an infinite number of elements
which are created in remote time
for example, ideally in infinite time

you manifest those that you need
and input of elements into the body
it is carried out simply and simply
on the opposite principle

i.e. the glow coming from a person
towards this element
it is activated by you
due to the efforts of will , spiritual or logical
so that there would be a reverse counter -current
towards the place where you need to enter the element
and the element is entered there

the thing is that in my experience
for example including
for example, treatment for stage 4 cancer
possibly by increasing microelements
let's assume the same magnesium
in the area of the pituitary gland of the brain

and this principle
it can be quite effective
if you these microelements
tie it up
with a spectrum of future events

spectrum I mean
that it is better to see the event specifically
i.e. how a person recovers
and not only in a generalized way
for example, the light spectral region

although this is possible
for a kind of super-fast analysis
but if possible
It's better to look at the final event
which is like here is the canonical one
or with that optical glow
which is needed for a given person

and then input elements
is carried out according to the same principle
which I just mentioned
just a primary level principle
he is in the future
and the sphere of a healthy person
glows in the space of the future exactly like this

in Thinking there is
very simple and worked out space of the future here

when you perceive
that is the space of the future
this is a fairly familiar space
in the ideology of Thinking
because making every next move
Human constantly uses this level of control

and when you look
to this very space of the future
then highlighting this area
like a second sphere that shines on another sphere
again dispersed in microelements
you receive input of those elements and in those quantities
which are needed in this volitional impulse, so to speak

your impulse that you use
for selection of elements
First of all, as I said, he
makes the scattered system so
so that it was
as an infinite number of transformations
for creating elements

i.e. you must create an element
outside the physical body if possible
it is precisely in this two-pulse iteration

because the creation is inside the body
implies another static principle
as if instantaneous principle of communication propagation
inside the body

in this case the input principle
implies overcoming
a unique level of security
which exists outside the physical body
well, it's a kind of safety pole

so when you create elements
and bring it to the body
the body still reacts in this way
well , a kind of filter is created
what is good for the body passes

if it is not useful
from the point of view of this time
then this is the most gentle method
in terms of self-control

that is not a useful system
which is from the point of view of development from the Creator
towards Eternal Life
not needed

so that she could pass
must be reactivated by you again
according to the target tasks of Eternal Development
this person

and so you can ^{like} once maybe twice
still duplicate activation

although it's better not to duplicate
and look so accurately
to enter immediately
the right element in the right place

so there is a second level
when ^{does it mean} you can enter it right away
into the physical body
and create inside the body

and for this then you must
so structure your Consciousness
so that the whole, ^{so to speak}, structural-framework complex
on which the construction of this element is based
in the body
would be like this
what is your Consciousness by approximation
by the accuracy of understanding of processes
was exactly like the information
information carrier of this process

then it's just a matter of
creating this element in Consciousness
you immediately enter ^{well as if} structurally
plant the entire structure
on this light element

and you get it right inside

but this design is like that
to pass this pole of independence again
inside
from the point of view of precisely infinite development

you need to structure your Consciousness like this
so that there is access
corresponding to the goals of the given person

that's why the event line of treatment
always supports
complete independence of man
and following it ^{well as if to} true impulses or something

and regulation of events
here is ^{one} of the forms of access
it is to facilitate human events
and then you have access
into this ^{well} into the root system ^{Means} and so on.

the main thing ^{is like} the basic principle
this is independence, free will of man
in terms of its creative development
and Eternal development as well

then you will see many access systems
because with such parcel levels
you have in principle
infinite access
to a specific person

the main thing is that your principles
were actually identified
from another person's point of view

then you can heal super fast
and at the same time pass on knowledge

^{so} next question
he is also quite interesting from this position
precisely at the elemental level

*as from separate elements of Reality
put together a single whole
which represents the Norm*

Well For example *in its original form* ^{let's assume}
it might even be an organ

Well, I think we can talk here
and about event structures
I will explain how to use material systems in general
for constructing event structures

if we talk about the physical body
^{then} the concept of "separate elements"
they can exist in the following way
that's in the spirit of today's lecture
and according to the technology of this lecture
that individual elements
can be considered

as active lighting systems

which means which are manifested

as systems that are precisely maximally revealed
and designated precisely as a separate element

i.e. each individual element

it is a system consisting of an active center
and plus scattered systems so to speak

where are the scattered systems

including the system means well all the connections

that's why there is a concept of "separate element"

that's exactly "separate elements"

this is a concept as I explained

should be in this approach

as the concept of " control elements "

