GRIGORY GRABOVOY

Seminar on the application of the technology of the Teachings of G. Grabovoi to search engines

26.08.2003

Today I am starting a seminar
on the application of the technologies of my Teaching
to search engines

in this case, the question that is considered first and foremost is
search for a person
well and so on applies to searching and finding
any information objects
in normal form
i.e. in a form, well, not destroyed, yes

For a person it is a healthy homecoming
and for example for some information object
like an airplane , a ship, etc.
this means in a viable state
This object must be located

in order for the search engine to be implemented
well, in full measure, i.e. in terms of speed of expediency
from the point of view of search engine security

and then often necessary
find yes anyway
Well, for example, find access to the system there
for the safety of a nuclear power plant
often need to find access to the system
[which is often undefined
At nuclear power plants many processes
[almost go]
Well, essentially uncontrolled

so in this case we are also talking about
[about access to systems that are poorly defined
in order to exercise control to the fullest extent
it is necessary] to use first of all
the structure of one's own Soul
where the Soul is already manifested in the form of Love
does search actions

i.e. here in the search
Love that is near the Soul
and is also a source from the Soul
this is a finding

for example, to find a person
enough before starting work
fix the state of Love before the Soul

at the same time the Soul must be very strict and tough
be in the physical body of a person

i.e. you first feel
well somewhere in the solar plexus area
what does it mean Soul is rigidly fixed yours
within your physical body
and then you put the information of Love
and at the same time the one who must be found
he must come to this information

as soon as you saw him coming
well, on the information, i.e. they felt it
in terms of spiritual diagnostics
in this case the optics of the Spirit must be like this
that it kind of wraps around it
this level of Love

and then this means that this is a fixed fact
that you found a person

and then the purely technical work begins
according to the search, well, with maps, yes
with some material effects
in terms of finding out people's phone numbers, for example, etc.

i.e. before the start of a person's search action
it is absolutely necessary to do so
so that he comes to Love
in simple terms, this is what it looks like
at the management level

although it is actually not a very simple technology
I said "to put it simply"
because here too we need to simplify
here in complex systems
often the word "simply put" simplifies

after all, in order to find a person in principle and as if yes
from the Infinite level of information
an unambiguous action is required
by narrowing the search yes in the local system
as soon as I can send a signal to him specifically
and receive a signal of his arrival
taking into account event management

it's actually quite a complex system
here in terms of structure
because it's easy to make management
knowing where you are and knowing the goal
it's basically a linear action, yes often

and find
this is from the Infinite level of information
first, as if to fix the technological level
i.e. here is Love near you yes
and show as a beacon for a person
from my level of Love came to you

i.e. the only precise level of information
in this case it is
namely Love for a person
and if we talk, for example, about an object of information of some kind
let's assume there is a ship technical system
for example, a plane got lost there

there is no information yet that it is supposedly broken there
that is, did not suffer a catastrophe
can it be in a more or less complete form
with a generally high level of work sometimes
find somewhere that he landed successfully there, for example

for this just information about Love
should envelop your physical body

if for a person it is near the heart
Love near the heart or from the heart yes
a person sees Love with his heart

and for the technical system
you yourself must become, well, practically, Love
i.e. you must attract the system like a magnet
and Love attracts any system

and so when you put this system around yourself

then you get
quite fast level of well reconstruction

the combination of events starts to happen
what do you practically get
already when you start searching
Well, you find some place in the information
where is the plane in normal condition

Well, let's say there were cases in my practice
when the plane was landing
somewhere in the desert, let's say, in a field
well or lost radio contact

with this technique
when the search work was just beginning
he was there and no one suffered there

so in this case we are naturally talking about technologies
which are related to the fact that well, they haven't been discovered yet , yes
primary data
i.e. there is no information about the object at all
this technology belongs to this plan

if there is some preliminary information in the object
Well, let 's assume there's a plane there, maybe
has some defects or landed badly there
this is a different type of work

but it is better to receive information in a more acceptable form
i.e. to minimize the system, for example, yes defects
means to reduce the consequences immediately before
as soon as you receive some information
you should basically reduce
as if the negative side of the following information

