

GRIGORY GRABOVOY
The Teaching about God
Inter-territorial management practice
17.02.2006

Inter-territorial management practice

in this case i mean
when I talk about inter-territorial management
quite active management associated with that
that neighboring areas of information
which are implied
as well as some territories of information
they have the same control function
as specific physical territories

that is the meaning of this type of management
consists in the fact that
that we translate any questions and problems
existing in the territories
or in information areas
into the structure that is located between them
precisely the concept of "between" ^{yes} inter-territorial administration

more in the applied aspect
this concerns precisely the territories of physical

and in connection with this the ability to translate
reflected signal actually
from physical territories
Well, which ones are here happen usually
in the form of simple contemplation
or there are Perceptions of some events in the territories

and the ability to translate this signal
on the structure of Thinking
This is basically the essence of such management

i.e. we must in order to make management
over some physical territory
find neighboring territory
which can be indicated by a number of signs
and get control
in fact, between two or three or a hundred territories

i.e. to find the actual meaning
or is there a fundamental controlling factor?

which connects different territories
among themselves
at the level of Thinking
and at the control impulse access level

for this the thought of the person who controls in this way
should be fairly linear
i.e. it must be geometrically maintained
as a level of access to management
where we have the following characteristic

that thought is some kind of thought force or thought pressure
this is what control is in this case
to the access point to the territory

i.e. in fact it looks like this
that we first perceive information from the territory
or it is physically determined in general
i.e. we know from the news or we know, for example , in forecasting even
what can happen on the territory

then select any area
and at the first level of management
this area should be neutral
i.e. it should not contain information
characteristic of the management area

and then we highlight
area in the structure of Thinking
the point to which we will access
and as if to exert some pressure

it looks like some kind of wave pressure
i.e. thought works as a wave in fact
and you bring the control to this point
start in a wave pattern
put pressure on the control point of physical areas
and control occurs

i.e. the model itself looks very mechanical
i.e. there are practically no special elements here
other than holding wave elements
as if in Perception and in sensation

i.e. at this level
you can move on to the structure of wave sensations
this is the wave principle of control

on the one hand, this simplifies control

because the wave is, so to speak, associative
or at the level of Perception of strategic systems
it is always perceived in some kind of fullness

i.e. if something happens to the wave
there 's some kind of ripple going on there, let's say
or for example some kind of splash
then it is always perceived as if on a different level

if so, then give an example
for example, a stone is thrown
it glides across the surface of the water
then for example follow
how the movement of a stone is perceived
in contact with water
flat stone yes

and if you look at how the ripples of water are perceived
then you can see that at the point of contact
stone with water
here comes Perception, first of all, more Spiritual
i.e. the spectrum of the Spirit is realized

because between different physical systems
there water and stone work more
on the first level
Spirit
it is the Spirit of man

in this way, one can understand in action
which system perceives the action first

as I already said, it is possible for this
not just a specific case
and generally doing some actions
consider
where the human Spirit works first
i.e. differentiate yes action of the Spirit
and where does Soul work, for example?

and now if we look further

then it is clear that the action of the Soul

for example, this is the center of this stone
is fixed

for example, the statics of the Soul

then it's clear

how the Soul of man grows into management

with this stone yes

you can slow down the movement, you can speed it up, etc.

although it would seem that physical laws should be observed

they threw a stone there

it should fly in principle at some one speed

and so it's like a control system

also related to inter- species systems, yes

optical

i.e. the Spirit has one light system

for example there is a silver-white one

and the sound concentration there is even different yes

there is no hidden sound

while the action of the Soul for example

can be defined as the structure of a certain melody

and when we start to analyze in terms of comparison

what happens for example yes between different elements

so to get control here

more concentrated for example

we can share the structure of even the melody

see

how can you fold, for example , there is power control

from the point of view of Eternity

to the melody for example yes

musical works

which have the property of being transmitted over time
into the future

this is some kind of power banner there

he looks different

i.e. it is formed due to the fact that

that each fragment forms a melody

it seems to be on an independent spectrum

as if interterritorial and intertemporal level of management

works of art that pass on
into the future
they last for a while
on those fragments of human perception
which do not depend on time, for example , yes

