

GRIGORY GRABOVOY
Structuring of Consciousness
Control through information from the senses
(15)
09.10.2001

In this lecture
I show the technology
information management
event management
like Macro Rescues
as well as direct access systems
based on the use of information
which could be, for example, visual information
i.e. physical vision
OR let's assume that the information is a rumor
or information of feeling

i.e. if you touch something
sensitivity is meant among other things
touch feel
or perceive, let's say, temperature

what is meant is that
what can be perceived
physical organs of perception

and when you have a mechanism
which is quite familiar to you
then in this direct access system
according to the system of Macrosalvation

i.e. access to such information
that you can control and transform
all Macroinformation
towards, for example, transformation
where there is an absence of a possible global catastrophe

here access is provided
via communication layer
between different organs
and levels of Perception

this level of communication it is like this
that at the point where the human body is created
i.e. the area of human creation
from the point of view of spatial arrangement
this information

in this area
intersection
different levels of Perception
means
perceiving area of Spiritual development
from the point of view of sorts Well, not such a generalized analysis

and combining these positions
you see
what Spiritual development
development of your Spirit
this is also what it is
manifested on a physical level
Perception system

when you listen to this formulation
Well let's say so repeatedly
then you will see
that the connection of Spiritual development
with a physically manifested level of Perception
this is the work of the Soul revealed in the form of a body

i.e. having examined the body
as a revealed area of the Soul
here in the position I mentioned
direct access system
to any information
including displacement
or information transformation
regarding a possible global catastrophe
into the area of non-realization of a global catastrophe

is carried out at the level
at least two or a maximum of three components
which you, for example, can perceive immediately

and here is the concept of perception of control components
consists in the fact that
what if you see with your eyes
For example yes you are considering
as an image

or perceive by hearing
or there it means you're just touching something
and perceive it as a feeling

then there are three components
can be contained in one level
for example, physical representation
or physical vision

and that's when we talk
about the physical representation of information
then she introduces herself
in the form of certain signals there
occurring at the physical level

but here is Perception when we consider
then first of all you need to combine
management with that
what's on Perception
you can have an image
for example, it could be a clairvoyant image
or thinking
or an image of memory
what you have in your memory

and then you have different images
or some kind of representation of an image
must find
in the whole combination of so to speak staged positions
which I said about
level
which contains
for example physical vision
level that contains
there is an auditory version of Perception
i.e. in the form of sound

level containing
all other levels of Perception
physical body

as soon as you set such a task
you will see
what is the level of Spiritual organization
areas of perception
starts in the optical range
strive well let's say so endlessly upwards

and this is this desire
precisely infinitely upwards
this is the system that characterizes that
that there was an intersection
your Spiritual development
With
Soul level

i.e. the Soul controls
your Spiritual development
i.e. you develop harmoniously
from the point of view of, for example , optical control components

in this case
I found out
optical control system
which must be controlled
that means from the side of Spiritual development
and including
would be a characteristic of accuracy
for example, harmonious development

with a certain accuracy
harmonious development
when you have for example such a canon
as if a diagnostic canon of management
you have that situation at the same time
that a macro-catastrophe is no longer possible
because the combination of the two
or there are more elements canonically perfect
no longer gives the opportunity to come true
as if the system is precisely a macro-catastrophe
i.e. the destruction in principle of the development system

and here is this postulate
in this case it works
because you find out it turns out
its physical control components
at the level of Spiritual development

when we talk about that
that control comes from the body
including Macro Management
let's assume a hand movement or a tilt of the head
this is also macro management

that's what the controlling meaning is
was laid
into physical free movement of the body

i.e. when the body develops
in terms of ^{well} there is no free development
it can be any action
starting ^{there} with sports
ending with any action of rest

i.e. when you work
by physical space goals
and at the same time it is accomplished
Macro Rescue Management
this is the technology
allows for detailing
and ^{as if well,} a kind of system, ^{perhaps}
similar to a system of cellular controls

i.e. when there is a series of cells
and here are these honeycombs
each one ^{is functionally} different
but at the same time they are connected to each other
general directional action

like this
you can break down every action you take
which would lead to Macromanagement

this lecture is complicated in this part
try to do it as homework
to do ^{means} what I said
trying to listen to the words
i.e. follow the structure of mainly physical words
verbal perception

algorithm of actions
these are physically spoken words
in this case

when you do it
then at the level of accuracy
an optical component must be formed
characterizing the next level
your full regeneration level
self-healing level
subject to harmonious development

i.e. the next level
he kind of grows up
from the level that I just presented

Well for example when a person grows
it grows on the base there let's assume your height
its primary mass , etc.

here is the same development technology
into a system of harmonious development, for example
with the condition of self-regeneration
self-healing

and knowing this principle
i.e. the second level of this lecture
described simply as a principle

and the third level
when you have access to any information
due to the structure of one's Consciousness
I propose to consider here as an element
where is the mobility
or maximum mobility of the element
creates a static form like this

this is a property of Consciousness that characterizes
formation of physical tissue

and so when you mean in the next level
use the concept
direct access to any information
that is the concept of "from where"
i.e. "from which access is provided"
this concept is reproducible
for example on the physical body

i.e. when you consider
your physical body as an element
means coming from a certain level
of your Consciousness

once you look at it
multiple well as if some connections
let's consider where they are
at the point of development of your Consciousness
is located there let's assume
the little finger of the right hand there on the left, etc.

having considered many components of the body
you will see
that they basically all intersect
in one small optical region
which is located well let's say from a distance
no more than a meter from you
somewhere around chest level

and the mechanism is as follows
i.e. optical manifestations
that they manifest themselves at that level of Perception
when you ask yourself the question
where the transition takes place
from means information
i.e. from the optical level of Perception
to the physical body
i.e. to the physical tissue

and as soon as you ask the question
you immediately identify this area
which I just mentioned
sphere well like a projection sphere
which comes from
from all your organs , cells, etc.

