GRIGORY GRABOVOY
The Teaching of Salvation and Harmonious Development
Methods of using the number letter and time
16.10.2002

Today on the topic of the seminar
implementation and dissemination
Teachings on Salvation and Harmonious Development
I show the methodology of forming Perception
realizing the introduction and dissemination of my Teaching
through the recovery complex

This methodology is based on the fact that
what do you highlight
in the information environment
in your Perception
highlight the number
select the letter
and highlight the time aspect

at the same time when I will tell
about today's technology
it is advisable to look at the unifying factor
which speaks about that
that even if you set aside time for example
that time can have the form

and when do you work
with the technology I'm showing today
It is desirable that what was highlighted
based on for example numbers and letters
i.e., it means that it is sufficiently voluminous in human perception
systems
transferred to the temporal aspect

because the work will progress over time
same as with the tense form

that's why today is exactly the task
preventing, for example, a possible global catastrophe
and ensuring harmonious development in the ideal of the Eternal
this problem will be solved by means of
what will you highlight in your Perception
namely the form of information

and this form will characterize it
any process already as an investigative one
for example, a number is a consequence of a form there
the letter is a consequence of the form

and also when we talk about time
then we will talk specifically about the form of time

so the first method is based on that
what do you highlight in the event system
highlight the number

means the method of extracting a number
according to this technology it is like this
that you are considering any number
for example, the event you are watching in front of you
may have a different number of characteristics

i.e. for example, make one control
to achieve the goal of the event
or, for example, several elements participate in the event

then it turns out
the number corresponds to the number of elements
i.e. you set the number of elements yourself

so the management here is that
that the area of my Teaching on Salvation and harmonious development
this is what makes a number three-dimensional
and voluminous towards yours
i.e. to you

for example I highlight the number 1
as an element of sole control
let's assume to prevent a nuclear explosion
at a nuclear power plant

and at the same time this is the number 1
i.e. it must be done with a single impulse
contains quite a lot of characteristics

first characteristic
that the action must be performed
in this particular case it is necessary

therefore I need to take into account the future factor
which is contained in this number

and that's when I say
about the structure of my Teaching
about Salvation and harmonious development
then the content of the Teaching implies
security
mandatory achievement of this management

and when I talk about the number that is in front of me
and in general in a flat form
for example, there, 50 centimeters from me, is the number 1

then the management consists of
that by highlighting the shape, well, like a hemisphere
in my direction from the number
I am realizing the management goal

i.e. the goal of management is as if it is growing at the same time
away from you
those. aside for example behind the number yes

i.e. if the area of the Teaching is what is closer to you
separating medium the number itself
the second hemisphere is the control area
which already acts directly
for the purpose of management

as a concrete practice
I'm entering it right now
element of your action
i.e. it is desirable that you make the management
based on that
that set the hall's task as the management goal

and at the same time in a single impulse
for example number 1
highlighted this form, which I said
namely a hemispherical shape on both sides
and got exactly the number 1
as a single impulse for control over the tasks of the hall

i.e. it is done quite simply
i.e. you just highlight the number
i.e. set it before yourself in your Perception
number 1

you fill it up as if you were mentally pulling it out

means in a hemispherical manner
to yourself form
the shape can be , for example, silvery-white

i.e. as if you give it a convexity
stereo effect to this number

and at the same time you are already tracking with Spiritual vision
please note that you are tracking with Spiritual vision
as the number grows
towards you, for example, away from me
when I work

accordingly when you work
it grows on me

and when you look at the element there is mutual growth
then you see that the hall's task is being realized
in a single impulse
where is uniqueness
this is precision, i.e. the obligation to achieve control
according to the hall's task

when I talk about the task of the hall
as a generalized level of management
i.e. the tasks are of course different
but when we talk about that
that are realized in a single impulse
all management objectives
then it is clear that in a single impulse
it can be implemented in principle
any set of goals

as a consequence
make management now
to find this consequence

i.e. there is a lot in the elements of knowledge
such quantities
which need to be found
at the very first level of implementation

for example I am talking today about today's method
and this method already contains
a set of some elements of development

and now apply this method

to get an answer to your question

for example, well, you can formulate questions
you may not
maybe just at this level
what is for example Spiritual Administration
in this technology
It is precisely about Spiritual Management that I have just spoken

then just take a look
in the optical element
Spiritual level
Spiritual element
and apply to see this element
again the same method

i.e. the area of the Teaching
this is what is closer and goes in relation to you
from the number
and the area of control is behind the number

so when you do it
i.e. you enter as if into a search engine
the number itself is the boundary system
between the field of the Teaching and the goal

i.e. the target may contain
as a Spiritual plane
how sensual
and the level, for example, is event-based
or for example health restoration

that is precisely the transitional level
this is the area of your Thinking

and that's when you find the area of Thinking
where the area of Thinking is
interacts
already with various elements of Reality
including physical Reality

you see that recovery
this is the inversion of this number
to you
but the appeal through the channel is already on the path of the Soul

here is the path that comes to you

this is the path of the Soul

and therefore the selection is quite strict selection
in work with only one number
elements of achieving the Soul
in this case characterizes
and the objectivity of the Perception of the Soul

because when we talk about Perception
and we consider , for example, the optical level of Perception
then work for example is an element of reason
element of Perception
which characterizes the event
or an element of the Spirit yes
these are the highlighted elements
in the optical system after all
because Perception can be optical too

but when we talk about the Soul
then we see a primary organizing system

so when we are from a single number
we already have a path to our Soul
then we see that management consists of
that the Soul can have a certain action
and I introduce such a term as state action

and when you use it for example
it's basically a two-word term like state action
and add there "action of the state of the Soul"
i.e. the third word

then you see what you can see
letter organization system
how is the letter organized
in the form of information

try to do it as an independent work
look
how does a letter grow
in the information system

after all, there are Laws of Perception, for example , Laws of Consciousness
which characterize you
fairly simple principles
dissemination of elements of Consciousness

for example if I look at the microphone
so that there is no possible global catastrophe
I'm first in the primary viewing action
for example, physical vision
I take action to prevent this from happening

so that this does not happen
I put, for example, yes, the first letter there, for example, "no" yes
there is no global catastrophe

then it turns out
control that comes from the Soul organizing the letter
after all, I said at the beginning that this would be the management method
where the concept of the letter will be used
one letter

then in this case one letter is the letter "n"
it must solve the control system
in the task of the primary level of Perception

and that's when you in one word
impose the first level of Perception
with instant action
you practically get the next level
you get the floor

