

GRIGORY GRABOVOY
Structuring of Consciousness
**Technology of structuring Consciousness
by type of reproduction of control information
physical object**
(7)
31.07.01

Good afternoon
in this lecture
according to my system of salvation and harmonious development
I give the technology of structuring Consciousness
this type
that external physical object
it reproduces that information itself, one might say energy
with the help of which control is done

i.e. the technology consists of this

and this technology is spreading
for all three lecture levels

This is salvation from a possible global catastrophe
then self-healing
at the level of general harmonious development

and also control from your Consciousness
any level of events

This means that in this technology it is necessary to consider
a mandatory complex of this type
that the external is precisely the object of physical Reality
I mean it could be, for example, a tree, a stone, a leaf, that means
or it could be some kind of macro object

it means it reproduces
information that controls this way
what are you doing management
within the framework of one's own Perception
but such management
what is the structure of your Soul
organizes this object

i.e. this control means it rests on that
what you should definitely consider
own structure
divided
to the level of creation of this object
and also to the level that this object
so it reproduces information self-organizes
what are you doing management
from a coincident point

this lecture, I am making it more difficult on purpose
those. it is complicated in that
that there is an intersection of different concepts
and the control is carried out
at the boundary levels of these intersections

in this regard, it means you need to consider
a special system for adapting these concepts
to management

i.e. you need it for work
with this lecture material
introduce a system of adapted control
and the adaptation level of one's own
with which you will carry out
this management
and understand what's happening
at each iteration of this control

i.e. formally the lecture is simplified by this
that during this lecture
a management tool is being developed
which is characteristic of what you are building
adapted model of one's own Perception
and this model is already being implemented, which means
which is perhaps a more complicated version of control

therefore it means that at least it has already worked out
three parts of the lecture plan
this means the level of the external object
level of organization of the object
adaptation model level
plus you can add
for example, a combined control point, etc.

in connection with this, right now I am doing this

specially such a rather abrupt transition
to the level of Spiritual Administration
and you try to achieve the goal, for example Macro rescue
from this lecture material
to identify precisely the Spiritual Administration

i.e. how do you manage in the Spirit
using this technology

provided that the technology
she is somewhere away from you

i.e. the level of this Spiritual Administration is that
what for example if you look
on some work of art
then you have some kind of association
with this or that work
and at the associative level you often build events
or on Spiritual Perception

i.e. any work of art
or let's assume a photograph of some landscape
may cause association
by construction means events of the future for example
and in this case you do it
not because you are analyzing the object of this work
and because you have Spiritual Perception
of this object

this type of lecture means the one I am giving now
in the form of control
he is the same
i.e. everything I have said up to this point is contained in that
that it is said for the purpose of Spiritual management

i.e. in connection with this you do Spiritual management
and now you need to mean on the Spiritual level
concentrate that control
which is located in a specific physical region
in front of you
and at the Spiritual level build a control area

in this case it can be as I explained
as the level of Macrosalvation
so the level of self-regeneration
and the level of control from your Consciousness

but to be in one point of the Spirit
i.e. at one point of Spiritual Administration

therefore it is a combination
means a dedicated level of management
and moreover, distinguished at the level of the Spirit

when you look at my literature
then there is the use of different concepts
such as for example
Soul
Spirit
structure of Consciousness
or
Elements of Perception

at this lecture level
try to perceive
that element of your Perception, for example
which, well, maybe it's not described in very specific words

i.e. to this level of Spiritual management
also includes management of those systems
which may not be translated into words

therefore you can perceive them from the outside
i.e. to do management
but you don't have to call them these systems

in this case it is easier to work
in the optical range of Perception
i.e. what works is what you formally perceive
as an optical model

and in connection with this
you get general management simply because
what do you see in shades of light
at a certain distance from oneself
these shades of light in a certain way
configure
at the expense of your management goal

the important element here is
here is the concept of the management goal

in connection with the fact that I set the task

combine different positions
control system

those. macro positions
and own private management positions

try right now, right in front of me
project that control
for example , there, one and a half meters from me
specifically in physical space
which denotes your own tasks
according to your management goals

and when you will manage in this way
which I just mentioned
this is a way of control through the ^{Spiritual} level
i.e. spiritual state

try to consider
how light optics change
i.e. light-optical perception
which is not necessarily located in physical space
in this case

and here is this level
which denotes the location of Perception
in the space of your Thinking ^{for example}
which often does not correlate, ^{for example}
with physical space

you are this space anyway
bring to the physical level
in front of me

then set yourself a task
that you work on your own Thinking
when you think you are accurate
^{for example, you can't always say where you think}
because the speed of thinking can be so high
that the coordinate of the point cannot be determined

therefore you can think at that speed
which makes space non-physical

and as a result you can get
^{for example, your own management space}

outside the physical plane

and this space will still move back
into the physical plane in front of me

when i say all the time do it
i.e. this can be done by representation
and it is possible to do it, for example, simply with clairvoyant control
managing, for example, clairvoyance

due to this
when you moved back
so the control space is in front of me
look what the difference is, generally speaking

so if you think
and do not determine the point of Thinking

i.e. you think but don't ask yourself a question
at what point in physical space
Thinking is happening

and if you asked yourself this question
what changes in your Perception in this case

i.e. your Spiritual state

do it at the same time
with my verbal level
i.e. I say you do it right away

if you didn't find any difference for yourself, for example
then you project the area of Thinking
into physical space
in front of me

if you for example find a difference
then you have to project it
into the space of Thinking
which does not correspond to physical space

Now look further
that finding a difference or not ^{yes}
let's assume there is no difference
in fact it is one and the same spiritual state

's why I've just now outlined the criteria
The spiritual state that determines management

means the governing Spiritual state
it's always the same
at any level of management

as a result of this
we can have
a completely calm level of external Perception
for example, inner peace
and at the same time manage intensively

therefore, there is a change in external tasks
in this control structure
it's just that
disposition of the actions of the Spirit
from the point of view of Spiritual Administration

and this is the work of the Spirit
in relation to, for example, the level of Thinking
determines in this case
presence of a control model
in terms of your Thinking
either in physical space
or outside of this space for example

and when do you do the merger of management
as in physical space
so at the level of simply Thinking
as if outside of physical space
for example in the space of Thinking
you see the structure of your own Spirit
and what's more, you see how it develops

therefore you can come
to your Spiritual development
as if from the outside at the level of Consciousness
and at the same time develop your Spirit
so that you can develop
only at the expense of
well, for example, the optical system of perception

i.e. in the form of an intense glow of Spiritual development
you can add glow
or there for example extend it

make deeper
at the level that you define, let's say, as the Soul
and this is really the Soul

or do you define it as Consciousness
but this is for example structuring of the Soul in the form of Consciousness yes

pay attention when you listen to this lecture
If possible, consider what this term means
in each specific case

and when you do the management
from that spiritual state which is peace
but which is the governing peace

you find the structure of this management
in the Soul
which, generally speaking, is perceived in management
as a motionless subject of Perception

here is the Soul
this is in this case
a motionless subject in your Perception

and you then when you go further
you will see that this is the Perception of the Soul

so that's why if you're considering management
in the context of the concepts I have defined
such as Soul
Well, that's a general concept.
in this case a certain concept
in this lecture

defined i.e. I defined it as a structure
for example reproducible
with the glasses of vision Perception logical
at the level of Spiritual management

i.e. to understand your Soul
and consider her even calm state
state means, well, kind of out of action
you need to make a spiritual effort

logically it is quite understandable
what does it mean to consider

the work of the Soul
and activate the Soul task
you need to make an effort

another question
how to make management technologically supported
i.e. management must be technologically implemented
at the level of your goals
and at the same time you must provide it
first of all always
secondly, sometimes without analyzing
for example this level of communication
which I just told you about

