

GRIGORY GRABOVOY
Structuring of Consciousness
**Technology of building Spiritual status
through the logical structure of Consciousness
Section of the Teaching - Religion**
(20)
13.12.2001

Good evening
in today's lecture
I show the technology of building Spiritual status
through the logical structure of Consciousness

and the Spiritual status is governing
in three positions
this is salvation from a possible global catastrophe
self-healing under the condition of harmonious development
and access from Consciousness again
into any event structure

in the third case, access from Consciousness
into any event structure
is dynamic
i.e. since the constructed area
which you define for example
as an area of Spiritual Administration
is an intermediate region
between
event
and the structure of the logical level of Consciousness

i.e. in this case access is carried out
from the logical level of Consciousness
what is called information related to logic

in order to structure
such a management system
necessary
First of all, highlight the Spiritual status
as a status that is being formed
due to boundary conditions

if we consider

in the optical range
area for example Spiritual
and the area of the logical phase of Consciousness
then the logical phase
is a denser area
closer to the reaction element
in your own Consciousness

i.e. I introduce such a concept
as a "reaction element"
of your own Consciousness
i.e. what do you understand

and this element is logical, it is closer
i.e. this is a diagnostic of the logical phase of Consciousness

and as for the Spiritual realm
this is firstly in this technology
autonomous, i.e. limited in volume
region
this is not an infinite system
and you should see it
at the level of another optical glow

Well, we can agree on this
that the logical phase is, say, a sphere
having to a greater extent
white silvery glow spectrum

and the Spiritual plane
this is, for example, a kind of layer
having purple, so to speak, shades

although in essence
if we move into the structures of this sphere
then it turns out that it still occurs there
white purple composition
in general, multispectral systems
except for dark gray ones, etc.

and in connection with this
it means in order to structure
it would seem already as if a second area
mediated after the logical phase
it is necessary to determine the boundary conditions
between them

and the first technology is that
that you define the boundary conditions
which are characterized by the fact that
what are you building on the border
you yourself
in the form of its own physical structure

i.e. the boundary region
it is you yourself in the form of a physical body

and when you, for example, set up such a process
as a boundary region
then the processes of Spiritual management
it comes down to this
that you structure the Spiritual component
near the surface of the physical body

and this is structuring
occurs only in that case
if you move exactly like this according to the algorithm
as I just said in this lecture

at the same time the phase of Macrosalvation
it is the Salvation of all
from a possible global catastrophe
this is the organization of the physical body
which is Eternal
the body is Eternal

as soon as you control
and put the control information
that the body is Eternal
you reach this control

phase that characterizes
self-regeneration
and harmonious restoration
external Reality and internal

This phase is characterized by the fact that
what does Spiritual Management mean
is happening
near your physical body

i.e. working with the logical phase of thought
near the physical body

you get
structuring of the Spiritual Plan
and such a one
what do you achieve back
already achieving the same objectives
but already in the opposite way
where from the logical phase
reveal the Spiritual

so the question arises
basically as follows
if we say that Spiritual development for example
this is development
associated with the comprehension of certain systems
for example, cognitive management
and often it's well as if a spontaneous process

then in this case we are talking about that
that we are the Spiritual structure
must be organized systematically
through the logical phase
and what will it be
this is the same Spiritual structure

i.e. what is achieved by
For example Well let's assume there are many years of creativity
or a special solution to problems
which well arise
let's assume as a creative message
or as compressed information
creative plan

in this case
this particular area is needed
structure according to the scheme I have outlined

due to the fact that in this case
we are talking about the creative potential
this is the potential of often external characteristics
i.e. it happens naturally that you know it yourself
information arises
Well as if from a clearly unknown area
as if a spontaneous occurrence
information such as management

if we talk about management

in creative characteristics
or awareness

then in this case these compositions
should also come in
in structuring at the logical phase

i.e. it should be structured
the whole structure that you are familiar with
and also the whole structure
with which you are not familiar

i.e. it is meant
which ensures, for example, the formation of a creative message there
and provides a solution to some problem

Well let's assume there is such data
what is Mendeleev's table of chemical elements
for example, I dreamed about it in a dream
and at the same time, as we suppose, they assume
that he had been doing this for a long time

if we are talking about the practice of Salvation
then in this case
there are tasks that are very difficult
and for example solve them
let's assume the primary level of information
so on a logical level, so to speak
it can be difficult or, let's say, logically impossible

as a result of this
by Salvation technology
those creative elements
which provide an unambiguous management answer
i.e. the correct answer is based on the management structure
should be achievable here
by a specific time interval
and specific plans for structuring, so to speak
which might not be very complicated
in terms of the control algorithm, perhaps?
this system

due to this
as a solution to this issue
is in the structuring of the future
in relation again to the Spiritual structure

which must be structured
exactly according to the plan of Salvation

for this it means in the structure of the future
stands out as I said
first known possibly known part
that which relates to the creative state of the Spirit
or to the Spiritual aspect of development

and the second part is what it creates

that's when you get close
as if to the structure of information of the future
to the second part
then the question arises
that some elements
they don't have for example as if of verbal origin

let's assume that there is some information value
Well let's say the glow of a distant galaxy
which has the characteristics
which, for example , are not described
known quantities

as a result of this
This characteristic affects
for example, let's assume that the occurrence there's a clozara
if in the optical range

and then well, clozar is like a physical object
in optical perception

then we get
what should we enter
descriptive plan system
which is like
First of all, be careful here
First of all, the description itself
which does not require translation characteristics

let's assume you have described and identified the shape

the second is descriptive elements
which are characterized by the fact that
what are you translating
for example, let's assume a known structure of concepts

another sublevel here
which means
just knowing the process

but at the same time
the process can not be differentiated
i.e. in principle
you can use this sublevel
but he has a dynamic plan

