

GRIGORY GRABOVOY
Structuring of Consciousness
**Management technology
by building your own cells
simultaneously with the management of all external information**
(3)
29.06.2001

Now I'll start the lecture part from the beginning.
then there will be answers to the letters
and plus additional information
on the questions that were asked earlier, but they
the information will not be direct
I am also mediated

Means in this lecture
according to my system of salvation and harmonious development
on the participation of the structuring of Consciousness in the management of Salvation
and preventing a possible global catastrophe

I give the technology of control from my Consciousness
which is based on that
what do you control
by building your own cells
simultaneously
with control of all external information

so when building
own cellular system
harmonized control system is being established
which controls through connections
with all the elements of the external world

and this control is carried out
through detailing
structures of one's own Consciousness
based on the primary impulse of Perception

with this approach, management is such
what do you highlight first
principles of building your own cellular system
then you mean this cellular system
activate it this way

that during construction and in the future
this system
harmonizes all external Reality in this way
that there is no possible global catastrophe

to build such technology from your Consciousness

you must first decide on that
how do you start building cells

and this is exactly what we are talking about
about the cellular system
within the limits of one's Consciousness

for this you allocate
cell projection
in Consciousness
from his own image

i.e. looking at , well , looking at, for example, a hand
or is there the whole human body
it can be considered that this is a certain part of Perception

and in the form of optics of Perception this is some information
which characterizes
or a part of the human body
or for example everything that can be
as a human physical form
and its entire information constant, so to speak
at the current moment of Perception

so that's the meaning of the technology of building a cellular system
it means that you
the visualized area, i.e. the outer area
which in your Perception means a person
you implement this area as a basis for building a cell

in fact, we are talking about the form of information
i.e. transforming
own information in this way
what is Macro about volume which is
image of a person
including the informative part
just not physical not only the physical version
you transform into a cell

Means with such a transformation
is happening
naturally harmonious process related to that
what is in the current time
human form
ensures prolonged development
i.e. there is no global catastrophe, for example

and including the form of man
thus it already controls the cellular structure
that you have a harmonic function
actually to the level of Infinite development

because in principle if we consider
not only the form
but also the ideology of building the structure of man
there is a level of Infinite future development

with this approach
the cell projects itself
to the area in which it is located

you have to be more careful here
because as soon as you bring it
to the design that I just described

you start to see
as from this information
but as if back to you
in fact, on optics it looks like this
from the area that is so designated
it starts in your direction absolutely definitely
by absolutely precise coordinates
go light pulses

for example , I highlighted it on my desk
this is the area in physical space
and from this area they begin to go
specific light pulses
which characterize specific cells
Well, for example, mine in a particular case
In general, we are talking about a unified law
building your own body from your own image

i.e. if we assume that we are given an abstract problem of this type
that when a person is in an environment where there is nothing
then how is it supposed to exist there?

solution to this problem from of this methodology
feasible

i.e. the task comes first

the stability of one's own organism

i.e. the basics

which exist, for example, without an external environment

the task ahead is

in the construction of external Reality

thus, when constructing a cell

necessarily an element of construction

is

formation of external Reality

and the formation of external Reality

in this case it is carried out, well, sort of automatically

i.e. it can be simply observed

to do a kind of experiment

set up the concentration zone like this

for example somewhere in physical space

and seeing when the impulse begins to return to you

you're just watching

how external Reality is formed

and external Reality

it will be exactly as you perceive it

well, the maximum level of Perception

for example with eyes

hearing, i.e. physical level

smell

and plus the information level

it will be about ninety nine percent like this

how do you perceive it

i.e. external Reality

it is built exactly as you want it to be , in principle

i.e. here is a very important element

what is the human behavioral system

for example if you are walking down the street there
or do you make some decisions
then the behavioral system fits in
into a system of certain laws
which are often manifested in approximately the same way
by the status of the information constant

this is the concept of "approximately the same"
in a sense, some manifestations
there are such spiritual states
but they are actually described differently by society
but they happen in such a way that a person comes and remembers
that such a design already existed

the thing is that from the point of view of this technology
when you are not working in real time
and for example through sleep

or are you working?
Well, if you take the Buddhist theory of reincarnation
taking into account the Perception of this information
then you just build the same area in front of you
and come to an already known area

then it is superimposed
that factor well previous optics
you will recognize the Reality created practically by you

Means this is like an illustrative example
which well exists in certain literature
and it happens to many people
in principle, it happens to everyone
but the question is how to use this element

or perceive it as a reincarnation system
in my control system
any systems manifest at the point of Salvation
i.e. they are applied

so here this information should be perceived
how exactly is the area pre-created
and external Reality is exactly like that
because that's how it should be

based on this

it is clear that the element of salvation from a possible global catastrophe
it is always feasible
because for example the desire to see
so that this catastrophe does not happen
it is always feasible
and in this case at the intracellular level

and as a starting point I took my own organism , for example

however, here again it is necessary to pay attention
that external Reality is a natural development
it means the level which does not necessarily mean is
level of active control from Consciousness

i.e. this is a natural level that develops like this
if you plant a tree sprout, for example, then
or there is some flower for example
he himself then as if is growing

so this is this concept, well, "in itself"
considering that in my control system
this means that all elements must be controlled
then in the next part of this lecture
This is the principle of self-healing
means according to the level of harmonious development

Means We can consider just this element
well, the so-called "element in itself"
i.e. when the situation develops
practically means synchronously with that
that during self-healing
you at the same time
harmoniously develop the entire external world

i.e. in this case we can consider
element of the basis, i.e. the supporting basis of development
when it is not necessary to control all processes
through the active function of Consciousness

i.e. you must be able to
quite specific for example or manage correctly
some current situation
or some situation, for example, reproduced
or to carry out some of your own plans, for example
and at the same time

control of all external Reality
must be carried out unconditionally

i.e. if you connect
the first task
means Salvation from a possible global catastrophe
where management is carried out by all external Macroprocesses
with that
that you also have control over Microprocesses
and in general any area of information
that surrounds you

connect this with the fact that during self-healing
you should still do it anyway

then the element of self-healing
from the point of view of structuring Consciousness according to Macrosalvation
has , well, generally speaking, the same essence

those. self-healing concept
still contains
there, for example, is the non-destruction of the carrier, for example , the planet
there in the next second, etc.

due to this
uniformity of actions
as self-healing
and control from Consciousness
it leads to that
what can be highlighted in the information
well, let's say unified or we can say similar
criterion-like areas
which allow you to create between them
the system of the next Reality

for example management
according to the system of Salvation from macrodestruction
this is one light let's assume a line some kind of light screen
self-healing where the principle is the same this is the second screen

i.e. one of them is already one common point
where does it mean the basis of this point
is everything that surrounds you

but at this moment you are doing the management

only in the target area
at the same time, the area that you are not considering
is manageable

so in this connection the task of management
this area
it's just that
well from the point of view of the optical system

to return by
go back to two screens at the same time
to a common point, as if located , for example, above
and let's assume that the screens are down to the sides, vertically down
i.e. along the body

then you get this common point
as a system of control over the whole Reality
which you, for example, are not currently doing

for example , there is no point in you researching or controlling
Microprocesses
or do macro regulation there
unless there is some current need for it

and at the same time the passage is constantly through this area
still gives control over this area
when solving specific problems

i.e. this is how my control system is built
that you are definitely doing private management
pass through the area of Macroregulation
according to the Salvation system

in this regard, having designated such a point
as a control point for all Macroprocesses
you are geometrically just
you are doing a very simple thing
you designate it in the system of Consciousness
bring it into the spectrum of your private tasks
and that's all

it is a mechanical action
i.e. you are the point that is
the point of connection of two screens
enter into the light area of target actions

and this point must be
preferably a central point
target action areas

i.e. if the area of target actions
this is a sphere
This will be approximately the center of the sphere

in principle, if the area of target actions
it is a dynamic structure
i.e. your Perception can change and change form
for example, if you quickly resolve some current issues

that is the point that I named
management of the entire Macrosystem
through means the area of inactive, as it were, control level
but at the same time mandatory management
will be located
in the closest
Light Elements of Perception

i.e. if you want to highlight this area
then in the optics of your Perception
you can just do it
for example, on a plane means horizontal
well, vertical in relation to the body

decompose this area
and see
that in principle the area of this Macroregulation
is the very part of your management
but it is simply closer to your physical body
that's all

i.e. she basically even
it stands out quite easily

and at the same time the control structure
i.e. the target part is this
what's next

and you can basically regulate and understand
why for example the task at hand
under target management

is implemented in some specific current way

and if you want to strengthen this task, improve it, for example
or speed up execution in current time

