

GRIGORY GRABOVOY
Structuring of Consciousness
**Access Control Technology
to any point
space-time**
(6)
26.07.2001

Good afternoon
in this lecture
according to my system of salvation and harmonious development

I give the technology for the first part
this is the prevention of a possible global catastrophe

the technology that takes into account the possibility
transformation of the visual signal actually
i.e. what you see at the level of Perception
in the possibility of propagating this signal
by Macroregion

i.e. in principle
access to any point in space - time
and control access

according to this scheme
the principle will be like this

it means that when you consider
any object of information, for example, well, visually
let's say you see a person approaching you
or when you look at the expense of Thinking
or you see, for example, a clairvoyant image

then all these areas of Perception
Well, for example, you can designate
some area
zone area A
i.e. everything that is perceived
as a visual level of information

Let's just look at a specific example
there is a specific person walking there
and you see it physically

then the first element of this level of control
consists in the fact that
that you need to define the outer area
in physical space near
near him

i.e. you kind of just assign external space
near this person
some kind of peculiar complex
it might look like a cone or a hemisphere
maybe a sphere

it can be arbitrary for everyone

in this area inside this area
you make the maximum concentration of your Consciousness

so if I'm now talking about the physical realm
it's quite clear
because you do
maximum concentration of Consciousness
for example near this person
within the area you designate

and what is this concentration of Consciousness like
that it achieves practically
any level of management
and therefore, i.e., you can achieve
virtually any point in the control space
and this concentration is exactly like that

i.e. the purpose of concentration
reach any point in the control space
through concentration for example near
visible image on a physical level

if this area is mental
i.e. you for example selected some fragment of Thinking
and they began to do it near this area, as it were
the same exercise, the principle is actually the same
you make such a concentration of Consciousness
she is so tall
that you achieve control
at any point in space-time
according to your management goal

then the important difference here is that
what should you do first
set the distance between this area
and the place of your concentration
i.e. it should be the distance you modeled

and the second difference is that
what is the concentration area
and the area there light area
from the realm of your Thinking
These areas should be of different sizes
simply in geometric Perception

i.e. you basically have a sphere of your concentration, for example
should make it bigger in volume, for example
than the area that in your Thinking means
optical signal

if for example this area is clairvoyant
then you are clairvoyant from the point of view of that
that exist there
some let's assume physical images
well there is a tree, a person or some area from
as an option, for example, such that you see through clairvoyance
some specific physical area

then concentration occurs
right on the border of this area
it's a kind of screen that rolls over you
and you see

in clairvoyance
you can watch it practically locally near you
and consider a kind of hemisphere
She can push through like a wave
as an image in your Perception

and then it turns out
that this image is not only the image of your Thinking
but also exists in the macro-collective Consciousness

here I have just introduced the term
here is a slightly new term
in the sense that there is a concept of collective Consciousness
for example which implies
what is your personal Thinking

also part of the collective Consciousness
but macrocollective Consciousness
this is something that, so to speak, many people know about

and for example a physical image
or the level of physical ordinary Reality
these are elements of macro-collective Consciousness

then when you work
taking into account the macrocollective Consciousness
actually at the wave front
optical wave

so i.e. I basically distributed it now
Well, let's say there are three levels of work.
with three different levels of Perception

Of course you can find it
there are still some areas there

but in principle these are the three levels
at maximum concentration of Consciousness
in the areas I have indicated
for the purpose of access via the Macro Rescue system
on the system of preventing a possible global catastrophe

they allow
actually carry out management
in terms of level, it is absolutely realistic for this
that you do not allow macro destruction

the logical principle of this approach
consists of what you do
maximum concentration so high
that you have any area perceived by you
so first of all you make it sustainable
i.e. this level of concentration
First of all, it improves health
or there it restores the information object
towards which you are concentrating

and you can use it, for example ,
for self-healing self-regeneration

secondly, it is precisely this level
so-called maximalism in the concentration of Consciousness
it is such that in principle

in the genetic system of a human being, for example
these concentration levels are laid down
and they are determined from the point of view of physiology
genetic development of humanity

i.e. if we want to have
balanced well like a genetic level
in a software version of infinite development , perhaps?
for specific people

then we must do it accordingly
Special exercises generally speaking
which would then determine canonicity
for example, genetic information
from the Creator's point of view

i.e. the Creator created genetics for example
what is called in the materialistic understanding
genetics
and this genetics
must also be controlled by Consciousness
and it should also be manageable
from the point of view that if there are
some external influences
then these influences must be such
from the point of view of their management
so that they couldn't change
some genetic parameters of human development

in this case it means I specifically deduced
this very characteristic
from the point of view of the general approach to Macromanagement
that genetics has a generalized nature

i.e. there are universal links
from the point of view of information Perception
which characterize what your genetics are
it has certain nodal points
the goal is the same for all people

for example if people live on earth
for example , everyone has the same desire to breathe air

the same thing genetics is arranged like this
what are the same
from the point of view of information Perception
managing this information

there are absolutely identical areas

and here is the second part of the lecture , for example
where do i talk about that
what does the level of the generalized genetic picture mean
you have a self-healing system
including the restoration of all surrounding for example
or Event Norm Management

in this part of the lecture look
just pay more attention to future information

for example, now I will talk about that
how to use genetics means and at the same time

and what's more, generalized information
from the point of view of genetics of all
in order to be able to self-recover
and harmoniously manage the entire external there
or inner Reality
or at the same time the inner Reality

