

GRIGORY GRABOVOY
The Teaching about God
Management by regulating past events
20.01.2006

Hello again
The topic of today's seminar
this is my Teaching about God
Management by regulating past events

in fact, we are talking about
what we do in management
a selection of key events that need to be corrected
and create a management structure
through the system of regulating these events

i.e. we try to do it this way
what is considered when
any future process
there must be a certain faction of control
taking into account the final assessment of past events

i.e. for this you need to make a certain selection
what events of the past need to be standardized
the standardization phase can be very diverse

but from a logical point of view
The norm of the past must correspond
those events that are generally socially normalized

i.e. if some unfavorable event occurred
then the assessment of the so-called Norm occurs in that sense
what from the point of view of the past
what should be the norm

how this event should have developed normally, so to speak
and what to do now to compensate for this Norm
if for example it is not possible there in the direct sense, yes

i.e. it's one thing to fix it
some kind of situational system
in some way

it's another matter if we are dealing

with the processes that will be in the future
for example, they may have a different type of quality

i.e. developing processes

and so we must clearly work out
the position of some kind of average Norm
what do we want from the situation in general

Well for example, there is a structure of universal resurrection
Eternal development of Eternal life
implies
full alignment of information to the Norm
in all aspects of Reality

so it turns out that from God's point of view
He introduces the Norm of Ever-Evolving
i.e. from God's point of view
any level of development is always standardized

so it turns out that we have
management position in this way
that the allocation of the Norm
this is the development of the overall status of a person's life
in which a person actually lives
predetermining the Norm
in the form of the following type of control

i.e. the first control impulse
goes through a phase of normalizing past events
alignment of past events
to Norma

and the next level of management
is already moving into the phase of managing future processes

i.e. any structure of the future
contains a normalized past

and by the way if you look
how the speed of development of future events develops
then you can see that the highest speed
have events where the past has normal status
well, that is, the usual status that corresponds
some process
social, physical, physiological, etc.

and that's why it turns out
what from the point of view of sampling future decisions
here's how to make the future more, *so to speak*, enlightened
in any case for the structure of universal Salvation
make Macrosave

you can see it here
that the maximum speed can be obtained
if we follow a series of standardized events
i.e., in fact, events that have an absolute Norm

here from God's point of view
He always has a control point, *so to speak*
absolutely developed to infinity
into a positive structure

because all past events
He is considering
from the point of view of my internal Norm, *yes*

i.e. He is considering
why does this or that event happen
and from the point of view of Infinite development
what will the status of this event look like in the future

i.e. He looks at the same time
and period
and some link connections
and the Infinite Ray
i.e. the unification of many systems of Perception and control

and here in this technology
also very important
when we look at management in this way
that we are making a generalized system of connections
which has an absolutely precise connection
as with future processes
so with the past ones
the future is more transparently visible here

by the way, in the conditions of a sort of strict Norm
or the normalization of a certain series of future events
there are systems that cannot be bypassed at all, *yes*

for example, there is the task of universal resurrection
realization of the universal resurrection
this is an unconditional task this is an unconditional action

which will happen anyway

this is like a principle of the absolute structure of the future
which also doesn't change at all
we can't, for example, change the structure
from the point of view of past events

this is the type of any situational systems

they are built according to the level of that
that those who need mandatory standardization
i.e. in the mandatory bringing to the level of that logic of processes
that everything in the world can be returned to normal

and then it turns out
that the person who perceives the situation
at the management level
it turns out that he can work out
as if two such contextual control mechanisms

first
this is information coming towards him
which seemed to warn yes about some event

and here is this information
it had to be revealed
in the form of some counter actions of a person

and that's when this one of them is somehow united
the integrated value starts to work
on the status of a person
then it turns out that he gets there more often
into the ideological status of action

i.e. the ability to see behind some events
ideology
which extends to all phenomena of his life

and that's when he starts being such a manager
see
what is the structure of this or that event
it is still located in the structure of the Eternal development

then this is a certain, so to speak, Spiritual platform
to perform that series of actions there
which will be visible
from the point of view of this kind of integral

unified level of event regulation
and control through this level

but the management is already happening
as a structure
where it already goes in the optical range
the glow of the created Norm of space-time

and then we get control in this way
what if we look at management
as the structure of light of some preliminary Norm yes

what we want to be the norm
for example, there is a level of non-dying people
this is also a level of absolute Norm

and the glow of this type
if it is strongly developed in optics
then the control space becomes like this

i.e. people who come into contact with such a space
they are starting to enter this system
and start working in it

those. well, that is principle of non-dying
the principle of Eternal life
is spreading
as a level of optical information transmission

and it turns out that when we find
this status as action status
in the conditions that the collective Consciousness
for example, it often does not support the current time
for example, at the beginning of 2006
that level
that Eternal life is achievable through Consciousness technologies
due to technologies of simply Spiritual development

i.e. not all people yes at least they know
about such possibilities at the level of logic
at the level of some simple processes of explanation

then it turns out that the principle of the Norm
it is now more of an internal norm of a person
who is involved in this technology

and so if we want

in the collective Consciousness
change the status of this process
and it will need to be modified
because then we have
in fact, the opposite influence of the collective Consciousness
on the normalization of the human situation

i.e. it turns out that we can quite easily identify
such a management principle
when the transfer of information to a collective status
leads to that
that the information around a person is leveled out
because in a collective status
information is aligned to the norm

i.e. because it starts to happen in Reality

and for example the level of Norma
for example if we consider
status of universal resurrection
that's exactly where the level of mutual Norm is
mutual so to speak glow of information
leads to universality

the same can be extended
to any other process of any other type

and when we move on, for example , to the control system
just by the universal series
must see
that it is precisely the growth of Eternity, so to speak
in the system of future events
This is primarily a matter of personal choice.
which is conditioned by knowledge of information

but knowledge is based
on some criterial standards again yes
some positions
which, for example, from the point of view of adverse events
should not happen to a person
then it turns out that this is one of the criteria yes