This is especially important in the Salvation system
where there is a possibility of targeted analysis
for example, time is enough you need to choose
optimal form of management

then you can

the area of Macromanagement is your task
and all external information that is not targeted
and you, for example, are engaged in Salvation
from the explosion of a nuclear reactor there
but at the same time it is somewhere in the forecast phase, for example , a month ahead

then you can do so Salvation
so that from the point of view of other tasks of the target tasks
it was optimal

those. don't let it come to that
so that for example there would be little time if possible

and here is this task

This is generally speaking a task of control optimization
related to the fact that the area of Macromanagement
she approaches you in fragments
then at the level of Perception

and for example, in this case I have outlined one of the tasks
if we take, say, the following task
i.e. let's assume we take the level
which we need to make the manager
from the point of view of all existing Macrotasks

i.e. you have highlighted
in the management spectrum, for example, a month ahead
a number of , for example, informative constants
which need to be managed at the required time

thus highlighting
control structure as I explained
you are just to the control center
which is physically closer to you
and is located approximately in the area of the thyroid gland

so but outside the physical body

bring in ^{some} kind of optical beams
from each of the spectra

i.e. in front of you
well, sort of multidimensional in an optical version
diagram of possible events that need to be redefined

and then the control center
flows down
to one point that is in front of you

so here is the controllability of these events
the thing is actually very simple
i.e. there could in principle even be an infinite number of them

the main thing is to highlight
from the part that is closer to you
i.e. the part which is called, for example, Macroregulation
without decoding the regulation level

i.e. you regulate the process
but you don't need to know and regulate
by active control of Consciousness
there are microprocesses, well, that's what you don't need in principle

from this area
you highlight the so-called
Well, I'll call it a matrix form
or matrix projection

in canonized form
it looks like a reflected ^{ray of} light
but having basically the same shape
as well as the area of Macroregulation

these peculiar forms
So they connect with rays
at the control point near you

and this connection
this is management
all current processes
which do not require active manifestation

and which already require active management

as an independent exercise and homework
make it manage
from the point of view of optical channel detection
i.e. what form does it represent?
where control passes
for your private tasks

i.e. this is what the optical channel is like, what shape is it
means it implements your private management

i.e. generally speaking I can say this right away
it is not necessary to know in the form of a form
but if you highlight as a form
you are simply following the logical chain
as from the level of Macromanagement
private tasks are being managed

because in principle it all comes from the same form

then you can change the shape
and knowing the Macrocontrol system
do your tasks

Logically it's a very simple thing
i.e. if, for example, well, potentially
some kind of earthquake with destruction is possible
then you will take it into account in any case
this component in business for example in this city
where an earthquake is possible

in this case, taking this factor into account
it is unconditional
i.e. your control depends on the current situation

the same at the information level
a lot of systems are being formed
Well, for example, there is a possible nuclear explosion there
possible nuclear reactor explosion
some kind of bacteriological system of destruction
for example, from the negligence of military personnel, let's assume
all these current situations affect
to your private decision

i.e. you need to , let's say, fly somewhere
you control the plane

Well , for example, it flew into the schedule
and at the same time fly through a chemically contaminated zone
it is forbidden

therefore you can determine
where from what vector of Macrocontrol
there is a delay, for example , in time

i.e. control accuracy in this case
increases significantly
when you work through this area of Macro Management
which is closer to you

and here is the area of self-healing
can also be an area of target management

this needs to be considered
as an independent work

i.e. in this case it is very important
what is needed can be built like this
form of management of private tasks
what it is and the area of your self-healing
i.e. to do two actions in one

which, firstly, corresponds to the task of Eternal development
you simultaneously regenerate yourself and restore yourself
and at the same time you perform control

it turns out to be one fraction of information
works in two tasks

well, that is, here in general it is important to see
how from one area
see on optics
from one region
you get
as private task management
I put any tasks in the category of private tasks
including the tasks of Macrosalvation

then it turns out that you are closing the area in reverse
i.e. you close the circle

and the result is a super-fast development of information
and this is already direct contact with the Creator

i.e. direct contact with the Creator

This includes the technology of simultaneous control
both from the point of view of private positions and general ones

this is also as an independent work
consider

now it means I need to, I think
here is a specific practice to do

i.e. everyone in the room
should be here in front of me, for example, in front of the table
put the form optical form of communication
which I said about
from the field of general management
there is an optical specific communication option

in this case
I'm talking about optical control coordinates

with your area of private tasks

each has a specific area of tasks
it can be different in principle
but since the connection with Macroregulation
is happening
naturally there is one common structure for everyone anyway

is still a real savior
but for example, everyone does it in their own way, yes

but the fact is that there is one common goal
it is manifested in the general system of themes
that in different images it should always be in shape
something universal for everyone

so now just select
put it here in front of me
this mental form

form if we look
to the optical area

from which, for example, control comes

in the area of private Perception

from the field of general regulation

then it could be, for example, an optical beam, yes
looks like well clear enough
as some kind of optical version, well, light

the form that you allocate for Perception
to put here
naturally it can be different

for each individual

i.e. the selected form may be different
This is one of the controls
where is the selected form
this is your own word control

i.e. take from the known part to select the form
and put it in front of me
this is already a different management

but the task is
first find a unified form
inside the form of each
Do it right now in front of me

example, I say you do it right away

for example, I will not stop the lecture here in this case
i.e. you just do it
and I say, I say, I say, all the time

i.e. try to make the controls like this
to solve problems simultaneously

i.e. for example you will make control
solve the selection problem immediately
selection necessarily means a generalized form
and you immediately understand it

so that means again

from the field of general management
there is a natural connection
with the area of private management
on the previous part of the lecture

the previous part of the lecture is an optical setup
i.e. with a certain regulation for management

and so it turns out here
from this construction you extract the form
what is there for you in the form of Perception
in any area of Perception, everyone can choose their own
this area
connection with private management area
it is the connection
i.e. I'm interested in the connection, just the connection

and there you find

a generalized control system for all

you do this when developing, well, for now, a mono-mode
but on the condition that I constantly add information to you

so with this technology
you think for yourself, you manage for yourself
for example, here in front of me
but at the same time you listen to me

i.e. it is a bit of a loading technology
but in reality that's how it turns out
what you should perceive
for example, verbal or some current information
including informative

consider for example
Let's assume the option at the Kursk nuclear power plant
i.e. look at what's happening there now
at the same time as what you are doing
and at the same time listen to me

i.e. i.e. it turns out
you already have three control vectors
this is a generalized problem
but everyone may have different tasks there

i.e. take it and work on your tasks
and at the same time, as if periodically monitor
the production part that I mentioned

i.e. highlighting the form of communication

so the next part of the lecture
considering that you are listening to me
and yet everyone does it differently
here is this part on management

the next part of the lecture is that
what when we say
about management means from your Consciousness
then in this case all technologies
of course they are related to that
that you control from your Consciousness

but in this case here is the concept of "from one's Consciousness"
for example, direct control of events from your Consciousness
i.e. we are talking about a private spectrum of control

looks like something you control
from the region
from the field of private management
i.e. this is a fairly well-defined area
and this is part of your Consciousness
and the concept "from Consciousness" implies that
that you specifically single out the element of Consciousness
so in this case it is an element
projectively located
further away from you
above the level of physical space