if possible now
do the job this way
so that when your specific personal goals
for example, you came with a specific purpose
where the first element is the Salvation of all
and then solving specific problems

then that's when you solve your problem
having done the first action
look where you see
organizing your proposal
as management goals

and what is the elemental letter
in this case is the managing one

i.e. in control through the letter
there is a principle of control through the letter
contained in a sentence, for example , or in a word

and you probably noticed this quite often

well, as if in my Perception
that when you formulate
and you try to imagine, for example,
exactly the sentence as it should be written
first it shows up in the optics
only some letters or just the first one

this is understandable because, as it were, in Perception
even if you start writing
the logic is that motor skills, for example , hand movements are like this
that you start writing with the first letter after all
and don't write all the letters there at once, for example

so here is the logic of Consciousness development of Consciousness
she is like that
what are motor functions
what you have
for example, in the form of their own development systems
these functions they overlap
on the elements of development of your Consciousness

and try now
in the space of your Thinking
try to do it at the same time as me

i.e. when I speak in the space of Thinking
Quite clear
this is what corresponds to the level of Thinking
and try to connect
level of development of the letter
With
level of digital development

i.e. select the level
and try to somehow connect
in some one place

it would seem like a letter and a number
well objectively some systems
if we consider them in the system of Perception
then the connection of a letter with a number
provided, for example, that management is formed
via form
create a third element of information

so this third piece of information
you will see that it actually moves

almost as if along a certain very rigid corridor
well, starting for example from the letter level and from that level
which is , well, in a volumetric, sort of hemispherical level
is developing in my direction
this is the area of my Teaching on Salvation and harmonious development

and again behind the flat letter
just like in the similarity with the number
so you have
dissemination of its target management function
behind a letter already going, for example , away from you

i.e. when you make a connection
numbers and letters
elemental control system
already exists and is developing
according to certain laws

i.e. here we can consider
precisely the canonical ones, i.e. legislative ones, or something like that
systems of development of Consciousness
when is the first act
leads to the next action

and that's when you highlight in your management
that one action leads to the next action
then you see the element
first of all control
secondly, the control element
as for the primary goal
when you do management

as well as for the mandatory achievability of management
according to Macrosalvation first of all
secondly, already solving private problems
in some interval of time , for example

that's when you're already walking along the timeline
in solving your problem for example
then in the Macrosalvation system
time begins to dissipate as if it were absent

because the principle of Macrosalvation is that
that Salvation must necessarily come
shouldn't be in any case
possible global, for example , macro-catastrophes
and must be ensured

Eternal harmonious development

accordingly these are elements of Eternity
and so when you move on
to solving specific problems
then here you consider the process in this way
that the solution to this particular problem
this is a timeless aspect

i.e. the function of Consciousness is such
that it works
at a certain legislative level
and the time aspect is derived

so that's when i said that
that time is displayed in this case
after the primary action
then this is the Law of Development of Consciousness
which states that

that action is a timeless aspect
when you consider the action
from the realization of the Soul

after all, the Soul really does implement tasks often
beyond time and beyond space
these are , as it were, true tasks of the Soul from the Creator

and that's when I say
exactly what is from the Creator
you see that light
which comes down from your Soul
please note yes
for the purpose of management
and it is precisely descending

that's when you look
it means that this level is how it "descends", i.e. "neither" nor
negation
the principle of negation in action
"goes away"
and "descends" means the time element can be removed
i.e. there is no time

and when you start to manage for example
through the connection of words and action
then here you can see that when you control

by means of the letter itself
that is the sphere of my Teaching about Salvation and harmonious development
which is located towards you
this sphere is very concentrated
simultaneously
and in the letter system itself

well, that is, the letter as a material system
write it, for example
I can write the letter A
and in Perception put the letter A in front of you
and consider that it is enough to do the management like this

for example, I can start every sentence with this
what to say "A" comma for example
and then there will be a proposal

then it turns out
what what offer next
in principle it is no longer significant

then you can control it
only through one letter
where the sentence itself can be anything

and here we come now
to the universal principle of control
where is the concept, for example, "inaccuracy of control"
or the concept, let's say , that "management takes a long time to learn"
these concepts are leveled out
you get mandatory control reachability
according to Macrosalvation at least
and you can achieve mandatory control reachability
for personal purposes

now do it with me
control
it consists of the following
that you also simply set before yourself
in Perception the letter A

and try to look
how this letter starts to illuminate the same letters
those people who are nearby

and that's when

it doesn't even have to be nearby in the hall
maybe even somewhere on another continent

because the letter A
anyone can pronounce it

and that's when you watch the show
this glow of yours
to a single-letter system it turns out
then you can see that at the base of this letter
the form is found
which is in your Soul

and here I introduce this concept
as a selection of the form of control of the Soul

when you work for example
precisely at the level of the Soul
for you everything is quite transparent
and for example, no willpower is needed
so that management can be implemented

because the Soul
it is a creative constructive system

and according to the Laws most realized by the Creator
She creates as the Creator does.

when you look at the principles of management
which I am giving now
for the dissemination of the Teaching
precisely as principles from the Creator

you will see that everything becomes
at a certain level it's quite simple
and you will see at this point of simplicity
how the Spirit is organized
in the same concepts that I just said in words

because that is the purpose of management
is
create such a Spiritual level
which always allows
regardless of your condition
even if you are sleeping
implement Macrosalvation
and achieve mandatory management

for personal purposes

and so when you
Well, for example, listened to this lecture or recalled it
c-focus on that
that how does the Spirit work in the same concepts

then you will see
that the Spirit is action
where the time aspect is missing
in the purpose of the action
from the point of view of this technology

and then you will see
what if for example we say
about managing yes through time

i.e. how to make control
if we have a time aspect

then time becomes here
a fairly simple level of pulse extraction
the first or the next control pulse

quite a simple example
for example if for example you perceive
any object of information
for example, you are driving and a car is driving in front of you

then the shape of the car the shape of the car
immediately creates an element of the number 1 yes for example
one car or there is the letter M
the car starts with this letter

and it turns out that in Consciousness
There are laws that allow
from a kind of abstract concept
highlight the following concept
for example, there is a number or a word or a letter

so if you are by analogy
you will start to set aside time
and it is necessary to consider this as the time of the Soul
i.e. this is how the Soul is
what time does the Soul perceive

then the dynamics of time

she can be so fast
that the Soul is characterized
as if at a supratemporal level of development
i.e. it is above time

i.e. the processes are so fast
that time begins to be controlled, as it were
well, i.e. stretchable, have an individual shade, etc.