Now I'm going to talk about this part of the lecture
let's just make a system of exercises like this

if possible, tune in to that
that exercise is not one
and everyone can have it independently

but what follows after this part of the lecture
consider

for example, here in front of my desk
there is a certain space there
at a distance of about one and a half meters

in this area
simply in the geometric region of physical space
review the third part of the lecture

this is the management of events from your Consciousness
direct control of any level of event
from the point of view of creative development

and if possible just now
start reading this information
each one individually

at the level of Perception
you can use it now
namely the genetic channel of human development
this is a generalized channel

it is basically the same type
so when reading from this channel
you don't get any intersection ^{there} with anyone
and you don't get the information readout restraint

so you try
just start doing it
" just watch for a bit

this information is right here in front of me
at a distance of about one and a half meters

and you take
and you read each one
everyone must add up
a clear idea in one's Perception
or optical
or Spiritual
or specific
This is what I will talk about in the third part of the lecture

you do this for now
to read information
you just have to do it mentally
some control optical signal
a peculiar beam of light
to this area
and how to get it back through a reverse channel

the technology is very specific
no generalizations are allowed here

and if possible, take a look
why don't your channels intersect
with no one around
now for example here
or from those people who will listen to this lecture
for example, from a video recording

i.e. do the analysis at the same time

time is about a minute

you need to understand in a minute

i.e. not just see it there
and also to realize

If possible, take your time in driving
i.e. do it calmly and increase the time norm
due to the same management

i.e. enter that there is a lot of time
as if it means just a signal of consciousness
take your time

because for this management
Sometimes a few seconds is enough

Now if possible reduce the minute to a millisecond
i.e. make the information minute
in your Perception
equal to a millisecond

and from what you did
build your own cage for example there
well, in the area of the little finger of the right hand

build

you did
you did it with the help of some information
information that I am not talking about now
so this information builds your cell

first principle
find this information

the second one to build through it
without defining its characteristics

try to do as I say now
for example, simply by consistently following the logic of words
or there to what I say
you can do it now without analysis

so let's say we made one cell
built their own organism around the cell

so now that they've done it at the management

try to see
where near your physical body
contains genetic information of all people
including all future people

if you want add all the previous ones

i.e. where in what geometric place
near the physical body
This information is now located
after such preliminary measures on management

then look now
due to the Perception of the internal due to clairvoyance
or simply as if internally assessing the situation
then look at the people around you
which are now, for example, in the hall
who do you want to look at there near me or near the neighbor

where is this information located
others have

if you find a difference
see how you found the difference

so in this part of the lecture
This is where I'm just getting to that
what is an indefinite characteristic
with which you worked
that's how you did it ^{yeah}
how did you discover this difference

try to be more careful here
because it is a management area
which is not defined by words, for example
not defined
at the level of the Spiritual impulse of control

and control comes from the level of the Soul
i.e. control that occurs through the levels of the Soul
may not be characterized by a spiritual state

and in connection with this
since the Soul reproduces, for example, the Spiritual state
then you be more careful
because this level is perceptible

see how you perceive it

i.e. on Perception

that level ^{as} I simply called it

this is the level of control through your own Soul

then how do you perceive your own Soul
and what

so at what point of control do you perceive

because everyone obviously has Perception

I did because I named it first

secondly, you already had it

and this is how you perceive it

since Perception is already reproducible

those. Soul first creates Consciousness

then part of Consciousness is Perception

then it turns out

than you perceive now

your own Soul

Well, let's say, asking ^{the} same question many times

I'm starting to answer it now

First of all, the answer is it exists.

i.e. each of you has an answer

who will listen to the lecture there later

by video or by transcript

for example, give a lecture there from a transcript

if it is written exactly like this

I think it will be written in the same production part

then when reading this text ^{for example}

Perception will occur at the level of localization

already on a sheet of paper

Perception will go

if you perceive a sheet of paper

but this sheet is an external Reality

if you are watching a video

then you take information ^{as if} from a video recording

questions come from there, ^{for example}

in this case, I am the one formulating the question
we are in the same team now

it turns out that in each case
you have different levels of Perception
but it's localized

i.e. everything that you reproduce
in relation to being outside oneself
this is also one of the detectors of your Soul

i.e. the presence of your Soul
in any information object
with such technology of knowledge
can be easily detected
up to the geometric level of presence
there in ordinary three-dimensional space, let's assume

so in connection with this
as homework
there will be a task

find the level of presence of your own Soul
or the Soul of another person, for example
at a specific level of information
in your Perception

i.e. if I look
on the door
or on a tree
or per person
or in general on your thoughts, for example, yes

then I can consider
the presence of the Soul of each one there for example
in a specific geometric location
of this information object

and here, for example, when I said something like this
what can I consider in my Perception yes

then here is the opportunity to move on to that
that I can watch without Perception
without information Perception as such

i.e. to form an image as if the opposite

First I look with my Soul
and then the Soul forms Reality
and I give her the given characteristics

it means in the elements of materialization
if there or quick control
in case of problematic situations
with as if quickly flowing let's assume yes for health
or so as not to allow
if you see this This in management
or in the elements of resurrection

element of external control for example
when the Soul is being managed
and Perception is formed
by the purpose of logical control

i.e. how to do it like this
so that the logic of your task
was at the same time
and the logic of the development of your Soul
from the point of view of this management

and in this case it is done quite simply
i.e. you just control the Soul first
without declaring, for example, the principle of control
from the perspective of the current wave of control
i.e. you control and that's it

and here you see
that the Soul controls so
as you put it into the control logic
because logic is a secondary system anyway

and therefore control is obtained from the secondary system
it consists precisely in that
what is the primary system?
has already outlined the control trajectory

and that's why we

Well, in this case I am considering the primary system
what is this Soul

when we talk about the primary system
about what the Creator has determined
development space initially

as from the primary point of development of everything

then he already knew
what will happen ahead

well, practically up to any level, there are micro-events, let's say

then the question arises
what is it
current time given this knowledge

for example I know there what's happening
from the point of view of information in the past
if you control the past

or what happens in the future
if you control the future

then current knowledge
what is current knowledge
or the time of current knowledge

this part of the lecture is basically
this is the one I'm talking about now
it is fundamentally different
as if from the first two positions

it concerns access to any level of events
based on the level of Perception

this lecture
it will still be quite complicated
and there will be many layers in it
in the sense that transitions
between one piece of lecture material to another
will sound illogical