let's assume in this case
one can look at this position like this

if we consider
some kind of composite material
let's assume there is a multi-composition there
complex plastic product yes
which is itself a form
and if we want to know
how was it organized at all
this product

we can see the composition of the composites there
chemical reaction flow
get a general idea of the product

another question
if for the structure of Salvation
we need to sell the product immediately
we can just take it and move it with our hand for example yes
to the right point
without doing research into chemical processes there

while listening to this lecture material
try to make the same element

i.e. what I told
in the form of fundamental Laws
leading, for example, to the implementation of control
Well, what corresponds there is very schematic
to the concept of the result yes
for example, there is a plastic product there

if you move this product
to some place
with a physical hand
you don't need to know
its chemical composition

so therefore move on from that part of the lecture
this is the one I have just outlined
as structuring of Consciousness
by significant component level of management
to the management goal

go this way
to obtain one's own physical matter

for example, moving the product
you use your own hand

if you do for example
Reverse Logical Thinking
you can naturally understand
that here is the product that controls clairvoyance
the hand is visible both through clairvoyance and logically
because the product is moving

i.e. the object of Perception is a product

and here is the object of Perception
also characterizes the purpose of Perception
you are moving there for some reason
for example there is a plastic cup

then another question is what is controlling clairvoyance
when combined with logic
you get
structure of sustainable Spiritual Administration

i.e. to you at the same time
and logically clear
what do you mean by this
and also clairvoyantly at the same time
this is a must see yes just like in the picture
superposition of two elements
it turns out to be Spiritual Sustainable Management

try to understand this lecture quickly

constantly hold specially
by the effort of Consciousness
at the level of complete understanding
in terms of, for example, at least the first iteration

i.e. in this lecture
It is imperative to maintain understanding
i.e. you shouldn't go into analysis
or think that, for example, this design is complicated

's why I'm getting to what I'm getting at now
that a stable Spiritual structure
characterizes physical matter

physical matter moves the glass
result of this we can get
that intracellular organization for example physical
specifically contains stable Spiritual compositions

I got this from the analysis
which is in principle a complicated analysis
combining there an elementary level of Perception

but at the same time this level of analysis
based firstly on the part of the lecture that I mentioned
secondly, it follows from this that it is associatively logical
really said it outright yet
what does it mean we can do management only because
that we can already work with the Macrosystem of the final type

so even though I've been talking about it all along
and this was clearly revealed to everyone
what can be done management
without delving into the system, for example, of organizing the process

i.e. when you listened to my speech
you are always in a certain way
on Consciousness
on Perception they implemented
this type of management
and it really can be more optimal
than process detailing

so take a close look
how everyone did the management

how everyone did the management
which is the final level of management
without details

and I need to look at the space in front of me
there, one and a half meters away from me
a sphere with a radius of, for example, 20 centimeters
all information of this management is here

then you should ask the question
and not look at each one individually
how exactly what did each one do
and immediately look at the answer to the question
as everyone did
and get only one answer for everyone

i.e. you do it now
get exactly one answer
for everyone's work

the answer may not necessarily be clear from a logical standpoint
but it has to be
be perceived as just one answer
For example like one wave coming from this sphere to you

i.e. in connection with this
this wave in Perception that this wave is coming
this is enough to know that the answer has been received

as a result of this
I just want to tell you now
about different levels
telepathic level of information transmission
so what are these levels, they differ in that
what is for example the level of Spiritual management

i.e. you make management from your own Spirit
and transmit information
but at the same time it is not visualized by that
who perceives this information
and you only convey the meaning
or event level

and a person can do it
or perceive
or, for example, not to perceive

the second level is the literal level
i.e. many of the students, for example , simply write verbatim
and they really write accurately

i.e. it just means such a level
which characterizes the verbal plane of telepathy
as it is understood in many ways
although this is only one of the systems
telepathic level of information

and now I want to talk about that part
to which I have now brought you in principle
this is that telepathic level
which becomes famous

like the similar wave I just talked about
i.e. it is not recorded anywhere she has no images
but it is a telepathic transmission of information
and more accurate and faster
but it leaves no traces

so this is the level of information transfer
is telepathy
the Macrorescue system
from a possible global catastrophe, for example
because this level of telepathy
it is based on unique
rigid systems of world organization

and at the same time, well, it looks like it
what do we say if there is gravity it works everywhere
it is generally considered so

it's about the same level
that this type of telepathy exists organically
as an embedded system
for example, a conditionally crystalline system means the organization of the World

i.e. this type of telepathy exists everywhere
because you have Thinking
This means that this is an element of the organization of Thinking

i.e. Thinking is organized this way
what does it mean once you produce Thinking
you receive a transmission of information
reflection of this element of Thinking

everywhere

for example why thoughts well you can say
that they are not all clear there
for those who are not actively studying telepathy
but it means nevertheless always
there is a feeling from the element of Thinking
either explicit or implicit yes

so someone thinks that he perceives it, someone does not
but some thoughts are announced, some are not

this is the structure of exactly what Thinking happens
Generally speaking, it is perceived by everyone as meaning That's why

and Thinking occurs in another person
for example, well, a person can sleep, yes
or for example not only a person there is an animal a dog let's say

if you look at the dog there
then the behavioral system
you can immediately tell that it is moving somewhere
it is possible to define levels of control
where is it coming from
and where are its objective functions
at the information level
for example, near the physical body of a dog

but is this Thinking
yes we can say that
that we took abstract information
and got control
from the viewpoint of the organization of matter in general

so here is this information
It is possible to single out the Thinking of a dog, namely Thinking

so this is for homework
It is necessary to identify the dog's Thinking points
near the physical body
not inside
and at a distance of more than a meter from the dog's physical body

so the point is that when I talk about Thinking
I characterize those positions that speak about that
that you can receive information

and to convey all m knowledge on Macrosalvation
using these very peculiar channels
rigidly so to speak built-in telepathic system

which is among other things
and an element of the organization of the World
from the Creator

i.e. for example if we consider
the process of the presence of the Creator in the Thinking of each
for example in the field of creative development

then we will see that this is a distribution system
in fact, well, among other things
information distribution system

and so that this distribution system works
functionally worked
there must be rigidly oriented links

and these are the rigidly oriented links
this is the system of a rigidly fixed telepathic system
in physical space
which surrounds, for example, physical bodies

but this is a physical space
is at the same time
and the space of Thinking

means as an independent work
find it again in the sphere in front of me for example
one and a half meters in front of me
sphere with a radius of half a meter

find in this area
those points which are simultaneously
and the space of Thinking
and are located at the same time
in the physical space in front of me

i.e. I took and sharply narrowed the task
i.e. just brought her made her brought
in front of you

Means you try these elements
everyone find it on their own

in this area in front of me

to find

Generally speaking, I don't give much time

Well, for example, they made some kind of review

got some Perception in this area

and we can say that this is the finding of this level

i.e. finding is what you managed to perceive

in that short period of time

which I actually announced

now then find the same thing

but for everyone

i.e. is there something personal in this area

in the same area find the same thing

but for everyone

not only those who are in the hall

for everyone in general

and when did you find it ?

you will pay attention

that's all you found for everyone

it starts to move forward in this area

to your point

i.e. not the other way around, but rather a unique one

well, in quotes, let's say conditionally a magnet

your point that attracts to itself

collectively generalized sphere

it means the element of this means construction

is that it is you

reproduce all external Reality

from the postulating sign

any object of information

reproduces all

including external and internal Reality

and therefore the management is brought to you

i.e. you have identified your area of management

or generalized for all

and it turns out that at the level of the Laws of Development

external control is brought to you

and when you analyze

for example, the state of your body there

let's assume a self-regenerating system

or a self-healing system

then you will see that it works

according to the same standard feature

that all external elements of Macrocontrol

have an averaged version, so to speak

which is located on points of the physical body, for example

let's assume why acupressure exists

for example purposefully

or why it exists in general

in both cases

there are points

which are the same

because in the body of a human, for example

there are exactly such detectors

who perceive both the particular and the general

and at this point

the general still tends towards the particular

i.e. to what is individual for a person

if you consider

a sign coming from you for example

then you will see that from this point of the private

you can build the entire external Reality

here in principle it is already elementary

from the point of view of Perception to do

i.e. it is enough to see

that the generalized point is moving towards you

Well, it 's a very simple element.

