

GRIGORY GRABOVOY
Structuring of Consciousness
**Technology of Translation of Thought Control
to the management of Spiritual Perception**
(9)
23.08.2001

In this lecture
according to my system of Salvation and harmonious development
I will show the technology
related to translation systems
from management, *for example*, by the level of Thinking
i.e. when there is just Thinking
and the optical element of Perception matures
To
management at the level of Spiritual Perception

i.e. management will consist of
that when you perceive on a Spiritual basis
then you are aware of it in a certain way

awareness is translated into an optical element
and vice versa, the optical element gives birth to translation
from the mental, i.e. thinking level of optics
in the optics of optical perception

accordingly there will be a third element
which will denote
what when you work
then you can fix
optical level of the Soul
there is such a thing as the radiance of the Soul

in this regard, here is the concept of the work of the Soul
i.e. the optical level of the Soul in Perception
this will be as an independent work

i.e. throughout this lecture
it is necessary to ask the question

in the case when we work and translate optics
for example, Thinking in the optics of the Spirit

then how to translate

for example, the optics of Thinking into the optics of the Soul

or vice versa

from Perception of the Soul on the optical level

how to translate

in the optical element in Thinking

i.e. the meaning of this lecture

bring the logical level of Perception

associated with the perception of images, for example

or with the perception of light

i.e. optical control element

to the level

when can you work

at the level of the Spiritual component

i.e. when you don't reproduce optics, for example

and for example, you feel or experience a Spiritual state

but you don't ask yourself a logical question

how to select for example optical level

so in connection with this means in the first part

This is a technology of salvation from a possible global catastrophe

here the first level in this level of management

is that the order of Salvation

means what in Reality

including in the information

no disaster occurs

in accordance with this as I already said

when you work on the Spiritual component

then you don't always ask yourself

what is Spirit

from the point of view of Perception or for example sensation

i.e. and from the point of view of optics

i.e. translation into a logical diagram

this is the definition of the boundaries of Spiritual Administration

and in accordance with this

when you do boundary condition control

This lecture is to a certain extent

will go at a high level of words

i.e. by speed

so try to perceive it as much as possible
verbal level and how to remember
this is what i say in this lecture

that means right in real time

so when you look for example
on Spiritual management from yourself
then you should feel the border
which separates
positive information, i.e. your information
which is around you
and inside, as if in this area
there might be
systemically sustainable life and safe development
for example the whole world

and outside this boundary there may be
Well, some information is theoretically possible
which would indicate a possible catastrophe

and here is the Spiritual state
which is located between these two elements
this is the logical form of the Spiritual content
in management

when I say
"logical form of Spiritual content in management"
if possible while listening to this lecture
determine the optical level of this concept

for example when you look at your thought
so from the point of view of optics
i.e. you find
where is your thought in the optical range
what is this glow this is some kind of sphere
and in what space is it located

then when you ask yourself a question
what is Spirit
from the point of view of the optical element of Perception
since all images are perceived as some figures
or when you sleep you see some images
also the optics of perception that's what I call it

in accordance with this the Spiritual state is as follows

what you can do for example with the help of the Spiritual state
define
back logical path
in the development of management information

some phrases from this lecture
will be axiomatic
and use them whenever possible
or as a postulating principle
or as a control
which is contained in the phrase itself

from the second level point of view
i.e. self-restoration at the level of harmonious development

you see that the level of self-healing is like this
that when you for example localize the Spiritual level
until the stabilization of one's own self-development

then self-restoration is the development prospect for all
from the point of view of Spiritual Perception
because the intersection of the Spirit
it is infinite
with the Spiritual level of other people for example

and this is practically universal
well let's say optics of perception
is expressed in the obligatory presence of the Creator
in any element of action

so when you do management
as the Creator does
you are just supporting
well, including the conceptual system of unification
general development
both one person and all at the same time
subject to freedom of choice

when you look at the optical system of development
then in Perception you see that
for example light, well, even if you take light from a light bulb
then it can scatter chaotically and in different directions

i.e. here it is as if there is no specific barrier
consider this light for example

as a source of, well, freedom of action
suppose there is a photon
at the microelement level

and therefore
when you look at the optical system
then in this system freedom is manifested in that
that comparable levels
for example freedom of Spirit
and freedom of the optical system
it consists of the following
that there are interrelated associative concepts
where the Creator creates Reality in front of you

i.e. when you walk, for example, on the ground
let's assume at the physical level
or when you start thinking
there is a Reality in front of you

here as an independent work
as a third level
necessary in this lecture
find
that control which denotes
control of any event from your Consciousness
but precisely at the point of the Spiritual aspect
as if [...]

i.e. Reality is created in the current time

and including
there is Reality
which it exists in front of you

and this is the level of Reality
it is not yet fully formed, apparently
may be in the elements of Perception
but it may have certain signaling systems
in the form of the same optical components of Perception
yes some light threads light points
or images

and in accordance with this
you can find the image of a person
as, again, largely independent work

which already reproduces the control
any distant Reality
in this case the outline of a person in optical form
well if you see a dream and you see a person
then this is the system that forms sleep
which is aimed at that
what are you forming
exactly the element
preceding Reality to management

but since in principle the meaning of management
this is the management of any Reality
including the previous one

the logical problem is only that
to the preceding Reality
Well, how can I at least identify it under boundary conditions?

in accordance with this
each element
which you will have
as a boundary condition

for example when you see
well, some kind of glow or some kind of point
which denotes precisely in your Consciousness
Preceding Reality
here you can see it very clearly
The law of development of future events and the logic of their development

i.e. to see future events
it means, among other things, to know absolutely precisely
how do they develop
from the point of view of the logical scheme of Thinking

in accordance with this
controlling clairvoyance in this context
this is the problem of finding logical circuits
precisely in the elements of previous Realities
the preceding Reality can be called so

and when you want to look at future events for example
It's easier to look at events that are visible
well, kind of from afar

i.e. if something looks ahead a second

It's easier to first look a hundred years ahead , for example
as if in the first iteration yes
well, like a ball bouncing, for example
made the task of looking a hundred years ahead
then, for example , a million and then a million later
you see exactly
what in a second

if you want to look for example an hour ahead
then there is no need to go that far
It is enough to look, for example, seven days ahead
and in seven days you will already see
an accurate representation of , for example, the hour ahead

subject to natural control
image accuracy i.e. this is a variant solution
you can enter a control vector there

it means if the image is stabilized
and you don't need to manage anymore
then you can see
that the further you move away in time aspect
the closer you see the accuracy
in the governing context

meaning in the previous Reality

therefore, based on this
First of all, you can do the practice
i.e. to see that this is really what is happening

when you go further in time
then the focus of precision is closer to you

in accordance with this
for example, if you act in the opposite way according to logic
i.e. consider the events in optics
as if close to oneself

i.e. "from yourself" well, in a millisecond from yourself
then you will, on the contrary, see very far into the future

that's when the question arises
management of masses or arrays of information of the future
because the number of events increases yes
the further you look

and like any management
when you make control from a specific source
the further you look
the more control elements need to be made

in the Salvation system
when you consider managing any event
and at the same time salvation from a possible macro-catastrophe
or just systemic development in general
is a reference system

the main thing here is to work it out
just some canonical or so to speak reference system
which will be permanent
be present
in the control factor

if you control and you control the whole element
and at the same time it is necessary to create
simultaneously
reference system

then the simplest element in this control
is again the same thing as I said at the beginning
this is the creation of the element of difference of Reality
in management

i.e. the first is your control through Thinking
accordingly the logical diagram

and the second is management
at the level of Spiritual content

It is clear that logic can be used
Perception translate
in management
from
logical diagram for example
V

the scheme of Spiritual Reality

but how accurately will you translate
it's your own control again

i.e. here is the whole translation path

it's your own management

so it turns out that
this is the intermediate path of translation
from two designated schemes
this is management
both the super-distant and the super-close Reality
according to the principle of the standard existing constantly in management
systems

i.e. this is the fundamental one , so to speak
the principle of this lecture
what is the reference system
it is a system that arises in dynamics
between translation characteristics
two control processes

in accordance with the fact that this lecture
Well, in many ways it was built at a certain speed.
especially for that
so that at the first listening
For example, elements were not recorded
in the form of figurative or functional Perception