and for this you can also use
the same technology
attracting positive information
on the structure of Love

when you come to a purely technological plan yes
for example you need to find a person
there is the first level of information

for this you need first of all
consider technological reasons

often they are of psychological nature
the nature of human social growth and his level of development

i.e. in search engines
it needs to be reflected very accurately
human psychology

in this regard you need to
well, let's take some kind of photograph or something like that
or let's assume the name of a person

determine psychological characteristics
human development well there from an early age
already when a person begins to perceive
as if Reality
as in terms of identifying with one's actions
Well, somewhere from a very early age
it means when a person begins to perceive with Consciousness
i.e. he begins to differentiate objects there to speak

that is, to highlight
the first element of social perception
a person comes into contact with society

from this level it is necessary
namely to develop the structure of analysis
because almost all cases
sometimes up to one hundred percent of human disappearance
are connected with, therefore , precisely activity
here are like previous layers of information

because here is the culminating action , let's say yes
the person disappears somewhere
is concluded as a rule
in the structure of previous development

so we need to consider
three levels, well, sort of in time
this is from 0 to 5 years
then from 5 to 15 years
and from 15 and further to Infinity

i.e. it is always necessary to consider first of all
three, well, components of the search process

because if you look at it there
some other period
then we will already have an analytical model

and not there search with finding

here for search with finding
you need to split the interval exactly like this

and having considered the characteristics of personality development
for example from 0 to 5 years
then from well 5 to 15
it is necessary to make a comparative characteristic
as if superimposing the first level of information
considered at the level of the Soul
from 0 to 5 years
and at the Spirit level, for example, from 5 to 15

we get, as it were, two frontal planes
or areas
Spirit
Soul

as soon as we raise them
as if above this horizontal line of analysis
and impose on each other
just like mechanically
by an effort of will we compress with consciousness
these two optical systems

we get the human body
where is it at the moment
but already in a living state

i.e. the concept of , for example, "resurrection"
from this design it seems to go to the level of that
that the man did not die

i.e. the Soul and the Spirit give birth to the physical body

Well, the Creator Himself, the One God, was created
It may have a creation structure
based on just any fractions of your body
even a single fraction
i.e. He can through the Soul
organize the physical body
or there by the Spirit faction
organize the physical body

in this case we have two components yes

it means having a static Soul system

and the Infinite Spirit System
as soon as we impose
we have a comparable effect
with action well and it turns out to be the One God
in terms of creating a standardized event
by a person's social status

i.e. it includes not only the physical body
but also that a person comes

here to ensure the arrival of a person
we form a completely unambiguous line of Love
where Love is the only way

i.e. Love is absolutely precise
and as a rule even here such a word
it's somewhat generalized

Love has no other trajectories, no other routes

so it's natural that he comes
to you or let's say to your home yes

i.e. if you put the structure about Love
near yourself
and set a goal for his coming home
then he comes home

i.e. it is a control system
i.e. not necessarily
to your physical body yes
because the Physical Body of the One God is one
but people often go to different places for His purposes

here is the same construction
by analogy of action
with the Physical Body of the One God

and when you start to analyze
how then to work on paper for example yes
here it is in front of you
First of all, there is a photo
secondly or there is a name
and let's assume there you go out into the area and there's a map

i.e. there are three attributes that in principle can be
or there are mainly two
i.e. primary information about a person

either a photo or coordinates
or some object even yes
let's say information about a person

and the second system
it's either a map
or is it still a kind of technology of actions
according to a given algorithm
it's not always a map

because for the security system
algorithm is often introduced
namely the search and the creative motive
because it is a system of creative search
and not to search there for the sake of causing there yes
some kind of negative actions maybe

namely, to find a healthy person
that's what I'm talking about, it only works in this case
find just an ordinary healthy person and return

with such technology, for example , it cannot be used
to find for that
to somehow negatively influence a person

i.e. why can't we use this technology?
because here stands Love
Love does not miss the structure of negativity
and as if immediately, practically, we act unambiguously
i.e. this system is completely safe to use

that's based on this
i.e. this needs to be known, understood and, as it were, spread
that any creative motives
they are already creative because of this
that they can even be disassembled why

