

GRIGORY GRABOVOY

**Formation of the structure of your Thinking
on the principle of self-healing
and according to the principle of event management**

28.02.2002

Today's meeting will look like this
that I will consider some of the requests that are here
and I will highlight some specific examples
from the point of view of the general principle of management

I will show you with these examples
how can it be formed
the structure of your Thinking
on the principle of self-healing
and according to the principle of event management

and at the same time, practically everything will be highlighted here
two main components
this is a skill in its Perception
highlight the scope of the task
what is your task
what is, for example, included in the point of appeal

the second is to be able to use it
and first of all to highlight
sphere pre form sphere
preventing a possible global catastrophe
including areas of harmonious development

and this area is mandatory
because there is a very simple fact of action
so that the action in the future will be realized
at least in the next second , for example,
there was a planet
for this purpose, a department for general harmonization is being created
and first of all
to prevent a possible global catastrophe

then using the sphere of circulation
and let's call the sphere Macrosalvation
you build by concentration

certain forms

which means that they already manage such systems

i.e. differences from, for example, the system

let's say non-targeted Thinking is that
that using the highlighted spheres
you will be already today
engage in the practice of translation of Thought
in control systems

i.e. in relation to those I have named

two spheres

to do certain healing actions

which I will designate as, for example, working with forms
or working with specific information

and for example these dedicated systems

are already turning into managers

by adding them together, for example

or by a certain level of arrangement

in this case I use the addition element as well

which is the simplest, for example, in the conditions
when you want to make management fast

since I am working on the topic

Salvation from a possible global catastrophe

based on the Consciousness of each specific person

and also in parallel

system of harmonious development

as a result, we will talk about

what will you form

such a Spiritual own structure

which will be able to do so in the future

use different technologies

even if, for example, a decision needs to be made

fast enough, like instantly

as a result, one of the components of this control

is that you

due to the structure of one's own Consciousness

you form such a Spiritual level

when you can make control instantly

so that's why I'm now, as if after what I said before

I'll start looking through the requests for a while
and if possible, formulate exactly the tasks
which you put here
in principle, others are possible, but not necessarily only these
but these are better

it means as it is given
here the appeal is of a recommendatory nature
you can basically try
some other tasks
and at the same time, if possible
select some geometric shape
from the totality of requests from the main
i.e. their ideas

while I watch
first level
this is the selection of one's own form

while highlighting its shape
from the structure of your Consciousness
so it is possible to use such technology
which concerns your personal experience

for example when a person is not yet born
he perceives
certain informative images
which are a reflection of Reality, generally speaking

here you come mentally
in this information
and try to do it that way
so that the images that you begin to perceive, for example,
were such that you can
in general, use your practice
concerning the fact that some elements of Reality
which you perceive
for example in physical Reality
or elements of Thinking
they have a custom shape for you

or it could be the item itself
or it could be an informational element
or some, let's assume, if you look at the hall, for example
and highlight the people present
to separate them for example people

from the surrounding things, let's say
then these are two different forms

and at the same time these forms they are
if we are talking about people present in the room
then we mean maybe just
as if remembering everyone who is here
mentally keeping it in mind

and if we talk about for example in chairs
Means well, the ones standing here
then here an action arises and a form of action

if possible, highlight these forms
somewhere there fast enough for example
if possible, around a minute, well, up to five at the most

while I will be viewing all the requests
and what will I have to do with some of these requests
refer

further on these requests
Today from 22.00 to 23.00 I will do the work
if possible at the level of telepathy
listen to how the work is going
and use this knowledge for management too

so that's why once again here I am
I will briefly describe the technology
remember if possible
what form do you get
if you look at some object or remember something

it doesn't have to be some geometric shape
better to translate into geometric form
when to approximate some image

or see the whole task
holding like this event for example
in memory for some time

and this is retention in memory
This can be called concentration
here is the concentration of attention
I call this system concentration

i.e. you can concentrate
on the image
on the form
for some purposes
however, if you concentrate correctly
adding by means of parallel there sequential Thinking
in the next control system
then it goes into Reality

i.e. you can restore yourself accordingly
or any other person in principle
and also manage events at the same time
and at any distance

since this principle
this is the principle of maximum freedom of a specific individual
then this principle is exactly what it is
the principle coming from the Creator
and if possible, when you work, watch

as the Creator does
those.
how a cell is created on information
how an event is created
how some element of Reality is created
which interests you

so now you start translating
your tasks in forms
and during this time I just look through the requests
and some of them I use specifically
to show
how to work with the sphere of Macrosalvation
with a specific area
and at the same time there will be a translation from an individual task
to the tasks of those present in the hall
to the implementation of this task
and plus a generalization to the level of infinite development

i.e. when in the future someone will use
data technology
it will also have a positive control effect

here is basically the general outline of today's meeting

so we again I come back to that
that you start working
up to five minutes maximum

then I continue on a verbal level

at the time of your work
the thing is that I also work, let's say, not verbally
if possible, watch what I do

Now I'm moving on specifically to that
that you are starting to form a specific management

in this regard, I think that the meaning of this management
will consist of
so that you can do the management as much as possible
taking into account the future transfer of this equipment
well the most adapted well let's assume simple
it's not necessarily simple it's adapted
may be difficult to find
adapted technology in the future

therefore [...] that this technique
other people will be able to know

when you work, keep this in mind
that as if immediately lay down
information transfer of knowledge
because the more knowledge you transfer
the more intensively you can work independently
this is, in general, a peculiar Law on Technology

act as the Creator does

I will now begin to list the ones defined here
points of appeal
and at the time of these appeals
there will be basically three
enough [...] methodological procedures in work

as I said it's better to start working right now
like for example, well, not just listen to my speech
if possible, that's what I call work
this means you should try to do that

what I will recommend to you right away now
i.e. literally in parallel to what I am saying
synchronously if possible

out some complex tasks
yes there for example, here is the point in the appeal
I'll do it there
I will be primarily again in these standard options

the first is the allocation of the sphere of Macrosalvation
the second means the allocation of a particular task
in the structure of one's own Perception
set out on this sheet

and the third is the possibility of the control system
i.e. where to build the control system
to implement this task

and in the same third point as [...] so to speak
includes the translation of this control system
on
first of all those areas
which are set out here in the appeals

secondly, to questions and tasks
which will be installed in the future
in relation to the Perception of this material

i.e. it means that any control element
it can have a unified vector

if you are doing management for example
and achieve, for example, control
for a specific private task
then according to the points of the third one let's say point
there will be a possibility of translation
into the form of information or into a control action
to the generalized spectrum [...]

