

GRIGORY GRABOVOY
Structuring of Consciousness
Management technology
based on the principles of concentration
on scattered systems in the field of Perception
(16)
16.10.2001

In today's lecture
I show the control technology
associated with the structuring of Consciousness
on the principles of concentration
on scattered systems in the field of Perception

the meaning of this technology is that
what if you consider for example the physical environment
as an environment revealed, for example, in the form of a subject part

then there are areas of first transition
even a visual transition between objects, for example

secondly, they exist at the level of Consciousness of the area
which from the point of view of the organization
they organize this environment too

to put it more simply
then when you look with your physical sight
for example I look
There is a video camera in front of me, there is a door further on
further I perceive that there is a corridor

then between these
well, as if by objectified systems
exists
first of all, transition
from the table to the door for example
and then to reproduce the space
between the table and the door
I have to at the creation level
including differentiation
i.e. to create this space from the point of view of management as well
i.e. therefore scattered systems

primarily relate to such transitions

also if I look with physical sight
but at the same time I don't see a corridor there with my physical vision
but at the same time I know
that there is a corridor behind the door
then I reproduce
at the level of creation technology
such a system as a corridor
through connections that can be called transition connections
between for example identified objects
i.e. between the door, let's say, and the table

This is the technology I am describing today
it consists of
it is precisely in the identification of scattered systems at the level of Perception
and the use of these systems
for example for Macro Access
i.e. for the Salvation of all and at any distance

and also for self-regeneration
in conditions of harmonious development
and a plus to have
means direct control from Consciousness

i.e. on the three levels of today's lecture
how is this generally planned
and so it will go
it is the system of using technology
which is used
in case you use scattered systems in Consciousness

the concept of "scattered"
in this case I will now define it even more correctly

i.e. it may be
what do we have
several objects of information at the level of Perception
and this information object
which, for example, is a collection of all objects
this is a concentration of scattered areas
i.e. it will be an additional concept
to today's lecture

Thus

we have, well, two characteristics of the scattered area
in this case, although you can generally speaking
then enter your own
while listening to this lecture

Means

and from the point of view of the first characteristic
direct access technology
at the level of scattered systems it consists of the fact that
that you make systems collapsible
at the level of optics of perception
to the primary access point
from for example your level
well let's assume Soul Spirit or Consciousness or thought

i.e. you define the point
which is primary
in the registration of, for example, a scattered system
and introduce volitional control
when in the optical range
this system seems to be collapsing
and literally in rolls

i.e. for example it folds
well, it's peculiar
like a rug spread out, let's say in the area of development of optics, it folds up
the opposite way
and to the point of the primary level of Perception of this area

i.e. the technology is quite unique and contains
as an external area of Perception
i.e. what relates to the area of the scattered system
and so is your area, actually

i.e. the intersection point means it is like this
what is the area that you consider yours
in this case, it seems to be a starting point
in order to scatter the system
collapse

once you have collapsed the scattered system, observe

how development technologies are developing
it means at the level of your Consciousness
because once you start

to deal with these processes
you can identify
very many quite correct
like at the legislative level or something
systems of development of your Consciousness
from the point of view of your Perception

because your Perception is also a part of Consciousness
then it turns out you work
with interconnected systems
at the level of, for example, Spiritual Perception

and just as an example
conduct specific practice
Here I gave an example, let's say a table and a door
well, those who are present in this room
like a constant value, for example, over time

if we look at yesterday's day, let's assume
then the ratio of the door and the table in this room
this is generally a fairly constant value

here is the organization of distance
between the door and the table
it is precisely space, i.e. air
what is there during the day for example yes
who was between the door and the table anyway

i.e. all this information
try to get it at the level of Perception
the way I explained
coagulation means precisely the scattered area

i.e. no information about the table and the door
and what's between them
and moreover, the folding into the area
where you perceive information on your own

here is where you perceive choose some point
near, for example, the physical body

i.e. this is this training
do it right away as soon as I said
that is, for example, within a few seconds
once you have completed the training

look where the area can come from
well, a peculiar area that characterizes that
what if we take some space
this area may be unstable
in the first impulse of Perception

i.e. Consciousness glides like a kind of wave
in the space between the door, for example, and the table
and at the same time a region arises
well, a kind of wave flow arises
which is a non-concentrated flow

i.e. identify this area in your work
and make the flow concentrated

and concentrated
not in the area not in the space outside of you
and in the space inside you

and that's how it is as soon as you
i.e. inside the physical body here
specifically already inside the physical body

so as soon as you are inside the physical body
find this point
you immediately perceive the table and the door very clearly

i.e. you need it as homework
bring this training to that level
that as soon as external control
then it is identified
with internal single point

i.e. when the dynamics shift
into the statics of internal Perception
you get control
and the Macro Harmonization Department

why according to Macroharmonization
because the structure of your body
if you work inside the body
is like a harmonious connecting structure
in Consciousness

and this is one of the Laws of Consciousness

that when you develop Consciousness
towards the processes of cognition of the World
then the body is a transitional level which is
level including concentration
various information systems

if we consider
different information systems
and the body as a level that carries and perceives information

then it's quite clear logically
that the body is designed in such a way that the body's task is to control
the most diverse
including scattered systems

because access can be chaotic
in principle, access to information can be arbitrary
namely this structure
it is closest to that as a system
that's exactly the scattered system
which I just mentioned

why did i say closest it's not the same

as an independent work find in Consciousness
so those are transition levels
when from a scattered system
in Consciousness you can get
level of arbitrary access to the physical body

and at the same time it is necessary to prove from a scattered system
from the state of a scattered system so to speak ^{yes}
in Perception of Consciousness

prove that the body is the level of concentration
basically any information
in endless development

i.e. if we consider it from the point of view of optics
what is the human body for example
in the projective part of all optical systems

i.e. having said
that the whole world consists
from optical systems in Perception

well really
what in Perception do you perceive
in the form of some optical impulses

and having considered all the phenomena of the World as optical systems
and at the same time considering the physical body within its own optics of
Perception as a projection of these systems

i.e. consider
those trajectories of the optical system
when you see exactly the projective part
directed at your physical body