i.e. it is not a stable structure

in this regard it should be applied
when you want for example
how to duplicate the system
or descriptive
or a system
which you kind of configured in the information
but do not translate into the language of known concepts

once you have determined
for example such a control system
i.e. in principle it looks like this
from the point of view of the design of the future
for example , in front of me it's like some kind of arc
let's say as an arc segment

and at the same time, for example, the first third
this is what is in the creative element
may be known
or from literature
or from my own experience
or just informatively assume

second part
this is already two thirds of the arc
this means that what I said happens
you perceive it as an area
creating the first one third of the arc

and the fourth
This is knowledge-based management
where the concept is not defined in principle at all
but you know that it is so

so as soon as you described, let's assume well completely

the entire structure of the arc
then control
as if compression in the logical phase
happens in a very simple way

first part of the arc
i.e. the one that I said
one third of the beginning of this arc
compressed by an effort of will
logical effort

i.e. you go into control of the logical phase
and squeeze on information
with the end of the third arc
the one that, as we would say, means
the third characteristic of management
but which generally speaking
you do not always apply

pay attention
that there is an expansion of Spiritual characteristics here
something you don't always use
what is dynamic

you have entered the characteristics of the expansion of the Spirit
i.e. infinite characteristics of development
introduced into the status of a static concept
in the optical range

and received
that you have identified an autonomous region
structured Spirit
which has the given characteristics

now you can
in the logical phase
this faction of the Spirit
just transfer it to management for example
Well let's assume there to prevent the nuclear reactor from exploding there

or do it like this
so that there would be something there
massive rapid healing
if we are talking about Macrosalvation

or quickly transfer knowledge

i.e. fraction
which is already spiritually outlined in this way
has both autonomy functions
that means in the optical range
and so the functions mean extensions
which is introduced in principle, generally speaking, into a planar system
it's just an arc

planar system
not even voluminous
but the truth lies in the faction of the future

and in connection with this
here is such a simple conclusion
that the plane is in the future
it's a multidimensional system now

i.e. and consider
as we suppose Well, the objects are multidimensional.
in the current tense
as a projection of future events
then any event, generally speaking, is outlined
in the real structure
any object of current time

and in connection with this
for example management
from the logical phase of Consciousness
through the structure of the Dtsukhovnoy administration
thus structured
looks simple enough
what do you suppose choose
any volumetric object
suppose physical suppose table
so I choose

and I can, for example, through structuring this information
on a physical level
as if layering the information part
on physical
get a convex structure
management plan

i.e. what is happening in management
i.e. dynamic control system

let's assume why a person
well, being in the dynamics of movement
Well there somehow perceives his body
is simultaneously a control system

because the body is physically manifested
three-dimensional body suppose
this is the control system

and here the principle is generally similar
you just do dynamic management
through structure
actually three-dimensional objects

how do you manage this?
study in terms of correctness
and in the applied aspect

those. set a task
and it is being realized

you can move on
to three-dimensional objects in terms of Thinking

and here you will see
that here is the three-dimensionality of the object in terms of Thinking
makes the shell of exactly that Spiritual plane
which I have just described
autonomous Spiritual control plan
structured

and it is this plan that creates
exactly as if in Perception
at the point of Perception of your Consciousness
three-dimensionality
let's assume objects of Thinking or Perception

and in connection with this
this plan
is an organizing plan
objects of Thinking

i.e. Thinking in principle
built according to the essence of the organization
built this way

what is like a correlation coefficient
to the creative level of development
it exists generally speaking in the organization of space

Well it looks like that
what is the space of Thinking

i.e. if you drive for example on the road
and follow the traffic rules
then in principle you can drive calmly
in principle, it is possible to violate them
for one reason or another
then movement may be complicated

and in connection with this
it turns out that in the structure of Thinking
there is this canonical level
canonized level
which I have now failed
organized
means correctly structured Spirit

the logical phase of understanding this process
very simple
Spirit that means Well as if
scans events at infinite speed
of all of Reality
naturally determines
the most promising the most optimal
from the point of view of creative processes
path of development

and therefore it naturally structures
as if that's correct yes

and in connection with this we kind of have
the control system in this case
when we, for example, analyze in this way
which generally speaking should find points
or as if their segments
Well, to put it simply, if you compare it to the road
to restore the road signs there means

and thus we can get
structuring
based on the fact that it is in principle

exists

for example at a certain level of Perception
that's how I told it

and from here we can move on
to the structure of one's own Soul
where there is information about everything

and compare that's why there is information about everything

from the point of view of means for example today's task
for example access to any event
just for nothing
for example in a physical table element

after I structure the system like this
I can do any event without even announcing it again
take for example the second fragment of the arc
without announcing the event
take control
and get control here on the table for example

but at the same time I of course have to know
Here's what I said for example

and with all this
knowledge of the Soul
what you know in your Soul
this is information similar to the technology I mentioned
but the information of the Soul is primary

and the difference seems to be that
that this technology only provides an answer
how to get closer
to the structure of receiving information by the Soul

but at the same time, for example
and it is precisely the receipt of information
naturally it can be different in principle
but as a basis
how can I say it's a universal basis or something
consisting in the fact that knowledge exists in any object

for example the Creator can be manifested
in any physical system

this is the principle
he may be the answer
how with this technology
structure, for example, the information of the Soul

i.e. in general how to direct towards structuring
Elements of the Soul
so that control can take place
already in fact of control from the Soul

i.e. here as a matter of fact just now
specific practice
make such control

i.e. the first level
This is the sphere in front of me that needs to be managed

she is the sphere there concerning that
what needs to be done positive management
in all respects
i.e. a fairly generalized control sphere

and you need to apply control
firstly from the logical phase of Consciousness
where structured in this way
Spirit as I said
in this case, you can take a copy from this level
no need to deal with the structuring algorithm

one of the methods

you can kind of recall the lecture evaluatively
and take as if to use
as structuring
well, a kind of copy from the matrices

you put
between logical phase
and get control of this area

and the second level
this is to make the management the same from the Soul
look at the difference
as if in the optical range
points of perception

it's about what i told you
that there is a point of Perception in your Consciousness
what do you perceive

and find it this way
from two different control systems

and I'll watch

while driving try to do this
so that the point of Perception is static
It would be better if it was located
inside the physical body
stabilize it

and once you have found the point of Perception
you open it

Well let's assume by type means opening of the sphere
there is a multiparameter system
inside yourself
and get yourself
in the physical plane
and in terms of information