so in connection with this there will be such a joint option
where practice will provide a unique technology
Means in general, the development of management methodology
Perception
and this will also be a concrete solution
here is this task in real time

since I will still be working from 10:00 PM to 11:00 PM today
if possible, then we can return to these tasks again
and see how current tasks are going, for example [...]

so I'll highlight it now
for example, such a point in the appeal

it is quite generalized
so the first point is called
so it means that *the health of the kidneys, gall bladder, slight obesity, etc.*

point two is *the knowledge of Truth*

Actually, I can immediately highlight
on two points it is generally better to always work
at the maximum level of information
if you work for health reasons
and if there is for example there Well, I'll do it next time
lecture on health
the question is best highlighted
the sphere of Macrosalvation
in relation to the set of tasks always

and therefore already from the totality
for example, you highlight a particular task
[...] for example there the first second [...]

in this regard, here is the sphere of Macrosalvation
in this case it stands out quite effectively
so that you just take [...]
if you have a piece of paper in front of you, that's one thing
Generally speaking, you can work with a sheet of paper

but if we are talking about the verbal phase
then you can, for example, look at the information
when I said point one
and he read it out
it may not be necessary to remember it word for word
what I read

and point two means
in this case, such a characteristic arises
that arise in your Perception
two different points

try to unite and combine them

as soon as the combination occurred
get to the level
infinite volume of information processing

this way out is logically very simple
you just set the task
that you are drawing two combined points
to that area
where is information processing
has infinite speed as if instantaneously

as soon as you withdraw
you have entered the sphere of Macrosalvation for this task

in general, the sphere of Macrosalvation is characterized
the need to manage this area
and the first exit
to the point of infinite instant access
This is a fairly necessary element
in the context of the reformation of this sphere

those. please note
that I give the structure of formation this sphere
at the expense of one's own Consciousness

as soon as you go out into Perception
to this point
If possible, then fix it
where in Perception do you see the optical signal

i.e., for example, by highlighting the information area
either in physical space
or in the space of Thinking
and by giving a coordinate system to the space of Thinking
it can be done
i.e. when you think
look
where do you think

and select for this task
where the optical signal is extracted
i.e. where is the glow point
as soon as you highlight

this maximum intense point
you fix it
and now this is called
concentration of the static phase

because everything you do
this can basically also be attributed
to the system of dynamic concentrations

as soon as you left
into the static phase system
i.e. they highlighted a fairly simple thing

in your Consciousness
specific there generalized areas
translated
either to a point or to a sphere

as soon as it was translated
you [...] remembered where it is
and then you start implementing the specific task

so it's a private task, well let's assume we are talking about that
what is listed here under the concept of " health "
and not even in the specific concept of " diagnosis "
but it is implied that we are talking about that
to normalize, for example, kidney function, etc.

you highlight it from the first point
also the level of maximum glow
first point
where is it located

again, either it's a physical space
it's easier to work in physical space
in front of you
in front of , for example, a specific physical body

well, for example, select a certain geometric system
in the form of, let's assume, the same sphere
and on this sphere as if marking
sources you have defined

it is possible to work in a flat version
but this is not very desirable
It's better to work at least in three-dimensional space

and the most optimal option
it is to work in multidimensional space
i.e. to be able to somehow capture an image
even if it is constantly changing
[...] measurements
access system, etc.

so if possible you highlight at this level
the second element means the same
for example, a question like [...]
quite a specific question
nevertheless we highlight
best in this case
in the form of an optical form

as soon as you start to highlight
in the form of an optical form
you see the presence of Spiritual Administration
this knowledge is quite deep
and you can implement the level
which can be called the formula for the work of the Soul

if possible, make a distribution
between logical level
level of Spiritual Administration
at the level of the Soul's work

i.e. you highlight for yourself personally as it means for a person
which perceives something
or works with something
if possible, allocate for example this control
according to these tasks
this is the work of Consciousness
the work of the Soul
the work of the Spirit

and depending on this, then perceive
transitions from one management level
to another
i.e. what do you work with?
or the structure of Consciousness
or you work with the Spirit
or Soul

so since I'm talking more now anyway
about specific actions
in relation to specific tasks

in this case, to implement
in physical Reality
or in informative Reality

what can be Spiritual knowledge
and it is not necessarily, for example, knowledge of the physical plane, yes

then this is such a level as knowledge of Truth
This is quite a specific question, as I already said.
and it is quite individual for everyone

so it's natural that you should determine
each one for himself
what can you put into this question

and we are talking about what is written
a specific person
here first of all it should be realized
Well, for him it works

therefore, management is done
for example I do management
and you do the management as you wish
according to your tasks or according to this task

and at the same time you do this
so that here is a generalized one
i.e. a unified version as I say
he would be the option that is
personally yours

i.e. you select the control system
wherever you want
i.e. here is the principle of generalization
on his task
he stands out in that area
in which you want for example there you are

and in this case
so it's already averaged let's say the control option
it turns out that

that you are just like Well let's put it this way
you still don't return to the selected elements