here when you consider the question
namely the cellular system
which is located, let's say, inside the body
specifically for the skin
that which is not perceived by sight
then the cellular system
it is always the center of this sphere

and here is the compaction of this center
it is infinitely great

here we see the manifestation of the Spirit
but as if developed in the opposite direction
from , for example, the tasks of Spiritual development of the individual
from the point of view of information acquisition
namely development

this is when the Spirit masters the information
vectoriality of the movement of the Spirit
coming from the body
for example to the subject of study
to the subject of action

in this case it comes from the body
in this case the Spirit develops into a body
at this point

and therefore the vectorial development of the Spirit into the body
that is, inside the body
this is a rather special characteristic
and inherent in the main means Well as if by human action
under some special conditions
for example, in conditions of prevention
for example, possible global catastrophes

or in conditions when necessary
a very large array of information
Means well, it converts very quickly
to the level of private management

what does direct access mean
at any event
and the structure of your Consciousness

so you noticed here
what I defined as
component of the structure of your Consciousness
Thus
that it is also a vector characteristic
development of your Spiritual structure

and if Spiritual development
this is an action towards the object of development, for example
and is perceived in the optical range
as the distribution of light elements
Spiritual level
emanating from the physical body
and moving into the control area

or it is the mastery of some subject
which you are studying
or it's an analysis
or it's just management
connected with any of your actions
of any nature

in this case
I have given a description of the organization of your body
when Spiritual structure
i.e. the Spirit develops inside the body

and that's why you see
vectoriality of this movement
you use it
for access control
and access is carried out as follows

it means that the Spirit has
in each characteristic an infinite structure
then setting a task means comparing information
with the physical body of a person
what is the first level of harmonization
and self-organization of information

i.e. if we see the component of the Spirit
moving towards the human body
then as soon as we enter
for example, Consciousness there
information, and not of a physical nature
then the information is harmonized
in this level of Consciousness

and then you have
firstly, infinite access because
what is Spiritual Constant
is already in all control systems

and secondly because
what is a harmonic system
which characterizes
integrity of the human body
i.e. his for example Eternal development

and when you satisfy
such two components
you are already just where you want to be

i.e. the work itself
happening in this place
speaks about that
that you are there
where you want to go right away
on the subject of this work

i.e. this technology is like this
what do you mean build a multi-component
Well, in this case, the area has already been explained

and work
in a specially constructed area
means
that you are already where you want to be
i.e. you work directly in the system
and you don't have any slowdown
by access
to any information
for any event

and in connection with the technology presented here
as an independent work
try to find such systems
in the area well let's say so chest in front of you
i.e. no further than, for example, 2 meters away

and if possible, work in front of you
as if at the optical level
but look how the work is going
if you are in sync
look at the level from the back
but you will go around the physical body as if in your mind

i.e. without passing through the physical body
but having bypassed it
and as if in front of me
the point is at a distance of 20 centimeters
then from behind
if this point is 20 centimeters from the side

then how can one carry out work there?

as a completely independent work
look
what is the fundamental difference
mental control
i.e. control through thought through logical form
when you have this technology that I talked about

in this case
try to highlight the difference
related to that
that Thinking is in front of you
and Thinking as if behind oneself, behind one's back, so to speak
these are different types of Thinking

and when you do that means you do the management

Means Well for example, combining Thinking
first let's assume the type
which we will call Thinking in Front of You
in physical space
And
second type Thinking for yourself
you will see at the level
for example, first the left shoulder and then the right
as if in a frontal projection or something vertically
you can see the transition area of Thinking
level of Thinking from physical space
to the level of the Thinking space
which is not connected to physical space

i.e. working with physical space
you can see and hit in general
is it really possible to enter and work
with space that does not belong to the physical

i.e. this is the level of transition
is carried out at the level
means the organization of Consciousness from the Creator

i.e. there is a level
which was originally organized by the Creator
but you also need to know it

i.e. there is a logically acquired level
which is basically related to as if naturally
with the participation of the Creator
but it contains more components
your own development
of your own free will

and there is for example a level
which in this case
Well, it's already more fundamental, I guess.

i.e. if there is , well, approximately an analogy
at the level of physical events
she is like that
what if there are trees and grass there
then this is what is from the Creator
and if this applies for example
to the concept of "wildlife"
and if these are cultivated systems
then we have more or less

but nevertheless
this is already a cultivated, i.e. reproduced system
from the application of the structure of the mind

in this case, the mind is not a material aspect
i.e. Thinking that was ^{as if} spent
for the production of some product
on the same territory
^{supposedly} wild nature nearby
this is what happened outside of space
physical matter ^{for example}
how is it considered

and so when you act
by analogy with this technology
then you see what the transition level ^{means}
characterized by the fact
that the component of the mind that I have identified
he just shows up here
but also in proportion
with physical matter
with physical matter

i.e. by setting a very simple task
here is a field ^{for example} A
where does the wild ^{nu grow} ^{as if} growing nature
in its natural form
and field B
which is cultivated where wheat grows

to cultivate
field B must be present
^{for example,} some kind of transport, some kind of tools
and thoughts about it in general

to create a tool
this is again Thinking ^{yes}

i.e. we have many areas of Thinking
and we are like thoughts that are used
they are either located
near ^{for example} physical space
if we are talking about a specific field
and Thinking happens here
near this field

or are in the space of Thinking

but the only difference is that
that as soon as we take the information
corresponding to the cultivated field
and is compatible with uncultivated fields
we reveal the space of Thinking
not related
to directly, *for example*, to physical space
this field or there person

but at the same time
this space is in the human Consciousness
at a point related to physical space

and that's what I'm talking about now
that we are talking about such an area
which relates to the physical body
but at the same time
is not located, *for example*, in physical space

i.e. recognition or diagnostics
this area in this case
this is the process that I just talked about

once you have this area
you reveal
diagnose
and create, *for example*, a special technology
work in this area

then you can create, generally speaking, any event
including your own body
including management *for example*
from the level of always super-fast access

because the level of Thinking
which is simply a level of Thinking
it can be organized in principle instantly
by your willful control

and as soon as you
correlate this level
for example with the physical body

hence
you can restore your physical body

ratio

i.e. bringing the level closer to the physical body

this is the regeneration of the body, let's assume

and the approach of the level to the event

also a cultivated field

this is the management of a physical event

if you detect this level

and it can be identified

near any seemingly material object

and generally near any

including non-material

as if at an informational level

i.e. the level of the ratio

I said that in general

about the level of correlation

different information areas

as soon as you identify

ratio level

you can do the management

but that means by direct access

and in this way

that you are this management

you can carry out practically

which means , including and at the same time, instantly

i.e. to the region

when the concept of instant control

more time is needed

so when you manage

Well as if in technology

such pre-instantaneous control

then here you already have the information

as if in a timeless aspect

and when will you be for example

Well, let's assume that this technology will be developed

you will see what it means when you do the management

for example, by Macroregion

then the concept of instant control

this is the area that organizes the Macro-area itself

i.e. if you work with Macrovolumes

that is precisely the concept

at the same time "instantaneous", i.e. before that
what is generally done instantly

this area is quite calm
in Consciousness
and control through it means
stability in management

hence
so in technology when it came to that
that instant access is needed ^{there}
or super fast access

in Consciousness
are divided into technologies
which in this case can be considered
how technology ^{means} working
in principle as systems
^{means} in which the time aspect is not required
for work

if you look at this information deeper
then here you will see
what does the concept of absence of time ^{mean}
for work
but if you work with time in mind
because you are in that space
which has a time characteristic, ^{for example}

then this concept
you can get it the same way as I just withdrew it
the concept of "working with an area, ^{for example}
which is located
near the area of physical space"
but at the same time
this area does not belong to physical space

