

GRIGORY GRABOVOY  
The Teaching of Salvation and Harmonious Development  
**Lecture on restorative technologies**  
(1)  
21.03.2002

The thing is that considering that I did propose  
to somehow fit in more freely  
and if there really is such a need  
be there today  
then I will try to minimize it

Well, that's actually the introductory part  
more to transfer to work already from 22.00 to 23.00 in the evening  
there will be work for three days in a row  
on a telepathic level, continuation of today's meeting

and if possible then we will agree like this  
because I will work through everything that is written here later  
already individually  
i.e. the meaning is that I am already taking specific measures  
according to what is written here on the appeals

we'll agree this way  
what is today's part  
it will be carried out in this way  
i.e. a seminar on restorative technologies  
that I will still show certain methodologies  
to date  
which means that they concern the principles of self-regeneration  
through such a goal  
as a prevention of a possible global catastrophe  
and ensuring harmonious development

and here is the practical part  
so that we can already say to minimize the time for today's meeting  
we will transfer it to a greater extent to independent studies  
from 22.00 to 23.00

i.e. at this time it will be necessary to be quite active  
if possible, but not necessarily  
there being in special conditions  
but if possible, remember as actively as possible  
the part that I will give now  
and try to simply implement it

Firstly, for my own purposes

secondly, according to the tasks of those people  
who are present here

This is who wrote the appeal  
and generally speaking about Macrotasks  
i.e. according to the tasks of Macroregulation  
Well, again, in terms of global goals  
sustainable so let's say systemic development

today's meeting is her  
she means technologically  
looks like this  
that I give the principle of work through the form of information

this principle of operation is that  
what since it is to a greater extent  
Today's meeting is dedicated  
namely strategy and tactics  
practical work in the current time

then I advise you immediately  
start doing the same as I will suggest  
at the level of Thinking  
remote control technologies

and trying means this is a decision  
Well, whichever one will act then  
from the level of use of today's technology  
it is precisely the governing decision to do so  
so that this decision is targeted  
first of all on  
to those requests that are here

i.e. this will be the first level of work  
the second as i said it will be a solution  
means both private and public  
according to your specific tasks  
and the third is Macroregulation

so the technology that I am showing today  
it lies in that  
which in a fairly adapted version  
for self-healing  
to highlight the form of information

I need to , well , almost remember  
the situation that arises in a person  
during the period, for example, prenatal

i.e. when a person is still developing  
So let's say in the prenatal period  
then Perception at the level of information  
occurs in certain forms

and so it's necessary to return  
during the prenatal period  
and highlight in the form of Perception  
primary control systems  
when a person is in a confined space  
can regulate, for example , external and internal  
circumstances of its development

i.e. in connection with this means management  
proceeding as if from the initial sources  
as if the biological period consists of that  
that the outer sphere stands out  
near the person  
Moreover, the sphere is not closed  
i.e. it stands like this on top let's say an endless stream from the Creator  
going to this sphere

and inside the sphere as if on the internal projection of the sphere  
the tasks are being regulated

first level of technology  
you need it then well actually  
having created such spheres around themselves  
mentally created

and thus initializing these spheres  
as areas of primary development  
i.e. what occurs precisely in the prenatal period  
when you are actually in control well as if  
without physical movement yes  
outside of the fetal development area, for example

so at this moment you do  
certain form selections

means selection of form  
arises

how is your desire to control first  
so this is how it arises as a principle, so that  
that you somehow get information  
so that control is carried out

so here is how to get information  
this is the boundary region of that physical matter  
which exists in prenatal development

in this regard, there seem to be very simple principles  
that physical separation  
information coming as if  
and management information  
this is, well, a biological shell, for example  
V Well as if inside which there is a fruit

in this regard, if we consider, let's assume  
well, such a position as the wall of the uterus  
when the fetus develops

then as soon as you start to analyze  
how does the fetus perceive  
information  
then the wall of the uterus is actually  
develops into diverse areas  
which are quite capacious  
in the perception of the fetus and are quite mobile

i.e. these are some kind of hinge systems  
by the type of set of balls so let's say  
which are located  
in fairly heavy traffic

and here is the task of the fruit  
select from the number of these spheres  
the one he needs at the moment  
as if the principle of enumeration of events  
from the level of fairly static events