as soon as you mean
do such events for consideration
then you get
that the physical body functions in a fairly canonical way
i.e. once determined in a very strict manner
in accordance with the reconstruction or creation of future events

i.e. the future from the point of view of this approach
quite a systemic area of information

and when you browse
this systemic area of information as a projective system
then the study of the Laws of the Future
it's just that
optical beam study but in reverse

and the opposite means
you take the primary point
for example, a point of the physical body
let's say when I give
Event Management Concentrations
it means that you are in control
coming from the body
not only there, as if abstracted processes , for example
not related to the body
but also through optical lines connected to the body

i.e. and therefore we get at such a concentration
management of such a type that you can trace
every operation of its management

hence

when you consider
here in the optical range
that's exactly how the control structure is

then you understand that the system is scattered
i.e. what is between two optical images, for example , or several
this is the environment that contains these images

and therefore in Consciousness
let's say instead of the content of optical systems
revealed, let's say, in Perception
it's the same thing
as a system of Consciousness which characterizes as a carrier system
and is, generally speaking, a proper value

i.e. there exist
their Laws of Information Distribution
and your own connections

hence
organization of the intermediate area
This is a special task in management

i.e. in management
any area including intermediate
this is the area of control

and in this case
if I spoke on a physical level, for example
that this is a scattered area
because it is dynamic, for example, yes

then there it may be a scattered area since it is static
and if you find out
well , more static than, for example, dynamic light pulses

if you detect
here is the Spiritual content of management
i.e. where your Spiritual environment works

then you see that the Spiritual environment
it works in that area of Perception where there is no difference
between
identified optical region
And

between static area
in which the optical region is located

those. control logic
on a mental level, or something like that, on a thought level, it differs in that
that it can be seen there
but on a Spiritual basis it is the same thing

and therefore
when you have a task
means infinite and instant access
then on a spiritual basis
it often becomes very clear and very fast

because you don't need to
overcome
system for example, decoding and perception of information
and you do it instantly
because in that area it's the same thing

you don't have duration
as if by expending some work
to overcome some level of Perception

hence
I entered this characteristic
as overcoming the logical level of Perception for example

and to overcome this level instantly
you can use those mechanisms
which are called, for example, clairvoyance mechanisms
and in this case they are located very simply

in fact it is more of a Spiritual vision or Soul work
because that's what we're talking about
it is about creation and not just about vision as such

and therefore this Spiritual vision is contained here in that
that as soon as you put it at the level of the Soul, moreover
set a logical task
to find such direct Spiritual vision

then here is the line
also the optical line of such vision
she is located

between the area of Spiritual direct access
which I already talked about now
and the area of the logical optically detected level

and this area on the optics
this is something that you can see directly right away

i.e. if you enter there with Consciousness
then any object of Reality
for example, that corridor I mentioned
which is behind the door
I can see him
as if I were looking with physical sight

hence
superposition of physical levels of Perception
I started with the fact that I look with my eyes
that means
level of Spiritual development already

Think about this term and try to master it
as if in great detail and to the end

well, in this kind of lecture version

level of spiritual development
he means he creates access in this way
that the physically identified tasks that I set
for example, the transition from the table to the door
and then the task in principle
at the level of physical space
that corridor that I can't see
for example, physical vision
but I can open the door and make sure that he is there yes

then how is it included here
also a system of actions of the physical body

when you for example
i.e. action
I walked up to the door
opened and looked with physical sight

then when you look at it all together
then here is the optically manifested system

about which I said
i.e. all events all information
is projected into a person
and at the same time a level of communication is created yes

then here is Thinking information of feelings for example
information that does not relate to physical space
it is created, among other things
as a system of scattered Reality

i.e. if you work
at the level of a kind of sensory image
i.e. when you look
how feelings are born from information

what's going on there
very rapid occurrence
as if sometimes suddenly and they arise
from a level that is quite dynamic and often contained
at an infinitely distant point of Consciousness

so if you combine, i.e. work it out
means the work that he does
for example, an information system related to feelings
but you will do it logically

then you will get
that logic has a level
quite specific
development restriction or something
in the area of technology, as it were, of a sensory nature

and this limitation is connected with the fact that
what if you, for example, are developing there
a certain speed of Thinking
then logic has speed
which can be measured
your so-called primary level of Perception

while the speed of feeling
can be infinitely large
at the point at the point of even occurrence

as a result of this
you have

Quite a universal research apparatus, generally speaking
your own, moreover, personal device
which can allow you
using known concepts
for example feelings
logics
direct access
which, for example, does not characterize any of the concepts

i.e. I can watch a plane flying by
but at the same time I see him
What kind of system is this?
yes, for example, how is it characterized

and you can also see
i.e. at the same time
you can use the platform of feelings
or logic platform
maybe you can watch

and you can definitely watch it
for example, directly with the Soul
or there at the level of Spiritual Perception
and see basically the same plane

i.e. you can work out different systems
from the point of view of different starting levels of analysis
and get what
there is a unified level of Perception
i.e. unified access to information
which is also at the projective level
means your physical body

or the physical body
developed from the point of view of, for example, Thinking
from a management point of view

therefore therefore
I introduced another term
what Management Thinking
for example the structure of Consciousness
this is the development of the physical body
development from the physical body

and when we for example

we proceed from the point of view of this technology
then here is the principle of access
to any point in space time
even optical access
for example, to prevent some kind of global catastrophe
in this case he is completely direct

at the optical level
there is just an optical beam , for example
to the point of possible disaster

physical body means that
what controls the optical system

and when you
from the point of view of work technology
including body actions
transform the beam
you change reality and disaster does not happen

so as a job now
specific work from a training point of view
do this work literally right now right in front of me

look through
there is a sphere with a radius of 20 centimeters
at a distance of approximately 2 meters
about 20 centimeters from the floor surface
the sphere that characterizes that
that a global catastrophe has already been averted
it's no longer there and never has been
this is exactly the kind of sphere

this means you take information from this area
and make it Reality
but Reality
as your physical body
and all information in general

do this training
from the point of view of optical access systems
and as I explained
by folding the optical beam
as if to myself from this sphere
i.e. do this exercise