and controls

It's better to take from Norma, which means the future

i.e. always correlate the action

from the point of view of the Norm of the Future
for this particular person

although there is such a principle

when you approximate the structure of Consciousness

the same as what the Creator does

i.e. the action of Consciousness is the same as what the Creator does

then you can immediately know what to do here

such an element is also implemented here

but the technology remains the same

do you know which element is highlighted

take it right away

and which one to connect with which one

this is an instant action

which is coming

when you structure Consciousness

you are exactly realizing the goals of this person

and do this action right now

the training is such that in front of a person

near the physical body of a person

there are his goals
and they are optically illuminated
Once again, we correlated this training

and then ^{try}
from the goals of this person
which corresponds to its implementation
and at any level
not only on the physical, but on the Spiritual
in terms of strategic goals
something that a person may not yet consider
^{let's assume} in the current time
personally ^{yes so let's say} it's easier to see from the outside
this is the principle

but in this case
" from the side " means
that you are ^{like} the principles of its natural development
do not correlate

i.e. that which ^{comes} from the Creator
this is the Truth
which ^{seems to} simply evoke the material
for construction

i.e. the supporting platform
that's right, in the optical range
is the freedom of human action

then you are from these elements
reproduce the elements already
which represent the Norm
or it is an element of the future that represents the Norm
a peculiar sphere

technologically it looks like this
that the sphere in motion in the present
unpacks and leaves an optical trace

in this case, the trail he follows first
like a trajectory ^{going} towards the body
physical body
in the form of a kind of optical path
then this route dissipates
along the pole ^{means Well let's say} the pole of inviolability

and therefore has the appearance of separate such elements

i.e. we get separate elements
not because we get them from anywhere
or something from existing optical elements

and we generally work in space
which originally
not optically manifested in any way

this is where the big advantage lies
that you do not use an external system
and you take only what this person needs
at the current time
from the future element

and each subsequent iteration
It has the appropriate optical systems.

and here's how to connect these systems into the Norm
in this case
the process will be expressed very simply

you just activate
set the desired glow intensity
in each optical phase
and that's all

i.e. some time passes
you highlight that
which from your point of view is not very much highlighted
maybe it could be for a week or a month or a second

then this time passes
you're shining the light again
the next iteration already
or the same one plus the next one, etc.

and thus
First of all, you control the process.
what did you do earlier
the next level he adds
then it's already your Consciousness
which has evolved in accordance with the whole Reality
Here are the advantages of working through Consciousness
that human consciousness

as the most intensive system of information exchange, so to speak
contains maximum levels of generalized connections
maximum number of levels of generalized connections

unlike, for example, the structure of grass
which does not participate there
let's assume in the social life of a person
in the form of well, active , so to speak, yes, in the form of control
if we are talking about a car, let's say

i.e. how to determine
status of general activity of connections

let's assume a car can drive there
and the grass can't help in any way
generally speaking, the movement of the car
can only hinder yes
if there is a lot of grass

but even the level of obstacle
still talks about it
that it can be correlated
with such a concept as "car"

but if we are talking about the cosmic level
i.e. some kind of spacecraft
reproduced by the intellectual phase of man
then the grass there is no longer structured in any way
in physical contact
if she is not inside this spaceship yes

then it turns out
what is the level of information exchange
this is generally speaking the level of access
from the point of view of even local all systems

and when a person has many such systems
he is more connected
that's why I said it then
that access through Consciousness
unlike for example there are herbal treatments
This is already maximally effective because
that it changes synchronously
depending on the growing connections
well, every iteration of time

and once you look at it
the time is precisely the change of Consciousness
personal Consciousness
in general Consciousness of each person, let's say

then you will see that this is like time information
as a space primarily undeclared
can create canonical
optical phases of luminescence
where is it stated
as if some kind of structural canonical region

and any deviation
well any destruction for example
very clear and immediately visible
in relation to this very concept

if we take social time
which is expressed
namely, it is not manifested in the optical
level phase or something those. like space
which you need to have in order to work in it
but at first it is not highlighted

i.e. this is space
has no systemic connections

as soon as you start working in it
it starts to shine
therefore it is always there
at the level means Well let's say ahead of schedule
at the primary level
for creative development

and once you have built
this space starts working
as a manager
because he had no previous connections

and any next phase
at the creative level
always maximally controllable
from the point of view of the control function of Consciousness
for the whole Reality

hence
if you are building
on the factor of the unidentified process of time
you build as fast as possible

but here you can just build
not necessarily
so from the point of view of elements only of the future
and here, as I said, there is a structuring of Consciousness
by maximum approximation
as the Creator does
to the structure of another

this is one of the iterations
where can you work
by time structure
in which at this level
from the Creator's point of view
set out well as if canonical systems

and then
you need the only one
which only leads to canonical systems
in this space

and then you get control
what is the norm of individual elements
is implemented in the form of for example
Well let's assume an organ grows there
or the tissue is restored
even affected by metastasis
or is the Norm of events being realized in general?