and the first act  
I suggest everyone to highlight such areas  
in relation to each such leaflet  
in the form of an appeal or in the form of just text  
which is on this table

i.e. it turns out that you will have quite a lot of spheres

which are specifically completely practically  
they are associated with specific sheets of paper

i.e. this is specific physical information  
in the form of a leaf  
set out on a sheet of some level of circulation  
in the form of some kind of problem or some kind of proposal  
no problems necessarily

so in connection with this  
you mentally highlight and firmly fix  
each sheet  
and you start to sort through what exactly you need

but when you start sorting through  
then in the center of your sphere choice  
this sphere of Macroregulation arises

this sphere speaks about that  
what does not in the forecast mean  
Well, generally speaking, in the forecast  
and never at all  
possible global catastrophe  
I always add the word "possible"  
This is the most intensely luminous sphere

and is provided  
this is precisely the systemic harmonious development  
of a creative type

i.e. it is like an outer shell  
the most intensely luminous sphere  
and the center of the glow which speaks specifically  
on preventing a possible global catastrophe  
he is changing

and maybe then the shell  
the outer shell can be the center  
i.e. these are mutually intersecting  
these are like mutually transitional systems

and here you are, shining inside as if  
central idea  
precisely that universal harmonious Macrodevelopment

you fill your sphere with management content

i.e. if we speak technologically  
distinguishing from the number of all spheres  
your sphere  
by intense exposure  
these are precisely the areas of Macroregulation

you just <sup>kind of</sup> write it out mentally there  
your desire

and you will pay attention  
what the more intensively you write out  
the realization of your desire  
the more intense in this case  
your goal is fulfilled  
the more effectively you help all other areas

Well, to put it simply, the optical principle is quite simple  
what is the level of action  
do as the Creator  
you every positive action  
spread to all elements  
especially those that, <sup>for example</sup> , in this case  
geometrically closest

i.e. having done such an action you go  
I already mean for homework  
go to the second act

i.e. you are actually working  
with the main area of Macroregulation  
but already to a greater extent more privately  
according to its task

i.e. the level of Macroregulation  
you bring this sphere closer to you  
and you work  
at the level of further development of the fetus

i.e. <sup>for example</sup> when a person is already born  
information appears in front of him  
from its dynamics of actions of movements  
i.e. information of space arises

hence  
the second level is the selection of information

not from a fixed system of space  
and from, for example, a dynamically advancing space

i.e. the fruit  
a person who is already born can move  
and at the same time your task  
highlight control areas  
from where you are

i.e. for example, let's say there is a table in front of me  
then I select the Macrocontrol sphere from the surface of the table  
if I look here

I can select control there from any place  
it doesn't even necessarily have to be the physical space around me  
can be distinguished from the space of Thinking  
or from the space of Perception, for example  
through elements of clairvoyance

so here is the selection from the space of Perception  
this is controlling clairvoyance  
you get control over that element  
which you see, i.e. interrelated phenomena

and that's when you highlight exactly that fraction  
where you see  
you highlight the sphere of Macro-namely Salvation there  
Macro means creative development  
i.e. in dynamics  
you highlight the sphere of Macro-creation

in this regard, try to somehow divide the principle of yes  
what is a static system  
and there is a dynamic system  
in today's meeting

and if you work at the level  
Well as if quick Perception  
then this can be distinguished into sound  
for example, just in sound forms of work

i.e. how  
you translate the form of information  
which I have now presented to you in the form of spheres  
and how they manifest themselves in the system of Perception  
translate into sound

for example Macroregulation  
this is for example an intense sound  
and regulation of private issues  
this is for example a sound that has well as if less intensity  
just by the volume of the sound

it is possible not to single out the structure of power  
or the structure is meant, let's say, of sound  
from the point of view of musical notation