I sometimes say
that it is desirable to think the same way if possible
in sync with what I say yes

i.e. without returning to the control system
as if not remembering what you did before
you end up deducing
some sphere of concentration
which denotes all actions
in the end you can output a numerical series, for example

i.e. try to see that number
which characterizes the solution
Here are two examples of these tasks

so that you can , for example
still, first of all, have from your point of view
secondly, from the point of view of this issue

i.e. in this case, in this meeting
I show a fairly unified approach
i.e. the control which is laid down, for example
on two seemingly private issues
applies to what is

so in the technology that I represent
you have to get your own technology
and be able to identify, for example, control systems
first of all, if possible, for their own purposes

so it means when I present in the future
management techniques
if possible, you can, therefore, based on this technology
highlight your tasks
and at the same time be in a state of decision

for example, the following range of tasks arises
i.e. which means Well let's say it arises in parallel
or does it arise from the tasks of the past
if possible, then solve them immediately in parallel
i.e. in today's meeting
work more, if I may say so

using elements
as if more intense Thinking

the next appeal sounds like this
that *the desire to learn technology is in the form of an appeal
desire to teach technologies of universal Salvation
and self-healing and harmonious development*

Means Well, first of all, to learn
first build [...] events in this way
so that these events are directed
to the level of implementation

i.e. to create an implemented base at the logical level
i.e. this means to lay down access elements yes
into the education system
this time is appropriate
and create an external event structure

or this training there is more from literature
or this training is specifically in-person, etc.

in this regard, in order to solve this problem
so this is what needs to be done first
highlight in terms of scope
Macrosalvation again
Macro management is like this let's say
need to highlight
firstly, the structure of universal Salvation
here is the sphere of Macromanagement Macrosalvation
She is still quite individual
depending on time and access to it

and in accordance with this, for example, in this problem
if we mean that we are talking about
about universal salvation
therefore, this area should be almost completely
that means including this staging function

that it is precisely about universal Salvation
and for example self-healing and harmonious development

therefore access to the sphere is the definition of coordinates
in this case it is a different principle
when you formulate access

depending on the tasks of a given area

as soon as you highlight this issue
this sphere

By the way, in practice it can be done quite simply
take a question and for example means to form
assign the sphere of Macrosalvation
for example, just close to the surface of the text
or highlight the text as a glow
and then access to the sphere will already go
through as if from a neighboring point of the selected question

i.e. but the first element
this is the sphere of Macroregulation Macrosalvation
and in this case it is allocated taking into account that
that here is the optical glow it concerns
that's exactly all the elements
which correspond precisely to the universal Salvation

i.e. the principle
Spiritual principle
Is the scope defined?
this is the principle that is written here
the principle of universal salvation

as soon as you select the sphere
and that means you set the task of learning
how can there be a private task

then go to this task for example
This is for those present in the hall
and who will use the technologies
this is a unified element
including the events of solving this problem

and for example for the one who wrote
I am specifically approaching this now in a not [...] way
Now it is clear that for specific tasks
you considered exactly the universal one
i.e. the vector of knowledge and technology of transfer of control

so that means the work must go on as well
and for the one who wrote this
Generally speaking, yes, it can be extended to everyone.

but if we are talking about receiving
and in this case we looked at the first question, for example
for example, healing the body [...] kidneys

then we must keep in mind here
what if for example we want to gain control
first question
then here is the sphere of private management
in this case it can be in the form of a number

the number well maybe quite simple
i.e. if I say the first question there
highlighting for example the number 5
we get there
quite an effective level of management

why 5
if possible, you can think about it yourself at home yes
for example when you can concentrate

so I think that some things
which I will not say in full
and it would be better to think them through somehow in the future
you should write this down somewhere and think it through
why the connecting element
between two controls
is the number 5 [...]
for homework

then further means for example such a question
Improve production activities urgently

so that there would be implementation of this issue
sphere of Macro-salvation
is formed as a system taking into account vectorially
as a first approximation
some production processes

therefore the access element
for example to this area
and in the targeted formation of this sphere according to its task
is what you are considering
some production elements of Perception
what do you perceive as improvement
what could it be

for example, a factory or some kind of sewing production
or production in general as information
i.e. for each individual

you just highlight in Perception
how do you perceive this production
and you have the first level

so in this case there is another technique
instant access technology
that the sphere of Macrosalvation is in Perception
closer even than the existence of this question

i.e. you are the next element
you consciously highlight
concentration on the issue further
than this is the sphere of Macro-Regulation
it should be closer in this case

and this means that you have made the control
with the condition of stability of future processes

i.e. you did the stabilization first
development of processes in the future
For example there in a second the Earth exists
and what's more, the processes on it are improving
and then you are engaged in production

then when we talk about production
First of all, pay attention
on such factors formation in this sphere
what are the production processes
depend quite closely on personal elements

i.e. try to make a generalized analysis
the concept of "production"
i.e. in this case it is desirable to generalize
to summarize

and when you make a generalization
you're getting it again
individually for each one
sometimes these universal areas coincide
but it is not an end in itself ^{there}, a coincidence
elements by concentration

when you highlight, for example , the production sphere
then you can for example make the following element

by combining means of this particular task
i.e. improving production activities
with the sphere of Macrosalvation
it is possible to solve those problems
which are unified

i.e. everyone who wants to get from this technology
decision on their private issues
for example, stated in appeals or mentally
or generally speaking, to apply somewhere in the future

he can do a pretty simple thing
this universal vector is located here
between the center of the sphere of Macrosalvation
and therefore the outer shell

i.e. considering also those coming from the center
to , for example, the surface of the inner surface of a sphere
after combining the question
you get it means action
to his own task

in this case the task can be
either internal and specific
placed in the path of this beam
or not selected
it's enough that you remember her

in this case this technique allows
to say that any positive action
directed
to solve a specific issue
in the conditions of universality of the transfer of creative information

that's what the Creator does

always leads to that
that any directed or existing questions
are being solved in parallel
because if you ask yourself the question
on the world order as a whole
for example, here is a question about the Truth of the universe

then you look pay attention
that it is quite logically simple to identify such an element
that in the world information is developing
well, almost at the same time
for the current moment in time

so if it's informative how to get out
to the root of this situation
even to the optical level

then we see that there is something for this
quite a powerful glow
which is sort of parallelized in optics
and the structure of physical events is created yes

so when you do exactly creation
i.e. creation of a creative level of management
you do it at that level
what is this glow
is a unified management principle
and with positive management
for the question that you really think about
it exists in the real control space

therefore we are talking about that
which, unlike maybe, well, like, non-controlling Thinking
in this case in the controlling Thinking
systems need to be formed
which are very close to the principle that
do as the Creator does

if we are talking about what you are treating
then you need to create a form like this
in principle, it is possible to create
removed organs, etc.