if you see that the car is going one way there

you will understand it right away with the extrapolation model

that she can reverse, for example, yes

but the track will be the same

if we want to keep the same track

i.e. it is possible to study the trajectory of movement

we can here simply from optical perception
but to unpack the trajectory, i.e. to understand
how to build Macroreality in this case
we can apply the Spiritual level of management
at the same point in space
physical space

i.e. it immediately becomes clear
why do we need physical space for example
what can we use
and let's say field information management

and also apply analysis
from the point of view of fixing the level of control

therefore if we have
physical space
for example in the usual sense
then we can have accordingly
and the criteria for organizing this physical space

then the criteria system
our physical body becomes

again this is the second level of control
associated with self-regeneration
by the level of universal harmony

then self-regeneration is harmonious
when you know the Laws of Self-Organization
in relation to any of the sources of information
for example, in this case it is a Macro-level organization

therefore, to self-organize
in many cases, just a little is enough
so do an analysis of this type
that you are just tracking
inverse level relative to the event
from general to specific

and here there is a very important transition
what if you do management
already from the general to the specific
in general from the general to the particular

then at this level you can go

to the level of Perception of any information object

in this case I said for now
about your individual level

i.e. you ^{have} your own level
and plus generalized but actually created

if from the general in general to the particular in general
you will be able to ^{actually} understand
^{let's assume} how it perceives
all elements of information
from the point of view of the Creator

i.e. you can understand this information
from the Creator's point of view

i.e. if we consider the World for the Creator
as a system of equivalent objects
then the individual characteristic is
own level of perception

it is clear that the person has
even in different states there
^{for example} Perception can change

and at the same time if we consider
different level of objects in general
then the Perception may be, ^{well}, basically different

and this is the level of Perception
and the level of organization ^{means} the World
from the point of view of this Perception
another information object

this is as an independent work
you will need to look at the result of this lecture

i.e. you will need to see
the organization of all Reality
from the point of view ^{of, for example, well, there are} trees
is some kind of animal ^{there}
or any level at all
which is considered inorganic ^{and} stone, etc.

i.e. you can generally take the created Reality

and look from it
how the world is organized

when you consider let's say a set of elements
then you will see that the total level of your Consciousness
which organizes different elements
this is the form of man

i.e. having completed this task
see be sure to discover
that different levels of Perception from the Creator
organize the form of a person
as a level
from which the objects themselves develop

therefore you need to prove
what is the shape of a person
it organizes external objects
but prove it as I explained
the technology of proof is that
what do you give, well, actually means
develop your Consciousness in this way
that your Consciousness builds completely different structures
from different elements of Perception
precisely from different elements of Perception

so if you consider the next level
which is called control from one's own Consciousness
any object of information
i.e. any information

and at the same time you will consider this management in this way
what do you mean generalization tasks
i.e. no separation of levels at all
example, to a private or general

and your task is
simultaneously
Macro Rescue System Management
then direct control from the structure of your Consciousness
this is a generalization

i.e. it is logically clear that the more you generalize
the more accurate you get and generally speaking it means more direct yes
those. shorter management

's why when I used the word "straighter"
therefore in Consciousness
we can interpret the management like this
either it is indirect or it is direct, more precisely, it is more direct

that the characteristic of management can be
it's just a formulation part of the problem
what do we want
there is only direct control there
then what is it yes
and what is it
direct control from your Consciousness

and if we use the term "straighter"
i.e. we are talking about the fact that in this case
there are , well, possibly, systems that
You can call them that they are conditioned
well, with such characteristics, perhaps?
that do not necessarily create direct control
and they can be intermediate links yes
to the control information segment

so in this part of the lecture
Generalized Perception Yours
it forms precisely the private level
reproduction of the event plan

i.e. if we set a task
combination of all levels of particular and general
then you are in the event plan
you have some events that are already controlled
if you enter
Generalized characteristics of Thinking

the task is only
that you will have to enter them somehow and put them somewhere
to get controlled events

and here is the concept of direct control
characterizes in this case what you
then you don't leave a gap
between generalized and private management

therefore in this case
as I already explained
at the position of convergence of trajectories

then you need to enter here
instead of the optical level of Perception again
It is advisable to introduce Spiritual
and in this case it is necessary to enter
Spiritual management
and therefore first Spiritual Perception

here is the formation of Spiritual Perception
this is that bridge
which characterizes the simultaneity of control
this lecture part
for all constructions of Consciousness

and therefore it means
only the formation of this Perception
provides direct control
according to the design of this lecture

In this regard, you should try
make the control volumetric
and this is management
how to make spiritual volume
in the control context if possible
right in front of me

i.e. view the volume of the Spirit
here in the space right in front of me
try to do it with concentration

I am now localizing the space
control in front of me
for example, within a radius of about one and a half meters from me
there is a sphere
for example, we consider that I am the center
there is this sphere, let's assume
and there is such a sphere around me

management must be carried out
on the outer surface of this sphere
those. not localized for example clearly in front of me
but try to see it as if
that some kind of ball, for example, here it is transparent
and management needs to be done here

i.e. look then at the content of the Spiritual volume, so to speak, yes, yours, which
you can simply appoint

here on this external sphere i.e. on the side
towards you
outer surface of the sphere

Now look inside
come inside
look inside
what is the difference of Spiritual volume

I am now forming the concept of Spiritual volume in general
it is important to do this
and the concept will be formed later
what is Spirit the volume of Spirit

the technology is quite unusual
the concept is formed later
after
you work first

then look at the same thing
but in the spheres around itself

all the same
quickly looked around for example
precisely in the outer part of the Spiritual volume
then entered the sphere
and looked inside
on the inner surface of this sphere

now do this action
all existing tasks for example yours
the whole world in general
for creative development

All these tasks are placed under spiritual management
i.e. certain volumes of one's Spirit
which you implemented and perceived here
but which we have not yet determined
for example how specifically
in the form of some kind of rigid system yes
what is the volume of the Spirit

but we use this concept
as a kind of transport system
for all tasks in the world
which are related to Macrosalvation

your private tasks
and all these volumes
settled here again in front of me
for example, in the same sphere with a radius of , say, 50 centimeters
make it so that it is a generalized sphere

i.e. the sphere of all

and those who in the past for example
and those who are in the future
those who were and are in the past
and those who are in the future

find the current time sphere from here
found the sphere of current time
and made the management
so that everyone's tasks are optimized

i.e. it is a cure for diseases
This is, for example, management to ensure that there is no macro-catastrophe
or event sequence management

all this needs to be done in front of me
try constantly
fix the size of the sphere approximately 50 centimeters
in front of me

i.e. do not go beyond the boundaries of this sphere
work inside

so now look at the difference in your work
and work when you work with everyone

need to evaluate very quickly
evaluate what it means there is no difference at that point
where is the Spiritual Administration
with the universal Spirit
for example, there is the Spirit of universal Salvation
ideological level
it has infinite volume
but often a specific localization

be careful with this
i.e. specific localization
Well, there is , for example, an ideological level, yes
the idea is often expressed locally

at the same time it can be universal
by spiritual content

so if you make the control like this
what do you mean, well, for example, only those
who will already be in the future
where the past is taken into account
due to the development of the structure of the future
then you see that the past can be organized
as a system for organizing future events
well, for example, in terms of information

