GRIGORY GRABOVOY
Structuring of Consciousness
Extending the control result to unknown areas
(18)
20.11.2001

Good afternoon
in today's lecture
according to my system of salvation and harmonious development
I am showing a technology aimed at that
so that the result obtained from management
in any one area
and in its structure of Consciousness

translate into results in that area
with which you may not have had any dealings
and maybe this means this translation is exactly like that
why do i say "maybe"
because from the point of view of disaster prevention
for example, of a global nature
it is necessary that the result is not realized

but it looks like it
that when you are in the structure of Consciousness
work with this information
then the division occurs as if means a bipolar region
where the minus pole is the pole with which you have to work
as if not touching him
that's why I use the word "possibly" here

it means that it is possible that we will have to deal with it
with that information
which cannot be realized in any way
in the form of, let's say, very specific physical manifestations
or even completely informative manifestations

i.e. the information that does not have
correct information systems
but from the point of view of, for example, an optical visualization system
influences events

and with the help of this information
for example, it is possible to prevent, let's say, a global catastrophe

hence
the point of today's lecture is precisely this
to be able to translate the information area
which you receive in your Perception
from the results obtained in any one area
to that area
which is often not even diagnosed
as a manifested area

so according to this technology
I show first
well, some axiomatic principle
which consists of

what when you for example look there with your physical sight
per plant leaf
then you don't always translate information into words

let's say you don't say it to yourself in your mind
what is this plant leaf
and you immediately understand
what is this for example a plant leaf

then you need to tune in
to such a level of Spiritual Perception
in this lecture

and at this level I will continue
as in the first part of the axioms
to express certain, well, postulating , positions
which will be required in this technology

hence
perception means some element of Reality
doesn't always have a good as if a finished nature
from the point of view of Thinking
so stereotypes or something Thinking
when you have a perfectly formulated subject
from what you perceive
this is the first

the second is also an axiomatic position
and at the same time postulating that
that when you perceive Reality broadly
then you have an infinite point of narrowing of Consciousness
in the area well as if of acceptor Perception

i.e. there is some kind of lever
who is on the Spiritual position
comes out from the level of the heart
so it kind of puts pressure
to the point of acceptor Perception
and this point narrows as much as possible
the moment you expand your Perception

for example, you are looking at a wide room
for example, I'm watching this right now
at the information level to the hall
and at the same time I have an ever narrowing point
the more i look

and here is the speed of narrowing of the point of Consciousness
this is the point of self-organization of Consciousness
i.e. a process is taking place there
when Consciousness begins to differentiate
and that means Well how to manage the situation
towards creative development

that's exactly it
expansion in one area and contraction in another
this is the axiom that says that
what from compression to expansion
there is development

but development is something else
what does it include
and the thinking part
and for example the Spiritual
and management of the Soul, etc.

hence
development of thinking
in terms of the design of the subject of your Perception
this is often the difference
only in the volumes of information
which you catch
in the structure of your Consciousness

and the third axiomatic position
this is what when you look
Well as if at yourself, i.e. look from the outside
for example from the structure
which does not apply to your physical body, for example

then your perception is like this
that it brings back Consciousness
into the form of a physical body

based on these three postulated systems
although by the way you can just look through them
at the practical level

we can say
that the design of information for example
possibly by reflection
into these three areas that I described

those. any information
can be projected
well, let's assume in the form of an optical beam
into three, so to speak, described information blocks

and then we don't have to
to design what we see
and it is enough just
means to perceive postulating areas

please note that I do not give the transition
meanwhile, the postulating areas
affect the information itself

here I am deliberately making it more complicated
in lecture playback

when you listen to it
try to catch it
how does the postulated postulated area influence, for example?
or three areas let's assume
the information you want to manage

from the point of view of the Salvation of all
for example, from a possible macro-catastrophe
the area where you have
your own physical body
or informative body
but which has the image of a physical body

in your Perception
due to external consideration of oneself
or go out into that structure of Consciousness

which is not located inside the physical body

and pay attention
what does the Law of Information Density mean
The Law of Development of Consciousness
towards increasing information density
brings you to that
that you have your physical body again
at the level
or information
or simply physically manifested Reality

in this regard after I did
Well as if several complications
specifically in this lecture
so you need to be able to do it in this presentation
means to move on to simplification
in the field of Perception

i.e. you will have to consider it yourself
when you listen to a lecture
how can simplification be done
so that it would be like a long-form speech
at the level of undefined objects
often completely undefined or partially defined
would manifest itself as
of a very specific design

To do this you need to be able to separate with your mind
what you perceive as Thinking
means to divide into two parts

i.e. the first part
which is the area of interaction
from all over the world
or there is internal information
in principle with any

and the second part
which is manifested in your Perception
in the form of those structures that are familiar to you
For example yes, these could be letters, these could be images, etc.

in this regard it means when you do
Well, it's a peculiar construction
similar to an hourglass for example
in the area of maximum narrowing

this is the division of the external structure of Consciousness
external elements of information
and within the region closer to you
means that this is what you clearly perceive

and here is the system of Salvation
from possible global catastrophes
the technology is that
that you two areas
as if the first part of a conditional hourglass
and the second
take and squeeze
and in the narrowest possible area
you just sort of fold them
one into another

and once you do this addition
a sphere appears which contains information
precise definition of indefinite objects

i.e. here is the technology in that
what exactly is certainty
undefined correctly objects
arises from the action with the form of information

as soon as you for example this example
Well, you will develop it
let's assume on other images on other objects
then you will see that control is happening
in the case when you don't use words for example

i.e. control occurs
when you are not using
such a concept as Thinking for example

and in connection with this in this administration
you often have direct access
and at the same time you have the opportunity
is obtained from the structure of Consciousness
due to direct access
manage events

Well let's say I can move my hand
but at the same time I don't think it through
what am I going to move there now
there for example with the thumb of the right hand

the controls are roughly the same
on physical Reality approximately like this
in this case

and direct control from your Consciousness
in this system
consists in the fact that
what do you mean by defining the control status in this way
that your own Consciousness you organize
precisely in the clearly manifested area
that's the one I just talked about

and at the same time from your Consciousness
this is a specific point
which is in front of you
or the area that is located specifically in front of you
and you make management out of this area

in principle, first to an infinitely distant region
consistent with this information
which you control
then infinitely close
but which is inside
management image

be more careful here
it turns out to be a closed triangle
which is the control structure
you can transfer it to a plane
For example there on the plane of the table
and it starts to shrink
to the point of infinite compression
where Consciousness grows
according to special laws
publicly available to everyone by the way
for understanding

as soon as you enter this point
you see how Consciousness develops in general
from the point of view of creative growth

i.e. it is possible to establish the Laws of its growth
and how to write out to study
use for control

hence
next step

in the axiomatic principle of control
is to find those link structures
which well as if they grow spontaneously
i.e. those that
have their own Laws of Growth

and being in these link structures
what was presented
at the axiomatic level
as an integral part
Well as if the next link structure

moreover, it is necessary to find according to the Laws of Consciousness
development of the creative structure of Consciousness
that axiomatically stated systems
solve the same problem
that and already developed systems

those. problem solving principle
it should be the same
when you watch exactly the canonically developing
creative management system

i.e. the achieved element, for example, on axioms
in management
I'm repeating myself again
should be the same in effectiveness
what is absolutely
Well, it could be a very highly developed structure.