we can take a fragment of time
one second
say that we work on an intertemporal interval

then it will be clear

what kind of art work needs to be done yes
and how

i.e., like God does, for example
created the physical body of man
The soul of man
He also laid the structure of Eternity.
by different qualities
and in connection with this, for example , there the Soul is initially Eternal

and when we talk about the Eternity of the body
then we have to expand the conceptual apparatus
or the apparatus of knowledge
so that the Soul and body work synchronously yes
at the level that there are two different systems there
at the optical level of expression

i.e. if you look with your eyes then
just by physical sight
the body is seen as a material-geometric form
physical body
and the Soul is perceived by Spiritual vision

but if the eyes of the Soul
or the eyes of Spiritual Perception there
compare with physical vision
then you can see the Soul in the same way
how a person sees the physical body
your Soul
or there is the Spirit
your Spirit

thus simply observing the body
such a conclusion is logical
can you determine how it works

Soul
Spirit
Consciousness

and here, in principle, there is such a method
some kind of substitute let's say yes
work where substitution occurs as follows

what do we see
how does Consciousness work
how will it work in the future
on some issue

and if we need to improve for example

let's assume some control element
then we can just take it for everything
and the same optical wave principle
set the level in action

i.e. we put management
how in general it's just that we move there
a segment of a substance

here is the ability to work with management
as with the elements of matter
this is quite an important characteristic
simplifying the control system
and putting this system
not only on the principle of spiritual development
but also on the principle of substance control

and a substance at the level of collective Consciousness
Often it's quite easy to manage
there, well, you can imagine there
some sand that can move
and one grain is enough
to change the whole Reality as if to the opposite yes
in the creative aspect

This is what you need to pay attention to
that the change of structures of Reality
occurs only in the creative aspect
from the point of view of past development technologies

and here is precisely the meaning of the inter-territorial level
it consists of the following

what for the element of the past
there is always only one way out
into an even better phase of development
here is the structure of logical connections

so the more events of the past
the future should be better ^{yes}
there is even a logical level here

and based on this from the point of view of Eternal development
at some climax
so much information accumulates that it is obvious
that man will live forever

here's to bring this moment closer
well, bring this event closer

and take advantage of it technologically
It is necessary to have these inter- ^{in fact} informational ^{yes}
I called it "interterritorial"
but it was meant
that the territory ^{for example} some information
namely the territory it looks like specifically

interinformation level
he is more absent-minded in ^{management}
"information" is not often captured as a specific location
and it can be captured as a concept

and the interterritorial information principle
where each segment of information
this is a place in matter

we can then bring this level to ourselves
and get a solution there social
there are biological physical processes
in management

i.e. in connection with this, ^{for example} , the structure of bioaccess
i.e. the presence of control in the biological phase
implies that if there is
structure of the Eternal development of the external environment
^{for example}, there is a mountain there that has been standing there for billions of
years, ^{yes}

then the comparable principle of an indefinite ^{as if} set

where there is physical life
in the physical body of a person, for example
may have the same functions and properties

i.e. the inter-territorial principle
implies the existence of a community of similar systems
and imposing one system on another
i.e. taking the information of Eternity of development in space yes
in the Eternity of Time

and imposing the development of life
on this information
we get the Eternal development of the human physical body

and here's how to impose it here
how to connect these conceptual systems
This is where the work of the Soul is needed
at that point in that area
where God organized the Soul
acting in its Infinite development
and removal, for example, from any level of events

this is how to solve the problem of Eternal development
well from the point of view of predictive systems

i.e. any forecast can be changed for the better
if at least something is done yes

if you do it in Infinite level
i.e. very far away
Soul parameters in control
then the feeling of the distance of control of the Soul arises

for example, there is a car driving far away
carrying some goods there
it's clear that it's far away

question is if there is no product there then it is only a car yes
and then the car approaches
the goods she moves to the point
i.e. the additional function arises in the removal
because we fix the second value
some goods there in the back of a car, for example

i.e. adding the next action
removes the structure of Perception
if it is already deleted yes this is action

and ^{well}, i.e. symptoms or severity
multiple events increases ^{yes}
the number of events is increasing