i.e. besides the fact that the goal itself is creative
it always determines the entire further mechanism
but you can also figure out why

for example, I said that yes, the element of Love
that we are already working on a Spiritual basis
around Love

and Spiritual status is always the status of God
i.e. the united area
generalized and united with God

with the Spirit of God
also with His Physical Body
moreover, even with the Action of God

so we know the structure
absolute creativity of the search engine
must reach the level of practical action

for this in the first level if it is a person yes
photograph of a person
it is necessary to obtain a signal, as it were, optical
above the head above the right side of the head
i.e. well, sort of over the right hemisphere
somewhere at a distance of about 5 centimeters
identify a sphere with a radius of also 5 centimeters
i.e. from the surface of the head
to the lower boundary of this sphere
5 centimeters total length
respectively 10 yes
and that means the length to the center

when we identify this area
it must […] be stable
i.e. to make management
according to the stability of this sphere

this sphere means
that the person is healthy, well, in good normal condition
for example, he comes home or wherever he wants

but definitely showing up
i.e. that it will be differentiated

By the way, this system can be used
to meet the resurrected one

and when it already means you have recorded it
i.e. we saw that it had stabilized
this
you start to slowly build a sphere
which means technology
and this sphere is located
above the left hemisphere, i.e. above the left side of the head

means the construction of the left sphere
goes simply as a management goal
i.e. you put this sphere, well, as if in the form of algorithms
i.e. what needs to be done

the first element there is to get the card yes
the second element there is some kind of relative
I have to do something, call somewhere
or somehow wait there or somehow work
for example, there according to my Salvation technologies

i.e. it is like a technological sphere

and thus you are the whole outline of a person
so you're practically closing it
into small spheres of action, sub-actions, etc.

well, that is , you create some kind of search aura
i.e. the aura of return yes

then these spheres cross
they close as if with light streams
the whole human body
and then you start expecting the fulfillment

here is the expectation of fulfillment in action
as well as the absolute safety of these actions
from the point of view of search engines there

this is where this action should be
completely unambiguous
the expectation should be that the person is not aggressive
yes comes
that he does not harm others
because he was there and returned, etc.

because often the reason for disappearance there
there are some situations there
let's assume there are collapsible and criminal ones

that's why you build so carefully
this is the external, sort of technological contour of it
which returns it already as if completely closed yes
and at the same time you are protected
and all other search engine participants

because search engines
as a rule can often relate
to some tense social events early on, etc.

as soon as you have done this action
and his whole body begins to practically shine

i.e. you already perceive a continuous spherical radiance

it is perceived immediately
diagnostic element
Love
Spirit
and Consciousness
in this case the Soul is like an activator of projection

i.e. already the next projection
goes on the action of the Soul
and at first it was
Spirit
Love
and Consciousness

you see we are beginning to equate Love
to the personality structure

if we say that the Soul is there and so is Consciousness
this is a manifestation of personality
then in this case a similar manifestation
in search engines is Love

and when we look at the diagnostic system like this
what does this person's projection mean
it starts to shine as if
into three planes actually

then from these three planes
Spirit
Love
and Consciousness
you have a projection on the map

if you are searching by map

and as soon as there are three lines that coincide
and in general it is very easy to find
enough to concentrate
you can even ring it out there
with a finger there, feeling the photograph there, etc.

Well, it might not be necessary to touch the photograph
but these optical lines are very clearly identified

if you take it there
some very sensitive film for example

then apparently it is even possible with a certain amount of skill
take a picture
where the main concentration of these three lines goes

and when you differentiate them
at this point
so at this point, well, there is an event, yes

another question is what kind of event is this
what should be done to find a person

i.e. well for example, firstly we can say
what let's say is that you can practically do the following

that the search mechanism is such
that you need to develop an algorithm yes
let's assume at this point
it means he physically exists firstly
and in a healthy state

the reason is that
that we brought out a search engine
it is precisely in the level of health of a given person

and when we have it
then it turns out that the next action
is like an activation of the following actions

i.e. if he is here
what needs to be done so as not to violate his free will yes
well bring it there to a normal position there
provided by the way that he still wants yes For example
return to the place where he disappeared from