Now go ahead
to the concept of an information plan
themselves

as soon as you go here
you see that it applies to you again
basically the same thing
because the construction of the structure of the information plan
this is a creative system

and it needs to be done regularly
and as if every day, every second , basically constantly

and then it turns out
creative organization of the Spirit of man
this is a constant, as it were, routine work of the current time

so based on this
i.e. by self-organization
because it's better to organize your information
better creatively
so that there was more

optimizing system in the future

and when for example you come
to self-construction
then you get three levels of control

those. Macro level i.e. Macro access
according to the system of preventing global catastrophes

system for example self-regeneration
and therefore harmonious development

the division can be quite arbitrary here, for example Yes

and plus access to any event
as a logical phase
your own organization

i.e. all three parameters
in general you can add any parameter
number of parameters in this case
from adding more information
your receiver volume does not increase

i.e. points of Perception

in this regard, the characteristic
the first characteristic of the point of Perception
as if in a logical sense
this is what can be entered there
any unlimited amount of information

and in the optical range
the volume does not change

Now I have shown how to achieve this

i.e. you have to come to this
by building oneself
in terms of creative management of your events
where there is control of all events naturally

and this point
should be near you
for example near the physical body
in the area, let's say, of the chest, in the area of the heart

in the form of a small sphere
let's assume the radius is 5 centimeters

and this point should be working
i.e. you should see
how your Consciousness perceives
what do you perceive
this is an element of Perception of your Consciousness

and in connection with this
you should kind of get information
which means it comes to this point
but at the same time it does not increase this point

for example, let's call the point the center of the sphere point
but the sphere does not increase

and in connection with this
when do you introduce such training
you see that all processes
that are happening around you
they are reflected for example in this area
how are the processes well like a mirror type

i.e. if you look from the outside
to this point
in relation to the physical body
then you can see the events of Reality
at the current time, and at any point

This is one of the levels of controlling clairvoyance
when you can see for example a picture

i.e. disclosure of the area for example when you know

and in connection with this
so here the accuracy is like a clairvoyant plot
first of all, well, it consists of this
to determine the design
i.e. how to choose the position of what you are looking at
you don't have to choose at this point
and near where are you looking

so now the second question
what are you looking at as if for the second time yes
what is this that arises

point what you look at what you perceive

at the time of this work

she is well as if non-functional

i.e. Perception does not go through it

it's as if you are perceiving from the outside

now you have chosen the second point

the second point is basically exactly the same

only it is shifted in the space of Thinking, as it were

it means another one, as it were well, some delta characteristic

optical level

which is physically located in this place

but in the space of Thinking

is located in another place

and hence by a combination of will

these two characteristics

you can see how a thought is born

i.e. for example, how a word is born

if you are two points of Perception

you start to impose on each other

and at the same time you see

how information appears

in order to read what word

if you take , for example, a kind of magnifying glass , yes

let's call you organized such a bipolar

so if you direct it to the optical plan information

you can read what is happening there

in this information

in general it's easy to read in words

if you if you have time

therefore and in connection with this

when you for example Well, here's this magnifying glass

let's assume Well, this is ordinary optics

in general the laws of ordinary optics

generally speaking, portable in this case

quite correct

on the optics of Thinking

you can basically make this magnifying glass
not necessarily convex yes
or there under the big image
you can make it concave there
then you can read big
there are larger texts, etc.

i.e. by varying this magnifying glass
you can kind of
or take a large volume of information
or less
i.e. a peculiar variant is known
there, regarding reading files, let's assume
either on a macro scale or on a micro scale

and in connection with this
when do you start
practice with this control system
the main thing here is to realize that
that the organization of this level
happens at that Spiritual phase
which I said about

i.e. precisely the structuring of the Spiritual plane
in this case it should be like this
what do you have
Well in general all management positions are like this
that management is such
that it contains Spiritual Administration
based on the fact that it is management
built on a Spiritual position

and it is deliberately structured this way
as I said here for example in today's lecture

on this
I'm just finishing the lecture part
on technology lectures of today's level

and now I will tell you about the section of the Teaching
which belongs to the Religion section

then in the section Teachings Religion
I define religious positions in this way
what is this action
including religious action

based on the principle of generalizing information

i.e. any control action

may be religious

in the sense that faith is, for example, an attribute of religion

in terms of faith in the Creator

faith there in yourself or in your actions and in your own

here in my religion

the control is done in this way

that you work as the Creator does

investing in the structure of faith

at the same time and the principle of operation

i.e. faith that works

and in connection with this

active faith

it is defined in this way

what do you additionally

by the way, faith is a powerful management tool

which for example is not defined

let's assume specific characteristics

let's assume there is a geometric plan

you do for example a control action

introducing the structure of faith

simultaneously

i.e. you are aware of your faith, you believe

and move at the same time well as if with her

i.e. in connection with this

here is a religious act

can be implemented

basically let's say so

anywhere anytime there

and generally speaking is aimed at the structure of Salvation

either at the Macro level or at the micro level

i.e. faith is information of faith

perceived

as a driving accelerating force

For example there are actions of Salvation

in this regard, it means that this is how it is built
distribution technology
such religious knowledge built on that
that firstly all fundamental knowledge
Here as if classical religions
which are creative
they are supported in this case

but here it's like in my technology
is added
if it is a classical, for example, religious system
an element of action is added to faith