hence
you can work on the same type
with time domain
but at the same time
from an area that does not apply
to the area of time

so that's why when you work
For example Well, in such categories, ^{let's say so}
you have natural direct access

there to management
to information

because in this case
for example, technologies that could be
call them comparable to these technologies
these are technologies for organizing the structure of matter
where is it included
characteristic of temporal development

and therefore
from the point of view of this technology
for example a forecasting system i.e. predictive management
predictive management
in this case it is a construction
including the forecast phase itself
as such in the logical and in the logical scheme

i.e. it turns out
that any composition is applicable
for example to future development
as a forecast-oriented composition
in management
or forecast-oriented
but already in the past

and why "predictive"
because you are still building parameters of the past
in this case

i.e. for you
it will be approximately the same type of technology

the only parameters of the past
have a different basis, as it were
which well in this case
is more characterized
like the density of control information or something
and nothing else

i.e. changing the structure of the past
in this case
it's just a restructuring of past information
which has well as if different
just specific gravity
in management

and the information will be future
based on the statics of Consciousness
what is considered that Consciousness for example considers
components of the future
what do you mean there are largely undefined components there
i.e. unfulfilled components

and from this the imperfect part
reduces the specific weight in management

and therefore
but in reality these are just properties
as if that part of the collective Consciousness
which is mainly faced with the fact that
that as if the process was taking place
this is one level of information
and what should happen
this is different

from the point of view of direct access control
it's the same level of Consciousness
i.e. it is one control platform

and in connection with this
when you do
forecast plan management
you must understand
that management is in the past in the past
also predictive-oriented management

but in connection with this design
the concept of "prognostics"
in this case it is that control
which is carried out using precise technology
when the next step is known to you

and when you work, for example
according to the technology of today's lecture
taking into account predictive systems
i.e. knowledge of the future step of work

you can use
the same exit technology
then in the forecast phase
consideration from the forecast phase
as if from a point in the future
or points of past control

management into the past

so what needs to be done to organize
there is no thought form of its own
or any other information organization

and thus
to fold I mean to develop
this thought form
what is the concept of management
will become transparent to you

i.e. you will know exactly here
what systemic position to take
because as I explained
you can always consider
element of future development
or is there control in the past
and see what needs to be done then
for example in the current time

so that's it for today's part
regarding, as it were, access control systems
I'm finishing

and while listening to this lecture
Do as many practical exercises as possible
aimed at specifying management
and to achieve a specific result
for example by phase or by target or by control time
choose the component that you need most

Practice as much as possible
it's exactly in this part

in the next part
today's lecture
I will now tell you about the meaning of part of my Teaching
in the direction of predictive management

and so I will begin the story
from common, as it were, staging elements
from generalized elements

and in connection with that
that this story looks generalized
try to do so at each generalized level

what about predictive management representations
as parts of the Teaching
find specific actions
find a specific mechanism of action
although it would seem to be just a story
and a certain technology
presented from the point of view of the part of the Teaching

so here in the part of the Predictive Management Exercise
I have a number of postulates
which means they are being implemented
at the time of implementation of this technology
i.e. this part of the Teaching

the first postulate is that
what is the current time
from the point of view
future events and past events
this is time well enough let's say so universal
this is time that is equally available
what of the parameters of the past
also from the parameters of the future

i.e. the current time is considered
as the fastest access time
to management
if we are talking about the concept of time

the second postulate is that space
organized means not necessary
for example, only in some design
there are spaces of the past or time
but the space is organized
at the time of control

and that means the third postulate here is
what is your management
initially it happens instantly

and therefore the forecast system
this consequence may be management
which has well as if instantaneous characteristics

if possible, these three postulates
tie together
I'll watch what's in front of me
at a distance of one and a half meters

in a sphere with a radius of 20 centimeters
connect these three postulates
and try to find the characteristics
Predictive management in particular
and I'll watch

well when did you do the work
by combining characteristics
with the aim of finding a certain conclusion

the thing is what happens next
the following characteristic follows
as if of a postulating type
i.e. the following principle of predictive management
consists in the fact that
what is involved in prognostication
any element of Reality

and any element
generally perceived information
and in general the one you assume
perceive for example

i.e., a more general range of information
rather than information of direct target action

prognostics is characterized by the fact that
that accounting of Macrocommunication
must be concluded
as in the current state of time
and in the state, for example, Spiritual
but also in the state of, for example, realizing the management goal

that's why predictive management
it is like this
that depending on that
how do you implement the management goal
so let's say a verbal forecast is formed

and when you verbal forecast
make it a manager
then in this case
here the management consists of
what should you mean by development factor
Spiritual aspect of forecasting
and stabilization of this factor
well in the best possible way

i.e. in the most optimal form
then reinforce the verbal part

it turns out that the verbal part
this is what ^{well} in this time interval ^{yes}
managed to do the best possible

and only then do you pronounce
in the form of words or somehow recorded

hence
predictive management
is divided
on the principle of direct, ^{as if} implicit, control
where naturally they can be
some verbal phases
expressed in words
but directed, ^{for example,} towards a goal

displacement of some negative event
to the maximum extent possible
or restructuring

if possible
or first offset
then there will be restructuring anyway

any principle of predictive management
this is an element of Eternal development

because if you consider
how does information develop in general in Eternity
then it is clear that the duration of development
i.e. where the time factor is infinite
always relies on
to a stable next component

and therefore the concept
development into Eternity i.e. Eternal development
it is always forecast-oriented
moreover, predictive and accurate development

and therefore
when we talk about predictive technologies
we must take into account
what does development accuracy ^{mean}
based on the accuracy of the information

which you control
and which it should become
as if in your control
from the point of view of, for example, current systems of knowledge
current information suppose

but that's the point and in general
advantage of the task set
from the point of view of predictive-change management
that at the moment of control
you change the control characteristics
and at the same time you act on the forecast phase like this
so that it is as good as possible
i.e. maximally optimized, for example

work here
systems for organizing your Spiritual environment
i.e. your Spirit
but systematically coming from the Spiritual basis

here is the principle of the organization of the Spirit
from the Soul for example
when the Soul organizes the Spirit
this is the primary level
Spiritual development and management

but when the element of Spirit
organizes the next element of the Spirit
those. creates something similar
as if a similar element to itself

but the principle is quite general
in fundamental knowledge and management

then you get
just the predictive-stable phase of management

for this you need to identify
as if those Spiritual characteristics
which are capable of reproducing
also information that is called
information from your Spiritual Directorate

and for this you need accordingly
well, like this for example, a grain or a plant grows there
any height at all
causing the creation of something similar

means we need to create the ground
and grow this element

in conditions of rapid action
this needs to be done, well, in principle, as it were
that means in the pre-instantaneous phase

because the pre-instantaneous phase in Consciousness
characterizes a particular grain or soil
for this particular control technology

