

GRIGORY GRABOVOY
Structuring of Consciousness
**A method of transferring information from one information object to
another**
(8)
0 9.08.2001

Good afternoon
in this lecture
according to my system of Salvation and harmonious development
I will give three new methods
by relevant sections

This is salvation from a possible global catastrophe

then self-healing
plus harmonious external development

and the control section from your own Consciousness
any information

the third section is
substructure of the first two sections

and, if possible, throughout the lecture
It is advisable to monitor
where this substructure manifests itself

because when I get to the third section
then in principle I will not clearly name some things there

in this regard, the task of this lecture is
throughout the lecture portion
it is necessary to ask the question
here is control from Consciousness of any event
not only, for example, preventing a possible global catastrophe
and self-healing
subject to external harmonious development
as is done, for example, in the first or second section

then the first method
Salvation from a possible global catastrophe
based on your Consciousness
using the technology of structuring Consciousness

in this lecture is that

that you use the system

Well a kind of information flow
from one information object to another

a simple explanation of this process is that
what do you have first
information object, for example, at the physical level
in Perception if you look with your eyes

then this object if it is a physical object
has a corresponding information area

in this method
First you need to find the information area
of any object
for example, there is a physical object

then be able to consider means technology
translation of information of this object
into the information of any neighboring object

let's say we take two trees
then consider how
for the unification of information
what happens is the translation of the form of the first tree
into the shape of the second tree

on the information of the shape of even identical trees
they are naturally different

in this regard, the task of this method
is precisely the consideration of the characteristics of the translation
from one form to another

and at the same time the use of this action means
i.e. translation as a control system
to achieve universal Salvation

the logical meaning here is very simple
it consists in the fact that in dynamics
when you translate one object to another
you use the system of all connections
in dynamics it manifests itself faster
than, for example, in a static system

i.e. the reaction of Consciousness is as follows
what when you consider
for example, first the information object
and then you want to tie it
to the system of general connections
due to management, let's assume

then in this case you are wasting your time
firstly, in order to objectify the object
secondly, in order to connect

in this method
it happens simultaneously at the moment of action
i.e. action
dynamics of the movement of the structure of Consciousness
namely the element of Consciousness
gives two solutions at once
actually two actions
in one impulse of Perception

i.e. this is optimization of management due to the fact that
what do you do control in a dynamic system

and in connection with this
then you will have to in this method
do this management
precisely from the point of view of that
what is in this dynamic system
all the complex ones already exist
all external and internal communications
in this Reality

in this regard it means
this is the concept of " the existence of all connections "
this is your own informational reflection
in the field of Spiritual Perception

i.e. you should take that as a basis here
what is your physical body for example
your control
which is reflected
at the level of Spiritual Perception
this is the manifested area
as an element of universal connections

so when will you listen to this lecture
if possible, difficult things several times

so, well, think about it somehow
to find connecting concepts
and connecting certain as if optical endings
from the point of view of the third point
management of any event

at this point do it specially and especially

so then the element is quite simple
development of this technology

as soon as you find it on a spiritual level
means reflection in fact, the optical development of the event
you get control
at the point of development of the Spirit

and here is the task of management for Macrosalvation
I introduced this point in this case axiomatically

i.e. in this case we need to understand
that this point is precisely axiomatic
I didn't explain it

one part of the lecture contains
directly logical development of management
the other part is axiomatic

between these two parts
find the technology of the third part
control from your Consciousness of any event

so when you get this point in the Spiritual system
this is Macrosalvation
i.e. Salvation of all by direct access technology
and yet this Salvation exists
as a point of rest
in the field of information retrieval

i.e. the characteristics of this area are as follows
that it can be found by a logical principle
just by asking a question
where is the resting point
in the field of information retrieval

i.e. Consciousness
when do you start working
with information on Macrosalvation

affects , first of all, your structure as well

and in this regard, when you are looking for a point of peace
then you really are
find the control stabilization point

and here is the control stabilization point
this is the control system

pay attention
as opposed to a certain type of lecture
finding the point of simple stabilization
this is the salvation of all

i.e. in this case the primary feature
on which some lecture materials are based
this is already a technology of control and salvation

as an independent work
do ^{this} type of work

for example, well, to plant a tree on information, let's say
must have a physical consequence
manifested on earth
i.e. how a tree grows on the ground
let's assume it's a sprout

by analogy with this lecture
you need
at the level of actual preparatory work
to planting a tree
model the tree in information completely

i.e. let's assume if you have
there just a shovel or just a seedling
then you should have on information
in the same area
an existing active tree

that means from the point of view of control from your Consciousness
This is another feature that speaks to that
that control from Consciousness of any event
this is the management of everything
at the same point

i.e. this is homework
should be considered in this way

that there is an overconcentration of management
overconcentration of the management level
or management information

and at the same time this concentration
is happening
at the same point

i.e. the starting point of the action
well, it's the same shovel , so to speak
and the same seedling
this is the tree
at the same point

i.e. Consciousness has no extension
has no value
and the temporal determinant
at this point

and at this point
just the most obvious
property of Spiritual management
in optical mode of Perception

i.e. it is in this place
you can visualize most clearly
optics of Spiritual Perception
i.e. the optics of the Spirit

how does the Spirit function
from the point of view of the optics of perception
where for example Consciousness of Perception
this is already a secondary structure
in relation to Spiritual development

but here you will be able to objectify
because density is logical
and the Spiritual information is so high
that you see a clearly manifested structure
because the speed of thinking
here is very high and comparable
at the speed of Spiritual development

then this level of information
by this method
it is already the final one here, i.e. I am finishing

this part of the rescue from a possible global catastrophe
because I named the coordinates of this Salvation
and you did it together during the lecture
i.e. at the moment of the word when I spoke

as homework
if possible, look at when you did it
because this action exists
it is at that point of the Spirit of maximum concentration
The spirit that is manifested
the manifestation of the Spirit is also the physical body

the second part of this lecture
this is self-regeneration self-healing
subject to external harmonious creative development

and this part as I said
includes control from your Consciousness
any event

this part of the lecture
in fact this method is for this lecture
I'll start with that
what exactly is the management of any information
that means from your Consciousness
this is the area of objectification of the Spiritual environment
which I mentioned in the first part

i.e. the Spirit that is objectified
in the optical element
I called it with words