and maybe he either
now I am already moving to the form of Perception

or infinitely large
or it can be point-like

i.e. focusing of Consciousness
at the point
from which you will control

this technology that I will talk about now
then it contains control
as from the Infinite Region
and from the point
simultaneously

i.e. you must work in the field
which characterizes
position of simultaneous control
as from the Infinite Region
and from the point

i.e. you just highlight everything
a fragment of Consciousness that controls
from the point and from the Infinite region
according to this ideology according to the ideology of this lecture

it means as for Consciousness
are no problems here
highlight this area
i.e. you just highlight it
it can be either dynamic or static
then you start managing from here

control from here is already quite simple
within the framework of this lecture
because the Macro level can be imagined
how B infinite number of connections
and a particular problem as a local system
but connected
with an infinite number of connections

i.e. the connection is obtained
dots
with Macro level
this is this area
in one of the private solutions , so to speak

and that's why it turns out
what if you do the management like this
that you connect these areas
then the management itself consists of that
to mean restructure
and necessarily in a naturally creative way
information

which does not correspond to your management
and redirect it into the area of positive management

this technology
which allows for restructuring
for example, the possibility of a nuclear bomb exploding there
or let's assume the possibility of a defect occurring
there during the plane flight
if there are already preliminary signs

i.e. the concept of restructuring
in this case it has the character of target management

and that's where to restructure
in the space of control for example
here we are already talking about spiritual education
where do you start working
based on Spiritual Administration

i.e. you get control
from the area that is located
near the area of the combined links

that connection I mentioned
I said I called it a unified connection

i.e. connection
control points
And
Macro array control
where do you control from
I called it the area of united connections

then look at the difference
it means the wording that was earlier
i.e. for example when I explained
and when I did for example what I called her somehow

when I called her
the intensity of information has become so
that it began to sort of expand
at the point of the name

so in connection with this here is the concept of management
through the self-healing system

this is an expansion, i.e. this is a Spiritual concept
contained well actually how can you call it
in mental i.e. in optical perception

the concept of mental perception
I see it as a wider spectrum
where the element of all external connections is included
and some areas are not defined

in this case i am talking
about the part of Perception means and only about this
in which you exercise control
for example, the Infinite Region
or there is a point area

this is the concept of the Spirit
this is where there is management in this area

the concept of Spirit
this is management
as Infinite Region
as well as a point area
according to the task which is expressed, for example , logically
at the level of optics of perception

this is the concept of the optics of the Spirit
it may be a more sparse level of information
rather than the optics of the thought process

in this regard, as homework
from this lecture highlight the connection again
optical communication
A spiritual-mental connection is obtained
Spiritual-optical communication

i.e. the optics of Perception
plus Spirit which is sometimes not indicated by optics
but it is designated conceptually
then you have to highlight the connection
with the concept of Spirit
and the concept of precise control

once you start to highlight the connection
you will see that the Spiritual, i.e. Infinite, is actually control
Spirit as a system of Infinite control

in manifestation
so this is that external, so to speak, Macroenvironment
which constructs a point region
for example a cell

i.e. delving into this conceptual apparatus
you can see
how the Spirit constantly structures
i.e. builds a cell

delving further into the cellular structure
i.e. without even looking at the cell
and keeping the Spirit in mind
introduce such a concept as the memory of the Spirit
memory of the Spiritual state

holding at this level means the image of a cell
it will not be an image of a cell
from the point of view of Thinking or Perception
well, which is, for example, in the anatomical atlas

then you get into the structure of the Soul
which assembles this cell

and you can see
how are you going
accordingly, harmoniously with the entire external world
according to the Creator's tasks
it looks like a system of knowledge

i.e. you have a source of the system of knowledge
on a spiritual basis

and in principle, for example, in ancient practices
these systems were often located in specific organs

so in this case
I just don't mean I correlate with those practices
because in this case we are talking about
that any knowledge
for example, which have a fixed character
they should be correlated
under the conditions of their application

and the goal of this part of the lecture

is a correlation system
i.e. using information from the past
to solve current problems, for example

well information from the past
let's say your body is there
it exists including there a second passed
that means it existed in the past
means knowledge of your body
about building yourself there, including your Soul
this is what is obtained as information from the past

and if you have
sustainability of the development of past information
from the point of view of Infinite development
then you solve the problem of Eternal development
including for myself personally

it turns out that the setting part of this task is very simple
you owe any object of the past
give Infinite development

and for this you must
so structure your Consciousness
to solve simultaneously the natural questions of Salvation

since Infinite development
there can be no talk there of, for example, a global catastrophe
or some problems connected with that
that this task will somehow be or will be extended

what do you pay attention to
how can the task of Eternal development be extended yes

in the conditions of Eternity this word it turns out to be absent
Eternal development has no coordinates
such as, for example, not a solution to this problem

Here's how the organization's logic is structured
Spiritual-thought process

the thing is that if we talk
about Eternal development
and this is Norma
we set this as a goal

then the concept of lengthening this process
does not exist

i.e. if a person, for example, develops
millions or billions of years
but how can one say that
he is delaying this task or not
if it does not develop
and in a personal version

we are not talking about the concept of generation
but man achieves the task of Eternal development
and then the concept of whether it extends this task or not
it is not solved in principle
because that's such a staged part
exists, well, sort of in two projections

or a person does not achieve this
then the question is removed in principle
or he reaches

Well, for example, several billion years have lived there

and then the question arises
in general it lengthens this task of solving
or he has already decided it

i.e. here is the answer to this question
in principle, it does not exist at the level of development

i.e. there is only one answer option
that the problem must be solved precisely
on a spiritual basis
because the physical level
well, like identifying events
it is not defined here

it can develop for example there for 100 billion years
but a second passes
will it develop in the next second
this can be shown simply by practice, for example, yes

so the task is that
so that the practice itself is manageable
i.e. it should develop in any case

hence the concept of Spiritual development
Spiritual self-reproduction
contains this solution
through the absence system
well, some projective logical components
i.e. the concept of "lengthening" as I showed here
it is not functional

due to this
when we talk about Eternal development and about these tasks
then first of all we look at the positions
from those features of the construction of Reality
that at the level of connections of Spiritual and thought processes
some concepts are not functional
as if they were functional
only in thought processes

due to this
when we talk about the Infinity of Spirit
we can't say this about the length of the Spirit for example

but at the same time we can perceive
state of the Spirit as
as a real presence
and this is even visible in the optical version

and even when digitizing information, for example
through objectification
it is clear that
Spiritual state is one optics
thought is a different optics
and the glow of the Soul
this is generally speaking even in the optical range
this is usually a different optical coordinate

i.e. we
I mean the intensity is different
although it may be in the same space
the spectra are different

so it turns out that way
that these concepts really exist
in our Perception
but when we think about it
that Perception is organized in any case

With soul
then there is present
influence of other elements of Consciousness

Reproduced by the Spirit
so it works out
we look through an element already recreated

and then it turns out
what is in Reality and what is inside

this Reality which is not reproduced initially

so inside, i.e. going inside this information
you can find in the dot area
just in the dot area
point of complete self-assembly
taking into account the harmonic function of external Reality

i.e. self-assembly which speaks about that
that all Reality is recreated and created harmoniously

in this regard, the important element here is that
that when you look at yourself
then in principle how do you see yourself collecting

for example, you look at yourself spiritually there
you see how to collect yourself
simultaneously
with the assembly there, for example, of external Reality

i.e. this process generally speaking occurs constantly

and I had them last time
for example, questions about resurrection related to that
what does it mean , for example, when a person is resurrected
how does it happen, well , his self-identification
that, for example, he was resurrected