and when you ask the question
what is instant control
then here's what's even earlier, even faster
this is what it is based on
this is instant control
this is pre-instantaneous control
I called him that

and so as soon as you reached this phase
that's where the forecast systems are
are already stable
because the management is even logical
speed above initial

as if there is , for example, an initial speed , yes
and at any point next
speed is generally higher than initial
i.e. you are always there
in the stable control phase

and as soon as you
do you find such a space?
do management
then you get stability accordingly
and accordingly the coordinate system
what needs to be done now
in order to ensure
Sustainable predictive management
or predictive management
so based on technology
well, actually, that access
which I just mentioned

at the same time the system itself that you found
that means she can create
access technology

i.e. you see it right away
well, like a peculiar level of many screens there
or this ribbon type
can be done in Perception
just in the form of a glow
characterizing a specific area

what should you do now
so that forecasting and management are accurate
up to the level of, for example,
Well let's assume there are interactions
with some external information
precisely of an informative nature

so at this level it is visible
that the action, for example, physical control
i.e. for example you can do the control like this
that depending on your actions
put everything around creative development

but at the same time it arises
a kind of reverse wave effect
some actions could be you
Well as if involuntarily controlled

what can limit as if
Well means some possible freedom of action

so that there are no restrictions
can this be deduced
to the phase of managing that information
which characterizes the precision of control
from the point of view of physical actions

then in this case you can have
ordinary creative actions on the physical level
and at the same time the control will take place
already in the information field
you just already know in this case
connection
physical body
And
the entire Macroregion

and this is in the form
one optical element
located mainly

first is on the right
then it sort of curls up into a spiral
around the body
and it seems like an infinite area is emerging upwards
then comes back down
in the form of an image of a physical body

as if layered
this is roughly the characteristic of this level

and then you kind of have a characteristic here
that control comes from information
which you control
only by the point of Consciousness

so here is this characteristic
it is fundamental
in a system of tactical predictive actions
when do you work
Well, in small volumes
or time intervals

if you start working
in time intervals of millions or billions of years , for example
in well as if in a well-known calculation yes
which currently exists on earth

you get it instantly
such an array of information
that you are entering a phase
which is in its local sense
can be called as a pre-forecast phase

i.e. the phase of organizing the forecast level

hence
working for example on this mechanism
you can lay in this phase
what do you want in the forecast
i.e. finding it as if the other way around
based on large arrays

and identify the forecast already in front of you
which must be realized
or in informative Reality
or for example in physical

V physical it is as one of the manifestations
actions of informative Reality

and therefore we can receive
a fairly general picture
for informative Reality
which
or takes into account physical Reality
Well, at the same time there can be neutral positions
from the point of view of tasks in physical Reality

or includes
then the transformation of physical matter occurs
for example healing
or there is a different kind of event management
not related to treatment

so once you get into the forecast phase
to this level
you can immediately
have a generalized control type
and direct access control

hence
predictive control mechanism
including control mechanism
where is the direct access system
this is the allocation of the forecast phase
working in this phase directly

Means well, due to the structure of your Consciousness
from your Consciousness directly
without any mediated systems

so when i say
already about the level of predictive management
Well or something more adapted
to different levels of Perception

then there are also a number of postulates here
allocated
in the form of tasks, for example, goals and priorities of certain

so here is the task of predictive management
in my Teaching
is means management which includes
so the change is like this let's say some information

at the time of implementation of predictive management
for the better
for everyone, by the way

i.e. this is the level

management objective
it is always a goal related to Macrosalvation
i.e. with Macroregulation
and ensuring stability in the ideal of Eternity
in Macrodevelopment
all of them systems
i.e. complete freedom of development of all systems

and from a perspective of priorities
it's always a priority
first of all there
preventing, for example, a possible global catastrophe
first priority

the second is the priority
means connected means
well with some other elements
which you choose yourself

but logically priority
that for example during some time there
a small next time if there are a few seconds
there is no global catastrophe happening
then what's the point of talking
as if about the next control

That's why
preventing a possible global catastrophe
it turns out to be a necessary control element

another question
that he is not always
as if Well, it should be formulated
in the form of exactly these words
as a prevention of a possible global catastrophe
can be included in any action element

and as a rule in my technologies
it's generally always on

the concept of " as a rule "

that there are elements
when a person is in control of the situation
already at a certain level of its development

what he knows for sure
what should not be done regulation for example
from the point of view of preventing a possible global catastrophe
i.e. he sees exactly stability
then he can act
as if in the time in which there is
already on harmonization or stabilization of development

and in the future
when there will be many managers
engaged in management technologies
based on one's own Consciousness
it's obvious here
that the stability phase will increase

and how it will increase further
the less you will need all the time well as if to remember
the task of preventing a possible global catastrophe
she will move very far away
eventually it will be restructured
there will be a task stand only
harmonious endless development

so here as an independent work
then if possible you try
identify
well in the information of the future
some kind of model development options
when necessary
that's exactly what I need to do first and foremost
preventing a possible global catastrophe there
hits all levels
primarily at the social level
as far as the development of society is concerned

the second is the level there well possible macro-catastrophes
external or internal space, etc., i.e.

i.e. find
what are the characteristics
may be
at the state of the Spirit
at the state of the Soul

when you are in management
and at the same time you have precise control
that Macrocatastrophe does not happen

then there is time to study there
for example, current management
as if deliberately not wasting control impulse
exactly for this task
prevention of a possible Macrocatastrophe

this is as an independent work
need to be identified
state of the Soul
state of mind
you can use optics
can be seen in this case
What
state of the Soul
state of the Spirit
it's also a space
which are located one next to the other
but they may not be related to each other

Here in your Perception
And in principle for any external Perception

similar to how I showed
what is the space of Thinking
being for example well, near the physical body
may not be related in principle to the physical body
at the level of Consciousness

Consciousness does not differentiate
this element of his work
as a quantity related in space

and when you consider
such an element of Consciousness
that when you only work on the Spiritual basis
you can see
what's in Consciousness
these are completely different levels

and when you look at that position
that Consciousness consists
for example, on a certain aspect of Perception
from completely different levels

it turns out that implemented for example
as a Soul
as a Spirit

this point
point in practice
giving, let 's say, universal properties
or the same qualities
or the same characteristics
at the level of action
any systems of Perception and control

i.e. it can be controlled
based on Spiritual
and get fast or super fast results
but the main thing is that it is needed

can be controlled from the Soul
for example, logically mentally
you can do something there with your physical body

but at the same time management
should be directed
for example, according to the Macrosalvation system, so
that you always achieve your goal
you are preventing
possible there for example Macrocatastrophe

and at the same time as soon as you give
equal in character in action
all elements
they are the most involved in your work

as soon as you start
give priority to any control system

if you see in the forecast plan
that this is how it should be and this is how it should be done

