GRIGORY GRABOVOY
Structuring of Consciousness
Three positions of structuring Consciousness
(1)
08.06.2001

I'm starting now
a lecture course that will cover

three positions
structuring of Consciousness

first position
this is the prevention of a possible global catastrophe

second position
self-healing

and the third
this is straight from your Consciousness
management of any events in a creative way

since education is connected with such a form
that I basically give a mono-lecture, in fact
then I answer questions

for each lecture
if possible, well, including if you can call it a seminar
I still need to prepare some topics and questions
and I will take these questions into account in the lecture course

this does not mean that I will, for example, answer questions directly
but you can also ask questions to the PO Box
or bring it to the office for example
better to a PO box
information is processed faster there

this course
structuring of Consciousness
This is according to my Teaching on Salvation and harmonious development
and is aimed primarily at
to achieve such a result
in our development

what we can actually prevent

a possible global catastrophe first of all
which is quite probable

and secondly
create a systemic safe development after all

that's why I still try to read
if possible, the course will be more widely available
to transfer technologies to everyone as much as possible

your task
after listening to this course
it is to pass on technology further

especially since their transmission is simple consists of
that my techniques are largely based on them
on the usual Laws of Thinking

just if you think
for example in one place of physical space
then we get as if just Thinking there
or is the level like this
that Thinking does not directly determine the event, let us suppose

then I often give geometric positions
which define specifically
space - time management

and the transfer of information is generally the same

i.e. in my teaching practice
there are technologies that allow
transmit thoughts
in special so to speak information receivers
in a person
then you can teach
or without words
or accompanying the teaching with words

i.e., if possible, be sure to invest
meaning means learning technologies
which are not only verbal
but you also mentally highlight the sphere of information
and just mechanically convey

so considering that according to my results

you can control any matter
and at any distance

if possible, take literature that concerns this
for example practice
This is a three-volume work "Management Practice - the Path to Salvation"

and then those works that exist now
from the point of view of theoretical foundations

so now I'm already starting the course
which will relate to your personal practice

and if possible when I speak
that you need to do something, for example mentally
do this immediately in sync with me

so I start the course with that
I will briefly introduce the main points
related to the prevention of a possible global catastrophe
based on your Consciousness
and these are the main positions
will be in future lectures
they will have to be used by you
as bearing positions as some postulates
which are generally simply postulated
i.e. they may be unproven
in terms of logical analysis

so when you interact
for example with Reality
then you can see with your eyesight
some object of information
but here it is and here it is
this will be approximately the level of postulation

there will be a level
logical transmission of information

and the level where logic goes
is transferred to the Spiritual Administration

in essence it is of course
education at the level of the Spiritual Administration

and then it is considered
Soul position
and direct connection with the Creator
when you can contact directly
have a direct knowledge system

z to prevent possible global catastrophes
I will introduce it at the axiomatic level now
Three Axioms

First Axiom
What
Consciousness controls Reality
just as Reality governs
neighboring element of Reality

i.e. a simple example
if you see a tree
then the tree controls its leaf
according to the same Laws as reality as your Consciousness
controls the same tree
or any other element of Reality

The second Axiom is as follows

you see reality like this
which transformed
with your Soul

those. I introduce the concept of the Soul
as an element of warning control
those. Soul is simultaneously in the future
and therefore it is actually
creates Reality in front of you

this Axiom is in need
well, in a kind of homework
and if possible, think about it technologically
how to do it
i.e. I will not give specific examples here
or somehow deepen

The third Axiom is that
What
you have
your Perception

at the spatial level
i.e. in the physical space of perception first
those. when you perceive something
you have this Perception somewhere in front of you
i.e. in physical space
For example in front of the physical body

although of course you can tune in
and think at any distance
there near this house
near another house
near his house
but then you have to make an effort

i.e. this is why I am explaining this
what is this all together if you concentrate now
and you will start thinking about each other near your own home
then for this you have to make an effort

i.e. this is this effort
this is the Spiritual movement
those. you work
through the Spiritual Management Structure

this is one of the coordinates of the Spiritual Administration

if possible, find out for yourself
other coordinates
and try to see
where is the transition
from logical control
to Spiritual management

because on the Spiritual Administration
a thing here situation
that there may not be words there
and yet the control must still be implemented

on the system of preventing a possible global catastrophe
I have just reached the key point here
what you will have to
be able to prevent possible disasters
for example, so that there would be no explosion of a nuclear reactor
or for some reason at all
for example, the planet was not destroyed

in any case even if you don't have
specific, for example, verbal information for management
or you don't have time to manage for a long time

i.e. this principle is the principle of Spiritual management
he is exactly of this kind of principle
or is it an Axiom even more precisely

i.e. what
you have control
even in that case
if you don't know the coordinates of the situation

this condition often occurs in a dream
i.e. if you wake up
and you have the feeling that you, for example, have had a rest
and there is some kind of bright stripe in Perception
then this is that management

just try to look closely now
to their states
because really any person still controls
but in fact it is like this
that control is often unconditional

then in this case
as to some mechanisms connected with yours
with your personal practice, for example with sleep
with some elements of perception of events
some kind of foreknowledge of events or direct clairvoyance
try to pay special attention
in order to identify those control coordinates
which concern
namely, the management of unknown areas of information

in technology to prevent a possible global catastrophe
this is often the main
because this technology allows
manage large amounts of information
because the unknown still lies in the fact that
that it is not necessary to know the entire array if it is very large

it's enough to go out
to the control point of an unknown area

then you will get control
for example, it is especially convenient to use

in nuclear reactors

because the back reaction from the reactor
in fact it works
largely on your information

so that there is no mutual action
negative, well, information about a nuclear reaction
which is actually
for human tissue it can present problems

then you should manage it like this
so that the characteristics of this level of Reality
did not pass on the fabric

The thing is that the technology that I give
it is completely safe from a developmental point of view
you need to know right away in terms of that
that I give development such as the Creator does

and here we have already come to that principle
which I said about
that the Soul when rules
she's already doing it in essence
or absolutely exactly like that as the Creator does
or approaches the accuracy of such control

The soul creating the body
then you look at my who
who have not read certain works
where does it say that
the body is a part of the Soul

and look
how is a body created , for example
from the point of view of development logic
and control logic

I've already crossed over here
to the principle of control from the Creator
and that's when you want to get
super fast control
it is enough to get to the Creator's information
just by specifically setting this system in cognition

i.e. you just tune in to it

that you need to have contact with the Creator
in order to have, for example, well, also prevention
there is a possible global catastrophe
or the same thing means prevention
there may even be some minor catastrophe
or sometimes it often comes down to that, for example from my practice
that it is often necessary to cure a specific person
and quickly or super-fast

then the button of the same nuclear reactor will not be pressed
or another one is pressed in time
which will not lead to an explosion and there will be no catastrophe

i.e. here of course we are talking
not only about management
any material environment
but sometimes it is often event-driven , i.e. system control
which I will now expound
in the third point

so in this case I have laid out in most part
positional systems related to Macrocontrol
but these positional systems
It's better to remember in the morning

i.e. when you go to work
or just on some business or even relaxing

If possible, do Macro Management first
so that it is not in perspective or in the current time
possible global catastrophe

Please note that I always enter the word "possible"

do not fix the situation on the information
connected with the fact that supposedly there are some kind of fates
or is there a possibility of inevitable disaster
i.e. be sure to enter the word " possible "

because I assume that
what is an adequate response to Reality
it is connected with the fact that
information should not be recorded

and here is the control
areas with unknown characteristics

including allows
do not record negative information

those. create a pole
which does not allow one to realize oneself
negative type events

so now I'm moving on to the second part of the lecture
this is the structuring of Consciousness for self-restoration

so the first part
it is like a part that is mandatory if possible
to be executed
let you spend a few minutes even seconds there before
maybe hours
to solve this daily task if possible
based on the axioms that I have outlined

and technologies
you can already receive specific ones yourself
or there attending other lectures of mine
or studying, well, my textbooks
by structuring technologies

and already apply on the basis
that and xiomatic
fundamental level in fact
which I have outlined here in the first part

the second part of self-healing
according to the technology of structuring Consciousness
it is such that here I am considering
in this lecture for example this audience
in which we are now