It's better to do it quickly there
in a few seconds and I'll watch

when you do these actions, pay attention
that the sphere does not change at all
it doesn't decrease, it doesn't move, etc.
i.e. working with this area does not change anything

therefore therefore
positive construction
related to the technologies of Eternal development
She has the status that she once had
even for example now I have given
She remains in this status

any construction of Eternity
for example, once created it does not change

therefore if we have
limited physical space
as is commonly believed yes
or for example the information space
which may have some specific volume

then the creation of the Eternal structures
can infinitely
fill these spaces

and that's when we talk
about the process of self-regeneration self-healing
from the point of view of harmonious development
that's exactly what filling the space is
such objects of Eternity
and characterizes harmony
in terms of Eternal reproduction
any impulse of Consciousness
any thoughts for example
any Spiritual message

in this case the information space
is increasingly filled with the constructions of Eternity

and this scattered so-called system
i.e. what is the transition
from one system to another

is being filled
in fact, well, with a kind of light, light means

they are kind of the same or something
ideological forms of information
and then it turns out
what is the Spiritual basis
it's no different from logic

as soon as the Spiritual basis
it's no different from logic
you see
how a physical cell is created

so that's what it turns out to be
that the human body is also
and integration system
means the space of Perception at the level of Consciousness

i.e. if we take for example
there is a ruler or a meter
and measure the distance from the table to the door
and at the same time we are at the level of Perception
let's consider
let's say it's 3 meters there

and let's consider it at the level of Perception
what 3 meters
what is it for Consciousness
for example what kind of optical beam does 3 meters mean

having considered these three meters in Consciousness
and therefore brought here
Spiritual system of Perception from the point of view of Eternity
we will see
what is the perception of this space
can organize a cell

just look at this mechanism carefully
this mechanism is a strong enough healing mechanism
in terms of when you build
it means it's a connection
logical phase
With
Spiritual

you can create a healthy cell
in principle, an organ or, for example, an organism as a whole even

i.e. therefore, if possible
use this technology
including as a regeneration technology
i.e. restoration

and conversion technology
it doesn't necessarily only concern the human body
and in general the transformation into the Norm
any event level

then next level
direct access from your own Consciousness
into any system
and management
namely management from the point of view of access
direct access to any event

here is what this lecture is about
what does management mean characterized
output characteristics
well, the same scattered system

i.e. as a rule
integrated management
it is a multiple or multivariant system
and therefore it can be determined
as well as a scattered system

and here is access from your Consciousness
to the control system
consists in the fact that
that all dispersed systems must be integrated
at the level of the best Soul
and from which you then reproduce
Spirit
And
logical level of development

i.e. be careful here
This is a fairly new technology
it is quite subtle and is connected with that
that the organization seems to be the same as before

or in other lectures
there is the same technology of working from the Soul

but in this case
the work comes from the Soul
at the level of creating a control area
which is already in control

and when you use it for example
this approach
then the systematization of future events
i.e. how to manage future events
it will already be visible to you in a dynamic form
i.e. you are already approaching
to the real future
once you enter this technology

to the real future that contains
well, a certain volitional component or something
a certain development system
which exists
well let's say in that future

and at the same time this Reality is like this
that the transformation of this Reality
as a rule provides
Well, it's quite a large amount of work

but at the same time
if you set a goal for example
and let's assume we decided to implement this goal
then this future is so dynamic
what in principle can be implemented there
any Macro management in a positive sense

i.e. to this level of direct access
be more careful
here access is very organically connected
with your physical matter
with your Perception
and is like a part of you

and that's when you do this kind of management
then the reverse control wave
so let's say feedback

which means it appears from the control area
in this case it is a continuous process
which one means

that's when I was talking about feelings, for example, yes
then let's assume there is some kind of system there
at the level of feelings it possibly causes a different reaction
but it seems to take time

and this is a continuous process in this case
as a kind of string that constantly exists
and here is the reverse flow
it's the same as a straight current
This is a very specific system.

i.e. the concept of "feelings" becomes multifaceted there
and as if not strictly defined

so when you work with this system
you will see that this system gives a lot
in the control system
but there is still a lot to learn there
from the point of view of the development of feelings
multidimensional image

or
from the point of view of development, for example, of logic into the Spiritual
well what does infinite dimensional domain mean

so in this case
I am exactly the lecture material
concerning, for example, the technology of today's lecture
I'm finishing

and now I move on to the section of my Teachings
well, which means it belongs to the Science section
and application of some concepts from today's lecture
to explain what according to the Teaching
so I enter as
Well, let's say the characteristics that explain
means the position of science
from the point of view of my Teaching

so in my Teaching there is such a parameter
as science in my presentation

and there is a parameter
as an orthodox or well-known direction in science
well, the same way I put it

those. the first parameter is
i.e., it is science in my understanding and presentation
characterizes what I am as a scientific task
I put it means research
own Perception
own control systems

and at the same time the primary task
is the task well, as if informatively revealed
while naturally it contains
either logically or unconditionally
adequate to the situation that exists in the World
let's assume the possibility of global destruction there

and then the task of access control
consists in an adequate characterization

i.e. it means that the scientific system must be creative
and therefore in the concept of "science"
I enter if you listen to the phonetics of this word
then in a certain, for example, Indian dialect
there in ancient indian
this means a creative path after all

when we talk about science
I mean we are talking about the science of creation

as if the concept of "science"
i.e. there is something that requires
so this kind of development includes in my understanding
namely creative technology
and it should be as close as possible, ideally better
the same means in methods
as the Creator does

and in connection with this I still consider
only the creative component
in this concept

and when I put for example
the task of studying the processes of Reality

that is an adequate reaction
this is what in the conditions of, for example, scattered systems
i.e. a set of connections
there are supposedly a lot of nuclear warheads there
a variety of chemical destruction systems
which already exist

and the task is to transform Thinking
in the sense that at least
for example, by logical means
People have not reproduced self-destruction systems

the task of managing from oneself arises

therefore the main component of my science
in my understanding
it is to be able to manage personally
structure, and at any distance
structure in principle any information so
to ensure at least
absence of global catastrophe
and including, if possible, any private disasters
and accordingly harmonious general development there
where your personal development is included

i.e. from this plan
I am building a position
and thus I give the technology of knowledge
manifested to a greater extent
in the form of a lecture plan
something like this, just like now

i.e. this is a plan for the development of one's own Consciousness
when a person personally
can manage the systemic situation
any information
may have direct access
and transform into positive management

another part
related to my science
but what is it called in the section
I called it that because it is my science
well from the point of view of orthodox systems
then here I first of all mean

that exist naturally
already accumulated positive knowledge
and they really exist
social life is built on them, for example
Generally speaking, the development of civilization is largely based on
to a certain extent
attained creative knowledge

and that's when I say
about orthodox or famous
for example in science as I explain it
then I mean that first of all I still
so I give my governing opinion
for each section

this is the opinion
that considering my general position
related to that
that you must be able to save everyone and always
and be at that level all the time
which shouldn't happen in the first place
at least a global catastrophe, etc.
as I already said in the first part

but at the same time I can consider
any presentation scientific presentation
and add what I would consider necessary
from this point of view apply