if in the forecast plan
we need to give equality
different control coordinates

definitely need to give equality
in the original impulse of action

and do such a training

what do you give equality
different control systems

i.e. without identifying the priority form there
precisely in the control phase

although it is known
that, for example, the Soul organizes the Spirit, etc.
but nevertheless
in this case, control
It should be perfect as if on equal terms
from the point of view of logical control impulse

so that's how you achieve this
you see that in the logical phase
i.e. in the form of thought
different perceived objects
may have
or you can bring them so to speak
to the conditions of equality of control phases

hence
as soon as you did so
then the reverse wave from the possible for example in acrodisasters
may not be implemented
because the equality of the Norm
in relation to future events
precisely in the forecast phase
it works
as a control system
in your Consciousness

i.e. Norm now
this is an equal characteristic
with what will happen in the future

as soon as you achieve
such functionality of Consciousness
then you have sustainable development
and at the same time you don't have well as if on purpose even
tasks in management

hence
precise control once
this is in the future you will many times to yourself
you can deliberately not well how not to put it
this is a task in the form of words

for example, preventing a possible global catastrophe

and already on stability
primary correct control impulse
do it now

and not just when for example
well, most of the collective Consciousness
will already have this technology

This is where I end today's lecture.
there will be a 15 minute break now
and then there will be answers to questions

I'm starting to answer the questions that are here today
and the first question is this
*how to restore
torn nerve fibers in the spine
which are responsible for the movement of the legs*

Well, the thing is that from the management's point of view
it is really possible
to highlight in principle quite directly
the area that corresponds
information, for example, regulating the movement of the legs
if we consider the spine

at the same time I advise
consider all the information in general
and look at it there
what needs to be done in all information for example the World

in this case
what needs to be transformed there
so that there is movement of the legs

and then connect these two levels
i.e. a specific technology
it is connected with that
which is really possible as I already said
highlight such a direct connection
just from the spine

having defined the area of the spine
in the form of, for example, a certain area
a specific sphere of a specific radius

and at the same time if we speak
about the excretion system
here's how to highlight this area

then it is not difficult to distinguish it functionally
since the area of absence of, for example, the Norms of leg movement
it is an area that can be like an outer sphere
in relation to the spinal sphere
and it is at the optical level
always has a similar system
inside the sphere
corresponding to the spine

then you can select it right away

and the second thing i said
it's still worth highlighting
common area
i.e. information, for example, from the whole world
in the form of a sphere
Well let's assume a radius of 5 centimeters

and try to determine
how to interact
with information from the whole world
so that the movement of the legs becomes normal

so considering that there are two positions
so you can say
what is the common position
concerning information of the whole world
this is information that contains
spine information
and leg movement information

i.e. a kind of platform
and peculiar means a larger or higher set

but when you start
make logic diagrams
then here you can do it like this
that as if the information of the pre-transformation, let's say Yes
this anomaly, well, this kind of diagnosis
which can be called
like the absence of the Norm for example yes in the movement of the legs
you can just draw this information like this

then this diagnosis
in the sphere of all events
all information about events around the world
starts to function as if
begins to be objectified
from a certain time

time is enough
often just highlight

and when you start seeing things like this
as if in terms of all information
then restore this process
This is a regulation related to standardization

but regulation up to that point, so to speak, up to that level
when did this problem start
first of all, develop
i.e. the initial principle or causal level
secondly, when did the problem start to appear

i.e. having revealed well as if two optical levels
you can as I explained in today's lecture
pre-level Norms pre-level Norms
just spreading it
to the level of the following information
in all the information of all the connections of the World, moreover

when you do this
you will be able to go now
along a completely clear trajectory
and besides, it is already the only trajectory
specifically to the spine, for example
considering that in this case
from the point of view of orthodox medicine
then we need to look at the spine area

and therefore making the control basically the same type
i.e. having left on time, well as if in minus time
before the beginning of the level of organization of the reasons
before the beginning of the manifestation of this problem

but at the same time I said that it was before the beginning
here at the second level you need to go out
before the beginning of the level of organization of reasons
i.e. further in minus time
than in the first case

when we look at the Macro-domain

and do the same actions
as if growth of the Information Standard
which I talked about in today's lecture

then it is absolutely necessary to do it
precisely forecast-oriented
but a stable Norm
diagnostics
in which you will find out
what needs to be done anyway
let's assume in the immune system
in the thyroid gland
or in the brain
to restore the characteristics comprehensively
organism

and at the same time, there is already a Norm
you can receive
from the future to the present

i.e. having set the task of the Norm
from the point of view of predictive diagnostics
Growing the Norma structure
goes from the future to the present time

Well, I described what exists
the flow of the Spirit into the body
vector of development of the Spirit into the body

i.e. what creates physical tissue

you can use it in principle
Spiritual Carrier platform
and at the same time
make correlation diagnostics
Spiritual development

i.e. look at the Spiritual reason
what appeared here means well as if a motivating factor

and correcting this vector
extraction of the Spiritual component
you are already changing the structure of your body
in this case

so here the task of development is as follows
what are you doing rationing
but at the same time you correlate
already an event-based structure

i.e. look in the Spiritual component
what was the problem
and further develop the structure
come in
for example, in the event-based physical component

there the transitions are very simple further on
as soon as you get there
in the vectoriality of the plan
The spirit creating the body
then you immediately get there
including those cellular systems
let's assume in a cage
located, for example, in the big toe of the right foot
but which mainly accumulated
information about anomalies

pay attention
does it mean that systems develop in this way
what do you mean you have a task to diagnose
where is the information located anyway
for example anomalies

then the information is usually spotty
and small ones, as if in an archive
in archive content
it is very dense

i.e. if you ask yourself the question
and where is the information contained?
like this anomaly
on the problem with leg movement

then here I am in this case
looked at one specific cell
located in the big toe of the right foot
but having crossed over
from the system
Spiritual organization of the body structure

the thing is that infinite means Well what about access ?
from the Spiritual Foundation

they are always projected
into a point system as a rule

i.e. in this case
because it is the Spirit
concentration of the Spirit collects cells

but basically
functionality of the Spiritual structure
it is basically standardized

therefore the negative component
always collected in a very small volume
physically this can only mean one cell

so when you enter
for example in this cell
then you can restore it too
because she is no longer physically normal
this will be generally clear from the diagnosis and from the investigation
because you came to her

comparing these two levels
you can simply restore
and this cage too
as if an archive of negative information
just restructure
and restructuring may take place
in the same way as I explained

when we build
for example, a forecast phase into the future
and this forecast phase
as if it were so far removed from the possible
for example, even a macro-catastrophic phenomenon
which can then be restructured

i.e. it can be used
in this case it is the same mechanism

so now I said it in words
remember in different ways if possible
either at the logical level
or at the level of Spiritual Perception
as you wish
or you just use clairvoyance
and look what I was talking about here