I consider first of all

optical system of Reality
it is the most technically perceived
and it gives the ability to control
from a management point of view
well, like mechanical processes

it's like mentally taking optical spheres
and, for example, move them from one place to another
and yet it turns out to be
self-healing control system

the thing is that in the practice of Salvation
of course it is important

often this is the main condition
when the rescuer must save himself first
or including saving all others

this structuring takes into account here
First of all, the Macro level of Salvation
i.e. as a rule, it is always the person who is saved
at the level of simultaneity of Salvation

i.e. here is the principle
that when speaking the concept of " save yourself" is always or "recover"
rests on the fact that it can be done
in sync with everyone after all

i.e. this is the principle
with t glasses of optical elements it says that
what is in your area of information
the optical environment comes

Optical laws
that exist in your Perception
they are not linear
i.e. they are not the same as, for example, in conventional optics
when the light
well for example mainly spreads in a straight line

Optics of Perception
as you all naturally already know
she is multidimensional

i.e. when you imagine
some object of information
he may be located
or in some modified form
you are in for example, we are used to seeing
physical vision

or it may be partially visible
or in general in the form of information
i.e. in the form of some kind of light
which means this object

therefore, it means an influx of information from all elements
i.e. to be saved together with everyone

This is the first postulate in the self-healing system
or recover at the same time

means that first you have to
adjust your Perception
to the influx of information
if there is not much time
then it needs to be done very quickly
if a lot can be done analytically

consider when all areas perceived by you
well, it kind of saves it
i.e. you must restore them at the same time
together with you

then the influx follows non-linear laws
well it's like some kind of hill ahead of you
from which they flow
or
into which light rays flow
but they are more like streams
there may even be liquid in streams

because there in the plane
linear straight lines are usually
only either close to you or it's at a distance
well, for example, for several meters or to infinity

i.e. keep in mind
if a straight line appears
a hard , straight line, very close
then pay attention
why is it in your Perception system

and try to bring it out as if mentally
or resist if possible
means internally spiritually
and do direct control
so that there are hard straight lines of light
didn't appear nearby
here at the first stage of self-healing

because principle of self-healing
it is a multidimensional system

those. principle of multidimensionality
must be observed

at the first element of self-healing

so once again I am making a kind of summary

you are tuning in to events
perceive them
and see how the flow of all events goes and where
or he's on the hill
either from
it happens differently
depending even on the time of day or the situation

as soon as you looked
that this flow is moving somewhere
into one single center
the center, so to speak, of the Creator
to the Creator
then you kind of unpack it
i.e. mentally bring it closer to you
and enter one of the corridors
i.e. you enter one of the levels of this optics

try to do what I say mentally
I see that basically whoever is in the hall now, you see this
but visualize visualize what I'm saying
it's very simple
you can work at the presentation level first

then you enter this system in a flow
and you get there mentally
Well, how can it be in a peculiar way?
Those who worked with computers have it easier
you get into a system that reflects
your essence
your personal information
i.e. your personal glow
in the field of general communications

so this is the principle of self-healing that I give here
Here
he runs into that
that you get self-healing i.e. self-management
only from that
that you your impulse almost instantly
from this area
spread back to yourself
i.e. on your physical body

spread it throughout your body as quickly as possible

This is one of the elements of self-healing
in which you restore all others at once

i.e. I won't repeat it here
it is enough to listen to the lecture several times
to grasp the subtleties of this management

as the next control characteristic
create means everyone now
for example, in front of this table near the hall
this is what is meant
and in front of this table
and near the hall
for example in front of the front door
create two of your images
every

and at the same time create it
to get
one common image

i.e. you must see each other
but also when everyone stands in one place
then what image do you get?

i.e. ask yourself this question
and try to control it
i.e. right now during the next part of the lecture
do this for about five minutes

then again
everyone creates two of their own images
i.e. mentally imagines
what is he, i.e. his information level
in fact, he himself is in the same clothes, for example
located like here in front of the table, for example standing
and behind the door

i.e. at least in two places
in principle it is necessary in three
better in two for now

Anyone who wants can add a third point of support

then that means

because everything is in one place

then what image is obtained general
when everything is in one place

This is also controllable

i.e. the one who asked three dots
it will have six control positions of direct and non-linear more
i.e. nine positions

who two images respectively will be four
but there the nonlinearity increases to eight

why do i say such numbers
try to figure it out yourself later

so now within the framework of this control
I start to describe
contact information with the Creator

Keep these images in your memory, don't miss them
those. listen to my words
along with this management

so this is the generalized image
this is the Action of the Creator
i.e. the Creator of all created
if there is Thinking
it means there is the presence of the Creator
but presence already through your Thinking for example
including direct, naturally

but it is important for the Creator
make everyone free
and give tools for action
same as Creator's Action

then everything will be constructive
and there is no possibility, for example, to destroy

with t glasses of vision of technology
This is the technology of Eternal Life
and constant self-regeneration for example

then as I showed here
what is the vector of the Creator

i.e. the Creator is present in a generalized Image
try to highlight this image for yourself

just work more mentally
not only in front of my desk
don't forget, for example behind the door
behind the door
i.e. in two places

indoors
outside the premises

now it means transitional level
here you go
from one image, including a generalized one
go through the door
here is the transition point
the door is closed now

how to cross a wall for example if the door is closed
how to move with consciousness

when crossing a closed door
what happens in Consciousness
when switching to another image
in principle, this is your own idea

but you know that working
for example, at the level of Perception of physical objects
you know that the door needs to be opened
and here everything is closed

then how to go to that image

so this is for independent work
practice this means, well, at home for example
and you will see
that when transitioning between hard environments
you see a kind of wave resistance of Reality
for example, the walls of some information object

in this way you can feel some object
there movie camera molecule anything
at the level of sensations

this is a training in obtaining certain sensations
on the development of a unique technology

for example in controlling clairvoyance

i.e. you must
see the whole Reality correctly as it is located
To do this, practice with the t points of view of that
what is near you
and who is near you

if during the passage
your impulse of Consciousness
you see some problem in a person, some disease
in synchronous mode you have to restore it

this technology is widespread
for restoration generally speaking any other person

because after i said
that the impulse must be restored and perceived
first from the general
Well, let's say I gave an example of a kind of slide
from where you quickly bring the impulse to yourself
and you do it

i.e. you basically restore it first
then you perceive

why are you restoring
because the Creator has already created it in the future

keep in mind
here the multidimensionality of the lecture is restored in terms of that
that the Creator is present everywhere
and therefore be more careful
we must act as the Creator acts

this is a whole technology
which can be understood by you
as soon as you even ask fundamental questions

where the Creator is present

as he teaches

for example when you look
my results more closely
with t glasses of vision of restoration of destroyed tissues
that happens there often

that organs simply do not exist
either they are destroyed by metastases or cut out

and when I restore it
then I act just like that
what i wonder
as the Creator does
I am considering this and doing it
that's all

i.e. therefore the technique of asking questions
by actions as the Creator does
If possible, use this technique

then you too will understand
how does he do
with t glasses of view for example including your Thinking

and by the way there are certain simplifications
in the knowledge of technology
since the Creator laid it down anyway
your development mechanism
then you can do it
even not bearing His Actions as if and already knowing

this is called clairvoyance
i.e. you know all the time
i.e. you know the answer you know the solution

and who, for example , had a highly developed intuition
that concept of knowledge
existed often with this person everywhere

it's just possible by logic
he relegated it to the background, for example
or to a more distant plane of Thinking
although it was possible to use only this

i.e. it exists here
decision making parameter
or you use process logic
including the control impulse there

or you use the controlling clairvoyance

why manager
because your impulse of Perception

it must be like this
that you first restore the environment as much as possible
i.e. you first do it as much as possible
so that in your Perception
no problems have emerged in Reality