and I think many people probably noticed
that time has individual characteristics
and therefore here the allocation of an individual characteristic
for the Macro Salvation level
in this case it is an action
which makes the reverse as if the level of development of time
i.e. gives time
it is precisely the spatial aspect

for example a car that passes by
and the number 1 is highlighted
this is the car that is located
well at some time Perceptions
there let's say you perceive 5 seconds

so that's when you do the opposite
How do you find the time?
then you see that you are self-organizing

here in this case
I have now made a kind of decoding
principle of self-organization
from fairly simple postulates
and even logical systems
in the form of conclusions that I have now given

where you can self-organize
from elements such as information Perception
so there are such elements too
as a number, a letter and precisely time

and I described the management to a greater extent
as management through the timeless aspect

so when you come to that
what do you see your body
i.e. you see how your body is growing
how the body recovers

or self-recreates
and also self-organizes

then you see
that the whole world around
it also has points of self-organization and self-creation in fact

i.e. and when you enter
right on target, well , yes , by Consciousness
self-creation
then the Creator shows you knowledge already in an explicit form

and that's when you should for example
see this knowledge clearly
then here the Soul opens up

that's what I'm saying today
there is quite a lot about the principles of working through the Soul
but that's exactly what they are
that work with the Soul as I said
it may not be tiring, it may not be felt
because the work of the Soul is always happening
but you don't always focus on this
even in ordinary life

that's why it's very important
that the usual state, i.e. the state of the Soul
may prevent a possible global catastrophe
can ensure Eternal harmonious development
and naturally can constantly restore you

and that's when you have
principle of continuous restoration
it would seem yes without effort

but simply by finding the state of the Soul

so the path to the Soul is often long
I've been talking for a long time
and showed there, for example, some trajectories
in the optical range
how to get to the Soul

but it's a state of the Soul
must be valid at all times
i.e. the path to it can be long
but the action of the Soul

must be instantaneous and omnipresent

because for example the next second is passing
everyone did some kind of management
so that there is no global destruction
therefore the Soul manifested itself
as the all-pervading Reality

and that's when you do Soul management
then pay attention
that the points of concentration of the Soul
these are external objects of information

for example, points of concentration in the Perception of the Soul
let's say I can find
here is a point in the microphone
and see the point of concentration
in the optical range
specifically my Soul

and see how, for example, your Souls
i.e. the Soul there may even be of a person
who walks on the sidewalk
she is concentrated
still according to certain laws
all the same at the same point

and here's the point
simply Laws are different yes Laws of optical motion
try to look at processes in optics

and when you are in the collective Consciousness
i.e. at the collective level of Perception
come out to one common point
you see
how does it work
how the Creator creates

and this knowledge is quite open
here it's just like on TV
you can just watch
do like
and that's all

and that's when you do something like that
if you listen to today's lecture
and get to that point where you I say "do likewise"

then such an action is your self-development

why, for example , does intelligence and reason develop there?
when there is a lot of work going on
or when complex concepts are solved

although it would seem that everything is open, yes
you can do something like this
and make a kind of universal system

the thing is that every next event
contains naturally all the previous ones
plus more modified

i.e. a similar place
always needs correlation
moreover, the correlation element is new

and so when you make a correlation you create

Now I have brought you to that
what are you creating
so when you do the management
try to work this way
that creation is creation itself
this is the action of the Soul
where such concepts as Spirit and Reason are known
the system there is external Reality internal
those. everything is known there

and here at this point
you see direct information
how to create
i.e. how to take the next step
how to do the next development

and that's when you are
at this point
then spread
exactly that you can self-recover

because i already said
that you can recreate yourself
and this is a specific technology
The norm of self-recreation is the norm of health, for example
Norm of surrounding events

and the transmission of information to others, for example
this is a level
where the transmission takes place
according to the Laws of actual collective Perception
i.e. according to the Laws of the Norm
where is Norma
besides the fact that it exists
as a control variable
it still exists and the norm is fixed

for example you can walk down the street
there are some trees and buildings there, this is the norm

and the Norm that is transmitted in optics through you
I showed that the letter A can be transmitted
instantly anywhere
it is transmitted to others

i.e. the interaction of the Norms of normalization

and when you look at the interaction
normal state of affairs
you see
that Eternity itself is attainable simply because
that this Norm can simply be constantly increased
by creating a special department

and that's when I say
about harmonious development towards Eternal development
then it is precisely the standardization that means the controlling
standardization
it is such that if we speak
about time management
i.e. Perceptions containing the element of time
then standardization
it is the absence of the time factor
in event elements

if you look at some building
and calculate what to determine
that this building will forever evolve

just take it out on the record
take away the time factor

then it turns out that your Perception

reacts to the building Forever
and moreover it knows immediately

i.e. you can immediately understand
how to build such a building

therefore it means to withdraw
like removing a flat plate
which between your Perception
and this building

so when we talk about a person
then this flat plate
she's gone now
The soul sees a person like this
that he is always Eternal

and you will consider well it is quite simple
in the elements of even ordinary Perception
that when you look at people
you naturally don't have it
let's assume the temporal aspects of Perception
from the point of view of there, well, let's assume that
what will happen in ten years or a hundred years
in ten in a hundred
in logic only different

and from the point of view of the Soul it is the same

and that's when you come
to such a level of Soul Perception
this is already the level of the Soul
what I'm saying now
this is already the level of Soul Perception
to which I have now brought you

and when you look at this level
you see that your Soul
she doesn't only mean you
well, it restores itself, recreates itself
but it also acts as the Creator
it also creates those around you first and foremost
who really need it
for example, it restores people

look at this level
and you will see that it goes very quickly in optics

there are waves of mutual self - restoration

and the next level
this is when you start to control the process
which means which you see in yourself
by means of a kind of special
logical control level
where you specifically increase management
to that level
and you build up logically

i.e. it is not even supposedly the management of the Spirit
or control of the Infinite Soul Factor
and this is logical control
which in this case shows
that logic is like this
that when you logically increase control
then logic grows along with the physical body
towards Infinity

i.e. there is such a concept
as growth "informational growth of the body towards Infinity"
i.e. the physical body simply becomes healthier
but here is the growth of germination over time, yes

i.e. if you look at it like I gave an example with a building
where can i remove the plate
and see the interval of Perception where it is located
then in the Soul this interval is you yourself

and that's when you see
your development on others
you see that here is the spread of technologies yes
technology transfer
it is also a state of the Soul

and when you are
exactly, well, as if in this state
then the spread happens quite quickly

i.e. for example if if control yes
Spiritual management
related to that
that you are sleeping and you can do so
so that there is no global destruction
this is a state
then in this case the condition is similar