Well, the thing is that in answer to this question
for example, using this technology
it becomes clear at once
what does the question mean it's just that
to what extent is Reality now realized?
around this person

or he has already been resurrected
and then the same mechanisms work
or there are a number of intermediate states

if he is resurrected then
in principle it means that Reality changes and develops in this way
that some certain projections of Reality
including generalized ones related to the collective Consciousness
can be considered
as elements of constant self-organization

i.e. the organism in any case self-organizes
i.e. self-assembling
together with external Reality

human body
through this Spiritual-thought system that I spoke about

and in the Soul it is just a point
i.e. having found this point
this is again one of the concepts
we know that then man is indestructible

and this too is an element of universal Salvation
it is enough for at least one not to be destroyed

and it turns out that in this case
we have
enough means a specific design
which speaks about that
what if we consider the issue of development
as a constant process of self-creation and self-recreation
then the question of resurrection is just that
question about the implementation of this design
for example at the level of physical matter

and the concept of personality, i.e. identification of personality
comes down again to the concept of the Soul

i.e. if the Soul has knowledge of self-organization
a man lives
if knowledge is lost then it is restructured
for example, in the part of the Soul in the physical body, let's assume

and the resurrection is just that

just restoring this knowledge

it turns out that the concept of identification
it falls away by itself
if he has already risen, then it means that it is only he
because there is no other process here
just like in individuality
for example, any object, so to speak, information

and so here is the answer
Well, it was in one of the notes, so earlier
as an answer, let's say yes to this question
so you can say
that naturally identification occurs unconditionally

what we assume at the level of the state , so to speak
psychological state
if a person asks a question
is it him or not him
then such a question as a rule does not arise in people
who didn't have, for example, well, among living people, i.e. not dying
it's clear that it's him
if he looks at his finger it's his finger right
this is just a task of Consciousness

and in this connection the question of identification
it is solved, well, let's say, in a similar way
from a psychological point of view this will be more understandable

for the resurrected, this question does not arise in principle
for example, I have not met with that
so that the resurrected one could ask a question there about self-identification
so, well , that is, from the point of view of my practice, for example

as for the further material on this lecture
then here it means the goal of control from your Consciousness
is such a management which means collects
are you
collects at the same time
any other Reality from self-assembly
including assemblies of all external attributes of Reality

and here is this other Reality
it's just a certain thing
just what I have said here specifically

to simplify ^{well} the position there growth of information
at first it increases in volume very sharply
there are speeds of development
and vertically upwards

pay attention
that is, control of an external object
this is the definition of an external object
in relation to
to your own self-assembly
self-organization ^{so to speak}

i.e. the concept of self-organization is not a mechanical concept
^{let's assume} there is some kind of mechanized self-assembly representation
closer to the machine ^{level} of perception

but self-organization
This is an organization including target levels
^{let's assume} there are ideological information levels

^{Well,} if we look at the optics
informative difference
then in principle in certain aspects
it's not distinguishable

i.e. here is the level of external control
just like I gave two words ^{yes}
self-assembly self-organization
or ^{suppose} self-healing ^{yes}

that ^{means, for example,} I enter the word there self-development of the system
it already includes all the components ^{of a kind of} structural link
what is below is substructural
self-development means it's already there
and self-assembly and self-regeneration, etc.
and or some elements there are software development elements

due to this
here is control from outside from another information object
i.e. to make another object manageable
any

then you just need to establish connections with him
by projecting certain connections onto you
i.e. sets you a task

what do you mean you solve this issue best of all

i.e. from the point of view of the question of self-identification again

i.e. unconditional identification

an event that occurred in the future

well, that is, if there is something in front of you on a physical level

some kind of obstacle , let's assume

then you can go around it there or take it apart

if it means some kind of physical structure

can you somehow disassemble it and go through or bypass it

i.e. the question of identification

self-identification in the future

that you will be there

this question naturally exists in you

inside you

when you dismantle a wall there or overcome an obstacle

do you know why you are doing this

so here is the question of prognosis

i.e. the question of determining future management

the question of determining the future ^{yes}

prognostic systems in Consciousness

to see the future and do

control clairvoyance ^{for example} apply

the question here is

what you have to highlight ^{is} the element of self-presence

i.e. unconditional presence

in the event

^{means of} its presence

^{means} that you want to make manageable

and this event

will simultaneously provide information

about the processes happening around

so you can look to the future

i.e. it is enough to simultaneously, ^{well,} as it were, feel

in optics it is a prolongation of the Spirit

according to the ^{criterially} completed form

i.e. you see

The spirit is prolonged specifically

into the structure of the past
while the past is on a physical level
for example in front of you

so you are looking at the past
as a reflective system
from the future
and from the past
just take the projective system

i.e. if for example I am now at the table
then the next second makes this table
including an object of the past

I have enough on a physical level
for example look
well , in general, into space
you don't have to look, I don't have to pay attention to the table
but the table is still there next to me

you can be
well there physically near me
but at the same time you can do any control there yes
by Macrosalvation
at any point of information

does this control do
table

by the system of general connections
he does have a reactive information system
and of course it functions in a certain way
let's say at the information level
but through inactive, i.e. passive functioning level
often in information

so you can immediately highlight
what objects are non-functional for example
from the point of view of what generally needs to be looked at in the future

Well, of course you can look at nature there
let's assume to watch
to some objects of non-functional value
from the point of view of optimization in event management

but the most important thing in the future
It is necessary to enter a control vector
always with maximum increasing speed
due to the task of managing the future
that with every second
the control speed must constantly increase
so, well, with every moment of control, as it were

and in connection with this
at this level of growth
you have a projective situation
i.e. the event comes to you
with such processing speed
from which it becomes under your control
i.e. control element through future events
is that you have this control
so due to the fact that you just insert
coordinate of the future
in the event

and this coordinate is like a kind of flashlight
highlights only those lines on you
which means which are acceptable to you
from the point of view of the implementation of this event

your task is only to perceive these lines
and let them bring their task to an optical level, for example

and therefore management of external events
from your Consciousness
through self-healing self-regeneration for example
and therefore self-assembly self-organization
this control looks quite simple
from the point of view of optical characteristics

and that means it simply consists of this
what do you mean by future event make it so
that you insert the future you need
in the spectrum means this event
located for example in the present

as I said
the future is determined
by projecting onto past information
i.e. you visualize

you need , for example, just in front of you in space

look

and there is no need, for example, to look for something in the future

i.e. the future in this case is in front of you

as a projective optical characteristic

and the task of this management

it looks like a system of screens

some flashlight which is the target

and in the future will be further away from you

screen

controlled event

controlled event as such

this flashlight shines through this event

i.e. through this optical screen

and highlights on

you reach the goal of control with your Consciousness

that's all

as soon as you reached

and along the path of extension

sometimes an event appears before you

event picture

what needs to be done to manage events

to reach the level of management goals

which is in front of you

and is the point of your self-organization

and self-organization

plus as I explained

external management organization

this is, generally speaking, a fairly general principle

it means the principle that allows for management

including unconditionally

i.e. you can then, for example, sleep

you don't have to deal with this specifically

but knowing just the principle itself on the conceptual system

you are that manager

that so to speak, some kind of surprise within the framework of the manifestation

there we assume a possible global catastrophe

even manifestation

this surprise doesn't happen anymore

so in this part of the lecture I'm taking a break
Well it might be 10 minutes
so during this break you just try to
to think about it somehow
so in principle it is possible to get out there

i.e. in this case the lecture will have a break

and then there will be answers to questions

I would like to start this second part
working with specific situations with questions
Valentina Aleksandrovna is with that part now
brought me a rather peculiar letter
related to one of the facts means the implementation of management
I'll just read this right here

this is sub-question 5 point a
so my husband has in brackets biologist, doctor of biological sciences
papilloma on the back disappeared
so well she so now we spoke verbally
about three centimeters with a bleeding leg

then one and only time
he at the request of Valentina Alexandrovna
tuned in to a telepathic session
She disappeared overnight
well and there is a dash there, a miracle

from a management point of view, this is what is typical here
the doctor of biological sciences there knows the cellular system thoroughly
I would like to consider this in the context of this lecture, for example

that when we consider
let's assume the option of constructing through a cell
and just like now, we were just talking about it
then he searched and didn't find it, as if it even existed