This is called controlling clairvoyance

your impulse will surely align Reality
towards positive elements
development of this Reality

whether it's a disease, i.e. it turns out to be healing
or is it some kind of business some kind of affairs
i.e. it turns out this is management in business
in any other matters
or is it possible to stop the reactor
if it can lead to an explosion, for example

Means therefore, from the point of view of information objects
if possible, do not highlight
that some object is big
or some object is small

for management generally speaking
everything is on an equal level

i.e. the Creator created the structure of the World in this way
that each object can be distinguished
in such a field of Perception
What all objects have equal properties
that a whole nuclear power station
car
molecule
the man is there
plant
etc.

and therefore from the management point of view
there is absolutely no fundamental difference
what do you control remotely
either you treat a person
or you are there save the nuclear power plant
or you don't let the plane crash

so when you look at my results
for equipment diagnostics

I advise you to look there at the end of the first volume
especially the case here Veremey Boris Ivanovich signed it
famous test pilot
already in the world including

and there he writes about controlling the Tu-144 airplane

pay attention to this system
I gave there, it would seem, just a diagnosis
that means the angle is refusing, that means the tonnage, well and
it is precisely the instrument failure
there was a decision to be made there
that this is an instrument failure
or maybe the real tonnage angle is not like that

and considering that they knew this information
I understood this from the experts' conclusions there
they didn't crash
i.e. but they knew my information
ordinary for example, written for designers

but in reality my management was more general
i.e. I simply wrote it out as an element of the event
Well , some information
and what the plane does not crash
I have already entered the following events

i.e. I looked at
that the plane does not crash in the future
that pilots get out of an airplane, for example, etc.

right here at this point we could stop here
for this section of the test flight

i.e. when managing events
Be sure to look at the investigation
what is the consequence of an event
Often you can control through consequences

so here is the principle of self-healing
he is often the one who controls through that
that this external Reality exists and as a consequence

you can bring the impulse to yourself
and get the Norm
in the presence of the Norm of Reality
then it is not a burden for the Thinking apparatus

it's still about the second position
here is this lecture on self-healing
but already here I make a smooth transition

to control Consciousness of any event

the thing is that in my experience
how i work on control at any distance
Here
principle of self-healing
And
event management principle
it is often synthesized

i.e. you see Reality
but if you want you can see
and yourself in this Reality
and manage yourself at the same time
i.e. with your information
for example, to restore
or somehow construct events

i.e. this is the principle of transition to the control area
when you are looking at both at the same time
your area

but there is also a principle of direct control of events
where it is not necessary to consider your area

try to work
both in that system and in the other

so the first system, for example, is a two-coordinate system
these are your events, i.e. what is around you
and plus the outer area

it turns out your impulse control
that comes from you
this is the control impulse
two volumes of information

or another principle
you just manage the volume you are targeting
or this is treatment
or it is, for example, the management of some series of events
or at the molecular level

it is no longer of fundamental importance here

but then you don't consider
yourself in this area of information
and enter there in fact simply unconditionally without announcements

so from the point of view already
dual domain control principle
I'll tell you now

i.e. I have already moved on as I said smoothly
to manage any events
from your Consciousness
and direct control

It is important to immediately note the following here
that when you consider two coordinates
then always between two coordinates
I speak in a somewhat mathematical language in the simplest way
in the sense that these are really coordinates in Consciousness

and as a rule, highlight whenever possible
coordinate area

then start with control
work with two systems
well more in orientation towards
then the body is on the right

i.e. if you work at the same time
and with you
and with external events
highlighting two areas, well, like two spheres, approximately
then if possible, start working from the right first
and somewhere it might be better at the waist level
i.e. at a distance of approximately fifty centimeters

if you are working with a one-coordinate system
i.e. management of just events
you need to work on the left if possible

if the center of symmetry passes
for example along the body from top to bottom vertically
and the right and left sides, well, sort of geometrically distinguish

and also fifty centimeters in front of you

at the level of the lumbar spine, for example
but in front of you
work on the control of a single-coordinate system

the thing is that when you look at my practice
there are control systems that allow you to do
Well or some kind of super fast or instant control

If possible, be more careful when driving
because one thing is just Thinking
it's another matter when you think
in the control area
you immediately influence Reality

so in accordance with this
track control impulses
and if possible, be sure to check the first time
i.e. look
what happens in Reality

or from the point of view if it is Macro management
then something is shown on TV
or there in the media

if this is treatment, then patient monitoring is appropriate

events are event control
from the point of view that at first
control impulse
be sure to try to project somewhere
on a physical level

this is not necessary in the future
but even more so the projection is limited
because the purpose of management
is
to prevent, for example , a disaster to prevent a problem
or make the decision immediately as it is
and the concept of verification often does not exist here

here, by the way, is the key point of this lecture

the main goal means management principle
is
direct and precise control

often elements that you perceive in Reality

they may not be implemented, for example
that means on the physical plane, for example
but that is your goal

i.e. the goal of the safe development system
is to prevent any problem
and therefore here we need to look very precisely
example , that there is experience

there let's say you write to me
I have two forms of reports
means management at the information level
where you identify some problem on the information
and if possible, still write

in this case you should immediately enter here
the concept of controlling clairvoyance
i.e. what you perceive as a problem
this should already be aligned by you

then you perceive it
aligned as if in a positive direction

then you perceive, write out and write
that by such and such technology
you got what the problem is solved
at the information level

is there a reporting form
This is physical layer event management

so, if possible, I'm involved in management
physical level events
as follows

set yourself up for as few problems as possible
so that it is generally projected in your information

and secondly, if something has already been recorded somewhere
then enter it
well with those objective coordinates
which are
and track on a physical level
result

means constantly increasing the positive side of management

therefore it turns out on a number of issues
management at the information level is often more important
but it is not verifiable
because you shifted the information

for example, there is no explosion and that's it
or the person did not get sick
but that is your goal

and in another case
then the already known coordinates are known
physical some planes they penetrated into your Perception
you need help

then it is very objective to write it out
and, if possible, examine the process more objectively

i.e. if this is a treatment
I usually recommend the center
examine on the same devices
let the same doctors, if possible

and if it's some other physical process
so, accordingly, we need to approach it more analytically

i.e. especially at first
Practice if possible
so that on physical Reality
the manifested systems were more controllable

and my system is actually like this
This is a system of spiritual education
it is exactly such that the main goal is
be able to prevent, for example , a series of possible disasters
that could be there
or not to allow
some kind of pathological process in Reality
Anyway

those. the education system is like this
what you should have
such a spiritual state
and the state of the Spirit will often be your control
even without applying logical control status

what you can get anyway
transformation of Reality into a positive side

and this transformation will be like this
that you will cope with the situation in the future anyway
which, generally speaking, may even be for you
and never met

i.e. the purpose of education
it's not about constantly studying some kind of techniques
which means which are known and which can be repeated
this can be done if you have time, for example

but the purpose of education is
ability to manage any environment
it may even be a completely unknown environment
in the future or there in the past

and at the same time be able to develop
that mechanism
which will save you in any case
and others as well

therefore, the event management technique
from your Consciousness
and by any events at any distance

this is basically a method of such a Spiritual level of development
which allows you to instantly generate
a number of solutions
or let's assume that we make management of this kind
what do you actually get
or instant result
or you can manage systems
which are not even known to anyone at all
except you

but nevertheless you can consider
this element of Reality
move him
transform
don't let it manifest itself
somewhere in the form of some kind of catastrophe of pathology, etc.

