

GRIGORY GRABOVOY
The Teaching of Salvation and Harmonious Development
Formation of a control understanding

Lecture 1.2

The next part of the lecture means it shows the technology.
according to my system of Salvation and harmonious development

how can one form a controlling understanding
when you have a need to manage
from the point of view of that knowledge
that every element of Reality
this is an infinite amount of information, connections, etc.

the thing is that here is the concept of "understanding"
has a projective meaning
for your understanding

i.e. you can understand in a given projection
i.e. for some business or action
this is one of the types of understanding
for example by purpose yes let's say so

the second kind of understanding is the understanding of the Soul

when you don't verbalize the goal

i.e. you must understand here
that the word is a consequence of the already manifested part
and you understand with your Soul

but this state is not a verbally describable part, so to speak
and the next one is, let's say, I will highlight
although it would have been possible to highlight others up to this level
I just took some of those, so to speak
which I named

so the next part
this is what the Creator has laid down in his understanding
on the Eternal Reproduction of Life

i.e. it exists and this is the purpose of the Creator
but your task is to somehow unzip this understanding
i.e. open, discover and apply

and in connection with this, for example, I took three positions
which need to be considered as a control system

with an array of Infinite levels

so here is the management of this plan
recognition of this position
from the point of view of Perception is that
what is laid down by the Creator
already contains an infinite number of connections
from the Creator

that you control, for example, the Soul
in terms of understanding the situation
this is the control laid down by the Creator
when the Soul was reproduced

i.e. understanding is a static function of knowledge
what needs to be done for the purposes of, so to speak, further
in this case

and in the third case, i.e. in the initial one, as I said
this is the target understanding i.e. your logical thoughts
which you invest in solving this or that issue

but here the Creator manifests himself everywhere
as a level that collects, so to speak, the whole Reality

and plus this is a consequence of the work of the Soul
through the level of, for example, knowledge of the Creator's tasks
from the point of view of Eternal development

so this is exactly the level
and he kind of unpacks it
i.e. unzips these tasks

i.e. when you want to know
what should be done at the moment
there according to the Macrosalvation system
you can go through that chain
which I talked about in logical reasoning
and feel on the Spiritual level

i.e. to find the level of the state of the so-called Spirit
the level when the Spirit perceives this information

i.e. now I am talking about those systems

which take a long time to describe in words

that's why I explain that this is a state of the Spirit
when you go through this logical chain
you will have information

you can see it
that your Spiritual system includes information
which is laid down by the Creator
from the point of view of Eternal development

then it turns out that understanding
in this case it is a system of knowledge and control
through the Spiritual state

why is it considered
that spirituality is harmony
from the point of view of management it is considered so

i.e. spirituality when the Spirit creates
he interacts
he receives information for example
it's filling up somehow
spiritualizes the external Realities there, etc.

therefore in this context of the lecture
I introduced the concept of "work of the Spirit"
through the structure of logical connections
which I built here

Well, they are not just logical, they are actually controlling.
from the point of view of event construction
future there or past

i.e. management here is based on that
that you are working on the Creator's tasks

and the Creator is the manager
because management is taking place
at the level of Macro-connections
and including private connections

here from the point of view of the Creator
Macro and micro and private connections
they are projected into one system

and it turns out

that B infinite number of external connections
can be combined
only in one level of understanding or knowledge

i.e. it turns out for the Creator
often just to create something as He knows
there is a technology of a kind of single impulse
working with large, huge arrays of information

when these arrays are projected to one point
and understanding only concerns the goal of understanding
how to manage them
there, for example, the impulse is transferred up and down
or extend continue
and that's all

the same thing, for example, I did based on the results when I created the organs
those. for example organ resection
then I do the management
the organ arises

then I was often it happens that I don't think about technology
for example, some very deep one
I sometimes work directly

i.e. I simply introduce an impulse into this organ, the target impulse
and that's all
and I understand how it should be
by functions of only adjacent connections
to this organ
and that's it, and the organ grows

i.e. it is also possible to treat there in principle the other way around
the process is somehow delayed

i.e. the area in contact
with a huge field of information
can be a manager
in relation to all systems

so work through understanding
from the point of view of the mechanism
let's say optical or in a mechanistic sense

when you look at the controls
as an optical element consists of
what do you understand at a certain specific point

also transfer this understanding to work with the organ
to the border area
where you want to create something
and as if you fix it for some time
there a process or organ begins to grow there
or is the situation normalizing?

therefore, managing large arrays
this is understanding
concentrated in a specific geometric location

then you get
full control of all systems
without interfering with the system itself

and this happens because
what is primary harmonization
it is already connected to the system itself

i.e. a rigid system of mutual connections
This is the world I am talking about.
The world of management
Well, sometimes they call it "subtle" or "manifested"

in fact, this is a world that is built on the basis
and there the connections are even more rigid
than in physical Reality

and they really are like that
in terms of even targeted management
if you do management
it can be completely unambiguous

for example by placing the understanding function
in the form of a thought
to some place
there may be no other place in the information at all

and from here we can say
that control is always precise
when you set the objective function correctly
for example Macro Rescue

then you can lift all these huge massifs
how to control small impulses in principle

that's why the Macro Salvation system
This is the precision control system
in principle the only system for development

because it is built on the real Laws of Salvation
i.e. prolonging the life of each subsequent element
this is the Law of Development

in this regard, as a means of independent work
you will only need this lecture
well, "only"

Of course I said this to make it easier for you
but in reality there is a lot of work there

we need to take a large array of information
i.e. Infinite some area absolutely Infinite

enter the middle conditionally of course
and from there look at yourself
and consider it as a mechanism of understanding
interacts with this area

i.e. consider
from the point of view of this Infinite region any
Well, it's clear that the Infinite can be considered
or a speck of dust there
or there is a massif of mountains there, for example, and galaxies

and having looked at this you will see
why even ordinary Thinking
calls Macro Management
the main thing is that it is located
in the necessary systems and spatial

either near the physical body
or in the space of Thinking
i.e. you will need to understand this