and it is clear that the effect of removal increases
although on the other hand
the amount of mass brings events closer

and it turns out that this is how humans are made
from the point of view of the physical body in Eternal development

the spread of the Soul and body into Eternal development
increases the structure of events

but since the body is on the same level
informational ^{well} in the material sense
then it turns out that a person only needs to recognize
those events that are
in front of the body
either in the form of information
i.e. Perception by the body ^{yes}
special technology of body perception

for example, predictive technologies
Body perception
this is the regulation of information flows
on the body
so that the body is in Eternal Life

this is where this principle arises
where is the body from the point of view of interterritorial systems
located
on the element of the current level of development of events
may be the next element of Eternal development
it's easy to just dock at the level
or observations
or joint tasks ^{yes}

the compatibility in what is here
that a person is at some point
in the future it may be
at this point in this city ^{yes for example}
or maybe he is moving somewhere

this is where the question arises

so that the tasks fit together
with the task of development
and the growth of the physical body there in space
i.e. the spread of the physical body into the future
Well it is precisely the informational dissemination of course
i.e. the presence of a living person in the Infinite Future

then it turns out that we can say
that at a certain level
spatial environment
it unites with some universal
as if by a mass of information
information system

and from this system we get well let's practically say so
socialized so distant
from the system there may even be future events
action
where does it work
some neutral value that already takes into account
what happened or may happen
in the future or happened in the past
analytics related to current time

i.e. as God does
He is from God's point of view
the effect of any neutral information

will simply be perceived as information of any level

but this is precisely the element of Macro-creation
speaks of the presence of God yes
in any information system

here is the ability to translate
any very remote mass of information
which has the property well for example there
pronounced optical glow

i.e. we can see
that it is simply some light coming from Infinity
and to think that or to really know
that this is the light of some infinitely distant
positive good event

then when perceiving this light
we must be able to form

any creative event

this is where it's important to see
what is the element of action
is like an intermediate element
the very light of a distant event in Infinity

but when we start to analyze further
that is the primary impulse for viewing
comes from your physical body ^{yes}
or from your Soul
but what does it mean in the physical body , for example

then it turns out
so that the physical body and ^{for example} the Soul
there is the Spirit
Consciousness
everything that relates
to the information characteristics of the individual

just Soul
it is more than an informational characteristic
it contains the presence ^{of both} factual information
about the information itself

i.e. it is ^{like} a deeper ^{and} certain structure

if we start thinking
about how information is perceived

then further is the Soul
for information
she is further there too

here is a connection of deeper levels of information
with Infinitely Remote System
gives the Soul that is here now
or there, ^{for example, it can} be projected there
to any place in management

i.e. we see our Soul
as a participating Soul, ^{so to speak}
participating
in some generalized
or in specific actions
information from all over the world

and it turns out that it is precisely the participating Soul
which is realized as the Soul of action
i.e. the level that characterizes
some presence of personality ^{yes}
it already manifests itself here quite well

those. interinformation interaction
such a concept as "Soul"
leads to such a concept as "personality as a whole"
but this is in Infinite control systems ^{yes}
in the distance

so the conclusion here is absolutely the same
what's in the future
personality is as indestructible as the Soul
including the indestructibility of the physical body

and here we begin
already within these systems identified by us
find how it interacts
for example the physical body
with Infinite information
just knowing
any movements of your Soul

i.e. analyzing some subtle level
and analyzing all the connections that can lead
only to Eternal life to Eternal development

when you start to see
that the element of Eternal development
is , for example, your specific practice there

for example, there is a solution to some political problems
personal tasks

you start to see
that control comes from your personality
this is actually the management of your Soul, ^{yes} , including
i.e. this desire is the true motives and incentives there
actions of your Soul

then at some level
where your personality completely intersects with the Soul
you have points of Eternity
which are the points

exactly this kind of concept
as "interterritorial administration"

compound
human actions
Souls of man
bodies
presence of God
or there in the presence of the fact that God is watching
God gives
this is the level of action or all actions so to speak

all-actions
i.e. any action instantly has an impact
to any territory

and that's when we comprehend this inner meaning
in management or there in Reality in action
then it is clear that in general any action
you can lay it out
on the system of certain internal meanings yes
internal categories of movements
internal even postulates or forms