but there is a social norm
when he disappears from the family there
this means he is obliged to return in any case

because as if as if he or at least say there declare
that he doesn't want to be there
in any case there must be a social norm
therefore the person must be found
this is the main thing

therefore, based on this
you are building the next management system

you put

Spiritual basis and the basis of Love
to the center of this point

Well, for example, you found a house
there, let's say, there is a kind of ethical norm
example, to enter the apartment if it is not desirable, yes there
then at least you figure out the hours
by which you can meet this person near this house
and offer him, for example, to return to his family there

for this it is already in principle a physical action
but sometimes you can resort to physical action

if you don't have time to go there
and for example look for this person
in this place
then there is an action because you
your actions
for example you could take there let's say someone yes
say that you will return to your family, for example
but this can be replaced by an informational action

for this you need a flat sheet
make it to that level
so that the leaf is your Spirit
i.e. approximation of the Spiritual sphere of yours

i.e. you perceive the sheet
as the glow of one's own Spirit

and then events start to come together like this
that the identified point
it seems to start to stretch
into the solution area
well, that is, in the area of the right side of the head
his sphere

starts if this if for example consider
his image his physical body
then this point starts to move
into this right sphere above your head

and as soon as she moved there
you kind of traced the route
All
it means the person is already returning
even if you don't tell him anything

so, well, by the way, you can use it here
here in this place in principle it is already possible to use
as if an auxiliary numerical series

This

4 7 1 8 9

and then with a certain slowdown, as it were,

1

i.e. they pulled the control there
so as not to imagine how not to waste time there

but in principle it can be used in a search engine
so that this whole system can be made into a single search engine
you need to find a person yes

then to what I have said we need to add
4 7 2

and then you will get just a control row
according to the search level of a person in any case
i.e. even if, for example , you do not develop the design
as I just explained

and at the same time when you, for example , act further
i.e. you need to suppose, well, it's not necessarily on the map
and let's assume that we work according to the scheme yes

here you have a sheet of paper
in general what needs to be done for that
to get the work scheme

i.e. what action to take
It's one thing to have general information
for example, it is immediately clear what needs to be done

another question is what to do technologically
and fix the symbol
the so-called search symbol

you take the projection
plane again
Spirit
Love
and Consciousness

imagine that means that information
optical information of the sheet
this is the information of the Soul
and just put the projection there

how it will lie down , yeah, through all the geometric lines
this is a search symbol that a person returns

i.e. as soon as you have drawn the symbol
it is enough to make further control on it
in terms of well, how to saturate with information
highlight in Consciousness
or give someone a chance to concentrate on it

you get a kind of return
due to the so-called search symbol

but well, there is a concept of "amulets" "talismans"
this information is basically stored there
well there is either protection or help

and here is a symbol, as it were, yours, which is personal
it can be correlated
for example, output into a numerical system there yes

or here I gave a number series
it can be written
you can also concentrate

better in this bluish bright white
there silvery white
or bluish with a bluish tint
in color it should be concentrated

when did you do such management
the situation is as follows
what after finding a person
it is necessary to create a harmonization department

i.e. well, there was some kind of unstable event area
when he disappeared
after he was found
The following control still needs to be done
which would indicate that it is guaranteed, as it were, yes
does not get into such a situation

Well, actually, it's like a kind of disease

some such, let's say, information
or some discrepancy in information
Norm of development

then that's what you need
and a sphere above the left side of the head
start to intensively illuminate
as if in future events

and this is the circuit that you closed
by creating a microsphere
near there surface and body
so you take this structure
once again, very intensely, as if shining through
and stabilize the process

then you will already be sure
what are the negative effects of disappearance
he doesn't have

i.e. well, for example, there are no problems with that
that the previous reasons there are yes
what he disappeared they will resume for example
i.e. this is such an action

by then we will say about the disappearance
any other information objects
Well, for example, there are technicians , yes, etc.

here the action is in many ways similar, let's say
in terms of what can also be added
contour there object information contour yes
illuminate it and due to the glow
it will sort of, well, basically, pop up in the information

for this you just need to use it like this
so that the informational pushing out, wow
made a contour, illuminated the object yes
some kind of aura of being there
and just an object
unlike if a person comes to you
then the object should simply be according to information
rise higher up

as soon as he rose higher up
and you recorded it
i.e. they saw that he came out
to the level of publicly available knowledge

i.e. they see him and hear him , for example , etc.