and when the technology of this action
for example, it is distributed
to the level of specific solutions

then it turns out
what is the Creator
action of the Creator
and the action of a person's personality
they are not well as if separable

i.e. that point of unity
when faith is a direct level of knowledge

i.e. at a certain level
this is so as if confessing such a religion
direct knowledge occurs
i.e. direct level of contact with the Creator
when any action
this is the simultaneous action of the Creator

and in connection with this
faith becomes so technological or something
the meaning of reunification
it means precisely with the actions of the Creator
with the Creator
with goals

and then it turns out
that any movement in general
Well for example, there is not even a religious plan there
when you from information religious action
for example, go to the management of the household plan

then this is a spectrum
which gives a certain glow
already in optical terms
to optimize future events
and according to the true system
regulation of management

where do you get
still the most fairly definite
principle in the future
What
you act like this
how does knowledge come from the Creator

i.e. you act as the Creator

act as God has determined
Well, this is real development.
and towards Eternity

because in the structure of Eternity of development
there are certain
well, kind of like load systems
When

for example after a certain amount for example there for decades
this already means that a question of this kind arises
what is technological
this must be a state

and the question of faith
here decides the question
it is precisely the constant development of the World
to the side already
real Eternal indestruction

i.e. faith in this case
is already of fundamental importance
but this usually means it manifests itself
at sufficiently well as if over long periods of time
at least several decades
but at the same time it seems like it is
already a necessary element

i.e. in this case it turns out
that it is enough to use
sometimes just once

touch this system
it is management
and religious faith
like this is the volume of information
and it turns out to be level again
Well there is no long-term or endless control

as soon as you bring the controls
for example closer to yourself
it's like a question of faith
is deep in the Soul
is the normal state
you can each examine it for yourself
and see that this is the state
and there is much that is ordinary

simply if it is understood precisely as faith
then faith is the organizing structure
for example bodies
Realities

and therefore there is, in general, a principle
act as the Creator acts
because it is a kind of well like a level
where are you well It's like it's already at the level of the heart or something
specifically, what about hearts?
informative as a field of Perception
feel
what does it mean processes are taking place there
faith related

and when you watch them
then here is the technology of my religion
you can see the control level
related to that
what comes out of you when you believe

i.e. how do you convey
i.e. not only faith, for example
so from the point of view of well faith in the Creator
and act as the Creator
and faith plus the technological aspect , for example

but when you believe how do you convey
i.e. what is meant here is
responsibility for the dissemination of technology

according to the plan of faith

because it's a simple factor of this kind
that spreading
who spreads faith
that attitude is different

as a rule the speed of propagation
much higher
or is it often close to infinity there?
according to specific plans of Salvation

and from the point of view of responsibility
Well, a believer in the action of the Creator in God
and acting as the Creator
generally speaking, it is always found
in a canonically corrected position

and generally speaking I think
He is doing the right thing of course
because the principle is kind of of a different plan, well as if reflections
he always creates the principle
well, a possible restructuring, so to speak
i.e. precisely possible destruction
negative plan, etc.

while the principle
that the Creator only creates and positively
this principle in this case
strengthened by faith

I have only told you about some of the characteristics now
my religion specifically
i.e. the section that relates to my Religion
section of the Teachings

in principle, it means I have it, it means in this regard
Well as if in certain variants
the texts presented
and therefore in the future
I'll just pass on these texts

but the principle system
that for salvation from possible global catastrophes
in general, even in private, any most private
in case of Salvation

and also the creation of Eternal structures of life
the concept of "faith"
in this case it is defined in that
what is best means here is not denied in any way
from the so-called fundamental religions of confessions

but the element is added, which means it is a control element
related to the same concept as "faith"

so this is where I end the lecture
there will be a break of about 15 minutes now
and then answers to questions

so I'll start answering questions
in the appendix to today's lecture
and the first one means the answer
will address the following issue

the question sounds like this
What

*are whether instincts For example Well form of management
or they can also be controlled
what are the instincts of the design of Consciousness
or the Soul program
can we consider the structuring of Consciousness
striving for Eternal life
the formation of a new instinct*

The thing is
that from the point of view of the collective Consciousness
the concept of "instinct"
it's like a sub-algorithm
associated with the formed system
already as if an existing form of collective Consciousness

this form can be manifested
in the form of specific actions
in the form of specific postulates, as it were
which are defined
in this static let's assume position

and in connection with this
I think instincts are manifested
also like sub-algorithms
more generalized algorithmic system, perhaps

stable event structures

i.e. if according to the collective Consciousness

some form of grass is growing

let's say wheat is growing

then it is also entered

in the algorithmization of this form

that for example you can bake bread

and in connection with this

like an instinct

Well For example there which means which is connected with that

what a person should eat

when he got hungry

or instinct

associated with a reaction to a particular system

as if eventful in external Reality

or sometimes in the interior

i.e. from the point of view of adequate Reality

on Thinking

then this can be considered

what does this mean anyway, the construction of Consciousness is here

but from the point of view of the program

if we talk in general about the concept of "Soul program"

then I would consider it better to say about it here

that the Soul shapes the path

and in general as such

I wouldn't apply such a rigid concept as "program"

specifically to the Soul

because it is an initially formative system

including

and forming the status of collective Consciousness

and in connection with this

so I think that if, for example, we go further

on the question of whether it is possible to consider

let's assume the structuring of Consciousness

and the desire for Eternal Life

the formation of a new instinct

then in this case

in accordance with what I said

that the concept of "instinct" is like a sub-algorithm

there is a substructure of a more general structure

then here, of course, it's like a simple priority is being created
To as if there was some reactivity to the control system
from the point of view of the canons of Eternal development
Well, first of all, because of the threat
large-scale or, as it were, global destruction
common and

in this regard the concept
for example, if we talk about instincts
in some kind of everyday physiological sense