second criterion
what should be in a positive way

but first of all, of course, a person
has a support system in the form of

that unfavorable is possible
shouldn't happen for example

and it turns out that this is the level
some kind of borderline or something conditions
it must be initially laid down
as a level of the previous action, yes
to the control impulse

therefore it turns out that the management itself
looks like a level of normalized systems
i.e. some criteria that have a concentration
usually it's like a semi-arc of some sort
in the control system here

i.e. it can be distinguished even in the information system
as an objective factor

what is, let's say, accumulated experience
not only by you
but what about people in civilization

what is the criteria level
which must be observed

i.e. do not highlight the spectrum of negative events there
but in principle it is simply a matter of identifying a criterion

and these are the half-arcs that are connected to each other
and they are not linearly related
not one ends, another begins
there is such a thing too

but it is precisely the principle of such a semi-arc
where we highlight the management structure yes
well, it's a kind of rocker
i.e. on the one hand if you take it there
the principle is to compare
what is a bucket of water
on the other hand there is ideology
for the same bucket of water yes

then it turns out that it is possible
imagine one bucket mentally
and one to have physically

and that's when we start to transfer

mental image
to the physical bucket
it turns out that they coincide somewhere, yes
i.e. they start to be the same

i.e. here is the transfer of Thinking
on physical Reality
this is a human action
preliminary human action

the same thing that God had previously done Action
then he moved the structure
on physical Reality

and when we start to see information
well for the same water
or any other information at all
embedded in the preliminary action
physical type

and then superimposed with the structure of Thinking

you should be so to speak quite clearly, quickly and simply
to bring to fruition everything that we have
pre-emerges as information
so that later, for example, you don't have to correct it for a long time
what was done incorrectly, for example

i.e. if we look at some problems again
according to the same option there in the past
nuclear explosions during wars, etc.
then it turns out to be a sign of incorrectness
generally speaking, irregularities
in the deepest sense

that shouldn't have been here
for example, **maSS** destruction
there shouldn't have been any mass damage there
is transferred to that
what shouldn't be there at all for one person
this is now

shouldn't be, for example, death for one person

and we are moving the management structure
to absolute status

if this is achieved for one person
he does not die under any circumstances
it turns out that we are the structure of wars
there are previous systems
we are starting to bring non-implementations into the system

and with the general resurrection under this ideology
included in the structure of past events
the very concept of "war" is being restructured, where there are victims, yes

i.e. we gradually output information
to the level of logical acceptability
to the level of some kind of harmonious
harmonic level of Perception
where we can detail the information
and use it as a harmonic and harmonious phase

i.e. taking some document and doing some action
we are in a certain information niche
where Eternal life is conditioned by that
what previous experience
proved that this is how it should be done
that there are no more criteria when it is not realized

i.e. to put Eternal life on the flow of Reality
and not only on the management task

and when we start to bring this out
as an objectified factor of Reality
what where already there is more possible yes
there were so many different wars, so many destructions
let's move on to the niche of Eternal development
where it is not feasible

and then we start moving in this niche
well, how is it with the water flow , somewhere around here
if we compare that there is some river there
or some movement is happening
and some molecule flows at the same time
with this water
and now the general flow captures the entire structure

if we look at the molecular level
there in a large stream of water
then the molecule
from the point of view of objectified factors of action
is at rest

this is a general movement
is being evaluated
as a structure of relative peace yes of this molecule

it turns out that if we generalize the structure
Of course, it can't be transferred there directly
to the management structure that a person makes

but nevertheless if we consider
process of rest
and the actions of a person of ordinary action
as a structure of some stationary state
here in the stormy stream of precisely Eternal development yes relatively speaking
either here or there directly
it turns out that a person's calm state
this is the consistency of this position

i.e. the person himself
this is a representative of that system of Reality
which is Eternal

any stationary state
this is a sign of Eternity
and the revelation of Eternity
and the very structure of Eternity

i.e. when we start to move on
in this management status
then we see that near the person
arises
at the optical level
quite a lot of specific ones
control technology technician
which are identified as technologies
literally there is a direct pragmatic sense

what is at the level of glow
at the level of how he manages these glows
that's how things happen for him

i.e. any other person in principle
can observe and see
what is there at the level of Macro-creation
another person does

i.e. the transfer of experience is exactly according to my Teaching

through this technique of normalizing past events
makes it very simple and understandable
method of transmitting information

and that's when we start to see the structure
as necessary there personally necessary for a person
the first task is to make it so that in the future
none of the people there had any need
to give any situation at all
to solve such a personal, seemingly unnecessary task
where there were unfavorable conditions
based on past events

and then we begin to see the situation of action yes
i.e. the first one must be cut off
the whole circle of unfavorable systems
so that they don't become personal

i.e. just a person's personality
as in the task of a manager according to my Teaching
costs
that it is in any case for everyone and for everyone
Eternal Development Technologies
so after all we are talking about each person personally

and if you cut off the structure
from everyone
unfavorable context of events
it turns out that collectively there are zones or levels

unfavorable level of development of the event
they may already be fading away altogether

i.e. it turns out that the management situation here is as follows
what we can do through collective action
displace
the spectrum of adverse events itself
away from the possible rank of events

then it turns out that the forces, so to speak, of destruction
they simply won't have the physical ability
to produce something
because there won't even be a phase of Thinking of this type
which can lead, for example, to crimes there, etc.