it's a kind of ball
from which all the time there from the past
Well, let's say it's an element of energy and information.
moves into the future
builds the structure of the future
and a peculiar wheel
where all the time everything is in conditions
only one level of masses and volumes

i.e. consider the development of the World
through this position

a second passed there
we take from this second
mass
just an information mass
let's take it and make it neutral
we take it out and put it there for a second or 10 seconds ahead
and we put the meaning of management there

i.e. it turns out we took from the past
put
and yet they didn't spend anything
the construction of the past exists somewhere
and this "somewhere" is the state of the Spirit
i.e. spiritual content

we can extract control information for example yes
but the spiritual content remains

because in this case it is
it could be infinite there for example
in minus infinity and in plus

therefore I simply highlighted this parameter
that you can work with the optics of Perception
means using a kind of closed system level
closed system

but when I start to conduct the analysis
then I come to the conclusion that the state of the Spirit
then it must be infinite
to hold the whole structure of the past yes
for example in Spiritual Perception

therefore I have highlighted this parameter
as Spiritual Perception
showed that the Spirit is infinite
and showed that we can be
within a completely closed system

i.e. without spending anything
nothing anywhere as if taking
and using just one element
for example Perception yes

and that's when you analyze all these elements
for example, you can do this for a long time by the way
This exercise can be done for a long time
analyze so as to obtain
own
namely, own management
it means specifically, for example , in front of you
in the physical area in front of you
and what does this mean for local characteristics
Spiritual state
i.e. a certain optical volume
which in principle can be called
as well as Spiritual state

we may wonder
what is Spiritual state
from the point of view of optical volume

and just see

and this optical volume
impose
on the element of the infinite in the past
development

precisely the infinite development in the past
i.e. on the contrary, the Spiritual structure of development

i.e. you can ^{therefore} develop the Spiritual structure
just simply developing a vector, ^{well} , actually into the past
vector of spiritual development

and that's why it turns out
that when the Spiritual construction goes into the past
you are still developing

the past from the point of view
Spiritual ^{well} constitution of the organization of personality
is not a regression

as a result you can gain control
from this, ^{for example}, logical ^{and} actually logical construction

so you can get control this way
that here is a rather unusual transition
be more careful here
that you are just in the current time
record the control status
on the Spiritual again constructions

and that's when I said "on the Spiritual construction"
i.e. in the Spirit
you get
First of all, you don't have to answer the question.
which should be asked
^{for example}, how do we technically transfer the past ^{there} into the future
or how we get a projection from the future
we just set the status

i.e. the fundamental idea
we create an infinite form

fundamental idea
or a conceptual idea ^{for example}
some infinite form

Well, ^{for example}, if you take
Well now they are called ^{PR} companies
or there are companies organizing control systems

then if we take the organization
well, let's say the main states of the world
then the system of Spiritual management
was at the same time
and local, i.e. the goal is usually in physical space
simultaneously infinite
at the time of organization
at the point of information organization

result , be more careful here
from the point of view of analysis
and the analysis can be done quite simply
take some major well-known states, for example
see how they were organized in general
initially
and just see it in physical form
on physical parameters

how the system was organized
in terms of what is here
and physical presence
Spiritual local government
and at this point the Spirit is infinite

any stable form
this is the infinite manifestation of the Spirit

this is the logical conclusion that came out here
i.e. it turns out that there is a cell of the organism there
this is also an infinite manifestation of the Spirit
in its endless development

what prevents us from making infinity for example
structure of Consciousness yes
and then Consciousness is infinite
which forms
infinite for example time and space of manifestation
physical body

i.e. the Laws of Eternal Development
they are not really that complicated
Now I just gave it a logical explanation
that construction of Eternal development
which is immediately very understandable
but for example it is not always expressed in words

pay attention
this design is very understandable
but words
if you look at it more decorated
and for example, for example, in a hundred years

those. formalization of management is as follows
that Spiritual development is infinite
plus minus infinity
collides
with word conversion system
and the system of change from social, for example, the level of development
when Consciousness changes depending on
how the life of the collective Consciousness changes

but the semantic connotation of the words is different
well let's assume there in Russian there
the word "world" is the physical world
and "peace" in general is peace where there are no wars
absence of war

so if we took a language, well, for example, that one
where "peace" means "peace" was highlighted with an additional letter
those. earth for example yes
then there was the exact coordinate
what to read there "world" with one more letter
this is earth
without the letter it is "peace" there is no war

then when the rules were changed
another construction of Perception now exists in people
there it was a more clearly defined system

in this case
if we consider Perception
so from the point of view of the future
there are some similar words there
but a different orientation in Perception

if you look for example millions of years ahead
then the language is transformed
in the form means more Spiritual context of communication
each word, for example, is more conceptually and spiritually developed

therefore your task
when you set, well, the parameters of Eternal development

this is a task to ensure endless development
and really perceive
what happens in infinity
and how do you understand this now?
and how to convey this to everyone

i.e. to make a universal development system
from the point of view of infinite development

i.e. in the future everything should be understood
if possible exactly the same for example yes
like now
from the point of view of the Laws of development from the Creator

and when do you consider it that way ?
then your Perception will again acquire
right here in the parametric level
in the form of a form
takes on the form of a human again

and look right in front of me
review the structure of your own Perception
this is really the shape of a human

therefore, for example, again to the form of a person
I brought
when I set the task
to do means Eternal development
technologically and logically justified

and it turns out that the parameters of logic
from the point of view of Eternal development
this is also a human form

i.e. logical thinking
it is possible to combine it with Spiritual development
if we form a human
from the point of view of information logic
let's start analyzing
in application to event construction

and then we see
how the Spirit participates in events
it's very simple logically

i.e. it is clear that each person does something

makes some decisions
and these technological solutions are enough
conduct
from the point of view of the human form

i.e. you set yourself, for example, a form
where form is the form of a person
and is the logic of your Thinking

logic is what you are basically in this case
accept it as everyday logic
logic in solving social issues there
or any other design at all
where you can apply logical thinking

then you are next step
a little further from this form
set your own goals
and look
how does this logic relate to the Spirit
with your Spirit
and where is it connected
at what points

such as activating the Spirit through acupressure
you can also activate logic
through a kind of, well, conditionally, acupressure
through the identification of these points
where is their activation
calls Spiritual Administration
in relation to the event

and you can control through logic
then by the Spirit

where is it further
just the design of your event

geometrically it looks like this, for example
once again I return to geometry
in physical space

There is a human form in front of me
i.e. well, in fact, a person is a form of a person
means control logic

for example, further there, five meters away
I put the sphere
which is the goal of my management
it can be anything
I can enter the meaning of management
I can change it

and I'm just looking
where in this, let's say, logical person yes
in your Perception of logic

the form of logic is man

the design of the glow intensity changes
so that my management goal
there in the sphere far away 5 meters from me
it was implemented

but at the same time, so that the control goes through the Spirit

this is how i manage my logic
so that the management is Spiritual

I don't need to keep track of the distance
I don't need to track it in principle
the geometric structure of the Spirit
because I manage through logic

and as a result of such an organization of Consciousness
therefore the form of the Spirit is often not defined

i.e. there is no task to identify it at all
although it is possible
it is possible to identify the local form of the Spirit as I explained
but with such an organization
can be controlled spiritually
using the logical principle of control

and it's quite easy to manage
this is what I'm talking about, the principle of activating optical points
in the logical form of your Consciousness

and as I just explained
this form it approaches the form of a human
and is generally such

and if the behavioral structure
logic that determines events
human behavioral structure