True, he called it as if directly
but it is naturally a comparable name
The meaning of these words needs to be thought about
if time permits

then when I call this system
as a system designated
I manifest it as the structure of my own Consciousness

in certain lectures
was a manifestation of one's own Consciousness
and the assigned structure

in this case the appointment is in progress
not from the Spiritual impulse, well, not from within

and you form an external impulse
which is yours anyway

it looks like that
that you are forming a management system
which is attached to you
according to the coordinates of your Spiritual development

firstly, that there was development
i.e. consideration of the coordinates of the previous development
then this structure will not leave you anywhere

and secondly, it is development
which includes the whole future
into the structure of past development

i.e. this is, let's say, a formal system
of this optical environment

the formalized system that I just talked about
it is revealed by a certain series of words
as homework
look at what other words
it is possible to identify this system

words
or are organized by this system
or you reproduce them as if from within this system

and now is the important part of this lecture
reproduction of meaning words
or reproduction of information
from the dynamic area

i.e., in fact, everything that I have just organized , for example
in terms of lecture level management of the second part
I meant this in a certain way
the dynamic part of Consciousness

this is a special structure of Consciousness

i.e. the dynamic part of Consciousness
which is constantly in motion and in dynamics
from the point of view of your Perception
and therefore has
certain independent advanced functions

i.e. there are elements of Consciousness
which are naturally static
and they are functionally limited
i.e. the possibilities of developing this element in Perception
not so much

and pay attention here I added the word "on Perception"
this is important here

so the point is that it is clear
what I always say about the elements of Perception
but when we talk
about the dynamic system of Consciousness
then Perception is a substructure of this Consciousness
your own perception

you can find your Perception
and understand what you perceive there

in this regard, it is an element
very clearly expressed
managing clairvoyance

i.e. as soon as you develop such a system
do you understand what is happening there
this is an element of direct knowledge recreated by you

how the Soul perceives Reality
she recreates what she already has

and in connection with this
technology means development of Reality
it is in many ways such that the element of recreation
this is the designated structure
from the tasks of the soul initially

therefore a dynamic system of Consciousness
this is what it originally contains
and the tasks preceding
for example, the tasks of the Soul previously designated
and future tasks

that's why the future merges there
well, like in one point in one area
with the past and present
you get almost out of the mental
i.e. outside the thought space

which allows for Perception
reproduce the external image
as if from within this system

because if we consider Perception
how exactly mental
called there a thinking space

then enter the area that is outside of it
outside this system
in this case it is necessary exactly like this

once you enter this area
you saw it right away
how do you organize yourself

provided that external relations are constructive

i.e. the task of this management is to
what according to the algorithm which
I have to some extent verbally indicated

enter the area
and just to see
by a certain vision detector

Well, it's not necessarily Perception of the mental plane
in this case, vision detection
it may be a state of the Soul
or the element of the Soul

this is lecture level
it is sharply brought up
by hierarchy of the control system
because in this case I introduced vision
at the level of the Soul element
to which you came at the expense of Consciousness

after all, we talked about that
that the Soul reproduces Consciousness yes
i.e. the secondary structure is always

in this case we are talking about
what element you come to
in the Soul
this is an element received from Consciousness
in this technology

as soon as you objectify this element
then according to the Law of General Relations
you get a harmonious
and a largely coordinated system

but in the Laws of Information Development
as the Creator does
any system has a harmonic coupling
i.e. a harmonious level of docking

any kind of output information
always meets
with incoming information
at a certain exit point or entry point

as independent homework
think about it
where does this happen in your Consciousness
or in the space of Thinking
or in Spiritual Perception

so the level of this lecture
in this part in the second
it broke into several pieces
layered or sublayered structures

and here is this level
well, a kind of lecture catalog

if we consider the lecture
as an object for Perception
in terms of, for example, Spiritual Perception
simultaneously with mental
and simultaneously with the Perception of the Soul

you will see a rigidly cataloged system
in your Perception

and this one is catalogued
Well, it's kind of like a directory tree
where by directories I denote
so I designate some kind of spheres
or optical type systems
which are manifested
outside the zone of your mental perception
this is the level where Thinking does not occur

and in connection with this
you begin to organize your Thinking
from this area

because you can coordinate precisely
find those Soul structures that you need

i.e. you generally speaking under this system
you can find those levels of the Soul
which you can even define

then it turns out that the secondary system
which is knowledge
can be a manager
in relation to the development of the Soul

please note I didn't say anything here
what about the Soul for example
initially the structure created by the Creator
it contains all future manifestations
i.e. the Soul is a more complex concept

and "to the development of the Soul"
this is the state of the same Soul
but at the same time it is the same Soul
in a certain part or in totality
or the whole thing
but in a state of development

in the field of Spiritual Perception
if possible, separate this in terminology
as if in the internal or external
i.e. in common terminology
such concepts
like Soul
development of the Soul
for example, the state of the Soul

and as a training
can you do a comparability analysis
when using these concepts
comparability in terms of action

when you everything that i said here in this part
you will do it
at least at the level of following the verbal part

you will consider that the organization of man
it is a naturally harmonized structure
with all external and well , and actually internal Reality
this person

and this naturally harmonized environment
this will be the first part of your Perception element

when you this element of Perception
you begin to understand
or consider and then understand
then by deriving this optical parameter we already get
before each event
which for example is in front of you
let's assume, control this event in optics

outputting this element
before this event
you get self-regeneration
taking into account external and internal harmonious connections

i.e. in this case what I was talking about
I brought it out into the optical element

how i output into optical element
technologically accurate
I didn't describe it in this part

but if you look closely
take a closer look at this information
then the exit happened as if by itself

and in connection with this this exit
he objectified the next level too
i.e. self-regeneration provided that
that I found the area and showed
which is already naturally harmonized

"naturally" i.e. with the presence of the True Ones
i.e. the real Laws of the Creator

this is the part we are now moving on to
to the third part of the lecture
i.e. control from your Consciousness
any point in space-time
any information

and here is the concept of the truth of knowledge
i.e. transfer of control
towards control from your Consciousness
any event
this is the criterion
on which the third part will be built

then as I said
was your task periodic or permanent
so the task is to track this third part
then everyone modeled it in their own way
a certain system in the third part

and this is the third part of the management
any , even from a certain point of view
little significant information

this part characterizes that
that according to the criterion, this is again what I said, this is the term
has long been known as the Truth of Knowledge
but here I will add that Truth
it has a certain length
from the point of view of Perception
knowledge in optical element
is True if it is perceived at all

this is in the first understanding
as a first approximation

but "knowledge" can be True
if you work outside the area of Perception
even if it is not perceived

in this regard, we are talking about that
that the criterion is primary and logically understandable
is this the Salvation of all
and so that for example something like this doesn't happen
global possible catastrophe

when you start working on these terms
then pay attention
Well, if a pianist plays some kind of complex melody
then he plays as if on two levels

i.e. first he perceives, well, perhaps mentally
but the main part is played
in space by direct transmission of sounds

and not in the sound space

and now if you consider

Well, the melodies ^{there} are already known
which are classic

look why the transmission happens even before that
how did you ^{even} think of putting this melody back on

and compare , for example, with some melodies of the current type
which are possible and can be classical
but they haven't yet

well the concept of "direct transmission before sound extraction"
this is exactly the concept where the criterion of Truth is
consists of speed characteristics
for example, primary spiritual perception