according to the Salvation system
this approach is needed for that
to be able to do it with a single impulse
which can only be primary
do the same
as with a developed management system

and here from the point of view of self-restoration
provided there is harmony
external and internal development
there is technology here
Well, it's quite simple in terms of use.
in the applied version of today's lecture, perhaps?
today's material
in terms of creating your own structure
provided that the entire external system
develops harmoniously

to create such a management
according to the technology of today's lecture
it is enough to consider that micro level
which constitutes, for example, the physical matter of man
which contains
the entire external structure of Reality
Well as if on an inverted level or something

i.e. to enter with Consciousness
as I explained
there is a position called the hourglass
when all external Reality
and internal
can be superimposed on each other

then in this case
information about the human physical body
can be imagined as a clock
related to the inner realm of Consciousness
i.e. correctly manifested

external systems
these are all external connections

when you do an overlay
then to each cell
according to the Law of General Relations
corresponds to any element of Reality
any level of this Reality
corresponds to a specific event

and in this regard it means event-driven management
here is shown
as an action often simply of the physical body

i.e. when you, for example , do some action
then any action is tied to that
that this action influences the event

and here, pay attention, it is very important
here is the nodal point in management
according to today's lecture

that when you are at this point
you start to think
or just discuss some elements

by means of, for example, mental dialogue
then you do the management
in this area

i.e. I have now brought you to that area
which is the managing one
because you came to her

being in this area
you do the management

intermediate systems of logical type
I left it here
and considered that the management
which is done immediately
once you find this area
this is the control in this case
it can be more effective
than the control which is sort of laid out
on logical postulates

and in connection with this
so the control point that I'm talking about now
this point is well in itself
is it new enough in terms of functionality ?
because it is presented
as a level of unmanifested systems
and at the same time
level of logically presented systems

and here is the topic of today's lecture
at this point

you can do
unification of any information object
from the point of view of its prolongation
or something in the control system
when the area is not defined

for example you need to make a control of this type
to prevent an explosion from occurring
there is a nuclear reactor in a nuclear power plant
industrial purpose
from the fact that at this station
For example a plane might crash there
let's assume with the same nuclear warheads

to solve this problem through management
then you need first of all
find a control region comparable to that
what can restructure this information
as for this event
didn't happen

information restructuring
requires related quantities
i.e. there is movement of the plane
there is a possibility
or the impossibility of starting a nuclear reaction
from an industrial reactor for example

that is quite a complex area
which is actually
even in the physical conventional counting version
does not always have an exact solution

due to this
if, for example , you set such a task
then the management of this area
may be a quantity simply expressed optically

For example here in the area of my hand
the area is located
which is displayed as a control system

and the task of management is that
that I just enter the control impulse
to the desired point in the area at a certain speed

I solve this problem then

well as a result of this
to make access to management unified
you need to consider
just in this case
that you are conducting the impulse correctly
i.e. you get into the control area for example exactly
in the management area
which is generally visible

especially in the event of the possibility of catastrophic events
control area
as a rule, it is very clearly expressed
and is very static

and here's how to change it in principle in fact
it's often not difficult

and that's why the main thing here
how to have a comparable level of control

when we talk specifically about the Salvation of all
then the control is always correct
because the body is already a controlling quantity
or thought is the controlling variable

so in this case
for example, there is a Law that a macrocatastrophe
in any case it may not happen
because the control variables
essentially as if Well, aren't they measurable anymore ?
such a term yes I use it again "immeasurably"
I use it on purpose
information that is displayed incorrectly

this means that we have an exact achievement
mandatory Salvation, for example, from a macro-catastrophe

i.e. if we develop the system like this
so that there is no macro-catastrophe
from an explosion for example there are local nuclear systems
then this control it already contains in itself
as if the trajectory of the control impulse
already contains

i.e. access control consists of
what about the macrocatastrophe
as a rule the control trajectory is unknown

but if you want for example
how to minimize and prevent
if possible, there is the maximum number of disasters there
then you need to make management
correlative

for this the easiest way is to take
and for example take any control
which is correct

for example, there is system diagnostics and human diagnostics
healing a person
consider

in case of recovery how does it happen
contact with the human information area

i.e. what specifically for you
is a contact system
how are you for example from the level of the physical body
generally speaking or from the level of Thinking
So you produce
contact with the system

and simply by ordinary mechanical means
or on the Spiritual component
as if remembering the Spiritual state
move this contact to Macro Control
and the area is not defined by you

just this area
is an area
which does not allow
for example, some kind of macro-catastrophe

and by means of this transfer
you just kind of transfer
in other words, a regular control lever
and that's all

i.e. it is enough to have correctness
only in one system
which is basically known to you

for this if you for example
Well let's assume so the situation is like this
what you need very quickly
make a decision and analyze
for example, comparability in management is sometimes difficult yes
for example, to reveal some fact
which could be the most optimal
it often takes time for this
even if it's just a few seconds or milliseconds

there is a very simple way
or use the first value as it were
which is highlighted
or in optics
either as a concept
if Spiritual value

and just project this value right away
in the field of management
well, i.e. use what is closest

the second level is to use
any physical object
which is , for example, at the level of Perception

let's assume there is a video camera in front of me
I look at the information
how does the visual impulse go

i.e. let's say I just look at myself
and I see how it is perceived by my Consciousness
at the information level
this video camera

and a video camera
it is also a static system
she is in front of me
and I'm just
I project as if I illuminate this optical system
and she controls this Macro-region
by means of this again undefined system

hence
first principle of management
through an undefined system
consists in the fact that
what do you find the control lever
which may be located
from the results which are known for example

just in case
it is possible to have several well - known systems
let's say you achieve
positive control moment
and on the Spiritual level try to see as if
what's going on at Dukhovny

i.e. to look after the Spiritual state
at the level of, for example, optical luminescence

if you are watching
on some geometric figure
you remember her
this figure

according to certain signs
then you can use
just the memory of this access

if as I explained
what are you suddenly starting
at the moment of such action
try the best case yes
and you start wasting time

then it's easier to use
For example here is just any physical object
or use any control
which is an access system
to this seemingly undefined object

now after you have done such control
the next level becomes
this is the definition of an undefined object

i.e. each next level
this is necessarily a definition of an object
which were not defined
at the moment for example Well there is no speed control

that means from the point of view of the definition of this object
it is necessary well how to place this object
into the known zone of Perception
where concepts are defined

movement can occur
in the usual way , for example
by means of a reverse sequence of actions
in relation to the object

let's assume it didn't happen
plane crash into nuclear power plant
you instantly find the structure
in this object
in relation to an event that did not happen

for example the plane didn't have enough fuel yes let's assume
and here is the zone that, generally speaking,
have you looked at this area
at one time as an indefinite
but which was controlled
and which was not defined

this zone actually turns out to be
in physical Reality in that sense
that there wasn't enough fuel, let's say, on the plane
fly to
as a physical plane

once you have identified this area
you basically got into the known structure of Consciousness
in the field of Perception
this is a fairly well-known quantity
and basically then you don't have to do anything else

if you have a multi-component system for example
i.e. as soon as you start
events output
on the level means Well as if the events were in reverse
from a disaster that never happened

you then
and suddenly more than one concept appears
for example, besides the fact that there was not enough fuel
some other concept yes

then the very first action
this is again the axiomatic level I am showing
need area which means not defined
translate to the area you have designated
as a known area of your Perception
and which is geometrically closest
the area you controlled

i.e. in this case it looks very simple
you just take it mechanically, as if moving it
to the area of Perception
exactly that area
which you have designated as a known area

and in connection with this this area begins
well actually things are starting to happen there
certain expansion processes
this area
and a vertical one arises
vertical i.e. in relation to the physical body
a certain optical beam
which is directed as if along the body

vertical in relation to the body is meant

and so when this beam begins to have
the intensity is very high
you understand on a spiritual level
what is it
this undefined area

i.e. it becomes definite
from the point of view of Spiritual diagnostics
although there may not be words there yet, for example

and once you have reached
first level of Spiritual identification
that the area is actually harmonized

i.e. it is not an external area
in relation to, for example, the structure of Perception
i.e. you entered the internal
it means that the system of this region was made like this
so that she becomes famous
within your known level of Perception

and then in principle we can continue
generally speaking if there is no time
there is nothing else to do in particular

but it is actually possible
Spiritual this is the glow Spiritual diagnostics
take and translate, for example, into controlling clairvoyance
i.e. consider
what does it look like in this case
from the point of view of the context of events

why this incident, for example, didn't happen

this can be revealed
like some phone calls for example between those
who could restructure the event yes