i.e. any deep there or deep action
still contains a conceptual structure
decomposition of this action
into constituent elements

for example, a person acts, he listens to music
but if you think about it
i.e. the technical part is for example notes or sounds yes

and there is an internal one
spatial-volumetric part
how does he perceive music

and each element of music there let's say block yes or volume form
some kind of voluminous mass of music, so to speak
which a person perceives

if he starts to see the system in this way, for example
that he is with something, with some private event of his own
well it touches
this element of music
and remembers something
this is again deeper

but still a more special case

and even deeper when he sees the music itself
i.e. he sees that territory
that space that is information in general
from God's point of view for example
how does God perceive information in general

and that's when he sees the depth
i.e. it looks like some volume, well
or is even perceived as volume
it is not always visible at the level of physical optics, so to speak, yes
even internal Perception
sufficient Perception

here he falls into the same depth
which the Soul recognized
after the creation by God at the first moment

and that's when we begin to see
that after creation, it was precisely at the first moment there
The soul begins to perceive in the same way
as an already formed personality
i.e. there is no concept of a "set of information"

and then entering the substructure of the Soul
we begin to see
where exactly did your Soul get knowledge
on Eternal Development
how did she even become Eternal

it is clear that it was created by the Eternal
By God
but this is exactly how the interaction process took place
for example, the element created there is a segment of the Soul
with its future concept event
of the very Soul

in this case we are not talking about in general
how is it created at the level in general
well, some kind of absolute system of knowledge
we are talking about relative systems
here we see that the element of the Soul
perceiving the whole world
was created
why does the Soul make this or that decision

i.e. there are very high-tech Souls
for whom the possession of matter
this is, in general, an elementary property

they often don't think it's a problem
however, at some point
matter control
from the point of view of further logic
such a transitional ^{yes} when the moment happens
This is a fundamental system of knowledge for them

for example, if we talk about the physical world
then like for ^{example well} translation
some mass of matter
from one to another
we can say that for very developed individuals
here is the transition element itself
i.e. the third degree is somehow loaded ^{there}
and then they know everything and control everything

although at the very moment of transition they also control
but when we perceive ^{for example}
we can say that it was a complex action ^{yes}
for the given level of management there
for this person
we think so

they may think differently
they may think that everything is simpler
but our point of view is important to us

and that's when we ask the question
Eternal life Eternal development
any element of Reality
no matter
in what form did this element of Reality arise at all

then here is where the fundamental level arises
what can be done for this anyway
as a rule, even practice, ^{so to speak}
for this it is necessary that the physical body
became more and more Eternal

let's say ^{yes} to the bearer of this knowledge himself this information

then we start ^{to act} more synchronously
target level of Eternal development

and understand more accurately and synchronously
there are the deeds and actions of those individuals
who set the task

for example there is Eternal Development
and simply being Eternal themselves
provide a certain system of knowledge

that's why it's important here that the personality
which perceives
some element of Reality means
First of all, she understood that it was for her sake
it means that many movements have been made
many systems are formed in this World

many levels are implemented for this purpose
so that this particular person well was fully realized there
or is it necessary for a specific person
completed some tasks

and here it is important to understand
what, well , how, let's say, is this situation compensated for?
i.e. than external systems that help
what are they guided by
and what they have to go through
to get help

here is the question
that the ability to determine help in advance and react
so that other systems are not overloaded yes
i.e. develop the prognostic phase
from the point of view of what if other systems of the World
or are there other personalities helping?