and you do
naturally you should then informatively
according to the same matrix in principle
as it was done by the Creator originally

as a result of this this principle it is
well the most intense

and since the purpose of the Creator
is Eternal development
it is an exact principle
development of one's own Consciousness

so the next question is
for example, there is [...]
well it will look like some kind of appeal
that *the person became indifferent to others*

i.e. in order to mean
Well, that's the question how to include in control
First, we need to consider the complex system
the man himself [...]
and for example the concept of "indifference"

i.e. to consider today's system
and due to the fact that you start very quickly
Well how to consider
external external as if events
in relation to this person
to the person himself

means to tune in to the complex cause
this means the state yes
which is perceived as indifference
i.e. what is the reason
there or for example in the surrounding
either in the person himself

and so, to search for this reason
Please note this level indicates that
that you can work
enter the sphere of macroregulation
by searching for the cause
i.e. without designating it as a final action

in this case it is closer to the formation of such
as a concentration of action

and here in search of this reason
you are taking it out of the scope of Macroregulation

the thing is that the sphere of Macroregulation that I am talking about
it is often excreted quite quickly

like, well , it appears and floats up
from the level of concentration on this issue

or you can still concentrate it there
fix at some point
and how to bring [...] control to do
then designate it functionally

i.e. for Perception
from the point of view of Spiritual development
since the Spirit intersects with the logical phase of Consciousness
it doesn't matter in principle
i.e. either you appoint
or you kind of bring it out
from the level of a seemingly existing Reality

so when I talk about the surrounding level
and a specific person
then you can generally speak without doing anything
neither by those around you nor by this person , for example
make concentration management
at the level of universal control systems

i.e. you just do concentration
to optimize this problem
i.e. and at the same time do not enter into a specific there, for example
drawing well or what about optical phase control

because there is such a principle
what if the action is something like this
perceived negatively means state
then it is advisable not to record this condition often, for example
or you can use the optimization principle
by the level of restoration of the Norm

so as a point
both from the point of view of dynamic concentration
this is precisely the concentration on implementation
maybe there is no such thing as a situational system
it may just be a concentration related to the solution

i.e. you yourself highlight the point that you consider necessary
its intensity here in Perception
and this is also the intensity in the transfer of knowledge
[...] points of concentration

i.e. you pass on knowledge to others
solve your problems
through the same optimization point
at the same time [...] forms

it turns out that the principle is very simple
having formed its shape
made a form of management
and that's all

in principle, the question is already raised
in fact, the principle of control itself

next question

Means For example *if we talk about such a question as farsightedness*

in order to cure farsightedness
a private management sphere is needed
have within the sphere of Macroregulation in this way
so that the number of reflections

Well For example there are elements of the sphere
within the sphere of Macromanagement
was multiple if possible, for example to 5
i.e. you internally calculate the next element

you have a Macro Management sphere
well which one do you find
one of the access elements
which is most favorable for you

and the simplest element
that it always exists
the only task is to draw attention to it, yes

so secondly you enter
to the center of this sphere
this control for example farsightedness

and when you highlight well as if
the second optical ball is as if inside this sphere
and give it a vector of movement
towards the inner surface of the sphere

then if you look at it, it starts to count

that it bounces off the surface of the sphere
you look and record approximately 5 intersection points
mentally it is
see five points of intersection
with the surface of a sphere

at the same time, well, as a kind of flow
it bounces off the inner surface of the sphere

at the same time, here are such points of the hemisphere
fix
If possible, highlight these points here as much as possible
in my Consciousness
and this is the treatment of farsightedness using this method

and when you before that well if you want
for example, get a universal vector
i.e. control of what is needed as if
to manage any range of tasks

that means the vector that you mentally draw
between the first point means [...] a kind of ball
inside the sphere
and the second point
and this vector is concentrating on which
and setting [...] tasks
you implement your own task

here is the universal vector located right here
but here is the logical meaning of why it is so For example

so I can explain the logical meaning of this control
why should we consider for example
let's assume 5 points of contact
optical ball , so to speak
with the inner surface of the sphere

because the concept of "farsightedness"
is that the most distant objects
they are visible when approaching
so it works out
that the object is not clearly differentiated
and in this regard, well, if we are talking about the text, let's assume

so if we set a logical task
prolong the action

which exists close by
then management takes place on a Spiritual basis
relating to that
what is the scope of Macroregulation
here is the function of the sphere of Macroregulation
any action that is close
can be made quite effectively organized
from the point of view of instantaneous control impulse

and in connection with this here is a logical factor
what are you like then you're slowing down
management implementation system
or if in technology
then you kind of zoom in on the text
and build with for example Perception well okay

i.e. in this particular case
principle well like this ball is bouncing
is that you slow down the action
i.e. related to the implementation of a specific level of tasks

because the slowdown in this case
is an approximation of the text
i.e. further means faster
Well, the distance
logic is such that the further, the faster

and so if you slow down
get solutions to problems
then if possible, look for it if there is such an opportunity
logical sense of management
why is this management exactly like this

then this means such and such a variant of address
as [...]
and it consists in the fact that [...] *to obtain knowledge*
Then [...]
with the aim of Salvation and harmonious development [...]
so in general

the thing is that, well, first of all
as intensely and widely as possible
here to spread knowledge
related to direct access technology
personally [...] simply designated determined by that

that the faster people master the technology of direct control
firstly, they implement it more systematically
your safety, i.e. the point of development

secondly, this is generally a sign and in general
the real principle of freedom
it is precisely the principle that exists from the Creator

you can constantly engage in management
independently let 's assume there from political systems of social
and at the same time, in general, be able to pass on knowledge
get the following tasks
this is the principle of, generally speaking, infinite development

and the faster knowledge is transmitted and the more especially to those around
the more you do your personal tasks there

i.e. in connection with this
and considering that there is now a very
in general, the situation in the world is quite simple
that more and more uncontrolled systems are developing
man-made systems

first of all
because in my practice
For example, I took part in that
to stop planes there in nuclear missiles
I did the control from a distance
for software recovery
so that navigation satellites are not shot down [...] etc.