therefore the goal of managing events at any distance
is precisely the goal of management related to that
that you must simultaneously educate yourself
cope with all possible situations
in the future

or even work with information from the past

but you have to do it, well, for example, in the same way, really
what if I can get Pepsi-Cola there
and I can always drink it in principle
because I can take it with my fingers there, yes

you should have the same
absolute control tool
well for example
on the Spiritual
logical
or any other management level
for example, control directly from the Soul

in this regard, I will now introduce here on management
actually at the level of your Consciousness
level of Reality at any distance

I will now introduce a number of axioms

this will be four axioms
which at the end of this lecture
I'll have to do it myself as homework
well actually study

and it means to study the effect and influence
at least by Axioms
so from these Axioms we can obtain a specific technology
to control events at any distance

i.e. your task will be
besides what I said
means that it is the fundamental basis for management
be able to at the axiomatic level
means actually comparing the interaction
different areas of these axioms
be able to obtain technologies

i.e. any part of the lecture
this is an opportunity to develop
its own technological level of control

so that's Axiom One

event management
at any distance

it happens like this

that events come first
transformed
from the projection point of view
to your inner Reality

i.e. you
need to highlight
inner Reality
well, let's say inside the body
as if even inside the Soul
this is how this term can be explained

in the inner region
in the secret realm of the Soul
can you introduce such a term

and consider management
almost in synchronous version

those.
everything that happens from outside
it is reflected approximately
like two films running simultaneously

is reflected in your Soul

then Axiom two

your Soul
organizes

all external Reality

Also
How
she organizes

your body

those.
mechanism of organizing Reality
for the Soul
it is unified

your bodies
organized according to the same Laws
for what
Soul
organizes
all external Reality

Axiom three

The creator creates
like everything at once
and so it exists
in any of the consequences

i.e. this Axiom is quite clear
I won't dwell on it here

and Axiom Four

you perceive
external events

not only in the form of, for example, the optical range
or in the form of a range perceived in Consciousness

and you naturally perceive events at those levels
which perhaps you are not aware of now
but in the future you will develop these systems of Perception
and you will have them

i.e. this needs to be axiomatized
it's logically clear
but we need to work here
here's how to axiomatize

and here by the way there is a very large one
tool for self-development

i.e. tuned in a second ahead
there for a day or an hour or as long as you want
there for 10 years maybe 100

then take a look
what do you need by that time
you had a control apparatus

external and internal Reality

and you can educate yourself
according to this technology of mine

i.e. you are just being here
Well, for example, imagine your image in the same way
for example tomorrow somewhere in the middle of the day
and take a generalized image, that is , throughout the day
or specifically some point of tomorrow

and you can
from here
look at the events around you
and transfer knowledge to oneself
but still considering it first
through controlling clairvoyance

this way you can conduct education
through identified information spheres
let us assume that each of the axioms
This includes the information sphere

and you can these spheres
thus place it near you
that on some mechanical level
even distributing their orientation

you can have
accurate information about management

i.e. the concept of so-called clairvoyance
where is the concept of irrational vision or clairvoyance
this is also a concept that means something that includes
perception of information
from that area
where do you perceive information
in the form of Laws of Information Distribution

this is such a complicated phrase, it comes down to that
what if you, well , let's say you have Newton's law
because there, for example, an apple falls

then here you have clairvoyance
because information is distributed
just like I said for example

i.e. you can find including
and their own similar technologies

but in this case there are two mechanisms
or use only my technologies
and then you can work calmly as long as you want
if you make your own technologies
It is essential to check them multiple times

so, as regards these four axioms again
for event management at any distance
then you just take the Axioms
let's assume write them down on pieces of paper and remember them
or you can even just memorize it by listening
there on the audio tape

and even changing places in geometry these spheres
you will have certain information
according to different events

to get controlling clairvoyance
For example imagining yourself in the future
or any person
or even some series of events one can imagine
also in the form of a sphere

and arranging them in an elementary way
for example on the table in front of you
you can do it quite calmly
mentally moving these spheres
even by writing on pieces of paper and moving these pieces of paper
have management information

these elements of Reality

and not only by these elements as such
how to move them at all
you will see this by the way, well, with experience or right away
but also to see how the information is obtained
Means in relation to you

i.e. let's assume
this is what management is
if you look at your events
or events, for example, of other people and not only people
just an object of information

what is the control criterion

sometimes it is completely clear
Well, since there was a controlling clairvoyance, he is immediately clear
but for example, for development you need to use
that you take axiomatic systems
which I just mentioned
in the form of these spheres
and just move them around

depending on their location
in relation to each other
you can move them around
Well, let's say in the range of one square meter
there's a meter by a meter

and what information when moving
you get
by management objective

For example the goal is this Here some sphere
which means either health i.e. restoration of health
either it is some event or series of events

and you will receive
in principle, three combinations are enough
any kind of thing
to get a generalized point of view

this general point of view
this is management
i.e. what you need to concentrate on
and what you need to achieve

i.e. that canonical region
which is needed for management

i.e. I just highlight the principle of Axioms
that the Axiom is a legislative level, so to speak
i.e. the postulating level
exactly the same as gravity there, for example
and if you throw a load there it always falls
it's the same here

distributing information
near these spheres mentally
you get control

already based on the fact that this management
this is your Perception
which you have from the fact that you observe these spheres

so as I explained
You can even write it down on pieces of paper
and just move
and see
how information changes
in relation to the object of the management objective

it could be the same nuclear reactor
basically any system you want

and change of information
as a rule, very large things do not happen

i.e. that's exactly what it is, it's a narrow circle
says that such
optical actually form of control
she is such that you see
the accuracy of the positions of these spheres

later as an independent work
try to find this type of sphere

criterion of finding
is that when these spheres are moved
in your Perception
nothing absolutely new arises , for example

although there may be a different angle
but you can logically or informatively connect
that it's basically the same thing

i.e. as homework
if possible, you can work with that
to find similar systems of my own

This of course may not even be an end in itself
you can just use my technologies

but as I said, the goal is still education
is your own Spiritual level
which allows
or create your own technologies instantly
or already very well, for example, know mine

so here is the concept of, for example, your own technology
yes she can lean on it
and will rely, for example , in many ways, sometimes absolutely
on my technology

but the meaning of education
that's when you can create techniques yourself
you will be able to quickly transmit

although only my technologies can be transferred

it's basically everyone's choice
as you wish
because to create our own technologies
here we still need to test them
and make them so that they are tested
anyway in practice

look at my work on factologization of the results
and please note that
for example, from a fairly long practice
I often highlight the healing
so, for example, they put a notary seal
only those people who need it

i.e. I consider this as a personal matter
here is a seal that he is cured
never goes back to that

there are people who don't need it
the same goes for the facts of equipment diagnostics there
Well, according to any facts

i.e. factologization should also be controlling

facts should do basically the same thing
which you do, for example , for your own purpose

Saving everyone and yourself

please take a look if possible

maybe even deeper on purpose
I already said this at this lecture
the book about the Resurrection means
about full recovery technologies

complete restoration of matter
any information object in general

and try to mean many Laws
easy to master as canonical
i.e. these Laws are like, for example, in a mathematics textbook
there or at any other level of knowledge
there are some Axioms and then logical consequences
If possible, master these Laws

it means that you will have it yourself
it means that they appear in the form of methods
this can be developed