then you need to do it this way if possible
to make the management in time
so that there wouldn't be anything there
too long level of external control
or burdensome or unnecessary
i.e. well, kind of difficult for the other side

here is the ability to predict
it is caring for any other system that surrounds you

when there is no need for others, well, we will tell people
or just some control systems

spend a lot of resources

to align your event side

and so that

i.e. well bring to the norm yes

from the point of view of favorable development systems

here, for example, from the point of view of healing from diseases

if we see what is happening

synchronizing control in this way

that we get such a level of management

what we take into account more yes situation

we take more information into account

then timely accounting

it is presence at this point

in the normalized control phase

then it turns out that we have such a level

what is the concept of "accounting" means we need

to the function of the body

there are social processes physical processes

it's not necessarily just about that means well body functions

where we talk about that

that the body is physically present somewhere there

we are talking about social systems

that a person can write something

to do some things

can create some service documentation

all systems should be standardized

as if it were even harmonized

in terms of in general, let's say more like that, well remote

there are strategic tasks of the individual

then here arises

this is such a unique connection in management

so let's say that matter is here

which is the fundamental matter yes

life is the matter of love

it becomes like an integral part

for human Consciousness

i.e. external matter becomes equally controllable

as well as the matter of human thinking

i.e. it is possible to introduce matter directly into the structure of Thinking

something needs to be done there, for example

some healing in the finger scratch
if there is a desire
and it is possible , for example, at a deep level there
it could be done several times faster
and a scratch there, for example, heals faster there

or is it possible to somehow grow organs
or you can do something like this, for example
regeneration processes
simply because the thought comes into contact with the structure of the body

and then it turns out that such a level
as if the territory of informational information
as a thought
and for example there such a physical environment as the body
when they start interacting
on any kind of questions from the point of view of Eternal development

then it is clear that the structure of Eternal development
for example, again the inter-territorial level
you can have in the structure of just your Perception
and Perception by action
and also actions there Perception
This is how it can be described in general
various control options

then it turns out that from here you can
to any point in any territory
for example, to go out into the physical territory

you can get out of here
into the structure of Spiritual vision
into the structure of some planned thing in relation to you
information
or what is being realized in relation to you

then the question arises
what can be done through this technology
transform
any possible negative effect
and bring it back to normal

and here of course it arises
level of external circumstances yes
what has happened so far

did you take any measures in a timely manner

but nevertheless in any case
based on the structure of your Eternal life there personally

like a level well there is, for example, no external aid
some systems or people

you can see that at the level of Perception
deeper meaning
here you can see that it is a personal question
which you put and ask in the World
it fits in with that
what is this question
this is the decision, the obligatory decision
from the point of view of Eternal development

i.e. the answer i.e. the information received
there can always be the one you need

it's just a question of taking into account
some kind of irrational nuances yes
that you may have not done something at some point
or maybe you just need to change some situation
towards Eternal development

this is where the deep meaning is
actions of your personality
in terms of interaction, well, it works out better with myself, yes
with your personal information

you begin to see that all the processes of the World
there are any private processes
let's say there's a person there going fishing
he just somehow works with fishing line, hooks, etc.

all these seemingly small processes
it's all you yourself
in terms of there being a personal embodiment of the action

i.e. you see the deep meaning of your presence
for example there is good fishing there
he is very passionate yes some process

but this is his personal need, his personal desire
i.e. the individual has freedom in this action

and when we begin to see the sign or reality
including personal freedom in any action
then it turns out that this is how it works in practice

i.e. a person acquires
that freedom, for example, physical
i.e. maybe it's healthier there

more opportunities to travel to some countries, etc.
just by territories, for example, where he would like to be
or go somewhere

for example, many people have some kind of dream
go somewhere to some place
let's say this desire starts to come true, etc.
i.e. a sign of personal freedom
obtained, for example, through understanding
internal structure of the World
so it translates to that
that's how circumstances begin to develop
like Mira

and this is where we begin to see
that this is the level of circumstances
what happens inside the control system
This is the level that is regulated
first of all by the person himself
but again at a virtually infinite distance
on information there on time first of all
from the person himself at the current time

in this case, the removal is both on a physical level, yes, for example
counts
and on the informational
where is the process of Thinking now for example
he should be like this in the future
that it is connected with some naturally specific matters
and at the same time it can be different naturally
there are different levels but
because the level of perception is different

but we can because we go out
to inter-information inter-territorial
management level
for example, according to systems of Thinking

see by reflection

this external thought there in the future
what will happen anyway

and then he shows the process of interaction
what since similar systems
thought now ^{yes}
and a thought for the future
these are all the systems that are defined
still current time
and they are similar, which means the thought of the future

may have the same characteristics and qualities

then it is enough to perceive the Norm of the current time
and it's correct ^{to} forward it
to the thought that is in the future
which is often captured by the past
on information