This is what I call an orthodox system
or a well-known direction in science
in my presentation

and when I use these technologies
then there are a number of sublevels there

i.e. this is a selection
already known creative part
what can be applied
as a creative technology
or is it expanded there
or, for example, somehow transformed in that direction

if this system is not of a creative type
which can destroy , for example

then I add here
conversion system
or with Consciousness technologies
or instrumental
or instrumental
or some other scientific methods, including

that would allow this system
make it at least neutral for example
and in the next one, safe too

and that is why it is as if it is completely meant to be safe and integrated
with the level of harmonious development
and from the point of view of the technology of Eternal Development

i.e. if we consider it potentially
so destructive systems then in that case
means adding the characteristics of modification of this system
this is also a special technology of my science from the point of view of orthodox
systems

I generally advise you to use it
this is the approach
in redefinition
completely different systems of Reality
may not only be related to science

but in principle when you build a control solution
in relation to known knowledge
and this decision is positive for everyone
it's all the same from the point of view of the development of already known
systems
This is a useful feature even for a system

from the point of view of the ideological Law of the Creator
when all actions must be constructive
destructive systems
in any case, they must be transformed into creative ones
in infinite time

hence
you are simply accelerating the work of their self-development
i.e. you don't enter in principle
into a confrontational system or something

destruction system
but you just develop them
to the level of the creative plan

so in this case
you can work perfectly
means direct access and wherever you want, i.e. without any restrictions, the
ideological status of your work
allows you to work anywhere

these are, let's say, the main approaches
which I attribute to the concept of my science
and in the substructure of this approach
for example in the first part
I use mechanisms that are in many ways similar to those
which, for example, I mentioned in today's lecture

i.e. use
systems of one's own Consciousness
using certain positions such as
Soul
Spirit
logics
and the use of completely different mechanisms in Perception
that would allow us to achieve
goals of real positive management
and an adequate one at that

this is definitely real salvation
for example, from a possible global catastrophe
and for any system, for example, a combination of events

but it is better to do it so that any combination
was under your control

and that means using this mechanism
based on one's own perception
in the conditions of the technogenic level of development of society

are often the only level in many ways
in general the Realities of the Eternal Development of Civilization

because the ability to manage
any technical system
from your Consciousness

so it depends on many things
in the next Law of Consciousness development of Consciousness that

reproducible object systems
for example there is technology
these are systems that have
a certain time of development yes for example

let's say there's a sphere in front of me
radius of 10 centimeters
consider
what does the technogenic system of human development mean
and consider
what does the development of Consciousness mean
in relation to man-made systems

put these two spheres on top of each other
and get your own development
i.e. how should you develop then
from the point of view of Consciousness
so that the technology is under your control

i.e. get this information right now
here in a few seconds

The thing is
that at the level of scattered structures of Consciousness
This information can be obtained instantly
only from Perception
one scattered pulse

at the same time you can immediately see on the Spiritual level
answer
it doesn't have to be deciphered
the main thing is to at least look at it
and then it can be technically transformed
or in the device for example
or in control technology

therefore the speed of solving the problem
Well, accordingly, it also gives birth to technology
a kind of gradual access there

that's why when I solve a problem
from the point of view of his own science

which is generally transposable
then certain things can be deduced in the orthodox system
I did this in math
when I derived the symbolic system
according to the description of the same process
commonly known to orthodox mathematicians

but at least it's my part
allowed to find those coefficients
which for example cannot be found there
taking into account existing mathematical systems

but at the same time they still
are objectified
because there is a very clear symbolic system there
characterizing specific characteristics of the process

and therefore here is science
which characterizes direct Perception
and an adequate response
science can be adapted to any known
well, in a symbolic or stable form
system

and here is a characteristic one of the characteristics of science
she can be like that too

but it is not necessary
for the Macrosalvation system there can be its own science
which is not necessarily integrated
but simply performs the tasks of Salvation

i.e. it is an arbitrary characteristic
I just do it like this for example
from the point of view of the need to also solve the second part

when i integrate my methodology
with orthodox systems
then the development of, for example , orthodox systems
it is already possible in a fairly cooperative manner
enough in a systematic form
already translated
to the level of development, for example
the same orthodox systems
i.e. in fact

I can give you the control coordinates
already means at the level of, for example, simply symbolic systems

and therefore if we, for example,
we have the following control coordinates
as we suppose, well, it's just a translation technology or something
character type
then we don't need to apply
once again as if means reproduced control
and it is enough just to use
already known technology
which is already symbolically expressed somehow, for example, yes

that's why i use such systems
and I think it is appropriate
within the framework of interaction
with different social levels of development of society
with different scientific manifestations or new manifestations

i.e. objective phases
must be in a certain way
so let's say they are combined
at the level of creative development goals
therefore mutual understanding
this is a very useful thing
for the stability of all processes of creative development

in conditions of free creativity there
for example, each personality or each system

and therefore when it comes to
o transitional
well, kind of unique from the point of view of this mechanism
let's assume how it exists
for example in transition systems
some kind of gateway mechanism or something
where some input parameters are transformed into others
and these parameters are clear to both systems

then these are the systems
they are even desirable between different areas of science

and when for example you mean you produce
scientific research in general
if possible, lay down a system

which would be or control
maybe she is the manager
but it doesn't necessarily have to be fully understood there, yes
all systems
but then it must be a control system