it could be , for example, some gust of wind or a typhoon
which prevented the plane from reaching there on the way
let's say we had to fly around
and he didn't have enough fuel yes
to this nuclear power plant

i.e. it turns out
that you just see a complex of events

which in the controlling clairvoyance
you can also add control

although it would seem that you are thinking
over the post-factual situation
but controlling clairvoyance
it is the controlling one everywhere
because even when you consider
and a situation that did not happen

we are talking about the situation
which well maybe would have been
still need to add control like this
so that this even within the framework of viewing
it didn't happen

when you do such a viewing
then this area seems to fall into the area of that
at a logical level of understanding , perhaps?
why didn't such a specific situation happen

but as I explained
you can just do Spiritual identification
what does the area mean is located
at the point
where is your Spiritual system
understands, for example, the structure of this area
and it is not necessary to output it into words, for example
or to the control level of clairvoyance

further I expressed here a certain level
which is closer to the level of knowledge
from for example the point of Perception

i.e. in this area you know
but you don't have to translate it into words for example

but here is the same principle of translation
means some kind of impulse
into an impulse of a different nature
can be used
if you know for example on the Spiritual level
and you need to translate it into logical Perception

then the same principle
Generally speaking, it works in principle
it works pretty much the same way

as I just described
what is the Spiritual level of Perception
is translated to the level of logical knowledge
you can have from the level of knowledge of the Soul
because the Soul knows the information
you can simply translate it to the level of logic

and then you don't need to use for example
some funds there let's assume well the so-called
information collection
you just know the system of knowledge
you're just projecting
on the logical system

and in connection with this
you get correct knowledge only because
that you used technology
obtaining seemingly unformed systems
in the field of designed systems

if you put it at all
such a generalized problem
related to the fact that
Here let's assume that there is a controlling clairvoyance
if we are in this room
this is how information happens in the world
now there outside this room

then this can also be considered
as a system that is not clearly manifested, for example Yes
for physical vision

and so that this system would be manifested
for example at the level of well let's say comparable systems of physical vision
i.e. the same thing , yes, clairvoyance, for example, controlling
it's enough to use this
basically the same principle

therefore this principle
This includes development through a direct access system
managerial level

or if control is not needed, for example
and the object is in a fairly calm state
then this is fixing clairvoyance

and the principle is the same as I explained

the principle of two means for example spheres
having a common border

it could be as I explained
there like an hourglass
or maybe just two spheres
where the outer sphere is all external events
which are not reflected, for example , in the manifested area

and that means the inner sphere
everything you know at the current time

and here is the superposition of two systems
gives you the opportunity
see events

i.e. to develop, for example, clairvoyant constructs
see in real time
what is happening in the systems
which are not manifested because
that they are located
for example outside the physical spectrum of Perception

and the physical spectrum of Perception
a fairly well-known design
everything that can fit in there yes
any figure any form
and known forms

and then the superposition of two spectra
you get a developing
a dynamically developing system
which if you add speed there
turns into a clairvoyant image

hence
the functional properties of Consciousness are as follows
what you can do with technology
which means which I have stated
in the form of, for example, the development of the structure of Consciousness image
develop to the level of identification of that
what happens in Reality
in the collective Consciousness

when you develop for example
to the level of control of the collective Consciousness

in terms of Macrosalvation
where each manifested system
this is a manifestation of collective Consciousness

then at this level
management consists of
that you, for example, by restoring one person
let's say you cured one person

then knowledge of this level is like a generalization
allows you to immediately fundamentally
change the constructs of collective Consciousness
as soon as you make any adjustment
at any control point

and here as an independent work
you try to be able to find it
these are the control connection trajectories
when you have done some creative work
get manifestation everywhere
and influence on the system of collective Consciousness
from the point of view of creative development
of this Consciousness

if we go further
then as soon as you come to these areas
you see what actually needs to be done
so that the collective Consciousness develops
to the point of, for example, Eternal Development

this is Eternal development
also just generally ordinary information
which exists
as an information constant

and you can
receive its optical reflection
and to see now as if in reverse order of events

when you treat a person
or you correct, for example, some event
then from this information
which beam to direct where

and it turns out that you
having short-circuited several times
Well as if having darned the information many times

you get on the top peak
you get, well, generally speaking, yourself

those. the principle of complete regeneration due to
what are you doing management
with one segment of information
i.e. with one level of one's own Consciousness

and when you, for example, begin to generalize the structure
again on the same principle
if you know one level
you stitched it all the way to the top

then everything else works out
y may be known sufficiently

hence
any process occurring around
Well, inside the body, let's say
or in an external system
he is also known to you
at a certain point of the Spiritual state
who understands this

and it turns out that you can on the Spiritual plane
at the level of this point of understanding
make harmonious regulation and Macrosalvation
while being simply just
at the point of understanding

where logic is combined
for example with the Spiritual level
and you, being there, do Macroregulation
at the same time well as if in fact there
there is nothing tiring

but according to the structure of real management
this can actually be a very powerful control

the only question is
what is this management
why do you need for example, do something else yes

and technologically, to transfer knowledge to others
it's often different

what is known to you to convey

something else needs to be done

and so let's do it as if control in two spheres
Now
one sphere is what is right in front of me
what are you doing now according to the hall's tasks there
or those who will watch this lecture

and the second area is the transmission of information

here's what I want to convey
what do you need to develop in yourself

i.e. what techniques should be used
inside the second sphere
where there is information transfer

and the first one is where you are at the point of understanding
just do the management
you don't need anything else

and see the difference
i.e. the trajectory of movement of your Consciousness
between these two spheres

for now do this in front of me
I'll take a look

the next element in this control
find that element of Spiritual state
when between the first and second sphere
you find that point along the trajectory of their connection
as if two balls were tied

by linear connection, i.e., in general, by, for example , a thread Yes
connecting these two spheres
you find the point
where it is absolutely clear
that Consciousness can be developed infinitely
to the level that is necessary
so that it is developed
from the point of view of, for example, Eternal Development

you need to find this point
in the linear version, not in the multidimensional one
in linear

there are two spheres

they are connected by just one thread
This is the thread we all need to find
this point

and that's when they found everything
see for yourself at this point
on ourselves
see the hall
Who is sitting in the hall now?

Now look beyond the hall
What kind of cars drive on the street there ?
Now look at the universe
and now from the universe return to yourself again

when did you come back
look back at yourself
what happened during this time
how did you even pass the information on

as you personally conveyed
Well, what piece of information did you take from there?
and gave it to someone
or you just for example spiritually transmitted

i.e. look at the technology

why did i say
" a piece of information was given away "
because i want you to simplify

those. brought to technologically precise
verified lines
how do you convey
what is the transfer
who even transmits

For example here I say " you passed it on "
and what does this action consist of?
how are you manifested
where are you manifested
how do you convey
all this is here, I have it with me
i.e. in real time
even when you are listening to a lecture
do all this yourself

and how did it happen
at least one correct transmission line
i.e. everything is known in this line
for you personally

you start to build the next action
To whom did you pass the information
although you might not have thought about who
you could just pass it on

but nevertheless
where did you transfer and to whom
next to whom did you pass it on
he passes it on

it would be desirable for it to transmit approximately the same
as you conveyed just now

i.e. teach him to pass it on
i.e. create a third sphere

and now here is what you have learned
the person to whom you handed over
transmit
this turned out to be the third sphere

take all three spheres
connect like this
so that they have the same center

see yourself in the center

I speak quite quickly sometimes on purpose
because I follow the fastest possible thought
by management

while listening to this lecture
in principle this can be repeated, for example, several times

as soon as you saw yourself
look how your Consciousness has grown
because you did such actions for example Yes
at the level of Macrosalvation

i.e. growth in the direction of Macrosalvation
salvation of all

and look
if for example such actions are not done
then is there growth ?
here in this direction of your Consciousness
and where does it happen then

because there is still growth
i.e. Consciousness always grows
in the direction of resistance
for example, a possible disaster Yes

now just superimpose these two levels
and look at the natural level of development
of your Consciousness
it is at least somewhat different from what was described
or is not different

i.e. everyone draws their own conclusions
and finds at the level of these conclusions
Well let's put it this way technologies that allow
study the Laws of Consciousness
at the level of Macromanagement Macrosalvation
make these Laws manageable

i.e. these Laws should be like this
so that they can make real decisions
including through the Macrosalvation task
let's assume your local tasks, i.e. private tasks

and the next training is like this

then it is necessary to create practically
well, like the information structure of the planet Earth
Thus
so that this information structure
was part of the developing Consciousness
your personal

those. please note
I didn't say it anywhere specifically
so that you have time and so that you create
and that this is part of your developing Consciousness

this is a rather in-depth task

as a training you will see
how can you well as if in passing, yes

to create such a powerful and extensive system

it means because it is an element of developing Consciousness
this is not an element when you can stop for example
and you have time to build there yes for building

and you are within the framework of the developing Consciousness of the personal
must build this system
information system, for example, of the entire planet Earth

then we can generally speak
build an information system on Macromir
i.e. what you perceive like the whole world, etc.