For example, I think
what if it's already your own
the methodology has been tested
then here, as I said, be more careful
what in terms of what in practice

and the practice is this
that some facts need to be recorded, some not
I just said

so, but the main thing is that they are all creative
this is the main idea

and when will you be
for example, to practically implement your facts
so if possible, highlight it
where is my control system
and where do you enter yours?

although it would seem so
this is a fairly multidimensional lecture level
I have
but nevertheless, one can still highlight here
where is my information
where is yours
this will allow you in the future
differentiate other people's information

and what is going on in the world anyway
who does what at the information level
who does what

because it will allow you

join forces
even in telepathy for example

after today's lecture level
I'll spend some more time in telepathy
three lectures in a row from 10.00 to 11.00 pm
for the purpose of this lecture

it will be a telepathic continuation
today's lecture three days in a row

that means from 10.00 to 11.00
just tune in to the lecture
and if possible, then if possible, do it this way

when will you be receiving lectures
that is, different principles of telepathic perception
continuation of this lecture

these words can be
these could be some images
or maybe Spiritual Perception
which is a spiritual state received from outside

for example, I give it in the form of a Spiritual state
and there may be so that there are no words

therefore in telepathic perception
it can be completely different
there is generally a level of telepathy
where information is directly transmitted from the Soul to the Soul

then the speed is super fast
and this is perceived as a state of the Soul

but the state of the Soul
this is not even information from the Spirit

because Spiritual state
this is a more familiar state

state of the Soul
this is a super super fast level of processing
perceives with Consciousness
and the person thinks that he is just there
for example, at rest often or falls asleep

i.e. therefore, if possible
it means that what comes in telepathy
It would be good to write it out anyway
and for example, transfer to the office

So now I will conduct the training

then the training is next

let's go back to what I already told you
i.e. you imagine yourself again
now only at one point
for example, somewhere in the center of this room

do you introduce yourself
and so what do you know
that everyone imagines themselves as worthwhile
For example right here
in the center of this room

and try to see yourself
but to see the general image
right now right now

then look at yourself
and look at the generalized image

it will take a little time, maybe two or three minutes

as you see
now it looks like this situation will happen

you try
Perception to do anyway let's say more like this
once again focused

and look at the generalized image
Here which is already around you

i.e., for example, you are in the center of this room
and around you there is this image

generalized image

so now we'll probably do it this way
I just need to commit it to memory
this image is a generalized image

and try to do it anyway
well, somehow in the form of some geometric figure
introduce
Well, what geometric figure is closest?
to this image, precisely the generalized one

so let me tell you this now
one figure
and if possible you just had to raise your hands
who could consider such a figure

it's a cone with a base at the bottom
i.e. the top is on top, the base is on the bottom
as if closer to such a figure
Who saw this?

Fine

it's the second level
it's like closer to the outline or something human
well, maybe it's like this it looks like that
what is above a person
from the person there are like clouds of steam
actually, this is the perception
well, yes, there is light
who saw it like this

like a matryoshka doll

Yes
Fine
so now you know what

who saw it in the form of a cone
and who saw, well, yes, like a kind of nesting doll
in a more multidimensional version

take these images too
put it again in the middle here in front of the table
i.e. already connect the generalized image

start connecting generalized images

whoever saw it differently anyway
this generalized image
try to put it in the middle

You have to remember one Law
what is in this area of information
you can Infinite amount of information
enter
you don't interfere with each other in any way

at least the information of the whole world
You can enter here
informative

the main thing is for you to perceive what happens
it is Perception that works

Perception
this is your governing body

so the moment when you
you already set a generalized image in front of yourself

the thing is, pay attention
that the Creator when he created creates Reality for example
there is no concept of past future
there is no concept of time at all
Well, in a certain sense

He already acted like that
so that every next object
developed the following

i.e. try now
find the second generalized image from the first

i.e. find the Laws by which
from one object it turns out
second object of information

it means when you are already a generalized object
they put it up again
connected to another
for example a cone with a matryoshka doll
a third object appeared

look how this
for example, a third object appears from the cone yes
or from a matryoshka doll

what are the Laws of Light in Perception

at the same time implemented

this job is the same
how does the Creator of Reality

and in principle it is Reality
namely to establish the Law of the development of Reality
this is what it is
that you can implement these Laws
in the form of our own development technology

i.e. that is why it is important to see here
how is Reality developing

not only through your volitional activity
but also through the natural development of Reality

now one more time
who saw the already generalized object again
when the matryoshka matched the cone
who saw the cone again
Raise your hands if possible

so whoever looked at it let's say so
this is quite a unique option
but if possible, if anyone has considered
such a moment
like an endless column of light
well, like infinitely high going up

so this is the Endless pillar of light
this is precisely the system of organization
transitional level
between two nesting dolls
there is already a third, fourth matryoshka, for example , etc.
And
meanwhile, there is a generalized image

i.e. development is also a form of just that
Well, for example, it looks like an Infinite Column

If possible, take advantage of it now
with the same technology
Means consider development
not as some kind of dynamic process
and as a form

so in everyone's mind
what form is this development
from , for example, a matryoshka doll to a cone
or from a matryoshka with a cone to the next cone
or independently from cone to cone, etc.

i.e., go through the options
what form is this development from the Creator, moreover
form from the Creator

and what does this mean
what if you have
some kind of, let's say, cell pathology
do you see anyone for example
and you need to build a normal cell
then it turns out that all that is needed is just
mentally fix the form
right in the area of the same cell
and the cell is restored

i.e. this technology is actually completely practical
i.e. there is often nothing else that needs to be done
there is only enough
reveal the form
and that's all
and fix it

so just work again
cone - cone for example
cone - matryoshka
in general between other elements of information
how one object passes into another
how does a person come to Reality for example yes
how the plant transforms into the soil
why does a plant grow from the ground

for the Creator
all Reality
she is on an equal footing

i.e. it turns out for work Creator
if you take it by the strings, hang it
a number of some kind of information objects
let's assume some cargo

then for the bearing surface
it doesn't matter what they are tied to

everyone is on an equal footing

every cell
The creator creates
in real time
well, like, all over again

i.e. the concept of the future
it is a constant process of creation

and then it turns out
in this case how should the earth be created
i.e. how to concentrate yes on earth
so that the plant grows
How

what is the transition period
from the shape of the earth, for example, to the shape of a tree
what form

Naturally, it is individual for everyone
but the point is that the control that I give

often generalized forms
they meet when
Well, in general, development occurs
when event areas touch
we get a generalized form

it can also be individual
the main thing is to know the principle

and in this regard, if possible
you try to identify such a form
which would give exactly
well, how to discover a certain Law in each system

i.e. to discover each form for yourself

While I'm talking, work all the time

when i say practice
then it just needs to be practiced
try to find these forms

i.e. it will take a little time
but find these forms

Now look, the situation here is like this
when you have worked for some time
and you have gained some practice
a certain spiritual state arose

i.e. when you do something
there is always something left over from this work
a certain feeling
capture this feeling

It's one thing to manage forms, for example Yes
another thing is to manage on the basis of the Spiritual state

then you can sleep
in principle, it is logical not to even engage in management
but it is enough to enter into that Spiritual state
you are in control

for example, right there we were busy for a long time
practice there rescue aircraft equipment for example
treating people
or any control at all

develop a certain state of Spirituality
which corresponds to that

what is this control
or it's a technique
or this is treatment
or control of arbitrary near events

and in connection with this
often when there is no time
for example, to build geometric structures
It's quite easy to enter this state

and then you see
that it is a monotonous element of work
that you are in a state
as if generally speaking, you don't do anything
but in reality you are doing the same thing
that you control through a logical path

so when you looked at it now
form for example in practice
go to to the construction of the same Reality
but through the state

and look
where do feelings come from

i.e. where do thoughts and feelings come from?
in general, here is your inner perception
in this case, what is it connected with?