then if there is an instinct
for example, some sudden danger there
let's assume there is an instinct for hand movement
so that nothing there touches the body yes
Well let's assume an animal might jump there

then it may be an instinctive decision
related to the fact that you are sort of at the level of automatism
especially those who were still involved in special sports
how does it work
and then the animal kind of fights back

but from the point of view of the logical phase of Consciousness
that's how I said it today
what how to do so that the logical phase of Consciousness
so she became the manager
through the structuring of the Spiritual plane

here you can see it for example
that as if the motives were not foreseen
which are in the logical phase
exist as generally speaking permanently existing
let's assume the possibility of a global catastrophe
from , for example, thermonuclear destruction of biochemical
a sufficiently logically manifested Reality
and generally speaking in terms of probability
this could theoretically manifest itself
Well as if at any second

and in connection with this
if we are talking about the logical phase
and we use the structuring of the Spirit
then at the instinctive level of the concept

at the level of free will
and in general it is not burdensome for, for example, the state of the Soul

i.e. this is, in general, a natural state anyway

we are identifying a new control system
in the collective Consciousness
which reacts in real time
and even when you sleep
controls
maybe it can be attributed somewhere if you compare
with a similar instinctive level
with what happens at the level of instincts
constantly restructuring
this is an event

from the point of view of means
well it doesn't let it happen
and makes sure that it never happens at all

in this regard, as it were in general What
this can be attributed to the formation
as if a new level of collective Consciousness
but I would say more that it can be attributed
to the development of the Soul
to the status of Eternal Life

and here is instinct
it is still more of an algorithmic system
when there are very specific levels of manifestation
and she has
this system is such a concept as "instinct"
it has a kind of limitation on the number of options here

application
even if it's a million
but still, for example, only a million

and in this case we are talking about that
that we are talking about the development of such a structure of
Consciousness
which is infinite time
i.e. in an infinite number of options
has a specific and unambiguous reactivity
in relation to
to any event, for example external or internal

let's assume the event of thought
that microdestruction is not allowed

why did I introduce this concept here
or even any private destruction there
as a means of counteracting macrodestruction
so why for example even the event of thought
is fundamental
because if on Thinking
a probable system arises
that's how the collective Consciousness works
that this can be realized

and in connection with this, as it were, the ability to manage
including maybe somewhere even closer
it seems like instinctive control
but this is already management of the Soul

you do it so that by profiling
those. do not allow, for example, in the thought system
who studies for a long time even sometimes not for long
but as for the essence
is engaged in Macrosalvation management
such a situation arises almost immediately
that Thinking is Reality

and therefore how to change the Thinking
this means not allowing, for example , macro-destruction

so the next question is this
please comment
properties of the structural facet of human creation

the thing is that if we generally speak the same way in general
let's look into this issue
then I would answer like this

we can designate
structural facets of creation for example
as I said today
there is a transition level
between logic and, for example, the structure of the Spirit
precisely the autonomous system of one's own Spirit
what we recognize as our own element of Spirit
what is this physical body

i.e. what if we talk about properties, for example
after all, this is a structural boundary
she structures
it means precisely dynamic control processes

it turns out that the edge itself
this is the creation of man
in this case
in this context

and therefore their properties are such
what does it mean that they are defined accordingly
for example position yes

if, for example, we approach the issue at this level
what if we ask ourselves
what do we need in this area
i.e. in the property
let's assume logically that we need to do something

let's say we want to do this
to be instinctive
the so-called action was universal
according to the Macro Salvation plan there

if you are there For example Well, they took it and put it into automation
jumped away from some area
which can be problematic yes

and this area
let it be even very weak
you had to jump over
on some neighboring brick there
so as not to get your foot wet, for example

but when you transfer there
the same principle
that in any management action
including this type of the most everyday type
the general Macro Salvation level is turned on

then you can structure it
as a property of this structural facet

i.e. your personal actions
have this property

what are you doing in actions Macrosalvation
and deliberately laying the foundation
for example in the management structure of a future event

i.e. take an arc for example
as I said there is a future event of future events
forming the structuring of the Spirit
through the logical phase

and put it into the property
for example knowledge
in the third phase of this arc
you lay down this process

then this process
First of all, I'm absent-minded
i.e. it does not have a specific point
but it always works

and if possible, take a look
that structuring of information of the future for example
it can be done like this
what how to output processes
which act really
and they always act

i.e. no system arises
when you are for example at the control information level
when does this real future come anyway
don't you encounter that
that this element does not work

i.e. look
such levels of structuring of the Spirit
when they are definitely in action
and you know it

i.e. an element of knowledge
used as a control system

so the next question is this
to many questions Means you give answers
at a hidden level, answers come through the telepathic channel
or they come studying the three-volume work Means

so the next question is this

what if Means *information that would*

Well as if *became more obvious* or what? *in this case*

The thing is
that firstly the clarity of information
I define it as a boundary region
through which we assume this information
it should be obvious

technological as if a mechanism in a logical phase
he may be there in this case
from the point of view of today's lecture
Well, it's quite simple

here's how what levels need to be made explicit
if for example we use technology
so-called biconvex lenses
when viewing
how a word is born

then transferring this lens
to the center of the transition level
between the logical and spiritual phase
I can immediately see what words, for example Yes
It's better to talk now

because if you say it in words
which is very far away
then the word load comes
Well as if stretched in the optical range
and becomes less functional

and since there are levels that everyone sees
then it's better not to say anything about it, for example
but I know you saw it

and in connection with this, as it were, the level of obvious
he well as if obvious from the point of view of manifestation in words
it is defined first of all
precisely the main goal
that Macrosalvation of all is achieved
including there the structure of the Eternal Life of each

and at the same time I see this as something peculiar
you can see
as if it were something unique so link