by the way, by the way
regulation of the Event Standards
it may be very elementary from this position

there is a growth norm for plants
The norm , generally speaking, of the target development of plants, let's say
here is a leaf of some plant
in the area of which
and the area can be generally speaking infinite
let's assume the whole Earth

i.e. for this you can use

let 's assume only one leaf

means for managing any level of events in general

and this Norm includes

creative principle of the next development

i.e. there is no destruction

as if never and nowhere at all

this is the norm inside the sheet it exists

and if you have access to this Norm

then you can just adjust it

i.e. for example the vertical component downwards

optical glow take

as I said about that drop

take lift a drop up

optical glow

and so that it hangs on the sheet and does not come off

then you can manage the event

through one sheet for example

especially effective if you work

at the local event level

i.e. well, some plans for the future

i.e. you can work there through the grass, through the leaf, etc.

and then you get

that collective Consciousness

has nodal structural points

nodal structural points

i.e. maximum controllability

where can you manage

based on the canonical level

existing object

i.e. here is a leaf that cannot be torn off

it is located high

he is the standard

that the control system is indestructible

and then you can mean Well for example, up to that point

what, well, to shift a possible catastrophic event there

through a system that is supposedly far away
and there is no access to it

but how logically if we are talking
about a possible global catastrophe
then there is no access in that faction generally speaking
where you as your own Consciousness
build this same sheet in the future
you defend it yourself
and you yourself do not allow a catastrophe

it turns out that for global catastrophes, let's assume possible
the only real level of control
is only your personal Consciousness
here is based on a simple, so to speak, logical example

and in accordance with this we get
what if we talk about that
where does this Norm exist

This Norm is just that
that firstly there are no ordinary logical norms
there is no global destruction
there are no private catastrophes, etc., etc.

we come to the very substrate
i.e. how it is built inside, for example, the information sheet
This is Norma

when you see it being built
you can implement it in principle
to a greater extent
control

and accordingly see at all
how does the management initially happen
how is matter organized in general
in the World

so the next question is this
if possible, work on this issue again
at the same time as me
i.e. look how I use the lecture material
why do i even use it like that
in answer to this question

when does the resurrection take place
you need to choose one of the methods
most suitable for a particular case
or use all methods in turn

the thing is that methodology in general speaking of resurrection
when you have many methods it is like this
that often methods on the optical principle
create a control structure
which is a consequence of many methods, for example

i.e. for resurrection it is possible that something is needed
at any given moment have one method
but just like I explained
about digital concentrations
and about transition systems

that there are several or many methods
create more systems for the primary impulse
that's how it is according to today's lecture

and therefore it is better to use those methods
which are on the Spiritual level
give more identification
what exactly is this method or these methods
create the maximum revealed design
for implementation

and what about the implementation of the resurrection
in terms of the meeting itself, it is like this
something collective Consciousness
which well for example in the current time
Well, now, for example, it's 2001
and not everyone is involved in resurrection

a phase of rarefied collective Consciousness arises
from the point of view of resurrection technology
sparse

this phase is characterized by the fact that
which affects the interest of free will
a specific person
and that's why if resurrection is done
from this position here in the current time

when the phase can still be dispersed
when, for example, near where you are
there are people who well for example, they are not actively involved
or they don't do resurrection there

then the rarefaction zones are like this
that their displacement is also a special technology

because you need to be able to organize a meeting
provided that freedom of expression is achieved
free will of those who do not engage
it has an equivalent design
from the Creator's point of view

The Creator created everyone equal

and in accordance with this
from the Creator's point of view
your task is either to convince to give education
and a person understands the true status of development exactly like this
and is engaged in resurrection
then you have a dense optical medium
and you meet well how to be faster with the resurrected

and if it exists well for example this situation
that many students are engaged
they create a special
maybe they are not necessarily together
in one room
create a dense area
where this collective Consciousness is realized
so it also happens faster
meetings specifically

i.e. how else does it matter here
apart from the methods as such
understand the social status of this technology
that the method should include
it is precisely the social level of collective Consciousness
in this place

if in a given place in space
or event part and space
collective consciousness
allows the meeting to be realized quickly

then maybe even
all that is needed is a spiritual attitude
and the methodology is implemented
exactly as what is known to the Spirit
after you have studied the method many times

what i said when
from the logical phase
The Spiritual superstructure that controls grows

and in connection with this
It's often enough to just see
form on d construction
if the collective Consciousness
in this case it allows
then a meeting with the resurrected one occurs

the thing is that such meetings can happen
as if once in a while in certain places
the collective consciousness is rarefied

then from the principles of free will
why else did jesus say
about the necessity of a general resurrection
so that such zones would best not exist
where there seems to be a possibility
as if fatal destruction
from the point of view of the history of the development of matter