therefore one of the criteria of Truth
is also the Spiritual Perception of Reality

and Spiritual means that which is originally
before, for ^{example}, material manifestation
that's what it's considered

of course if we consider
Spirit as a structure
existing in physical Reality
and so it is at the information level
and in Reality it is manifested

then physical Reality
can also be a criterion of truth

but stability in True development
it turns out that there is a physical Reality
as objectified for all formulas

therefore if we connect this logically
what i said
we get what collective ^{means}
i.e. the manifested physical Reality, ^{for example}
this is the Truth that is perceived by everyone
in collective average form

when ^{well} this postulate
there is a mutually postulating connection
also pay attention to this terminology

she may be new

we will spread
to the level of the first part and the second part of the lecture
we see the reproduction of the lecture part
in the third plan

something that is created by you individually
and what does it mean I think it can be reproduced
as for example a practical level of exercise

when you can create in principle
any Reality
which is not declared as existing, for example
i.e. such a Reality, well, a creative Reality
not in your Perception

but from this Reality
you can get it in principle
any element of the current Reality, i.e. any event

and I propose now as an exercise
just do this action

you are near me for example
here at a distance of one and a half meters from me
first build the sphere of that Reality which does not exist

from the point of view of your Perception
let it be a creative Reality
but you don't find such Reality in the information
and you build this Reality in front of you
what will it be
some world
some kind of Reality of Thinking
it doesn't really matter here

the main objective of this training
get
any element of Reality from this form

so as a kind of exercise, so to speak
in a few seconds you should build
this sphere in front of me

I'll just watch for now
try to build in approximately the same place

i.e. when you build, keep track
that the parameters of other people's spheres coincide

I deliberately didn't tell you
for example, the approximate radius of a sphere
I just said that she is in front of me
at a distance of one and a half meters
in physical space
i.e. in front of my physical body

due to this
as soon as you built this sphere right now
she begins to emit a certain light
and this area is very stable
because they don't act on it in principle
known connections

sustainability is also characterized by
that this sphere does not have
as if the history of connections

and it turns out that it is quite autonomous
in general development
that's why it's stable
It's as if there are no connections that could move it there
or somehow deduce
on the aspect of known situations

therefore here logically we have come to the conclusion that
that the new system is a more stable system
in this construction
in the context of this lecture

and in connection with this
as soon as you start developing this system
she instantly acquires
the nature of all external relations
which are known to you

Please note that this is an algorithm
what needs to be monitored

development of this system
this is the nature of all external relations
Well, the sensory level can also be considered external
but it is precisely the concept of "external communication"
this is an important concept

in relation to this area
in geometry

i.e. the space begins to be filled with events
which you just took , for example , and moved aside
to find this space

but at the same time if it is a small sphere
then the events are postponed
occupy practically, let's say, the entire room
the whole hall or more

you have to look at this and understand it
you have to feel it

so as soon as you watch this
it turns out that all known events
in principle, yes, all external Reality
concentrates
at the central point of the organization of this sphere

I can explain why this happens
but it is possible if we have time , so to speak
you can find it here
so it seems like there is some kind of logical mechanism
well, let's also say so

this happens because
what if all your external connections
it's very logically clear
that means which you pushed aside and which you managed to remember
occupy this room for example

then naturally everything that concerns prolongation
i.e. all external connections with Reality
this is the whole external world

and that's why we
in relation to the sphere
the outside world

so in this case we found the point
which reproduces the external world around itself
and all of it

it was enough to ask the question
means to find an area that is not described in Perception

as a result of this mechanism
functioning of Consciousness
which I have now outlined
quite simply clear
that the Creator is naturally always
may be present nearby

because such points
they are even logically designated
are in the process of developing management

well exactly like I found it now

in this regard you need to enter this point
now Consciousness
and just as the Creator does
begin to organize the entire external Reality

at the same time, start specifically
right from this point
and there by a centimeter or there by a kilometer
or tens of thousands of kilometers

start this organization
I'll take a look
I'll watch

moment of this organization
pay attention and watch how others do it

first there is a sort of chaotic search for that
what needs to be organized
and the organization goes on
because the statement part of the problem
it doesn't happen immediately, like instantly, for certain reasons
clear

there is an objective reason
why is this task not clear right away
because the speed can be high

but generally speaking it is not clear because
what is clarity of management
what is the concept of "not clear" in this context

clarity of management
this is what you should

at least something generally speaking is not clear

i.e. if you are, for example, in management
you have everything absolutely clear
for Perception
then the elements of an indefinite system
which exist in physical Reality

if the eyes look at a certain horizon
then they ^{kind of} don't see it physically
what's beyond the horizon
or there behind the door

and here is the concept of ambiguity
This is a comparable system
based on certain physical
as if in the organs of sense and perception

therefore, since the world is developing comparably
that concept of "ambiguity"
this is a comparable system of actions
in this case it has a positive context

that's why I introduced this level specifically
the analogy is that yes, due to clairvoyance
you can see everything
but here is physical vision
it does not see behind some closed elements of space

to make the vision see
we must ^{therefore} reform the space, yes

but the world is socially structured that way
what can be reformed in those systems
where it does not disturb others

therefore we have
optical perception limited
because there is a logic to the development of space

and here is the logic of development of this control element
consists in the fact that
that at first a kind of chaotic search
was happening
then ^{well}, sort of chaotic
because everyone's goals are basically defined

specific goals began to emerge
and thoughts related to that appeared
that target events can be controlled
since they are from there
they can be found i.e. they can be found
from this point

and then the main question begins
this is management

since you are managers
Of course you did the management at each iteration
and management of exactly the right event
from this technology

that's exactly what it is
that when you look at physical Reality
then there is a kind of element, well, something like that
as if scholastically closer to the chaos- like level
on Perception

i.e. if some planets are scattered
some processes are taking place, let's say, in the earth's crust
volcanic eruption
well, not really controlled processes

as I already said
the concept of "introduced ambiguity"
I designated this system like this

from a management point of view
this system of introduced ambiguity
or something like what is called chaos, for example

so it consists of that
that this is a manifestation of certain norms, for example, yes
physical development
but at the same time these norms can be controlled
i.e. it is possible to make it so that it is not there
very much some kind of catastrophic eruption
for example a volcano or an earthquake
or there is a global catastrophe

but at the same time it is necessary to know the mechanisms of development
well the so called
so to speak, chaos-like or scholastic processes

these processes they are in this case like this
that their manifestation
as if in the boundary conditions of their implementation
is well actually
Firstly, in optics it is an element of your Perception
but also the elements of the body there of the physical body of a person
or the external environment

in this case i am giving a lecture in this way
which I specifically take away from the verbal designation
the purpose of this section of the lecture

pay attention
i.e. it means the brain is trying
well, or so to say, activate the mind
which means the central idea in this case
and all the time there is a rarefaction of information

as if the emergence of some secondary tertiary meanings
in this lecture part

in this case it happens because
that I took for example information chaos
and I take and work on this information
'm putting this information flow
it turns out that the semantic level
it naturally has to get lost

i.e. there should be no logical sequence in Perception

here is this element as an independent work
work it out
i.e. if you put information
on a rigid platform of logical development
or for example on knowledge of some
then you have a logically determined
i.e. cause-and-effect related or understandable
system of thinking

you need in this homework
make management on chaotic connections

i.e. not causally related
and generally enter this information
and from here do the management

when will you make management on this system

then you will see that this point
which we just talked about
and from which you began to build the whole Reality
it is functionally no different
from the point where the process can be anything
well, it's either chaotic or linear
or generally understandable natural or unnatural
for Perception

and here is a rather important point
unnatural to Perception
what can there be for Perception at all
unnatural