Well as if in the next word
where a word is created only if
when before the word all this is realized

i.e. from each well from a person
the glow goes to this goal
where is the real Eternal life
where is real Salvation
where there is definitely no macro-catastrophe

but it is on that level
there is knowledge, generally speaking, of any knowledge
that this is really necessary
I'm trying to achieve
you achieve
but somehow we achieve everything together
but for this you need to do something
certain well what actions

and in connection with this, these actions
fit into that
that this goal is quite clear and visible

and in this case
what information has become
becomes more obvious
what time
often it is even a question related to that
that some information
is laid down as information for the future

i.e. in the future it will be understood exactly like this
as I wanted for example now

and therefore
although mostly I try
so that it would be at the same time
i.e. both now and in the future

but nevertheless
there is such a property of lectures, for example
that turning later
they provide another level of semantic control
but with the same efficiency
or it is possible to restore the original meaning
and make the management equally effective

i.e. I try
so that every element of knowledge
it was still multi-parameter

and in connection with this
as if often the verbal structure
it is simply a certain form, a certain criterion
or some recognition level
in relation to which
Generally speaking, management is done

i.e. for a specific phrase
in a specific lecture
can be found generally speaking if possible
an infinite number of effective control systems

and therefore how much do we need them now?
for example, to show additional words
this is again a technological issue
often associated with that
what exactly is technological
the main thing is what it consists of
that the manifested system
to make it work
sometimes even without any attention to it

i.e. how does it work out
by an implicit sign in general, i.e.

and in connection with this it means well and so on approximately
at this level of tasks
for example, an explicit or implicit system is set
and the implicit one may still exist
subdomains of implicit
something exists at the optical level

and on the Spiritual level
often as if quite clearly
it is conveyed without words
there are no words for example

and then it turns out
as if the next design in control
which characterizes the transfer more
it's more like this is specifically more defined like this

that are just fragments of the future
this means they are put in a control position
and you come to this
at the entire event level

then it turns out that there are not even any words here
and there is no such thing as a system for transferring knowledge
according to some conventional meanings
and there is simply knowledge due to specific events

and this is also one of the control systems
In general, it works precisely on an implicit basis
but it already works with event structures
where macrostructures are included, for example

so now the next question
he looks like this
which is exactly what concerns the question of space , for example

and that means I'll read it out now in a certain part
I am interested in the issue of creating new spaces
Means *it is said in your works*
What Means space depends on that
where do they intersect For example *different time intervals*

so the next question is this
what for example *if we take the cubic form of time*
then it can be a conditional value

and in connection with this
for example *because in order to create a new space*
we need to change the collective consciousness
i.e. when most people
reaches For example *True Consciousness*

and if Consciousness
reflects the Reality of the World
in infinite time for example

so the thing is that now I
Well , like this one
I read only some fragments of the question here
because basically what we're talking about is that
that we have some positions
for example, we define them as positional systems
and some well as if they exist

it seems to be not very dependent on Consciousness
but at this level of reaction of Perception

I have one in general

for example, the physical theory of wave synthesis
where some levels are waves
others are like static systems
and the imposition of a dynamic wave
on a static system for example
this is already the next action
birth of the next action

and so if we introduce, for example, such a conditional concept
as "time"

and we say that we are tied to time

let's assume according to the train schedule there
by aircraft movement
although we introduced it as a conditional system

then in a real control context
we get it anyway, that means
that we influence physical space

i.e. this may be the reason
change in physical space
which does not seem to depend on Consciousness

i.e. a conditional characteristic of time
here it is quite here in general
showing you a simple system right now
at the level of the optical range, after all

be more careful here

as in this case
The optical level is related to that
which is like real management
after all, we introduce time quite conditionally

and in connection with this
this means we get an influence on the static phase
more general structure of collective Consciousness

if we go through a deeper level, as it were
here is an understanding of this process
then here you can see that if you take a kind of peculiar knot
well, from which, for example, clothes are woven or knitted

then it looks like this knot
from which it means he will wriggle out, including
phase of the static level of collective Consciousness
but such as, for example, oxygen, earth and some macro-objects

and when we look for example
into the essence of this process
then it's like it's said here in the form of a question
interested in the issue of creating new spaces

then it is possible through creations, for example , in the field of Thinking
new spaces
and in such a physically applied way
means finding a way out in space
Well let's say into subspace
in physical space
and create control systems there

Generally speaking, it is possible to influence
only on parameters
time alone

i.e. you can just do it
influence space
changing, for example, the characteristics of the flow of time

there is such a characteristic
as time flows

means that it creates time
here is a conditional concept in the collective Consciousness
for example time

but to create this concept
what in general
what creates
how to speed up time there
or for example let's say we make it slower

that's when you get to that position
then you will see
what is in this seemingly conventional concept
exists to organize this concept
there are a lot of such systems in use
how new spaces are precisely new

i.e. there is an organization going on there
and creation by investigative signs
it is precisely the new space of Thinking that we assume
or management

and this looks like this
Well as if to go even deeper
like a kind of fireworks
where each one is like a flash
is a new space in terms of properties
or Thinking
or the real space of the physical body

if we assume to consider
Well there is a geophysical layer there
just physical level material level
then you can see it there
what do we suppose the structure is well there is a temporary structure
expressed in a different spatial environment

i.e. some kind of temporary structure
has one spatial characteristic
in the geophysical sense
another has another

Well, I'm generally speaking in this case
I'm just at the level of collective Consciousness
came up with the implementation of this technology
on physical matter

and as soon as you for example
look even deeper
then the primary meaning is visible
organization of all physical matter in general
from the point of view of primary sources
collective consciousness

i.e. where there is, as it were, a primary
but still functionally homogeneous
not very much as if a manifested space
or Thinking
or management

thus the concept
Well as if " creation of new spaces "

it is better to create in the canons of collective Consciousness
by the level of Macrosalvation
and create them well as if technologically knowing
what do all processes in collective Consciousness mean
they are connected maybe like this
what does it mean to control a conditional process there
brings about real change
Well as if it were a more static process
such as there are physical processes
or processes from the level of Macroregulation, etc.