therefore the principle of direct control and direct access
in the modern world
he in a fairly short time
will simply be a necessary principle
also because it's like techno cybernization
Means well, civilizations are like that let's say
is committed to creating faster reagent machines
systems that in general can already even now
develop yourself intensively enough to self-educate

therefore the principle of control from one's own Consciousness
it is aimed at being able to manage any systems
maybe even be there
some super-complex or super-modern

and generally speaking if we consider
the principle of real development of civilization
where the principle of the Eternal exists, namely development
according to the Creator's tasks

it is natural that in endless development
man-made systems can acquire
in general, an incomparably high level
in relation to the existing system, for example

i.e. the principle of one's own autonomous so let's say self-development
may be significantly higher
than even the known social laws

as a result, the meaning of management
from one's own Consciousness
each specific person
is the ability to manage
any well let's even say very rapidly developing
external system
this is a question of the internal development of civilization

but there is, generally speaking, a probabilistic question
which, since it exists in the matter of Consciousness
and it must be taken into account
that it is possible, for example, some external actions yes
starting from the comet ending so to speak
elements of some confessions of technological civilizations

since we are talking about that
that theoretically we must be prepared and practically prepared
to any system including external

then we are talking about the fact that management
which I am trying to form
still as actively as possible
it is aimed at solving, generally speaking, any
well, including there, it would seem, very complex tasks

therefore the task is as it is being discussed
it is about facilitating the acquisition of knowledge
we need to understand here that
as an element of assistance , perhaps?
including in obtaining this knowledge

I will basically just be answering the question

and then there will be a sphere of formation

it means the management sphere

but at the same time I do not form this sphere, please note
direct answer to the question

assistance will still be that

what do we refer to as interaction

i.e. the more it will be developed

each specific person each personality

and the technique of direct access from one's own Consciousness

the more naturally it will provide greater assistance

for example, in gaining knowledge

well which well For example there I own

and we are not talking about a specific system there

well, some kind of stationary possession

the point is that at every single moment

preferably constantly means being able to manage

well, the current situation

or a future situation

well, including in principle the previous systems

i.e. therefore the point is that we need to try

it means either well in this way to develop the Spirit

who has precise knowledge , I suppose?

that he will always cope

with elements of possible tasks

or then develop yes

to be there in advance on this side

that's why this concept of "self-healing"

for that means so that there is understanding

what is well development

the concept of "owning" is more

refers specifically to ownership

in relation to each

possession of the instrument of real Salvation

real, and by Macro I mean first of all Salvation

and naturally then there is also a private one

i.e. the rescuer must naturally be saved himself, so to speak

and plus ^{it means} the system is aimed at implementation
target True Laws in the management of Reality

for example, if we are talking about growing an organ
Well, to a person who had an organ removed

that's how growing happens in my practice
the same organ arises
at a real physical level
only in that case
if we consider
processes exactly as I am saying now

do as the Creator does

solve the problems of the Creator
i.e. which are aimed at Eternal development

then we get ^{well} really there
correct result

if we are talking ^{specifically} about the general development of that
so that in the process of this action also transfer knowledge ^{yes}

then we are already talking about the timing of this implementation
or they are fast
or they are gradual there
depending on how exactly in infinite development
this knowledge will be spread

so here for the formation
it turns out that the sphere of Macromanagement in this matter is here
although in this case it concerns [...]
the point is that I ^{must} pass on knowledge

it still ^{means} the sphere of management
is formed as a smaller sphere
i.e. I form it as a universal system
^{means} located

For example there I will take it at a distance of 50 cm
then I will create a sphere
there with a radius of 5 centimeters at first
then I can increase it
depending on how this sphere stabilizes
to resolve this issue

in real action i just watch
so that in the real world this is a problem
I mean in the physical world

there is simply an optimization of events
according to the assistance option
in which I myself will always [...] try
accordingly, it means somehow according to its methodological base
and create around those students who
students' work
which are most actively intensively there [...]
namely the Macrosalvation technology

and as soon as I form a sphere
I see what's happening
further on the formation of the sphere
by the way one of the controls
there when you do you should see the consequences

so this also happens when
then the system when you are doing treatment

at the same time you should by the way
see that positive result
which from one [...] method generally speaking to another
you can be like this all the time
which is controlled
precisely positive results

and depending on the amount of time for example
Well as if you are doing
specifically management
you try as much as possible
this control for example to do
well, quite accessible, as it were
accessible to everyone

and if you for example do management
well, let 's say for ourselves
accessible to all
this doesn't mean that it's very simple there
if possible, work this way
what you will have to do management
from the point of view of well for example those questions

which already exist in other people

i.e. take into account that level
what do you do for example when you do management
should be as intensive as possible
include the task of knowledge transfer

therefore, the formation of the target sphere
in relation to the Macrosphere
it's basically like a segment
maybe Macrospheres in this case
which is characterized by the fact that
that you are just this segment
as if you are bringing it into the sphere
well, it's just there's Macro access
but you are already sort of bringing it out from the inside

if possible in the future
when you look at this material for example
look what i mean
as an independent work

if you output [...] desired control
from the inside
how do you see the sphere
and from the outside
these are different technologies

in this regard it means
there is such a principle [...]
i.e. if you do it as if [...]
when the same action is done but from different sides
it turns out to be a different control