Perception is Perception
if you look with physical eyes
on something
well, if the air is hot there, yes
then you need to close your eyes

but for Perception there is no concept of hot air yes
there are images that are distant
and there may be some problems with some destruction there

i.e. unnaturalness in this case
let's assume it is manifested by a semantic characteristic
some even remote process
if this is clairvoyance

and therefore here is the concept of "unnaturalness"
in this case you can use
as a functional concept
i.e. it is enough to just enter
level of absence of unnaturalness
you gain control due to that
what you harmonize through Spiritual development
or the impulse of the Spirit
who is able to be in a chaotic process
and at the same time do direct control

as homework
do this procedure
unnatural, so to speak, management of chaotic processes
make it like this
so that you receive targeted management
always and immediately
this is the first task

the second task you will have to do what I said
find the same characteristics
at this point
and in the field of management of chaotic processes

and the main thing in this part of the lecture
this is what will be most important in this case
in the third part
and concerning the entire system of lecture material
which I just told you about

you need to find the presence of the Creator
in these first two processes
where in what place is He present
in your Consciousness
in your Perception

in what categories
and in what form can there be projection thought forms

and secondly, where does the Creator have knowledge?
which characterize the precision of control
any chaotic process

in this case I have so far talked about that
what from a chaotic process
make precise target management

and you need to get knowledge from the Creator

so in connection with this
this particular lecture part
I'm finishing here

as i said you worked on the first two levels
where the third level was built and understood

as a so to speak small clarification
here i will just show one technology
well, actually the implementation of management
based again on this constructed point
where the Creator is already present
after such a stated task
for home development

so as I said, that's what you need
find the Creator

Of course you found it now
and found in the future

but I take this position which is already known
in the future I will bring you back to this same point
and it turns out I receive the presence of the Creator
due to the fact that you
you found it

so now since you can find it yourself
in information
then you can learn and get
your own development

and in connection with this
you should have one here
principle of self-development
which allows
manage specific natural development issues
or your own for practice
or by Macrosalvation
or some other

"other" means that the following
what is not included in these two levels

means as an independent work
right now right in front of me
do this procedure

everyone has some problems, for example
there are some problems there
like an incurable disease there, let's say AIDS there
cancer complex curable etc.
i.e. complex problems of humanity in general

Well, more specifically about diseases now

and enter control from this point
well for everyone present in the hall
or who will listen to the lecture at all for everyone
it turns out to be three levels

that from this point you solve their problems
i.e. from this point you find those events
which characterize the Norm
in relation to this event

i.e. there is no negative event

and find it right away
these points in your Consciousness
this needs to be done in front of me

i.e. to reach this point in this sphere
and take control from this point
which would and which without words
even here "would" which or "which would"
if you want to have time and control
i.e. "would" be a probabilistic element
just a slight increase in time
but nothing more

control must always be precise

due to this
then you do the control from this point
and now you do it well within possibly a minute
every

I'll start talking again in a few seconds
a few seconds
there is when you can control without verbal accompaniment

now that you've done it
or do it like I said for about a minute
this is management
you will have to set the task right away
track in the future
what this management entailed for everyone sitting in the room
as a solution to their questions, for example, yes, tasks

what cures have occurred for example
what kind of global problems are possible there ?
were converted to neutral
or they are no longer systemically dangerous, etc.

i.e. this is management as far as possible
analyze very carefully
where this management is collective
resulted in a positive resolution of the issues
or someone was cured
or a relative of someone
or it means it's suspended somewhere there
including man-made technical disasters, etc.

when you analyze it
this knowledge needs to be passed on to everyone who perceives it
or anyone who can be taught to perceive
or create a system of Perception there
it's not necessarily people
adequate system of perception

and for this knowledge to be such
that you will have not only constant development
let's say on planet Earth there
take the best one possible
from all external levels of information
but at the same time control
only by one's own Consciousness

and have the development that speaks of that
that Eternity is your own manifestation

i.e. you are Eternity
and your own manifestation
this is also Eternity
i.e. every action in your manifestation
this is the element of Eternity

find these elements in this exercise

from the point of view of information
Eternity
although this is a concept that is closer
to the concept of Infinity

but this concept is in Perception
has a certain shape
optical form

this optical form
I'll have to find it
in this exercise
in each element of the action

when you do that
then as a very powerful enough level of control
you can just have this element of Eternity
enter into some object
target even even logical
i.e. events that did not happen

just take this optical element
impose on the event plan
which is also an optical element
connect them
and you get control
or it's a cure
or it's event management

this is the point
it is in many ways nodal
from the point of view of the integration of the three levels of this lecture

why is it nodal
where do they connect and why
these levels are technologically
if possible, you can find it yourself

after this lecture
there will be three telepathic lectures
from 10 to 11 pm
in this mechanical version
i.e. today you listened
so today there is tomorrow the day after tomorrow

listened to after a certain number of days
immediately after this number of days
exactly on the subject of this lecture
there will be three telepathic sessions again
this is the principle in this lecture material

the lecture part is where I ended it
and now there are 15 minutes before the analysis of practical materials

in this part of the meeting
I start answering questions

and in this case
as is already common in many ways
necessary in my answer to the questions
remember if possible
how the lecture material is implemented here
today's lecture in particular

and then it is created
Complex level of Perception
which characterizes

application ^{well} actually in many ways
such verbal material
immediately into practice

so this is the first question
how to work with a loss-making enterprise
how to formulate a status for such work