then it is clear that the control is implemented
and in the future, first of all, everything can be changed for the better

and secondly, what can you change in this level?
and then just use the result

i.e. an element of change for the better
it feels literally on the level
well, even at a similar level
the way physical action occurs

i.e. accuracy in obtaining information
you know that everything will be favorable
and it's good because of this action ^{yes} specific

and another question is when we work
not just informational
and we also perform some physical actions
corresponding to this process

then it turns out that management is already structured in this way
that we can then use this system
such ^{as} diagnostic

and then it turns out
that in each specific action
we can consider
it's ^{like this} at several evolutionary levels

or what? development of Consciousness
in terms of working between any environment

there is one environment for example and the second
we can still consider it
that human consciousness
absolutely precisely clearly defined
current state of Thinking
current action of the physical body there
Souls of man

i.e. at the level of such simple simplified concepts
there is a structure of the physical body

there is Thinking for example yes

and this level is enough
while it is considered
that the Soul is the level to which one must have access
or special access even for the person himself
i.e. some time is needed

and there are completely objective things
which exist instantly and always
in Human Perception

the physical body itself
and what is perceived by the body, for example , there at the moment, yes

two continuous parameters of information
which are continuous
means they increase in the information system

and that's when we start to enter from here
into the control system
already from the Soul or there by the Soul

then it turns out that the control is, for example , the Soul
those. quality of Soul realized
on Infinite Development
this is already a sign of simply the logical will of your will

means Soul management
it is carried out there by the will and participation of the individual
in their events

and practically if we start

continue to implement this management principle
it turns out that we can quite see
let's ^{say so} Infinite removal already
from you
there from this level of management

see
what is there Eternally living there your physical body
being there in some situations
it is the same reality as you perceive yourself

i.e. the personality perceives itself
just like ^{there in} Infinite Distance
in some event

then it turns out that the Eternally Living Bodies

possess then
some informational signs ^{yes}

and information that, ^{for example,} is not
information of Eternity
gradually, ^{well, it kind of} falls away
from such an information body

i.e. it is clear what is happening in this case
as soon as we set the process
namely interinformation management

i.e. the allocation of the Eternal body in information
of his Eternal body in fact
we all external information of a different type
^{Well} which is just there
external Reality ^{yes}
we take and transfer it to the structure of another environment

and we do the control in the third way
where the third method means
always Eternal physical body

^{well} accordingly
Soul
and the Spirit of man, etc.

i.e. that which is with the Eternal physical body
corresponds to the Eternal Soul
i.e. as a consequence ^{and} compliance

that's certainly true
even well just logically accurate

when we start to proceed from here
what then is the action of the Soul
then we see that the action of the Soul
this is the very statics of the body
what happens inside the body yes
The soul is always present in the physical body.

and that the Soul itself recognizes some elements
there, let's assume, the most favorable
for the future development of man

as a system practically so to speak
of their own actions
where for example you need to read there in the future
well there's something like the multiplication table, yes
a person needs to read at some point

some material

then the Soul forms
the whole personality of the person himself
and even external circumstances yes mostly
based on the specific task and goal of the person

i.e. here is the target selection
the allocation of a fraction means goals
due, for example, to the fact that we
in general, this is the goal
we set it as a task for our own development
and on this we have Eternal development

just the same, well, in general, similar, even identical to that
what was in the spaces
different types of external control

that the external goal merges so much there
with the task of the person himself
that integrated general management is already being implemented

and all events of the World are regulated
because this goal merged with the solution