next question
it should sound like this
let's say two questions
is it possible to compare well as the next part
if we [...] deconstructing information systems

the thing is that the concept of a "destructive information system"
it must be perceived as an element of Perception
and therefore the concept of "comparison"
it's basically just for the whole
transformation of this information

therefore the sphere of Macroregulation
it is placed here as a direct control sphere

i.e. you are just
when you build the Macro Management sphere
immediately through it you work to impart positivism
informational part of your Perception
because you perceive a positive system

and then it turns out that
how to build a Macromanagement sphere
and the selection of the second private element
these are combined elements
and here is a universal action
it's very simple in any case

what you perceive on a Spiritual basis
as this management
This is the principle of the universal system
i.e. you can use it in the future
as a universal access system

and if you enter into that state of Spirit
which you have come to know
this element
then in the future you just do the management
as if without optical elements
only on the basis of the state of the Spiritual

which by the way is very important
see that many controls
they should be done instantly
especially if they are multi-parameter
if you have a lot of tasks

then the state of the Spirit
determines precisely the control over that
what what do you control well for example without images
but nevertheless, how exactly do you know?
and even [...] the level of Consciousness
that you are managing correctly

further there is this question
what does that mean *study of methods* Means *Grigory Petrovich*

here is the application to life situations

the thing is that here is the concept of "studying methods"
if we take the sphere of Macromanagement
then you can deduce it like this
what is the methodological base what is the methodology
for example, in the materials of some book

i.e. you take from this material too
the sphere of Macromanagement is revealed
from the concept of "methodology"

and then the concept of "study" is simply highlighted
with the concept of "studying methods" ^{yes}
what algorithm is needed when studying methods

and then you just go on
take it and, ^{as it were,} illuminate it as intensely as possible
as a sphere of Macromanagement
so that ^{means} that sphere
what are you which you take to study

and then where is the projective part
in the field of Macromanagement
you ^{seem to be} mentally transported to her
and see how you build there [...] study
what method to take from which page in general
what else to read
or listen there in telepathy

so you define it in advance
based on that
that this principle is also quite simple
i.e. the sphere of your desire
study
and plus the sphere of Macromanagement
they are maximally and giving
maximum luminescence of structuring of Consciousness
such that here is your sphere
the projection beam just falls
to the sphere of Macromanagement
and you just look better
i.e. you receive information in this area
what to do here is according to the study algorithm

and the versatility of this system lies in the fact that
what in principle to determine
algorithm of any action
In principle, it is possible to create a similar sphere

the sphere of Macromanagement
or according to the target task
or just by identifying it in general
this very sphere in its Perception
and you can set the task in it

means to highlight
and get the projection part
and see what happens next yes
or in management
or in some element of dynamic concentration there

here is one that is also quite interesting
variant of address
one of the points sounds like this
about training [...] technology of Eternal development

the thing is that when we really talk about that
what should we mean in development
then Eternal development is called
research into the task of the Creator

so when it comes to such a question
this is the sphere of Macromanagement, it consists of this
that each of its elements
although it has a finite form
has the element of Eternity

i.e. Eternity is realized as
it means the structure that is perceived by the Soul

so when we talk about that
what we need to perceive
it is precisely the sphere of Macromanagement
from the point of view of Eternal development

then we must see, i.e. in Perception
understand that you are looking at this sphere so
what do you see and look at
the element of Eternity in the sphere itself

then this will be exactly the right area
which is technologically the controlling one
in Macro control system
in relation to the private level yes

at the private level of Eternal development
for example, your eternal development
it's basically the same highlighting
a certain [...] level
even in the form of information
which goes into the sphere

then you
's how you react to it
that the principle of interaction of these systems
he is such that you highlight
infinite speed of information
implementation of the Eternal Development system

and the distribution of this element
on universal principles is that
i.e. so that the element of precisely Eternal development
on the same principle

here it is important to see this technology
what you should see is that as I said
the concept of Eternal development
this is a concept that is also a structure from the Creator

you are the unification of this option
we should consider in principle precisely the unification
i.e. in Eternal development
unified element
what is called the Spiritual element

and here is Spiritual Perception
it just gives the exact same task
which means you are implementing
to a greater extent no longer verbal

that is why the concept of "Eternal Development"
it is not always a word of verbal type

and therefore, for example, if we take

logical formulation of the problem
what is in Eternal development
an infinite number of events is obtained

and in any case we compress it
into the structure of infinity
as if increasing Perception
i.e. an infinite number of events
means designed in the form of [...] personal goal
there are control systems
in relation to Eternal events

i.e. if you look
infinite number of elements of Reality
in the form of tasks in general to view this information
then this information is quite quickly manageable

please note as homework so to speak
on one's own
try to find the principle

what if you want to do management
well, at some autonomous level
this means highlighting
only this autonomous level
then such control is generally implemented
on the Spiritual level
where [...] instantaneity
that some time is spent there after all

and if we are talking about management
through the sphere of Macroregulation
i.e. through the sphere of all connections in principle
then you do it often quite freely
especially if we are talking about real Macrosalvation there
or there in particular just saving people
or well, so [...] the situation

i.e. this is just in my practice
Access technologies for the Rescue system
they are carried out as a rule, well, basically instantly
or even substantially [...]
let's say that plane needs to be saved there
which is included in the control base there
i.e. for example it exists as control tasks