here you can see that there is an influence
on the structure of Thinking

at this level of action

and when we begin to see
that the structure of Thinking varies yes
depending on the collegial action of Consciousness

i.e. for example , most people are there or all people are there
focused on living forever
the life termination system is not implemented
one particular person
because the whole structure of Thinking
works
as a system for reproducing this information

i.e. in the World, for example , let 's say so
there is a certain amount of information
all the information can be taken
in some quantity there autonomously express
there to some extent yes

and if all people are aimed at Eternal development
or is there a majority
so that this platform is based on something
another phase which is this
or doesn't know
or something like that perceives development in his own way
or for example there does not want to know
The laws of development there are along the lines of God

this system is already in action
as a carrier of information of Eternal development
i.e. the platform i.e. the inactive part so to speak yes

but the inactive part
gradually begins to transform
towards the asset
i.e. it starts out as a platform
starts to sprout there
and these ideas also somehow mean to be inspired, so to speak, yes yes
and develop into the structure of these ideas

i.e. it is clear that with a large number
that's exactly what we'll say about people
which develop towards Eternal development
we have a structure of such a management plan
that those who do not develop there or do not know that it is possible
they nevertheless, at first passively, but then more actively

begin to develop
towards the ideas of Eternal development again

and here is where their possibly negative experience , for example, yes
which has accumulated
some negative or maybe they call it
fatal events
which they believe cannot be overcome
and in the future they have no solution

as soon as they see that the managers
for example, according to the technologies of my Teaching
can overcome such a system of events
it turns out that they naturally become supporters

i.e. this is the collegial level of development
ideas of Eternal development
It is very important to put it often
at the level of possibly previously unresolved problems
with solution structure

for example, there is still ideology and action for resurrection
this is the solution to problems

for example, managing the structure of the past
to normalize any aspect of the future it is
this is the solution to problems

and that's when we see that people come to that
that there is a certain connection
one unresolved the other resolved
Well, let's say I'm comparing this for a simpler explanation.
that in some mover
there is the following resource ^{yes} in management
and this resource can pull that system

which did not have this level of action

and here we offer an additional next resource
deeper more real ^{so let's say yes}

and the reality of the assessment is not that
that we are simply offering something ideologically there
or even show
what is this yes for ^{example, the same resurrections happen}
which will undoubtedly happen in any case
general resurrection

well, a phenomenon related to the structure of Eternal development

as soon as we show it
we see that we are talking about the person himself

in the structure of any person
there is first of all himself
where its qualitative characteristics are laid down
Eternal life

and it turns out that he starts
perceive oneself

i.e. from the fact that we correctly represent
for example, such work
Well, let's assume it's for propaganda purposes, yes
to be more in the phase of collective Consciousness
people were involved in this process

because as i said
the more, the faster the issue is resolved
reverse the course of events

although not in the direct sense often
but at least the issue is being resolved
and he will decide , yes , in any case, what's the matter

i.e. it turns out this
characteristics of the solvability of any issue
in a positive direction in the Macro-creative direction
starts to attract
and those people who, for example, are born there in the future

i.e. the transfer of the structure of Thinking
structures of future events
the speed of this glow is already so fast
taking into account the neutralization of negative experiences
is increasing

what is the structure of the future man
is already being organized as the structure of the Eternal Man

for example there is resurrected level technology
i.e. a resurrected man
resurrects with the structure of undying immediately
i.e. the next additional factor arises
in the future

the undead person already has
Infinite number of ways to not die

i.e. not some local methods or effective ones
or there may be some that need to be learned for a long time
namely, an Infinite quantity
and the sample is like this
that in any phase of management
the number of such ways is again infinite

and once Infinite ways
then any method is a method of not dying yes

and this is how we develop constantly
speed of action
when we already have those management horizons before us
that we are solving the problems that exist before us
Now
Well to the extent of social conditions to the extent of that
that a person has certain conditions in life

we still have enough, I still think
powerful platform
with this approach to taking into account past events
that the influence on past events is so great
what well some so to speak opponent systems
those that act , for example
or against
or don't want to consider
the system of Eternal development as such in general
or they don't think that such a field of knowledge exists
or on the contrary they know but they are deliberately preventing it

then this is the level
it's starting to become dysfunctional
in their ideological position
because with full recovery of information
all their efforts are in vain

i.e. they understand that they are not achieving their goal
any kind of destruction

and how does such a philosophy spread?
in the form of action of Reality
here again are the actions of Reality

then we see further
for example, there is an atomic bomb there, it doesn't explode
Moreover, it can do so on a physical level
become less and less evident

until it disappears completely
it could be a program at a political level
destruction of nuclear weapons there, for example

and there may be a completely different change in substance where
where is the transformation of matter
let's say if we add plutonium
one let's say microactive element
then neutralization occurs
as such the principle of nuclear fusion
like explosive energy

i.e. well, it happens there will simply be a neutral substance
which does not explode, etc.

so it turns out that the translation of Consciousness
in the control phase
we can work out this element
Well with a simple movement
if at the level of physical experiments we take neutrinos there
and knock out a proton, for example, due to the close passage of a neutrino
at the same time at high speed
such a substance arises
This is a purely technical problem that can be solved very simply.

so it turns out it's possible
from any number of nuclear weapons
make a normal neutral substance
by the type of silicon systems there
it will be just as neutral
in relation to the outside world

and it turns out that based on the control system
associated there with overcoming some negativity
for example there in Hiroshima and Nagasaki
atomic bombs exploded

going through the life restoration structure

each of the victims
we neutralize nuclear weapons for example

into the structure not only of nuclear weapons damage
and in general from any kind of mass destruction

and we find common features
what happens in this case

further we see the reference points
what if we achieve no defeat
for one individual
then there is no longer any talk of any weapons
it's just not effective and there's no need to produce it

i.e. based on the structure of such a variation of events
the main task now is that
how people around you should get help
from you from that technologist
who even has this task?
as a simple task even

because as soon as you start to perform the task
often this is already the fulfillment of the task

i.e. you fall into the field of invulnerability
and it turns out that there are outside people who don't know about this
here's how to make them accept this technology

and here again the problem arises
mandatory standardization
total status of negative events
for a different person

i.e. now I have told what we have in this case
pro-manager as an active manager

but for another when we want to convey
then the transfer of personal experience of positional experience
to overcome
this is usually quite good maybe the best way
it is precisely the ideological position
actions of a manager in relation to another

transfer of experience to another
this is sustainability
ideological stability of the manager himself

well, sustainability may not only be in that
that he doesn't do something or doesn't believe in something

he can do and believe
but at the same time not to show any activity
i.e. for example, in words it may not manifest itself in any way
or in action

namely, here is the transfer in actions
Position transfer
there is a bright, for example, open transfer of position
there are followings of Eternal development
for the benefit of the whole civilization