the next question is this
so what
in general, a series of questions can be expressed in this way
what *technologies are used*
control from your Consciousness
for prevention For example
or man-made disasters
or natural disasters
Well *or there too*
use diagnostic systems
to determine

here is one of them, so to speak what about parametric systems ?
these questions as a whole means that it consists of this
well, at the same time, specifically some here means for example, expressed
production facilities or houses, etc.

so the point is that
what if for example we take
technology of today's lecture
and we use it as a technology, for example
to prevent, for example, man-made disasters
well, more like a private plan
and not just to prevent
for example global catastrophes
or in general for solving specific problems
through the global disaster prevention system

then we will see a kind of level
that even deciding well like questions
prevention means local type disasters

it all starts again anyway
according to the canon of development it means civilization
human personality

in general means all elements of information
overcome the next status of macroexistence

i.e. in the logical phase
this is also a kind of curved one
what does the lens look like
the logical level is like this
that naturally you need to have macro situations
i.e. it is necessary to have, for example , the Earth as a whole
to continue
as if to reason about something or develop somewhere

due to this
like this control element
which implies
Well as if a convex lens in one direction
associated with the logical phase
it kind of characterizes that
what is on the Spiritual level
a number of control systems are carried out there
for example, of a creative nature
including as if the plan is just knowledge
what to do without some kind of analytical system
in terms of, for example, a solution
when it is very urgent to solve a problem, for example
you can apply this level

i.e. we are all the same
according to the technology of today's lecture
we come to this position
as the same option, for example, an arc divided into three parts

and as soon as we start to compress this arc again
and then we move on
to the next level of the algorithm
just receiving in the space of Thinking
biconvex lens contour lateral contour
which is this arc

i.e. we closed it
and got for example there is a circle there

then this technology can be used
to prevent natural disasters, let's say
Thus
what in case of natural disasters

as if to the information center
which characterizes this disaster
or it could be a tornado yes
or let's assume there is an earthquake
although they may be caused by artificial reasons
let's assume there there is a defense complex

then we can get control in this way
that we place this lens inside
and just bend
as if one convex edge
to another
but at the same time we don't make them concave as if

so more than the central one, this plane here
which cuts two half-lenses

then such management
leads to restructuring
i.e. no information occurs there for example earthquakes
it doesn't happen with exactly that much force
or it doesn't happen at all
as it might have been previously

they work on roughly the same principle
for example my crystal systems

so as an exercise
Now do this
Well, such a control technology
identify each from your own point of view
where can control be applied

and here, for example , in the sphere in front of me
for example within a radius of 2 meters from me
there is for example like the radius of a sphere
there is a sphere around me
inside this sphere
Well, it's small, for example. there in a meter
radius of 50 centimeters

within the radius of this sphere
right on the radius of this sphere
on the radius
make such control to get
that means the vibrations of this lens

and get what everyone who looks at it will receive
any problem of natural plan
so that it doesn't happen

and I'll watch

at the same time when I was talking
about possible natural disasters there, for example
or man-made

in this case
have you worked with natural disasters?
it is possible to work on an infinite spectrum of time
there as if even a million years in advance
or more there is less anyway
work with what you see
and determine the possible time
for example, a natural disaster
maybe not even Macro level

after quite a long time
do not record information there
what is possible, for example, macrodestruction

and in general the concept of "macrodestruction"
always means compress in this way
so that this can be resolved
as if for example in a very short time
let's assume there well doing the first iteration information
per year
This is a fundamental decision

and for this to be done quickly enough
because the principle of no macrodestruction
It's better if it's done as quickly as possible
and it would be better if the destruction period was years

so when you go into the future for example
do the management
for example, there are some local things there
if they appear
i.e. so that when you look at the World
so that there would be local things there
manage right now

why did i say exactly two spheres

here is a small one inside
like a large sphere
it means because if you bring out this small sphere
beyond the boundaries of this big one, so to speak
well, the one around me
I have designated, for example, a certain spherical region

then we get control
namely man-made systems
i.e. systems reproduced secondarily

man-made can be considered that
which doesn't seem to apply
to the system created initially
at the level of a sort of static phase of collective Consciousness
is secondarily reproduced
at a more systemic level

and as soon as you transferred this system there
then you will get a biconcave lens again
the same lens but biconcave

and as soon as you place
as if into optical information
center of possible problem

i.e. you are looking at the center
usually it can look like a vortex-like system
just an optical level

the whole situation is that
that in all these processes
there is a root system, as if a causal system
cause and effect

by inserting a biconcave lens there
and as if breaking down cause and effect
you are restructuring the event

enter it as if mentally
either by volitional control or Spiritual

Actually, it can be done in different ways
just to cut it sideways and level

It's clear at the logical level

why biconcave lens
because if as I explained
compress and impose one on another
biconcave precisely the tendency
vector compression
in Perception

we get reproduced systems
for example the word
or some kind of man-made system

so work for example in this area
we need more with identical systems
if biconcave
this is so as if by vibrational optical characteristics
closer to the investigative system means the devices of the World
well, for example, to technology
then biconcave means
that it is investigative and more quickly controlled

although it is possible to make control
and from a biconvex system too , as it were
if we use a lens control system
but then we need to build transition systems
and in general sometimes the process is not so effective
as if as if at as if more identical level
primary entry into information

Well, if we talk about it on a technogenic level , I guess
in technocratic language
in order to get into the technogenic system
Need from login system
similar

and at the information level
if you are already transferring to an event
then often it is simply necessary to short-circuit the board somewhere
or something like that needs to be tweaked at the management level
some bolt
then this doesn't happen

and in connection with this
how would you have parameters
those. work with their own parameters
the same systems that form
for example, the restorative phase

and then it turns out
what do you need to reproduce
and it is better to reproduce it with a biconcave system
because concavity characterizes Perception
that's exactly at the point of Perception that I was talking about
what do you perceive
characterizes precisely as if squeezing out, i.e. creation

and by the way, work hard
with the system of your Consciousness
try these characteristics of Consciousness
which are like Well, maybe the job descriptions are closer
Well like bodies in water