or this system can be such that it is understood
and control occurs
from the development of that system, as it were
to the level of understanding your system

and when that system recognizes that your system
it is more appropriate

but this path may be longer
but it's for social status
it is also appropriate
in the development of scientific technologies

when for example I look at
the principle of meaning the development of scientific systems
then I think that science can be
science, for example, coming from one person
i.e. from one person
and can be called science

i.e. it is not necessarily a system
for example statistical
the system is not necessarily repeatable

because in my technologies
the main thing is to prevent, for example, a catastrophe
there is a global catastrophe private catastrophe
any system at all
which may be completely new

if we proceed from the point of view of recurrence statistics
then there might be a situation
which, first of all, never arose anywhere

control task
a task that has a real scientific technology
and will cope with this situation

hence

it is not necessarily systemic
in terms of repeatability, for example, the approach

it could be
only one single solution
or one idea that will really save
but at the same time it may not be adapted anywhere

but at the same time
This is also considered a strict science
because it solves these issues

that's why I have the concept of "science"
this is the concept of a real solution to the problem
and it may be that there is a whole scientific direction there
already known or all in total that solved the issues
they may not actually solve the issue
in conditions of endless development of events

and a newly emerging idea or technology
very close to this process
can the process really solve

hence
task of scientific technology
be able to develop to a greater extent, for example, spiritual abilities
or so to orientate instrument technologies
that would solve those problems
which can be, well, sort of perfect
for example, it means new
which never arose anywhere

this is under the conditions
for example, the same disaster prevention systems
this is a very clear task
disasters can happen
for example in those systems
which can be very, very stable
or it is not assumed that they can be there

and so the situation here is this
which I think is especially true in today's world
in the conditions of terrorist systems there
when in principle in the presence of
weapons of global destruction

even a small terrorist group
may represent
in general, in principle, an adequate threat
for example, systemic development
than it can be
for example, a local interstate war

and therefore
in these systems, as a principle, I consider it to be scientific technology
it is to be able to actually prevent
and radically from the point of view of solving the issues there
let's assume the same ones who assume a terrorist act
and not, for example, only there by force
a real solution to the issue on its merits

and this is still achieved through knowledge of information
by using technologies that are completely unique
and can be claimed, let's say, only once

hence
the technology is truly scientific
in my opinion in modern conditions which really saves
from the point of view of creative science
this is direct access technology again

direct access to any information
precise knowledge
and precise reaction
exact solution

so here it is
I'm finishing today's lecture
there will be a 15 minute break now
and then I will answer questions

Now I will answer questions
First of all, I will formulate the question myself
and I will answer it from the point of view
apparently explanations to a greater extent of today's lecture
in particular specifically to technology in science

and the question, for example, might sound like this
what from the point of view of scientific technologies
this is how to objectify

that this technology is , let 's say, scientific
precisely to objectify, let's say, in the social environment
from the point of view of different scientific approaches
what relates to the concept of "science"

but the thing is that I think
what is desirable to know the next answer
that when we talk about the science of Salvation
i.e. about science which, in principle, generally speaking
this word exists as long as civilization exists

then in the framework of self-development, as in any system
or in an intellectually reproduced system
i.e. science is a certain system of development of society

and obviously, well, let's take a simple example
if there is a study of some scientific process
any chemical physical in principle
or of a philological type

then the research question
always implies that this is a study
in general, someone must need it first of all

hence
even if, for example , a person needs it personally
but from the point of view of human development prospects

and generally speaking
it's important if someone needs it from the point of view of the future
the future must exist

it turns out
in any scientific element of research
must be entered
Global Destruction Countermeasure System
let it be a philological system, chemical or physical

hence
even in the conditions of private systems
I mean privately orthodox scientific
This technology is feasible

in this case
I am answering a question here

in principle, precisely according to the science of Salvation, for example
according to the science of preventing a global catastrophe, let's say
which is often a very narrow technology
and a special completely technology

for example, to provide
that many satellite systems
which are produced by different companies
and sometimes have not very good software
how can they, for example, activate the launch of a nuclear missile
if the software is
for example, it will fail
or will be extinguished there by a beam weapon

then all these connections
here they often require a very narrow approach
for satellite systems management simply

and then it turns out
what in scientific terms will be called technology
when a person is simply from Consciousness
can, for example, restore a program or
or just stop the rocket from taking off

then it turns out
that the technology of the science of Salvation is realized

hence
say that the research is scientific
this is when you actually do it
result of Salvation

and then you accordingly according to the science of Salvation
act scientifically
the concept of "science"
in this case, it is objectified by that
what did you do result

but there is an even more widespread and more serious meaning of
objectification
what when you do for Salvation
then the research can also be immediately scientific

because the main point
it is to be able to prevent some problem

and not , for example, even downplay it or restructure it
when it had already begun

hence
so in principle we can say
that who is engaged in Salvation
and Salvation, moreover, adequate

that there is direct access from anywhere
to any point in space and time

then you are doing well
truly scientific technology
because you really set the task

i.e. in science from the point of view of the general concept of "science"
this is usually the staging part that matters
when you set the task adequately
therefore you are engaged in science

that's why I advise
Well, in the future you can refer to what I said
or somehow develop this ideology
and consider what any other points of view mean , for example
well, which may not fit together

firstly, they may not know, for example, that ideology
which is implemented in the Salvation system
or they need to be encouraged to do so
somehow transform it, give them knowledge and try to translate it
best of all on the same philosophy
by means of some logical or spiritual information, let's say so

one more question
which I would like to formulate
and accordingly it will be like an answer to the question
from the point of view of the development of the ideology of today's lecture

this is the next question
what when i talk about the concept
scattered structures of Consciousness
then a peculiar element arises in Perception
which characterizes that
that attention then works at a diffuse level
here is the spectrum of Perception

which corresponds to attention it is scattered

and this is manifested on the Spiritual level in the form of that
that the work is happening at the level
as if fuzzy systems of perception

i.e. when will you work?
you analyze and see
such a level
it means it gives a certain , well , questionable phase

i.e. questions may arise there
because the word "scattered" also gives a consequential wave
as a dispersed system

so you approach this phase in this way
that scattered systems are the principle of freedom

i.e. the more dispersed the systems are
the more freedom of will freedom of creativity in this system