Well then it becomes a personal task
this is the task of civilization as a whole

and here is the follow-up
for the life of the entire civilization
as for the life of any person there
and Eternal life
begins to guide the other person
towards the Perception of this signal let's say this action yes

and here if at least one option is accepted
then at the level of even the philosophy of Thinking, so to speak
It's clear
what in relation to the opponent
when there is a solution mechanism

for example, there are technologists according to my Teaching
in general, technologists simply have Eternal Development
if we take the direction
for example, there is Christian philosophy on the resurrection of the resurrection
there is always a path of life here

and when we consider
management structure
which is inherent in principle to any fundamental religion
and as a rule it is described in any as let's say documents
which accompany any creative organizations
somewhere between the lines or there somehow it is manifested
this is the strategy of creativity

it turns out that when we start
this niche to show to people
as a kind of technological niche

then it is clear that at the level of logic

at the level of social processes in general
we have quite a lot of supporting parties
should be

among the technologists of Eternal Development

the only question is
how to stretch this control spectrum
to an acceptable phase
to any other system

i.e. any system there
be it economic or philosophical
scientific philosophy is also, let's say, a science after all
but that's exactly what I meant
a more general philosophical point of view
where we consider a certain positional philosophy
where people can allow something and not allow something

and here is the extension of management
into the system of actions
into the life system
here at the level of management practice
through rationing
translates to the fact that in any system
you can enter control
if we have this positional system of regulation
to manage future events
we set it as a system of our personal action
and the actions of any other system

then it turns out
that based on the level so to speak prolonged
or there are Macro actions
we can do this, let's say, integral
or there is Macrospectrum
or local spectrum
any future event
see as an event
which exists in normal there in an explicit form
Now

i.e. the whole strategy of all future events is normal
for personality
for the maximum number of individuals
and in ideology in general for everyone

and overcoming some nuances
no actions related to the private level
with private event level
it is always something that is conditioned
existing apparatus of action

i.e. a person is always ready to take some measures
he is always ready to take some action
which gives him the opportunity
Well, first of all, he is the same as all people, naturally.
who, let's say, don't even know about management
do not manage

i.e. it naturally passes through this spectrum of control
i.e. it has normal capabilities
well, in general, in social programs
which exist for any person

and at the same time he has the opportunity
overcome any system
which may be negative there yes it is possible

then it turns out
that through such a level positional
naturally such a person or such a person
he has the ability to transfer experience there
more on the reserved so we plant based on yes
any positive experience in principle means

then he can, so to speak, teach
i.e. certain knowledge directly
or there implicitly there thought forms

and it turns out that the task of such management
is translated into the task of personal action
in conditions of concentrated solution
internal tasks of the Soul

i.e. that's exactly the case
we solve the problems of the Soul
which were originally set by the Soul
for any action

to shift an unfavorable event
It is quite common to say here
that the Soul does not need this task in the future

in fact, the accumulated light is a kind of , so to speak
Well solutions to some negative problems there
he starts to act
as a factor of the Soul's action
rich and directed action of the Soul
at specific levels of events and actions

so that this action would be , well, systematic, so to speak simple

so that it can be learned
this is action
to the person himself to other people

we see
that's in the mechanism of the transformation of the Soul
through the Actions of God
this is exactly the mechanism for overcoming

this is so that this mechanism is aligned
and was perceived
as a completely private and universal level
you must always follow
level so to speak super speed of information

i.e. at this level we see
that all the information of the world so to speak
crosses into the Soul at super high speed

if you think about the mechanism in general
how does the action in management take place

then it turns out that we can consider
rigid link system
and can we consider
as a very fast crossing system
at some specific point of all information
there is almost instantaneous or even instantaneous

and now if we consider such points
where is he, well, let's say an external observer
can perceive
where God created them

then it turns out
that such as an integral system of action
there is a mono-system or even if you consider it

a unifying system
and Eternally existing
An ever-functioning system
the man himself is here
where the speeds are super high

and the first approximation system
this is the system of human thinking

i.e. in this case in this management
Thinking is considered
as a system going to a person

i.e. thought primarily perceives
these super speeds
and begins to move towards the person
i.e. the speeds concern the person himself

the reproduction of information is such
that we have a direction of movement
although towards the person
but information for
for the physical body of a person there was already

it means information for the physical body
where the body always exists
there is always
this means that the human body cannot not exist

and it turns out that this is a directional signal
here is the indirect link
such as Thinking

we, well, people often perceive
as if as an external system
as if the thought appeared somewhere
and then it is perceived as such
well, a certain environment, so to speak
on information at the level of Perception

i.e. the wave of Perception is somewhere near the body

and it is often believed that thought comes from outside, yes
although it is the same person

and naturally the thought exists
only in structure

and bodies
and Souls
and the Spirit
as an integral characteristic of Perception, the total

and it turns out that although this concerns the body
but is perceived as an external wave
if you look at it from the observer's point of view
this just coincides with that
what are ultra high speeds
transforming into the structure of Thinking
give an image

and that's when we'll look at it
mechanism of transformation into an image

what a person needs to do

that means a person somewhere personally makes a decision
he is personally involved somewhere
so that at the level of the Soul for example
to distribute the system of Thinking within oneself
and get what he wants

he gets only what he reproduces for himself
in this case

i.e. from high speeds
he highlights what concerns him
or does it concern everyone there
forms a thought in oneself
and as if refers to the level of the next Perception

but when it operates in this system
how is it expressed yes Human

here is the management of the future
through the system of unconditional Norm of previous events
super speed which implies
presence of primary Norm
Norms where negative events have not yet been realized

and here it turns out that we have
just a system of action
where in principle it is just visible
what is the managing personality

i.e. the person who controls
she is always in control from the start

points of lack of control in the individual
in principle, it doesn't really exist at all