I'm interested in this case  
what is sound the power of sound i.e. intensity is meant  
related to as if let's say so with the way you hear  
there is the rumble of a passing train  
at the same time you can hear something nearby, well there  
let's imagine a nightingale chirping there, for example Yes

i.e. I'm interested in what you should translate  
as homework already  
from 22.00 to 23.00 I will continue to work  
that's on today's topic  
here for all the tasks, well, as for the requests that are here  
and it will go on today from 22.00 to 23.00  
tomorrow and the day after tomorrow

so if possible, work tomorrow already  
with the translation of the Macrosphere it is in intense sound  
and the spheres of private management  
in such a way, well, less intense  
maybe not even significant  
compared to Macrosphere sound

and try to connect  
here you have to work very simply  
once you connect the form  
corresponding to the big sound

but the big sound is not simple  
it is precisely the sphere of Macroregulation  
as if the transition of the sphere into sound yes  
this is still a form, but it is still more diffuse

once you are inside the big sound  
find  
the exact place at the level of Thinking

as if the purpose of his appeal  
or any purpose  
you get a management effect  
taking into account precisely the main task of Macroregulation

i.e. the second level  
i.e. tomorrow it will be work with sound

and on the third day try to work with color

i.e. the translation is as follows  
what do you for example output in green  
this is the sphere of Macroregulation  
you can basically withdraw  
in blue well, actually, such  
the calmest, non-dark colors  
which you can choose individually for yourself

as soon as you withdraw  
the sphere of macroregulation  
in one of the colors  
in this case the color can be seen as color  
what is most adapted to the space of Thinking  
because then it is not necessary to ask  
rigid form of color

color can be perceived in the space of Thinking  
most adapted  
just like, for example, the contour of the space of Thinking itself

We think but we don't always speak  
that we think for example within the limits  
some specific space

that's why working with color  
allows you to work more dynamically  
and the task is actually very simple  
but it should be more of a repetition  
three tasks that are here

In the first place, this is today's task  
work on all requests as much as possible  
well including my own there  
over the sphere of Macroregulation  
within, for example, the third day of classes from 22:00 to 23:00

In principle, you can do it for an hour, but it's not necessary  
and how much is more convenient for you, for example Yes  
when you think you've worked hard and gotten  
exactly the result you want

For example well at least at this hour

so when you do color  
select first  
most intensely, as if by an effort of will, highlight  
color Macroregulation  
i.e. the Macrosphere of Management  
and then find a shade of color  
to match your own task

and at the same time the management consists of the fact that  
that representing the light of well, as if Macroregulation  
like light, well, some kind of inclined plane, yes

management consists of  
what do you take and your under-color  
In principle, it is possible to make a different color  
but for it to be of such intensity  
that you know for sure that the main task is being carried out

movement by color on an inclined plane  
exactly up  
i.e. you kind of pull it out by an effort of will

and here you will be able to determine very clearly  
what is this color pulling  
i.e. your personal task  
this is first the Spiritual Administration  
i.e. it is then possible to define the color function  
Spiritual Administration  
how do you work on the Spirit

it can be determined that the top point  
this is already clearly manifested control  
from your Soul  
i.e. here we can very clearly define such positions  
in Perception  
like Soul  
Consciousness  
for example Spirit

and here the level of Consciousness is the supporting plane

i.e. what is this inclined one based on?  
as if the color plane of Macrocontrol

the simplest element  
This is to represent Macro Management

not even imagine but perceive  
i.e. it is like an element of a fairly rigid  
objectified, so to speak, Reality  
systems of collective Consciousness  
like a silvery inclined plane for example  
inclined at an angle of 35 degrees

and begins to move along this plane  
well, the same silver area  
and this movement should be like this  
so that the synchronization of the glow is uniform

i.e. after some time  
you should not in Perception  
how to feel the difference  
between the sphere so let's say well in color  
corresponding to Macromanagement  
And  
own color

once you achieve it  
you get control of your own event

I explained that now  
such as Well, the geometric ones are not very rigidly tied  
control systems  
but they are quite easy to digest  
so they are adapted quite widely

and in principle, practice as much as possible  
because the main feature, well, let's say so management  
is such a spiritual state  
which exists, for example, in humans  
in which a person knows for sure  
accurately ensures  
and on my own, personally  
that a possible global catastrophe is not happening

and it will be installed  
here is a systemic harmonious creative development

i.e. to a greater extent the more you  
practice on your personal matters  
i.e. setting as many goals as possible  
through such an ideologically staged part

what is very important here is what we are dealing with  
to a greater extent often with ideology  
it is ideology at the expense of one's own Consciousness  
be able to do Macroregulation  
i.e. to prevent a possible global catastrophe

be able to directly control events  
simultaneously with this common goal  
or through this common goal  
basically it's the same thing

and do it as often as possible  
in relation to personal or to surrounding events  
in general what do you think  
from your point of view, it needs management