I did this specifically in this lecture

then when you listen to it
naturally you will have some
as logical
as well as Spiritual
or connections for example of the Soul

i.e. logical and Spiritual connections and connections of the Soul
by management

and therefore try to form this scheme
more already in logical status
so that, for example, with repeated listening
gave constant control
into an infinite system for example
from you

if you take it very close to yourself
point
for example in the existing Reality

which means
some element of the previous Reality

let's assume it's milliseconds yes
if it is a temporary point

or spatial point
then how do you choose a point?
very close in space
to yourself

there is a principle here
just the organization of one's own physical matter
through the structure of time adaptation
to form and to space

i.e. to build something very close physically to oneself
point
it is necessary first of all
consider all infinite space
which is expressed, for example, in the final form

i.e. you are in the hall
but the number of connections is the number of spaces
is it really possible at all?
it is infinite in the World

but for example in the control context
all this
if we consider external control of an external system
for example, control from the Creator

then you see that functionally you are
still in this room

but the control vector of all infinite connections
it still exists
in relation to this room

and so you can from here
generally speaking, looking at the wall of the room
or on the door handle
finding any event is logical

but then you have to spend a lot of time yes
to take into account and what events in general to highlight

therefore the information extraction system
in management
this is precisely the designation of the nearest level
to the physical body
and the nearest level which reconstructs
i.e. builds

"reconstructs" means
takes from the past and makes something new as if anew
and not something that reconstructs in principle in this case

and builds the physical body
at the level of simply, it means segmental dissection or something
an object perceived at a physical level
or at the level of Thinking of the object

i.e. you can imagine
some element let's assume far enough
there at sea or anywhere there in the galaxy on any continent

and this element can be cut in the same way
and see that each of the areas of this space
has
well, as if by a functional convexity of the optical form
well, a kind of lens
that exists around you
in a closed element of Perception

i.e. if you perceive in a closed manner
just like in any optical system
there is a focusing element yes
external ray for example

let's imagine that this room
is located under elements of some glasses or magnifying glasses
you see that it always focuses here
Well, everything that fits , yes
on this wall
to this room

in the system of general communications
everything goes here

therefore at any focal point
you can highlight a specific event
and this event can be controlled

and that's when I gave
control translation element
from
thought patterns
on
level of Spiritual management

then the Spirit is all external control
which ultimately turns into
in thought
in this case

i.e. you just have to select
a specific form in isolation
for example, just consider yourself to be in a room
then you see it already with Thinking

it turns out that
you translate Thinking because
what do you see, for example, a wall in this case
or there is a room or some object
for example a clairvoyant object

and here a nuance arises
i.e. the difference in the formation of the clairvoyant object
occurs as close to the physical body as possible

while the formation of the logical level
first of all it begins
from the most distant point of Consciousness

i.e. Consciousness is arranged this way
so that the system is controllable and stable
formation of known i.e. collective objects
what everyone sees with their eyes, for example
is happening
or they can touch it, for example
or feel let's say the air

all this is happening
from the most remote systems of Consciousness

because
the more generalized the system, the more stable it is

and it turns out that
logical connections they are the most generalized
in this case

i.e. based on this
the closest point to the body
it is designated exactly as I said
during these minutes of the lecture

you can find it yourself
and specifically find it near the body

this means the position of the body
in this case it is completely ordinary
i.e. it is physiological
and the point is not inside the body
and near the surface of the body

as an independent work
you can find it

once you find that point
then management already consists only in that
that you are just
load with elements of your own Consciousness
this point
and she starts to unpack on her own
control arrays

your task is only to observe these arrays
and if possible, if you want
to make some kind of reconstruction or adjustment

in this case the adjustment will be very simple
because you already control the Spiritual system
but you perceive your control

i.e. when the point starts to rise
space up control
it begins to live, well, in a peculiar way
this space
unpacking more and more control arrays

as a rule this happens exactly
but if you look
that some visual array, let's say an event

you don't like something
you can easily adjust it
while your Spiritual state does not change

so in accordance with this
you have found the Spiritual Directorate
when you are in a state of complete, for example, peace
but at the same time the control is absolutely precise
and does not depend on the amount of control information

i.e. under this system it is possible to introduce
generally speaking, an infinite number of control characters
or control goals
only at one control point

you have to be more careful here
It's better to consider this yourself
and it's better to spend, well, for example, at least an hour there
for consideration of this design

because this structure is mobile and the characteristics are such
what is constant
beyond the logical phase of Consciousness
this design will try Well, he's trying to get out somehow.
at the same time you feel the vibrational level
at the level of the Spiritual system

and the presence of the Soul
here as I said
this is your, well in this case, personal task
find
but here it is very evident
Soul Presence System
and the Soul is present
exactly as a boundary level, so to speak
border and regulatory level

regulating
this is the concept of the manifestation of the Soul
and the presence of the Soul
in this case it characterizes very accurately
characterized at the optical level

i.e. according to these words
can be seen
the location point specifically of the Soul

and control from the Soul occurs in this way
that your Soul is present everywhere
because you are here

so you are looking at this logical form
and find the connection
logic of manifestation, for example, of the verbal plan
to the reproduction of control from the Soul

i.e. if we say that
is some energy there
and suppose there is control
well using some energy sources

then the Creator creates Reality
he also created the source of energy
therefore in management
creation of energy sources
this is also a task

i.e. it says that you can just somewhere
take some energy
transform it somewhere
in general, this can be said about that
that you use the investigative system

although it can be done
but in general this system can be quite effective
but nevertheless in management to create energy it is
let's say create control energy
if such a concept is even introduced

create an event structure
this is actually management
which characterizes means
your own management status

or you do the management
using existing elements of Reality
let's assume there are some energy systems there
external or internal
either you control
doing management only from myself personally

i.e. the second status is when you do everything
of course it is more of a priority

in essence, in tasks and in scale

because in this case you don't depend on anyone
and you can create a system
including energy
for example, for the investigative principle of control
on one's own

as I told you
that it is necessary to isolate the energy element
it means if you do your own management
for example, control from the Soul

then you can, for example, right now in front of me
make, well, like, an elementary design

for example try to find the difference
from the point well in the form of a cone
there is a cone in front of me
just in the optical control system

let it be either in the Spiritual system
either in the thought system

so we build
we think
What
Spiritual Management Space
or thinking
is in front of me

and since it can be assigned, then it is so, yes

and since that's how it is
then in principle it's all the same
i.e. this logic exists here
when you make management out of yourself

and when you, for example, make a translation of this cone
i.e. the top, for example, is just an acute angle
do the translation
into the sphere
but which is located
in the space of Thinking created by the Soul
I didn't say where the first element was created

but when you translate into the sphere
where for example this sphere was created
in the element of Thinking but created by the Soul

then you see that the transformation of the cone
gives birth to the next Reality
i.e. another Reality that characterizes
your Soul's attitude to the next Reality
i.e. to the development of the World

here you can build your development
depending on that
how do you even consider the management system

i.e. in principle, development systems
in this case
there may be a limited quantity
as a first approximation, let's say so

here in the first iteration you can see
several elements that, well, for example, are clear to everyone

i.e. if we have such concepts
like Soul
Spirit
and Thinking
which for example exist
as a consequence of the Soul
Thinking
but also Thinking can be
consequence of the Spirit

then when we do Thinking
precisely as a result of the work of the Soul
then we see that Reality is developing differently

i.e. external preceding Reality
or Reality that is not developed
The reality of a different world
or another level of development

as an independent work
make management
when you do management in all cases
in cases even if the World is not developed externally

i.e. as an independent work
make from Soul management
that Reality
which is provided by your management
and there you make the control that you want, for example, yes

in essence, management is there on sustainable development
or by the Salvation system

this task is actually not easy
so I said about her quickly
but it means that it consists of this
to build a sustainable, i.e. that Reality
which you know which is expanding

i.e. Reality of people's lives for example
Eternal life
and the Reality of Sustainable Systemic Safe Development

build all levels of information
where is it possible, well there is no such information
or where it definitely isn't
this information

but build from your own Soul
and build on the level of mental, i.e. thinking space

this is how to build
the technology is given in many lectures
in construction optics
and the ideology is that
that is familiar, i.e. known or reproduced, so to speak
Creator
Creator-created Reality
should be everywhere
i.e. it must be universal

and here is the criterion of universality
is of course an expression of many species levels
there are animals
plants
galaxies

but there is an alternative
which, for example, can counteract

what you perceive

let's assume at the optical level
or at the level of possible development elements
these are just levels of Perception

it is obvious that there are levels
which may be, well, some other ones , for example

that's when you ask yourself
and how to manage other levels
which are not perceived now
or which may not be perceived

then the control will be only by the Soul
The soul is where concepts have not yet been formed
and perhaps should not be formed

as a result of this, when you control from the Soul
then the logical phase, i.e. mental control
this is just part of the management

and here is the rest of what is reproduced
as a level, for example, related to the length of the path , so to speak
to this management

this is your Spiritual state i.e. Spirit

in this case
Optics of the development of the Spiritual state
is expressed simply as a certain space
which surrounds the space of Thinking, for example
i.e. a kind of thought form, so to speak

and at the same time this is the space of Thinking
it means it is aimed at the characteristics of the Soul
just like, for example, if we take devices there
Crystal modules for forecasting
let's assume earthquakes and disasters

then functionally
Here is a comparable optical diagram
functionally for example light that passes
from one crystal to another
performs almost the same role

i.e. here it is functionally
intercrystalline space
indefinite space
it is indicated, well, in fact, in this case
Well, let's say it in this rough outline
as an element of the Spiritual state
element of the organizing Spirit

and here I introduced a new term as
element of the organizing Spirit

i.e. there is a Spirit that characterizes
current system
logically it is clear

but when I introduced this concept
then at the management level this concept is already different

organizing spirit
this is what organizes Reality
from the point of view of your logical tasks

and here as an independent work
highlight this substance, so to speak, in your Perception
Transfer all your existing tasks
there in front of me at a distance of two meters
there is free space

here, for example, I enter a sphere with a radius of 50 centimeters
enter all your tasks
those who are present in the hall first of all from the first iteration
into this area
make this element
i.e. enter all your tasks

make management from the organizing Spirit
i.e. make the control from what I said
i.e. only by verbal interpretation of control