Often this is where the search engine ends
you come in the same way
to search on paper
through the same three projection planes

i.e. the difference is often just in that
what if in a person I repeat myself again
this is a movement towards you
then in the technical object yes
vertical upward movement

in principle in any other information object
if you are doing scientific work
and you need to find some electron there, right ?
then you can basically use
the same technology
to identify its location and examine it

well, that is, if it is not really fixed somewhere
and somewhere, for example , it is unbalanced
and how to study it well you have to there yes
it is as if to track it in its environment
it is possible to pull it out to the level of a fixed system
and calmly study in statics, i.e. from all sides

and by the way, here is this system
which I now offer as universal
it can allow to study any organ

i.e. in this search engine you found
frontally, as if framed by this glow
also brought up

the only thing that is a human organ
you must simultaneously bring yourself to
and a person
and organ
to see, as it were, inside a person

but by the way it is a powerful diagnostic system
i.e. in this way you can any organ
consider
not taking into account some information interference there
and in a very calm state you can watch as much as you like

for example, they wanted one cell

look at her for an hour, two or three, as much as you want
she won't change

I have such a system, well, let's say, a conclusion
to the static area
used frequently in scientific works
with the purpose of
well if it's morphology
yes , this is analysis and control
if these are remote technical objects there
I looked at the structure of the object as it is located

well, if here, for example, I had an antenna
large antennas opened up in space
there are a lot of different rods there

and so I recorded it in this system
that's in that area that I just mentioned
this system
and looked calmly
at the same time I don't know where she flies in general
First, you need to find the information and record it
and that's all

I could of course find out the coordinates
but this would not have given anything in general for statics

so static area
this is the field where
Spirit
Soul
Consciousness
and also the Will of God is according to the Norm of events
they are all united

here, by the way, I introduced such a concept as the Will of God
and for example according to my Teaching about Love
The Will of God is manifested in Love for people

therefore you can quite well consider here
and it really is so
know
what Love for people
i.e. it is precisely the desire to Save them
this is the main system, well how to prove
what if you start it
then basically you can
Save a person, i.e. find

and that's why I think
what from the point of view in general
here is the target level of problem solving
that well a person should live in a harmonious society
where it is still unacceptable, for example, for people to disappear there
well, something like that negative events

I think it's this part
well, exactly like at the search level, then
which I just said
it is important in terms of harmonization of the World society
that a person should , as it were, choose for himself personally
but at the same time not disappear socially

i.e. conditions must be created
when a person does have easy access
there to relatives or he says that he left yes
or if he disappeared then he is returned
for example, it is included in the Norm
and then everything will be harmonized
and in general comes to Norma

due to this
well, as per search engines
it is desirable to work quickly enough
and, if possible, the work algorithm
must be correlated
for example, with a certain level of the Teaching

here I have given more details
my Teaching about Love

then here you can for example use
technology, well, let's say knowledge
at the level of actually quick actions

i.e. you decided to take a quick action
and you kind of carried out this quick action
if, for example, a situation arose there
find some person

then today's lecture is exactly like that
ways I did it on purpose
quite a bit short in time
about half an hour
to master the search technique
as a technique of fast action

this is of fundamental importance in this lecture
because if you are told about such a level
like [disappearance]
well and even more so even if it is there
quite old in time
i.e. the person disappeared quite a long time ago
then here you still need to take extreme measures
i.e. quick measures

and in connection with this, that's exactly why
I gave this lecture at high speed

as a practice, let's say, of a seminar type
try to make the control right now
to work there
with any information objects yes

better with people
directly identify these areas there
and how to simply find information
who needs help
from people
it doesn't matter, maybe you don't know them physically

and practice it directly
right now after the lecture part

Thank you very much for your attention

This concludes the seminar for today.