This is a system that, among other things, determines
and which defines as I said at the beginning

if it determines the shape of a person
then it is clear that any event construction
also builds the form of a person

i.e. having its own form
we can always know
what is happening in events
this is the controlling clairvoyance

not just know but also manage yes

that is , the event structure is external
it also characterizes the fact that you already know her
because she organizes you

so when for example we look
on the concept of clairvoyance development
from the point of view of this design
manager and clairvoyance

then you understand it
because you know, for example, the ideology and components
i.e. elementary
from the point of view of the elements of lecture organization
this level of knowledge

and when we say, for example, it opens there, well there
clairvoyance or healing abilities
or direct access system
for example for Macrosaving
for any principle of Salvation management in general

then it opens when there is a knowledge system
which organizes
it is precisely the step-by-step level of organization of this knowledge

when do you come
to such components through knowledge
then they can't disappear from you in any way

Moreover, the level achieved
let's assume clairvoyance or healing
it never decreases in this case

i.e. it can only be or develop
or, for example, develop in parallel
at the same speed but in other components
there, let's assume, clairvoyance is directed at microelements
or on the Macrocosm, the manager, moreover

i.e. as an independent work
you should find that mechanism here
based on this lecture
which would ensure
the necessity of developing direct access characteristics
for example irrational vision
which includes not only clairvoyance
and the system of rational
and including irrational thinking
simultaneously with the Perception of the image, etc.

i.e. and show that
the postulate that I declared
it functions in the following way
that you always have only development
because events are developing

therefore you can't
there, for example, having reached a certain level of management
let's assume this is lost
or be technologically unsupported
this is very important

I came to this conclusion logically
and generally speaking spiritual postulates

so try to understand this very clearly here
because the meaning of management
is the attainability of control
from the point of view of Macrosalvation , for example , always

i.e. instability of forms of unstable forms for example
instability of the form of governance
cannot be shown here
and this is a logical principle

i.e. you must logically understand that this is so
and then it will be like this

for example, from the point of view of the Spiritual level again

logical form creates the Spiritual level

i.e. direct access level

at any distance

therefore prove why the level gained

for example, the controlling clairvoyance

can't be understated ^{yes}

under no circumstances

this means, firstly, to ensure systematically and realistically

provide ^{for example} a Macro Rescue system

an element that is completely real

i.e. The reality is that

that you always achieve control

if necessary, there are, ^{for example} , components

some actions for Macrosalvation

secondly, it is very useful

in case of the same treatment there

or any other level of event management

at any distance

and these events

then it is clear why this is training

who constantly improves you

from the point of view of solving the same problem of Macrosalvation

from the particular to the general the same postulate

so this ^{means} logically prove this construction

as logically by way of thinking ^{yes}

in the space of Thinking

so logically by forming the form of logic

see a person in front of you

and this can be proven the other way around

from the Spiritual level of management

i.e. from the Spiritual path of management

after the logical form

This concludes the lecture part.

There will be a 15 minute break now

and then I will answer questions

I'm starting to answer questions
almost as it usually happens
these answers imply
practical application of the technology presented in the lecture

however, the application is often not direct
but it is fundamentally connected in a targeted way
specifically with the lecture part

is next

found at my son's Means *herpes*
and there is such a statement
that the disease is associated with the use of air conditioning
and the question is
what *can air conditioning affect*
to reduce immunity

the thing is that from the point of view of control systems
for example in your Consciousness
may affect physiological state
just a transformation
which causes change
it is precisely in Consciousness

those. the air conditioner itself
if you then control it through Consciousness
and for example you make such control
that it does not cause any problems

then air conditioning
like any other, for example, technical
or not just technical
biological system
will not cause problems

but air conditioning
well, at the level of , as it were, automatic perception
of course it causes those constructs of Consciousness
which means the following principles characterize

what is known for example as
from the point of view of orthodox medicine
of the usual plan, as if physiological
that a sharp change in temperature

This is considered a negative quality

for example for the possibility

for example, there is some kind of disease

if herpes

then the corresponding environment, for example,

with certain humidity characteristics

and at the micromolecular level yes For example

increased ionization, etc.

i.e. they exist in the collective Consciousness

certain constructions

which are activated all the time

as soon as the image of the air conditioner appears

or presence near the air conditioner

as a result of this, naturally

that activation is like

in fact, it is the same as external control

this means that when using the air conditioner it leads to that

what does the level of the same immune system mean

which means, generally speaking, it regulates in many ways

that's exactly it, including the external communication system

in relation to external information

begins to transform

and it turns out that when there is

such a strong collective opinion

then this opinion may cause

some kind of disease for example

as a result of this

so management in this case

consists in the fact that

that like I set up the management process, for example

as a system of Spiritual Perception

from the technology of analysis for example

the controlling element of Consciousness

then here is the meaning of management

maybe the following optics

as if in Spiritual transformation

this means that the air conditioner itself can be removed

as a system of organized events

for example, at some physical distance from oneself

in the thought-image

and make the level of D1 of the mental control like this
that he would be that sphere
which contains air conditioning
and here is the status of endless spiritual development
simply means from the inner surface of this sphere
simply optically extend into the area
to the air conditioner area

i.e. where is the physical image of the air conditioner
and output this generalized control point
for example, telepathic plan of information transmission

why next final
in this control
action
is to bring into the realm of general telepathy
and the fact that every action is of a positive nature
requires that, well, according to the Macrosalvation system, so to speak, requires
that this needs to be taught to everyone else

and if you just did
but did not pass on, for example, the knowledge that you have
according to this design
then you actually get
limited level of Spiritual Impulse

i.e. here is an impulse from you to control
it is infinite
because it is truly infinite
i.e. you give all systems Macrosalvation

if you are a learning action
logically do not enter into this construction
from the point of view of today's lecture

I explain in general this is a general principle
in relation to the entire management

means you only have part of the control
and then to the physical level
this may well not happen in principle

i.e. control that translates
to the physical level
This is management taking into account the transfer of knowledge
according to the Macrosalvation system

so in this case it means the general ideological conclusion
this is the explanation of this construction
that any information is controllable
it's absolutely clear where it comes from
for example, external control action
any information
or it is social
or it is fixed there in the collective Consciousness

often it is just an external thought, for example
or even the level of external Spiritual management
where the person himself does not differentiate the state yes

then it turns out that
i.e. the spiritual state of another person, for example
or it differentiates not as it should

then it turns out that in this design
understanding of the Spiritual state
or there is the ability to read minds, for example
on Macrosalvation Management

i.e. not everything in a row
because there is a principle of one's own thoughts
well , to which, generally speaking, there may not be access
if a person doesn't want to

but according to the Macrosalvation system
then these are precisely the irrational systems
like mind reading
differentiation of spiritual positions
this is precision in Eternal development

i.e. then you will not have external control
as if by negative status because of that
that you didn't understand or figured out something there

or you, for example , go
according to the structure of the collective Consciousness, for example
which imposes a negative status

there was such an element here
what could be restructured
the structure of collective Consciousness
in this segment

but I still did n't give a restructuring system
How about a frontal control system like this ?
if I may say so

and gave a system connected specifically with the lecture
be more careful here
attach lecture material
in terms of developing the answer, let's say so

Now a list of questions
how to explain the very frequent lack of desire to eat

Well, first of all, when using, for example, control technologies
often, let's say, energized and in a state
here is the physical one
she is such that she really can
that's exactly why there is a lack of desire
there we assume precisely the intake of physical food
because you can
firstly, to structure Consciousness in this way
that reproduction is taking place, for example, in the same
including physical matter

but considering that
management is fundamental
in the case when everyone can do it
according to the system of Macrosalvation

then we either have to teach everyone
well, how to organize the physical body using Consciousness
or then you need to eat food
until everyone knows how to do this, for example

but nevertheless
these are the states
they really do exist

comes the second question
the concept of light of the Soul and combustion

in Spiritual shade these are different constructions
The soul is burning
more spiritual-optical design
in that sense, from the point of view of today's lecture

and for example the light of the Soul

it could be the infinite light of the Soul
from the point of view of literary interpretation, for example
of this concept

that I give an interpretation to some concepts
in this case to a greater extent
consider exactly
in the appendix to today's lecture

because we are talking about concepts
it's possible naturally
from the point of view of the general design there
there, let's say , philosophical or psychological

that's why the answers are always mandatory
bring to understanding today's lecture

and then this concept of "temperature regime" for example yes
so from the point of view of the burning Soul
so if we consider

so this mode consists of that
what should you answer like this, figuratively speaking, so to speak
shine so much
so that the light would be further than your radiance

this will be the answer to this question

the third question is this
what is the technology of Micro and Macro rescue

Well, the thing is that here is the situation
again in practical terms according to my lecture it is like this
that I will not talk about it anymore
that for example technology in many lectures it exists
is at least technology there for example
This is exactly what I call Macro Salvation

but here I would like to show more
precisely the transitional level
that in fact it is in many ways the same thing
from the point of view of the development of Consciousness, they are one and
the same