I don't give you any other logical
I say we need to make management from the organizing Spirit
so you do it

now it means another sphere with a radius of 1 meter
the centers of these two spheres are the same

tasks of all external Reality
according to the systems of harmonious development
enter into space
between the first sphere and the second

and now do the management
from the center of these two spheres

as soon as you start doing management
from the center of two spheres
a condition arises
that the spheres begin to increase infinitely
i.e. the spheres are kind of lost
in well, that means in geometric space
are starting to disappear

and in accordance with this the control element
it may not be visible in physical space

can't even be seen sometimes
in the information space

then only by doing this scheme
you will see it simply in practice through clairvoyance
you can see it right away
that with such management
control element it is not marked
for example, in none of the Realities
often

logically it's also understandable
if in three-dimensional space
do management
for plane
then it will be like an external element
in the plane it may not be visible

it's the same here

therefore the management of physical Reality
it may not naturally consist in the fact that it is visible
control is visible
either with eyes
or even in the informational Reality
it is somehow manifested

and therefore management
neighboring element of the informational Reality
can often be an element
which cannot be detected at all
for example, by the same means
of this information Reality

therefore find the controls
or control point
very simple
it is enough just to ask the question
what are the characteristics of this element
does not exist here
then it's immediately clear where he is

i.e. therefore it means as an independent task
just ask a number of questions that you have
or for treatment
or by management for example
or just Spiritual knowledge
there is self-development

and look
Here I have given, let's say, four elements
yes in optical manifestation

and see the controls for these elements
is located where
if it is not indicated in these elements

are formed immediately
in relation to each element
the points are very specific
in the space of optical perception
which are organized by the Spirit

and at the same time this organization takes place there
where the Spirit is organized by the Soul

i.e. you find the point in this case
where the Soul organizes
this peculiar borderline borderline
point
which was expressed at the beginning of the lecture
that the Spirit has specific local systems
and these local systems

they denote a kind of external pole
which characterizes stable Reality
for everyone

the formation of this pole
you can naturally create
system safe Eternal development
and even just one is enough
this is to form
one person
i.e. or well let's say one person

in accordance with this context
because the Salvation system requires
including management personally
and the solution to virtually any issue
on my own behalf including

then the intersection with the collective
consists of transferring knowledge
in terms of what has been achieved

and this transfer of knowledge
in terms of what has been achieved
this is among other things and sometimes it is mainly
mental form of information dissemination

hence the social status of Thinking
mental development from the Creator
consists of disseminating information
so that others understand

having thus considered the thought
it is quite clear that it is often possible to create
thought form of sustainable development
minimizing the means of information transmission
from mental i.e. in thinking activity

then you develop more Spiritual basis
or there, for example, Soul management

i.e. in this case I showed
on rather, let's say, subtle matters
or subtle transitions so to speak yes
if we are talking about the optical form of subtle matter
I'm not saying specifically

about the Soul for example
Spirit
or the mental part
thinking part of management

and I'm talking about subtle matters
this is what I designated as subtle matters

when you see what i mean
this is for example that term
which means well, something subtle, yes
there is a "subtle world" there are such social concepts
there are some concepts from the subtle plane, so to speak, etc.

but there is a subtle matter there
or for example subtle Reality let's assume
if we introduce such a concept
it says that there is some kind of thinness
i.e. transitional level

reflection of this subtlety in your Consciousness
and defines the specific management status

and so I think that just in conclusion of this lecture
you try to make the management
now on my own
when can you do
control on infinite Reality
using for example the term "subtle matter"

and do it in front of me

in this case the lecture itself
it's already basically finished

do management
there will just be some more explanation later
which will also take time

it means I specially made lecture material
from explanation
Well, let's assume there is a lecture course there, yes
as is customary in books
for example, in general education or there to the highest

and let's say there is an explanation, this is important
the explanation is different
this is where it is not present
for example, formal or factual novelty
in this case

means that's why that's why I did it on purpose
in this lecture I highlighted

I'm finishing the lecture now
do management from the point of view of the entered term
subtle matter
and do it again in front of me
If possible, do not disperse the image

i.e. you need to decide something
tasks for example those sitting in the hall
and solve all the problems
and including my personal ones, for example
do it now and in front of me

i.e. everyone can sort of pile up tasks
and everyone solves them
both ours and those sitting in the hall
or who sees the tapes later
and who will use it then anyway
technology of such Eternal development

and in general everyone should use technology
so it's the same for everyone
control

solve all the questions in simple terms
Here
and I'll watch
in front of me

I will now move on to an explanation
i.e. to the explanation part of this lecture

so it is included in the lecture material after all

so the explanation is that
what is needed for example
the task is to cure a person

as the concept in treatment
this means no diagnosis
then the absence of diagnosis is management

as I said, diagnosis information
for example, here is an image in front of me, let's say information
which signifies the healing of this person

so here is the cure for this person
this is where there is no information about the disease

logically very simple
lack of disease information
this is a cure ^{yes}
i.e. control comes from the sphere
which does not indicate this disease

and it turns out that this is exactly it
such control comes from the Soul
in this case

here in the current lecture
this control comes from the Soul
in context to what I already said in the lecture
in the preliminary lecture
in the main lecture material
and not in the explanation

then the second level
when you want to manage from the information of the disease for example
i.e., identifying the form of the disease
and introducing the characteristic of Thinking
in this information

then control exists in the realm of Thinking
which exists within this information

but the area of Thinking is such
that it does not indicate the characteristics of the disease

i.e. well, a kind of ball
which simply increases
and is ^{sort of} pushed upward by the information of the disease

this means yours
well there let's say the sphere of Thinking or the sphere of Thinking

and she is the manager

from the center of this sphere
the technology by the way is very simple and very practical
you are taking out
you first reveal in the optics of Perception
and in any case, everyone can see it in their own way
information about a specific disease

you form a thought, a certain sphere
treatment of this disease
and enter this information inside
and it's like a bubble is pushed up

as soon as she pushed herself out
from the main body of information
just to the center
enter control
absence of this disease
including from a mental point of view
i.e. logical control
when, for example, the tests are normal, etc.

and it turns out that the effect is the same
which I said about the two spheres

everything around instantly dissipates
including the sphere of Thinking itself disappearing at first
she moves on to Spiritual content

then the truth comes out
but already there where the Spirit is realized in this sphere

pay attention
this is no longer a mental sphere
and the Spirit is realized in this sphere
you just see it

and when you have already recorded it
so you made a treatment management
this can be by the way and any event
not necessarily just treatment

and the third element
when you build Spiritual Content Management
i.e. the whole Spirit in relation

to the two spheres I mentioned in my lectures

all external Spiritual management
consists in the fact that
what the Spirit in this case will be called
in the control context what is located
outside this outer large sphere with a radius of 1 for example

and when you look and search on the optics
this Spirit i.e. do you want to perceive it
as if he's actually running away all the time
i.e. it is very mobile

because it gives birth to Perception
so you can't fix it
for example, strictly as in the picture

this is the correct management in this case

and when you set for example the control position
then the control position itself denotes
the realization of the Reality that you want
in the center of this sphere is large
Well, there's also a small sphere inside, as I said.