so that's why when you listen to this lecture
the logic would be that
what is your task
keep control of Macrosave at all times

the second part is a guide
it means self-regeneration
plus general harmonization
based on the fact that it happens in real time

and here is the third part

this is the management of any event
from the level of one's own Consciousness
which basically means that
what if we have two parts of this lecture
two parts are simply compatible
then we will get the third part of this lecture material

then as I told you
what you should have considered
lecture material
in the third part of the management
from your Consciousness through events forward

then accordingly when did you look
did you formulate any questions?
and received certain answers
in the part of the lecture that I am talking about now this is taken into account

it looks like that
what if there is a preliminary exchange system
so with some preliminary papers, for example
then in the final part
only that part is said in words
which is already new

so be careful here
because I gave you the task to count the information
and everyone thought differently
then the third part is fundamentally different from the first two

then you need it at the level of Soul Perception
find the characteristics of these differences
Now

i.e. you will have to, for example, in real time
that's when i say
find
what is the difference between those first two levels of lecture
and the third part of the lecture
at the level of Soul Perception

when I said just now
about the level of Soul Perception
you calmly began to work on the Perception of the Soul

then the question arises
and what is the difference in perception for example

which is part of Consciousness
and Perception of the Soul

there is also an element of development which implies
that you have knowledge
I'm just saying this
do it this way and that's it
and you, for example, don't ask
at a level, so to speak, telepathic

I have practically formulated the question now
nobody asked the question
what is Soul Perception what is the difference

therefore I just announced it now
Well, this is the characteristic of the structure of the Soul
that the answers to fundamental questions
for example, Eternal Development they are contained there

for example, there is data in the Soul
how to resurrect there
how to regenerate tissue
how to manage towards Eternal development

and the task is
in a mechanical sense of knowledge, yes
with the glasses of vision where mechanics
I mean there is logic here

consists in the fact that certain things
if possible, you just have to do it

i.e. first you need to do
and that's when you do some management elements
that's when you've already done them
you discover that the Soul has
quite a specific mechanism for example, the development itself
firstly self-adaptation
and external control

here as a mostly independent one
in this case work
but that will have to be done later
better even two or three days later
after listening to this lecture
the next status will need to be determined

if you do management first
then from this management
find the characteristics of the development of the Soul
characteristics of the structuring of the Soul
characteristics of the Soul as such in general

in terms of Perception
that's exactly in terms of Perception
where is the logic of Perception

so I took it in Perception and sort of dismembered it
another level like this
which is called the logic of Perception

i.e. Perception is like , well, if it's a mechanical system
we are any object of information
we can perceive that part of the information
which is called logic
on that part of the information
which is called, for example, Soul Perception information

and here I entered the word "information"
as a word that unites
and Perception of the Soul for example
and Perception at the level of Consciousness
i.e. a secondary system in relation to the Soul

it turns out that the word entered there is logical
can combine positions
means that now we can explain

in accordance with this
as homework as well
if possible, find the words
that allow you to explain the current situation

i.e. you are in this situation too
you can make development objectified for you

i.e. there is an infinite number of events, for example, yes
external or internal Reality
any other for example yes
I specifically introduced the term "any other"
not to say that there are only two types of Reality

and your task then is to
to manage all these processes

but you are here
in the developing world which, generally speaking,
Well, right now, nothing is happening there macronuclear explosions
i.e., in principle, it develops quite systematically

and your Soul is involved in this
while she is participating
in managing all these processes

because according to the Laws of Communication
with all elements of information
these connections still exist

and when you consider this approach
you will easily discover
that generally speaking the system of knowledge as such
Firstly, it is simple in this case
secondly, it is transferable
thirdly, it is sometimes transmitted very simply there
I can not speak
there we will assume to form an impulse to transmit

is happening
or healing
or there is materialization
or control yes

in principle, you don't even have to talk about it at all
in this control system

but in order to convey knowledge it means broader
and let's say in the most accessible way
we need to formalize them
i.e. make them accessible
from the point of view of definition of concepts
which do not change the essence of management

and from the point of view of that
what if you put it very clearly on a piece of paper
then there are no problems
all this can be considered
simply by visual perception

Now let's take two parts of the lecture
as on everyone who listens to the Salvation technology
the task is to transfer education
all of them

so as I said about it
mean when we read
is located locally in the area of the sheet of paper

and I set the task of transferring knowledge
from a development point of view, for example, yes
some management process
and observations of it

then just do one simple thing
if you write by hand, for example, on a sheet of paper

what kind of mutual control exists
a sheet of paper and a hand

if you are typing on a computer, for example
then what kind of mutual control exists
then the computer and let's assume your Thinking
or your hand

so having carried out such an analysis
you will find areas
which characterize
mutual development of various elements of information

and you can determine it there then
how then to transfer knowledge there

if these are schoolchildren
or are they people with higher education
or are these people who have no education

how to transfer knowledge in this case
you can see it only from that
that you will simply spend
systems interaction analysis
with the glasses of vision of Soul Perception

i.e. the introduced term Perception of the Soul

so when you consider
management as a system, for example, infinitely developed
in space-time
i.e. your management is meant

then you see that you are reproduced Eternally
from your management point of view

then it turns out that it is enough mentally
prolong it
and tie into the root systems of information
the idea that your control is eternal
and you have a clear trajectory for your development
with t Macrosalvation glasses

i.e. you decide for yourself
how should we develop further?