Let's assume that some kind of nuclear weapon is being transported there
and it shouldn't fall

then the control system is like this
that it is being implemented [...] for example the tape there
materialization of some faulty boards
and yet it is not difficult at all
i.e. there are no voltage elements

that's what I mean, that access was Macrosalvation
even to the private level of such an element
which can be contributed to the Salvation technologies
it is implemented first of all
often not stressful

i.e. the concept of load is not a characteristic
well, the attainability of the management element, perhaps

so in the future when you work
be more attentive to this level
not necessary to have access
to the structure of Salvation
well, have some kind of load

some things
they are not perceived in principle
like some kind of difficult or systematic work

and if we consider such a principle as Eternal development
then it turns out that well, the concept is like this
as "fatigue" there or an element of "difficulty" of some kind
in the structure of development there
this element generally speaking should
Well, in ideology, well as if to be absent

i.e. the action element should not lead to
well, to costly control systems

therefore one of the principles of management
it is still the presence of the most optimal possible
less costly level
because it's the same as the Salvation system
it doesn't happen often there
there is no implementation of load systems

so that ^{means} the situation here is this
that one of the principles of construction
areas of Macroregulation
is the principle of ^{meaning} creation
the most, ^{well, not} the most burdensome for you personally
control options

i.e. special technology
If possible, watch it at home
and from the point of view of the positions that the audience has

then the ^{address} is *angina pectoris*

so the treatment of angina is like this
what is the scope of Macroregulation
I call it the Macrosphere there is Macrosalvation
Macro management
I sometimes call them differently on purpose
i.e. I set different access coordinates
here is the structure of Perception

so when it comes to angina
then the treatment is that
what exactly is the sphere of Macroregulation
she starts to shrink after that
how will you touch
element of the task
with the surface of this sphere

surface of the task ^{for example} treatment
and start after contact
thus ^{means} to direct
development of this sphere
at the same time in strengthening where the Spiritual management
that it begins to decrease in radius [...]

that's why there is the concept of "equality of elements"
for different points of view
in principle it should decrease
to shrink in all respects

^{means} for Perception
radius and diameter of other points of view
you are in the sphere of the most

so any action
within the framework of your Perception
always output
well, not like the concept of a "logical system " for example
that the radius is for example two diameters
in this case, a different approach principle

but according to well-known concepts
you still have to everything that happens
compress to certain conditions
to be in the structure in the same sphere
you can consider future events [...]
i.e. you can always not do the action yes

so, but in principle it is possible to return to it
or by doing such an action
there on the movement of this sphere
to the space where there is [...]
i.e. you are basically increasing the technology
towards intensity

the second question is *osteochondrosis of the spine*
this is how it sounds here

i.e. the point is that in principle it is necessary to react to that
how the question is put
there is a correlation with [...]

i.e. what is most important is the person's own opinion
that he, for example, thinks that it is still possible
write out the appeal exactly like this

and as a rule, a person can say well , so to speak
what is more visible, how to write about a specific situation
so try not to pay attention to the situational
is the diagnosis written there exactly or what does it look like there in general?

the main thing is that you need to do yes in this position

here is the versatility in the control system
is that when we spoke
about angina pectoris and the principle of its treatment
is
compression of a given sphere upon contact
areas of the task

let's say the task is to cure osteochondrosis

then here is the principle of transmission

it consists of the following

that when we have it, for example, for osteochondrosis of the spine

then for this you usually have enough

just transfer control to everything

to the point of greatest intensity of interaction

let's assume that the spheres are precisely angina pectoris

with the possibility

that small area that we are talking about now

it is the sphere of Macromanagement

i.e. we find on the surface

exactly this large sphere

point of maximum interaction

from the fastest possible level of information processing

and just this glow

we highlight all other questions

For example there is supposedly osteochondrosis of the spine Yes

well or we can just look there [...] osteochondrosis

so the situation here is this

what do you watch if possible

what actions

may not need to be created additionally

and use those actions that are already known

just dots well as if the intensity of the glow

there or for example endless [...] information

just highlight the universal as I said

control

and guide her in solving this issue

or to the exact area of action

the concept of "osteochondrosis"

or simply highlighting the recovery status

i.e. the principle of restoration

illuminated control system

restores the body, generally speaking

from a universal point of view

and you can use well if you need to

for example, there you can quickly assemble an organism

or for example some extreme cases
or so that there are no extreme cases
i.e. the principle of instantaneous
level of recovery of the body

before this unified access point
and restore the entire system
quite an important point

if possible, work with her
and that means Generally speaking, ask questions exactly like this
single point
where there is complete self-healing of the body

and concentration on this point
finding concentration
this is a real restoration of the body

Here is the next question
what exactly is a health restoration appeal
it's just written that way in general
health restoration

the thing is that this is exactly the part we are talking about
what when you are on health restoration
then we are talking about the fact that well this recovery
it must first of all be implemented taking into account
enough means big connections
i.e. external system of connections

and the element that I just brought up
these are just specific examples with the purpose of conveying
principle of universal level of information transfer
which can be implemented
from a specific task

i.e., in principle, if possible
watch for a certain time
what if you are solving a specific problem
then the principle is precisely of the universal level

i.e. when you transmit
Well, that's enough general knowledge
into the external system of collective Consciousness
this principle is possible

it is necessary that it is often as if fundamental even

because as I already said
in the conditions of significant development
various, as it were, artificial, let's say
human-created systems
which may well be problematic in the long run

development of Consciousness of all
it should be more intense
and the more you pass on knowledge
about the principles of developing one's own Consciousness
by Macro Access
by direct access
instant access
the more stable it will be [...] in your own questions
Well so, well, those that concern you specifically
i.e. your levels of implementation, etc.

so well, for each person it is of course quite individual
i.e. everyone can choose for themselves
what is some kind of maximum speed there
or at what point you need to act
and in which one for example Well maybe it is
not specifically physical action
it's the same action yes

let's assume as a principle that was still known
With [...]
what does it mean no action can be maximum
well somewhere there is a maximum yes [...]
that the absence of action is maximum

i.e. choose to select a specific principle
what do you want to do now
or intensively apply some technology there
simply means considering the issue from the point of view of Perception
which is also a technical action yes
it's an individual matter for everyone

if possible [...] designated [...] systems
which allow you to develop
a certain algorithmicity
in solving the issue

but nevertheless, if possible, one must proceed from the fact that

that the main principle is
organization of the Spiritual state after all
which says allows
regardless of even the application there
from any specific technologies
allows you to be such that you decide exactly
well, any problems that arise
Macrosalvation is definitely happening, etc.