and here in the center of these spheres
implementation is taking place

and you can through the logic of the Soul
pay attention to the logic of the Soul
control the processes in the center of this sphere

i.e. the principle is also very simple technologically
the truth is that the level is already being used
Souls
Spirit
and including a certain level of the mental plane
what do you see with your Soul
the logic of the Soul's control arises
but this is not Thinking

i.e. as you think, so it happens
instantly

and Thinking in this case is distinguished by the fact that
that first you need to create a thought

then the idea is realized
then it enters the information levels
and only then does the implementation come

if set correctly there
thought-control system
it either turns out quickly or there is a longer implementation
if you, for example, slowed down the speed of thought

in this case, the Soul is being controlled

this is a specific management
in which you can heal for example
well, including at any distance, of course, in any place
managing any event
but at the same time the work of the Soul is going on

it is distinguished by the fact that
that there is a different temperature in Perception
here enter such a term as temperature of perception

let's say you perceive light as color
like blue or white silver
this is what color is in the Perception of this color

for each person it can be individual
but there is something absolutely clear
absolutely as if a clear position
if i say blue color
it's still at a certain level of Consciousness
it turns out that this is a blue color

i.e. what is said stabilizes Reality
the word stabilizes
the manifest stabilizes Reality
the same type stabilizes Reality, moreover

you can perceive the same light
blue for example yes
and look at what optical image
emerges in your Perception
to perceive the blue color
it might even be silver

but if it is silver
then how is it that the color is the same

looks like a different Perception
silver

well, it's like a multi-coordinate color and white
in your space of Perception

if you take a mono system there, let's say
do you think that the known laws of physics
and you think that there is supposedly a monochromatic option

i.e. physicists took and cut off the wave and said
that green is such a wavelength

i.e. you just simply recorded it
known collective level

but when you
and the physical one is such an ordinary optical one

if you go further
from the point of view of the organization of this level
then you still end up in the center of these two spheres
which constantly begin to blur
as soon as you get there

i.e. the concept of differentiating color with something else
in principle, it is possible in the conditions of the elements of Salvation
instant action
may not exist

because often there may not be time there
it will be necessary to make the element of Salvation instantly, for example, yes
let's assume that the nuclear power plant doesn't explode
or some management issue was instantly resolved
if you are moving there, let's say in transport

then it turns out that when the color
for example, well, some concept, so to speak, information
is not perceived as anything else
the very fact of existence
this is the management of this information

and if you ask a question, then how to perceive it

then you just need to feel it spiritually
or leave the question for after-action
i.e. how to transfer the transcript

in understanding as if in time forward
i.e. to create a pre-forming space
in Thinking or in Management

and from this space
gain control
without even deciphering it

i.e. in principle, why do you need information, for example?
how is color perceived yes
why is it needed for example
maybe it is not needed at the moment

but all phenomena must be understood

Anyway
every phenomenon in Reality
it should be understood

and this element of understanding
i.e. an element of development in management
i.e. how to understand

it's enough to push forward
into the pre-forming space

pre-formative space
this is not a space of the specific future
it can be based on flows
as if from the space of the past
at the present
and into the future

this is a kind of, let's say, information mass , so to speak
which often exists outside the Laws of Time

and therefore means pre-forming space
this is also for Consciousness
and an infinite number of connections

i.e. where the context in cognition is not defined
there the number of connections is always infinite
for the first impulse of Consciousness
at least with a scanning pulse
in the primary Consciousness

and then it turns out that by pushing it there
the task again of this color
you gain understanding
this is what we get Spiritual understanding
i.e. the Spirit matured there

there is a concept of the maturation of the Spirit, for example, yes, a mature Spirit

and where does the Spirit mature?
if you ask yourself such information

then it is quite simple to determine
what is at this point
The spirit is truly maturing
there are processes of peculiar maturation taking place there

look for example how it ripens
cherry there
apple
and you will see that on the Spiritual level
these are different processes

and for the Salvation system
often the concept of maturity of the Spirit
must be instantaneous as well
i.e. wait until it ripens
there may not be time
therefore the maturation processes
must be approximated
and received instantly for example

i.e. the Spirit must correspond
those elements of Reality those conditions
which need to be managed
whatever they may be, yes
either super complex or completely primitive

and therefore the situation here is normalized by that
what do we suppose the concept of "primitiveness" or "complexity"
these are quite peculiar external concepts

so when you
you use someone's external point of view according to the concept
then you can select the spectrum

for control it is simply a control spectrum

there is no conceptual system there
it is beyond words

and based on this
I brought it about
that pre-forming space
this is the space of your direct control

Well, logically it's understandable, generally speaking

i.e. the Spirit is in the pre-forming space
and its instant ripening
perhaps therefore there

what is meant is
The spirit is in that governing context.
which this particular lecture was
pre-formative space

while he is there [...]

and when you consider
all your Spirit
then you see a point of such concentration
that the Creator is present here
manifested for example there in physical tissue

i.e. your manifestation is also the Action of the Creator
and your Thinking is also the action of the Creator

you can learn from here
for example, in accordance with how this happens
learn to simultaneously consider the process
as if very far from oneself
outside the structure of a simple future event
but at the same time to design
future management space
or simply event space

from the space of precisely the pre-forming
before something is done yes
before the future is committed generally speaking

and so when you use this term
You can build here as you wish

easy enough
this is the free state of the Spirit
but it is constructive it builds

why so many people
for example, it does not experience any stress
but nevertheless Reality
it still develops creatively

and in any case Reality cannot be destroyed
it's just the technology
what is better for everyone to know and they could systematically
ensure development there for example

sustainable creative reality

so here is the control from everyone
originates precisely in this area

as an independent task
consider the management of all
why not experiencing well well, for example, loads
in this case I explained it
in the coordinate system means knowledge

those. coordinate system of cognition
when you perceive all the time
there are many coordinates
maybe Spiritual
could be mental etc.

and therefore in the coordinate system of Spiritual knowledge, for example
in this case we will only talk about the Spirit
and that's when we talk about that
that in this case the Spirit is not tense
most people often have
who participate in management
but at the same time they don't think about it, for example

then when will you answer the question
you will see a lot of knowledge transfer elements
to others
and direct transmission elements

it's not necessary, it's just a logical part

or just verbal
or just there Spiritual
or just information exchange
from Soul to Soul for example yes
it's a kind of telepathy
between Souls
there is Spiritual telepathy
there is Spiritual-mental telepathy

i.e. you will see many transmission channels
and try to implement them

i.e. your task
pass this lecture on to everyone
and let's assume in the whole future
including

and see how understanding goes there
if very far ahead
how is this lecture understood

and you will see what a difference in development
the system is immediately visible what needs to be done

those. knowledge transfer including future development
this is the coordinate target
and including a standard development system

This is where I end this lecture

there will be a break for about 10 minutes now
and then there will be answers to the questions

so i'm starting to answer questions now
I looked at what is available now and plus I will take those questions into
account
which, well, were for a certain period
and which I would consider necessary to note now
from the point of view of the material of today's lecture

considering that the material is mainly applied
i.e. I give answers
from the point of view of lecture course technology

here I will apply external technology
but in many ways it was earlier, let's say

and from certain contexts
you will be able to choose what you need
and at the same time consider what else needs to be added
i.e. well, formally it means to build a goal
in future management
what else should i learn
so that, for example, some current issues are resolved

i.e. the answers will be like this
that the technology of today's lecture will be used
well known ones will be taken
or largely known facts
from the materials I have previously presented
by management

and the task will be to formulate the question
so at the end of this part , let's say
related to answering questions

it will be necessary to formulate a simple task
and what else do you need, for example , specifically for you?
what is needed for those around you

who can master the technology
well let's say fast or slow
slowly with the aim of for example in detail
This doesn't necessarily mean that
what is time yes

so, i.e., the tasks will be largely set
must be formed
and once you form them
you should basically understand right away
on a Spiritual basis answer

such a task

that's why I'm starting with questions

then please *explain*
technology for working with ischemic vascular disease
using plants
and the use of a digital series

so, first of all, about plants
I think it's possible to say right away

what does the action of plants mean
Firstly, they are visible on the information

i.e. if you apply
for the treatment of ischemic heart disease or so-called vessels
for example plants

then in principle the situation is this
which is still easier to consider
action of the plant
look at the optical level in Reality
what does this system give, for example?
there if it's several plants

and simply replace it with control through Consciousness
i.e. you can basically do the same thing

i.e. it turns out that the general ideological principle here is this
in this matter
what when i talked about two spheres
which, let's say, are being disbanded
once you get to the center

then the principle here is this
what if you look at the inverse problem
then the principle of formation is precisely optics
based on known schemes

those. actions of the plant
in certain doses can be positive
and you can watch it right away
what kind of Reality does this plant create?