and this is free will
i.e. this is management
this is the freedom of your inner will
well or any will at all

in this [...] here this part of the lecture
try to take a closer look
because your freedom of control
that you are doing this in the wrong place under pressure
not because we assume that we have studied some system
and this system is so static
that it must be there, definitely there
or functionally repeat

you will understand that the management in each case
it may of course be completely new

but let's assume the criteriality of control
well, related to freedom of expression
with freedom means behavior
it consists of
that you can then only feel
free control impulse
consider it what you are doing right

i.e. the principle that comes from
from the state
proper management
because you have the right state

so this is the control system
this is the access system
to any point in space-time
by control impulse
when you are in a state of being in that
what you are doing right anyway

so in this case
this is a new design in my technology

where the state determines the control precision

means the state that determines the control
this is a different state

and the state that determines the control accuracy
this is accordingly a different state

so, well, different, I said the word "different" twice, yes

in the first case I said it in relation to management
in the second case I said in relation to the state

look at the informative meaning and difference of these words
at the level of your information Perception

so i.e. it's the same word
I said in different phrases
and in different control compositions, so to speak

just right now
I'll spend about a minute analyzing and working with you
look again in front of me
at a distance of about one and a half meters
there is a vertical column of information, it is endless
for example, silver or white

you try from this pole
read the difference of this word
in the first case
and in the second
I'll watch for now

now make the next control option
when you looked at what it means, can you explain the difference
and when did you do these exercises
along vertical flow
look what you were doing

i.e. look at what you were doing

ask a question
I said make the control there
look

then what
what element of the Consciousness of the Soul or Spirit
what did you do it with
and where exactly is it located for you?

in this case it is necessary to find these points
i.e. everyone must find these points
at home, well, for example, it's better near the physical body, it's easier

or in the space of Thinking
then we need to fix this space

so having found these points
make the following control

in front of me is
the task of all those present in the hall
who will watch the second level
who will watch while studying lectures

third level
the task of all, generally speaking
plus infinity yes

here are three levels of tasks

with the help of what you mean you determined the difference
using this tool
make management
for the optimal development of these situations of tasks
right in front of me now

in principle, anyone can withdraw
his tasks or others who he wants
right here in the area in front of me
just enter
about a meter and a half from me

a certain sphere there means for a single task
you do the management
using the tool I mentioned
what did you do management to detect the difference
between two identical words

using this tool
you do optimization of all tasks
this is someone's treatment

someone has event management etc. yes

now rise higher

Well, let's assume that you can rise a few meters there.

right here in the space in front of me

and make management by Macrosave

a kind of umbrella as it looks like a background there

do management by Macrosave

it consists of the following

that you are just doing management

or want to log in

to a specific geographic area

and do it there

if you think that's the problem there

It's possible that we're talking about a nuclear warhead

which must be brought into a state of stability

so that there would be no explosion, let's assume

what I say is "let's assume"

Generally speaking, this is real information

that means that's why they made this management

Now look at the balance sheet well as if information or environment

around those present

i.e. look at how the state has changed

after these exercises

i.e. around you

has the density increased

or for example she became different

it means what information has become more unified

which one is more individual let's assume

if she became individual near you

I'm only interested in what's around you

Now in this room let's assume

analyze

and based on such an analysis

I specifically don't give the opportunity to bring it to the end

and the concept is that "to bring the analysis to the end"

Generally speaking, you just need to set the positions

what to bring the analysis to

up to what point of Perception

what to call the end of the first characteristic of the analysis

this is a unique spiritual state
which suggests what's next
or don't do it
or some circumstances have changed
Thinking switched to another image

then in connection with this here when I speak
that the Thinking switched to another task

look at it some more as if geometrically higher than itself
above the physical body

look
this means it may even go to the extent of
that mentally rise
and look with seemingly physical eyes from above
but for information

and when did you look ?
pay attention and find
pay attention and find
the area that characterizes
why the circumstances of external Reality have changed

i.e. how do they change in general

i.e. well , yes, it's clear that a second passed
some other TV show came on
or the situation has changed, for example , in the Caribbean, conditionally

so why are these events happening
Well as if outside of you
and you react to them because they happened

look this way
that just rise higher
and look
where are the control points for these events

how to purify water there in the same Caribbean basin
or how to make the ecological system there clean
there in any city, even a very large one
how to make it optimal and clean
this system
i.e. stable

means according to the designated levels of tasks
it is clear that control points generally speaking of any process
exist including
and in geometry near the physical body

and any management in general
can be found
near the physical body
precisely in the outer part

so try from this area
first of all, build yourself
i.e. having found something as a home, so to speak, level of development
finding the control point
build from it
your physical image

and even look
why near the physical body
you can always find it
area of control of any process

in many ways this may be a somewhat philosophical answer
but nevertheless i want a technological answer
so that everyone has a technological answer
at the level of optics of perception
at the level of the application control goal

second task
why is it always so easy to convey information
from one to another
according to the system of Salvation for example

logically clear
first element if you see a person
then his information is personified with you
you are also a human being

in this regard, the commonality of, for example, the same genetic system
enables direct transmission of information

these are the transmission systems
if possible, find and watch
how to transmit information through them instantly
for example about Salvation
or in portions if you have time

and the third level if it is a plant
then what is the difference and how to convey it
so that the transmission speed is not less

i.e. a kind of training of the plant
or telepathic
or there is information
how to develop in this world in general

what the plant should carry on itself
what development function
is it a stone
or is it a micromolecule
generally speaking, any element of Reality
must receive control information from you

and as the final part of this lecture
look
three levels of this lecture
find sublevels there four five or ten for example yes

find a generalized control system
and look
how could this lecture be spoken
from a higher point, for example, without dividing into levels

i.e. for example you want to transfer knowledge
but you have no time to talk
that there is one level, there is a second one, etc.

but knowledge still needs to be passed on
or very quickly
or is it slow there

but then you should speak as if in the same type of speech
and then it's just that
another control point
which will include everything that can be broken
basically to sublevels

as a practice of knowledge transfer
do this exercise
and then do the exercise
if you want to pass on this knowledge to someone
about management
make levels like this all the time
Well as if simplifying the transfer of knowledge

sometimes it can be a complex phrase

Well, which one is another system ?