it's still big, three centimeters there

if it fell off
then it would be clear that it would be lying around somewhere

and there are quite a lot of cases like that
when large pieces are outwardly expressed there
disappear somewhere
then people search for them hard but don't find them

so in this case it is necessary
which is the principle of tissue organization
through intracellular organization
when an organization goes to a person
through intracellular organization
as if through the projection of the outer part
Now, if we break down this process technologically
on this occasion
then he worked like this

as far as I understood it was my telepathic session
as a continuation of the lecture

i.e. if I said for example after today's meeting
there will be three telepathic sessions

and that was the first telepathic session
I gave a lecture
Well , he stood up, sort of
into parallel and sequential flow

i.e. and perceived the technology through telepathy
well, which, for example, I partly gave just now

at first, in principle, I sometimes give telepathically
roughly the same thing that I then say
sometimes things are really different

at that moment I was a part
well, sort of in batch mode
gave exactly on this part
there is self-organization through the cellular system

and so he took this
well, sort of in a package version
this optical information
knowledge of microbiology, for example , came into play
by cellular structure system

i.e. knowledge works in this case

as an active control level

in general in every case of management

It is necessary to keep in mind that management
always based on the knowledge you already know
i.e. the more you know, in principle, the better

but in this case it worked for self-regeneration
and the system worked just like that,
I would like to draw your attention to this once again
from the point of view of today's lecture

where is the external system
i.e. the image of a person
self-image
placed inside the cage
he realized himself in that
that the image actually restored itself

i.e. of course the outer part
this is this big tumor
She basically just stopped existing
because there was simply regeneration, first of all, in all tissues

and secondly, self-healing usually happens
just to normalize
the entire status of the organism was normalized
and that's why she certainly didn't fall out there
and it simply means it became absent
as if in the next element of the development of Reality

and in connection with this he still has an external image
and here, when analyzing this case
fundamental importance
that the external image is the norm
according to the technology of the following control

for example when you use control clairvoyance
then you take control based on that
what do you see there with your eyes or clairvoyance, for example?

this is what i said about the baggage of knowledge
from the point of view of clairvoyance
you can just get all the necessary knowledge
take from the volume of information

then it turns out that it is not necessary to keep them there in your head

the concept is when you are there "the more you know the better"
including rests on the concept
and this is the most efficient level of use
of this concept
"more knowledge better"

that you are just a level of knowledge
bring
to the level of controlling clairvoyance

so here is the concept of controlling clairvoyance
by the way, there is such a question here, so according to clairvoyance , yes

here in principle I can say
that the concept of clairvoyance is a technological concept
well, including technological, so to speak
and sometimes mainly a technological concept

so the concept, well let's say, is clear to see
it means seeing the target there
follow her
what is clarity of vision in terms of well logic there Salvation

or is it just logic that allows you to save yourself
or is it there in a completely ordinary sense
in direct clairvoyance
see Microprocesses there Macroprocesses

and here is what I give a course on concentrations , for example
this is, well, I think that's exactly what you need to be able to see
and this is well, in principle, this is clairvoyance technology

i.e. it's one thing you're there let's assume
you somehow intuitively master it
You are developing according to the tasks
another question is when do you listen
Lecture course on structuring Consciousness
where there is a need for access to some system

then here is the technology of clairvoyance
already laid down as a management tool

i.e. when I showed the controls
in between I don't often talk about it
but in reality it means that it is already being laid down there
it is the technology of developing your Perception
at the next point
which means you should perceive it , well, actually clairvoyantly

it's just that here the clairvoyance is different
it's not directed there
to view there, well, some images , yes
at a distance that are not functional

although it can be done
i.e. this but this will no longer be the technology of Salvation apparently
and the technology is just contemplation

in this case if you are for Salvation
you will be able to lead to that
what you want to see is just Reality
Well, for example , physically, there is watching a movie from a distance
in some movie theater

then you should
this is either to justify for oneself as a practice
there for the next development
or say that when you watch it, you are the one saving
i.e. this needs to be brought up logically
at least the logical component is better than the spiritual one

the thing is that the technique of Salvation
this is still quite often a narrow specialized technique
and I achieve precisely the goal of Salvation
but there looking at images is a different technique

but nevertheless, from the point of view of the concept of clairvoyance
i.e. see what you want to get there
it is often simply a necessary tool

as I said, it is precisely the control
those. optimizing clairvoyance

so if we consider
how ^{did} the information go, so to speak
or how the information developed
from the point of view of Perception

then it was transmitted by me
i.e. I transmit
for example, I have a certain optical image there
there is a physical body
transmits certain information

so that's how Perception went
in principle, it is from the image of a person there to the image of a person

and so here is the transmission
if you want to do clairvoyance

Well, there is the transmission of information, telepathy.
more intense
then you focus on physical images
there, for example, in my place
and the person to whom you want to transfer
then the connection will be faster

in this case, let's say the analysis showed
what does this mean microbiological system of knowledge
worked on the reflective principle
through your Macroimage

and here is also the continuation
Here Valentina Alexandrovna writes
what do I personally feel after listening to the lecture, etc.
So the cataract is gone
but although it is considered as here in brackets
what does rare case mean
There is computer diagnostics, etc.

so well the thing is that
well, since there is a principle of this lecture again
and the goal means work on these cases
consists in the fact that
what I implement means
so let's say the program laid down in this lecture
by management

that is the concept of cataract
so you through let's say visual perception
Well, if you start
the process of healing from cataracts begins

then first of all you have to do the management in this case
what does it mean well the vision norm is being restored

and restoration of vision norms
so this is a direct process reverse process
this is something that can limit, for example, cataracts
there is a visual range
in principle it is the same optical range

and if we consider the concept like this
how do blind people perceive, for example?
then their optical images are developed to such an extent
that they are moving
including both sound and visual

and there are levels of blindness, let's say at a certain school
who, generally speaking, well, as if in the dark, but see
although, for example, their eyes don't work functionally

with the development of this technique, well, through the vision of the Soul
for example, you look clairvoyantly
but you can see some object
there in any place, wherever he is
what is not visible to the eyes

and in connection with this here
and so from the point of view of the lecture that I mentioned
External Reality
principle of cataract treatment
by using
for example, spontaneous growth of external Reality
or the natural development of external Reality
from two points of Perception

i.e. the points there are external
And
level of self-organization

then you can
for example, consider such a process here
that this is where the principle was actually implemented
what does rationing cause
Well, normal vision is normal

and in this case I made this lecture specifically

very much so, let's say different in focus or something like that Perception

and I made this explanation specifically like this
what exactly is on the point of disappearance of cataracts
what does it mean here the meaning is still precisely in this
what if we have

let's assume control from yourself
into external Reality

then it is enough to just lay down the Spiritual impulse
into external Reality
and external Reality can heal
for example, to cure cataracts

so here is a fairly new management principle
embedded in that
you can even consider
that when, for example, well, for example, so to speak, cataracts develop there
then the element of external Reality
it naturally becomes in the optical range
means less distinct

and it turns out to be sufficiently spiritually regulated
external Reality
Well, how can I put it in the right place?
and then you will get a cure
for example, from some visual diseases
there are no vision diseases there

visual diseases and vision disorders
look what a difference this makes
in the verbal phase so to speak

try to work
at the level of orthodox Perception
there are "vision diseases" for example "yes"
and what is "visual disease" then, for example, yes
for Spiritual Perception

and in connection with this
I think that well here most likely it will be important
apparently there is still something extra
to what I said in the appendix to this lecture

Well, I guess I think so

Here are Valentina Alexandrovna's own comments
maybe you could briefly tell me the situation
here from your point of view

how was the flow set up yes
let's go here
and you just tell me approximately the time frame
in general, here's the picture of events
how it happened

you know better, better sit here
because my image is being digitized

V.A.
I don't know for sure, I just really wanted to
and it worked
I really don't know how it happened
but the streams

G.G.
all , you are talking about papilloma
tell me the first point

from the point of view of the lecture, you are listening to a lecture
how did you listen then
there will be such a moment now