Well, the thing is that the concept of a "loss-making enterprise"
this is a concept at the information level
quite easy to perceive

so if we translate it into an optical model
then you can translate
as in a teardrop form of information
Well, it 's a unique option
like a balloon or a drop in reverse
this is the form of this information

to make the enterprise not unprofitable
i.e. standardized and with profit for the workers
for this information
First of all, you just need to twist this drop, ^{well, sort of}
around the axis of one's own Consciousness

the technology is that
that you are introducing the axis of Consciousness to the beginning
or if you imagine it this way
what is this cone shape
to the top of this cone

and through the work of the Spirit
you start to spin
exactly around the optical axis level
this level of Consciousness

then you get control
which begins to cause a number of other optical lines
and in your Perception
you can see what these lines mean

or it is the organization of labor in this enterprise
or it could just be external control
and the drive on ^{let's assume there} are orders of sales elements
or the functionality of this enterprise in general

i.e. in this regard here is the answer to the question

how to formulate a status for such work
the status should be Spiritual-optical in this case

that's in that lecture in which I just said
that you should apply it in this technology
here we need to apply in concept
exactly where the optics are
i.e. this is the twisting of the drop-shaped form of information
around the axis of Consciousness
translates to Spiritual management
and vice versa, the Spirit controls this system

i.e. here is the application of this lecture here

Means *vision and sight are interconnected*
how to work with vision and sight
if at the same time
seeing is seen as understanding

Well, the thing is that understanding
this is also a point of information, naturally
and therefore it really can be a vision

then it can be expanded
control clairvoyance system
due to simply, well, in many ways
or something like that, even at the everyday level of development
this technology

for example, you see with your eyesight
there on the physical table
or look with your eyesight
on some object of information
which is located means
Well let's assume the door is behind the table, yes, which
the table is in front of me

the part that is the table
in physical Perception
I can look at the information
what does my Perception mean

I can look later
what is a table in Perception

and see
what is a door

and at the same time that part of the door
which is closed, for example, shaded by a table
I can also see it through Perception
already under the system of connection prolongation
from the table to the door

on the ideology of today's lecture
so this is an extension
creates the Reality of the door

and that's why I can know
what is in the invisible to physical sight
parts

i.e. physical vision
can be as an element of development
and just generally factual clairvoyance

if you want
just see some constructions
at any distance
and in general, including at a distance in front of you
in general, it is possible to engage in such development

in this case it is necessary to take into account
that it might not be possible to do it for that long, firstly
because according to the Macrosalvation system
just clairvoyance where you see it

if you have done the exercise
and that's exactly what happened
what you saw on the level of clairvoyance
coincided with the fact that you stood up physically
looked at the door with physical vision
that's how it is

then in principle if you try to do
the second time or third time in another place
this may not be advisable
because the facts of Salvation
the main thing is to collect fundamental facts

how useful will such direct vision be to you
there in the Macrosalvation plan
that's another question

if you saw it once, felt it and touched it
maybe there is no need to do more

ask yourself a question
is it necessary to do this at all

because the question of Salvation
it's not a question of clairvoyance or healing, for example
question about the application of technology
precisely for the purpose of Salvation

in this regard it is better to work
with some new element
even if it is possible
not connected there, for example, with the vision of the object
but maybe it would be better to work
and simply with optical elements
from which the understanding of work comes

but you don't unpack the optics into the image
because the image
it is a tiring system for perception generally speaking
and it often acts slowly

if you work in optics
and move the optics with the Spirit
mental optics
then you get control and you understand
that you get control

it is not necessary to unpack the images

and if we talk about vision again
then here is vision as understanding
vision allows you to fix
point
near your physical space

i.e. precisely the point of Consciousness
which is located
exactly near the physical space

i.e. not in physical space
and near the physical space

as an independent work
just look at the difference

I can speak

For example , my hand moves
and I speak in this area

where am i pointing my finger now

but it means if I put a thought into it
and I speak as if with Consciousness from here
it turns out that I can speak near this area
but being physically like that again
right here

vision allows you to see
even by the way on a physical level
this optical effect is visible

why does glow occur, for example?
there it comes from the body
By the way, it needs to be balanced
keep yourself in the background if possible
i.e. do not allow optical glow of the body

because the processes that occur mean in Thinking
in physical space
these are the same processes
when you bring them here with your vision

and on the physical
physical vision
here works as a control
and you just take it and bring it out in front of you, for example

if you work near this area
then physical vision
is also located near this area
then it turns out to be a kind of parallax
the glow begins

Well, this is the concept of sensory technologies
there is such a glow that it can occur
if you have such a difference yes
as if I was talking about now

adapt if possible
bring it back into physical space
and work better in physical space
so as not to be seen, so as not to raise any questions

from the side

and when for example you do management
that control which is connected with physical space
it is again held by physical sight

pay attention
that physical vision is an element of holding the structure
at a given point

i.e. here are the answers to these questions:

so the next question is this
when included in Consciousness
more and more objects of management
if we remain within the framework of ordinary Consciousness
it becomes tiring and long
control over the process by enumeration
Are there any techniques for generalized coverage of events?
and generalized control

the thing is that as such
that's just a generalized level system
well let's say in infinite development
It's better not to use it here
element of the existence of such a generalized coverage
if this coverage is not targeted

i.e. another question
that you can simply set a management goal
and make a general generalization
by Macro Controls
which have also been studied

and then the goal appears as a reflected system
from already known methods

i.e. so as not to do control
really each one individually
you can see the general glow
well, like a group of light bulbs that provide a general background

then it is enough to make control
at the point of common background
you will get comparable management

but this is management

will concern a particular specific case of management
and still will not be

as if well, like a universal matrix model or something
anyway, in this case it is better to do it this way
so that it wouldn't be like a matrix model
for all cases
better in every case
to define again one's own management principle

or we need to generalize
it is possible and sometimes necessary to sort things out
in specific objects of so to speak management

sometimes you need to increase it on the contrary
number of connections
let it be even tiring but often it is long yes
it is written here
let it be tiring and long
but it often needs to be done

that's why decisions should be made
depending on that
how to unpack your goal
well, for example, at least in optics

if you go the way
well, a kind of tedious search
by budding off new hierarchical systems

then first of all the concept of "tiring"
this is also information

you can simply remove this information
and then the search will not be tiring

the word "tiring" is a common optical luminescence
in general this information is naturally controllable
you can make it so that it just fits you
as if it worked in favor
and at the same time it was not tiring
this control system

by the way, here it is as a special practice
if possible right now
make all controls like this
so that the control is Eternally reproducible
and did not cause fatigue

right here in front of me
there is a sphere of management
and start practicing

i.e. you need to achieve that
so that you can make the management
permanent, well ideally eternal
and you didn't get tired

then to remove the level of fatigue
from this management
what needs to be done
Here first do it for example in the sphere in front of me

a sphere with a radius of approximately 50 centimeters
at a distance of two meters from me
above the floor surface
50 centimeters
these are the geometric data of this sphere

enter any management task
and within this sphere
make it so that the controls are not tiring