state of the Soul
where my Teaching is being spread
about Salvation and harmonious development
but the Teaching includes
after all, the technologies are very specific
upon achieving direct control
and instant control

if you for example Well, make this design more general
then this design is implemented like this
that you get almost instant control
only from the state

and here is today's task now
training will start now
where necessary in the state you are in now
the point is that there is no need to change it

and being in this state
try hard
it first of all
self-healing solve your own problems
and at the same time
convey the entire practice in only one state

at the same time I don't distinguish
are your tasks there or are there Macro-salvation
I'm just saying that you're working
on the task that you choose

and start working now
and if possible, definitely
when I will be silent for a while
please take a look if possible
at the level of your Perception
how does work happen from one of your states

i.e. pay special attention to this
start working
I will work with you

pay attention
that the state is not tense
i.e. this is a natural state

and that's when you find

point of natural state
this is a complete implementation
in ordinary phenomena of the surrounding world
i.e. in conventional event systems
i.e. your natural state
This is the maximum control system

and when you come to this
what do you find in the natural state
maximum control system
you practically teach yourself to do so
what do you
what you found
by developing logic for example
for example, this lecture
this is what you mean you can highlight
in Perception
and teach yourself the same, i.e. teach yourself logically

and that's when you sort of teach yourself a lesson
independently logically
that connection
logics
and plus the logic of following
there is this lecture material

where the concept of "teach" is simply setting a task
what is this state you taught yourself
this state
you did it like this
what is your natural state
this is the state of universal Salvation

then here it is clear what is happening in general
no matter what a person does, he is still saved

and when this state is owned
practically as many people as possible
it turns out that it is an element of universal Salvation
it's just normal

The norm that is laid down
into an element of relationships
i.e. complete freedom of action, etc.
and in conditions of complete freedom of action
and a wide variety of interests
the element of universal Salvation is always observed

and plus the achievement of what are already private goals
are achieved more quickly
the more people do it

Thus
when we talk about that
what is the state we have come to
this is the control state
and the state of the Soul
and that's how it is now
and it was now when you were practicing

then when you come to this logically
you can any state
make it a Macrosave system

i.e. well let's say if i diagnose an airplane
which we assume is there during the transportation of nuclear weapons
which do not need nuclear weapons
i.e. it is necessary to make it so that when controlling
there has always been a push to reduce nuclear weapons
well, in such a civilized way, politically, etc.

then it turns out that here something like yes arises
two types of state
that first of all I have to accompany
so that the plane doesn't crash now
and secondly, I am against it
so that nuclear weapons increase
i.e. as if the element of reduction arises

then we get two different states
must implement
one common management goal

so here we come to that
that is, nuclear weapons must be transported, for example
and at least not explode along the way
until it is politically removed from production, for example

and here it arises that
yes there is governance in the political system
in this case yes
but it turns out to be two contradictory states
must solve one common problem

this is where the next level comes in
level of presence of the Soul
level of realization of the Soul
in information
and in the space outside of you

and that's when you come to this level
you see that even if the states are different
this plane arrives anyway
it doesn't explode it doesn't fall there
nuclear warheads are being delivered
and in principle after a certain number of years
they are simply restructuring
by adopting international agreements there

i.e. such a thing is laid down
what will really happen
and then you see
what if for example the state
which can be completely different

for example I can listen to music
or I liked the melody there
I can be there
in a state of perceiving a melody
I may not analyze at all
in general, contradiction or uniformity
states of the Soul
I need to make a control
and achieve that there is no macro-destruction

thus it turns out
that I am entering the Spiritual sphere
here, pay attention, I showed
where does the transition exist
to the Spiritual sphere of management of Perception
namely the Perception of the Spirit

and then as soon as you get closer
to yourself
you are moving on to logic
and here is logic
it is precisely what forms logical connections
this is more evident
when you come to your body

and the first surface, well , the first contact

skin yes this is already the most rigid system
event logical levels

and that's why when I talk about that
where the system of my Teaching stands out
about Salvation and harmonious development

then the selection in this technology
already in this development
happens where you have
rigid structuring of connections and events
i.e. when approaching yourself

and when you get closer to yourself
it is clear that that light emanates from you
where every event is clear
why is it like this why does it happen

i.e. reverse light

learn to work with light
light approaching the body
through the trajectory that I have just given
where the Soul passes into the Spirit

and the Soul is present yes
in the outer element
it's like a three -dimensional space

light from here when it moves towards you
and you move it
these are all controlled systems
these are not chaotic systems
this is not trance this is logic it would seem yes Thinking
where the goal and light optics are simply realized

i.e. in working condition
you shouldn't be there, for example
in a state similar to trance or meditation
this is a normal state
where you are able to do so in any state
so that there is no macro destruction at least

and moreover
any state is that
what is the source of your Eternal development

and from this it follows that the area of the Teaching
this is the development of the structure of Eternity
in your Perception
Now I have highlighted the area of my Teaching
about Salvation and harmonious development
as such a target area

i.e. I've already left
from the concept of rigid fixed forms
the area of Teaching as a principle of development

then it turns out that the elements of the Teaching
which can develop themselves
they create very quickly
training systems that are very clear

try to make such control
what if for example I take
area of development of the Soul
at the external level
and from here I begin to look at myself as if
then I can very easily restore it
organism yes another person or there is a hall
or in principle the number of people doesn't matter there
just because i'm considering
realization of the Soul of your Soul according to the Norm
at this point

and I said that there is an external implementation system
and this Norm is just to bring closer to oneself

and approximation firstly
this is the total system of Reality
plus I am the one who wants it yes

i.e. it turns out that I have deduced that
what to want i.e. set the goal of Macrosalvation
this is a solution to the problem in the current system

and when well like the next second
no macro destruction occurs

Here please pay attention to that
that I work with logic
but these are the Laws of the development of Consciousness
Laws of the functionality of Consciousness in general

Consciousness also has
certain Laws of functionality
on a specific management topic

that's why I specifically spoke about the Law here

the point is that you can consider
some kind of investigative systems , yes
pay attention when i say laws
try to listen to this
and they can be found from different positions often
these are not necessarily rigidly fixed laws

and when we speak
already about fixed Laws
then the principle is self-healing
the principle of movement towards your Soul
principle of movement by distribution
when you move towards yourself
distribute to everyone

then it is realized in that
that, well, at a certain, let's say, intimate level of the Soul
every person wants to see people like themselves there
to see that there was well surrounding happiness
development, health, etc.
i.e. a certain set of norms
social or physiological in general
for health or political reasons, among other things

therefore at that level of the Soul
Spirit and Soul are in one place
just like the body

and here I have brought to that level of understanding
that there is a place in the space of Thinking yes
in the space of your Perception
where everything is in one Spirit Soul Body

and when do you work from here
then here it is enough to follow the logic of development
for example today's lecture
i.e. if you see
Well, there is a lecture part, yes.
when I say
then the second part