This is where I want to introduce a new technology now
that Salvation is built on the development of Consciousness

i.e. then you can
means to receive management activity
because you see how your Consciousness develops

this design is very simple
here at this level there is generally no difference
where are you
in the Microregion or in the Macroregion

but Micro and Macro regions
allow us to identify, so to speak, the trajectory
or there light-optical trace
where development is taking place

as I mentioned in the lecture
there is a private level
and there is a generalized level

and here's a private one, for example, let's take it and make it unique
transformation of consciousness
and let's say
that the private level is the Micro level
from the point of view of all connections
and the general level is the Macro level

i.e. two optical regions
one small
another one is bigger

as soon as you declared Consciousness
these two postulates
you see that there is a spread of two levels
in relation to each other
and they move towards each other

why, for example, do scientists perceive
in the optical range
that the universe is expanding

The thing is
what if we look at the Micro and Macromolecular levels

i.e. for example the concept of the Macromolecular level
consists in the fact that
what are the molecules that are

for example, one molecule in a large vacuum volume
if we consider such a design
then we will see how optical light appears

i.e. optical light
is being implemented
from the connection of Micro and Macro levels
from the point of view of Perception in Consciousness

because my technology is based
on the knowledge of the Laws of Consciousness of one's own

then in Consciousness
if we have one small physical system there
we output to the Macrosystem
for example, in a very large amount of vacuum

instead of a whole galaxy, for example
we have a vacuum
and we introduce one molecule there

then here is the molecule
which is located in a large physical body
for example on the ground

and from this molecule
with mutual desire for each other
external divergent light arises

and then if this light
it really means, well, let's say it has large volumes
from the point of view of the physical medium

that can be seen from the physical medium
that it is as if, for example, the universe is expanding

and if we have, let's say, such technologies of knowledge
which are comparable
Well, of course we have them
here from the point of view of Perception in Consciousness
what does it mean we can say means about that
how can one see the development

the very fact of this development lies in the fact that
what we must see first
in relation to what

we will differentiate development
i.e. how do we perceive at all

for example in this particular example
it can be seen quite clearly
what we perceive
depending on the logic of our reasoning

and this is this concept
Perception
depending on the logic of our reasoning
it is precisely this that determines
what does the most stable logic design mean
for example, your own body

if you think near the body
then this is the second part
sustainable design in management

in this regard, if we ask the question
what is the technology of Micro and Macro rescue
then you can answer after such long reasoning
so that this technology is such
that you work near your physical body
first of all

and why do you work, I already explained

so and when do you get it
this is understanding
for example, yes, related to the simplicity of the answer
this is the state of the Spirit
which forms logic
having physical form
physical precisely physical body

i.e. it is precisely the physical form for Perception

here I said it absolutely precisely
not just a form
but for Perception
namely the physical form of the physical body

because
"body shape" is one thing
and "physical form"

this is another information for Perception
and is located in another place

so if possible, analyze it
and already from this difference in understanding
find your own technologies
and Micro and Macro Rescues

the most important thing is to find where the controls are
which is built on the development of your Consciousness

as part of the answer
I'm just talking about this issue
I will transmit it by telepathy
well, almost like the second part

for three days in a row
after this version of questions let's say so
after today's largely seminar

because there are questions in the seminar plan
I give more where I have my own practice

so I think that it will be necessary to address this issue
build your own management systems
and according to the Macrosalvation system
you need to build them like this often
so that they are not separated

next question
how any information is created

so the point is that
that the creation of any information
for example from the point of view of Consciousness
this is the work of Consciousness

those. information is created
the work of your own Consciousness
in this regard, it means based on this level

why am i talking about consciousness
because I believe that in Consciousness there is
Perception
and the Soul which reproduces C awareness and Perception
This is the design that is more fundamental.

and that's why I first define
it is the element of Consciousness

although it is clear that the Soul works first
but if Consciousness is not reproduced
you can't perceive information

therefore any information
created by Consciousness
where it has already been reproduced
and where it is felt

if you want to manage the event
then you can control from the Soul
but if you don't form
stable form for example on Perception
then this means it is management
from the point of view of control logic
may not be correct but completely

because the correctness of management
this is control, including through logic

if you do management somewhere
which logically, for example, is not implemented
then you can count
that the management in principle is of course done
you can even control it

but for the integrity of management
It's always better to use
logical form

i.e. normal logical control, so to speak, yes
but it may not be quite ordinary
from the point of view of direct and universal access technology

but you reveal
it is the concept of "logic"
often as an informative concept

look where is the logic in this case

because if you see through clairvoyance directly
certain events

and manage
then what is the logic anyway ?
you see and control there

for example, I'm watching it now
and I can watch
for example, there on the state of the nuclear reactor
which I need yes

I just looked at it
he is in normal condition
but where is the logic of my actions, for example?
from the point of view of this level

the logic is that
that there is yes
first logical postulate
physical object
manifested in the collective Consciousness
it exists yes
there is a specific nuclear power plant it exists on the map

second logical postulate
I do this action
to teach for example really
this is a learning activity, etc.

i.e. logic can be found in the plan
where is there target management, for example, for Macrosalvation
in terms of the usual, well, sort of everyday level of Thinking, here

i.e. the everyday level of Thinking
turns out to be often just as important
how direct control is for example
at the expense of, let's say, the controlling clairvoyance
just direct vision of the object

that's why I don't make any difference in management
for example between direct clairvoyance there
and well, specially achieving
and an element of everyday thinking yes

in this case it is clear why
because the same thing can happen there and here
state of the Spirit
aimed at the goal

Salvation

due to this

so you too, here I am, just when I give these lectures

I give you technology where you can act

wherever you want

from the usual background i.e. everyday Thinking

or from a special state, for example, of the Spirit

special access technology

I always advise if possible

equalize your condition

i.e. just do normal calm Perception

and from this Perception always

so you can manage

not for example fixing

any special conditions for example

or even special technologies

so again the question

so how is any information created

and the answer to it is that

that information is created taking into account sustainable

i.e. background forms that exist

those. any information is created from this

if you want to build instantly

for example, well, some kind of material information object, yes

then you still have to take it into account

that physical space already exists

well external stable forms

background shapes

they also create and receive information

in your control

and so here is the further answer to this question

it's already yours

pay attention as in the lecture

I make special designs

I could call them that

as constructions of the superdevelopment of the Spirit according to the tasks of

Macrosalvation

these designs are very fast and very capacious

I included them in the lectures and now
and your task is this superdevelopment in fact
because beyond what I gave
as one of the answers to the questions
what you should understand
that overdevelopment is also a controlled system

if you need to "super" develop
then develop "super"
if you need to develop logically or step by step
then develop gradually

i.e. the meaning is this
what is in the concept of information
there can be no concepts
which would be unmanageable
in its creation
from the point of view of the design of Consciousness

I just answered part of the question
at the individual level of response
how information is created

now question seven
seventh on this list
I'm leaving out some questions here
and transmit in telepathy

the thing is that generally speaking
I answer all the questions on this sheet
some of them are telepathic

and of this type
which denotes precisely the movement of the wave
but is not fixed in the form of, for example, a verbal series