Well, feel how Consciousness works
in terms of these systems
when a vector system creates
and when a vector system, for example, screens
or is stationed there or controls it
at the level of the structure of Consciousness as an environment

in this case i am talking
that Consciousness is the environment
and has the properties of control
which manifest themselves
at the level of logical approaches
means the implementation of control systems

and try this exercise
in terms of today's lecture, make it like this
to work at the same time already
each one independently
to prevent man-made disasters

you have to do it yourself
i.e. it is not necessary to do it now
whoever wants to can basically do it now

i.e. restrictions by the way on management
there is none at all for you
if you think it is necessary, do it now
but at home for example from 10 to 11 pm
if possible, definitely
play around with this biconcave lens system

next question
so how can i connect students of groups
to work on the listed technologies

Well, the thing is that, generally speaking
I'm just on this issue , for example
Well, there's also this so let's say similar questions
by means for example, according to the postulates of management
according to the Teaching there, etc.

a certain control is applied
for example in sociological systems
for the dissemination of the Teaching, for example

I wanted to propose such technology in the future
for example , I'm now giving another lecture
next week on tuesday

and then I suggest somewhere around December 27th
to conduct such applied seminars
related to the fact that each of the students
who wants to take it under consideration
some specific direction means from my Teaching
so he can prepare a report
on technologies for disseminating the Teaching

what exactly is being done, specific results
and what issues, generally speaking, are desirable to resolve
to disseminate these Salvation technologies

and then, for example, here are the students you teach
so you can connect them to these technologies
in terms of what you will do
for example from the point of view of seminars
which will be held in this same hall, I suggest
you just need to take the topics yourself

I propose here such complete freedom of will
Who likes what, what direction of the Teaching
make a report on the technologies of dissemination of the Teaching
in what for example so it can be manifested

first of all, in how practically
and how to spread it faster
these are Salvation technologies
provided that they can be given, generally speaking, in different ways

one of the levels will be like this
that the technologies are very specific
which I am currently preparing
calculated for example
well, no way as if a preliminary primary level
methodological base method
based on such adapted systems
which are simply stated

and plus, naturally, to a greater extent
it means it can be effective in the future
this is when technologies spread
Well, which means that first of all they have already been tested
each individual student practically

and then the next students
also show specific results
in distribution

and here is the systematization
i.e. exactly as here in the question there is for example
's say here's a question for children

Well, I actually have one
these are technologies for children
starting from birth there
and even before birth, etc.

i.e. whoever wants can, for example, use this equipment
from the point of view there Well let's assume my monographs
Anyone who wants can take it, for example there
if we are talking about sociological systems here
then sociology, etc.

i.e., in principle, any section of the Teaching
here the main criterion of this level
well, let's say these seminars
where the students will perform
with the proposed specific
technique of dissemination of the Teaching
will be the effectiveness in achieving the goal
there is practicality
speed
and at the same time, this means that they must be considered
specific technologies social

i.e. in which systems how to do it
and if possible
so although I give the algorithm specifically
what needs to be done as in the system

that means if we are talking about a specific system
but since there are a lot of systems
then it is more appropriate
when you show a row yourself well for example questions
and then
or I say there how they are solved
or they can talk there for example students
who has already solved these issues

and in social terms
so I think it's important to imply here
that we are talking about spreading the Teaching
all over the world

i.e. in social terms this is of course what we are talking about
about common technologies
not only well as if even to other continents
and on other groups of Perception, for example
Well let's assume in those systems where there is no writing
this is how to distribute technology there

if especially and in general if possible
maybe I shouldn't even leave
then we need to create transmission networks there
interacting systems

if it is a very complex structure
for example, some scientific research
then in principle there are no special problems there
any information is possible
restructure and process

the main question is this
achievement of each specific topic
so that they have their own device

i.e. to transfer one's own management apparatus
to each specific one there for example, to an inhabitant of the Earth
who could personally participate in that
so that there would be no global destruction, for example

and that's the level of development
you can prepare thematic reports

In general, I have a number of topics for reports now
I will pass on those topics
which could be relevant
and in principle, you can, for example, suggest your own topics

so I will look at the topics of the reports
so it can be possible to give recommendations
if necessary it can be by
to a greater extent in the direction of the development of the topic here

and basically I mean
what do you mean you're just oh as if by joint creativity
It would be desirable to create technologies
which would spread at that speed
what does it really mean that a solution is actually happening
this task
what is systemically sustainable
and from all positions of analysis, as if any analysis
logical
Spiritual
informational
it is clear that there will definitely not be global destruction

and it is better that the issue is resolved simultaneously
that nothing private happens either

when do you perform such a task?
then in principle it would be possible to further develop it
like systems engineers

i.e. systems engineering is basically
as if sometimes a system of radical restructuring
any levels
Well from my point of view
for example, the creation of completely new technologies
which may not yet be known there

or let's assume such a rise of known technologies
which would be completely transformed there, etc.

but at the first level it is of course
distribution, actually

Well For example there are some of my lecture technologies
some specially adapted
so that everyone could master the technique
I actually have them now , etc.

i.e. I think that means in connection with this it will be
I will appoint
this will be under the auspices of my foundation
well, managers for example yes for this job
this means that there will be , for example, two managers in advance
who will organize
and whoever wants to can perform
well, with reports , comments, etc.

and very useful
Well as if at the level of a seminar system or something
this is basically a discussion
this is the type who asks questions and so on.

i.e. the main thing is to create a system level
direct access to information without any delays

here on this one
I'm finishing today's lecture

thank you for your attention