Well, let's assume that the concept of a seminar includes that you work

and when do you work
let's say our interaction happens
within the hall

it is clear that the hall exists as a physical quantity
that there will be a video cassette there, for example, yes
text transcripts
they will diverge
but the interaction occurs for a single purpose

goal is to save everyone
as a primary goal
and the task is to prevent a possible global catastrophe

so here is the glow of this goal
this is a sign of presence
in us
ideological system of universal development there

and when you, for example , highlight this system
as if in myself
then you see
that this system is first of all
primarily aimed at that
to realize, as it were, your physical Reality
from the Macro level and from the level of ideology

for example, this is where thoughts come from
why such and such actions
cellular plan level

please note I am moving on to that
how do you organize yourself logically
self-organize

and at the same time to show tissue and self-organization
I had to tell quite a lot now
previous systems

if you carefully, well, sort of go up to this level
at least in one listening
even here in the hall
then you are already there

the level of self-organization is that

that the cell sees its own body

special Law of Consciousness one of the Laws
that the cell sees the whole body

any element of the body
perceives your own body
as you perceive
in principle, everyone or yourself

and from this it turns out that if you are yes
at this point of knowledge there is simply knowledge
then there are no problems for you at all
there for instant recovery
instant normalization of the situation there

after all, I often, well here to a greater extent often, speak
about ideological positions after all

i.e. for example , I say certain words
but at the same time I watch how the hall works
in fact, i.e. in total, the external system yes
how do you work present
how does the interaction work, let's say with the building of the hall itself
how does the wave process of optics go out to the street

and the people who pass by
they participate in this optics
well, it's like in the ocean, there a person has different things
levels when floating
there are different layers of water

that's exactly what happens
exactly what Infinite level of information
localized here
it's also why i used the word "ocean"
there is a lot of water there comparatively

compared to body weight there
as if an infinite volume of water is rushing

and it turns out the same here
local knowledge well obtained in essence
received for the purpose of action
it can be spread even mechanically

and here is the next principle of dissemination of my Teaching

about Salvation and harmonious development
precisely through the recovery complex
consists in the fact that
what are you considering
your own management system
as a rigidly fixed system
recorded somewhere

for example you work
in some specific space
here you liked it
some plot of land there at the dacha, well , anywhere
and you try to work in this place

and that's when you work in this place
then what you do is already the goal of management
is implemented as
first of all in this place
and is implemented everywhere, therefore, according to the management goal
but also the light coming from this place
it spreads
as well as mechanical waves of light
well, like ordinary light

I've already shown it here
as the light of Thinking
docks
with the light of physical Reality

here it turns out
what if you work in a specific place
the docking of the light of Thinking is in progress
with the light of physical Reality

and what's more, there is the possibility to control
the light of physical Reality

i.e. just do something normal
Well, let's assume that the management there is like this now
what is in front of me for example
let's say we make target control
for example, let the place be chosen in front of me
not at the dacha as I said
and here it is in front of me

and make the management
Well, try to get out

to the light control level in this way
so that there is light coming to this place
it was a kind of bridge
where is the correlation coefficient
where there is, well, like, the amplitude of the waves of Thinking
And
real light
matches

and then it turns out that you go to the wave principle
like at school

so when did it coincide
you see that light is physical
it is no different from the light of Thinking
where Thinking passes
in the field of physical management

because when we talked about that
that the primary level of action
there is an action of light
pay attention to the effect of light
not the light itself, but the action
but the action is based on something

then when we talk about the action of color
then here the light, for example, has color
he has the Thinking characteristic
i.e. the space of Thinking

here are quite , well, in general, like here, seemingly complex concepts
there when I talk about the space of Thinking
but this space of Thinking is precisely working
we need to do it in order to highlight the structure
and control physical color

that's when you start managing
physical color
then here you can enter
into the structure of the material
any material element
which is located
well basically how far is this beam of light
so we can get out by extrapolation
from a beam of light
get into another system

this is the element that shows
that physical elements can be used
in order to gain control
such as direct control

i.e. for example you can do it this way
that it's just the light you walk on
as if to a source
comes to a specific level
and this level can be cellular
it could be health level etc.

now make a specific control
so this management consists of that
what needs to be highlighted now
their private tasks
put the controls back in front of me

so when you do the management in front of me
i.e. you set your own private tasks
in the form of specific , let's say, vertical pillars of light
let your task be some such
cylinder of light
placed here before me

and try through this element of light
to go out means , in fact, to the management level
which characterizes
and achieving a particular task
inside this light element

i.e. inside this column of light
you must achieve control
in fact, well, there is a concept
something like, let's say , "thing in itself"

i.e. you must achieve
within this system
what you get
by setting up this system
in front of you

Well, let's take it for analysis
my personal practice
there, let 's assume, there is training in orthodox systems
let's say there at the university

so as not to solve the term paper
I just took it and immediately put the answers
but i.e. I put the action into the final result
and absolutely everywhere this was the same from start to finish
if I needed to do something there quickly

then it turns out
Well, in principle, this can always be done
but I tried to do it generally out of necessity

and so let's assume that there are answers there
why then do you need to create the action itself ?
since there is a solution

it turns out that the solution contains an action
this is what we strive for
i.e. universal Salvation is what everyone needs
why do we need to complicate the system
so why do you need to take and attract something from outside
do some kind of complex control combinations

when you set the management goal
in front of me
put it back together
so there is a solution to the problem in this same goal

and now it means you are entering
into this control system
enter it then well as if you enter with Consciousness
in your personal this control column
and try to be within this system
and I will be talking all the time

i.e. try to listen to what I say carefully

try using those methods
these are exactly the ones I just talked about
those that I presented methods today
try these methods
realize the management goal
i.e. to achieve control

when you put the control in front of me
for example, there, three meters away from me
you are here
in your space of Thinking
and the spaces of Thinking do not actually intersect

just like any coordinate system
you think you are in some place
you can't stop each other
you can only improve
mutual control system

because you give light
light is an improvement in control

and when you manage in one place
then this principle
that when many people work for the common Salvation
then the light increases

and the light should be like this
that universal Salvation has already been achieved yes
as in the example with the task the task has already been solved

and I know for sure
that there really is universal Salvation
in the future

i.e. it turns out that I am using the same ideology
who cares
I know the tasks, the technology is the same
or there is equipment diagnostics
diagnostic system

in go out on my so- called personal practice
log out of this system
just go out

and when do you go out
there is no need to look for anything there

look at my personal practice and go there
The Teaching of Salvation and Harmonious Development
my personal practice is also included there
and try to follow this practice
Login

and look, it starts to light up , yes
the area in front of me starts to light up
look carefully

i.e. what is light like

at each point there is a light source
it is practically infinite

i.e. the growing element of Eternity
from your Consciousness

and when do you start
to rush towards oneself again
then you see
What
you are the Eternal

the main thing here is to feel it
and feel it at the level of all technologies
here are those presented, for example, including in today's lecture
where there is an element of the concept of the Soul
and the development of the Spirit of Consciousness, etc.