as if well maybe in a more complex way for you
the setting part of the task

and do what I just said
well for example this action will happen
your work will happen in front of me
at a distance of 2 meters
in this physical space

work in front of me

and I'll just watch you

it will be a little
maybe even a few seconds

that's how I just said it
we are talking about work , literally a few seconds
you must quickly build management

and basically basically
this problem has now been solved in the hall
but then the rest of the time
this is a construction
fundamentally similar recovery systems

i.e. this technology is generalized
and applies to any disease in general
and in principle any event

just in this case
if we are talking about accumulation
there are information anomalies anomalies
in a specific cell

then in case of events
this may be among other things
some material object
according to the structure of development of events

i.e. if you are developing some technology
then control
then control information
may be located for example
just well as if well concentrated

concentration of this information

can be found, for example, in a stone

and in connection with this

Now if we consider

logically understandable access systems

then logic develops precisely as a search engine

why when you look at let's say an event

Well, let's mentally say yes ahead

imagining the event on a mental level

precisely on the logical

then you have them snatched from you in advance

some components

if it is some kind of conference or meeting

then some spatial systems

either from the past

or from the future

so if you know the premises

these are some separate elements

may remember this room

so this is a kind of search system

which reveals areas of concentration

like control systems, so to speak

that influence events

and as a rule

up to ninety percent, sometimes up to one hundred

in the case of, for example, the Salvation structures

when to apply

namely the technology of Salvation

and not, for example, private management

here are some specific tasks

the volume always contains

the entire management package

you can always unpack it in principle

or instantly

or there gradually

and do remanagement

so if we talk about that

in what time

it is possible to do remanagement

it's only a matter of time

and for the purpose of personal development

i.e. the personality wants to know something
and then this component
should unpack later

or should I do it now?
watch carefully
this is what your personality needs most
as a rule, this is when implementing
namely the Macrosalvation systems
it always happens

so here is the control
the volume of space
which I said about
where are all the connections, i.e. all the information of the World
can actually be carried out
even easier than, for example, private management
where there is a high background concentration level

because the task of Spiritual development
this is a general creative development
i.e. collective Consciousness
there in the most targeted way
directed to Macroinformation

and when you solve a particular problem
then the concentration of collective Consciousness is less
according to the creative status

so how can we do this here
to make it just the same
here is the answer to this question from the point of view of development

try to convey what you have created
Well, it's positive.
on Macro Management
the action there is local action
as if a collective Consciousness of each person

having done as I explained
from the point of view that here is the Soul Spirit Consciousness
for example, the mental control system
just the logic of thinking
it is the same system for control

exactly the same way
from the point of view of Spiritual Perception
for example Macro level of Salvation
And
private task

you will be able to strengthen it in principle
First of all, the collective Consciousness
each specific person
in terms of Eternal development

and also as a system of rationing
transfer Norma
which is ideological for Macrosalvation
in the Norm of specific development

and if we look
this particular case
then such a Norm can be created here
just from the restoration of that one cell
which contains, as it were, control information
absence of the Norm

and grow the whole organism
you can only
to restore it in a normal way
I call it growing in terms of information growth

it means only by creating
that technology
which is now I said for example
in terms of information standardization

i.e. by applying this technology
when the whole organism and one cell
can
at a certain level of Spiritual Administration
mutually standardize
i.e. the principle of the feedback signal

and especially in such problems
limitations in the dynamics of movement in general
principle of mutual standardization
even in relation there To there may be to a body part
it is very convenient and allows you to achieve
faster result

i.e. it looks like this
that taking for example the Norma of a finger
correlate with the body norm
in terms of the dynamics of the body
it may not just be physical parameters
physical type
and in the dynamics of the body

and correlating this information
you can only work on your finger then
and do the restoration
for example, a finger of the body, a finger of other fingers, etc.

mutual recovery system
allows you to create
well, a kind of control framework
then which contributes
well, for a faster recovery

second question
how to exercise control
for event management
without having an open irrational vision

Means Well, first of all, the concept, so to speak
event management control
this is a concept that is included in principle
still in the concept of management

from the point of view of the concept of control
it's like a control variable

and in connection with this
if you are faced with the task of management
then the scope of control over management
is located inside the entire control array

and the logical part of the control
the logical part that is concentrated here
can develop according to that scheme
which I just mentioned

for example in today's lecture or earlier technologies
built on the principles of logic after all Thinking
or logical Perception
perception of words there

respectively words

who talk about images, meaning images, etc.

and this is, generally speaking, management

that's when you use for example

well the word is irrational vision

what well for example characterizes

let's assume there is sensory diagnostics

clairvoyance

controlling clairvoyance

then here, actually,

the Laws of Consciousness development themselves

for creative development

as the Creator does

they are built on elements of foreknowledge, for example

and the concept of " irrational vision "

as a special concept

concerning for example there watching some stories

well, in general, just some elements of physical Reality

it's just a technology that is useful

but in this case

in general, development technology

logical levels of perception

up to management level

in principle it is also irrational

but here I think that often nothing else

it's not even necessary except for what is there

For example there in the lecture material

in order to do management

because that is the very purpose of management

it may not be possible to look there through clairvoyance

let's assume some plots

and it is enough to make control

so if you want

to use technology means development of Consciousness

for example, by direct control

for the development of precisely means clairvoyance

for example, here is my phrase

revealed irrational vision

I'm only considering that

what we are talking about here is adding

it may be that there is a more convenient or more developed clairvoyant element

but according to my Salvation technology
this is the concept of " clairvoyance" i.e. to see some images
This is not a mandatory component.

and what's more, I often use special
image system
I simply translate it into an optical element
which characterizes the state

and for example the glow yes for example in optics
is perceived at the Spiritual level
as a point diagnostic system

if I were unpacking
all images as clairvoyant
then I would spend time contemplating
there are plot phases for example

and so well I can do it like this for example
I can watch it as a plot
well, on a normal physical level
there at the micro level
or Macro level

but even look at the plot
and disassemble the image
for example which is systemic yes
or this is an image or this is an object for example
this is a waste of time

the same if you watch TV
there you perceive the image
and you spend, well , even milliseconds
there are micro or something like that
maybe 10 to the minus tenth power of a second
but you still waste this time

and in connection with this

i.e. to decipher the signal

and this means that the control system is like this
that it is better not to waste time
to decipher images
if possible

and so as I often
the concept is here let's say "irrational" i.e. clairvoyant plan
on the contrary, I archive it in a special level
Well, how do I do it?
because I implement this technology quite often
then it turns out fast
or there as it is necessary in terms of speed

but sometimes I really do it on purpose
I do this to have
as if it were just an informational constant
Well as if the principle of direct control
and not have images for example

and therefore
but within the optical framework
or there are technologies that I give
which are not only optical
there actually the mechanism itself is fully revealed