You will have a few seconds of time now
for this

technology means relieving fatigue
in the conditions of application of today's lecture
it consists of this training
what do you see as the image of management
on the inner surface of this sphere

as soon as you perceive
management image
well, like a peculiar optically reflected image
there's just some optical thread glowing there
inside this sphere
and the image optically falls on the sphere

this is where the maximum concentration is
of this optical glow
make a concentration
even if it's short in time
and you will see that fatigue is relieved
Moreover, you can see
that there is interest in a special area

and this interest is the precision of management
in this context

i.e. it is possible to create interests in management
when you do this procedure

I actually added it now
what else would need to be added
as independent work if possible
look what someone did on their own
to remove control

take this universal one for this hall
experience
and distribute this knowledge to everyone

when will you distribute this knowledge
look how the collective Consciousness
is starting to stabilize
and people

in principle, such an element as fatigue
start to lose a lot
and somewhere on the physical level

see how this information will travel around the world
and especially look at the future tense
for example, with an interval of one year ahead or 10 years ahead

i.e. if possible, look at it as one element
Well, that's my goal now
one element of the action of the collective Consciousness
for example in the hall it causes in the interval of many years
and far ahead

therefore the task is to be able to draw conclusions
which you can teach others
elements of development of collective Consciousness
towards Macrosalvation

the question is next
how to properly structure work
with the information matrix of the departed

Well, the thing is that working with such a matrix
primarily determined by the biological meaning of the word
social, as if collective meaning of the word

which was earlier

it needs to be done right away
that the matrix must be living

i.e. from the point of view of today's lecture
this is an element of information translation
from another object
towards, for example, a recovery element
or is it better to immediately do it in the direction of the living one

i.e. therefore work with the information matrix
departed
should ideally always happen
like working with the matrix of someone already living

and build events from this level
well it turns out to be in the direction of this matrix
already among the living

when will you do such work
there is quite a capacious meaning here
functionality, so to speak, of the phenomena of the World

for example if you consider
there are such information objects
like stones
or in a conscious technical system
in general, some types of plants
see why some types
and not all

then you will see what we will say in order to create
element well let's assume we take such an element of Reality
like a dog's ear
basically any

then this element of Reality
to create it, for example, from elements of different types
i.e. those who belong to those living there

for example, a tree that is more functional
how the system is closer to living people
or a stone that is less functional in this regard

then the system of translations of this information
in the dog's ear information

and then the whole dog

it consists of the following
that you should be able to see quite clearly
transition levels
from one to another

you need to make such control right now
which will create the shape of this ear
but taking into account that there is the whole dog further
and there is the whole outside world _{yes}

i.e. here is the control taking into account
what from one ear
you can build consider or create there
the whole dog

do you understand this?
the principle of the Spiritual level of development of information
which suggests
what on mechanical _{as} mechanized
or only at the optical level
In principle, it is impossible to build this completely

i.e. many things are spiritually understood
but they are not built on optics

i.e. here is the understanding
intersects
with an optical model of the implementation of Reality

and when you did this, _{for example}
having understood something on the Spiritual level
or _{for example} everything

and at the same time you made a translation of the forms
then a logical construction arises
which is in principle quite simple

at the information level identify the dog's ear
what is this volume, what does it represent
let's assume there I will take the given form

there is a sphere with a radius of 2 centimeters
what is the tree you take
for management

let it be a sphere with a radius of 1 centimeter
and I will take any stone that is suitable for this
sphere with a radius of 5 centimeters

So I basically got three spheres
I need to get one out of two
radius 2 centimeters
This is a common geometric problem

the only question is
what should i think about this
and where to place these spheres
in the space of your Perception

so when you practice
then here is the space of Perception
this is the same information
but it means that sphere

maybe there is such an option
can be used in this case
filled with a ball of certain information

that these are the Laws according to which
the whole dog emerges from the ear

this is also information

i.e. it turns out that I can simply
construct informative constants
which I simply looked at and saw
and here he built a system

if for example it takes a long time to build
or is it necessary to detail the construction
then I can do the management
which means that this construction is development
that, let's say, level which is its own level
develops one's own Spirit
and at the same time it is management
gives management for the rescue of the same dog there
because of which you can save, including for example
from a possible global catastrophe

because I just gave a specific example here
there was an incident at one of the nuclear power plants

dynamite was planted
and yet the situation is like this
that you could only let a dog out there
and pull out this bundle

and that's when she ran like a dog
it turned out that the ear was injured
and here is how to solve this situation
it was possible only in two designs
there was a stone nearby
and there was , well, like, some kind of vegetation

that management could be done
in this case
as the dynamics of image development
from stone to plant

and this dynamic gave control
as the subsequent body of the dog
where there was contact, for example, between a stone and a plant and an ear
which was just at the moment when she was running
this ear was injured

but if we want to have direct and fast access
so that this nuclear power station doesn't explode
even from dynamite

then this is management
that's exactly what translation systems are all about
that we are from two relationships
wood and stone
and the tree
ear means well it became in general
somehow it touches it becomes wounded
and in general that's how it turned out there
that the dog was fixed
basically couldn't run any further
because there was some kind of plant needle there

it turned out that it was necessary to take control here
even in a physical sense
this particular tree

and since there wasn't much time there
basically, according to the timer, so to speak
which was actually in a different place

then it was possible to solve this problem
as on a physical level
from the interaction of wood and, for example, stone
means to be able to
i.e. what first enters Perception
yes, for example, in the services that deal with it
anti-terrorist activities
that a dog was sent and got stuck there
because some plant pierced my ear
which is near the stone

i.e. it is still the primary information of Perception
we still have to build management
from the same elements anyway

i.e. what I say matters
not only targeted and general, as if canonical
What
from any object
build any other

but also that external Reality
it basically flows into Perception
folded at the same level

therefore control as coming from you
that you have to build the object anyway

i.e. in this example it is clear
what is better to be able to build a dog from an ear

then you are universally ready for it
what if this situation happens
you just finish building it, like changing an ear , for example
and she runs on yes

another question
what does it mean for example having a control yes
we can do dematerialization there, let's say
or teleportation of the convolution of this

but then the question arises
how does this other social system function
there are dogs that can do this in principle

then either we need to teach everyone
this is to do there teleport

or it means using the installed system

this is the concept of harmonization in development
consists in the fact that
that the available systems are used
as elements of manifestation of collective Consciousness
so as not to disturb the order of development
those natural systems
which are also functional

therefore the application of control
in this case it only came down to this
that this flow of information
from plant to stone
went as a management for the seizure of the package
well, through information for example
where the whole dog was finished

so that's when you work
with controls
element of the information matrix , actually
for example, the departed
must be mandatory
matrix of being in already living levels
i.e. where they already live

in this case
if you use this wording
then the control is at the same level
when the bundle is removed
and the destruction of this nuclear station does not occur
which could have caused catastrophic consequences there
for example, in a fairly large region

there is an element here that you
simply fixing the level of living
but not for specific living people, for example, yes
and for the state of the same stone there
for the condition of the same plant
or for the dynamics of the same dog

you fix the level of living
not as a personification of belonging to people only
but in a more general context

then you do event management
and you get that, for example, the package doesn't explode

this one with explosives

that's why it turns out
what does output control ^{mean} matrices
into that structure of Perception
that this is an element coming from the living
this control is more general

it's not just among living people
and this is where the word living people is
controls all Reality
this is roughly the formulation of this construction
using the example that I just gave

is next
how can one unpack the knowledge of other incarnations

Well, the thing is that in the current trend
^{means} giving that value to the physical body
that the body cannot be destroyed at all
and we need to set the task
Eternal development of each

here is the concept of "embodiment"
i.e. incarnation apparently means embodiment
according to my data

here again, management matters
if we talk about unpacking
then we need to consider
what do you want
from the point of view of embodiment to consider

i.e. what characteristic of embodiment
and what is the social meaning of your incarnation , for example?