do an unpacking of some feelings for example
that's when you
there is a concept of feeling thirst yes
like a feeling like a desire
and at the same time it is something material
try to start with such feelings

there is a feeling, so let's assume there is compassion
i.e. try to feel this
nest control element

and you can consider any feeling you want
and look

how are humans formed
these or those feelings as if suddenly
i.e. what sometimes suddenly
what element of Reality is triggered in this case

as through feelings
see the changing Reality

i.e. feelings build Reality
as an element of your Perception

and as an independent work
go to that
so that the technology that you have through the senses
which means more connected
with Spiritual Management technology
would be a technology, including a logical one

i.e. through logic through representation
i.e. when you can
this technology may even be abstract in some ways
transfer to thought

this may be such an abstract logic of Thinking
let's assume that the number is five, yes
it consists of some strokes

well any other number also consists of strokes
associative transfer

i.e. completely transfer
on the mental, well, on the mental image
by any means possible
it may seem completely illogical there
but please do it now, it may take time

the thing is that today
this practice is basically sufficient

as an independent work
it will be necessary if possible
do this practice yourself

and so when will you do this practice
you try to essentially always follow one goal
for example, the goals are here

act as the Creator after all

each of you
must act as the Creator
act towards the goal, if possible correct y
which you could control

it's better to have absolute control
if to rule physical events means to control them
if it's informational then don't allow it

and also to see that it is so

i.e. their own control mechanisms

and apply all my technology
exactly, after all, specifically, well, to the goals
First of all, Macrosalvation
and the system of safe harmonious development

then the solution of specific problems

the thing is that everyone, for example, walking on the planet
understands that there are a lot of systems related to this
that you have, for example, such a plan , let's say, for development
what is a protein life form at all in general even any
but for example especially protein if you can call it that yes

according to normal biological laws

that means it must be contained there
in the information part
information about future events

i.e. in any case, take a closer look at those
what are each of you doing
from the point of view of organizing future events

how your information is involved in the future

and if possible
identify some individual characteristics
well what is your personality personal participation

when you find out you will see
that what you do is unique in any case

i.e. the Creator gave to everyone
do something personal on your own
in terms of Macrosalvation

and apply this technique
from the point of view of well the so-called may be even more
their specialization in this part

i.e. what do you personally do?
and here's an example others don't do this
because you have to do it anyway

and then it turns out that the positions of each
here in many ways they become equal
from the point of view of controllability

and just those developments of technology for example
which allow you to add the following technique
or increase your level

these technologies they will look like
as for technology, well, mostly anyway
Spiritually your personal development
but also the development of another

i.e. I put it here
highlighting personal characteristics
as a simultaneous apparatus for the transmission of knowledge

when you see what you personally do
then accordingly you can pass it on to someone else
having understood how does his system of knowledge work

so here I think that here
At the beginning I said this thought again
I said that it is absolutely correct here
here is the idea expressed
and even invested in information
It is necessary to pass on knowledge about Salvation
I have some of my own technologies there that you know

but why, for example, do I build technologies?
based on Consciousness
at certain levels of development

so how can you materialize
for example here is Reality
can be controlled

at a certain level of development
when the technology will take over
an increasingly important position in the development of society
level of control from Consciousness
this will be the only possible level
according to the data of the leading researchers, for example in the scientific world
including my own

i.e. technologies that allow
control devices
I have such inventions
information transmission system
please look at my patents if possible
there are tested sensors

thought
concentration on crystal
transmitted and read
on another crystal

i.e. it is a technology that allows you to control equipment
at any distance
prevent disasters
with the help of the same kind of crystalline systems

and since we need technology that can be controlled in the future
and it can develop very quickly

these techniques may very soon be necessary

and by the way, this is this education system
it is approved by the state program
and only for Russia

i.e. the Ministry of Education of Russia
and in principle here when confirming this I just showed
that these technologies in many cases
they are necessary first and foremost
in the context of developing man-made systems in the World

because there already is
for example, computer neural systems
which are developing like artificial intelligence
and they can, for example, already now
remotely erase the memory of other computers
at a distance, for example, a weak electric current
in the wires to extinguish the electric fields there, etc.

but if the neurocomputer is of this type
how it exists in the form of separate boards there
already does it
then if we connect it
then it will be an intelligent artificial system
self-developing and moreover

and then it will be possible
for example, to control or somehow stop
at the expense of one's own Consciousness

in development here technologies of one's own Consciousness
in fact, there are no restrictions on the level of, say, development
there is no other piece of information here

you must be able to control any system
super complex ship
or for example there are concepts such as "alien systems"
it doesn't matter how complex they are
aliens so to speak there are such concepts
it means that they are separated

no means those that are more
which have a higher level or there is a low one
There is such data among ufologists

why am i considering

any information
as completely, well, let 's say neutral

i.e. your task is to provide for all systems
even if somewhere there is a granny on a bench who said
that she has some problems
and this also needs to be done in a way that is manageable

i.e. as far as possible
when you are in management
doesn't mean don't put it
Generally speaking, this shouldn't happen in principle
but if possible, do this now

do not set any restrictions on management
any super-called complex system
or super intellectual

because as i said
there is a Law of Distribution of Information

each object of information is equal

and when everyone moves along the creative level
this is one, i.e. harmonious development

if others are not creative
then any object of information can be controlled

i.e. information from, for example, some blade of grass
can control a powerful complex there
if you look at it from the point of view of connections
just digitize the connections and watch
how is the light distributed
in space and time

so you have to understand
that this is the control in any case that I give
regardless of complexity or possibility
even there is no other object of information

so, at this level I will finish this lecture

in the practice of my lectures
There are two types of answers to questions here
for example, it is best to put questions before the lecture
and if they arise later after the lecture

write them out and send them to a post office box
or bring it to the office

and I can give an answer
or in the form of, let's say, telepathy
sometimes I give or send brochures with special excerpts there
or I dictate audio tapes

i.e. as long as there are some questions
ask them if possible
of course after some time
when you are already at the level of managing clairvoyance
Well, maybe you'll get out at a faster speed.

there are often questions there
or in general, like this, for example, in my simple practice
even when I was studying there
For example, the answer was immediately clear to me
but I didn't ask in principle

so questions are not the goal

but for example, you can simply suggest the goal of the discussion
and that's all
i.e. some topic of discussion, etc.

so I'll answer now
there are questions here
which, in principle, well, from the point of view of just practice already
they will be in the form of answers like this
that I will focus this lecture more
in order to consider the questions
Here the applicability of the lecture from my point of view

the concept of "applicability"
this is a concept when I can use
no longer specific Axioms but simply consequences

what I have considered in relation to this issue

for example, the question is this
Means *how much can be optimized*
your abilities of controlling clairvoyance

The thing is what about the Salvation technology
optimize in general in an ideological sense or something

as necessary as it is necessary

i.e. if you have
some rapidly developing nuclear reaction
then why could this be a big problem?
for example there is a nuclear explosion
then it means that the controlling clairvoyance must get ahead

if you see it there in a second in a month
then in a second
in a month means in a month

i.e. the meaning of Salvation is exactly like this
that the controlling clairvoyance must necessarily control
from the point of view of achievement, after all Necessarily
Harmony by management

therefore, optimization must be targeted
if you want to see the micro level
let it take maybe a few months
then learn to see the micro level
or manage at the micro level, etc.