For example there is, for example, physical destruction
and there is no way to restore it
i.e. this is the rarefaction zone
if there is even one
then all people can do it except one, for example
to engage in restorations effectively
meet the resurrected

but even one rarefaction zone
it can slow down the process in general even for everyone

therefore, there was talk of a general resurrection

and when we talk about it, for example,
and what should the methodology be then?

so that every single one
the system of cognition has reached

Firstly, it must be accumulative.
i.e. all the knowledge you have
It's best if they spread
exactly to everyone at once
i.e. the methods must work socially

that's why many people who are involved in resurrection
even at certain meetings
encounter that situation
what ^{does it mean} that it turns out to be a social principle
for them it begins to be predominant
as for those who have already been resurrected
but they need to meet
and for those who are resurrected
and for those who are involved in resurrection in general
those. not dying

and then it turns out
that here the social principle is like this
that it bears more loads
to transfer knowledge
or certainly, ^{for example,} directly without words
or conditionally, i.e. in words
to everyone

as soon as the process of transferring to each
saturates to a certain level
Well, let 's say meetings might happen again

if the concentration is so high
that ^{well} the mission of a specific person is accomplished
on knowledge transfer
then he just
the resurrected one himself already remains with him

i.e. therefore the question of resurrection
Often the question is exactly this
in terms of training, ^{as it were,} all others
because that's how I explained it
zones of possible rarefaction of collective Consciousness
from the point of view of this question
should not exist in principle

provided that the ultra-fast development

this is exactly what advantage means
exactly this design

in that such a high intensity occurs
exchange reactions with matter, perhaps
that in principle matter becomes
already fully controlled
and then there are completely different horizons for development
they have other tasks

than in the conditions
when there is a possibility of termination there
for example, life activities
and the tasks in general may be completely different

although they are at a certain level
intersect
but to solve another class of problems
you need to have a level of controllability everywhere
this means that complete restoration of any destruction

so now the next question
as I said
that complete recovery from any destruction
This is an ideological task in many ways
to ensure the quality solution of other levels

then if possible, look at this question
from the point of view here is the next question
namely the principled ideology

for example, I can answer
so that it would be technologically understandable
and if possible more adapted or something
it's the verbal part

and I can, for example, just be at the level
information transfer entities

both the first and second parts
sets the same level of knowledge
i.e. the level of information acquisition, the level of development
I still manage to endure it, well It's like they're the same thing or something

but for me sometimes it is fundamental
so that there would be control
from the point of view of transmission in the verbal phase

that the work is going on
precisely at the fundamental level of direct access
and not only at the level of, for example, greater knowledge
example, due to the words that I said

so on this issue
when I formulate it now
then concentrate as much as possible
at the level of fundamental Reality
so I will call it this Reality
and at this level
try to do it at the same time

i.e. when I read the question I immediately do
and then when I already do the management
then I say for example yes second iteration

i.e. the first level of management
I do it there for Macrosalvation first of all
then in principle
then in principle I say for example Yes

and you can in principle in the substructure
turn on more for example there is recovery in the hall
there is a solution to the problems of people in the hall
in general, everyone who listens to the lecture
everyone in general, etc.

i.e. it is possible except for Macrosalvation
make a series of sub - iterations
in general, how can this be solved in real time?

and so when I read the question
I decide everything first
then all that remains
like some kind of wave there of the second level
and for example , I answer in the form of words as if to a question

i.e. reading out the question
this is also the solution to the issue on its merits

so that ^{means} I'm reading now
you are simultaneously solving the issue

Means Well, I'll formulate the question this way
in the presence of control through digital codes ^{there}
treatment of diseases, etc.
does every person have their own code

well, as a kind of direction there
The following option is given in brackets
what is the number month birth code

and what does it affect
and also *can these be* ^{For example} *city codes, streets, etc.*

so they carried out the control right away
and from the point of view again
that's why I often cite local lecture systems
sometimes I add that it is necessary to use material from others