Now the question is the following
what is the methodology
event detection by digital series

this is quite an interesting question
from the point of view of practice, for example
here are studies of numerical series in general
and their connections with external events

or internal events
in your Reality
I introduced this term here
what external and internal events
but already indicated
how is your reality, for example

based on such a design of Consciousness
we can say right away here
that's when I was talking about that
that Reality shapes external events
and this is Reality
may be your physical Reality
and is for example your physical
your physical body

that's pretty clear right away
what if we designate
external elements of this Reality
by the amount of Spirit

I've been asking this question all along
and how to find the amount of Spirit
for example by volume

and how, for example, can it be formally defined
in the form of some finite volume

and as one of the answers
this can be done at the lecture level
but I didn't say it directly
just output locally
into physical space
somewhere

then we can assume that locally
this is this volume ^{yes}
or this volume may contain
in a word
in some idea
in final form

if we consider this technology
in relation to the digital series
then you can control it generally speaking
just a regular mechanical one, so to speak

mathematically

who knows, well, any primary school student there

i.e. you just need to know in this case
that for some specific combination of events
it is necessary to assign a certain volume of Spiritual mass

let's say I need to mean in the store
somewhere within a radius of 200 meters there was a certain kind
mineral water
This is the task I set for management
private and simple background level

then the next level of management
according to the Macrosalvation system
I should be in the center, for example, of this sphere of management
if the sphere is 200 meters
insert macro save point

i.e. there should be here
everyone is saved in any case
there will be this water in which specific store
this is no longer the point of the question, yes

i.e. the question of Macro Management
it is often not related to background management at all

i.e. Macro management in any case
we need to provide
and will there be water or for example I won't want it at all now take yes
impulse of freedom of control
what the Creator gives to everyone
this is already a question of sorts of the third level

and here is the principle of freedom of management
this is a measure of the Spiritual state
in each event element

i.e. therefore if you paid attention here
when I said about freedom of management
there was a final optical pulse
in the event control point area

and a lot of control
it is like a mass of matter

defined within a radius of 200 meters

therefore at the digital level

for example, there is a number for 200 meters

so we can number control tasks yes

there distance to control system

there for example I need to manage there in America for example yes

I think there are so many kilometers there

I take and put the control number

in the form of those same 200 meters

if you need a specific brand of mineral water there

so then I'll add this number

I'm starting to sort of wind down

making it from this level means

infinite spiritual state

how can you fold a number

i.e. how can it be compressed

so in this case

digital compression process

i.e. obtaining from the final mass yes

a number is also a mass of some information

then it needs to be compressed in this way

so that it would be better if there was a tendency towards zero

i.e. if there are two zeros there

that's already good

but if there are for example 190 meters and 198 let's assume

there are three numbers there

and I need to get it

between them, for example, the state is at zero level

means getting a state at level zero

what does criterial control accuracy mean

where you manage means taking into account the harmonious development

and control from there

that's what I call it

I can name her

as an entry point to any point in space-time

this is the so-called

level well let's say zero space

those. reduced system
in digital management
should strive all the time
to this zero space

i.e. control from the state
you are the management

that's the whole point
principle of control through numbers

according to the ideology of this lecture

and if you are the management
you must be at peace

then zero space
This signifies a spiritual state of peace

let's say I take it to explain ^{yes}
that 200 is a simple design
I take 198 meters
I'm changing the design
then I get
what does this control ^{mean} you need to enter
^{for example} the distance between numbers
to gain control
from the action of Consciousness

i.e. firstly, as I laid out for clarification
Consciousness action 200 changed to 198
to make it more clear
I am also aware of this construction of action
in the optical element

I showed the action
these are just numbers
and how did I act?
I said 198 instead of 200

as I called
This is a normal optical element
you can see it see its shape
this is not a problem

I introduced the optical element between these numbers

1 9 8

between one number 1 and the number 9

I entered what is the action

when i transferred from 200 to 198

for clarification to everyone

and between 9 and 8

also entered the same element

Now I have Spiritual Perception

Spiritual Perception

meaning concerning the exact coordinate

between these numbers

i.e. between one and for example between the numbers 1 and 9

For example , I can enter 5 yes

then there will be Narzan water for example

if I enter 4 it will be Borjomi

at a specific point

the point also shifts

so if I am between nine the number 9 and 8

I also introduce management

I can re-fix duplicate

like control parameters

making them more resilient

for example Narzan but pure

i.e. not a dusty bottle, etc.

so and in accordance with this I show

that by entering between there the same number 9 and 8

one more number

I'm just optimizing the control parameters

therefore I showed

five-digit control system

in this case

but this system applies

generally speaking to any control structure

i.e. if you specify a seven-digit system there

you can just bring it to fruition

i.e. by setting three numbers there or four

adjust parameters

but the number of transfers
there are not very many of them
there between 9 and 8
in principle you can put it there for example, taking into account zero
ten digits
the same in the first case

and there are duplication systems
if you made the control
and on the Spiritual impulse
felt simply the stability of control

i.e. by enumerating the numbers
you got it means that it is
the so -called brute force option
and it works in those cases
who wants to study this system step by step
for example from the point of view
Variant event management capability
in the future

but from the point of view of Salvation
Absolutely precise control is needed
if it concerns the Macrosave system

and here they exist
absolutely clear criterial things
related specifically to the indication of Macrosalvation

i.e. if I withdraw
and in the process of management there, for example, achieving control
so that this water is in a specific place, for example
or there is a defect of the machine that didn't work yes
Well, even such a small defect is not dangerous
I or there is just car repair yes
let's assume at a distance
this is how you can do the management

in the current control
if a task arises
again impulses of the Macrosalvation system
here i should have
absolutely clear combination of numbers
characterizing that control will always be carried out

and here here here
a very important point in management
through numbers

the thing is that the numbers I mentioned
they are basically assigned numbers
i.e. for example 1 9 8
these are the numbers I assigned there
or 200 I assigned such a number

and in managing numbers is fundamental
and the main element is that
that the numbers must be assigned by you personally

i.e. there must be a system of complete freedom of choice
in control of the number ^{yes}
the number should not be
well, like a controlling external element
in relation to any construction of your Consciousness

you wanted
the number was set
they wanted to remove it

and this is the concept of purpose
characterizes that you have control
in relation to oneself, ^{for example}
always towards full realization

and therefore
that's why in the Salvation system
^{so if you} remember any numbers at all , ^{for example , there}
if there is a large number of them, it is not necessary to remember them all

if there are three numbers do you even remember
just then these numbers
this is a fundamentally different level of management
but through the same numbers

i.e., doing a search there or organizing, ^{so to speak, yes}

this is already called "organization"
bottles of water or some event
or treatment

it's the same as
in this case you do
you are just a construction of numbers
even if you manage to catch one number
from the management level of yours

this is your development
i.e. you are present in this element

you should be at a speed better than super big
It is you who must understand that the speed is extremely high
not even the maximum
in your Consciousness

in Consciousness in general there are no special problems
perceived as super-large
then it will be super big

you are this number even if it is just one
or even a trace of a number
must be transferred at this speed
to the center that I mentioned, the Macrosalvation center
and which exists, generally speaking, independently
from any of your tasks

and then you will do Macro Management
and then you will see how the return wave will pass
according to the purpose of your management
there already or the numbers will be a lot of them
or you can do it without numbers

i.e. there is a change in numerical control
to the Spiritual Administration

i.e. in this case
you just do this exercise
if possible, well, this should be done as many times as possible

and when you look
how does numerical control work
then basically well that will be it
another element of your development
according to the ideology of this lecture

where is the element of Spiritual development here?
he is still primary again

I after talking about all the numbers
it still led to that
that at the level of development of Consciousness
the number is transformed into a Spiritual state
in Spirit actually

and from here you can see
how the Spirit forms a number

so as homework
look how the Spirit forms a number
what is the state of the Spirit
forms one number for example
what other

but on condition of your complete freedom

numbers have
because they are fixed systems
that feature
as opposed to, for example, just letters
until they are collected into the word yes

letters are collected into a word
and the governing meaning of the word is obtained
and the number has
property of rigid fixation
as if by an external control system
towards you

when working with a number
it is necessary to control
the absence of a kind of obsession , yes
constructed numerical design

i.e. the Law of any management
that's according to my ideology of Salvation
this is complete freedom of your will

if you see
that the numerical construction has
for example, the property of imposition
well, as a result of this, for example, even
constant performance of management even
for example constructions