First of all, let me tell you then
what would be desirable to hear is yes

so firstly it was after the lecture in the hall yes

V.A.
Yes
it was on the 8th from 22:00 to 23:00
My husband and I got ready, I persuaded him
tuned in to a telepathic session to continue the lecture

I wished him that this papilloma
By the way, she is very scary and very big
she was bleeding and bothering him constantly
so the question was about surgery

Well, we're in the mood
and overnight she disappeared

G.G.
the question is this
When did you tune in?
that part which I gave in the form of words
did you remember it somehow implemented it
during a telepathic lecture

V.A.
you know, it means that I recorded it very badly on the tape recorder
but nevertheless we listened

G.G.
at the moment of telepathic lecture

V.A.
no before that
at the moment of the telepathic lecture we were just meditating
We have special places like this at home
there we lay and meditated
tuned in

G.G.
the question is this
at the moment of the telepathic lecture you , well, let's say

V.A.
felt the flows

G.G.
there is such a concept as, let's say, clairaudience , yes
i.e. you can listen to what
well let's say I can take and listen to my lecture there and then
for example now
this is the action that was performed
i.e. you listened to the audio recording

V.A.
no during meditation

G.G.
I don't mean physically
not physically

V.A.

and that's how we got ready
and the husband saw your image very clearly
G.G.

well, I see , well , that is, you are still at the moment of a regular lecture
listened to the lecture material
well, formally, sort of

V.A.
Yes

G.G.
ok then that's the question
you yourself have some impulses
Well, apparently I see that you sent control impulses
what are they like
to him during the lecture
which

i.e. what did they look like
what did the optics look like or on the Spiritual level
what was that on your part
just remember or look
Now look straight ahead and speak

V.A.
Well, it's very difficult to say here
What

G.G.
here you know there are two options
or you tuned into my stream yes

or you entered it additionally yourself
here are two options

V.A.
it looks like it was both

G.G.
This is what I saw from me
I need
what did you give

V.A.
I gave an impulse for dematerialization

G.G.
this papilloma
Fine

V.A.
pulse

G.G.
dematerialization what was it
where did you put the papilloma tissue

V.A.
Don't know

G.G.
Well, you just kind of introduced the word "dematerialization"
and that's all

V.A.
Yes
I don't know where she disappeared to
it's really a miracle

G.G.
well, just from your point of view
Where is she located materially?
Well, do the analysis now

the thing is that I already said that she disappeared
because there is a reflection from the Norm of the image yes
in the next part there is no Reality

mechanically from the point of view of my explanation
's not there, for example

and from the point of view of information
you can find this area informative

V.A.
No

G.G.
By the way, this is the correct diagnosis
this area now it does not exist

V.A.
she doesn't exist
how can i find her

G.G.
she doesn't exist yes
so, but nevertheless, you are with me now
tried to look for her and said "I don't know"
well, i.e. you just didn't find it at the optics level

the thing is that

V.A.
she is not there

G.G.
yes the concept of information
in this case it just is
complete, well, let's say, healing
and therefore the region does not exist

i.e., the question of sustainability of treatment
it is resolved in that there is no area

and often means the question of the sustainability of any process in general
consists in the fact that
that it is enough to just informatively detect
that there is no area that would lead to instability
this is the result

i.e. in principle there is no need to return further
or if you want you can practically track it just in case
logically
but in principle, as a rule, this does not arise later

and another one of your own explanations about cataracts
there are principles, methods, etc.
how did you implement this

V.A.
here I used it in general
I listened to your lectures, read your books, listened to audio cassettes
and tuned in to the digital code took the numbers

G.G.

general analysis

this is what the optical process is all about
here, select the shape and optical in your opinion
what led to the healing after all

for example, you read something and learn something
what form is being implemented

in your Perception
what is that there, a cone, a ball or something

V.A.
sphere

G.G.
yes sphere yes

V.A.
sphere

G.G.
in this case the situation is like this
what is a class of diseases for example
which are actually realized
well, towards healing there
with a certain level of as if forms

and let's assume if I give the concentration by numbers
then in fact this is also
projective reflection of form for example

then let's assume that for cataracts it is really true
The total concentration represents
yes sphere

the only thing that is kind of stable
from the point of view of the future of future processes
this is already closer to the cone

i.e. you are in Eternal development
must necessarily set the task, then
development well towards Eternity
provided that you don't have any problems
well, anyone with vision, yes

V.A.
[...]

G.G.
but then you have to find a form too
Well, from this point of view
in this case, well, maybe it's the most canonical
cone

i.e. the forms in this case are not mandatory
it's easier to work with numbers there
but in general it is possible to work it out
even a kind of catalog or system of forms there
which can be implemented in management

V.A.
yes actually a resonator

G.G.
yes, approximately yes

V.A.
the thing is, as they explained to me at the academic clinic
This is the Russian Academy of Sciences
that cataracts are not curable
that I need to live with her forever
that it will only get worse
and here you go, it's not there

G.G.
well on the other hand from the point of view of your phrase
as if they know about Eternal Life there
if they if they offer to live forever there at least

V.A.
No, they are still far from that.

G.G.
Well, I was kind of happy for them

V.A.
but in any case they even prescribe the same medicines
who exactly build up this film to such a period
so that it can then be removed surgically

and here this happened

this is still in practice
in the academic polyclinic of the Russian Academy of Sciences
there was no

G.G.
well, thank you
I will then continue with the next part

By the way, when I speak into the microphone
Voice recorders allow you to record sound normally
Now

replica:
Yes

then maybe it would be easier to orient you somehow
there you can hear it better when I say yes

Fine

replica:
Last time it was a good recording

G.G.
good recording

replica:
yes, the additional microphone will still work

G.G.
and if there is an additional microphone
that's another question

Fine

so now I will answer the following questions
how to work means in brackets
build a structure with a question mark
with a desired but not yet born child
question mark again

the thing is that i try to read some things verbatim
so that you get the information right away

Well, in essence, ^{yes}, there should be one generalized area
in Perception it will be faster
that's why I quote there that there is a period or a question mark

so here is the situation I think

Well, first of all, in my education system
I have an educational methodology
I'll edit it and publish it soon

it concerns the fact that the construction of information
that means with an unborn child
must be carried out
Well, the first element
from minus Infinity to minus three years
then from minus three years to minus one year
from minus one to there conception
then from conception, etc.
every day until the moment of birth
and then on through the twelve-year cycle Infinitely

i.e. such an education system I have
it means simply in this case
as for ^{example}
namely parts of the structure ^{for example work} ^{yes}
here is to build a structure

then structuring consists of
what for example minus infinity
then minus three minus one, etc.
here is the concept of "unborn"
Well then it reaches the point of birth

and in connection with this, ^{the} very first element
which arises from such structuring
this is what you should see
elements of future events
and these elements of future events
should be the basis for this structuring

i.e. here is the concept of working from minus Infinity
up to minus three ^{for example}
taking into account what you want and is always the ideal goal
in this case the ideal goal is canonical
it's like a pretty tough element of work

i.e. for the living
having a certain level of Consciousness development
means the concept of Eternal life
this is the ideal goal and the real one
Well, there is a social aspect
Well, a peculiar optical refraction of the essence arises
from the point of view of knowledge

i.e. when a person raises the question of Eternal Life
in many cases there may be some symbolic Perception
at a time when this is generally speaking technology
and this is Reality

here the concept of Reality is absolute

and that's when you build
for example from minus Infinity
up to minus three for example
then you should just take it accordingly
plus three is better
to plus Infinity
and superimpose on the information of the past
this element is optical

when applied to this information
you will see it immediately in the future
for example there is plus 5 years from birth
you see what events need to be adjusted

i.e. you add there, for example
for example, a child doesn't catch a cold there
at the same time you go, for example, to minus 5 at the same time

and watch when it's minus 5
what needs to be done
what optical constant to set
so that there wouldn't be any problems there at plus 5, etc.