once you do such well as if Macro constructions
build your own information as well
in the same way

and when you connect for example
again same yes, there are three spheres of control
connect them
you get your private events
in the control zone
i.e. the events are highlighted quite clearly
as a control system

it could be either treatment yes
or any other event you need
in order to achieve a control effect

i.e. the level of correctness in management
for example, the technological chain, so to speak
often associated with tasks
which are for the logic of Perception
seem like macro-tasks

but really
for example, managing all the information in the world
this is a common task in the production part
the same as, for example, information on growing a tree there
let's assume by volume and by density

i.e. control characteristics of Macroinformation
and generally speaking micro
generally speaking any information
they are in hinged systems

they are basically the same

i.e. they are quite equally mobile
and therefore from the point of view of management
you shouldn't have any restrictions
in terms of using control objects

and when you, for example, reach the level
well, it's like a standardization
in vector control pulse
that you have no restrictions

you get what i said again
from the point of view of what I said
Consciousness must have that knowledge in general that path
where mandatory reachability
creative management
in the structure of the Eternal Administration
will always come true

i.e. that's where I started the training, yes, with two areas

but at the same time I kind of brought
through various iterations at the logical level
again, basically the same thing

the main path as if
well, is it a vector path , so to speak, to bring to this
when you have managerial status
more like a technological status
By the way, I didn't mark this trajectory here

but just showed
that there is such a path, for example, yes

often one path is not connected to the other at all
neither logically nor associatively
but for some reason I took it and brought it, let's say

and if you look
again a system of two systems arises
where one system for example is often uncertain
in relation to semantic development
first system

but from the first system
you can get a second one

or vice versa

and as an independent work
try to be on the level
transferable optical even elements of information
get from one system to another
and any

as an ideal development structure
of this training
needed from any system
get any other

and when will you receive for example
very specific technological levels

let's say I need to
from the field called mathematics
and from the area which is called, let's say, the Russian language
from one to another

Then
let's assume that from the Russian language we can get mathematics
I have to , well, some conversion factors, yes
between two spheres
get the connecting threads
and consider that these threads are they
namely the translation system

then what will happen on the logical spectrum
inside these threads

i.e. it is quite clear
what could possibly be here
a lot of transformations yes

but nevertheless
when you start at the logical level
how to understand them
that arises around these, as it were, communication channels
these two spheres
an ever more expanded glow arises

Here are the crossing levels of these channels
this is already the first one
as if a generalized universal feature
translation systems

and when you have these translation systems for example
then your level of control on the Spiritual plane
it's such that you just have clear knowledge

i.e. this is the level of clear knowledge
this is the level when concepts are united

You know
but in principle it is not so important
what specifically would you like to highlight, for example
in the system

from this level
it's enough to just go
back to the level of controlling clairvoyance
It's like the other way around now

I said that we are doing a narrowing
so we have a point
as if an infinite level of condensation of Consciousness
then we have an external image yes

and in this case it's the same
controlling clairvoyance but vice versa
clear point expands

then you don't need to capture the outer area
you just sit and watch
what's going on around
or manage

combining these two levels again yes
Well as if a peculiar darning is happening again
two or three sizes
you get your own structure again
for example the physical body

and at the same time you can establish the Laws of Connection
between your physical body
on information
and or information body
and all external factors
which as rigid systems would be like this
that everything around is harmoniously arranged

i.e. when you inform yourself like that
then in principle

Well, a field of information arises
quite often dense there can be in the form of a glow
but it's better to standardize it
so that there is no highlighting, for example
which is optimal
at the level of the work of Consciousness
as a structure that understands Reality

i.e. here you are already starting to come
to the Consciousness that understands

and you see in the Spiritual plane, for example, Perception
how does Consciousness understand
i.e. Consciousness works well as if autonomously

and then at this moment when let's say you are sleeping
Consciousness is still evolving
in terms of the goal, let's assume Macrosalvation

so, according to today's lecture
it is possible to develop the structure of Consciousness
where is the understanding
what happens generally speaking and often certainly
where understanding is conditioned by
that you already see how it happens

Moreover, you can manage, i.e. assign

then it turns out that your development
happens in that case at the same speed
for example when you are solving some problem
for example, if it is, let's say, extreme

but if you don't even do this for example
in the current tense
and you solve some problems
Well, I'm not extreme, well as if of a typical level
maybe even in many ways of everyday life

then it's still your Consciousness
works according to the level of development
in terms of overcoming, for example , a macro-catastrophe
works at the same speed

i.e. no matter what you do
Consciousness is always evolving
at the highest possible speed

towards preventing macro-disasters

i.e. this kind of training allows
Well how to educate a segment of Consciousness
which is related to physical space
for example near your physical body
expressed in optical units

there is Spiritual diagnostics of development
this segment

and about today's lecture
interaction of this segment
with all the other information yes
where does Consciousness enter
suppose development
Souls
Spirit
or for example consideration there
functionality of logical circuits
all systems begin to be
mutually conditioned by development

and here the main thing is on the Spiritual level
then it turns out only
to maintain the status of something universal, yes , this
development of all systems

and the meaning of this management after all
is
what do you see in the context of management
what is this done for
for example, harmonious sustainable development
in terms of Eternal development

but there is a small nuance here
that Eternity then manifests itself at the cellular level
with this approach

i.e. when you start
let's assume this system as if further
why do we need developing Consciousness anyway ?
this is autonomous

and because the projection of this system
on your cell

gives that the cell, for example, is Eternal

if you increase it
then you get
Well let's assume there is organ restoration
some even have
by highlighting some cell
at home
by reflection
it could be organ restoration
in the patient, etc.

i.e. these are the systems that I call
they are applied
here, according to the developing system of Consciousness, it is precisely in this
and if possible, consider them without fail
in the applied version

because it's just a development system
which gives expansion
and well there in general it is visible
that there is an expansion of Consciousness
what are you starting to observe
processes of development of Consciousness

they are in a functional application
must always be attached
precisely to the task of Salvation
first of all, from possible global catastrophes
when this problem is solved
that harmonious development

i.e. you always need to track the specifics
for management purposes
because that means management should be desirable
always targeted

analytical management
should also have substructural-target systems

and therefore it must be done
and then concentrated here
minimization principle in control system

if you start branching out control
and build complex structures

Well as if irrelevantly
to a specifically formulated goal

then you get it often
Well, the system is too loaded

but here are the specifically formulated goals
as I explained
even if it is not specifically formulated
it is possible by means of a revolution
of these same peculiar hourglasses
get a specific goal again

thus as an independent work
it will have to be done this way
so that any goal is specified
in the image
and in the level of your Perception
this is here as work for today's lecture

and again it means well, how about the topic of today's lecture
considering it for example from the very beginning

the main focus should be on
postulating areas that I mentioned
axiomatic areas

then communication levels
between lecture structures
which are not defined by words
and I didn't
for example, it did not highlight on the Spiritual level
connections
i.e. these are the connections that you must build