I had a lot of tests there students
cases
when here is the same numerical construction
always, for example, cures a specific disease
that's always the case

Well, for example, in this case
this is already a weighted form for Consciousness

i.e. Consciousness
forced to hold that structure
that supposedly there is a completely identical type
control principle ^{yes}
for a specific task

what should not be allowed

i.e. it turns out that in the management of numbers
provided that when the numbers work
for permanent implementation, for example
some kind of events
special management needs to be done
apply again
you know, this is a kind of retraction system
into the system
when the system that works positively
maybe we can say activate
most of the Consciousness
for this technology

because this is what happens in numbers
I say that very often
according to the specifics of the personality of individual students, for example , I
have
so it starts to get drawn into that
that this is constantly being carried out

and then you just have to do it
or management of this kind
how are numbers constructed in general
at the phrase level

i.e. always ask yourself
the fundamental meaning of management
where there is no number yet

where else here the organization of Reality is still like that
that you organize it for example

i.e. either ask yourself such a question
then there are no questions

then you see constructive systems
on Perception
where the number has not yet been formed
in your Perception

i.e., simply put here
the deeper you go
into the system of the Soul organization
you control it more precisely in this case

but when you look at the construction of Consciousness
which means it works on a digital series
then you should still, if possible
see this design initially

the fundamental meaning of management
where the number is not yet organized
for example , it is not yet in the information
while

and the second level
it is always to give equivalence
all the same, equivalence in the control system
in relation to another type of management
there in words of some Spiritual levels
control, for example, directly from the Soul, etc.

i.e. giving equivalence
any management plan
even if some plan is very effective

this technology
must be used when managing
Well, especially with digital rows

because as I explained psychologically
they work quite often correctly
because of the simple shapes
and therefore they can have this equivalence
well somehow transform

towards more active choice yes
for example control via numbers

and management
well, for example, especially according to the Macro-Salvation system
you always have to choose that
which you see on the Spiritual level
at a better Soul level

i.e. you should always choose control
from the point of view of taking into account the whole of Reality

and even if you want to choose there, for example, control
more efficient on a digital level
so that it doesn't happen
as a control, well, as if in many ways automated
that you, for example, like doing this
you are doing it

every time it is necessary
consider the entire volume of information anew
in management
and make a decision
not from the point of view of the convenience of the system
and from the point of view of that
what to choose now at this current moment

and asking such a question
you are already choosing

if it hits well if you see
yes, you need to select a digital row
then choose

if for example something else
or something new needs to be created
then you create

so it means that with such constructions of work
with a digital row
This is what is important to do constantly

and from the point of view of external control
control via digital row
leave leave exactly that much space
how much any other type of control

there or this is control from the Soul
some segment of information
Consciousness in general Consciousness
by all methods
or by the same methods
who will come to you

will unpack them right now
you will start to manage, for example
or new systems altogether

i.e. in addition to the equivalence of control
This is a special technology
when working with digital series

and this must be done constantly
i.e. try not to forget this

another question
what for example how does the question arise then
how to systematically work out some kind of system
let's assume the same digital control system

There are no problems here, that's a different task
you just enter the task system
for example, work with digital control
and no problem
you are working it off
that's all

i.e. if you are working on a subsystem
as if lower in level yes structure
Here as if a kind of directory tree

then there are no problems there
you can practice any technology
as high as you like
or there are an infinite number of ways

another question
when you start doing something again
there even an elementary action yes
you are always there
at the level of general perception of information
and general management

and in relation to digital
just highlight a special level of equality
and then go down the structure
and work as much as you want

at the same time you just have to always
control the upper structure
as if the upper directory and the upper superstructure
that the digital series is on an equal level
what from the information that came to you
what from any other method

like this
I even more so

here he showed the level after all
well actually the level of reduction
to neutral Perception
in case of working with digital series

because there are no works on the digital series
Well, for example, there is treatment through a digital series
there are many of them

and the main thing here is to always work
at a certain distance from you
so that it is found
so that he has this option and works with digital series
he didn't push your information

and here it is
as a proposal , actually
in the name of saving the world
creation of a management sphere
around the earth

generally speaking
and this sphere is of this type
that any event is translated into a new quality
for example, in non-problematic quality

but the thing is that this is really what exists
principle of universal control
why is it often necessary to transfer knowledge
by any means possible

that the creation of either such a sphere
or everyone creates their own sphere
but at the same time, for example, participates in the creation
one specific design yes

this is general management, it is exactly like this
and will manifest itself
what if I give during a lecture
there everyone does their own thing, for example
and then they do everything

the difference here is fundamental, generally speaking
i.e. well yes, you can do it alone
and generally speaking, in principle, do everything
what do you set there as tasks, for example?

but the principle is that if everything
Firstly, as a rule, it can be faster
although one must do the same

you see, this is the management
such a principle
which one must do anyway
then he goes to the next level of development
and all at the same time

then if we declare for example a sphere yes
which is around the earth
as suggested here

and that means the events are translated
in fact, at the normalized level
if they get there
if they even approach critical levels

This is the philosophy that I have
for example in crystalline systems
there in the device crystal module
and plus me for example Well, let's say these are similar options
so first of all I met
secondly, let's say I suggested reflecting on the continents there yes
and work comprehensively with all Consciousness

i.e. Consciousness is better than all
all the people of the earth there

to prevent some kind of disaster
so that there are no disasters at all

but it is best that such proposals
everyone had them

i.e., for example, I had a proposal ^{there}
crystal

for example, in the book "Resurrection" there is such an option
which would project onto the continents
or on the elements of the universe
and there with the participation of people on the Internet networks
they could actually control the event
moreover, improve in management

in this case
this is the sphere of management
so around the earth ^{for example}

and then try to do your best, each one of you
find your offers

i.e. which could transmit telepathically
^{for example} yes to everyone

what could it be
it can be in principle an arbitrary system
the main thing is to find
participation of the collective Consciousness
around some specific image

sphere
Quite convenient by the way, too, the image ^{means}

but I just have technology there
to a specific indication of the problem
the crystal indicates a problem
and takes you to a specific continent or point on the continent

in this case
it's more of an ideological plan, ^{for example, yes}

it doesn't matter, here's some option that you will have
you try to find it
Here what can be made publicly available to everyone

and where general management can be generally speaking
clearly shown

Here are some systems

what could it be

organization for example society

according to certain strict canons yes

for example, how some religions are developing now

or it could be

some specific instrument form there

or it's just a form of management

namely, mental, i.e. logical type, etc.

and try to use this knowledge

first pass it on to the participants

here is today's meeting in the hall

and then pass it on to everyone

i.e. two levels of your work

because I give three sessions in telepathy

after today's meeting

today tomorrow the day after tomorrow

and after listening there

or when you watch a video

the same three sessions still take place

even if you look there in a year, let's say

and or there at any time

at the same time when I give

for example, some kind of stated task

it should be implemented in any case

as a practice

do it yourself first

offer systems

then you pass on this knowledge

or even implement it there in the form of some schemes

if possible, designs, etc.

on this

I'm finishing today's lecture

thank you for your attention

Goodbye