when you do this kind of work often  
you get training you get experience  
and here is a characterization of the experience  
this is what the Spirit becomes already  
to a greater extent then well, you're prepared  
exactly to the main task

and according to the principles of Marospasenie  
Generally speaking the principle is this  
What even so often there well, even after listening  
For example one technological there ideological lecture  
in this direction  
Generally speaking, it is already necessary to be able to provide in the forecast  
here is the main task

i.e. in reality  
this is precisely the concept of " duration of development "  
it's not always like that, which means you have to put it  
some long terms or there is a long time to master

you need to set the task best  
correct development  
for example at the right time  
i.e. if you have a task in front of you

Well let's assume there is treatment there  
then you should master the technology in that time  
for which you need  
there to cure well let's assume a different person  
or self-recover there

if event control  
therefore you must  
in such a time  
to master , as it were, those subtleties of technology  
for which you must implement the event

because in the system well for example Macro Rescues  
Often the principle of instantaneous control is required

and here as an independent task  
please try if possible  
well maybe not so doing it often  
such as , for example, simply planned management

but if possible, work some more  
with the principle of instant control  
well, for a number of those tasks  
which in your opinion  
they really don't match that  
what needs to be managed instantly here

because you always have to keep that in mind  
that you are working with a concrete Reality  
and this Reality is like this  
that you if possible  
Well, don't do that there  
for example, some experimental system  
and just work on specific tasks  
that really need to be managed

This is exactly the management principle I give

the thing is that some experimentation  
or is collecting statistics a completely different task  
this is a task of work on the meaning Well as if at the level of Consciousness  
where is the density of the concentration of Consciousness  
she's just smaller  
and the technologies there are different  
there are other optical laws  
it doesn't matter what

the difference is that if you take  
concentrated lens system  
there are only Laws of Information Distribution  
where the lenses seem to have  
Well as if a low optical concentration  
along the beam  
there are different laws there, there is a different technology

that's why this technology is aimed at that  
that the problem is solved first  
preventing a possible global catastrophe  
this is generally speaking in reality  
maximum optical concentration  
there in society

and therefore it turns out that we need to clearly understand  
what we are talking about in this case  
It's about real work on real issues  
and it is still advisable to keep track  
how does this work happen

i.e. at the level of physical control  
and at the level of information control

i.e. there is, for example, a restructuring of the event  
at the level of information control  
i.e. it is clear from the information that control has been achieved  
and the main goal of management  
so that there are no unfavorable situations  
in the forecast

and if you for example do management  
at the level of physical events  
then you should still, if possible  
control  
that this event is being realized

i.e. if possible and better to do it constantly  
if they are not implemented at the required speed  
so, at the right time, you need to look  
why as a rule once you master the technology  
your Soul has earlier tasks

It is necessary to take into account that the execution is as if  
as well as planned earlier tasks  
it also requires resources and time

therefore, allocating a control faction  
be more careful  
from the point of view of the temporal aspect  
and try to define this aspect  
Well, maybe in a more general way

so that's what I'd like for today anyway  
Well as if considering that the goal was today  
quite fast though  
give the main material  
which I would like to be listened to today

so that's it for today  
that's exactly it, well, like the technological part  
about today's meeting

so considering what I said after all  
that next Thursday I will give a lecture  
it will be possible, well, in many ways it will be similar  
with today's lecture firstly  
that's what I said right away

for example, it is still possible for anyone who wants to  
sign up with the plan so that after all  
Well, there were normal conditions for listening  
i.e. everyone could sit or take notes, for example

so that means next Thursday  
I will give a lecture, it will be somewhere around one o'clock  
in principle it could be less

and then there will be another performance, well, about reports there

and in connection with this it means  
me well I would just suggest that anyone who would like to sign up  
it's still Georgy's or it means basically it's still Georgy's  
It would be desirable to somehow sign up for one list here

and for today I'm finishing with what I also said was a level  
that I will spend from 10:00 PM to 11:00 PM for three days in a row  
as if a continuation of today's meeting here

If you have any questions, you can always leave them  
or somehow convey it  
which I take into account in any case

Well, basically, I'm finishing the meeting for today.  
if in principle  
since I have time now  
I can do this somehow answer  
to those private questions that exist

thank you for your attention  
I'm done for today