I just showed you this
one of the areas
which characterizes management
through the structure of Thinking
thought formation
personality of a person

at the same time for people ^{who} are not involved in management
thought is formed as a primary thought
came from somewhere, ^{for example}
or is it formed by some factor, ^{well} , external

here is another question to identify and recognize
primary action system

how a person himself forms a thought
i.e. in general, how does he form a thought?
if it forms and at the same time ^{let's say so}
he doesn't consider
the structure of his personal participation
who is not involved in management

but if we consider
the structure of human sleep, ^{for example}
that is, images, but this is not related to the fact that the person is sleeping, ^{yes}

he sees images
but at the same time correlates it with the information of the dream
because he sees these images in his dreams
and thinks that it is just a state of sleep

and here is the formation
where the formation of images takes place
physical condition ^{eg} sleep

and the same thing if you go this way
to the structure ^{of} the action of the organism of a simple person
it turns out that the physical condition
here is the cellular level
mutually reacting to each other, ^{so to speak}

one cell reacting to another
and another one there on the first one, etc.
they organize, as it were, inter-reagent
let's say such a space
at the optical level it's simple

and when we start to enter the level of action
here is God who created the world
it turns out that any level
perceived
as His further action

then any action of the cell by analogy is simple
this is a human action
impulse coming from the cell
this is also a human action

and it turns out that the person begins
how to develop into Infinity yes
some kind of property of intercellular germination

and it turns out that the phases of Infinity
are based on the intercellular level

and there are just events of the past, future and present
the cell exists
in the phase of preliminary past events
if it didn't appear somewhere there literally instantly yes

but when we look at
instantaneous phase of emergence
then we see already
vertical information stabilization system
where there is practically a mechanism for creating these cells

some kind of stem , i.e. vertical systems
on the upper base
cellular function develops

there is a concept that is similar there "stem cells" etc. yes
primary level of formation of, for example , a material system

on the information we can by such variation
just a small geometric movement
of these vertical systems
organize the entire external area

i.e. actually form the cellular structure

when do you start to form
taking into account the prehistory of the action of the cell matter
then we see that it is embedded here
the whole system of development of civilization in general

here you can see all the problems of civilization
that need to be resolved
and which, well, in general, were expressed in that
that this information is present
for example there in cell division yes

evolutionary development option
in this case it is shown
as a system of influence accumulated in evolution
experience of the so-called

i.e. here it turns out that the management
evolutionary property of its own development
this is an action to take into account the evolutionary environment
influence of the evolutionary environment
well at least by the optical principle

then we can work out a principle
take in evolutionary development
some point
which can be shifted in the management of the past

and then it turns out that the whole spectrum of future events
may be favorable
either there is an hour and a second or there is Infinite time

the main thing is to take the exact point of development
maybe it's even insignificant
and the evolutionary path that is related to man
as just an information path

a person perceives
the entire structure of any development
including the entire path of previous information
not only evolution
there, for example, which is considered to relate to a person

then it's clear
that man being completely unchangeable yes

by biological species type
can perceive at the level of simple information
evolutionary system of development of the World

and then it turns out that he is like
there is no way to make contact closely and in essence
with this system
he can influence her

then it turns out that the person is higher
systems of evolutionary level of development
any level

it is at the level of actual Action of God
i.e. God originally self-created and created the World
He didn't have any previous development factor.

there is in a person
and the primary completely unique factor
relating only to him
why are all people unique

and there is also a reactive level
to the previous phases of development of all information
where does the evolutionary parameter come in

and when do we start

this is the evolutionary parameter
output
to the level of control over future life processes
not only there is biological life of man

it turns out that the combined characteristics
past
form a remote structure
already improved with this experience of future events

i.e. improvement is the influence of experience
refers to a practical data set
where there was data on improving the situation

experience not in the sense of the word "experience" as an experiment
and "experience" is experience accumulated through labor
well, with some difficulty

and that's why it turns out

we must consider
this is how it is managed
what if we do accumulation management
for example, through labor
as a specific person
or by the labor of all people

it turns out that the influence here will be very stable
for the development prospects
when can we say
that a certain type of experience
guarantees Eternal development to all people

here is the selection
a certain type of human experience
to guarantee Eternal development for all people

and as I said before
what if at least one can't
then we are in the same place

with any technologies of Eternal development
if at least one can't
well then it turns out that we are basically talking about that
that the system as a whole does not fulfill the functions of Eternal development

and it turns out that this is exactly the development
which would be transmitted to everyone
here is this level of accumulated experience
implies the identification of this experience as a structural quantity

what experience can there be
which guarantees Eternal development
and what does it actually consist of

if we speak
about some physical mechanical actions
then this is usually the case
with the development of Infinite amount of information
say what we will have
for example, the same level of possible overcoming of the situation
naturally it is impossible
because there may be completely different conditions for development
there are other comets, meteorites, planets, etc.
somewhere from outer space for example

then it turns out that we should

focus on the Spiritual structure
it means experience embedded in the Spiritual plane
at the Spiritual level of action

this is the education of the ideology of action
this is the main experience that is
guarantee of Eternal development

structure of the allocation of ideological
Spiritual experience of action
and that means the Spiritual is there mental
with the help of technology there
Consciousness
Souls
body actions
overcoming some problems so to speak yes
problem solving
precisely in the direction of Eternal development

i.e. this is basically the essence
the very factor of any person's action
in this direction

and that's when we start
that's exactly the level of action to identify
then we come right to the action of the individual

here is who regulates from the point of view of personality
Well some such system
maybe some kind of gateway or something levels of action
on the formation of thought
here's what and who from the point of view of personality yes
passes information to form thoughts