and freedom is not scattered things
On the contrary, it's more freedom
Spiritual manifestation of will and creativity

and here is just a replacement of concepts by a replacement of positions
you already have a correlated system

and when you can even view this level
at the optical level of Perception for example
there you will see
that there is a very simple principle
change of positional level
i.e. well, on optics, a change of optical media, so to speak
change of platform which lights up in one way or another
this change regulates accordingly
precision in approach

i.e. if you work
just at the level of scattered
as if a diffuse level of information
or a scattered system in the Perception of Consciousness

then it looks like a peculiar
if in optics as if points of an optical plane

which come, as it were, from an infinite area
and you work in many ways unsystematically
by enumerating through different access levels

as soon as you count
that you are working at the freedom of access level
here the system seems to freeze
and dynamic property
turn into static

just watch this effect
and if possible if you have an uncorrelated system
i.e. it either moves too fast or it is mobile so
that there is only a general sense of information but no specifics
you change your point of view

i.e. a logical change of point of view gives stability in management

and one more short question
related to the explanation of the position
so here are the folds
this level of optical to the point of application
means primary impulse

that's how I said it
as if some kind of path is rolled up into a roll

If possible, you can work
generally speaking with this element
just in the space of Perception
i.e. the question is how to do this at all
for example , well , in physical space, for example, yes

then, generally speaking, we can not complicate the Perception there
on a multi-parameter form
but it is enough to work in the space of Perception
as if in an autonomous area of Thinking

i.e. here are the characteristics
which is enough to spend somewhere at least once
and then you have control implemented
i.e. it is not necessary to work
in relation to physical space

i.e. you can simply fold it into some kind of thought form

i.e. to allocate space for Thinking
see where it is
and collapse at the volitional level, for example, Spiritual and that's it

and just know that it is connected
for example, with the distance between, say, a table and a door
here's about today's lecture

hence
many elements can be done
just so that the elements are at least retained in Perception
this is a special level of concentration
which characterizes
that when you do an action knowing the meaning of this action
then the action is still implemented

because it exists
the system of connection of each element with each is already known

hence
if the action carried out in one area is implemented
naturally this action
will reach its destination level

you just don't have to always be in control
assignment levels

and this approach
he can just speed up
some procedures where you need to highlight
the main central part of the action
what does concentration mean for example

if we speak
on a dynamically moving environment
i.e. in the space near you in the space of Thinking

then concentration in this case means
means understanding the action
knowledge can be optical impulse
knowledge of a kind of optical form
knowledge of the Spiritual state if necessary, etc.

and the body of knowledge is concentrated
even if it's only for a short time

will mean the same action
what is concentration
at some fixed
there we suppose
or on a fixed part of the body

hence
this is the concept of concentration
can be transferred to the control area
for example in this way

although the concentration can be translated
at the level of the state of the Spirit
i.e. to derive from logical levels
that state of the Spirit
which denotes concentration
from the point of view of these technologies of knowledge
when you work with your thoughts

or when you work with systems
which do not relate, for example, to Thinking
but in Perception you can consider them
as the work of the Spirit we assume

and when you do concentrations for example
well, different in time , in duration of time
you can generally work for a short time
but simply in the space of information
time to lengthen

those. first option
you can concentrate
for example, on a finger or on a number
a minute there let's assume yes or more

or you can just do concentration
but do it in the information
that you just make the concentration on information more
i.e. as much as needed

and then you
you don't have to
for example, to concentrate on some system for a long time
Well, for example, I have some kind of concentration on a number series
at the same time if I do this concentration

then in principle, well, somehow time is generated
and in order not to waste time, let's say, physical
you can just do it
enter control on information
that this concentration lasts for such and such time
and you do so much of it

i.e. replace physical actions
informative actions

or well, let's say there is a series of exercises
let's assume by concentrations
then let's say even here is a question
which is placed here
this is exactly what the concentration is from 22.00 to 23.00
and there is an overlap of concentration

and so, well, here it is written further
that there is sensitivity to all concentrations

the thing is that sensitivity as such
This is not a mandatory system.
i.e. it is better to have sensitivity
but then in principle
it is necessary to exit this system
i.e. so that there is a level of normal Perception
background level if possible

and then if we talk about concentrations
and they overlap
then you can do exactly the same
let's assume there are some concentrations
there they either overlap
or intersect at the same time

then you can just do them earlier, for example
there for some time for any in principle

but to make the concentration pass
in your information space
at this very time
and exactly as I give in the manuals

then it turns out
what can you work on

let's say in the morning half an hour or even 10 minutes
do all the concentrations for the whole day, let's say there
or do you want a month in advance

and then you will just be
well, it's like being in that time in the information space
and already at this time
Well, you can choose either the optimal one that you want
or you can actually say
integrate again
to go into the space of the past
and just kind of look through it
here in the current time
how are they implemented at all
and something somewhere, well, sort of tighten up, that's all

and at the same time not waste time, for example
and as I just said
what are scattered systems
i.e. when there are many concentrations, many light systems

highlight the main ones
which are most optimal for you now
somehow tighten them up
for example, adding some small time maybe

and then you can
Well, well, it's not like I'm trying too hard
from the point of view of systemicity, I suppose
from the point of view of time costs there
do actions
means which you need
for example, by target management

and now as an independent work
you make a concentration
here is the sphere in front of me
let the radius of the sphere be 2 meters

then the boundary of the sphere
is somewhere in front of me
and inside the sphere in the center
do a lot of concentrations
and do everything in the center of this sphere
those. radius 2 meters

the center is 2 meters away from me

when you do everything in one place
you will see

how does the intersection of concentrations occur
but none of them

for example, it doesn't get in and doesn't interfere

because everyone has their own space of Thinking

i.e. one point is simply geometric

but the space of Thinking is still different for everyone
therefore there is no intersection

and do this exercise

look how the Creator created the World from this point of view
that there can be an infinite amount of Thinking
for example, when space is limited

why then exactly this space

this is exactly the form of a person

why is there such a physical form in the world at all

i.e. draw conclusions immediately

it will take a little time and i will observe

pay attention here

there is a feeling of freedom of development

i.e. you see that they exist

adjacent areas of concentration

they can flicker and appear as optical systems

while doing this

the common task of creation

and here is freedom

that's how it is expressed

that the point is one physical

and there may be an infinite number

for example, mental Spiritual manifestations

and that's when you look

for example, there is a human physical body

and the amount of Thinking

can be infinitely large

then the principle of complete freedom is any Thinking
in the creative sense from the Creator
directed
into any physical space

hence
concept of space transformation
this concept, including freedom of the individual

i.e. when you look
a social concept of this type
with the concepts of the organization of the World

then look carefully
when you do concentration
in the area in which they do well , including others
and you see for example
that your area of concentration is in the projection level
here if you pay attention
Now you have concentrated in one area

and pay attention
that the projection of all concentrations of other people
on your concentration
gives the form of a person

just take a look enter these forms
and you will even see internal organs, etc.