i.e. if possible, implement it
it is precisely the principle that is more Spiritual
all technologies when directed
for the development of Spiritual characteristics
for the development of the Soul
then you are already becoming
to the level of sustainable management development

so that means if we consider this specific question
how to restore health in this case
then this question turns out to be quite general
and yet it means it is completely specific
and this is the allocation of the system of connections
from this spectrum
i.e. it is still a selection first of all
that sphere
which concerns the health of all Macrohealth so let's say

and then you just find
its own segmental system in its sphere
and make it more sustainable
that's all

i.e. there is a concept if there is a source of Macrocontrol
then you enter a segment of the sphere that [...]
to the segment immediately

in terms of transferring this knowledge to others, this is a neighboring segment,
yes
you can focus on the adjacent segment
and cure someone there
or does it mean solving your health problem
Well, basically, I would like to note here
what have I given now
Well, these are pretty general control characteristics
based on that possibility
that as simply as possible to convey

well, practically the management level
plus there is a theoretical level

If possible, of course, it is desirable to look at my methods
but nevertheless [...]
but nevertheless, since today I give from 22.00 to 23.00 in the evening
well, telepathic, so to speak let's say the information
I work on your specific questions
which are either formulated or not formulated
Here

then still try to get this knowledge
it is precisely technological knowledge after all
i.e. when you use logic
how exactly technology

and at the same time this technology
must nevertheless be brought to that Spiritual position
when you can optimize accurately
i.e. there well any problem there or not necessarily problems
any situation or management in which it must be
from the Creator

that's why I'm thinking
what is the most effective element for example
after today's meeting
it will be okay as if further continuation of the work
related to your questions specifically

i.e. if possible, work on the question itself
because I will be working with them in management today

and try to understand how Thinking happens
in order to answer these questions
from the point of view of Macrosalvation
Salvation of all, and real one at that
and not declarative yes
level of this Salvation

so how should we form it then?
the structure of Thinking
and how is Thinking different in general
from the governing status of Consciousness
i.e. if possible, ask yourself these questions

if you just think somewhere
maybe the management is also clear

but if possible, highlight it
the difference between the state of Consciousness and Thinking as such yes
and the state of Consciousness of control
where the element of Thinking is also present

but for example there I will simply explain this thing
through there clairvoyance can be seen
Well let's assume there I see the plane and I do its diagnostics
[...] any element of Reality

but how does this relate to the concept of Thinking, for example?

those. control is possible yes
the problem seen
how to neutralize, for example Yes
i.e. to make sure that the plane doesn't crash there
or some [...] cure for the pilot
and then the plane won't fall either
[...]

in principle it is not necessarily an airplane
there is any element of Reality, for example , a nuclear power station
then what is meant in this case
under the word Thinking for example

and when you use terminology for example
some kind of thought there, for example
or else there assume control action
from the structure of Consciousness
differentiate these systems if possible

i.e. thought is also only one of the characteristics of management
thought must modify yes
depends on what you see at the level
for example just Perceptions

and the idea is that in general it is structurally better
sometimes gets connected
with the implementation of physical actions
there is somewhere to go or something specific to do

when we talk about the direct access structure

we mean that we
from your Consciousness
from the structure of the Soul
Spirit
or even from the structure of the logical phase of Consciousness
we have access
and directly to any element
including the element of thought

i.e., you can think, for example, well as if
in some kind of automatic mode
perceiving Reality in that form
in which we perceive

but it is possible to form a thought in general
by the same management
and so it goes
so that the thought was there as if already
also in your control system

then it turns out
what if i consider
the principle of control as a universal system
then you have to go in
and the system for managing that information
which relates to information in general in principle
including thought information

that's why I would like to share now
this principle
and say that in this case we are engaged in management
generally speaking, any process
which also includes the process of Thinking

and let it be external control
and not Thinking, which, for example, exists as if by itself

i.e. in management there is an advantage
optimal control from the point of view
management in essence yes
what should you manage
a necessary process
including the informative process let's say in general

then if possible, look at the data

once again after today's meeting
according to the concept of collective Consciousness
how the elements of collective Consciousness are formed
according to these principles it is to a greater extent
set out in the book "Resurrection and Eternal Life"

and try to ^{do it} yourself
^{for example} why practice
for example, after the meeting ^{there} now in the near future
and best of all constantly

i.e. constantly practice
at the level of solving their problems
that concern you specifically
but through the structure of Macrosalvation

in that case you are
Firstly, in such a global mission that everyone needs
^{well} and first of all to you too
what do you do directly
task of macroregulation

i.e. some processes in the World they don't ^{seem to} undergo
they really don't pass unchecked then

i.e. at least if information arises
that needs to be worked ^{on} ^{let's say} with a nuclear power plant
so that there is no explosion

It's better to work in person
i.e. don't ask anyone
or specifically make direct control
the same thing [...] in many cases
the most effective and sometimes the only system
which allows you to cope with the situation
just from my Consciousness

so try to remember as much as possible
that as soon as you start working on Macrosalvation
you start doing the work
already a specific rescuer
and often this work as I explained
she always calls there ^{for example}

in general, actually

you can do no fatigue at all
and not be accompanied by, for example , that
that you have a load system

i.e. you can do absolutely real work
but let's assume that you just think like that

actually try somehow
differentiate your future actions
and define what your job is
and what like well, something
how will we count spontaneous situations there

these are the main recommendations
so for the next period yes let's say

and on the issues of the next meeting
you can contact the secretariat here
find out well most likely it means there will be a meeting in March
then in April, and so on.

i.e. some elements that interest you
you can basically formulate it further
or else to express it in telepathy

and try to do your best in general
to a greater extent
constantly practice and differentiate
that this is exactly your job

as I said to do try means to do
or an informative conclusion
or conclusion [...]
that it is really you
you work in technology

all that you left
except that I'll work today
I will come back to these questions again
somewhere around the week
there will still be work like this [...] the most active

Now I basically read it as an example
as an example, I read out some of the appeals

so thank you for your attention
all the best to you