i.e. from the optical form of the plant
receive control impulse

if for example you use a digital series
then you can use the digital series
as it is written here for example

or can you use a digital series
which forms the management structure
through plants, as if in reverse

the sphere there is a digital sphere
builds , for example, an image of a plant

which already forms the optical system
Well, this is quite a long control
but it can be effective
where a high specific gravity is required
in the control impulse

i.e. it looks like this
what does it mean to build a digital series
on optics in this way
what is below exactly vertically below
the plant that means, i.e., is compacted, is emerging
the proportion of information increases

which, for example, regulates the Norm of health
i.e. leads to the Norm
in the case of ischemic heart disease, for example

and when does this system form?
is obtained by a fixed digital series

the advantage of the digital series is that
that as opposed to just an image
which is formed by the Spiritual impulse
digital series is the system level
and it exists all the time
in the form of simple descriptions we suppose

and then you get even lower
already optical glow
which is expressed by the influence of this plant

from the digital series
into the control system of a real event

well, it's like a three-level management
with high specific gravity
in this regard, with high stability

so based on this level
then it's visible
what does it mean, for example, from a digital series
giving birth to the image of some plant
then it can call control
through the mental-spiritual sphere

i.e. the logical structure of just numbers

evokes a somewhat average image
which is being formed well, basically logically
maybe ninety nine percent

and the optical level is already systemic
through logic you get
Spiritual Systemic Management

next question
*is the resurrection of people a fact
who at the time of the car accident
turned to God with the words Lord save
everyone is alive
there is not a single scratch on the body
the car also doesn't have a single scratch*

so, well, first of all, it really is so
that this appeal is simply just
brings the situation to the Norm
and in general on the logical status
judging by this data and generally speaking judging by everything
this is true

car accident provided
that the car has no scratches
Well, this is a rather rare and unique case.
and no one has scratches on their body , for example

so if there is a possibility
like, well, somewhere this is happening on the side
there we can even say quickly emphasize
some kind of appeal or make instant control
then it just reconstructs the information
to the norm

and as a rule here it's just that simple
The norm is, well, the norm.
and it can't be explained by anything else, yes

there is a factology of the displacement of Reality, well, sort of the other way
around
and there is well from an already completed event back
when there is some collective level of Consciousness
and direct contact with the Creator
allows you to simply have
eventually Norma

that's why I think
what does this mean well it 's not necessary of course it's a fact
namely resurrection
because the car accident itself might not have led to
to direct, for example, biological death

and it's better not to put the information like that
i.e. it is always better to choose information
in terms of the best possible, I guess

but at least it is because of this appeal
normalization has occurred
I think so

next question
is the resurrection of the family possible

Well, the thing is that from the point of view of the Eternity of development
resurrection of all
in any case there must be a resurrection of the family

so the principle here is not even that
what are we talking about
about , for example, the hereditary level of reproduction of people
but only that, in principle, the ideology is still the same
that everyone must be resurrected
and so it will be

so the third question
is there a code of feelings
love hope and then a question mark

the thing is that the concept of "code"
it's still quite a limiting concept
the concept of "coding" yes
social meaning is put into it

then well, all the more so love
this is infinite in image Perception

and hope is like something mobile
at the optical level of Perception
system
and here is the concept of "coding"
here, to a greater extent, it seems that

not acceptable

there are elements of reflection from these concepts

well, for example, in formal terms

there's like a lucky number there ^{yes}

when love is shown there

or hope appears

so that's why from the point of view

that's exactly it, by the way, love, hope

Well, first of all, love

there is the concept of "fixation", i.e. coding

i.e. a certain control level going towards love

this level is basically at the level of static information

does not exist in my opinion

there is simply a situation that is related to that

what love reproduces

a certain static level

sensual next sensual plane

having examined the element of Peace

as an element of the development of love

one can see the near presence of the Creator

this is the concept of the presence of the Creator

may be different

Near is when Love

and when we consider hope

then the formulation ^{means} this principle in general

hope is a multi-component system ^{generally speaking}

and denoting

from the point of view of the concept of the preceding Reality

that Reality already exists

in a more manifest form

than for ^{example} on the logic of Perception

generally speaking

this is quite a controlling beginning

if this beginning is simply even revealed

this is often ninety percent of the solution to the problem

just as we know

hope is formed because

that information about the possible best option

she really does exist

this is a real option that simply exists
it's just a question of management

and therefore the concept of hope
that's enough
It would be desirable to have a fixed system

and here is the concept of a kind of "encoding of feelings"
i.e. that which corresponds precisely to the parameters of even feelings
when hope appears
it's better to just introduce it here

i.e. parameters of hope
just information of the future
which is possibly realized
positive at that
in the creative aspect of management

and then you can just from the control area
get this information
and make it more manageable
i.e. to receive not just hope
and the exact implementation

in the concept of the technology of Salvation of universal Salvation
hope in this case
this is a very specific system
which is always realized in the best positions

This is needed as independent work
according to today's lecture even before the explanation
work with this concept

love as universal love and Salvation of all
this means a functionally universal concept
from the Creator created by the Creator
Love for all
and Love for example Salvation

here is such a level
which means, so to speak, in functional terms
denotes the obligation of management

i.e. it means that Love is given by the Creator

this is the necessity of its manifestation
including
because love is what it is characterized by
infinite momentum
initially

pay attention here
What
Love for the Salvation of All
it is originally an infinite impulse

well, basically, like any other love, often
if you analyze

so when you look at the controls
from the point of view of its development
please try another one as an additional explanation
some other means to express feelings, yes for example
that is, comparing them literally with specific feelings
which can be felt

let's say you form a desire to eat an apple
Well, let's call it the desire to eat an apple
and when you look
what surrounds feelings in terms of coding
when you eat an apple

how is the implementation going, yes, implementation for example
from the point of view of your continuous development
and such that it is not necessary to eat an apple
but you need to know right away

and here is the control
from the point of view of sensory manifestations
this knowledge is absolute
where the Spirit is united with the Soul
precisely connected

i.e. there is a point
where the Spirit gives birth and creates the Soul
there is such a point too
but it creates only at its level of implementation
at that moment, as the Soul is still original

and here is this point
this point is the closest to the junction

where the Spirit gives birth or creates the Soul
from the point of view
as if a systemic internal spiritual knowledge

i.e. you can get the idea out
for example Spiritual aspect
to see that the Spirit is developing itself

i.e. it never stands still
and by the technology of Salvation
you will develop further anyway
to the level of all the same Salvation
there under any systems and combinations of events

it turns out that the Spiritual basis
it is still developed by the Creator initially

another question is what needs to be done
because there is a task of the Creator
give full control and skill
decide for yourself , so to speak
all tasks of own development

so if for example Well, how can we not do it technologically?
then the time simply lengthens
and Spiritual development happens in any case

as an independent work, look here
well, from the point of view of, for example, some kind of option
what about future lecture material ?
or how to build a system of questions

form it here
let's assume a special type of questions
that's exactly why the answer to this question is

so the next question is this
principle of vision technology
methods of obtaining clairvoyance

well the thing is that the vision, so to speak, yes
you see it anyway

another question
how to create images this way
so that they would be managers

and ^{so}, according to this concept of vision
I would answer more here
how to create ^{for example means this is this vision}
so that ^{it would be the manager}

i.e. you can simply get an image
and ^{in general, well, it will be somewhere static}
or go somewhere to the side in the control space

from the point of view of the two areas I mentioned in the lecture
here is the control
^{for example, principle, for example, yes, vision technology}
from the point of view of image management
consists in the fact that, if possible,
deepen the image inside the first sphere
closer to the center ^{so to speak}

and then a vision
what you see ^{for example yes}
is standardized by your tasks

i.e. the range of tasks is like ^{that framework}
which are designated in space by two spheres
the closer you move this system to the center
the more accurately you get your tasks completed
even it would seem by some elements of vision
completely arbitrarily

i.e. in Perception they manifested themselves
some elements of memory, ^{let's say, of a dream}
you can enter this sphere there

or maybe something just popped into my memory
you can try to move towards the center again

Please note that when you are
move towards the center of these two spheres
the elements of vision will start to creep somewhere

as I said they start often
^{as if to disband}
spheres
this is just normal
it just ^{means} you don't have to move straight
^{for example by radius yes}
but somehow by a detour

try to move closer anyway

as soon as you move
you can decide at the same time
some completely different tasks
but to make the management targeted
what you originally needed

i.e. you can assume
to output some things under such a system
which you do for work
let's say you're doing development there
Well, let's say you write some computer programs.
and you have a vision in the optics of these images
It's easier to keep these images in the center
these two spheres

then what is the purpose of your management
will be more implemented
rather than if these images were blurred somewhere
and are located in different places

gradually, in general, when you already learn
bring to the center of this sphere
well, like any element of Perception
you will see that this element will be processed
and then you can just continue working with the next one

the spent element indicates that
that it won't necessarily be exactly like that, let's say
Well, definitely, it is always used head-on , so to speak

just a worked out element says that
that you know this technology
and it is often not necessary to use it exactly like that

it's just important to work out the technology
by its logical meaning
for development according to the Salvation system

and then further
methods of obtaining clairvoyance such a question

Well, the point is what I'm saying
these include methods for obtaining clairvoyance
if one could say so

just clairvoyance
I would rather call it controlling clairvoyance
where simply clairvoyance is simply an element of control

i.e. you have to see it first
some current design
and then do the management

and that's why it turns out
what is clairvoyance in this case
Well, I'm putting meaning here
precise correct control

and either it will be simple
optical control elements
or elements means the use of Spiritual management
or from the Soul

then this is the same type of concept of the same clairvoyance
or coming from the Soul
or from Consciousness for example
where the Soul, Spirit and mental Perception are
put together let's say

it's special, well, sort of
corpuscularly increasing scaling
clairvoyance, etc.