this phrase characterizes very well

and in general, another person, for example , will definitely understand it

so how do you need it for management

sometimes it's a simple phrase

but it needs to be repeated there several times, for example

that's why we need to keep track

future events if possible

and speak depending on that

what future events from the point of view of Macrosalvation

give

it's actually very simple

you seem to be in the information and are actually in it

are there

in the next iteration it is clear what you need to say

and then you make a simplification

this simplification may not always work out

from the point of view of simplifying words

but it may be that this is precisely the adaptation system

which is being built largely mechanically

at the level of Perception

by way

i.e. the next area

under construction

from all previous areas, for example , etc., etc.

until you are absolutely sure

that all the knowledge you want

they are transferred

or using words there yes

or without using words

two options

due to this

here as a special, so to speak, training

special task of the Rescue Mission

which everyone must perform

I think it will be important here

practice enough

it's exactly with this lecture

as soon as possible
or there is a super-fast level of knowledge transfer

when can you hand over
either instantly there or let's assume as needed
and be sure to achieve the goal

due to the fact that you are simply mechanical
build transmission areas
or simplify them
or maybe you're complicating things there
but you definitely achieve that transmission
when in the future you see that everyone is saved

i.e. these are just two links of control
one link transmission
the other thing you see is that everyone is saved
and how would you just need to establish two connections

but having installed these two [...] taking into account the entire apparatus
about which, for example, I spoke today

obviously you can of course use it
everything that I said earlier
there is all the previous knowledge on management
or there are your own

but it was in this lecture
we need to build at least these two links
and prove that the Macrosalvation management
always implemented
from the point of view of what you are now

for example, you are here now
this means that the Macro Rescue control has already been implemented

how do you put these logical connections
it becomes immediately clear
judging by the reaction in the hall now

so on this part
in fact, as if homework
I'm finishing the lecture

now I have somewhere around 15 minutes break

I'm starting to answer questions now

in accordance with usual
with the context of the lecture material

i.e. the answers that I will give are as follows
that this is actually development as well
lecture material
and a system for understanding this material
in the application to a specific question , for example

in this regard, if possible
in this part of the answers
split the first part
this is a development of the lecture material

and the second part
where exactly
and in what area of the lecture material
I mean, I practically just explain it in the app
the lecture material itself

i.e. when I will answer specific questions
you differentiate immediately if possible
a specific answer on two points

because the answers are like this
what is the lecture material
Well, for example, it formed in the form of a sphere there
a certain radius in front of you
and you can approach it from any point in this sphere

i.e. it depends on where you are looking from
from here you will understand
precisely the applied meaning

the question is next
*please tell us about the technology
when working with blood diseases
is there any peculiarity when working
and does it matter
with blood of different groups*

so the situation here is as follows
the thing is that I'll start with that plan right away
that when we talk about differences in blood groups, for example
then first of all we need to understand here
what is in the general system

for example, in the same genetic system that I talked about
where there are universal links, for example , information
and they are universal for all people

including
including information about external Reality
for example, information about plants there, etc.
stones
external some galaxies of universes
or microcosm

in accordance with this
when you look at the blood type
from the point of view of the information content of this component

i.e. instrumentally detected difference in blood groups

you can see the difference
from the point of view of the external environment

but from the internal point of view
well, sort of a uniform environment
there is no difference here, generally speaking
Here from the point of view of lecture technology

so you look when I say that
at the genetic level there are no clear areas for all people

what is the component of blood

well in this case
for example if I take hemoglobin
then hemoglobin can be developed
how is the system there microcosm in information
so is the system of the macrocosm
but here the development is structured like this
that in the macrocosm hemoglobin manifests itself
from the point of view of the distribution of the Soul
and in the microworld it is the structure of Consciousness

i.e. every element of Reality
we can break well the physical Reality of the body yes
let's assume blood

we can break it down into Spiritual projection
for example, to the work of the Soul
and to the work of Consciousness

in connection with this it turns out
what is blood type as such
it just characterizes
some individual characteristic
corresponding to a certain position ^{yes}
information ^{there} personality

and therefore transitions between blood groups are possible
within the limits of development
it's just that transitions occur in accordance with systems
so-called ^{well} pulsating levels of change of Reality

it looks like ^{something} like that
what if you run your finger there sharply
on or some thin objects on fire
then fire ^{means} the torch of fire can be as if continuous

i.e. very short
and ^{therefore} the minimum in time, ^{so to speak}
from the point of view of sustainability
the process of movement may not be noticeable

for the whole system

although in principle
it interrupts the system there discretely ^{yes}

it's the same here
these are the transitions between blood groups
actually exist in humans
especially there in childhood up to three years

but they can be firstly local
and secondly, ^{it means} they are so short-lived
for ^{example, that there are} modern objectified technologies ^{there}
related to tracking ^{let's say} the same blood group
they do not allow, ^{for example,} to diagnose such a process

and therefore your task
^{so} firstly if you want
You can even diagnose it
then it needs to be identified locally
in which vein specifically
what time
this change is happening
and these systems ^{of sorts of} mutual changes

in a blood group variant
they characterize a fairly general principle
What
because the world is created in the image and likeness
and man, including the physical form of the Creator

then uniformity means in development
consists in the fact that
what is the choice of the type of development
this is first of all like well including
and the internal status of a person, for example

and therefore if we have different blood groups there
then accordingly this is a certain unique
and my own choice too

you have to be more careful here
this is the level of one's own choice
it characterizes that
how do you perceive external Reality

well, well , I've been talking for a long time, let's say , comparatively
by difference of groups
while saying that there are points of intersection
they are really small though
by time, for example, 10^{-18} degrees of a second, etc.
these are mostly even smaller

but if we take the order of milliseconds
then these processes are very short
and generally speaking not everyone

from the point of view of Consciousness
general body organization
this is a process of peculiar optical impulses
which extend beyond just blood
but also on all the body systems

that's why this is such a long story
blood group related
he translates , well so let's say further logic
to the first part of the question
that's exactly what the technology of working with blood diseases is