so I have such a concept as "management karma"
where does it mean if the concept of "karma" is used at all?
karma as a system of cause-and- ^{effect} phenomena
which cause
for example, some obligatory possible phenomenon

so here for the salvation of all ^{there}
I gave a case
well, like in a certain analysis in certain works
I introduced a level there called karma management
that for saving the same nuclear power plant

from a general explosion
the task is not set there why is this happening now
and is this a karmic structure for example

often it means there is simply no time for that
to analyze
as if a karmic reincarnation system
those who are subject to possible destruction
from this explosion

at the same time therefore karma of management
this is a recreation of a more general system
in the space of Perception
where is one activation point
practically means it gives control
and at the same time removes karmic dependence

i.e. this is the management where you are first of all
you don't take it upon yourself in any way
for example, no karmic dependence on others
due to the exit into multidimensional space it is obtained
and not only cause and effect
where the goal of management is the Salvation of all
this is the goal, this is the source, it turns out
removal of karmic plans

if we use the theory of karma in general, for example
or the theory of reincarnation

in this case
if we are talking about incarnations
and that means we have precisely the reincarnation theory
because besides reincarnation
there is an embodiment from body control for example

then in this case
according to the theory of reincarnation
there is of course a sign of karmic theory and practice

and here it turns out the same as in the karma of management
multidimensional area solves questions
you achieve control
removing karmic dependence
and this fact is the Salvation
for the one you are saving

here too we can approach it multidimensionally

i.e. to draw out firstly those systems
which you need
in order for the future to be determined
and it became more stable

and then you generally have to go out into the area
by analogy simply with the karma of management
according to the Salvation system
go into a more general area
i.e. having more functional connections
at one point of Consciousness
well, that is, a more multidimensional area

the difference, let's say, is this, in a simple understanding
in a somewhat mechanized sense
what if you think in one area of Consciousness
and you think cause and effect
that every incarnation
it is completely specifically linear

then in one area you can unpack
for example, some certain number of events
which corresponds to life
for example one of the reincarnations

as soon as you enter
to the point of presence
i.e. what's there
that is you
so this is called a point of presence
for you then the reincarnation system
it is no different from that
what happened a second ago

this is just a spiritual state
what is this, for example, your reincarnation
in terms of specifically optimized or something
in a positive manifestation for you

as soon as you leave
on the concept of the Truth of manifestation
then the truth lies in that
what should you do management
so that your reincarnation means transformation so to speak
your reincarnation system
she worked as efficiently as possible

for the Macro Rescue system

the thing is that this is essentially how the world works
that everyone is still preparing to take part
in any possible fundamental situations
which may arise from the Macroregulation of life

This is the development system now
that people can be destroyed now
from some global system like the nuclear level
or even bacteriological or chemical
and almost simultaneously

then reincarnation systems
they are basically folded like this
that their development and focus
is aimed at solving this problem

in this regard, it is most simple
unpack exactly these levels of Salvation
where can you get knowledge for example or methods
although here are mechanically directly transfer methods
as a rule it is not necessary
some kind of correction factor needs to be introduced
at this time
if you have it there large backlogs for example

another question
that it is easier to work with information from the future often
than to use reincarnation systems there

and then you just need to do the same as in any management
choose

Now I have come to the nodal point
so in this answer

Here
this is the selection process
it is a multidimensional level of direct access
i.e. the selection process
he immediately declares multidimensionality
at the access point
and control can be instantaneous

as an independent work
look what is primary direct access

this is practically management
by meaning incarnations

and if you, for example, make management of this nature
can you do
for example, to manage with some time
there for some time

you try to look
this is the difference in management
when there is time
or when, for example, there is no time

i.e. find that universal component
what to manage with the presence there some time
or control when you control instantly
when there is generally no time
or not for some reason
or you don't want to use it there
the element of time in Perception
well, for example, more than one second or even less

look, it's the same

as soon as you find
what is time management
or control instantly
it's basically the same thing
you'll hit the spot right away
where do you mean you see mean
how to manage access system
to that means precisely to reincarnation incarnations

i.e. this Spiritual point
and the point of Consciousness at the same time
this is access to unpacking

once you unpack
firstly you have a target unpacking
useful so to speak
secondly you can use
some potential from reincarnation

so next question
O Means in digital order
I'll actually read out the questions now
that's exactly what we're talking about

what is the phrase *digital order*

the thing is that, generally speaking, it is precisely in this part
this question is of great importance
from the point of view of understanding
connections for example numbers
And
elements of external Reality

this is precisely the concept of the order of numbers
where each for example number
costs
for some other

and vice versa means if the number
for example, surrounded on both sides
i.e. to the right of the number there is a number and to the left
and if there is no number on the right
what then arises

i.e. let's look at it in this context now
here it is right in front of me at work
look, well, it 's a kind of energetic meaning
such a combination of events

the first element of the event is a number
and around there are two numbers yes
let it be a sphere again in front of me
there is a small radius, for example, 10 centimeters

take a sphere of 20 centimeters
at a distance of, for example, 5 meters from me
where is the number
let it even be some order of numbers
and after this number
there is no more , the number ends

look at the difference between these spheres
how do they differ except for size and distance

and here is the line that connects
the centers of these spheres
this is in the context of my lecture
this is the digital order

the digital order can be interpreted
that this is precisely the order

well, in the usual everyday sense

i.e. that's how the numbers are, they are in order

so when you, for example, consider the Spiritual meaning
this lecture

then you see the interpretation

well, for example, from the inside of the universe

in this case the universe is very bright
and as if from the inside

enter that state of light
when you see the light as if from the inside

and that's why it's clear that light will always be everywhere
i.e. knowledge of creation they will be everywhere always
because there is order ^{yes}
in this case it is a digital order

similar level of order
which I generally described
from the point of view of a largely optical model
try to output in everything else
for example, the order of life ^{yes}
there is the development of the universe, etc.
or the order of Eternity

i.e. if you use the word "order"
then what kind of order can there be in Eternity?