while doing this, try to do it like this
so that the body your body
controlled the whole situation

I mean yes there is a concept of "logical control" yes
there is a concept of "Spiritual control"
and body control is when
just the body shape controls

here I translated
to a new level of perception
where is the body
control system
and the implementing system

i.e. you are calmly here now
Well, for example, in this room, yes
and your body
exercises absolute control over that
so that there is no global destruction
just because that's the form
that it contains this solution

and from your personal practice I have come to the conclusion that
after all, we have a seminar
i.e. after all, what you do
I add control accordingly

and how does it turn out that it is as you found it

at least many found it right away
someone a little later
but overall
as soon as the element of Infinity of Light appeared
you found the solution
within one cylinder
own cylinder of its task

found because
Well, first of all, I found
secondly, it's easier than complicating something

and it turns out
that you can solve problems very easily
and this simplicity is the state of the body

and here is the state of the body
this is a state of the Soul

when you have a body state
i.e. you feel and embrace yourself
how do you have a body condition
which, by the way, may not be differentiated
as a state of the body
but you understand spiritually
what is this state of the body

and here I introduced such a concept
as understanding by the Spirit
i.e. the Spirit can understand

I see, what does he understand?
but here you understand it logically
see how he does it

and that's when you have
the principle of Spiritual understanding
then you can develop your Spirit
Well, let's say it this way , through logical effort , I guess
to any point in space-time
and understand at any distance
what's happening

that's what's happening there ten kilometers from here right now
if we assume strictly north

I take this point

I understand what's going on there
I just see yes
Well let's say an element of control vision

but I'm doing it now
because you know it

i.e. it can be done
because you know it
I told you

and when you start solving the problem now
try to solve again without the main state of trance
i.e. so that there is no entrance
into some special states
maybe even very pleasant but it's better not to enter

because well imagine you're driving there
or are you solving some problem
are you speaking at a conference yes
now, for example, it is possible at the same time
I can diagnose or work there at the same time
with a nuclear power plant, for example, there in Voronezh

but I have to give a lecture, right ?
or control satellite systems there

and therefore try not to enter into trance systems
let it be well there it can be nice
but make sure it's not trans

i.e. trans is a system of , well, super-fast characteristics
where there may be a lack of a kind of control zone, yes,
everything falls on some external algorithm

in this case the algorithm should be yours only
no trances
and further management consists of
what you should see yourself
through the element that I just said
the element where the Spirit understands

understanding Spirit he can he descends from above
in the form of such vertical rays
he might just come down on you
is coming down right now

and try to see
where is the spirit of the Creator
where is the presence of the Creator
this is your Spirit

it is in this rigid formula
where the presence of the Creator is your Spirit
I repeated it twice on purpose

when you see control from the Creator
you see that you understand Him

because that's what I started with
what do you
can be understood as an external element

and when you relate it
to yourself
I didn't say "take it from there"
"understand yourself intensively"
no matter how much I emphasize it

I said that
do you understand the Creator
when you look at yourself

understanding Spirit

and when you go deeper
here in this well part of my material
you will see what i said is quite simple

in order to obtain universal Salvation
to get action i.e. real action

and here is sufficient simplicity it consists in this
well, not all elements are possible, yes
for example, to put it very simply
but nevertheless there are elements
which only because you listened to them
they always come true

i.e. universal Salvation is always realized
because there is such a goal
a goal cannot exist without its realization
according to the creative plan

pay attention
it exists as a Law of Thought
after all, the external task of the goal
then you are already implemented there
I said that the Soul can be realized outside of you

i.e. this is your Soul
but it simply realized itself at some point in space

when the external glow increases
i.e. the light coming to the Soul is like this
that the light coming from the Soul
and from that part of the Soul that is outside of you in the optical range
connect at the same speed

and the vector coming from outside
And
coming from the Soul
they are like this
what is at the junction of light
vectorality i.e. the origin of light
it almost seems to blur
i.e. light becomes universal

and that's when the different vectors of light
seem to go in different directions
but when they intersect they give
it is precisely the element of such universal radiance
then this is what the Creator does
that's right, in the optical range

it's very easy to trace
just take it as you have time
and look at the optical perception
you change the vector as it were
just by logical effort

where the connection of different vectors of light
gives uniformity
and vice versa, increasing intensity
this is the presence of the Creator

and when you look at this element
then this is the phase of my Teaching
about Salvation and harmonious development
located
in the primary light element

you can enter the technology immediately
i.e. to understand how it develops
so this is precisely the creative level
which is your exact level
well, i.e. what is your personal path in this place
what is your personal task

when you see it
you may well pay attention
on yourself but already with the light of the Creator

i.e. you can see yourself
according to the tasks from the Creator
through the eyes of the Creator

i.e. why do you need it at the moment?
something needs to be done
and what needs to be done in general

this is the most accurate vision
which allows you to work precisely and perfectly
to prevent a possible global catastrophe

i.e. for example , right now I set myself such a task
I personally looked at it and examined it
that there is snow melting in the Antarctic region
so high
the task is to make sure it doesn't exist

after a sufficiently large number of years in the hundreds
This element leads to that
that there is no macro destruction

but if we fold the element here we attract it
then we get
that there is no macro destruction here
there is no macro destruction there

for the Creator there is no time aspect

and we get
that in its single action
we achieve a total absence of macro-destruction
in general, it is possible to achieve the absence of destruction
for this we just need more people to work

and it turns out that this way
although it would seem that it does exist
some complicated understanding
at first glance, it seems to be of a verbal nature

however, when listening
there one two or three times
or there when proofreading the text
I speak quite simple words
I don't write any complicated equations there
these are just words

and it turns out that through ordinary words
without any formulas
it is possible to bring it to the level
almost certain absence of macrodestruction at least
but moreover, you can definitely achieve personal goals
you just have to learn the technology
well, how about deeper, more detailed
or do more of it

because in the end
it all depends on the amount of time there, yes
How long have you been involved in technology?