God has all external events
these are His actions

but He is always in the system of decisions, ^{yes}
it coincided in this case
logical version of control
and ^{as if} the derived version of control
due to the technology of simply viewing the actual information

and here we get
such a criterion of controllability of the environment
that in order for the environment to be more manageable
from the point of view of Eternal creative development
we need our presence factor to be universal
in any action of this environment

i.e. we must then set up management
to another territory ^{and} to another task there
only such that the impulse of this control
is reflected in all systems
including those systems
which, ^{for example,} we do not perceive as active
or we don't know anything specific about these systems

and at the same time it is precisely united

i.e. integrating ^{or something} Part
where management is technically divergent
in different systems
this part it becomes like this
that you get control
^{Well} primarily in terms of personal tasks

if you think about it
how does a personal task arise?
from the point of view of logic of abstract ^{levels} in general
in general, the reproduction of events

where do personal tasks come from
why are they placed like that
and why do we invest so much resources into them
and why is this our ^{personal freedom} ^{for example}

this is where the importance of combination comes in
^{as if} externally imposed ^{as if yes} tasks i.e.
and action objectives
consists in the fact that
what is a personal plan when it is really free there
a person must know for sure that this is his personal desire

and this is this space
that this is his personal desire
and he carries out precisely personal action
this space is quite special

because this space has practically
Well, basically there is such a special form
which has the functions
Infinite removal of any substance into Eternity
when approaching this space
any matter

i.e. we can introduce the matter of Thinking there
and as soon as we see that the thought goes into Infinity
and at the same time the feedback signal increases stability
there you are your management
then it turns out that this is exactly the kind of space
and we can already work with this space
due to the fact that we know its functions there in the future
i.e. we can already sort of take it and lower it

and that's why a person is not specifically attached
to some space
let's assume the tree is fixed in a given space

and therefore there is no principle of removal
when transmitting information

here's if you look
how does a tree work at the management level
then the blocks of information that provide growth there
or an external system of interaction with Reality
these blocks are like they are adjacent to the tree
in the form of certain comparable layers of information
there at a distance of 2 or there 5 centimeters

so this is one of the explanations for that
that you can put your hand on a person there
and saturation occurs
Well how a person perceives it as if by some kind of energy

i.e. it turns out that based on the practice of action
can be seen
that this is precisely the dynamic level of a person
implies the presence of dynamic information areas
which means that they correspond to a real person

to any person

and here is to make human life Eternal
it means just at the management level

and not due to some artificial levels there
some ^{well} movements of the human physical body ^{yes}
when a person

Well, I mean "artificial"

that the number of movements can be increased
the person himself can observe
how the structure of Eternal development increases

in this case we are talking about
that with any number of movements
we are the faction of this Eternal Development
we perceive it as an understandable faction

i.e. we can say what exactly we need
so that Eternal development would be
and so that there would be skill in any case
change negative forecast ^{yes}

the fact that it exists at the level of the Soul is clear
but here's how to ensure
that it is spread to everyone there
and at the same time we must have
some specific implementation systems

then here is the most important thing first of all the most important thing
see
what relates to parameters
and yours
and collegial perception

i.e. external ^{information}
Collegial Perception

there is your Perception
this is your personal physical image ^{for example}
where do you see yourself in a situation
or informational

and then when you start to see
what is happening here at the level of Perception
there it's "Wednesday-Wednesday"
or there "information object - information object"

for example, you perceive yourself there
in the form of a certain level of management
there is a specific specific person
which means well performs some actions

and here is the external information Endless information
then it is transformed into the final form
i.e. the form will then be finite
for example there is one that looks like an egg, yes

and that's when we start interacting
namely the Eternal Man
with the final form of information
where is the concept of "eggs"
there may be another form of information about this egg

i.e. the development of some system
which has a structure of at least periodicity yes

it turns out that we find a personality
i.e. yourself at the management level
it is precisely in this Perception in this action
where is "self-location in information"
such a term if defined
this is the level that is required in any case
solve all situations that concern a person

i.e. a person must definitely receive
solution to any situation
which means well, in general, he is interested

and at the same time he lives freely he takes into account there
some piece of information
must guarantee
that his position is generally correct
positional level

and that's when you are at the Eternal level of development
i.e. in Eternal life
keep the positional level as the determining one
special sometimes yes

then it is clear that all external systems
they are radically negative
they definitely can't touch you anymore

because there is a level your personal
in the control space
and the third system is in control
you yourself
and your personal action

Well They often say that a person is there
the source of their problems there on their own yes
here it can be seen
in general, such a connection with this space
so where is it defined
it's like a geometric connection

i.e. a certain part of the body is defined there as follows
that you can see its interaction
with a specific event