and the main thing I would like to get here
as well training or something

that any undefined region
i.e. any control impulse
which, for example, is carried out in the control system
how to solve target management problems
so it solves all generalized problems
which are somehow connected
or not connected with this impulse at all
but decides

i.e. learn from today's lecture
to do such management
which seems to solve the whole complex of problems
for example in one impulse

with the help of this hinge system
defined and undefined areas
it can be done
and once you do this
it is not necessary to stop there

i.e. although this is a complicated design
but try to give it logic
simplified level well as if of a normal design

and as a Law of Control
any even highly complex design
once you understood it
she basically becomes well as if elementary

i.e. try to come if possible
in this lecture to this level
that the controls are quite simple
after you already understood

and this level of ease of control
that's enough for you
and it is not necessary, for example, to remember the entire structure
which led to this knowledge

and being at this point
you can do the management
already as if in a concentrated area
just by seeing its optical light
and that's all

if in mathematics it's long
Well there is some formula going on there
by means of previous actions
then the final formula can be small
but it solves problems , as it were, taking into account everything that follows
well, it's about the same principle

i.e. try to simplify it as much as possible
what is the system in the end
that it will simply be
single pulse example control system

although underneath it is
there are a lot of sometimes complex definitions

because definitions are often needed for that
to bring
to the desired point in the area of Consciousness

as soon as you get there
in general, the path may no longer be needed further
the path itself

i.e. you don't need to look through it every time
the very path to reaching this point
or the whole trajectory

This is where I end today's lecture
there will be a 15 minute break now
and then answers to questions

in this case i will start with specific questions
in the appendix to today's lecture
which characterizes the structure of the physical body as if
in relation to time

the question is next
that *everyone can be resurrected, but what about reincarnation?*

so the point is that the concept of "reincarnation"
in tune, let's say, in the Buddhist version of development
and he characterizes this option
what is information accumulation
for the next level of development yes
for example from one reincarnation to another

from the point of view of my Salvation system
i.e. the Teachings of Salvation and Harmonious Development
what we are talking about now is that
what are we talking about now, anyway?
about the need to save in principle
from physical destruction well for example Earth

because there is a principle of generalization of information
it mean for the World
the disappearance of one planet for example
means, generally speaking, the restructuring of Reality
i.e. Reality takes on a completely different form

therefore for the existing level of Salvation
even one planet
we are talking about the salvation of the whole world then

and in connection with this
the concept of "resurrection" and
concepts of so-called "target systems"
generally accumulated earlier" yes
reincarnation is an earlier ideological system

what is it for anyway
there let's assume in the ideology of Buddhism
reincarnation
from the point of view of, let's say, ancient Buddhism
reincarnation as an entity means in the future
in general Well, you could say deification
i.e. following the movement along the path of the Creator

and if we talk about that now
what needs to be done first is this
so that there are no macro-destructions

i.e. the task of the Creator is to
so that there is no complete
as if fatal destruction of the history of information
in this case Reality develops

then the reincarnation model
in this case it is realized again in that
to the culmination of reincarnation
it was simply
in Eternity already of one physical body
as the most clearly manifested system

from the point of view of today's lecture
namely the physical body
which is Eternally functional
this will be in this case
correctly manifested system

and the entire external system
can be converted
for example already the Eternal body

and then it turns out
that all systems are reincarnation

which seemed to correspond to a specific personality
they can be manifested in the same way

the question is only one of specifics
let's assume there is a specific person
and it must be implemented somewhere

that is, such a thing is sufficient in principle
is it a simple principle of development?
physical including Reality
it consists of the following
what if we consider for example
the ideology of Jesus after the resurrection
then his presence already turns out to be in all
this is, well, in many ways, a fact , as it were, axiomatic axiomatic

and in connection with this here is the principle of reincarnation
from a technological point of view
that means manifestations
in the area already correctly defined
consists in the fact that
that any, including correct, physical manifestation
is being considered
or as absolutely means individual
including extended

if there is such a thing as fabric
who was previously in reincarnation

i.e. there are completely different models of reincarnation
one of the models, so to speak, the most developed
so in terms of the real development of matter
that the cells which meant corresponded to the body
at some reincarnation moment
they are simply transported to another time

and in connection with this it turns out
that there is nothing left in those systems
that's exactly the material substance

in case of reincarnation
when the material substance is preserved
i.e. here is another ancient Buddhist custom
to burn means for example the body is connected with that
what is the Law of Reincarnation
this is a transfer of the physical structure as if into the next time
this is ideal

and therefore the reincarnation model
generally speaking, ideally
it still works on one body
which is well developed to the maximum

i.e. from the point of view of today's ideology
this is just proof of that
that the body is indestructible let's assume resurrection
This is, generally speaking, a power structure in reality

i.e. this is a manifestation of the vector of force
in relation to possible global destruction

i.e. to prove
what if resurrection is this
generally speaking, ordinary for all technology
even if it's mass
not to mention the usual

it turns out that it can't even be destroyed
if this is development to the level of generalization

and that's why it's possible to resurrect everyone
Here For example yes, I would split the question
that generally speaking the resurrection is real
it is possible that it is precisely when and really everyone

because if there are, well, let's say, unresurrected
then it turns out
exists in the collective Consciousness
point of separation
which will be in the future
a deterrent

so as if
because reincarnation
in this case I considered it as a question
that's exactly what preparation means
well, as specific individuals
to the possibility of resurrection

then ultimately reincarnation
from the point of view of today's lecture again
it's like, well, it 's not a fully manifested system
because there can be many reincarnations
means it has activation in the correct system

which has target basic functions

and in quality, well , in many ways, or something like that
additions to today's lecture
this is exactly the correct system
which already has a correct structure
it may actually have super-fast development
unlike, for example, indefinite systems
from the point of view of the logical status of development

from the point of view of the Spiritual
an uncertain system can also evolve
as fast as you like

and in connection with this, I still think
that at the level of bipolar systems
there are really no contradictions here
firstly, as a logical status
research into the Creator's task of Eternal development

and secondly, that even in this case
when the physical body for example exists
or some signs exist in other times
resurrection occurs

then there is a principle, like this, according to Jesus, let's assume
expanding presence yes
for example the Soul becomes wider
i.e. it covers an ever larger system of Reality
and no contradictions arise
between the Soul of one person for example
or the one who well for example is located
at a different level of development or something
in another time interval of development

this is the principle of a kind of unity of Souls
here is the point of unity of Souls on the way to the Creator
i.e. the manifestation of the Creator
in terms of the docking of Souls according to the tasks of the Creator

those. Soul birth information
it starts to be as if mixed up
single purpose
in relation to the information of the Soul's action

where the Soul is born, there it acts
it's like a point in Consciousness, this is one

and that's why it turns out
that the contradictions between the Soul
who was reincarnated
i.e. in diverse Perception
where in one or something Perception
accommodates many concepts
in multidimensional Perception

there are no contradictions between
for example, one Soul
which was at that time for example
and the Soul that was reincarnated
Well as many times as possible

at the same time, as I explained
that resurrection i.e. including those who were before yes
in reincarnation models
is not a contradiction

because the principle of the Creator
the movement of each specific personality
to the level that is determined by the Creator
as the level of Eternal development

so basically here
at a certain level
the concept of "contradiction"
it just means that it actually disappears

and the question is next
mother in quotes Sri Aurobindo
Well, this is a fairly well- known thinker
so I can say about him Sri Aurobindo
and he is the author, in my opinion, of integral yoga
here is what *Sri Aurobindo's mother says about that*
that less than half of the people living on earth
and who are the rest, what happened to them?