because well sometimes there are questions there
what time to study
This is of course at the discretion of each person
but I just had cases
when, in general, even from the most serious diseases
people by simply very, as it were, a large number of activities
completely self-healed

well, like with the help of for example, according to a book
"Unified knowledge system"
many people brought me the results of self-healing
where just the amount of time was high

that's how it turns out
what is the volume of training in the Macrosalvation system
This is also target management
i.e. where is the number of classes
may lead
well, it seems to be leading to a more systematic achievement of results

so now the task of management
I'm just giving you a task

what are you trying to do management
while doing so I will watch and work together with you
so that the number of actions

i.e. put such simple control
so that the number of actions
so it was like that in your Perception
that after all the quantity is not
the defining element of control

because if you really manage
many tasks at once
then often you don't have time
there is a long time to do some specific task

so it turns out that this is what
make this control now for the hall
First it's management
what matters is the precision of control
although quantity does matter
i.e. from quantity you get accuracy

put it again
such vertical cylinders
You can already work with spheres, by the way, whoever wants to

inside the sphere
your management goals do so
so that with these three simple methods
the number means the letter and time
those. three aspects of management
you achieve that
that quantity is not decisive

yes so very well
what if you work really hard
you can definitely get control

but now I want you to do the task anyway
more or less, quick achievement

get it in management
what is the number of your own actions
is not a determining quantity
and you will achieve in this system
quality, well, accuracy in general

and do this management by three parameters
first for the universal Salvation
the second in the hall's objectives
and who will watch in the future
this lecture, for example
and the third private tasks
like three structures

achieve fast control
everywhere
here within the framework of a generally rigid sphere
place your sphere projection in front of me

when i say use three methods yes
remember what i said about methods
no need to go into detail
just work

because I have already brought you to that state
which is the controlling state
no detailing required

just work
within the framework of newly set tasks
and that's all

start working now
try to keep track
how is the work on your tasks going
and how is the diagnostics going?

how is the diagnostics going
Diagnose the system if possible
try to watch
start working

If possible, work now
take it easy, don't rush
I told you it was a state of the Soul
it is often a lack of tension

i.e. this is the state
when you can even think about something else
and the Soul works
i.e. you work very easily and you work
take your time

achieving specific goals as much as possible
diagnose them more accurately
diagnostics of the current state
current status yes for example on the body
plus forecast phase

i.e. look and identify for yourself
what yes you have achieved control

very rigid system
of their own identification

Now look around the room
this is already how I give some kind of control structures
but at the same time, as I said
do it, you can do your own thing, well, sort of at the same time
around the hall
look how the hall achieves its goals

i.e. I started the opposite way from the private tasks of the hall
further I approach the universal Salvation

although you had to work
and started working the other way around
I started from the other side

and because external Macrosalvation
this is already something that contains all the controls
this outline of the outer sphere

make your spheres
everyone go to the spherical level of management
work within the sphere
sphere of light
in front of me it's better again

so that the sphere is the Salvation of all
here is the boundary of the sphere this is the Salvation of all

everything inside
Light Salvation of all
you work within this light

the light of my Teaching
what is in action
light movement inside the sphere
which is spreading

on the outer surface of the sphere
and includes

Now move the control sphere
around the hall
to yourself
each one has one sphere yes

it first unites here into one common
you move it closer to you
how do you get a kind of matrix
to yourself

and note that the sphere is across the hall
it didn't decrease

the most important
Make it very clear to yourself
that any actions
when you attract the management sphere to yourself
you put it in front of you, like, ten centimeters away
can you make it smaller
so that it doesn't obscure the view

so you start moving it even closer
and work with it
but this is the area of hall management
not your personal sphere
highlight very strictly

then when you start working in this way
look, it is the sphere of Macrosalvation and Salvation of all
she is the same

and go to this area
just like I said
she is the same
there is no need to do anything else

and when did you move into this area
then this sphere is that
what drives the events of Reality
including moves
moves events forward
or organizes events

and then you can

in the center of this sphere
go to the creating sphere
in a sphere where there is no time aspect

and look how time is collected
how is time organized in general
how to get space elements from time

the same example
a car is driving or a tree is growing there, for example, the second example , yes
or any other there
elementary particle
the movement of a particle is a time trace

time is very easy to extract here
here is a particle moving
fix yes for example
and what is movement is time
take and confiscate

that's how it turns out
what time you took away
This is a very powerful control element.

because the particle was moving at this level
i.e. as if a base for movement

and it turns out
what is the concept of "time" understandable
for a person who
well, how is the event management system
gives a very accurate projection
for any event

for example at a specific time
there at 9:00 p.m.
specific events are happening on the planet

and it turns out
that element of allocated time
it carries precise information about the event
and it is a small element

and here it is
that the element of one time
for example point of time yes
in this case it's 9:00 pm, let's assume

resolves the issue of control
it's a question of knowledge in general , etc.

i.e. the logically introduced concept of "time"
and logically allocated segment
Here's how I showed it
from this trajectory of one point

it turns out that things are logical
have properties
total control actually over information
properties
and the properties can be expanded and developed

and it turns out that the development of properties
this is giving independence
i.e. as if the element of light was being revived

when you bring light to life
and give it fairly simple functions
this is universal salvation
ensuring the harmonious development of the Eternal
and solving your specific problems
and solving all problems in a positive way

then you get
that this self-developing light
placed in this way
it forms the external Reality
towards you
and the external one can form
what is inside i.e. internal
Spiritual level
i.e. the level of development of the Soul
level of structuring of the Soul

if you come to that
that you can structure the Soul
then it turns out that you are
at a very strong management level

and you have to try to do it like this
so that well he has this level of structuring
has always been targeted
for a specific action

and try to make that sphere

which you have highlighted in front of you
in the form of a hall sphere
then the spheres of general management according to Macrosalvation
it was your personal sphere

i.e. it's just another imposition and combination
there was a combination, this is your sphere
what you work with
this is the universal Salvation
and work on the tasks of the hall

for example, here are some notes in front of me
or let's assume there is someone who has the task in mind
and these tasks when I work with them
or I work on my task
I said let's say we do it like this
to prevent an explosion at the Voronezh nuclear power plant

but doing this task
I am simultaneously doing the tasks of the hall
work
according to each task

and when is the universal Salvation
in general, according to the task of each specific person

it turns out that here
combination of control systems yes
at one point in front of you just
gives a general effect