the thing is that from the differences between groups
it follows that many diseases can occur
at that moment

when the principle of generalization is used, for example, according to the gene principle

here are the universal links
there in genetics for all people
and here is the transition through these peculiar
well, are they articulated links in optical information?
they may not always be straight

and this is the cause of many diseases
Well, mainly diseases of systemic structures
which seem to mechanically touch
all body systems mainly
Well, this includes blood

they consist of the following
that these are genetically uniform systems
which exist for all people
in a particular case they can be unstable
at the moment of their implementation, i.e. this information

and in connection with this
in blood diseases
the technology consists of the following
that you are fixing uniformity in a universal form

i.e. you take it and with Consciousness , well, you kind of compress that area
which characterizes the meaning of the Norm
and it's better for everyone

if you want, enter
parametric difference
by groups there by components of some kind
which you will consider
by access, let's say, of blood to a specific organ
and to a specific part of the body

and then you can treat
due to the standardization of similar macro-regions

so from the point of view of today's lecture
this type of standardization
if you, for example, enter a control Norm
there we assume a Macro-rescue of this type

that in infinite time

firstly, there will be no precedents
which would threaten the sustainability of development there

secondly, what are you installing this system
for example, on one's own cellular system

i.e. the question of why life should be Eternal
It also has technological significance in that
what when you do that
then this is also a technology for ensuring Eternal development

i.e. the questions intersect each other
how from there from the Eternal development to you
and from here as if from you
when you bet on the Eternal Development cell
generally speaking and implement it

and therefore there is an ideological task here
it intersects
as if with a technological task

so when you are doing something for example
blood restoration
that is the concept of Norm
including should include
as wide as possible as possible
but in any case
according to my techniques, many things turn on by themselves

there the power of Macro Salvation
it is always included in the management system
from the point of view of the main goal of training and development
namely the sustainable Eternal development of the system

so here you can do such management
based on
as a Macrotask
and taking information from there, as it were
in your area

and also based on that
that you are putting the solution to the Macrotasks
for example, let's assume the same hemoglobin

and here's how to put it
and at what point yes hemoglobin for example

or how to normalize leukocytes
or how to ensure it in general
blood flow continuously yes for example
and Eternal time inside the physical body
what ensures Eternal development

then here you can go out on all questions
on the Soul Perception system
and get answers

but the first element of the answers
you will get a specific answer
in your own Soul

and the second answer option
you will get answers
as a projection of your own Consciousness
it means in an infinite region

i.e. you are in the process of solving this problem
you see the hemisphere there, the whole sphere of your Consciousness
and if you look at it from the other side
then you see an endless area of development

i.e. there is a technology for accessing an infinite area

this complication in this answer
I brought it specifically for that
so that there would be some kind of mechanical contact
with the lecture part of the material

i.e. I just answered
in an optical version of the answer, perhaps?

if you have a lecture in the form of optical glow
then here is the end of this answer
I got there exactly

and the system of knowledge is like this
what do you perceive then
well maybe in a few days sometimes instantly

but nevertheless it is the same system
which allows one to perceive the Eternal
material
with the same, well, actually, benefit
next time you listen

because you get there
into the unified area of Perception

these are the elements in genetics
which are unified
this is their permanent system of existence

i.e. now I have actually explained
based on this question
what the so-called
Well, they really are visible in the information that way
common genetic for all systems
these are systems where there is Eternal reproduction of information

i.e. they are quite easy to recognize
there is the factor of Eternity
is the first criterion of access

and in this part of the lecture
already call this by words
this is a development of the lecture

so the factor of Perception is also that
that you can use this factor
as an access criterion

i.e. in principle, to get into some information
you just need to accept it first
but it's better to perceive it correctly right away
i.e., the criterion-controlling area of Perception

and then it turns out
what if you perceived
then you are in control

as an independent work
find an area that is like this
that the Perception you reproduced
this is management

and that's why it turns out
what if you create something in this area
then you will probably implement it

or in informative Reality
or in the particular case of informative Reality
for example in physical Reality

so this is the answer
according to this system of questions, I guess
I showed it as a system

now if possible, look at this, let's say
to the person who asked the question
in this part I specifically don't say so, let's say
and look how this person took the answer

and the task is specific
so let's tell the person who asked the question
pass on knowledge pass on your knowledge
your own perception

you must have all this knowledge
to receive from this specific person
on information

and accordingly train everyone sitting in the hall
there it is mutual

it turns out that now it starts with this
it is best to do this very quickly

it works now
which immediately begins to layer
information understanding

i.e. let's assume that somewhere in the institute
listen to the lecture material there
and after a certain number of lectures
the essence of the chapter, for example, comes, let's assume yes
in the end

now this has started to happen
I just didn't let it settle

therefore, if possible
you try to understand this element
receive through interaction on the main goal
this is Macro Salvation

so the next one is kind of unique
including the following can be formulated
as a question on the topic of this lecture
which is very important by the way here

from the point of view of the genetic level of information transmission, for example

it's written here
that today there are seven people from Orel present
and that means a lot of work was done using my technologies
this group

then try to make such an event
seven people from Orel are in this hall
so look at the work these seven people did
how did they learn technology
and here's what could be applied
from a management point of view
in relation to these seven people

i.e. if possible, look not only at them
who surrounded them there what plants what events

I often use the word plants yes
I mean in this case ordinary plants
well, the ones that grow there trees grass etc.
physical plants

so therefore be sure to keep this in mind
what I needed in this case
so that there is a connection exactly
for example, if a plant then it is a physical plant
an event is better is an event that many see yes
i.e. what is happening, let's assume, is on a physical level

then you if possible now
look at their level of management , actually
i.e. what have they achieved in terms of management
precisely according to the Macrosalvation system

and these seven people must
to pass on means to transfer knowledge to everyone around
what have they achieved each day

so, and accordingly, you will transfer it to a group of people
seven people
and in the information of seven people

all you can
well, it would be an option to share experience

at the same time, your concept of "sharing experience"
this is management
in relation to the information of seven people
control

then it's not necessarily ^{there}
maybe ^{there is} just a concept of "passing on experience"
but this is also help, ^{for example, yes}, including
point to something from your point of view
optimal levels of their development

and the same seven people from Orel
they should do the same accordingly
that's when I say "the same"
^{understood} by those seven people
what is the best way to do this?