so if you have
even one generally proven method
then we can say that you have revealed
let's call this irrational vision

another question
that it is better to constantly increase the number of methods
because there is one principle here
that all Reality is changing
Well, it depends on time and development.
and either it is mastering
it is better to master new methods for example

but even a large number of methods
gives that certain synthesis
which is already more adequate
to the altered Reality

i.e. you can have, for example, accumulate there
some number of methods
let's assume that we have a hundred in a certain management baggage
it doesn't have to be only correspondence
well, which somehow were realized somewhere

then these hundred methods
can bear a certain load
related to that

that you implement management
well, during development there
well maybe for years to come
but static methods

but after years you still need to do it
correlation systems
and that's why I mainly give Spiritual development
related to implementation
in principle the main essence
mandatory access to management

i.e. when you are engaged
mandatory access to management
you are in a methodological phase
it kind of opens up
at the moment the manager

and it may actually be even, well, in many ways new
the main thing is that you have the tool
for example Spiritual Administration

so here, actually,
here is the concept of "disclosed" again from this point of view
characterized as such
that you can even, let's say, use levels
which I have now explained
in the form of image archiving
actually a component

and at the same time having control
well, in the Spiritual sphere
where even optics are not detected for example

when switching to control at the Spiritual level
or at the level of the Soul
is no need to consider optics there
in the form of concentration as concentration systems

there are, as it were, sublevels of the organization of the Spirit
they talk about that
what are you doing well comparable
or is there correct control

so well here is how I said
it means studying means irrational systems
systems there let's assume irrational management

it is still given over time to that
that something is needed
or finish studying
or you have to use luggage
with a lot of methods for example Yes

although for the system it is precisely C that saves
it's not necessary
one method is often enough
and Salvation always really happens

but nevertheless, somehow
the most pragmatic approach
mastering the technology as much as possible

because for the purpose of salvation
probability characteristics
have the same meaning sometimes equal

i.e. the probability of that
that this method will work
or this situation will be restructured
for example, a list of known methods
it is not always equal to one

well, that is, there is a possibility
that it may be necessary to have something urgently
build a new one for example
or remember, for example, a very old or forgotten method
irrational management

so it's best
constantly interact
with the current Reality

and here is the current Reality
this is what determines the formulation part of the task
or you just mastered the methods
and rest for a while

or so you mean Well, you know how to manage
on the Spiritual system
what do you know for sure
What at least according to the Macrosalvation system
and even private in any case with salvation
you always implement control

and all other cases
which do not belong to this class
something that belongs to the class of Salvation, for example
and belongs to the class
may be action control
this is either for managing events of a different plan

so at least there is a substructure
also revealed as Salvation
since the development of any event
better to invest
into the system of sustainable development , i.e. , Salvation

but nevertheless it is not direct, like this
in terms of wording, is it an event ?

so here it's all the same as far as possible
you make a distinction
what if you do management for example
and well for example, you think
what does it mean you don't have an open and irrational vision
which may be of fundamental importance to you

then it's better to watch
where in the management did you open
Well as if it is in any case feasible

any methodological package as I explained
he always does the controls correctly

therefore the concept cannot be
" unrevealed irrational vision "
may concern specific tasks
mostly for example here

and on the other hand
if we consider the process in general
that's how I explained it
anyway, the concept is like, well , sort of " full disclosure , perhaps "
in the conditions of the current changing Reality
this concept is quite conditional

because the task is still the same
mastering new technologies
implementation of more progressive ones, for example
or which can, for example , help you
or from lecture material

be mastered
or which you implement in practice, for example
with the glasses of application
let's assume the same lecture material
or are you creating some new technologies?

so here it is as if here in the concept of " open "
why do I keep coming up with this word
that the concept of " disclosed " as such
this is a concept when you know for sure
what can you do well for example, precise control
due to, for example, irrational technologies

on the other side
so here we apparently need to consider
that accuracy depends on that
How well have you mastered the controls?
current environment

if we talk about the future factor
then we can say that there are a million cases, for example, of the same type
which are completely one hundred percent positively realized
but to say for sure that this is the million and first case
must be implemented without fail
only on the existing base, for example
in the conditions of development of Reality
naturally, even in probabilistic terms it is impossible
logical plan

and that's why it turns out
that only technology needs to be developed
real access to any Reality

and this technology
it is a technology for the development of the Soul and Spirit
there for example also the logical phase of Thinking
built on this very task
that regardless of the amount of work there, let's assume Yes
because under the structure of Eternal development
the work also turns out to be Eternal in terms of management

i.e. you should basically do it anyway
so that if possible
you had a permanent management apparatus
which would not bother you
within which you would still move forward

Well for example, including self-regeneration
i.e. it is a kind of unique way of life
in which you have
as a recovery system
and the system that is needed
or open or collapse completely
as I explained

so therefore it is as if a principle
that's exactly the mandatory disclosure
he well as if it 's not fundamental after all
in Salvation technologies

this is the main thing here
must have access to management
and perform management

the next question is *how do you see*
the ideal level of disclosure of the activity of the Spirit

Well, the thing is
that the ideal level of disclosure of the activity of the Spirit
this means a complete similarity in my opinion
Spirit by the action of the Soul
it is precisely in the creative component of the development of the Spirit
and in the creative level of development of the Soul

i.e. the ideal level
Man strives to do as the Creator does
and the ideal level is
Well, that's like the maximum degree of attainability

also the Spirit is originally
including those produced by, for example, the Soul
ideally it should be comparable, for example
with tasks with goals of the Soul
and still function like this
so that certain structures of the development of the Soul
were well possible to also be developed in Spirit

now the second question
how do you view manifestation through a person
Love and Will of God

but the point is that the manifestation of Love
is expressed in my opinion in that
What

Reality is built on Love
here is the informative Reality

and if you see for example
neutral side of Reality
then there is such an expression
that God is identified with Love, for example in action towards people

then here you can find
that is not a neutral phase of information
this is action
and the initial one is precisely the infinite phase
this is love

and the Will of God
that this is a manifestation of the Will of God
then the Will consists in that
that the Creator himself is infinite
in the plan here for example, the development of one's own life
i.e. Eternal
He naturally manifests the Will
according to the same level of development of all information even
that people should be Eternal

and here is the concept of the manifestation of Love
and the Will of God through man
then if you approach this phrase
that Love through man is, for example, the Will of God
that is indeed it
this combination is acceptable here to a certain extent

then we can consider here
well, such a concept or something
what if we take atheists for example
which, for example, also have their own
my own philosophy or something
enclosed in personal creativity
or there in the personal element of behavior
associated there with their specific personality
and with certain elements of external Reality

then in principle
as if as a creative component as a developmental component
they are looking there let's assume there is a personality complex there
or personal initiative positions

but at the same time

if we consider for example the concept
Love specific to the individual
then Love is also expressed in that
that well, a person is kind of given the opportunity
to choose means well, well, an option For example there is an atheist
or the option that means well maybe
there is an option there, let's say totemism there
belief in the power of things there, etc.