Well, I mean, for example , there
skin on the side of the right shoulder
with all the information of the World
interacts more with buildings there
i.e. with some construction systems yes

there is the little finger of the right hand
it's more like, for example , some kind of animal world, etc.

i.e. we can see that if we want
among these very systems of knowledge
have your own personal path of development there
accurate
taking into account the specific correspondence there
there are biological objects
or informational material objects

then you can see that at some point
there having received the communication information
there, for example, a specific level of its action
with any other level

i.e. like the hand there, for example , there is the right hand
interacts
with Infinite information
or with information
some specific material object yes

for example , there a person takes money in his hands

here is a material object
and it turns out that the interaction
with an information material object
and that means well development of the physical body, let's say
to control this situation
leads to that
that any simple situation in this World
which exists
It's easy to see with this technology
that there is always a system there in general
more of a presence factor

that there is a person present
event element present
where the deep meaning of the event is clear first of all

and a person can always meet
your own thoughts
your own construction of Perception, perhaps?
in any event in such a case

i.e. he can find out
why did this or that event happen at all
and can understand and will understand as a rule
what was before this
or many warnings of any kind
either he did something right
and therefore the event improved

i.e. here is an element of material connections
on the interspatial interterritorial
interaction
allows you to build a kind of
there, like, well ladder
some links of events

and if each link has a deep meaning

and a ladder step is just a system, yes

then it turns out that the rise is up
well, there is a certain climb up the stairs and the concept of "climbing"
although you can go down the stairs yes

in this case, for example, depending on where it is located
management objective

and yet, for example, considering
lifting element
and deep systems of knowledge
in the form of, for example, a certain array of information

we can clearly say
that any flat level
i.e. any level of another representation
the same action
this is what he comes up with himself
or he composes there or sees
the man himself

i.e. any level means
next presentation of information
present at the root level
the person who observes this

and that's when we start to see
that here are people who see some information
with eyes ^{there} or by controlling clairvoyance
these are people present for some personal purpose
in these ^{as if} forms in these fragments of information

we see
how does god single out people in private
to the task of specific actions

i.e. we can already find the actual task of God
how did He even convey it to a person, for example?
some specific personal path of his

and here we are precisely in the factor and factology
deep profound knowledge
we can see very clearly
what's happening at the level ^{let's say}
obtaining an information management plan
i.e. how do we see it as a problem in general?
in general, the status is like its own task

i.e. how did we get them from God?
you can see it right there
how does the transfer happen
who was present at this
there ^{for example} in the form of saints
or how tasks are generally formed
how do they even happen at this level?

who puts them
why do they happen one way or another

i.e. to consider the deep conceptual roots
any system
It's quite possible here with this technology

and it turns out that the situation here is like this
what if we consider for example
Well some action as deep let's assume

we can say so to do such management
what if there is some kind of control object there
then we can say
about its external functions or forms
if possible there are two control objects

then well, as if formally, if we take for example there
we put one object on top of another
we understand he will be there
let's take physical action
They doubled the control system there
received two items
one on top of the other

if we say from God's point of view we proceed
each of His actions contains
An infinite number of meanings and actions

it turns out
what exactly for Infinite expression
Actions of God
and man was created yes
here's how it would be on a simple level
there is some kind of physical action there

Well, you don't have to do anything yourself
but it's enough to delve into it
into the structure of the internal, as if omnipresent
such a deep personal meaning
of his own Eternity

and that's when a person is

in this control space
everything is already generally at a point or there in the area
which is above all spaces

and over all territorial systems there

and then man is already Eternal
because that's just how he perceives the world

any look of his is already Eternity
every movement of his is Eternity

Well this way it is possible in natural situations
as if in everyday life even yes
to be at the level of Eternal development always
there to see the future
and it will be just an ordinary, everyday Consciousness
but Eternal

i.e. in this situation man is Eternal

from the point of view of this situation
just practice in your natural states
and find this coordinate
this is the state
when at normal level
Eternal development is given
precisely as a system of simply ordinary, as it were, everyday action

just need to be in this space
here is how to do it through the system that I just showed
be
inter-territorial inter-level type of interaction

Thank you very much for your attention
Today we finally got control
concentrated enough

Thank you

Goodbye