so if possible, you do all this
try to do it right away while I'm talking
because if I, ^{for example}, switched to another thought
then you immediately switch to another control system

try to work in sync
in accordance with my thoughts and my presentation

and so look now here in front of me
directly, for example, somewhere about one and a half meters away, ^{let's say}
there is a sphere
She is one and a half meters away from me
and its center is about a meter from the floor
20 centimeters sphere

here is laid
instant information comprehension system
I got it actually now
by the way that means I tried this way
^{means} to guide you from the point of view of mutual work
in relation to seven people
which have a certain genetic level of their own
you have your own
and this is the point of intersection of the same type of genoforms

i.e. these points are the same

but I got it because of your action
this form

as an independent work, take a look
what is deduced due to your action
in the information form
she is no different
from operating all over the world

i.e. it turns out
you with your own Consciousness
created a unified system
this is precisely the area of instant understanding of information
which is what happens in genetics

observe when you meet a person
instant recognition occurs
unlike if you look
there are mountains or some landscape where there are no people

where is this level of instant recognition
and why is this level characterized in this way?

i.e. why just transfer knowledge
because there is a mechanism for instant recognition , for example

therefore the mechanism is as follows
that you give access first
and then you can convey any thought
and give Macrosalvation
and to everyone at once by the way using this technology

so here's what concerns
reproduced at the level of Thinking
management
try to do this
well, not necessarily in relation to the seven students from Orel
and it is not even necessary to interact
there with some groups of people

just try to find the shapes
which you can reproduce yourself like this
how do they even exist in the World from the Creator
and so that what you reproduce
was no different from what was created by the Creator

in this case you naturally
you can heal there but so radically that nothing remains
for example, there are some scars, traces, and diseases

simply put, do as the Creator does

and accordingly manage the information so
as from the Creator
research
creative development of the whole world

and here is the example given here
Well, it is possible to do this from your own control
at the expense of one's own Thinking
or, so to speak, one's own development

where in the concept of Thinking
the concept also comes into play
including its own reproduction
based on the Soul of the Spirit
and the reproduction of all Reality

in this matter in the letter
I have questions related to that
how to work with the book here "Resurrection and Eternal Life"

the thing is that work is with materials
so from the point of view of technology
if this is a training material
or material that aims to
to implement some specific technology

then first of all you have to work
generally speaking, directly according to that technology
which is stated there at the beginning
in the form of text proper

i.e. as far as possible
you need to master the technology associated with that
what does the text contain

i.e. read the text and ask questions
related
or to yourself ^{yes}
or go to the information component
or mentally address me
or for example to students who know this, ^{yes for example}
so you can find it in the information
who has already mastered it from the students

and try to tie the same answers

for understanding the text
this is the first rule of work in general
well with all the teaching materials
which are presented in the form of texts

then there is another option when you work
for example with a video cassette
in this case try to translate the information
just like it happened during lectures

i.e. if I am giving a monologue
in terms of following
by speed of following
Well, my speech needs to do something there
If possible, this should be done

i.e. try in the first rule
working with video materials means
don't think that there you will end the video cassette
then you will have time to think there, then you will rethink
and supposedly from this you will improve education

better to work in real time
Always
here are some current materials

another question
this is the first sign
this is the first principle in this case of work

the second principle is full analytics
and for example watch the same tapes several times
this is already the second principle of operation

because according to the Salvation system
the main thing is to implement it
instant access if possible
and instantaneous understanding

and again, well, returning to the book
this is the concept of "instantaneous understanding"
is located above the text
as some kind of, let's say, holographic component
here in three-dimensional space
like some kind of layer right in physical space

for example, there is a piece of paper in front of me

there's about five millimeters on top
so, well, locally, and not throughout the entire sheet
but on the sheet itself

so there are levels
basically it's like flat screens
which can be optically viewed
get an answer
and get the second sense of control already

and even higher is the third meaning

then you get there
to the center of a peculiar sphere
when you look at the sheet well from here

i.e. this practically in optics speaks about that
that behind the sheet there is a segment, i.e. part of a sphere
which is what you're actually looking at
when you understand the text

pay attention when you study the material
the material gradually as if from you
is removed to some hemisphere
the more you understand it

if you have it in that transcription you want
understood
you find yourself in the center of a certain sphere
and you think that you understand what they want from you, for example

if this is mathematics, the formula was written
if this is literature
accordingly, you understood the meaning of the work
either collectively
or in my own way yes

you find yourself in a certain center

then try to work
with my own understanding
and first of all, look at what is generally usual for you

i.e. what I'm telling you about
these include universal areas of Perception
accessible to all

for example, it is easier to learn a foreign language
if you look at it like a leaf
and on the surface of the hemisphere
then you don't need to do any intermediate steps
bring it to the center then look from here yes
you don't do two actions anymore

and imagining that on a concave surface
is located somewhere behind
behind the text of the book
you gain Perception faster

so this means that one of the elements is actually yes
works
with the same text, for example, the book "Resurrection and Eternal Life"

and there is another fundamental question here
in general in positions of working with literature
where it is about Eternal development
and the universal Eternal restoration
that it is necessary to always work
only on the Reality of the usual type

i.e. it means resurrection
This is a normal resurrection in a physical body
i.e. it is quite clear in terms of explanation there quickly
what does Soul mean simply
Well in fact, as if this is really happening
recalls knowledge of body organization
and the body simply recovers

this means that many things are described there in a postulated manner
in the same book, for example, about the resurrection
what does it mean the body is a part of the Soul

but if, for example, this postulate is developed
that is part of the Soul

then it turns out that the resurrection itself
it's just a restoration of a part
namely, physically manifested resurrection

and why should it be done?
physically manifested resurrection
because
Well, first of all, that means the most basic meaning
which is thereby proven

that destruction is not logical
this is a system of forceful counteraction
possible macrodestruction

i.e. then it turns out
that no technology can destroy
sustainable and endless development of humanity for example

so, well, it is possible to pass on knowledge
there are the same plants, etc.