i.e. you can collect a lot of methods
which could be attributed
precisely to the manifestation well, sort of
when Perception is Perception precisely as clairvoyance
i.e. as an image

but it is clear to see from the point of view
i.e. well, definitely see
from a management point of view
it's still not necessarily an image
it's just to ensure accuracy
those. knowledge of technology

next question
what is sleep how can you regulate it

here from the point of view again

bispherical model of the expansion of Reality
which I said about
so the concept of "sleep" in this case is sufficient
Well, it really goes to the sensual level
so let's say it 's your own

and you just try
Well, take any of your dreams
and just into this small sphere
which I was talking about
there are two spheres, exactly in the small one
to the center
enter this dream there

and try to look
how is the regulation going

I'll watch you now

when did you just do the work
by considering , so to speak, the moment and understanding
well how to do sleep regulation
then the question immediately arose there
what a dream
where was it and how to regulate it

here in the concept of sleep
there is a clear enough position
in Consciousness
that sleep has quite, well, kind of a big
you could say the maximum length
in Consciousness
if you perceive a dream as an optical model

then it's a dream from the point of view of optics
this is a fairly prolonged structure
which, let's say, flows organically
into your physical body

i.e. from the point of view of the optical model
this is the information that is connected to the physical body
well, for example, a person

and not necessarily
well, like some kind of sticky mass
it may be connected to a plant there

and being located
in the field of physical Reality, etc.
therefore according to the control model
so the dream can be considered
as an intermediate system
which generally speaking it does not apply
to pre-reality, so to speak, to the preceding Reality
but it is located near the border
of this previous Reality

and therefore exists on the informational plane
as a system of actual flow
super-fast flows of so to speak information
in let's say super slow manifestations
well including the physical body
this is where the physical body is, it is part of the Soul

so that's enough
the complex concept of sleep itself
firstly, logically
it is quite connected with the physical body
concept

because the physical body
Well, in general, if you don't use special technologies
then you need to sleep
and this is what happens
part of the functional means, or something for development
this dream

i.e. we can consider sleep as well
as well as a special technology for something
let's say if we approach sleep
as a positive element of Reality
and ask yourself a question
that's good
what needs to be done for example
so that sleep functionally means giving control

in this case i think
that it immediately becomes clear that the accumulation
when controlling here in optical terms
as soon as you ask such a question
the dream becomes clear
and pay attention
Why did I use such a word?

it is precisely "becoming clear"

somewhere in the middle, well let's say, of the head
approximately in the area of the pituitary gland mainly
a certain system emerges there
well, a kind of enlightenment
means which

i.e. and in the optical range it starts to glow
Well, if you look at the physical body
head
when asking this question

and therefore
when you work with sleep
you can kind of ask yourself a question
and solve a question of this type
how to ask the question in what place

so if you see and ask a question
and the glow, for example, means a control of this type
which one you need
then it is considered that the brain determines
Well, there is intellectual activity

and you need to do management
precisely in the intellectual part
its management task

it's easier to highlight it, well, in a physical sense
looking at the information specifically let's assume the head
if you have an intellectual task

if you want to fish
then it's easier to light up, let's say, the legs, yes
walking a lot or standing in cold water yes
if you enter the water

then the control is different
and you don't have to activate
let's assume the pituitary gland

so when you look at it
one of the mechanisms of sleep
that is precisely the function of sleep

this is to redistribute your control systems

which have accumulated, let's say, during the day
or they are standing in front of you

and you then observe yourself during sleep
you see, for example, you can see through clairvoyance
that these control units they move
as if through the physical body or inside
somewhere something is illuminated
and control is carried out at a completely systemic level
something like this
how blood moves after heart rhythms

i.e. it happened

for example, there was a contraction of the heart muscles
sleep control by analogy with physical
it's about the same

and so when you see this control
you can regulate your sleep

i.e. to regulate sleep
and make him the manager
just enter the information
in your own heart rhythm

because the rhythm still exists
it is enough to enter control
just without the corresponding overloads
according to the task plan

for example, let's say in a state of sleep
to have some control action
was implemented

and here after the heart contraction
enter this information immediately
into heart rhythm information

then you will get controlled sleep
but not a logically controlled dream
and controlled
in many ways it is mechanical and it turns out that way

i.e. the goal of control is set on the physiology of sleep

because the dream is connected by information
with a physical body
therefore the functions of the physical body
as an investigative level of information
determines the function of sleep

well, that is, to consider the information
let's say some segment
and consider that part of the segment is a dream
and a part is, for example, the physical body of a person
then at the junction at the docking point
it's like a task
parametric sleep control tasks

sleep control functions
after all, it's like a dream after all
information is spontaneous and it would seem that information
i.e. so that it is not spontaneous
and as if uncontrolled
you can insert control into the heart rhythm

then you will get that your dream what you see in a dream
at the same time, no matter what you see, by the way, in this case
this is the advantage of this management
then the dream can't be bad

i.e. whatever you see
you still get control
only in the positive system of which
Well, this system is designated, for example, as universal Salvation
and plus your specific task

therefore, here is how I already explained
Well, it's a complex system.
in the spirit of today's lecture, for example
dream
can be used for control
in this aspect

and as an independent work
look at what other manifestations exist
Well, there is no such position as sleep
because as soon as you inserted the control
to the rhythm of the heart
you get a fairly high specific gravity
in terms of the level of management as such, generally speaking

because one thing you do is management
due to, let's say, Thinking or tasks
arising spiritually
or mentally
or Soul Management
where processes are controlled by Consciousness

in this case
it means when you control Consciousness
when you apply it with full knowledge
for example, there is my lecture course

when you, for example, just think
you also control Consciousness

but in a dream when it seemed like there was no control
there is no such direct waking control
Consciousness allegedly
then you get full control here too
i.e. you fall into the structure of continuous control

this structure in general
it can be a load at first
but when you do it, for example, you will see
that the load is only positive

because there is a constant increase
oxygen content, for example, cellular composition
what is good about this technology

i.e. it is healing
and if there were some areas there
stressed state or overloaded
they are usually and including
where it is necessary to restore it altogether
they can recover very intensively
with this technology

i.e. the uniqueness of self-regeneration technology

if we generalize this technology
and enter the general control point
then this is a complete system of organizing your own organism
due to one impulse
or there are prolonged impulse systems

in Consciousness

This can be done in independent work
there it is enough just to do this
so that the heart muscle is also reproducible
your Consciousness

i.e. in this case the whole organism is not there
for example, you need to collect
for the Eternal aspect of development
and all you need is just the heart muscle and one element

and in this case
here is the concept of the first sleep technology
leads to the same result
what as the assembly point of the whole organism for example

therefore the logic is as follows
that through Consciousness
Generally speaking, you can find only one place
which doesn't even relate to the body
but completely collects the body

for logic
this is the Creator
Creator level
where is the Creator as such

but since work needs to be done
as the Creator does
then you can find this point in logic
in logic in reasoning

by analogy with which I just said
from the point of view of today's lecture
without explanation of the lecture

and when you already find this point
then you see that in the logical status
you are no longer indestructible
by entering a logical status
what needs to be reformed is the system
so that there would be no weapons of mass destruction, for example
this point instantly implements these concepts in control

and so it is immediately obvious how in the social sphere

for example, positive processes begin

in terms of reduction, let's assume those, well, how to say, weapon systems
which, for example, are extremely dangerous

it may not be actually global
first in the sense of weapons as such
maybe those systems
which are either not supported technologically
i.e. a rocket that can take off
due to some malfunction or lack of funding
or because the technology is simply broken
because of, well, let's just say, a specific person

these are the kinds of things
the most problematic
as a rule, seemingly chaotic processes are like this
and this point is the one that acts most specifically
exactly for such processes

such points in Consciousness can be increased
either by logical means
or this way
including the use of sleep structure
and transfer knowledge about systemic safe development
including through
let's say a presentation of sleep management technology

next question
this is a tumor its structure the reason for its appearance

well, the information structure of the tumor
may be different
as a rule, tumors are benign
and it's just that the tumor is malignant or something
characterizes mainly the cause

i.e. here's the thing
what, let's say, from the comparability of the event structure
There are tumors that you can carry for a hundred years
they don't change at all

and let's assume from the point of view of the event part
Well, the question often arises
related to that
that when you define event control

the main thing here is the normalization of the event
for a well- reproduced system and the next development
for example a specific person

a person must be
in equilibrium in the future
and his position should improve all the time

if there is such a plan of management
that there are some problems at the level of events
then this well vector can manifest itself in different places
and there is some kind of tumor system there
it may not be relevant for some time
because let's say the main process
is the formation of all events

here's how the event is formed
the tumor disappears

i.e. the structure of the tumor is very tightly defined
well, in this transcription let's say so
then with the structure of the future event
for the purpose of event planning

if you look at the tumor
a kind of excess of information
which is not implemented
in the event construction of the future

and when the goal is not changed
this has the character of tissue overaccumulation yes
of the same type or different types

malignancy means
that you are researching the structure
which means it's not actually functional
those. usually malignant
it does not exist at the target information level
and is considered in this case
as a completely external reason

so here is the reason for the appearance as I explained now
tumors means it is an external influence
given that
that the tumor is malignant

that is , to make the tumor non-malignant
it turns out to be quite simple logically in this case
just disconnect this information
it's logically so

on a spiritual basis
because logic is crossed
with the Spiritual Plane
we still need to continue working on the Spirit
i.e. this means that the genetic level begins as a rule, etc.