This is precisely ideology
primary ideology
maximum amount of ideology
in human action

i.e. this is although of course it is the person himself
but it is precisely the Spirit developed into the structure of Infinity
The spirit that does what God does
so this is exactly the kind of Spirit
moving yes
and driving Reality
and moving with Reality

he forms
at super fast as well as Infinite speed
forms this one in principle
namely the structure of the thought form
i.e. developed Spirit
evolving Spirit

and then it turns out that we really are then
with such action
that so to speak fragment optical level of the Spirit
which is developing
he's new
and a person does not have time to immediately realize it

i.e. he has already developed, he has formed a thought
but it's the same person

and it turns out that way
that the information turns out to be as if it were new
although it is Spiritually pre-formed
or it can be formed by the level of the Soul

so these are the personality structures
as the Spirit of man
The soul of man
these are undoubted objectified
completely objective levels of Reality
which are manifested for everyone
not only for a person or for a group of people

and then it turns out that we can
this objective phase of Reality
find
in any system of physical Reality

and that's when we start to find

then we have data about the system of any object

i.e. we can say
for example, well, it concerns some kind of prehistory
any material object
the entrance is so- so into the so-called information
where can you know the past of an object
then there, having extended the management further
see the future
on the statics of ideology

i.e. it turns out to be an accurate diagnosis of the past
and the management of the future is that
what we got out of this case
on the Spiritual level
into the object structure
into the area of a kind of carrier of the quantity

and then we make a selection at the maximum level
practically, well, let's say, an ideological factor of control
i.e. such a factor where accumulation occurs
such a kind of standard experience
improved there or better ideology

and then it turns out that we have quite a lot
such a management structure
that in this case the control is carried out
due to knowledge of the future
any object of information
and simultaneous level through Spiritual management
past

Now I propose to make such a control
i.e. to reach all the information objects that interest you

and due to this very ideological Spiritual selection
make an access platform
see future objects
and manage it as a normal universal system

i.e. continuity between the past and the future
and the future is controlled
any universal system
just by sheer force of will

work now
I will work with you

when managing such processes
here are connected with the past
it is necessary that the future be mandatory
in the Macro-creative sense
just as the past happened in some type and order

i.e. it turns out that based on the level of management

any past experience including negative let's say so
some level of adverse events
should only lead to that
that the future is Macrocreative Eternal future
for any information object
is coming

there is a very good mechanism here
use
masses of information of the past
known to man there
to bring everything into focus
only on one task
Eternal future development

i.e. in fact we are talking about
that there is some kind of hemisphere there
which together with the future
it's a whole sphere
where the projection to one point only goes
Eternal development

and that's when we start to study this area
then this is a very strong practical mechanism
for Eternal development
to any next action element

i.e. all events of the past
there including negative or there positive
shine into the center of a sphere, for example
where is the Ever-living Man

and then
i.e. it is you yourself , well, it could be any other person
who do you work with

and then the entire external sphere of events
this is something that he can in principle choose yes
but some assessment of the characteristics of the action

and then it turns out completely transparent you can see
some situations, for example, there is a car number

which will be there in the future
there might be some problems there, yes
for example, let's assume that one of the lines is developing there
it is possible to show development lines

from this information center

for example the car number is 596 yes
why is there 9
why 5

and we begin to consider
what to do then to improve the events

we can take it there
increase concentration on the number 9 and that's it
nothing else is needed
the event is disbanded

use of objects of physical Reality
to do management
we don't come up with anything else
we just take and work with physical Reality

let's assume there is a problem with the building collapsing
we take and concentrate on just
at the level of the building corner
and then the building doesn't collapse
the reason is found in time yes
or it just doesn't collapse, no one knows
and can stand there for as long as he wants
will not pose a danger to humans

i.e. the ability to work
with an object of physical Reality

this is how the work directly happens
that revealing then
structures
in the relationship of the system of past events
very easy to develop
such purely pragmatic clairvoyance
when unfavorable situations

for example, they don't repeat themselves there anymore

then it turns out that this is the level
permanent training of this type, so to speak
past events that happened
constantly shine into the future like some kind of expander
you are constantly pulling them up to the level of Norma

it turns out that you are there all the time

in the exact knowledge base

an element of sorts of scanning the future

it's like it 's doing it for you

this is the system of reference points of the past

where you just simply catch

only positive already changed improved signal

i.e. an experience that may even be negative

there in the history of the development of civilization

or some unfavorable situations

in general in the world

for a specific person

constantly aligns your future

i.e. at a certain level

for the better and always

at a certain level it turns out

that the maximum concentration of some negative systems

gives a positive future for sure

and Eternal

negative systems past systems

they are restructured, i.e. they disintegrate

and if there is a point where something falls apart

just on a different level

there is always a point of Eternity

i.e. it turns out that any action

leads to Eternal development ^{yes}

any local action even if it is good there

it is not necessarily unfavorable

leads to that

that there is data on the exact Eternal development

and absolutely accurate data

which are characterized

a specific instrument of action

as I said, the sphere method

this is the focus of all systems

future past

for Eternal development

and the development of literally one ray

from the past to the future

gives precise knowledge of the future

work within this sphere

for example, it gives the opportunity to influence events
precisely in the creative Macro-meaning
for any system of action

and at the same time we can quite say
what is happening here is such a principle
that the Soul of a person that develops
in the system of interaction with the past
in the density of interaction with the past

because there are unsolved problems
ever for a number of reasons
they could not be solved by man
there was no technology or he couldn't keep up
or wasn't there
or tried to solve it there warned repeatedly

but for example, nevertheless, all people are free
someone didn't take note
but he still needs to convey and decide yes
in the future

then it turns out that he begins to develop the situation
from the point of view of the free will of another person
the main thing is freedom of will freedom of choice
to be realized
any other person

and it is precisely this free will that implies slowness
often well, like an action
sometimes it can be fast

but here is the delivery of information to another person
may be as if diminished in speed
if we consider the principle of free will yes

this is how much we can speed up the improvement of the situation here, so to
speak
here you can immediately say
that as soon as you are ideologically
you convey it to another person more accurately and quickly
all positions of Eternal Development

the faster and more accurately he begins to help you
at the level there can be such sometimes unconditional action
sometimes open direct

but nevertheless there are fewer contradictions of any kind
even if it is in terms of misunderstanding
some complex conceptual ideas maybe
there are complex technologies there

and here to understand all the systems
difficult levels of the World
because when a person lives in modern society
it should in principle be at the information level
be able to know and understand
any complex technological systems
of this world

there is, for example, the process of resurrection
it's a process
on the one hand it is instantaneous
there is often a simple ^{yes}
because the person knows
technologies are embedded in the Soul

and at the logical level
it can be a complicated process sometimes
but he must still achieve it
of this process in management