i.e. that is why it turns out
that the organization at the physical level of man
this is freedom inherent
into the structure of information development
into the structure of development of Consciousness
and such that any quantity at one point in space
they don't intersect with each other in any way

it follows from this
that the Creator made everyone absolutely free in essence
created everyone

and it turns out
that even with a large number of actions
the person still survives

internally really free

simply from the point of view of the development of the technology of Eternity
you will see

that this is the birth of Eternity

information of Eternity

Well, if you ask yourself the question

how is the information of Eternity created, how is it born

then this is exactly the point that I just spoke about

i.e. Eternity has finite characteristics in birth

but at the same time it becomes Eternity

if you are as if moving away with Consciousness

and you see the information of Eternity

let's assume in the form of a larger sphere

and who is near the sphere

a certain boundary in some way

they are accordingly also Eternal

look at the investigative part of this development

when do you work

with information of Eternity

then there is something peculiar

there is sometimes a lens influx on

i.e. from some general background

and to a specific private area

you can see the sphere of Eternity

and can you see

how is it organized

for example, from means of some kind of dynamic type system

so this is the organization of Eternity

from the dynamic level of Reality

where your Thinking is

if you go further you will see

where Thinking meets Eternity

where it passes into Eternity

and this is the level of transition to information

this is precisely the boundary of the space of Thinking

in the field of Perception
for example, this is exactly the type of lecture I mean
where there are scattered systems in your Consciousness

if you, for example, will not be realized
in terms of control, not necessarily in dispersed systems
for example, not according to today's lecture material
and in concentrated systems
then the transition to the structure of Eternity can be different
but in principle it may not differ
and in principle it is no different

watch as independent work
what is the unified system
it exists everywhere
and the difference usually does not occur

Set your goal now
solve your problems here now
and to decide again within this sphere
which I said about
again in the center of this sphere
and also seeing how others work
how to help them yes

in this case, Thinking occurs in the center of this sphere again

i.e. work is in progress
both over your situation and over the system
who will work here now
and those who will watch will still be working
for example, videotapes to read lecture material
and they will still work, i.e. look at their work

Moreover, you should do something useful
well for those who are still there anyway
at the level of such
what is in this option for them
physical information it is not available
i.e. they are like this now, for example
They are not listening to this lecture at the moment
but at the same time they also need help with their main tasks

i.e. there are three levels of work
your own

help for those in the hall
to those who will listen from the students learn ^{yes}
and those who are in everything all the time
Well, for example today
for ^{example}, these people don't hear, but they need help

you see
This is a special type of information retrieval.
i.e. each of you identifies your area

and pay attention to how the work is done
^{so} everyone has

pay attention i.e. enter this area
and perceive it optically
not necessarily so verbatim
and it's not necessarily very ^{strictly speaking} there exactly
and the main thing is to have
Spiritual Principle of Perception
we need to perceive all this in Spirit

and now pay attention even further
what's more is already being formed in the hall
Spiritual aspect of management

i.e. precisely the Spiritual environment
begins to focus on Spiritual Management

so here is the logical level
related to the tasks of the general physical plane
begins to organize
The spiritual plane of space, moreover

in physical space
Spiritual Administration begins to be implemented
which does not have such ^{strict} optical parameters
more like neon light for example ^{yes}
as if a scattered system

and Spiritual level
it's practically ^{indistinguishable} , let's say
on the Spiritual level within the framework of creation
people become ^{essentially} equal there
before the Creator
by the actions of the Creator

and here is the approach to the level of the Creator
that's exactly what's happening
on the general spiritual creative development

i.e. that's all I said
You can just touch it with your fingers now
there to feel and see this Spiritual environment

and if possible, just have all of this in the hall
take a closer look if possible

now that i said
Spiritual System has passed
in greater implementation and information
then the logical phase comes again

but the logical phase is already more highlighted
she is more developed
through the transformation of the Spiritual plane

those. please note
that this transformation
it happens as if by itself
this is the work of the Creator

i.e. you can see
how does the work happen
because this process
well, it just happens to be a qualitatively next level

and in this way one can develop to the work of the Soul
where is the work of the Soul this is development

and when we talk about concentrations, for example,
then concentrations are systems
which lead to exactly this kind of development
which often works already
or for example, the Soul mainly works

where there are no mistakes
from the point of view of the work of the Creator
according to the creative plan it is meant

and then any non-creative aspect

is being considered
as a lack of technology
lack of knowledge

it is quite clearly visible in this regard
it becomes very clear right away
that there is simply information from a lack of knowledge
if something is destructive there is simply no knowledge

hence
task being at that level
this means that knowledge must be passed on

how to transfer again
it is possible with a diffuse optical system
throw away several levels of management
and see which one is more adaptable

even then watch the channel
i.e. the first emission can be general
and then look
what is the plan for transferring knowledge
with the aim of developing other systems there
or with the aim, for example, of transforming destructive systems in general

i.e. this is the exercise
you better do it now
i.e. how to form
where there is no knowledge with the help of scattered systems of Consciousness

the point is again in the center of this sphere
get out of it
and you begin to pass on knowledge
I'll be watching