that's why I explained it anyway
from the point of view of these two spheres today
given answer

and try to find it in my answer
where is the first sphere of information
there should be a first sphere inside
although I didn't share it

and what information is related to the volume
between the first sphere and the second

and determine why I have arranged the answer this way
Well, basically without explaining
for example, a mechanistic reason
or the well-known social one ^{there}
I'm more interested in this case
how to manage the ^{situation}
so that you can manage the situation
i.e. to dissolve tumors, ^{for example}
from the point of view of today's lecture

so the answer is this
try to get this answer many times

i.e. get an answer all the time
Well, you can even do it from the same point
even the same

but it's better to do it several times
until the stability point is reached

and apply if possible
well there ^{for healing somewhere far away}
let's assume a potential person

who may have or has tumors

or does it simply mean the person who
about whom do you know let's assume
what is a tumor
i.e. apply it in practice if possible

Well then the question is next
*Is there a method for optimal information acquisition?
human
being at that level of development of his Consciousness
where the bulk of people are located*

Well, the thing is that the next question immediately arises here

because every person is individual
and Consciousness is such a person
The Creator created it this way
that he is both independent and free from the beginning

then the principle of freedom of one's freedom of expression
and personal perception
each person may have a different one
at some point in time
Well, maybe the same type of systems of Perception
let's assume the same goals of the state party, etc.
but the nuance of Perception is still personal

in accordance with this question, as it were
the bulk of people
from the point of view of collective Consciousness
is , well , in many ways, still on an ideological level

i.e. they adhere to a certain ideological system
Again, I answer in relation to the lecture
plus a lecture explanation for today's part

that when I consider the development of Reality
due to the disappearance of, let's say, two spheres
then we can consider that these two spheres
for example, they pass into this Reality
which needs to be created

but it can be considered that this is Spiritual Administration
and then it moves on
to the level of just Spiritual Perception yes

two points of view
and two different ideological forms

in accordance with this
ideology that exists for example
well, at the level of politicization of society

forms completely
after all, the consciousness of people is discrete

and let's assume a part of PR companies
Well, let's say the company is there by election
a certain person there for a certain post
it changes perception
It even happens on purpose
that the company is somehow implicitly true for a person in the main

and it turns out that the majority of people
is generally in a fairly mobile level
external even social information

and so that the assimilation is optimal
firstly, the simplest option is generally the most necessary
and in the future he is the only possible one
from the point of view of the development of the Eternal

this is the task of solving the issue
Well, is this the most adequate task?
First of all, let's assume
Salvation from a possible global catastrophe
then systemic or simultaneously systemic development, etc.

i.e. when the optimal, well, position has been developed
in the conditions stated by me, for example, right now
then the external sphere of information
which is being organized
Spiritual, for example, reproduction of collective Consciousness

precisely the Spiritual reproduction of the collective Consciousness
in this case it will be like this
what is optimality
well, for example, to study some book there
study the subject
English language for example
there is French and German, let's say

at the same time, yes, if you set the task

then in the language environment there is
well, peculiar horizontal peculiar levels
when learning multiple languages
happens at about the same time
by the level of internal assimilation
if you start learning them at the same time

and this is the level of internal assimilation
this is the collective status of knowledge

you can even just take it there for practice
start learning two languages at the same time
this is the bar
it's still about the same time
as if suddenly appears at the level of Perception

and therefore the acquisition of knowledge, for example
in this case the most standardized

this is on condition that the person is as I explained
is also in such a situation
which I described

it consists of a certain level of production
it means such a state of Spirituality
who would not perceive it in a jerky manner
so this is a kind of accumulation of information

and so that Perception is on a Spiritual basis
it was going on almost constantly

for this
well, like in the same dream information, for example, yes
it needs to be considered both in mechanical terms
the body develops

i.e. here comes the movement of the physical body
what exists before the physical body

i.e. some space
let's say it's 5 centimeters away from the skin
there is some space in front of a person

Well it really does exist

I'm just saying why "let's assume"

Well, I'm setting the task

it's like that in mathematics

the word "suppose" is often used in the same cases
when is it

and when, for example, this space is in front of a person
is moving

then you can the same English language

or there is German and French at the same time

perceive this part of space

i.e. to understand not only by channel

which comes, for example, from the logical level of Perception
or from repetition of text

and perceive from a part of space

as if absorbing knowledge into the skin there

inside the physical body

and through the physical body already transferring control

in the field of knowledge

as if filtering through itself

only this is a different way

at the level that is usually taught in schools

this is an external path, like a logical path

which is the opposite through the body

the body first has

load reaction elements

and then they are transferred to the management area

as if from top to bottom

this is obtained vertically

First the body absorbs and then removes

so that means well I in my time

I gave the course quite a long time ago, though

study in several languages

and that's when the multi-load information

then it's better this way

but in conditions when a person is

it seems to be at some background level

but in reality in different conditions

just like when learning languages

It seems like the loads are about the same
but the languages are different i.e. social status is different
or a person is affected by different social phenomena
then the study can be carried out, for example
including like this

so that's why I explained it in such detail
Well, this is the level of Perception
because it is important to me that from the point of view of the lecture
and what I explained
plus the staging part
or some previous knowledge
so that you can work it out
Well, there is a fairly simple task here

Perception near the body
still from the point of view of logic
where does this happen locally

i.e. if you absorb all knowledge with your whole body
where the specific word is absorbed
or a specific phrase

and it turns out like this
how is her specific translation going?
i.e. created so that you
Here own technological system
translation of this knowledge into management knowledge

and try to look here
it means knowledge of management
as for the well actually system
which needs some improvement
in order to, well, let's say, get that control
which [...] you consider necessary

i.e. to consider knowledge in general
as a system that needs to be developed

you see, this is also a point of view
or you view the system as fixed
which is constantly evolving
and then there are no questions, that's how it happens

but in this case
I asked the question exactly

what needs to be developed, for example, in management knowledge

so here's the question

do they exist in your system

any suggestions for cleansing the body and nutrition

is it possible to cleanse the body

according to the control system of Consciousness only

the thing is that it means you can clean it yes

Well, how to restore , well, in fact, I give

course using technology only Consciousness

but from the point of view of nutrition, for example

if we talk specifically about cleansing the body

Well, I mean the Norm of the simple functioning of the body

acceptable or comfortable so to speak

then here I would still advise

apply control

anyway when choosing systems

well, for example, the same cleaning of some systems

because I still don't do it as a rule

any special restrictions

if they are not shown there, well, very harshly

and I still try to mainly transfer it to management

where is the choice of the same food for example

or some kind of cleaning systems if they are needed at all

they still come from the control composition

so let's say Souls

Consciousness

i.e. you still make some decision

eat something there or use something there

you still use it

current management system

i.e. how functional does it mean ?

this is the current system for this case

for example, you don't have to start eating something there

but on the second day, for example, you don't want to eat anymore

and then if you entered some rigid system

and you still eat something

then it may still be disharmonious

well, from the point of view of even elementary saturation
some components of the body
i.e. I am still a supporter of flexible management
here, with some kind of systemic power supply levels

Well , for example, when you are already working
according to the control system for a long time
and you are looking at some power elements specifically
from the point of view of the control context

then you will simply choose those products
from the point of view of , well, the existing level, so to speak
let's say comfortable control
when can you eat those foods
which you want for example
and may not be fixed too much
on some hard systems

I'm just always a supporter
dynamic control systems
and so somehow because of this
so I'm still making a suggestion regarding nutrition
in choosing those elements that you consider necessary
at the moment

those. actually betraying control
all the same in many ways
to you

and when you work with management
it is known that you can
there to activate the value of the product
this or that or clear it there
and accordingly by means of the same management

that's why it turns out
what is nutrition in this case actually
So it can have a component nature
so it means that the character is not so strict
than if, for example, simply not using control
to eat something

so in ideology for example
including today's lecture
in general, here's the general lecture material
I still recommend food

choose some, for example, cleaning systems

still nesting the control

i.e. so that what you take is under your control

next question

*this is how emotional state affects
on mental control
and control from the Soul*