i.e. the concept of superposition on the axis at minus Infinity
it is not mechanical
because it is not just a mechanical optical superposition
this concept immediately gives birth to an element of that
what needs to be done

and by the way on the optics of Perception
it's quite easy to see

i.e., for example, only one optical line is sufficient
impose on another
the bulges are immediately visible

and by the way, maybe here is a Spiritual diagnostics
these peculiar optical bulges
unpack them and have them
corresponding development, generally speaking
in terms of what needs to be done next

i.e. it is completely clear
what needs to be done for example in minus Infinity

there is one Law here that immediately characterizes
quite by the way here is an important question
from the point of view of all Reality
What
a characteristic element of the development of the Soul
and its existence
is
the presence of processes in minus Infinity
including

the thing is that the point is minus Infinity
well, just like plus Infinity
it comes down to you
and this is the point of the Creator and Creation
simultaneously

i.e. the Creator in the plan of Will His presence
and the creation of you
here it is implemented in that
what is minus infinity
performs
as a structure or even as a construction procedure
in most of the first impulse of the Soul

here at the birth of the Soul
The creator therefore created such technology
that the Soul is born
from the primordial nature of Eternity

and the first impulse
he is on the logical level of Perception
comes from minus Infinity

and therefore the task of forming the Soul of a newborn
consists in the fact that
that you are forming the first impulse nature
in this case you structure
it is precisely here that the concept of structuring is the main one
you structure
structure the Soul from the Creator
and you start creating while in contact
external Reality

but at the same time you need to know here
that Souls are created by the Creator
from the point of view of the ideology of the entire development

and you will understand more precisely
here's what to do with the momentum from minus infinity
as if with the shape of this light
where is the rate of increase of the pulse
towards you
it is higher than the speed of Infinite propagation

i.e. for Consciousness this is an element of information
which means
what is the speed of information dissemination
to you
Here's an example of what needs to be done and how

it is higher in speed
than the speed of Infinity
Well, for Consciousness, in principle, these criteria are understandable

i.e. the speed, for example, is equal to Infinity
it is a certain optical quantity ^{yes}
expressed in the form of light dynamics
peculiar flame

speed up
than the speed of Infinite propagation
for Consciousness this is usually a point
which is ^{also} an element of this flame

that's why we

Well, when they say there is the fire of Life, for example, yes
there is the heat of life or the development of life
or a fiery heart conditionally there
around which the construction takes place
other elements of the body
or Reality

then it is implied that this is the fire of life
it just contains
like what is above
i.e. the level of Consciousness is precisely the point that is higher
than even Infinite Processes
existing well there in Reality

because from the point of view of Infinite processes
this is also a rather conditional concept
we say that the speed is Infinite, i.e.

and it turns out that we assign this process
i.e. implying that in order to achieve Infinity
at least some kind of preliminary acceleration is needed

i.e. we reify some process
even if we make it Infinite in Consciousness

this is as an independent work
here you can think about it
what do we have then on the logic of Perception
It won't be difficult here

it won't be difficult here
because it's really not difficult
then when you analyze
this part of the lecture
there you will find it all
I just say sometimes it's not difficult
to adapt Perception
It's really not that difficult here

so that's why you should definitely think about it here
as for logic when you will see it
because now I have laid down Spiritual Perception

and now there remains a period

from this it turns out 3 in this case minus 3 there ^{yes}
up to plus 3
pass

so the point minus 3 is actually
nodal such a peculiar parametric point
because the Soul's main functions
begins to be able to do
it's ok minus 3 years

i.e. if you compare it with the development of a child
then the Soul develops in this way
for example, at 5 years old a child already does more than at one year old
well, somewhere in a yearly period, ^{yes}, per year

then it's about the same thing
i.e. at minus 3 the Soul can already make so many children
at that time at his birth ^{yes}
which means he already exists at that time

i.e. Reality is built this way
that the Soul is already there
the same as in minus Infinity

that you have the opportunity
already have more contact on the Spiritual level
with a child
in terms of a kind of education
just like if you were explaining it to a 5 year old
what to do next

i.e. an element of event construction
from point minus 3
it is fundamentally different in that
that you are more in a dialogue mode
if you can take a child under one year old , for example
and somehow, for the most part, there is carrying and swaddling
or he's been going there since he was 10 or sometimes since he was 7 months old
more often even earlier

then increase the dialogue mode as it develops
within the range from minus Infinity to minus 3 years
The main thing here is to consider how it develops

i.e. see it and enter into dialogue mode

but it is limited by the fact that we clearly
for example, you may not be able to write with a pen, but logically

then after minus 3 years
then it is clear that you can give some things through
for its development
related to the fact that he can also write
i.e. to reproduce one's mental energy

this means you
the main thing here
give freedom to its development

i.e. to give freedom of expression
what will he draw there
Well, of course it's better to orient yourself right away
to certain creative systems
but the drawing means it should be free
i.e. here the principle will be like this

then from minus 3 to minus 1 year
this is the period here, it is unique
approximately as a period
from minus Infinity
to plus Infinity
but which happens at a very high speed
close to the Infinite
but close to zero to plus Infinity
i.e. not close on the other side
i.e. not above the Infinite

and this is the option, it is like this
that here, well, more of a structuring of education is going on
in terms of specific actions
there are methods of some educational systems

at the same time you can adjust
educational system in the future
putting this in the minus area
because there you work directly with the Soul of the child

in the future you work with the Soul
manifested including as a body
which means it owes more
well, that means in a larger volume in a larger part

The soul is now obliged to control the development of the body
i.e. some elements of development
associated with the need for control and attention
to the physical body

i.e. the Soul in principle if we consider it
as an element closed by the number of actions
Well, it 's a unique option
if we look at the human immune system
then let's say you hit your finger
then the immune system is engaged in that
for example the finger tissue is restored there
at that moment she, for example, some functions
maybe somewhere it could be done in a more intense version

it's the same here
at the birth of a person
it means education that is transmitted already at birth
it is fundamentally different in that
that you are working with part of the Soul's information

at the same time, the part that also controls, for example
development of the physical body

and in the case from minus 3 to minus 1
you work with the Soul directly

in this regard, for example, ancient traditions
well in earlier developed civilizations
for example, there were such civilizations that were developed in a variant way

where the period is from minus 3 to minus 1
it was a period not only of individual education
but also how at school they had groups of peculiar teachers
who sent information there
well, like for the future child

so this is from minus 1 year, so further
before the element of conception and therefore birth
Here it is important to determine
status of future information
that conception is a necessary next birth

This period is therefore complex
well, sort of like one

those. from minus 1 to birth
this is basically considered a single period
and here we need to give special importance to that
what does minus 1 mean
to the point of physical birth, well, at the normal time
this period must be specially made monolithic by Consciousness

i.e. mainly to carry out work on structuring Consciousness
in terms of the mandatory nature of this process
so that there are no problems there
for example, prenatal care was not implemented there
for example there in a negative way
from the point of view of the child's health and those around him , yes
mothers

in this regard, in this case the question is more
about the organization of the Soul
from the point of view of the formation of normal health
both the child and the mother
i.e. this is the period of such formation

further from the moment of birth
Well, in this case I'm in the applied version
including answering this question
you implement the design
for example, according to today's lecture
of such content
that you immediately put this information in
at birth in telepathy
especially effective in the first month

for example, you put information
building your own body
due to the body image at the intracellular level

in fact, it is a mechanism of Eternal reproduction
well, since it is clear that if an image gives birth to the image itself
this is already the Eternal element of development

i.e. i.e. I gave this technology
as a technology of natural Eternal development
but I don't talk about it often

but if we look at this area in this way

it is clear that by laying down such information
First of all, you will make your body more adapted
well and accordingly the child will simply develop
in accordance with the canons of Eternal development

at the same time, naturally, you can continue further
Well, working with technology there is a special technology.
what to transfer on what day
I still have to edit it there, so to speak
After a little editing I will publish this
what is after birth

and here is exactly the second question about books
Well, which means you can read here