Of course you need to use the material
from other lectures
but local system
it can be fully processed
when she ^{well for example,} formulated in theoretical terms
and at the same time, ^{as if} applied

here is today's lecture attached
we can say that all digital ^{are like} combinations
which correspond to the objects of Reality
you can generally consider
in the form of the same numbers ^{of course}
and consider
control number change structure

i.e. if the numbers are more static
who are the managers
then the substructure changes

i.e. every human movement
it's possible naturally
in accordance with enter ^{means} some number
which would characterize
in a ^{more planar} version
^{it means} precisely control systems

i.e. even more in the projective
i.e. number as a projective control system

if you see optical glow
in the form of the Reality that you see
and you don't call it by words yes

then you are in the Reality phase
which is not yet designated

i.e. it could be like this
that the words are not manifested here in any way
and to formulate the word at all
we need to make a transition system
only then the word is formulated

also for the number
the number is means already
correlated in the phase of Perception of Consciousness
system

and so that the number is one number
which in a planar version
for example, it is written on a sheet of paper
and is the governing number
or there is a combination of numbers
corresponded, well, let's say more correctly
your management goals

needed between impulse
the main glow for example numbers
And
impulse of external Reality
which is well characterized
not by number but by some actions
or health condition

so it is necessary to conduct a kind of series
interconnected, so to speak, rod structures
or in other words it is more adapted
some bridges

then you can use it here
the principle of the same fragmentation

according to the time aspect of numerical series, so to speak

i.e. taking for example some
arbitrary numerical series
and without looking at it closely there
Well for example on the Spiritual level
knowing that between the control number
for example I take four
in order to mean well in this hall
knowledge was spreading
well, with the maximum super-fast speed
and Eternal time

let's say I take the number four
so why am i taking the number four now
because first of all
is currently responsible for this task

and secondly, it means I can just appoint him
well then just if I appoint
for example, I will assign five
then I will have another
other distribution system

and that's why I choose
or I appoint
or I just choose
as an informatively existing number

next I need to do the controls
taking into account compliance
for example, not just to every person
as a certain level of number
or digital codes

the thing is that the person himself can influence this
what it can do is transform the system
Well let's assume there your own
any other
for the purpose of Salvation

i.e. the person who creates numbers in general
who is in charge of management
it has both a controlling effect
this number

who, for example, does not do it
actively managing system
that has a number as a static system
which is changing
or from external influences
or, for example, according to the essence of the goals from the Creator
exactly according to Eternal development

then it turns out
that the manager has a design
which it influences
and therefore my design is from the number four
must be implemented
towards the number nine for example

where is there a possibility of change
if nine is connected with zero for example
through the space of Spiritual reproduction of number

here is a number that can be reproduced spiritually
but it is not visible there as a number

and when you translate for example
from nine to zero
as if knowing that the reflected wave of nine
she is so fast
that nine carries the functions of zero as well
i.e. root space
or the so-called "zero-transition space"
in any phase of space at any date

then you get the control that you
For example , I just add to everyone
what I would consider necessary in the form of knowledge
mostly

if necessary
then I do direct control
for the development of the structure of Consciousness there
but at the same time I try to make sure that they are
interchangeable, mutually accessible systems, so to speak
they would be free not conservative
and if possible such that
if it does not concern the structure of a person in principle
radically

i.e. some kind of trauma or some kind of problem
so that he himself could choose personally

i.e. will he accept it or not, for example ?
if it concerns a radical change
i.e. then it would be like a platform of free choice
built on the platform from the Creator
i.e. towards Eternal development
and still there is no imposition

this is for the management system
who if we were to consider a scattered system
like a subsystem where the numbers glow
then managers can, in principle, change these figures
but nevertheless in the iteration of the action
does this number exist

hence
I can answer this question like this
that control via digital codes
exists for those who are involved in management
exactly, well, the whole Reality
what does code mean
or a digital combination of actions

and not as a static system

if it means a person well To a lesser extent, I suppose
is engaged or not engaged
control of Reality from Consciousness

then such static systems
correspond for a more or less long time
so by this I don't mean
there is the date year month of birth
This is of course a static system

but it is more modifiable
depending on what number
to give some spiritual content

and so the change is here
maybe it means from the level of the Spiritual plane
and here is the Spiritual content
let's assume from the point of view of Eternal development

if we consider infinite development
then the Spirit also develops infinitely

i.e. synchronicity occurs there
logical and, as it were, factual phase

then the superposition of these phases
depending on the condition
can determine

as if the active action of each number
here's what action
every number gives birth
for example year month date

and then get the date of birth
let's assume a seemingly fixed system
receive as active
and, moreover, changing according to target levels
because that means you can
or somehow expose it
some numerical combination

pay attention
that when you celebrated some birthdays
some numbers were more revealed
on the Spiritual level
some less

at some time
you either reveal one or the other
either by one sign
you are precisely the internal, so to speak, optical glow
you receive an optical signal
either one or the other

i.e. it turns out
numbers they seem to be static
they have this property
that transmit information
and you can control them there
or activate this information
or for example leave it like this
if she is normal so to speak
from the point of view of your Perception

so for the one who is engaged in management

this means that even seemingly static numbers

there let's assume city codes, streets, etc.