that's why in Salvation technology
here the meaning is more ideological

need to be saved
and time is determined by this goal

so then here is the question that
how to optimize your business

The thing is that the optimization here is such
what are you sphere of business for example
i.e. you represent your business
in the form of a certain sphere of information
and then you work
you can even imagine it there on the table in front of you
in the form of a sphere

at the same time or turn it on as much as possible
all possible characteristics of a business
or you can have some separate one
which you need a characteristic
represent in the form of a sphere

then for event management at any distance

take these four Axioms that I said
also in the form of spheres of information

or just write them out
do you even put these sheets
again on the sheet these are the goals of your business

and tune in and get connections
you write out the connections

so when concentrating on these connections
you get direct control
your specific business

this question is general
this is how you can do it and just treat a person
write out a diagnosis for example
and consider at a certain position of the leaves
what information is coming

i.e. what you see even in the first Perception
and when changing what information

when from a combination of leaves
there you will make five or seven moves

the information no longer changes
then you get the control that you need

you can do it mentally
it is not necessary to move there physically
but of course it would be better not to write this

i.e. spheres
just tune into these areas
four spheres and receive projection
on the fifth sphere

if you look
how the level of development is structured
as a dynamic level of development or something events

i.e. where is the statics of the World
intersects
with dynamics so to speak
at the information level

there is basically a five-link structure there
where the four structures are the supporting systems
and the fifth is the transitional level

and therefore if from the point of view of the device
exchange level of information
that's in terms of treatment there
in terms of event management
or does it mean treatment at a distance

that is precisely the fifth link
where the fifth is the transition link
you need to make a goal

i.e. the goal is not absolute
you must understand that it is always connected
with all other changing information

in my works for example there
in the work "Applied structures of the creating area of information"
there I describe exactly the principle
What
each object of information connected with each

and how should this be considered
and what follows from this

i.e., in principle, the mechanism of these connections is described there

so basically i think
that the main element here is that
what's most important here after all practice more here
spend it anyway time is better every day
to control through your Consciousness

gradually it will just be at this level
that it will be natural and will not be difficult

and when does it already manifest itself?
more advanced control clairvoyance
then you already have it
as a system in general, approximately the same
that's when you look there with your eyes
you can open the door there and turn on the recorder
it will be the same it will be natural

but you will constantly control all events

Means *the question is this*
if everyone lives forever then
so what is *the purpose of this*
and what to do with overpopulation of the earth

so the point is that I need to take my book
here is the answer to this question
best of all "Resurrection and Eternal Life"
and there it will be clear that this is the goal
that Eternal life is considered
as an element of the same postulate of the Law
What
Eternal Creator
Eternal God
He gives birth to the Eternal

and in connection with this
the purpose of the Creator
is Eternal life for all
because
The Eternal creates the Eternal
it's just the Law of Information

by type of uniformity of information creation
By the way, this is also a mathematical problem

so there is even such a principle
if from a mathematical point of view
a great many
still leads to a large number

i.e. and if so, in general, to abstract logically

and in ideology the goal is like this
that when we set a task
Eternal development
then we'll get straight to the point
we solve relationship issues
relationships between objects of different times
man - man
man - ecology
there internal ecological problems, etc.

and the development system changes accordingly

and how do you know
it's enough to set a goal

it can always be achieved

then there is no need
develop , for example, a weapons system

and by the way, the concept is Resurrection
I enter there
as a power characteristic for counteraction
possible system of global destruction

i.e. if it can be proven that it is possible to resurrect
then it's clear that there is no point in making weapons

wait until politicians come to an agreement, for example
or will it be decided at some interstate level?
sometimes it's not let's say it works out
that the characteristics in the reflections will not be objective
and therefore it is better to rely on yourself

and "on yourself"
this means you still have to manage
on yourself
and from myself

Man was created once in the Image and Likeness
that means he is free For example
and why on earth are there some kind of global destruction systems there
should touch you

then you need to do something so that it doesn't affect you
means to prevent, for example, destruction
including in the way that proves
proves that there is a resurrection

this is like a small philosophy, so to speak
from this angle
is included in this book, among other things

and in this regard the goal
there is also a purpose for giving after all personal freedom
closer to True freedom of personality
when everyone sees for example even logically
Eternal number of events
may well be free

because it is clear what the Eternal number of events is
he will do what he wants

means what concerns overpopulation of the Earth
then the meaning here is what is indicated in this book
as on the basis of Consciousness of one's own Consciousness
for example, to create matter

for example my various works
there in Novosibirsk MSU on materialization
they talk about that
what can be created
for example, in a vacuum I created completely ordinary oxygen
there is just soil, plants , etc.

various experiments on materialization

i.e. you can create land
how much land will be needed
as far as it can be created
or some other lands

i.e. in fact it is not a problem
because the World will also be described somewhere
this means that the point here is still the same
that the World is manifested as a Collective Consciousness
where of course there is
and first of all it comes in
Consciousness of the Creator and

but here the situation is like this
that after all the Creator teaches us to do so

i.e. here it turns out
that since the Consciousness of the Creator enters here
but He also teaches you to be creators
i.e. they knew how to create

so when will you start practicing
you will see what exactly is the purpose of that, for example
to create space and time
look at what's really going on
if your goal is defined specifically for Macrosalvation
it's not that difficult

and as a rule it is
in principle, the concept of "efforts" here is as follows
there is no such concept in management

there is a concept of a goal for the goal of Macrosalvation

you can either materialize there or heal

but in terms of effort
there may not be any effort there at all
maybe just normal natural
there might even be a somewhat lighter state there
from the point of view of Consciousness there
because you do it for everyone
and this gives you stability

and so in fact
of course you do when you are engaged in Salvation
you choose the rescue mission
and therefore it is clear that here

By the way, there is a question related to the second question
it refers to the concept of "evil" and "good"
and "good always wins"

but the point is that the concept of "victory of good"
now it all comes down to that
to really understand first of all
all the existing threat
and really react adequately

and so, in accordance with the concept of "evil"
Let's assume the question is this
why evil lives and thrives
for example, good always wins

but the thing is that I have a concept of "evil"
I relate to an even greater extent often
to the concept of lack of knowledge

i.e. if knowledge
means they do not correspond or do not cover
the whole system as a whole in a complex
then it turns out that we have
Well, it seems like a good system
but sometimes it can be manifested negatively

therefore the purpose of my education
it still is
embrace all elements of Reality
why is education so concerned
global systems are required

i.e. the ability to consider
all elements of Reality
either together or separately

you can imagine the whole world
just in the form of a sphere with a radius of two centimeters
and it will really be so
i.e. you can see all processes
inside this sphere

and of course good wins in any case
but now the situation is like this, for example
in connection with possible global destruction
even a reproduced human
what is better to be able to do independently
It's better if everyone can save

then it is already clear that in total

we will naturally save in any case

so here, so here is the situation
associated with the supposed cost
question about the cost of the lecture course

so the point is that the concept of value
here it comes down to the fact that after this lecture
I'll have to come and do a digital scan
and you will be given special, well, these are digital systems
for information processing
and these systems will need to be after each lecture
wear at least a month

so that's why, in principle, the cost is the limit
into the digital information processing system
a video recording will be made there
and then you will still need to monitor it for a month
there is a minimum of situation related to control

I do it anyway
cellular control
event control
in connection with this, it will be necessary to come to the office later
and do these shoots

maybe it will be easier
I'm currently having an individual shoot

i.e. there is no general filming in the hall yet
but in general I will soon work out this technology
then it won't be necessary to go to the gym
then we can do a general shoot
and immediately make these systems digital

i.e. for now I still have it entered
here is a method of information control
and this method of control rests on that
that these mini-systems are digital
I'll have to wear it

so here is the question
Why undying is
method of preventing a global catastrophe

Well , I explained it
what does undying mean
method of preventing a global catastrophe
because the point here is precisely that
that when we put the ideology of Eternal life
then we don't create at least the weapons themselves

and secondly, the mechanism of immortality provides for
completely self-regenerate
and control of the entire external space

that's why it is
method of preventing global catastrophe
Well, one of the methods, so to speak

question five
Why then well *they die* I would say so
in general, here is a more general question , apparently
and *how can you prevent death* at all , let's say yes

the question here is specific, really
why do little children die
and how can this be prevented

but here the situation is such that in my opinion
this question is actually more general
it refers to the concept of death in general, not only of children
and how to prevent it at all
I'm just writing in the book