it turns out that the concept of "complexity" should not exist
a person should always know
fundamental principle structure

any system
any technologically complex level
any level of events

and here it turns out that this is precisely the level of integration
i.e. the transmission of such powerful combined information
to any other person
at the level of simple knowledge
at the level of simple actions
at the level of some simple postulates maybe
makes it possible to understand a complex system too

i.e. if another person accepted some knowledge
let the simplest ones be there, well, for example, there is a conversation, yes
at the level of the logic of knowledge
this is a conversation
maybe where knowledge is accepted
some very basic knowledge

if they are accepted by another person

then a person is able to comprehend
any complex system
logical law

then it turns out that based on this
there are some super-complex systems of a non-creative type
No

i.e. there is, it turns out that for the level of creation
the process is more motivated
previous phase
at this level of management
ideologically normalized events

and complex systems are always learnable
if they can be problematic in any way
then there is always time to interact
and bring the situation back to the norm

it turns out that in this niche in events
in this phase of management
a person is always protected by a structure
Well in fact, as if of one's own intelligence
or your own level of focus of actions

where is the intelligence
it's not specifically knowledge of something complex
and not a long learning curve
namely the level of direction

intelligence as a manifestation of more
well, sort of adequate or something phases of interaction with Reality

i.e. well simple example
what if there is a possibility of Eternal development there
then it is better to use this opportunity
well, it's sort of seen as just a direction
but this is an intellectual action, etc.

but this does not mean that a technologist there has to study something for a long time
namely, the phase of intelligence as a principle of choice

and that's when we start to consider
such management
it turns out that for the so-called intellectual
there is no deep control
you don't have to know a lot of things here
or somewhere to study something for a long time
but it is enough to make the right choice

at some current moment in time

and this is the correctness in choosing a solution
this is what motivates me in this, as I said
area or there circle where
in an open circle
where thought forms are formed
it's a choice
from the point of view of the primary postulating action of man

where is the physical body of a person for example
then where we suppose the Soul of a person
The spirit of man
aimed at the structure of Eternal development

and here is the postulation system itself
i.e. the selection system itself
this is what the action of the Spirit is about
defines
structure of personal choice

this is exactly the level of such action
where do we begin to see
that the determining level
at the very level of Thinking
is another value yes
which speaks about the level of simple decision making
based on more general body of knowledge
as individuals
there is a physical body of a person

i.e., in general, the total knowledge demonstrated by a person

then it turns out that it goes in there

and the product of Thinking itself
i.e. the thought itself
The level of perception itself is included there
i.e. it itself is formed according to certain Laws

and now if we begin to study these Laws
in accordance with what is happening in Reality
where does a man walk
how does he move

it turns out that we can see that
how he reproduces himself
your structure of thinking
and defines it
to the level of information receipt

for a person

and the level of Perception of the following events
for example, physical vision
or another phase of Thinking
other thoughts

and then we see
just like God does
reproduction of information is practically located
in a very closed cycle for a person

i.e. level external level
this is a level greater than the transfer of knowledge and training

and the level of formation of its system
this is his personal level
manifested in the structure of his personality
where is it actually his management

i.e. we again come to the management level
but already from the deep positions of the Soul of man
where personality is necessarily manifested
the spectrum of its actions

i.e. the personality is in the structure of those actions
where actions are mandatory

then Perception arises yes
Thinking arises

so you can always say
that there are no problems
a person is always socially adapted
can always live ^{well} in any creative society
and there is something to underestimate and not understand
in this society it means so
this does ^{n't} correspond to the general position
man as an individual
as an object of information even

well, let 's say in general, as created by God, let's say
at the level of the World ^{yes}

and it turns out that then based on this
we can see very clearly
that the management structure which can be unique
i.e. it is due to long-term development there
due to long processes of cognition

it can be transmitted very quickly
i.e. shown and quickly learned
by all who are simply positional
I switched to this point of view

can be transmitted almost instantly
main knowledge base
it is enough just ^{for example} that
so that a person decides to live there forever

took the position of that
that Eternal development simply exists there
this is already approaching

if he, ^{for example}, went to that
that it is precisely Eternal development that is his task
then he immediately receives even more information

when does he start working in this regard
then the information is almost instantaneous
almost everything goes to him

then the question of access to information
this is a sample again
but already at the level of Eternal development

i.e. in the structure of free ^{yes} personalities in action
maximally i.e. infinitely free in infinite development

it is precisely a personal and again ideological choice
Eternal development
where the platform is the ideology of Eternity

then it turns out that
and ideology is born *as if* from logic
here is a logically formed ideology
is the principle of operation

that's why the World is built so often
well at least there
in some complex technological processes
on the very action of the logical spheres of control

then it turns out that when we start
this phase of management
translate *as if* to the level of Thinking
through standardization and forecasting
then in logic this is very strongly reflected
logic is often based on previous experience of actions

then it turns out that based on the action of the logical
i.e. so to speak, systemically or logically conditioned
with the action of man there in the Infinite Far
in Infinitely Approximate
point

we can say that a person in principle
due to your Thinking
completely determines the personality structure
at the level of Eternity of its development

and by the way any other person
if the other person *is* just an ideological supporter

that's enough here
so that a person is an ideological supporter
and he instantly receives almost all knowledge
from this Reality

and when do we start
thus react to Reality
here is the transition to the base of the collective Consciousness
what does it mean then logically clear
that many very people can be supporters
it is enough to give only the first phrases correctly

i.e. to show that a person can live forever
that this is his task
the task before civilization is there
a certain mission of each individual person, etc.