some phone codes

they can be made activated

and generally speaking work in this way

so that for example between two numbers there

construct various number series

to control these codes

here for managing static codes

there is a somewhat reverse structure

i.e. for example if I consider

let's assume some number

Well, let's assume that there is some two-digit number

consisting of two digits

then i can make a substructure

and consider from zero to nine numbers

what if i mentally enter

between these two numbers

any of these numbers

one or a whole series

then I get event management accordingly

through fixed numbers

and I use the same numbers

Well as if reading and a kind of controlling reading

between the lines, so called between the numbers

and then how do I get it

that even seemingly formally static systems

actually very active systems

and from the point of view of today's lecture

they are expressed as control systems

where are the scattered areas

I create simply by means of volitional combinations

looking at the structure of future events

and in connection with this

for example, if we are talking about

about treatment for example here through the numbers

then between the numbers
it is also possible to construct subnumerical series
and make the process more intense
or for example more controllable
Well let's say in terms of time, slow or fast, etc.

so i.e. not just distribution
for example inside a sphere
where is the distribution system
may not always be fixed
and we also need to concentrate our Consciousness on that
so that I could somehow measure the distance
and remember their distribution

and can you sometimes fix it
through a rigid system of sub-digital concentrations

in this case the system of sub-digital concentrations
she can be
or your own
or consist of identical diagnoses

i.e. choosing any place
basically this place
approximately in the middle of the number series
if you enter by digital concentration
by means of investigative or by organizing
this diagnosis
reasons
then you intensify the treatment

Well, you can also create your own systems
and at the same time write out
then you get
a fairly rigid intensity system
in the fixed row control plan

so this is the question
which in this case is generally true today
it would be well enough worked out
at the same time as me
here in the logical phase at the initial level

and then more control went on
on the Spiritual flow so to speak
on Spiritual Content

so here is the revelation of the Spiritual phase
this is what it is in many ways
a kind of enlightenment of optical information
where the sparseness is already more information

but besides that
that here is a characteristic of sparseness
here the intensity is as if logical clairvoyant
the level of understanding becomes clearer

this is the concept of "direct knowledge"
this is among other things
spatial minimization with respect to time
for the Perception of some element

why did i say
what if we split time very strongly
when there is no time left
for logical perception
we just see

i.e. clairvoyance
it's just a direct vision
where you don't waste time
in order to restructure
through the logical phase of Consciousness

where logic exists
because you have adapted knowledge
you know what's there looking at the transport
or to some phenomenon
you just know him

if this phenomenon is completely unusual
then you just either know right away
or translate
into a known system of the structure of one's knowledge
or simply expand the structure of knowledge
depending on need

and these expansion systems
they are such that you can simply expand the systems
Well, in any case, in a targeted manner
seeing the phase of the general for example Salvation

while there is suppose there is a global threat of destruction

you can do it in the first iteration right away
in the second iteration
in principle, it is possible to apply the analysis

but for now it exists
again, the system is macrodestruction
it still kind of forces you to do iterations
with its real level of possible implementation

and therefore
that's why i introduce the macro rescue level
as a preliminary basic level
because it's sooo is it a phase of objective Reality?
which must always be controlled
so that the next second of development there
existed
and there was no global destruction

so if you work
with numeric codes
according to the purpose of these levels of management, here are the
numbers
if possible, definitely
this is generally like a canonical rule
It's better to do this right away

but why do I say if possible
because often in the substructure of the scattered pulse
there is a level of Macrosalvation

so I admit
that is like a word
"if possible" to do canonical management
related to that
to displace the information of Macrosalvation
and not give it a numerical form

i.e. if you don't implement it as a number
that means it doesn't exist, well, in the space of the future

Now do this training
right in front of me
then build such number series

where there is no information
where there are no numbers about macro destruction

try to do it quickly
it may only take a few seconds
and I'll have a look

here is the question
which I have now set as a task
look this is quite a challenging question
in that regard
where Soul and Spirit act simultaneously

those. to be able means to create a number series
which doesn't fit together at all
for example with the number of possible
or something about global destruction

i.e. to create an autonomous system
which is not described in any way

it's actually a very tense structure
in Reality
where Soul and Spirit work simultaneously

pay attention
This is where you can track both at the same time
with the work of two specific systems, for example
as Soul and Spirit

and on what principle
see how it works together with you
Creator
to prevent Macro-catastrophe

i.e. you will immediately notice it quite clearly
if on a physical level
everyone does the same job, some kind of generalized one
then this is quite a collective Consciousness
it is very clearly shown here
well for the same purpose yes

here it's the same
at the level of internal management
because the relationship with the physical level