Well, I think that this is exactly what you can read
for example, by education there
what to do every day
and for example what I plan to publish in this book

but the thing is that if at the present moment
there are lecture courses where they are, so to speak, deciphered
needs some editing
I think I will publish it soon
i.e. in general, this has been in my plans for a long time

well and plus current specific technologies
which I have right now
there according to certain instrument systems
I'm also going to publish
but this is still in the plan and depends on that
when I do the editing now

the thing is that here is another question
that there was data that the concentration was at the point
between the third and fourth toes of the right foot
already gives a construction
the structures of the unborn future child in brackets

but the thing is that yes, concentration
you just take the image as I explained
translate it into the cellular system

in this case you just do
it is desirable that they do exactly this action

somewhere in the interval this information was put
from minus one year before birth

i.e. when working with the unborn, as if with a future child
what is important here is
here is the interval
where do you put the information

i.e. if you do concentration
then where do you direct it?

here in accordance with the element that I have just indicated
accordingly, you need to take it when possible
from minus one year to birth

however, my recommendations are mainly
structuring character in this on this issue
and naturally you can do further at your own discretion
make management like this
whichever you think is more appropriate
from the point of view of your Perception
in real conditions

what, for example, I am showing you now
these are systems that are closer to the legislative level
i.e. there are listeners in the hall who are listening
there is, let's assume, future information
concerning listening there on videotapes
and there is a task of Eternal development of this information

and when you accumulate
you get the essence of the legislative level

in each specific action
you can just have a projective system
concerning what is appropriate to choose in this case

i.e. your freedom of choice is in principle unlimited
in managing such a process
especially since it means that the child is the future and Eternal development, etc.

so after that here is the question

this is more related to the lecture part
and that means even some information that it would be desirable to know

that after attending the first lecture of the seminar on June 8, 2001
I felt like my area was activated
in the area of the third eye
This is Valery Yurievich who writes like this

so the point is what does this concept mean, for example
well which relates to the "third eye"
and in general to certain geometric systems
which characterize, let's say, clairvoyance
these concepts in my management technology they are as follows
what if you are more used to working
through such a concept as the "third eye"
Well, that's what it says here
that I used to be involved in healing
at the yoga guru academy from Santen
and I know what it is

and then, in principle,
Well, activation is natural.
that you are working through your Perception system
for example, already upon activation of the level of the third eye

but in my control system
I can say right away that there is a bigger task here
to control not through the moment, for example, of the third eye
only there, for example, is the element of the third eye
or to identify the level of activation
although if it is convenient it can be done

the task of management is
to be able to see well, including the whole Reality
or some target Reality
means through any element of Perception

it can be physical
for example a cell of your body
i.e. if you project Consciousness
in a cage
then you must see the whole Reality from the cage

or you can see from the area of Thinking
i.e. near you on the physical plane

or simply enter the space of Thinking
well, how to unpack the level of view from there

i.e. to examine everything from there
and see everything from there too
i.e. the level of vision of the controlling clairvoyance
must be from everywhere

therefore , the activation of a specific place
she is good in that case
for example there is a third eye
she is good in that case
if you have a mechanism already developed
and this is acceptable and natural to you

but nevertheless, even with good activity
there is a third eye
i.e. in principle this is usually direct clairvoyance
including management
which is activated through, for example, the third eye

you still have to work according to my method
related to work through other systems of perception
and in general to make Consciousness seer
i.e. independent of that
where do you do including concentrations

then it turns out that you have
Spiritual direct vision
and this vision is like with the eyes

i.e. for example, the eyes of the Soul they are contained in that
what well the eyes of the Soul are
and the real levels mean the exit of the Soul
to external Reality

and this is also the level of learning of Consciousness
i.e. the Soul teaches Consciousness to have clairvoyance
where there is the most targeted nature of interaction
Souls with Reality

and therefore it turns out that you can through this level
Well, this is one of the projective points, for example, the "third eye"
and you can set the task right away
see only at the expense of
element
i.e. the existence of Consciousness

logically it is very simple
setting the task of Eternal development
and at the same time control over Reality
you do this task like this
that the task is based on the Eternity of the Soul
makes the development of direct vision
i.e. the vision of all processes is like this
that this vision is determined by the Spiritual state
and you can have

I'm just answering a little bit
more in the area let's say manifestations of yoga
for example, when nirvana develops
it is not the path to nirvana but the development of nirvana
then the concept of "nirvana" becomes different yes
for different practitioners

it turns out that we have the same thing here
roughly this is the logic
why the same
you can analyze this yourself
so, well, with independent analysis

so I want to touch on some issues now
which would be interesting now
from the point of view of these questions
which were also in those notes
but this will be a somewhat generalized answer

and they concerned fundamental matters
well, which are connected with the complete regeneration of matter

in connection with this here
This concerns the answer to questions from previous notes
so taking into account that in the future this will be useful to you
I would like to answer them now

for example, one of the questions concerned that
what if the future area is not designed
as if statically
into the realm of our Perception
then it turns out
what is the possibility of reconstructing the future
if for example the area array is very large

Well, let's assume we have a rigid system of connections, or something like that
from the projection point of view
for example the possibility of a future earthquake
this is a lot of information
quite a large amount of information
which is designed for our Perception
for example, to the current or to the previous position

and then how to manage this large array

but I can say right away
that the problem is solved here
First of all, it's very simple logically
if the information is very large in volume
projected onto your Perception
so at first she shrank accordingly

i.e. you see in Perception
the part that was able to project

therefore Perception itself works
as a receiving element
already a kind of ready-made form for perceiving information
this is first of all

secondly, to manage
manage from the point of view of the harmony of the external world

i.e. the presence of the Creator consists in the fact
that He helps to develop Eternally everywhere, in fact

and that's why His presence was there
and according to the task, it turns out that there was and is

and that's when you do the management
so that if you have this in Perception
so as to reconstruct
it's easy enough to study
how did the compression happen at all
i.e. how did such a large array shrink?

you just tune in to the optics
to the area of external problems
for example, there is a possible earthquake there
look and look

how is the compression going
it goes in steps, like an accordion, for example
or string-like

you identify this optics and you simply activate this optics
already for further management at the necessary points

next is the question of earthquake displacement
it is basically completely simple

for example, I even managed to get it on crystals
function on this task
and they reduced the magnitude of the earthquake

simply because optics were simply standardized
in accordance
with primary optics level
where there is no earthquake
that's all

i.e. it goes well the crystal works
he just chooses Norma
imposes
it means optics which is the control
and Norma brings control
and that's all
it turns out that the magnitude is underestimated

also, I did an experiment at the Institute of Seismology
the waves diminished after
well, which follow, for example, nuclear explosions underground
i.e. they decreased by a clearly defined magnitude
when the crystal is activated

it turns out that if you activate Consciousness in the same way
and Consciousness has Infinite access to control
unlike the seemingly low-power one
well, variants of the crystal system

then here it is quite simple to build in Consciousness
those parameters that normalize the process

and the question of managing the "big"
it turns out that it's just a technological question
related to the dynamics of the development of the process

and in connection with this
since the question is simply that
that you study the dynamics first
and then enter the Norm
then you have in a dynamic system
this system simply does not exist anymore
you are changing the history of development from the point of view
towards Norma

and there is another answer to the question
what if you changed the development history
how this information is further manifested

you can immediately say that when you changed
furthermore it will not manifest itself
because there is a principle of generalization
to all information systems
and all other impulses that will be less powerful
they won't happen anymore

by autonomous generalized force
Well, the next earthquake is there for example
or some kind of man-made disaster
you can prevent it again, etc.

i.e. the more people work for Salvation
the less opportunity there is to manifest the system at all
either from the point of view
as firstly a possible global catastrophe
and in general, in particular, even any little thing

so the work of management
seemingly with large amounts of information
it consists of the following
that sometimes it is enough to just study
the development scheme of the element of Reality

and just add a little bit more
management
and the process is restructured

This is where I end today's lecture.

Thank you

Goodbye