Well, first of all, here it is for example in my book
"The Resurrection of People and Eternal Life are now our Reality"
there is some information about that
what does any element of Reality mean
develops towards a human
including the form of a person
it is not necessarily only a physical form
but also a form of reason

i.e. a more intelligent animal, for example , is meant
more intelligent plants, etc.

and in this case
in this case, well, in my opinion
what could have been said here
from the point of view that there is less than half

then in principle one could say like this yes
what living
if from the point of view of even the reincarnation model
consider
there is someone who reincarnates, well, let's assume even further
who sets the task of reincarnation
will pass to Eternal life

and what concerns those, for example
who, for example, develops towards a human being
i.e. ideally there is a single Creator
which in the final goal yes
which is also a single whole
and at the same time to everyone there in particular
as if the structure of the Creator's development

and therefore since there is such a principle
as the Law of Self-Recreation of the Creator
then every object must be
well , it is autonomous and at the same time harmoniously manageable yes
all external and internal Reality

i.e. in this regard, if we talk about that
that, for example , "only half of those living are people"
then I wouldn't take it seriously
this is how this statement is
as if well, some kind of fencing off of the other half
It's not clear where
and I perceive it
how exactly the task of movement
towards the ideal design created by the Creator
towards Eternal Life

therefore those who approach
Well, maybe it's not necessary
Specifically people, by the way

i.e. they gradually take shape

like ordinary people
then they start to develop
and others just move knowing their tasks
and in connection with this
Well , apparently there is some kind of division
although in my opinion
this was possible even when Sri Aurobindo was here
it was somewhere around here, as if according to information
well with reference to Sri Aurobindo
there was half of it

in my opinion already in the current time
those who, for example , would not really fit together , so to speak
with the task of the Creator for Eternal development
only a few of them now

i.e. at the level of well let's say
not always only at the level of logical Consciousness
here at the Spiritual level at the level of tasks

the tasks are very simple and clear
when there is global macro destruction
as a theoretical possibility
then the mechanism that exists in everyone is triggered
the mechanism is either explicitly manifested or implicitly
in that everyone does something
to prevent this from happening

and therefore moves along the path
designated by the Creator

and in connection with this
as if this movement is quite definite

we can even do it now
a certain training for example
on this issue

look at these spheres
where there is movement of people
which work on Consciousness
towards the movement according to the Creator's task

and there are areas where people, for example, do n't know
that such technologies can be applied
for example at least for now
and yet they still move

look at the difference
for example, by the intensity of the glow of the spheres
in terms of volume, let there be two spheres in front of me
and compare whether there is any fundamental difference at all
between the Laws of their development

and I'll watch
just analyze

Well, you know what the question is
Now you have done the training
comparison yes, here about people
which would develop independently
without using the technology of Consciousness
by direct control
and who uses it?

let's assume from this point of view that 's the question
if you compare what is possible it was
statement
I think that we still need to approach this more carefully
that there are, for example, such points of view in the world in general, yes
that there are some entities
which are not related to people, let's assume there

and in connection with this, I finally answered
more ideological
i.e. having covered this possible point of view yes For example
even if it is not in such a specific form
stated by Sri there for example, here with a reference to Sri Aurobindo

I just think
that anyway, the answer to this question is fundamental
that there are no radical contradictions at all
between those who are considered, for example , as people, for example Yes
and to those who are considered that they do not belong to people, for example
let's assume there are plants or animals there

's why the question is here
it doesn't even matter where it came from
does Sri Aurobindo have this or not

it means most likely that if the question is formulated
then the Perception of this person allowed
this question is expressed this way

i.e. if a certain point of Consciousness
is precisely Sri Aurobindo
then it is best to understand it exactly like this
but I think that since it is Sri Aurobindo
developed precisely integral yoga
that's exactly what we're talking about integration
i.e. we are talking about that
that at a certain level
so these are the differences in terms of movement
they basically wear off
and everyone is already becoming more similar in appearance or something
towards people

i.e. with a certain evolution
let's assume keeping the shape of a dog
if you keep the shape of the dog
then the level of interaction of a dog for example
on the Spiritual plane
he is again approaching the level of the Spiritual
I'm not saying that it's exactly like that with people
but at least technologically
a dog can understand for example
certain impulses suppose spiritual content yes

and there were even certain experiments in my opinion
at one time, related events were held
what about telepathic spheres
the dogs reacted quite correctly

i.e. well, generally speaking, this applies
to everyone there, to plants, for example, to cats, etc.

so development is still
towards the development of people
here is all external Reality
it's just like the Law of Reality development

and ideally the Creator who created everyone
is a manifestation, i.e., ideally, of Thinking , so to speak Yes
is a manifestation of all the same

and that's why I think we're talking about that
that this is exactly the half or some part there
this applies more to objects
which generally speaking
in form initially often even
don't look like people

but movement
for example, if we take for example the mass flow rate here
let's assume we take information from a mass of people
take information let's assume masses well let's assume plants

that is such a Law
that each level of information
corresponds to a certain sphere
and this sphere is exactly this size
as the sphere of any other information

i.e. by mass standards
here from the point of view of the Creator
who created each object independent and free
it turns out that if you take two objects yes For example
then two objects they have the same
mass characteristics of information
in the Law of Information Development

then it turns out that people are exactly what they have
let's assume there there's fifty percent
if you take two objects

and at the level of transitional systems there is control
well then for example, it turns out that depending on
how is the sphere of mutual control going yes
or more or less
but about fifty

for example, you can generally consider the issue this way
that from the point of view of mass information development systems
each system in a bipolar system
it's about 50/50 and consists of

why else did I take this as an answer to the question
this is exactly the example
that's when i say
about a certain undefined sphere of information
they are massive according to visual characteristics
they are about the same
they are interconnected in roughly the same way
50/50

and a certain system
Generally speaking, she is like this
that she translates to her side

indefinite system

i.e. we are always moving
towards a certain system

and in connection with this I think
whatever the question may sound like
what is this let's assume according to the Laws of Development here For example yes
information
and from the point of view of that
that each object of information
develops towards a human
towards the Creator

we can talk
that there really is a relationship
somewhere on equal terms , that is, 50 to 50
in relation to any system

from this point of view
this question is very interesting and reflective
as if the essence of independence of any object of information

as far as it was said
indeed with reference to Sri Aurobindo
that's a different question

but from the point of view of today's lecture
this is quite correct
actually a performance
in terms of use
here is the practical use of today's lecture

selecting any two spheres
and the amount of information in each of them
always about 50/50

and in connection with this
as if it were just the Law of Equality
any information system

and that's why it turns out
what we have here even with management
through undefined systems

we can all who are named here yes for example , non-humans

Not well, let's assume that they don't relate to people
convert them all into people
at least translate into tasks
which people perform
and that's why the system here is like this
that there are no such things as a rule
Well as if there were absolutely antagonistic contradictions there
from the point of view of this word
if we take socialist realism
there is only a path, for example, to follow
generally speaking, a common goal

i.e. if we talk about the concept of "antagonism"
as a manifestation of the system
just like I said
in case of destruction of a planet, for example Earth
history of information if destroyed
then in general any system
will no longer have the same appearance
i.e. Reality is changing radically

therefore, based on the Law of Formation
means any element
from the point of view of self-reproduction of self-creation
those who would be interested
in general in the destruction of the planet
in essence, generally speaking, no

it's just that many people may not understand
that it will affect them
because they simply don't know
Laws of connections of information areas

that is why the task is precisely Eternal development
the task of creative development
often it is a task of simple explanation and indication
on existing laws
and in general they could be more clearly announced

That's why I think so
on the ideology of today's lecture
for example, taking the next one as indicated here, let's assume half
to the level of an uncertain system
I need to do this as homework
so that they were or just people
or at least helped people like that

i.e. just as a training
do this exercise
on today's issue

the question is next
so *how to find the point of karma of Salvation of all*
without worsening anything and nowhere
because knowing where the management of the karma of Salvation is located
you can get into the nature of self-regulation
past in relation to the future
and here, by the way, you can give an example

the thing is that if we consider
the concept of "karma of salvation"
then we consider the area
again, as I am saying now
which may have the following manifold structure
Well as if the next one could say measurement
but that would really narrow it down a bit
the meaning of this concept

because measurement
it's like just some next vertical component
I would say about a different information density

i.e. if we can put it in one basket there
Well, let's say 10 eggs and 10 chickens appear
if we take less
there are quail eggs there
then there may be 20 of them there , etc.