but it is precisely the structure of choice and approach
that's what God has determined such positions
they are like this
what about the hierarchy, if we think about it
in the hierarchy there is true faith in God
as a saturated structure
from the point of view of one's own development

then when a person believes in God
his actions are personal
touching
with God's infinite information
i.e. the Will of God's Love
and at the same time it has an infinite development status

when there for example totemism or atheism
as one of the concessions and, in general, religious analogues
Means as if it starts to develop
in terms of the local system
then the system is still being shut down
inside your own tasks

i.e. it is an autonomous local system
not having, for example, access to the infinite [...]

and therefore the idea of God
as an infinite entity
It's quite clear here

while totemism

i.e. faith in local systems
there for example the sun is some kind of thing there
which in a limited version emits
Well as if certain levels
who are the managers

these are always closed systems

which, generally speaking and in social terms
they are not progressive

so that's why here is the concept of Will and Love
is expressed, after all, in acquisition
Well as if after all True knowledge
where Truth is also faith
i.e. this is for a certain level of faith
these are compatible levels

and then, as it were, combining such positions
you could even say that it's like
there are atheistic and some other concessions
it is still love and the Will of God
for example, manifested well in the design there of development after all

and if at the logical phase it is quite clear
what since no one said there
what is there or is it a representative
there an atheistic level created Reality
there let's assume there are moons or Earths
or is it someone who believes in totemism or another concession
which does not consider
For example well, active action of God, perhaps
but considers, for example, the investigative level

i.e. they think, for example
what does nature mean, it kind of develops
but who created the same nature
as if the issue is not being considered in principle

Means Well, it's like any other, let 's say, limited
in terms of goals, so to speak
it may not be limited
in the plan here or what, an ideal ideological goal
but is limited in terms of the development platform's purpose

concession any such concession
she still joins gradually
to a larger volume of information, perhaps?
what is the manifestation of God

and at the same time this is a manifestation
Well, this can be considered
such as there are scientific discoveries
that people can do there
like some kind of social transformations
but at the same time if we

if people don't consider
this is precisely the presence of the Creator
and only the investigative system is considered
they may well be considered
as well as a manifestation of God's Love
to this particular person
but which, well, should be in principle
in the future I will still master it
it is there that the Divine Essence of Being, so to speak,

and naturally
everyone can have their own level of Perception
the main thing is that in my opinion
here everyone still has to answer
to a very simple question

what is the original level of creation
must be determined by something

Well for example from the point of view of my practice
I even do it during treatment, for example
well in case the organ
either modified or missing
and the restoration is happening
then when i
for example, I implement the information of the Creator
i.e. I act through the information of the Creator

Well, my technology does provide an opportunity
specifically well as if to feel
Reality of the Creator
The Reality of God's Action
your point of view , for example
may be personal development technology

that's why I try in my technology
show that the manifestation of God
in conditions when, for example, already
well, the possibility of macrodestruction arises
this is also a manifestation closer in action
with a person
and, as it were, more specific training in technologies
for example the Creator
and manifestation precisely through a person, for example Yes
God's Will
consists of
that's why you can even say here

that man was created in the Image and Likeness
and the task is Eternal development

hence
this is Love
what is the desire for Eternity
and there is real Eternity
in terms of social development

that's why it turns out
that this one is quite well , it seems so
such a short question
if we consider it as multifactorial
from the point of view of the tasks of Divine development
from the point of view of human development tasks
as the Creator

then in principle we can say so about it
still find your own answers
If possible, please try
it means it is possible to find answers
to these largely staged, as it were, systems of tasks
which I have just described
and find it so as to show it
What

the action of a person and the action of God
in many ways it can be
process well as if of the same type
but in terms of tasks, I still think so
that in many ways we have
in fact, a fundamental task
to realize the positions of the Creator
on Eternal Development

so come to consider this issue
maybe more fundamentally
in terms of analysis

i.e. try to find
linking systems between words and questions
and try to highlight parts of the phrase in general
answer the question
and understand this answer
or understand from my answer

i.e. try to answer this question at all

work as much as possible

Well, the next question concerns the flight
and since right now there is a problematic situation ^{happening}
in aviation in general in the world
in connection with various terrorist threats
the population ^{so}
which, for example, is not armed
Well let's say with physical weapons

then here I can ^{basically} suggest
Well in fact, the use of my own technologies
along the route of the flight route
just apply the technology
related to event management
where the control is the Flight Norm

if possible, use this as widely as possible there
take over some companies
^{well, that is, to help more widely}
if there is such time

and ^{that means} here is the control
I will simply give a specific management principle
^{for example, at the level of today's lecture}

^{so} it consists of that
what is ^{suppose} event
and if we have an event
concerning the flight of an airplane
then there is the concept of a pre-event
i.e. the plane must, ^{for example}, be at some point
when will it be in the future

your task is to make the pre-event normal
i.e. the plane is flying at this point
and ^{for example}, the plane has no problems there

for this this technology is such
that you are in the pre-event area
i.e. considering the flight path
maybe even the end point
It is better to do this on the highway, i.e. in the air

put this point

and the flight norm that I said

there is the development of the Norm as if the growth of the Norm
make from the future
during which it will be as if preceding
to this event

i.e. first you model
look ahead
and model the Norm
what is Norma
the plane flies and no problems occur

this Norm is highlighted as a kind of sphere
for example before means directly
there is the cockpit of the plane
at a distance of about three meters

i.e. you work
at the level of still representation
you must keep in mind
aircraft appearance

and at the same time you saturate this sphere so much
what does the sphere produce
the next sphere of the Norm of the Event
Means like an airplane at the point where it flies
he has no problems

i.e. you work ahead of schedule
to put it simply Means well, real coordinates
and that's all

This can be done very simply
so that you are simply just
landing point
activate in the optical system
and throughout the entire trajectory from the start of takeoff
in several places you place levels like these
pre-event organization according to Norma
and that's all

then you have a sort of standardized flight
i.e., in simpler terms, here you create a flight corridor
which is normal

and generally speaking in ideological terms
from the point of view of counteraction
possible terrorist system

does not apply to this particular aircraft, for example
and in order to stabilize the situation in general

best

in the context of seemingly local terrorist manifestations
search in information
namely local private levels of manifestation
terrorist or some other possible threats

i.e. in counteracting terrorism

The main thing here is to resolve the situation
concerning the reason for the organization there
and if possible
it would be better if everyone did this work together
to make it more stable
now the situation in the world in general
and to promote precisely the tasks of Eternal development

hence

we will still have to resolve the issue in principle
and find fundamental roots
and it is precisely these that need to be solved

and not for example apply
let's assume only force pressure

I'll stop here
today's lecture

thank you for your attention