another principle that secondary already
that this is a mandatory restoration
at any there pathologies for example organic yes

i.e. technology that is generally needed
in terms of development there
and that these are general canonical Laws of governance
through the fundamental meaning of management
as the Creator does
and therefore this is Eternal governance

and that's why we're talking about that here
that's why it 's necessary
this technology means to study and implement
here is the concept of "necessity"
you know, it is based firstly on that
what is the need
because we really need to save
and introduce real technology

but from the point of view of the individual
development of personality in general
and the place of personality, so to speak, in the history of development
or in self-understanding

if we are going to deal with some peace issues
then for the individual it is naturally more expedient and accurate
to engage in elements of Eternal development
from the point of view of personal development in general , in my opinion
a person there

it turns out that the technology is, so to speak, an adequate response
to possible global destruction
for example, resurrection technology
she runs into that
that from the point of view of maximum personal freedom

anyway a person should do something
elements of Eternal development

not only elements
element as a system of real Eternal development
one of the elements for example

and it turns out that it is in this way
we have it anyway
that Eternal development is natural

and it turns out if we look
that's when i said naturally
and where is this information located?

then we see it right away
let's say I get there
to the area near the physical body
left
at the projection level there above the hip
but below for example the left rib

and here it is in front of me
this area it is located
but this is the area
where is the Soul Spirit Consciousness
they are in the same area of Perception

and yet here is Perception
it can be just as primary
by feeling Perception
precisely by the light spectrum
as well as the Soul

i.e. it turns out to be the Soul
also has an intersection with Perception, for example
well, just like any other piece of information
has with any other
intersection
with the aim of Eternal development

what a feeling
I introduced this term there: sensation of perception
for example on Spirit

it's one and the same

this is the extreme one , actually
serious characteristic
speaking about what was originally
level which means it is considered secondary
there we will assume Perception in relation to the Soul
in a certain place they are equal

and that's why I give the Salvation technology
I don't necessarily put an accent, for example
that you need to work only there somewhere with Soul
or somewhere there to work with Consciousness
as a secondary structure or logically

I say that it is for Salvation there
where do you do creative management
You can work as you want
the main thing is to achieve real control
real result for Salvation
including, for example, resurrection

therefore the next level means in Thinking so to speak
such a synthesized multi-level Thinking
where there is a unique Thinking
I can now say yes
what can one think
With soul
there by Consciousness
since there is equality at certain points
and physical space

and by the way these are not just points of Perception
if you take a digital camera there
and make areas visualized
then this area exists simply even in the form of processing

for example, well, kind of unique , so to speak
level of the rigid system of Reality

if you enter this level
he is of course changeable
then we can see
by what laws does gravity even exist there
why is the earth in this place yes
and it doesn't fall somewhere and fly away

i.e. you can kind of look
the system of distribution of connections in the world

knowing these Laws
and in connection with this
that's when you make a control
Be sure to put it
the simplest implementation characteristic
well from the point of view of Macrosalvation
and still the usual implementation

i.e. this is a normal resurrection
in the usual in the same physical body
or there is another application control

and if this is event management
from a technological point of view
set out in the book, for example, "Resurrection"

or if it's technology if you take a book
"Applied structures of the information creation area"
then event management can be shown
from the point of view of secondary information
as a certain line
passing well how does it look like that
what is between certain lines
then the connection exists

but at the same time a connection begins in one line
and for example it doesn't even end in a logical sense
and in a different place altogether

i.e. try to find such connections
it is mainly event-based management
where you manage the event comprehensively

if we are talking about a specific control object
then it's better to work there
on significant volumetric multidimensional systems
as I explained there spheres for example yes

and if we are talking about control objects
which includes a complex of events
then it's better to work
at a kind of thread -like filamentary level of optics
in the area of the Perception sheet

the lines coming out from one mean for example
level of this thread
it fits into maybe a completely different word

at all there in three pages
if you for example found this level
you can do that management
which in this case you don't need

in this case we are talking about
that you find it more for yourself

although well for example, if we take ancient Greek writing
they are lines of such control
they did it quite specifically
they even pierced the sheets there
and they tied it with blocks, that is

Well, the truth was later lost over time.

but as if the primary meaning of such reading of texts
it means at the management level
exists now
it's just easier to do it now due to Consciousness
than, for example, to tie it there mechanically with threads
one word with others
then along the trajectory of the layout of this thread
for example, read the second or tenth meaning
yes management

so but nevertheless
you can, let's assume I showed it
two techniques of working with literature there

you can find something else of yours there
the main thing is that you are sure
compared with practice
if possible at first

but after some time
when you already have mastery of the instrument
You can tell people around there about it
what exactly did you find there
some maybe the following technique

Well, it will be easier from now on
the more people know about your technology
the more systemic and sustainable Macrosecurity
and by the way it will be faster
and you will succeed

those. knowledge transfer system
this is actually an acceleration of achievement
own goal for Macrosalvation ^{there}
and plus I think
that this is exactly the principle that works here
which I announced in the lecture
that state which leads to precise control

precise control is essential

here is a system of knowledge transfer
when you pass on knowledge
there is a certain satisfaction
^{like a reverse wave}
which characterizes precisely the precise control ^{yes}

i.e. you understand
what you do exactly and correctly

here on this one
I'm finishing today's lecture
thank you for your attention

Goodbye