It is desirable to see here

and then you see the Creator
which created the same physical level

i.e. this is such a philosophical question
concerning that
what does Eternal level of development mean so to speak
it is manifested to a greater extent
as a Spiritual component

that you see Eternity in yourself
because you are like that in the first place
i.e. there is that level of Eternity
which is easy to implement
if you just keep going to him

if for example you start to pause
then you just get caught
to another quality system

and therefore the level of Eternity
it is realized in you
moving towards Eternity

if you ask the question
here is the demonstrative plan of the existence of Eternity
then billions of years may pass
but the next second always keeps the question
until it is implemented

there could be billions more
and again the next second
always asks himself the question
but it went well for example there are many billions of years there yes
two- or three-fold for one period
and then this is how Eternity is realized

that's why the concept
"truly realized Eternity"
this is the concept of precision in implementation
i.e. such a Spiritual state of such movement
when Eternity is already realized
factually, it seems to be compatible
With
event level

so we can look further
that each event construct
positive creative spirit
also has the structure of Eternity
which generally speaking can be considered
even on my own

and if possible
as homework
look

where each creative construction
contains the structure of Eternity
for example in the form of a number
in the form of some segment
for example, in the actual sphere of glow

and try to make this information of Eternity such
to impose it on the information of life
make them identical

then you can spread life
even in those systems
which for example Well, they are not
from this point of view, functional

the question is this
what if, for example, we consider the concept of "egregor"
and at the same time it means from the point of view of the egregor
consider the issue of importance
Well, when a person adheres to some egregor

then I can say that well if we consider the concept
as if one of the levels of collective Consciousness
for example egregor
as a level of collective Consciousness
which characterizes
some specific connections relationships
For example there is Christianity, Buddhism, Islam, and so on.

then here if we talk about commitment
one egregor of some situation there
exactly like this, like in the essence of the Spiritual plane
commitment of the egregor

then there are a number of systems here
concerning that
how is the same egregor formed, for example?
if we take earlier times
when else for example

Well let's say religious contexts of development of society
were manifested differently
that is the concept of "egregor"
was mainly formed territorially

but egregor
which exists for example Well, let's assume in Christianity
including has
territorial systems of formation

and with the intensity of connections
it starts to spread
moreover from one level
information passes to another

if you look at all the fundamental religions
then the idea of creation in general is about technologies
including a creative plan
it is shown there quite clearly

therefore, strictly speaking
if we talk about importance as in this question
a person's commitment to some egregor

then I think it's important
so that he would simply understand
the essence of the creative plan of any egregor
it is precisely the creative that is meant

the concept of "non-creative egregor"
This is not a functional concept as a rule
i.e. it is like a system of deconcentrated
let's say so if we call it that in the optical version
systems
which have constant dynamics

i.e. they are constantly moving
and in principle practically
because of this, by the nature of development

they are not functional

Means well why let's assume here are the paintings
about means different systems of punishment
for sins
they are precisely in some such
dynamic actions of all sorts
presented well some kind of lights there
there are no actual concepts of "hell" there for example, etc.
where all the time happens
from the point of view here is also a counteraction
yes to the egregor
not even an egregor
you can't call it that
and for dissystematized systems, well, destruction

because there is constant movement here
where destruction is detected
in the form of, for example, a dynamic system
which has no future development
from the point of view of Eternity of development

any destruction
always has a reaction
elements of Eternity

and when, as it were, this is the Creator's plan for Eternal development
identifies such systems
why is it said that the Creator always finds
Means Well as if possible destructive directions
in activity in Thinking

and because it is recorded quite clearly
in terms of development of even optical systems

and therefore talk about it
that this is exactly the kind of egregor
if we speak about something comparable to the concept of "egregor"

because the egregor is mostly worn
such a positive characteristic
from the point of view of Perception

but the destructive level says that
what is in the destructive level
as a rule accessories