but i.e. we are from the same region
we reproduce more information
although all things being equal, well as if initially conditions yes
the word "egg"

so here having said some word
for example, by making management
from the point of view of cause and effect relationships, for example
we can track
for example, one of the control lines
which may be manifested in physical events

but if we have
namely management in a diverse area
i.e. we are not looking at cause-and-effect relationships
as if of a linear type

I call the connection linear
for example, manifested from the point of view of physical Reality
where does management mean from the point of view of karma
as if it were clearly shown linearly
physical reality
in terms of weight functions there, as it were
i.e. for something you get something as if

but when we look at
the task of Salvation of all i.e. the karma of Salvation
then the control center
it just becomes the center of the tasks

i.e. Salvation of all
this means solving the inverse problem
and as if, i.e. as if from the future here
I mean back

i.e. where the Salvation of all is
and therefore the karma of management yes it becomes
firstly, the karma of Salvation begins
it begins to have completely different characteristics
on interaction with Consciousness

and the point can again be diverse
not like in the example with the basket of eggs, for example
not like let's say only 10 eggs yes
we can get 20
or there let's assume if we take eggs from even smaller animals
then for example hundreds, etc.

and at the same time
in the same volume of information

hence
if we have let's assume control at this point
which is the cause and effect point
then the control is not at the cause-and-effect level
and the target level

i.e. we need to save everyone
it consists of the following
that many issues are being resolved
well , either instantly or very quickly

and here is the cause and effect part

is just a subsystem
which, generally speaking, has been solved
in terms of the actions of a specific person

i.e. this person, having found himself in this place, for example
will be able to make the management such
so that from the point of view of even well let's assume normal karma
it will still be realized at an equilibrium level

i.e. by doing some positive action
a specific person may well How to cleanse myself or something
if from the point of view of cause and effect karma
i.e. linear type of karma

therefore the Laws of Distribution of Control
there is control information
they are just more concentrated
in the karma of Salvation

and if I give a specific example, for example
here 's an example of that
so that the nuclear reactor there is not destroyed again
an aircraft that has nuclear warheads on it

the first is the simplest example
for example we can make control
but who suppose I loaded nuclear warheads there
took and unscrewed, for example, the explosion system, yes
for example, he took and unscrewed that screw
which powers the missiles themselves on the plane

but the plane could still fall
i.e. part of the karmic task
which stood on this man
if there were any
not specifically even his personal problems with karma
and there is a concept of "macrokarmic systems"
there are some territorial, tribal, etc.

then they can work in that regard
if he did it
then the corresponding one goes, well, actually
and the optics clearly show the enlightenment

For example Well as if in a loaded part of the karmic system
which supposedly should have led
to some problem

i.e. a conscious action of a person
leads to the fact that by this action he actually cleanses yes
when does he work
from the point of view of the Salvation of everyone
where is this glow
Salvation of all

but from the point of view of self-reproduction of information
self-organization
the task of the next iteration of life
i.e. Salvation is a real existence
for example physical Reality
this is a task at the same time
from this point of production of this Reality

i.e. there is a physical problem there
growth of physical Reality
and the management task
they intersect
from the point of view of Spiritual Administration

and that's why we looked at part of the problem there, yes
Well let's assume that the plane will still fly there, yes
up to some point
then the fuel runs out
Well For example there the second pilot went and partially drained the fuel
Well, it's not there yet
somehow they didn't take control away

i.e. it turns out that we have control yes
then in the karma of Salvation
not a cause and effect system
and the action of the individual leads to that
that on the contrary, the personality begins to influence systemically
for a specific situation, for example

and this influence is not linear
because it comes from the organization of Reality
existing Reality

secondly, because there is a diverse communication system there

and secondly, in a linear system
it's going well as if a kind of improvement

therefore, and since this is the task of the Creator

again improving local systems
Well, well for example in linear ones too
then He still fulfills His own task

i.e. no matter which side you approach it from
Rescue System Management
this is the realization of the Creator's task
as on a linear principle
and at the level of Salvation karma

and here is this specific example if we take
here, for example, it's just like that
get there it is written here
into the nature of self-regulation of the past
in relation to the future

in the future where there is Salvation
past i.e. including current yes
in a second it's already the past
self-regulated by the choice of specific individuals, for example
from the point of view of collective Consciousness
or the personality of one person

that's exactly what personal freedom is
in this case it is shown
as a necessary element of development by the way
if you observe this level

and when we consider the freedom of the individual
as an element well as if fully developed
such as the Creator intended

then we have that here is the karma of Salvation
it is precisely the control from a single impulse there according to Macrosalvation
this is basically enough
Well as if a peripheral system in control
i.e. karma i.e. cause and effect system
which is aimed at the realization of Salvation

higher system
there is no question of karma there at all
i.e. i.e. as if for something you must necessarily have something specific

there is only one question there
that doesn't happen
for which, as it were, a linear compensation occurs there what is the situation

and it is precisely at this level that management is like this
what is the karma of Salvation
this is the way to it generally speaking in the ideological sense
And true Salvation
when it does not arise
Well as if restrictions on creative choice

i.e. in the concept of "karma of Salvation"
this design comes in
that the limitation on creative choice
in fact it doesn't exist there

i.e. each subsequent desire
in a creative way
it always comes true

and if you look at this design
karma of salvation
in connection with linear karma
you can pay attention there
that these Laws of Consciousness development exist
which I said about
in terms of the development of the Consciousness of the developing
including if you, for example, just
as if you were watching from the side

behind the segment of Consciousness that you declared
for example your segment

and watch how it develops

you can take karma for example by iteration
take the karma of Salvation
in the form of two spheres

and that means the karma of Salvation
It's a completely understandable system, everyone needs to be saved there
and simply karma is a cause and effect system
she has well as if undefined
in many cases the situation
because in what exactly is karma manifested
and how is it supposedly connected
Well , that's a question of analysis

and therefore the question of analysis
well if you define it as an indefinite system

karma of salvation
as a certain
then we can translate, generally speaking, any karma
in the karma of Salvation according to today's lecture

simply by superposition
that's all

and in connection with this
we can have an effective mechanism then
inside this system
how to look inside a test tube
look how then we need to somehow facilitate
development of elements of Consciousness
so that they develop all the time
towards the Salvation of all

at the level of the concept of karma, for example
and then we went beyond this concept
into freedom complete freedom of will
in that segment
which I said needed attention
where is the concept of "karma"
i.e. as if for some reason something is not realized there at all
because the question is not asked that way at all
there is another level of Reality

and try to answer this question
Apparently I can still answer this way

for example after the resurrection of Jesus
when he already has
in fact, the Eternal physical body
he has completely different tasks

i.e. and those other tasks
this is also a range of tasks
so and how it turns out
that having understood that Jesus is always involved
so that there would be Salvation here

but besides these tasks
other tasks also appear
since the Eternal body

and here is the connection of different types of tasks
this is the personality of Jesus

which one well generally speaking, it may be possible to act where necessary
and how would it be then
and at one point
and everywhere yes

so this is the level of action
in one point and everywhere
in principle, there are developed personalities there
the saints there are enlightened
ideologists, even scientists, for example
not necessarily which scientists
which we assume as if socially revealed
or simply scientists in terms of the scholarship of the Spirit, or something

they have such a connection in many ways
and often their only action
solves the problem of everyone

and here is the same principle
from the point of view of the concept of "karma"
what does a single action mean yes at one point
solves the problem of Macrosalvation

in applicability for example to the Salvation of All
It's better to proceed anyway
from the target control impulse
and Salvation of all
and the concept of "karma" should be considered only
still as a peripheral system

as a system that requires analysis
because any cause-and-effect system
i.e. that for something you get something specific
this is a limitation

this means and therefore it should be considered
as a system well as if more lower
hierarchical level of management
the concept of "karma"