When transferring knowledge, please pay attention
on the vector of universality of transmission

i.e. you transmit data to the systems, for example
and as an experience try to pass it on everywhere
i.e. to destructive systems
there was simply no room left

because there is a principle here
for example, to Save the Earth, to Save the World

the situation is precisely technological
is concluded in this type of
that as soon as the entire level of information
will be dense in the collective Consciousness like this
that there is no possibility to implement
destruction system

then the level of protection
this is the level of harmonious natural development
subject to stability

i.e. the level means well security
this is the level of the absence of destruction as such, generally speaking
because any insecurity
this is the possibility of external destruction

hence
these are the outer spaces
possibly containing destructive elements
they also transform
through the system of scattered Consciousness

and so here is an element of working with a scattered Consciousness
if to harmonize
every area of scattered Consciousness
then this is a strong system, including protection
means your development

and therefore when you, for example, do management
from this point of view you approach it in the same way

and now it will just be necessary to transfer it jointly
I just have this work experience, that is, students
and it lies in that
that 11 people worked
at the same time my students taught
i.e. it turns out that training is conducted

for example, take a problem like this, like a model problem
my student is teaching
i.e. you can conduct training

then you learn
for example, in this case there is a group of 11 people
so let's assume point 1 there

information for work

Alexander 24 years old postoperative sepsis coma

after the first session he came to consciousness and asked for food

After the second session I started walking

then you will look at this information more carefully

and take first of all conduct your management

in doing so, consider information at all levels

i.e. here I am working

the student is working

students work there who study there with my student my students

and at the same time well it happens

for example, a certain regeneration process

then consider this technology

let's assume that this is the system of scattered Consciousness

where processes are not defined yes

from the point of view of implementation

for example, well, into a conscious state

in terms of the usual communication systems, so to speak, yes

and consider the element of Consciousness

if it's a coma

that in which the element is expressed

so these elements

try to make it sustainable

in terms of sustainability

what is the exit from a coma

then the element of the corresponding state of coma

it is being steadily restructured

and appropriate to the state of health

it is steadily growing

i.e. the stability is also different, yes

hence

the concept of "restructuring"

and for example "sustainable development"

this is also a system of scattered Consciousness

these are different in terms of multi-component levels

as if emissions of the primary impulse

and this is how regeneration occurs here

you should see

how did the students work , for example?

and if possible your work

must contain the following actions

for process stability

not necessarily

in relation to let's say Alexander is 24 years old

I was talking about that component

which speaks about the universality of knowledge, i.e. the vector of universality

i.e. you need what the students did

because they did it anyway

move on

i.e. take and make the next level

in general, in the development system of any technology

including instrument technologies the main thing is to always do

next level of development

at the same time, yes, it needs to be recorded

for example the current system

i.e. do it this way

so that there would be some level of Reality

so, well, as if always creative

was which could always be used

but here is the next level

it is very important in terms of the development system

i.e. here is each element of the next action

must contain development

and in connection with this

it means that it must contain development

you are here

First of all, naturally, look at what and how the students did

positive level ^{yes} you transmit

secondly, it means you do it yourself

and you also pass on what you yourself have done

in terms of overall sustainability

then it turns out
one component task
Here is the restoration of Alexander
so she came to that
that this task became a task
by canonical stability

and according to the level of favorable development
in any conditions, that means well, this process
postoperative sepsis and coma or something
towards recovery

i.e. at the same time
when did you do that
look how to take this knowledge and spread it
on social aspects in general
it's not necessarily just health

i.e. be sure to do the gradation and see
how to spread the technology
for some other processes maybe make it universal

and once you do this you will see
what is unification of your access
by scattered systems
again scattered systems of Consciousness

health is one thing
another thing is that it seems that well, maybe it is real based on the information
another area of information is the event part
but at the same time you can say very clearly
that the knowledge gained from restoration
as if it were already enough in a complex version
for example, here is a coma

this knowledge can be used
when, for example, well, for example, the process can already begin
let's say at a nuclear reactor
and some processes have already started to become problematic
this knowledge can be used as it were
to stop the process and bring it back to normal

even at the beginning of a certain kind of

well, a pathological process at a nuclear power plant

i.e., if possible, some elements
which you find in the translation management
and which concern the technology of Salvation
means to output

and this is specifically the implemented technology of Salvation
because if you show the primary information
there was a really difficult situation there

and that means you are deducing it too
at the level of the universal impulse
which has Spiritual statics
and you already have this Spiritual static impulse, this is your experience

later it will be instantly realized
when do you sleep there
or are you involved in management there?
in an arbitrary or even non-arbitrary area
get there
under this static impulse

and even if they address you mentally
it works
you pass on knowledge
well, without really focusing on it
in telepathy there

i.e. this is the level of overall growth
due to a specific action
level which in the conditions of systems of scattered attention
allows the scattered Consciousness
scattered areas of Consciousness i.e. "scattered"
precisely as an elemental part of Consciousness

Consciousness can be concentrated
and in optics these are scattered systems
and i.e. in optics they are simply in different places
in a local place they are one, for example, some center

and then you can
master very quickly
very large arrays of information
according to the technology I have provided

firstly, such arrays are like that
what are you forming
this is such a universal impulse of Salvation, so to speak
universal status

at the same time an independent situation
it works universally
and you at least
already have a multi-redundant system
in relation to all events
it doesn't matter what they are connected with
personal
or there are public ones
or future events in general
maybe even
that you may not physically meet

i.e. therefore, if possible
form precisely the status in management
which is in principle
a very serious management goal
when you can handle any situation
according to a simple unified principle

simply according to a unified principle
i.e. any experience then any result
this is luggage for you
in order to dramatically increase the level of management

and according to this principle
you try to implement
well, there are their own tasks
tasks of helping others

and when you have
many elements i.e. a lot of information
then try to implement these principles
which I outlined in today's lecture

if possible
look at certain things
which are completely obvious
from my point of view but I didn't say anything about them
because they are intermediate in their connections

and logically they are very easy to detect

i.e. as homework

then find some logical ones for yourself
clear conceptual or practical connections
which can be implemented
from the point of view of today's lecture

from the point of view of today's lecture
there are quite a lot of such connections that can be found
in the target plan
working with large amounts of information

working on target
with the task of changing information in the future
in large structures

i.e. this is for large territories
in case of big problems there, etc.

i.e. here you can find
Well, let's say those levels that are logically very simple
can be generally called
Well, to put it in correct words, let's say so

This is where I end today's lecture.
thank you for your attention