Now the question is the following

is it possible to master foreign languages
using your method

Well, the thing is that as I explained
if you need it for salvation
there or even for some methods of self-salvation

For example, I often gave it to pilots literally in three days
there is a full volume of foreign language
when they were transferred to other planes
and it worked

Well , in general, this is not an end in itself, the speed of development is there
because from this the pilot might not understand the dispatcher, for example
he could, in principle, let's assume, fall yes
and so he quickly mastered

but if you want you need it for something
for Salvation you can of course
if just for example tasks specifically not Salvation
and tasks such as achieving some goals
then try to make this goal like this
so that it would be a salvation for everyone

then in principle you will be able to
master it simply, well, as an external course

there is a method of gaining knowledge of foreign languages
which is just an informational level
i.e. you highlight
another language as information
look at your information reception elements
How do you even get information?
at the cellular level, for example , you perceive
or on an event
and mechanically you just take and enter
and that's all

then you
I did my education this way
and in general what languages are there, for example , at the physical level
I should have said yes and master it as well

but it was simple
the goal there was to prevent the nuclear reactor from exploding
in one of the countries

if we assume that you just need this
you still understand, I still understand I give
the technology of Salvation, moreover, real Salvation
if you look at all my facts
and the purpose that exists

so if you still tie it up
to the Salvation of All
then I have, for example, students
one of the students manages the quotes quite clearly
on the New York Oil Exchange for example
absolutely absolutely correct
she just found meaning in her technology in that
that she ties these quotes
for the purposes of universal Salvation

if you find this mechanism
then you control any process
as fast as you want
well, including, for example, learning foreign languages

further the question is more general
what to do with emotions
if they suddenly *start to cover a person there,* for example

so the point is that, as I already explained
I even included it in the first lecture
there is control through feelings

if possible you will consider this management
management including emotions

and all you have to do is just highlight
this emotion as information

at first it may look unusual
because before it seemed that feelings
they seem to exist on their own
but that's basically it normal information
The only question is whether it is worth changing the information

for example, if we consider the feeling of Love
then it has no actual sources
there is Love and something to do with it
Apparently there is no need for much here, yes

but there are feelings that can be made out

i.e. there are feelings that are sort of unpacked

for example, the world is based on Love
and unpack there more as a rule
it is not presented here
any such quick opportunity
if only we are talking about real Love

if we have any other feelings
then they can be unpacked

and then well , as it were, the consequences can often be seen
consequences and those elements that lead to emotions
then you can often just track it down
where does emotion come from anyway
what kind of influence
and just remove this influence

there are different concepts there
as the psyche of the "evil eye" there is "damage"
but I refer this to the concepts of interpersonal relationships
normal exchange of information

the only question is
what if you are doing Salvation
and here we get resistance
then your task is not to destroy the other
means being able to save

i.e. their position is that of those who destroy
in this regard it is simpler
their task, for example, is simply to destroy
but your task is still intellectual

if you are involved in this technology
you need to choose such a position
when you can control without destroying another

and vice versa give it the event level
which would, for example, lead to this formation

because the concept of Eternal development
it still implies training for everyone
technologies from the Creator

i.e. to live forever
develop forever

and especially if we ask these questions now
Well, people won't even master it quickly enough
then in principle the technologies are like this
that yes of course good wins
Well, as a practitioner I just do it
so that it would be real

but what does it really mean
there is no threat of global nuclear destruction
there are no interstate, well, contradictions
no, let's say there are no infections that can destroy there, etc.

so from the point of view of Reality
there is actually a lot of work

and therefore, apparently, it makes sense in my opinion
that's why I still even I'm watching
to a question with emotions
that on those elements that are more understandable to you
which are even closer to feelings, emotions, thoughts
work more efficiently

so that it turns out to be a kind of practice
knowing which you will no longer practice there again
on the elements as if there could be physical Reality
and will simply do so that there are no problems
and that's all

the thing is that here according to the book "Resurrection"
question
that means by *how much the book can be distributed*
"Resurrection in general and Eternal life..."

Well, the thing is that this is a book for everyone.
if there is a possibility to distribute
then it should be spread as widely as possible

so the point is that there are small nuances
related to the fact that I'm still editing it
but in June I'm already practically thinking about publishing it
in more or less final version

namely "Resurrection and Eternal Life"
There is also a monograph "Resurrection" from 1999
and the book "Resurrection and Eternal Life" is from 2001

then the book itself is basically like that

that of course I'm interested
so that everyone has the best of it

if there is a possibility to distribute
then I always welcome this

of course there is such an option as a concept
what is interested may be the publisher who publishes, for example
there is some copyright
but in this case I am the author
I can say right away that I allow it
you can spread it there as much as you like

another question there if the publisher
for example, it is distributed in the form of books there or in the form of Internet systems
then in principle here it's like buying one book
if you have a source of distribution
Well, not exactly commercial
then there are no restrictions

You can distribute it as much as you like
and according to publishing law, let's assume the publisher himself will have no questions
if this book, for example, is published

Well, what if there is internet?
and as a rule, nowadays no one really follows these rules
we need to do it as widely as possible across all the emails there
send out

those. I'm absolutely for it
i.e. I think that there is publishing law here
as if for the sake of Salvation it does not exist

the publisher exists until then
as long as the planet exists

so the thing is that I think that in principle
well since i basically tried to cover
those questions that exist
and in the future we will agree
that if possible before the lecture it is better
still put questions

because i have
image processing system

so I still make the image objectivization
then I digitize it
then I do the usual morphological control

i.e. I look at the state of the human body

and if the questions have already been asked during the lecture
This puts some strain on the digitalization technology

so that's why I basically answered based on the book
because it is a matter of principle
I am most interested
in the Infinite Spread of Technologies about Eternal Life

and these are basically the questions that already existed
before the lecture

we will do it this way now
I just need to be in the hall now, well, well just sit
maybe even go on holiday somewhere
video recording will be done now

maybe it won't even be necessary
I am now introducing such video recording for the first time
These are usually more individual digital recordings.
translation to digital

Well, if there is just a recording now
it will be digitalized
and then you will need to come to the office
and take away, well, the systems
so-called digital control systems

These can be either floppy disks or hard drives.
you just have to wear them
within a radius of no more than 70 meters if possible

Of course anyone can do this
but I advise you to do it
because after all I am at the same time
I'm doing a restoration by the way
at the time of lecture materials
and if possible, I would like to look at the condition of the cells

This is my technology, I created it.
working in mechanical engineering
to control remote objects, for example in space

and it allows you to be absolutely sure
consider what is happening in the cells
just a routine diagnostic
due to the fact that against the background of certain information
the image is being digitized
the spectrum of that Reality is highlighted
which corresponds to the person
and the disk that he receives, he just kind of fixes
Mathematics counts

this technology is absolutely it so neutral
She does nothing, she just transmits information.
about cellular composition
plus about the Norm of Events

Norm of events
i.e. if a person has
well there on the hard drive on the display appears
that there are some problems with Norma

and Norma is quite clear
from the point of view of non-interference in the development of personality
this means that he is alive there, for example, and has no injuries
well, some ordinary concepts of the Norm

and there the norm is really introduced according to its goals
let's say about the fate of creative development

but this is actually the main thing
so that some problem does not occur in the events

here the control is based on two characteristics