Well, the thing is that for the Salvation technology
when you need to save immediately in any case
often instantly
emotional state has practically no effect
because it is the simplest characteristic
if you consider, let's say, an explosion of a nuclear reactor
which means it causes a very strong emotional outburst yes
at the moment of possible destruction

then your emotional any state
when you save
it still perceives at the level of adequacy
as if on a filter it is perceived on optics
on this optical parameter of Perception
which I was talking about
we can highlight the Spiritual level

and as a projective part
this is the external emotional state
it's still being designed
and a peculiar thing arises
as if the moral level of mandatory management
and achieving results

and then it turns out that this is a hard pole
so, well, like an externally manifested system
he is independent of his emotional state
it means, well, it kind of creates
such a transformation of information events
that you will make the control precise in any case
no matter what emotional state you are in

it is connected exactly as I explained basically
with the fact that the status of the solution to the problem on an emotional
level
he is well above the need or something of the precise control application

as opposed to an emotional state
there is a manager there

Well, in general, even here the principle is simple
there is responsibility for two people there
this is already more than one yes

if a nuclear power plant
we are talking about a global catastrophe
then here is the level of responsibility
how in such a logical understanding is he so high
that this is done in any emotional state
although on a Spiritual basis this is often not felt
as a load
Here

and further if we talk about management in general
then this is basically the meaning
that this also applies to mental management
and to control from the Soul

i.e. this is the answer for the case of Salvation
from a possible catastrophe, for example , including a global one, yes

and if this is what we are talking about
about managing private tasks
that emotional state
and its regulation and even shades
This is control information

it means because it is a private task
which is comparable to you
for example, by emotional level

you are the source
the same emotional background that seems to be far away from you, yes
in the event part
Well, in terms of time it could be right away
and in Consciousness these are the same type of emotional vibrations

then it turns out
what is the vibrational structure of emotions
as if its parametric or something informational state
it affects because
if there is some event
has the form of certain information

and this form is, as it were, bordered by an emotional state
also in the form of information

then obviously this is an emotional state
there is an impact on this situation
from the point of view of information

and obviously if you make a sharp transition
in an emotional state
then you can, for example, solve the problem yes
as in creativity

at the same time, the emotional level is comparable
solves a problem in management

but when you perceive
well let's assume there on logic on mental control
then in this case it would be more inert control
if from the Soul then it is more direct control
emotions are already a consequence of the Soul
and here already under control from the Soul
This has less of an effect of course

more of an emotional state
just affects the Spiritual management

i.e. because it is often a direct emotional level
emotions often contain
somewhere around eighty, there around ninety, under one hundred percent
Spiritual content
in control I mean constructions

and judging by this question
Here the principle is clearly revealed
to get an exact answer, for example, on Spiritual Management

because of the emotional state
this is often in its pure form Spiritual management
Spiritual Management

so you asked two questions, it turns out, about yes
i.e. control from an area that is not selected
as I said in the lecture
control from an area that is not manifested

here it is just

to gain control of the manifested area
they chose as if the question was posed from another area

technologically it is correct
i.e. you can also receive answers in the information
i.e. because the answer is not mental
control from the Soul

but the Spiritual is what I highlighted there, for example, Spiritual Management
this is often an emotional state

why did I just say in a lecture for example
that the state of rest governs any spectrum
i.e. emotions do not change
this is a special form of management
and if possible, it just needs to be studied more closely

so now I'm just suggesting
make management in front of me
for example, in a radius of 2 meters
somewhere in the small sphere
there is a radius of 5 centimeters
about a meter above the floor, for example
It hangs a meter from the floor

and in this area
try to consider
own spiritual state
here is a reflection of the state of those present in the hall

first element and second
as a reflection of the state of those
who will study this lecture there in the infinite future
this is the second second task

That's when I set the second task
a large sphere began to form from the lecture course
external
although the inner one remains small

so here it is
this difference is creation
that area of control which is not fixed
as if as a known area

so that means I'll answer one more question

*please tell me how to work with memory
so that she becomes better
increased perseverance and attentiveness*

Well, first of all, the concept of memory, I'll tell you right away
it's not necessarily the brain
and possessing management techniques
You can always return to the point you want

i.e. always see that
what do you want directly as if
not as if increasing the intensity of work there
let's assume the brain

and that's why there are more here
it would be necessary to apply related technologies
with direct access to information

for example you look through clairvoyance
you can see basically anything
in real time
but this is not memory

it is easier to work through the direct access mechanism
such as clairvoyance

and so that's why, well, that's what I'm answering
so that it becomes somehow better
i.e. to give more target characteristics

but to increase perseverance and attentiveness
Well, in this case it's easier to use the same control
so that for example perseverance means it shouldn't be yes for example
some current distracting matters

Well, make the management for that
so that if there is some task
solve other matters

in real time
do it by remote control
rather than there, for example, due to phone calls, etc.

then you just increase the event system as it were
promoting so-called perseverance

and plus you can

if you want somewhere well as perseverance
so you need to sit, for example, yes

so if you want to put the control somewhere and control it
either by yourself or by another
for this person or you to sit in this place
if you need it

so I am a supporter of this type of management
so that the concept of "perseverance" or "restlessness"
or wherever you are, for example, it means that you still have to
as much as possible approximately the same
it's better to always be able to manage in the same way

i.e. to solve problems equally
[...]
are you moving, are you sitting or sleeping
and the concept of "mindfulness"
in this case, well, if possible
so that it would also be approximately uniform

in my opinion management
this is an opportunity, well, the goal of management in general
this is an opportunity to always react adequately to a situation
Firstly, regarding macroregulation, yes
so that there is no possible global catastrophe
then some target
and plus, for example, a private current one
well with the same level of reaction
because perseverance
for example, sit somewhere in one place and do something
does not interfere with the questions of Macrosalvation
even in a logical sense

there are a lot of systems
which require regulation
and where will it be
during rest or during sleep
are you sitting or are you walking
then that's a different question

so that's why from the point of view of ideology
and here are the Macrosalvation systems
direct control
there so that, for example, a missile with a nuclear warhead does not take off
do you need to increase your perseverance for this, generally speaking

and what kind of attentiveness should there be then?
understand social awareness it is necessary
do the current action

but maybe it would be better not to do something current
well, like , some kind of study of some specific subject
or better yet, switch your attention to that
so that the rocket doesn't take off
more attentiveness

i.e. that is why the concept of "attentiveness" is here
also in my technology there is a unique concept
aimed at solving issues
goals for example Salvation
Saving all of ourselves, etc.

that's why here I would say when I say
Well here it says increase
for example, perseverance and attentiveness
It's better to raise from this position

i.e. if you are going to sit somewhere in one place
then you still have to decide in the current tense
the whole current situation
still keep it under control

and when is this done
then in principle it makes no difference where you are
or you sit in one place
you study something or learn something there
or you do it in the current version
while driving there
some kind of lectures, some kind of work, etc.

the thing is that when listening to this lecture course
technologies well basically they arise very quickly
often almost immediately
direct access

and the task of direct management immediately falls on you
anyway, i.e. wherever you are

so it turns out that you already when you can
and encountered the elements
especially since this is management in practice

then this arises well a certain
as if it were enough , well, at first there might be a loading task
but then you get used to it
this is the norm

i.e. to control Reality in real time
and to control everything so that it doesn't happen
any catastrophic global phenomena in the first place

and then this status is like a permanent action
it's already happening everywhere

and here in increasing perseverance there
or in any other actions
better this status
well, as if to always first logically keep in mind
and then you will gradually get used to it

who else, for example, might not be completely used to it
and sometimes I just watch
so who is just starting to learn for the first time
for example, there could be two lectures
they mostly try there

who for example the control system
then well as if they start working
to a greater extent, or rather, practically, basically yes
to shift to something that is some thought
well maybe it's just a coincidence there
i.e. you can ignore it

but with time when it already comes
level of such a plan
which is all the same both in terms of the target task and in practice in general
This level is almost the same for all students
to the fact that you still have to manage
in any case the whole situation

then this is how the concept means, well, this is it
what to do and when
when you need to be attentive to something
and manage [...]
generally speaking, informational concepts

i.e. this is what is needed in this case

to be attentive to something, for example
show perseverance or increase the target there, for example
for example me presented perseverance
then how to do it yes

i.e. it is basically still a permanent job

why I paid so much attention to this issue
it seems simple enough there

because the point is
that many are quite everyday concepts
there are combinations of words
they sometimes require revision in your management
like the rescuers
when you, well, make some decisions
try to look behind the phraseology
and enter here
so, well, there is a special managerial meaning or something according to Macrosalvation

let's assume an increase in attentiveness
I emphasized here
what is needed first and foremost is logically clear
be careful so that there is no global explosion
because then all the other questions would be
don't matter at all

and then this factor
means increasing this attentiveness
how does it affect
in studying some, let's say, language, yes

this is a unique technology
this needs to be resolved simultaneously
current situations
and at the same time something else if you need to learn

so from the other side
naturally you can control
take it straight from there
where do you do the Macro Situation control

just translate training
by the same path of control
then you will increase the intensity of training

or if you decide something
and insert it into the Macrocontrol task
the purpose of this decision
then you will simply get incomparably more
than with any mechanical study of something
or increasing such Well as if perseverance, etc.

Well , that's where I'll end today's lecture.

thank you for your attention