It's always better to manage
from the point of view of the formation of that impulse
which means due to control technology
and the goals of Macro-Salvation
gives immediate control without restrictive systems

the next question is this

evolution happens every moment
and every moment the Creator
changes the state of Consciousness of the body's cells

Means *what will the Consciousness of the cells of the human body become*
using your rejuvenation technique
so *what time is the norm*
incorporated into the standard

I'll start with the fact that the Norm of Time
is creative development
all events of Reality
well, embodied for example in the iteration of events, yes
in a second

i.e. the Norm is the Norm of Eternal development
i.e. time is as if in this case
or really, by the way, on optics if you look
time flows from the source
which in itself is Eternal

and when we determine
such a time norm
it is clear that every moment there is a connection
changes in each division of time
in every cell

and it turns out
what is the time norm
well, it affects , so to speak , a specific cellular system

and from the point of view of rejuvenation
so that there is rejuvenation
in the presence of natural development of Reality

rejuvenation can be considered
as the next development of cellular composition

and then there will be no contradictions
it doesn't arise here
there is simply rejuvenation here
this is a manifestation of the structure of the Creator in fact
here at this point
from the point of view of Eternal development

and including that your Consciousness
corresponds to , for example, in this case

this task

i.e. everyone chooses when to rejuvenate
or after for example there after 70 years
or there earlier
or there at some age which is considered
well, always like average young or something

i.e. some system is selected
each person individually
and there is such a right element
when those around you still have
as if it were an opportunity to grow old

then it turns out
that from the point of view of the organization of the entire collective
Consciousness
to have some kind of rejuvenation point
earlier
here you need to have the opportunity then
generally speaking, to somehow transfer knowledge to others
or just rejuvenate there
's go ahead and see who's meeting in management
or teach there yes

but in some cases
sometimes, for example, for clinical indications
rejuvenation is possible, very radically so to speak
externally which is immediately fixed
for example other people

and it may even be
to such an extreme level or something
which is immediately obvious
that the person became many years younger

in treatment, there were simply situations in my practice
when for example in the fourth stage of cancer
I sometimes used technology
very strong rejuvenation
well up to that
that there, for example, a person became
not match, for example, the image in the passport
let's assume so much younger
but the situation there is like this
that it was like stage 4 cancer

therefore, as clinical indications
such a sharp break is possible
to save a person
but in general, on average, during rejuvenation
must be taken into account
that one will be well or is it more sustainable to rejuvenate yourself
who in the concept of the Norm for example time
lays down this standard for others as well
from the point of view of Eternity of each element of development
for everyone, by the way

i.e. again the task of transmitting information
transfer of knowledge in this case
is revealed
as a task, it is still a target

and any action
it is advisable to direct it to that
so that other people can also do something like that
which corresponds precisely to the tasks of Eternal development

one more question
This exists from earlier notes
it concerns that
what in terms of applicability
for example to today's lecture
let's say if in a lecture on rejuvenation
we as an undefined system
let's take
an event of the past, yes, in terms of rejuvenation

and certain systems
this is a rejuvenation goal event

then the overlap of goals arises
that there are a lot of systemic connections from the past
begins to be imposed
for the seemingly personal goals of this person

and at the same time
Well, you can do it as I explained, transition links
and then rejuvenation will be harmonious

and the question is: Time standards
here it becomes a question
that's exactly what it means to normalize
from the point of view of events every

that occur during a given time
have been optimized
that's all
at any time, by the way

i.e. the Norm covers all time
both the past and the future

this is what I would like
as a question of one
i.e. that was the question
that's *freedom of the individual*
which manifests itself For example *in the actions of the creator*
how is it reflected For example Well *instantly reflected*
by what transition systems
instantly reflected
For example *in the entire collective Consciousness*

the thing is that it really is
what is the creative level of management
it exists at a point
namely instantaneous reflection
in the structure of the entire collective Consciousness

i.e. if we take for example there is a sphere
and let's say this is the sphere
this is the collective Consciousness of people for example

then one person wanted to cure someone
this is the desire
immediately becomes a glow
specifically in the center of this sphere
unlike, for example, the destruction system

if someone there wanted to do it
destructive action
then this is basically
action on the surface of a sphere
for the purpose of well as if this sphere
well, it's kind of like doing a piercing
get inside the information

Well , at the same time, it is a peripheral system

hence
this is when you do positive type management
according to the tasks of Eternal development

any control
in any case it is positive

here is more proof of that
what does it mean Well as if it were not a positive type of management
it is not fundamentally regulating

i.e., like that's where the information grows
information is created yes
by the system of all connections
this management comes from the tasks
namely the creation of an infinite Macro-region of development

and therefore, as if to radically manage
not positive
basically there is no access there

therefore any control systems
they are connected precisely with the tasks there
targeted harmonious sustainable development
from the point of view of Eternal development
they are always positive

and they always show up
inside this sphere of collective Consciousness

i.e. everyone sees
and therefore
or you highlight it too much
if there is something very positive there
macro positive effect for all
the nuclear power station didn't explode there

or personal action
this management there is some kind of its own or something
level of tasks

then as a control system
take this as an example for example
such a level
what if you do
even some personal action
from the point of view of exactly that
what do you know what is needed Macrosalvation
know some elements or know a lot
by management technology
for these purposes

try specially
highlight your management level
so that in the collective Consciousness
here in the center of this sphere
there was a transfer of this control
to everyone at once

and as a Macrosalvation
this will be the second already defined sphere
and your first sphere
which is well represents private tasks
also a certain sphere

then by the way that you
both spheres
made certain
try to convey information immediately
into the entire system of collective Consciousness
here is such a simple principle

what should you pay attention to right away
that you are in the center of this sphere
in the center of information of the collective Consciousness
and in principle anyone can perceive it, generally speaking
this information

so when you teach
you can immediately in the form of a criterion
look
as far as well as a person
who shows interest
how effectively does he get it from you or something
these are the coordinates
according to Macrosalvation manager

here also in the center of this sphere
it is possible to integrate knowledge
i.e. use any positive knowledge
for these purposes

and try
the task of transmitting information here yes
to give it something like this, as it were
optical technological tint

i.e. in the optical range

do parallel control
when you pass on knowledge

for example, I was at today's lecture
I can do this all the time, for example Yes

in half an hour there
take a lecture watch
take control light up
and tell everyone yes
for management

but during the lecture
for example, I pay more attention
namely the transmission on a Spiritual basis
where speed is infinite

the verbal part, as it were, formalizes
general direction status

and then you can also for example
or build this sphere in the future
or from the point of view of past education
which by the way also applies to treatment

i.e. treatment
as a system for transmitting information
you can use the same system
where you are in the center of collective Consciousness
do restorative procedures

it is transmitted not only to the cured there
but generally speaking as an experience generally speaking to everyone

and then the next person
he's already well for example, to a lesser extent, perhaps
susceptible to this type of disease

because he has accumulated experience
when due to the structure of Consciousness of one person
already as if in less probability
that his body, for example, will react
to some problem in this way
like the person you healed for example

Well that also applies
and to the whole spectrum of events

that any event any positive experience
can you please tell everyone at once
by technology solutions

because at the level of, as it were, Spiritual Perception
it's very easy to do
the main thing is how it is in the archival system
unpack your actions
and show that you open them
by free will

because when you show
then it can be watched

according to the original plan of the Creator
and that's how it is now
and in the future there will be

that every person is created
in fact untouchable
if you don't open
then guess what you want to convey
Well, apparently people can
which well as if they just know somehow
You said
either in conversation or announced there by text
and here are those who don't know you personally
then how to form them

this is the education system
which is aimed at those
with whom you, for example , do not speak personally

and so if you will
expand the status of such an entity
then here is the center of the glow
in the center of collective Consciousness
for the transfer of knowledge of Salvation
can be very intense

by the way, watch
example , I have set myself such a task now
if a month or more time passes there
what is the intensity of the glow
increases
you can even compare this

if desired

This is where I end my lecture
thank you for your attention