then we see
which is exactly how God does it
these are these super-fast knowledge transfer systems
there the Macrosystem is super fast

and at the level of one, as it were, action of the individual
there could also be a super-fast knowledge transfer system

so we can see the same
what is a person in general
which mainly forms
their own tasks
myself
your own system of Thinking

as soon as it acts
again on the transfer of knowledge
and the main thing is that they are as fast as possible

in the Macro-creative sense
for all people

then he solves the control problem
because he, for example, taking into account past experience
normalizing the events of the past, bringing them into the Norm
thus controls the future
because here
again this super speed is the transfer of knowledge
even if it's only for specific people

maybe it might not be that much
but the more knowledge he imparts
the more it increases speed
here are their impulses passing into the external system

then it turns out
he takes from there information of a creative nature
and here is its management
structure of Thinking
structure of action
self-government is happening

because he is already receiving such a formed experience
that other people already have their own knowledge
or what other people did
he receives knowledge himself

here we already get an integral total
such a characteristic of joint actions
and the system becomes open in humans

i.e. he begins to live Eternally
because knowledge simply exists about Eternal life
even another person

and as a rule, knowledge of another person
this is , in fact, the structure of human experience
and therefore it turns out that we can see
control in this way
what if another person's experience
expressed as a personal manifestation

then it turns out that we can say so
something or another person
he went through it as his own path, yes
or he received it in the form of knowledge

but when it is the personal conviction of another person

then there is no nuance in the actions of any other person
Well, in terms of personal action, there is no longer any manifestation
and have no other meaning in principle
as only a direction for Eternal life

i.e. there is a kind of combined signal
about the Eternal development of Eternal life from all people
at this level of action

i.e. experience no longer has any fundamental significance
the postulating principle matters
i.e. over experience and over knowledge

knowledge of Reality

and this practically predictive knowledge comes
there is a future Reality

where is the future management structure

this is a level
which is practically well let's say it is like this
what is perceived
as some kind of set of future events
as if appearing from somewhere at random

although in fact, according to this methodology
visible
that it is a collection of personal experience
and personal choice of decisions of all people
provided there is interaction there
with all the information of the world but that's how it always happens

and therefore the future structure of events is collegial
almost one hundred percent controllable

i.e. the more collegial systems exist
the more precise and faster the control

although each individual manager
can reach such a level of course
that he himself can manage there
the whole system is quite

but with collegiality
management becomes systemic

and therefore, when taking into account past events, as it were,
you start to manage
on the transfer of experience

to overcome some negative systems maybe
or just even if these are positive systems
it's more of a transfer of experience

then it turns out that you are all more collegial
come in
into the predictive management system
then the future is naturally Eternal
because it is determined by the previous level
which has already been implemented

and the past is a structure already realized
this means that the Eternal future is also a realized structure
Well, the matter is the same, yes
taken from events that have already taken place
built future events but Eternal

they just took the material
the ideological material is the same
the same fragment was taken and put forward

i.e. on a mechanical principle, very clearly and accessible
and by the way a good way of healing and transformation
just in the Health Norm

in general, including complex conditions
as soon as a person is introduced into this environment

in principle, any condition can be brought to the norm
regardless of primary status

and thus this is how it is
Well he is somewhat mechanical and abstract
approach
or more pragmatic
just take this optics
and with it build future events

but nevertheless it is a very feasible option
and as one of the methods of management in Eternal development
It is quite a strong and effective method
because they are more clearly manifested there
specific control structures

what needs to be done there
how is it necessary for example
in very specific systems
build communication systems

Let's take a simple example

some event of the past
how does the optics go to future events
the trajectory is clearly visible
you can literally calculate it almost by degrees there
what branches out like
which impulse goes where along the rays
how much to inspire the beam
to get for example the Event Norm

i.e. you can work here
literally like with a geometric system
in this control system

and work exactly there, fixing
in which case what happens
if something is there at a specific number of degrees
there you can change the angle and control
reflected beam there from the past
point of contact
and future events
i.e. to work simply on a mechanical level

i.e. it is possible to create a very systematic
well, let's say it like that definite so let's say scientific or something
inherent to ease of understanding
in scientific terms
objectified level

although this is not often necessary
but for precise control designs
sometimes you need to make calculations that are precise down to the paper

and this method allows it
calculate systems with complete accuracy
and management methods

and in connection with this I believe
what is the management task here
is the allocation of the total system

where precision is needed
and where more Spiritual action is needed
maybe accuracy is not necessary
solution sampling can be instantaneous

but the main thing is the principle itself, the approach itself, it should be like this
that we have a management system
as a system of your precision
controlled at each period

actions

here is an important element of this management
that the controllability of the action at each period
in this method it is also high
sometimes it reaches absolute values

because the structure of the past
these are the events that happened
those which can be used in any case

translate to Norma
they exist

and therefore it turns out that the system is very controllable
and controlled at a completely calm pace
i.e. in a completely clearly defined context of contours
it is quite clear what is wrong with this system
Eternal future is definitely achievable
because the Eternal Future itself
it's just a subsystem, generally speaking
this is generally speaking a small part
of this control structure

and so when you start working
in this control system
try to work like this
so that the work is completely understandable
it is absolutely transparent to you
Well it's just absolutely logical
to any other person

so that it would always be possible
you can easily draw it there on a piece of paper
prove what where where

and show
that it is this system in any case
will lead to the result by itself
which you will not be able to bypass on the Spiritual aspect
this is the system of Eternal development

The Eternal Spirit can even be explained this way
there during the transfer of knowledge
will still have Eternal development

Consciousness perceiving Eternity
will also have Eternal development

so the body is there, it's natural

as a consequence even the Eternal

i.e. to offer some already completely understandable methods
to transfer such management experience

and then it's much easier
the more you transmit

either directly or there Spiritually implicitly

Well, "directly" is meant by the words
the easier your management becomes

and then you move to the natural level
which always has a controlled value

i.e. naturally it means
that you are at the level of your natural state
and the state of complete controllability of the system
there is no external World and external Reality
or inner World, etc.

i.e. therefore it becomes natural here
some kind of like that Well, let's say a few
power factor of control
where do you start doing management
as the management that occurs
from the actually super-high concentration
but which is perceived simply
as a kind of control force

and here the power factor can be increased
i.e. it is possible to increase the impulse of the control force
which by the way allows
at certain levels of action
at a certain time
increase control to the required level

including up to the value
which obviously characterizes
the obligation of Eternal development
you personally

and at a certain speed and degree
any other person

i.e. technology leading to Eternal development
in a completely controlled manner

This is where I end today's seminar.

Thank you very much for your attention