Well , there is no such thing as a long-term one

that's where the weakness really lies
any destructive system

but if it is manifested
for example in the form of a nuclear bomb
then we get a static thing

and here quite a lot arises
Well as if in a moral principle or something
quite a fundamental system

that once reproduced
on dynamic systems of destructive nature
for example a nuclear bomb
now it begins to form
like a system of nuclear bombs or something
or a system of global destruction
begins to form a counteraction
including what is necessary
so that it would be done in a local manner

i.e. so that everyone
having a system of its own reaction
I could have prevented everything, generally speaking

that's why i teach
so that everyone can do it
well, to prevent a possible Macrocatastrophe
and on my own

because the level of formation of this system
as if Well, destructive.
he is exactly what was intended
to as if to everything to everyone
what will develop further, for example?
in the sense of, for example, the creation of a nuclear destruction system

and therefore it can be used
concept well there is no "positive egregor"
essentially highlighting any egregors
in order to teach everyone
across the whole mass of positive information

i.e. as just independent work

you take it and try to look
how strong is the characteristic
here is the entire volume of positive information
against there a single level of invention there
let's assume that led to a nuclear reaction
and there the creation of a nuclear bomb

i.e. this is a one-time level of destructive plan

and the growing Consciousness of people
it's so big
that anyway
are being implemented
ways to prevent a global catastrophe

but at the same time
each next level of development
actually adds much more
than the possibility of destruction

and here it is with me now
generally observe this Law
that each element of development is in fact
makes a global catastrophe increasingly impossible
although it seems like the number of bombs may be increasing

from the point of view of only one level
and look at this information of egregors
in creative plans

the ability to quickly transmit information
and I'll watch

Now do this training
immediately after the primary
each person may have different ones
so in optical manifestation or something
glow systems
and even depending on time
there are different ones in terms of intensity, for example

then for the purpose of the endless development of such glows
an infinite set of contents arises

glow for example associated with

Well there with a specific fact of implementation
nuclear bomb
sometime there at the beginning of its invention
it's just one form

if different forms of glow
all the people there in the whole world
take and direct
and they are still changing endlessly
according to the structure of Eternal development

only the restructuring structure
this can lead
to very strong social processes
is connected with the fact that gradually
nuclear weapons for example at least
or there is bacteriological chemical
may no longer be dangerous
for global destruction first
then for complete destruction

and therefore, if possible
as an independent work
see how to use
a well-known concept, such as "theosophy"
religious systems social
in order to identify
maximum number of different glows
different shades in the optical range

to reveal, for example, the structure of life
in different systems
including past and future
and all this should be directed towards restructuring
for example possible systems
first of all global destruction
which are generally highlighted as a rule
Well, basically, as a rule, they are highlighted

if we say that they have this
Well like this concept of "the right to be seen" yes
let's say their internal and local law

that concept of "rules"
here it only fits

as a temporary system of their so-called existence
within the social consciousness

because over time
any social destructive systems
may no longer be in social consciousness
even the names

that's why this usually exists
only in local terms
in terms of counteraction
I use this word

and look here
that this is a normal monoglow
quite clearly manifested
in general, not having any special
means some special characteristics

therefore, the possible catastrophe is not even global

always simple enough
if you pay attention to it
define
based on the functions of one's own Consciousness

and even means in any case
prevent, as it were, macro-consequences

i.e. this is the system
it's just inherent in literally everyone
at any level of Perception

and if a person is just looking there
perceives or exists at all
he is already doing this work
it can simply be done purposefully and effectively
by combining the efforts of everyone

and then what will not happen in any case
at least macro destruction
this will already be logically justified
socially proven task

I believe that based on the technology of use

means high-speed technologies
i.e. technologies of Eternity
different intensities of glow in different people
and it turns out to be infinite
time is an infinite amount
completely different
intensity

direct
on some kind of monochrome monowave
and restructure
actually, in general, it's logical
there don't seem to be any particular problems

and therefore it is clear
that in any case there will be no global destruction

another question then
why do they exist , as it were?
such long periods of achievement and such goals

and they exist for that purpose
to make this Consciousness
everyone got it
at the natural level of natural Perception
i.e. according to freedom of personal choice

and therefore educational processes
they mainly affect
orientation of free choice
on such an element of collective Consciousness
i.e. well as if a kind of spiritual growth

that's why it turns out
what what well in any case
it may not happen and it will not happen
even here, according to the Perception of one person
which generally sets the idea
for example, the inadmissibility of macrodestruction

technologically in social terms
these ideas take a long time to get through
because according to the Creator's order
everyone is created free
and precisely on free will

he must implement it

and that's your task
is this what the resistance system is
here's how monosystems restructure
who would teach others
or the structuring happened naturally
in social terms
when people can mean Well, let's implement it
joint decision

but nevertheless
you always have the opportunity
forceful intervention in that
to prevent a global catastrophe
because the methodology allows it
do

I'm finishing my lecture for today

thank you for your attention