so it's logical if you think about it
then here is Eternity
as if it were, it turns out to be Eternity
and any number of combinations are possible there
various phenomena

but then how can it be there
some kind of established order, ^{yes}

it's immediately clear
what does it ^{mean} the creator is the order
i.e. the Creator who created
He created and order

the question then becomes this
that the question is about order

this is a relationship with the Creator
gaining knowledge of the current order of actions

i.e. consider another meaning
what I said
on this example

so the question is next
*so how can you erase
an unwanted event from the past*

the thing is that, well, first of all, erase the unwanted event
Can
firstly, the method is still a change
as the most fundamental way is this
of all Reality
and you no longer remember in the future
that the event for example existed
i.e. as if you set such a task yes

it means because
here is the concept of "memory functionality"
it still exists
and then there is another type of memory
so this is a spiritual state
which characterizes that it happened

i.e. if, for example, there was an opportunity
there some disaster or some past disaster
under certain actions
restructure naturally
at a certain large volume it can sometimes be
it is still possible

another question is how much there is
Everyone needs this, for example, yes
to you personally

and if you think
that even you simply need
can you do this

and here I remember, as if matrix memory
which you have
this is the accumulation of knowledge
it is mainly located in the area
it's like a projection of the heart

a little further from the physical body
ten centimeters

there is a point there
means in front of the chest
where exactly there is information about events
which in the current time
arbitrarily or not arbitrarily
basically erased

for example if you consider
the system of development of Reality
as an inertial system
Well, that's how it is if you look at it this way, first of all, yes
and secondly, it is logical
and so it is in the nature of things

i.e. if the inertia of the rubber there
or the inertia of some elements of Reality
exists
example, I noticed
especially in erasing information on objects
which can lead there
to global type disasters
like the same nuclear power plants

there is a list of events
as if it is gradually being withdrawn
from the level of negativity of the situation

i.e. let's assume first one division
reports that everything is fine there
and although the second is parallel with the presence of a direct connection
also says that they see catastrophic
then the second, etc.
as if a unique event is being erased
example, let 's say

let's assume there are problems with the reactor
which could lead to disaster

this event is erased
all the same gradually

and here's after it's erased
right down to the documentation

there may not be any structures left in the documentation
Well, basically it's almost documentation
and even the instrument system
do not reflect the event that occurred

although sometimes they do reflect
here in percent is true 80
as a system for developing a further level
the reflection remains

but there are times when this is not necessary
then memory in such systems
it becomes like a state of the Spirit
at a local point
and you can unpack it and look at it
how many events are basically negative
for example , you erased it at the time of control
and which
maybe already there on a certain periphery

i.e. the inertia of information
it's not only from you
but she is also to you

you can use this inertial system
erase somewhere
and in a certain system physically manifested even
this situation has already happened

and then it turns out
that you erased this information
well, like logical memory
you may not have

but if you want
restore logical memory type
then you must enter this point
unpack
and look at this Reality

what did you even do
and in general if you want
it is possible to find elements that would prove
that this was happening

another question is the main one
in this very question

what does it mean that the Creator created everyone
so free
that access to erasure in the past is just as infinite
how much is the management of the infinite processes of the future

and here is the element of infinity
it is contained in that
that you have for example logical memory

i.e. in this case
logic is the manifestation of infinity

and then you can do the management
erase from the past
with factual erasure
even attributes, for example, of physical Reality
some objects there
and at the same time have
absolutely clear memory of that event

then the technology is of course clear
that it only consists of that
that you will have to set a goal
like any management
why do control by erasing

if this is management
leads to future ones for example
as if to a certain series of events
which you really need
then no problem you can wash it

but naturally in this case
you have what your physical memory
stores an ordinary event of the past

but for management if this erasure is necessary
then erase

so basically well that's basically it
what I would like to say, for example, in this lecture

I just would like to maybe add something else
here are some questions related to that
that this could just be a technical issue
so, for example, to say about a second higher education

when start duration etc.

the thing is that, well, considering that this program is mine
where books on structuring Consciousness are taken as a basis
this is "Applied structures of the creating area of information"
"Unified knowledge system"
and in general those materials are lecture materials
video gives, for example
generally speaking all materials

this program is approved
here in the Ministry of Education it means as a state program

in this regard, there is an opportunity right now
after training as if this is standard
there are 1118 hours there I think
issue a diploma of higher education
second higher education
and with a specialty as a technology management expert
warning forecasting

to get such a diploma
or undergo such education
First you need to dial the number of hours
either independent work and lectures
or in most of the lecture

here the question is well it may not be that big
It's tough in this regard now

and I think I will offer
this is the type of education
who would like this, for example
this is a second higher education

then the proposal will be something like this
to show it somewhere apparently
that a certain number of lectures have already been completed
Well, as a rule, this is already the case
whoever goes to lectures is taken into account

secondly, it means specifically if we are talking about higher education
then here we will have to get it formally
and in fact in many cases
that's when it comes to the minimum number of hours
just dial the number of hours

and then in general it turns out that it will be formally maintained
like a status, well, a normal status used in higher education
that there should be a certain number of hours
there are some number of in-person ones
means home or correspondence plan

you just have to watch it in the program
In general, we need to take it from Georgy Stanislavovich
Apparently if anyone wants a curriculum there is one
and see how many hours you need to get there
in what disciplines

and in accordance with these disciplines
it means that reports of the usual type are simply written
and plus, it seems, there is also practice

Well, basically, it means that this is a fairly standard procedure
which is applied as usual
so we are talking about knowledge of simple factual material
including
i.e. we mean the material that is the basis
for this program

this is the book "Applied structures of the creating area of information"
and "Unified Knowledge System"

and plus management techniques
there are related to sustainable development

this is generally in terms of literature
if we say talk about the text part
it's actually in the text part
it's not that much

another question
that like any management
any education

my goal
it is to give education
really giving control over Macrosalvation

this is more important in this part
these are of course the reports
which are written in this form in the usual way

and these reports should be

simply means at a certain time
handed over

I make a conclusion based on the reports
and together with knowledge of , say, the usual text of the material
this is already considered as a certification period or something

here are all the subtleties
what specialties, for example, can there be
so, well, it's activated, so to speak , then
for second higher education

is there some approximate list of specialties
but they may simply be of a targeted nature

in general, of course, I will try to do so
so that the maximum number of people are there
with the broadest possible level of education
not only is it possible there as only strictly listed
could get a second higher education

but also higher education
there are some strict criteria there
but within the same program
approved by the Ministry of Education
there are courses there
there are such external courses
where can i just get a certificate

basically, that's what's written right there in the certificate
that the course has been completed on the sections of my Teaching

so actually speaking here it is possible
maybe just certificates first
these take
because it is desirable that they were

and here is higher education
it's up to each individual to decide

so here it is
I'm finishing today's meeting

thank you for your attention