the same as the universality of knowledge about, for example,
that universal Salvation is achievable
leads to the same effect
as management well going already together
from the Soul
Spirit
bodies
and plus coming from those around you

here is an element of distribution
what is spreading at the same time
from many systems
as from you personally
and those around you
but in the same way, although individually

here it turns out why exactly the same
because there is one goal
and in different areas of your management
everything happens everything is controlled

so here I would like to consider
such an element, well, like education
in the section of his Teaching
and show how through this element
distribution and implementation occurs
my Teaching on Salvation and Harmonious Development
through the recovery complex

the thing is that, well, considering
the previous part of the lecture and showed
what is the union of spheres
i.e. the unification of the elements of light
by management objective

educational aspect
precisely through the recovery system
consists in the fact that
what is the element of information translation
bringing information to an object and action

let it be external Reality
or will it be some kind of Spiritual element there
or just an information element
this is the creation of an educational system
very rigidly structured
which stores hard knowledge
first of all about everything
i.e. about all elements of Reality
secondly, it has its own level of self-development

and why is there a strict system
precisely the preservation of knowledge
because there is an element of self-development

i.e. the element develops itself
and contains all the great new knowledge

if it stops developing
it no longer contains this element
the newly created system of all Reality

that's why in my education system

elements of knowledge elements of knowledge
they are simultaneously universal

and that is why I highlighted in today's meeting
This particular element is educational
as an aspect of education

education is taking shape
Well, let's assume that a person reads there , or thinks there
or tries to manage to do it there
in session for some time

Well, if you take
Let's assume three elements of today's methodology
where are the elements that you form in Perception
are what allow us to implement
it is the introduction and dissemination of my Teaching
about Salvation and harmonious development
and through the recovery complex

then the educational aspect
it is in the education section of my Teaching
Here we can highlight a special one
so the Law is a special level
which characterizes exactly that
what knowledge
it is in my Teaching
they are self-developing knowledge
but controlled in terms of mutual knowledge

i.e. the element you created seems to come to life
Well, generally speaking, it really comes to life
i.e. living light
which enters into a dialogue system
with you
and you act as the Creator acts
give him even more creativity
even greater development
and this light is already universal

because you gave this world your personal knowledge
and personal knowledge is you
but only in this place

so it turns out that the light of Consciousness is the light of your Consciousness
begins to develop Infinitely
because it is Infinite in the essence of the organization

i.e. it has, let's assume, the property of revival
i.e. the property of the source of Eternity

revival or living light
this is when he is Eternal
in each of its unified levels

i.e. here comes the light source
he is here Infinite then he is alive

the criteria of living light are very simple

it's just a matter of diagnosing
that the source of light is Infinite
that means he's alive

when you suppose to go further
then you can proceed from this
It's very easy to cure diseases this way by the way
what if we consider the number series yes
example, to cure diseases

that number that forms the light aspect
it is built approximately the same way
which brings one closer to the Eternal Light

but the Eternal is yours
i.e. when you know how to do it and pass it on to others

i.e. an element of your Consciousness
containing this knowledge
in the same numerical series
So, in the educational aspect, he acts like this
what if you take and dictate a number series
then this is the numerical one
i.e. it would seem that the transmission is very simple

but it is the loading part
in this educational aspect
it's in what you know

and you always know
by technology
because the Soul always knows

i.e. simply deeper

awareness of action i.e. why
more precise formulation of the action

and it turns out that external light
what is action
this is already like a kind of complex
containing
as an educational technology
as a technology of learning action, etc.

i.e. external system
very rigidly structured
it is clear it contains all the elements
both self-development and dissemination

and that's why
in my system it is education
I always try to stick to the aspect
when dissemination of information
exactly for example well first of all
this is universal salvation

this is a process that, well, first of all, it is universal
he can't be stopped, he always achieves his goals
and it turns out that the system
should be developed, yes, in this regard, precisely

and then she must have
this is one of those properties that I just said
this property when exists
it is precisely this aspect of a kind of living light

when you look from this aspect
then try to do it now
next control

take the living light defined by me
i.e. shown
and you came to this
Now you are working with this concept
you know him

and take ordinary light
which well, it kind of comes from the light bulb, yeah
take it and sort of synchronize the beams
and first revive the light bulb

i.e. do it this way
so that the light coming from your Consciousness
matched the light bulb itself, for example

then everything external and what is around, well there is a building for example
then it turns out that the space of your Thinking
this is everything that surrounds you
and you see it

try to see what's behind you
try to extrapolate with a quick push
how to see what's around from the building
there on the sidewalk or there at all
somewhere let's say in America
and in Western Europe or in the depths of the ocean

i.e. look as broadly as possible

and look at each of your images

and now recreate yourself from the image
i.e. precisely from the image that you yourself found

and spread this knowledge in the form of light
it is not necessary to detail them
just light up as if

the light that carries this knowledge around
will enhance the perception of others

right at this point
the strengthening of Perception occurs
what you begin to see more accurately
to record more accurately
and more precisely, well, for example, to restore there, yes
more quickly, etc.

when is the restoration going on
accordingly you should show
what is this
to those around you as clearly as possible

of course you have your own perception

but try to show it more clearly
how do you do it
if there is such an opportunity, you have time there

but in general when you work with information
If possible, of course try to teach

it is in my Teaching
the principle of information transfer, i.e. the principle of learning
this is still a fundamental principle

why do i characterize
precisely as the Teaching of Salvation and harmonious development
what you have to save using your own experience

logically it is very clear
the more people work for it
to prevent the nuclear power plant from exploding
the better for everyone

and it's even better when they work this way
there teaching this knowledge yes
distributing them widely
what are special educational technologies
there are special technologies
allowing in the educational aspect
to pass on the knowledge that already exists
that having this knowledge
at the same nuclear power plant
it is impossible to blow it up

because this light that is alive is the same
that he just records yes
what makes this building eternal is that it doesn't explode

and as if when we start talking
about educational technologies
then we must understand here
that technologies are of course different, yes they can be
in terms of there Perception
but they are united in purpose

therefore, our task is very simple
common goal common task

and in connection with this it turns out
that there are no problems at all
there is one light
which means precisely universal Salvation

work on specific implementation
of this light image
especially since I said that all this is in the future
it means that there is universal Salvation

and the task is just
this is yes to move closer to yourself
and implement as quickly as possible

why faster?
because well it's just for the adequacy of the reaction
on the environment

if possible
as if at any moment of global destruction
It is best for universal Salvation to be now
so that this possibility is leveled out and does not exist yes
global destruction

therefore the element of movement
this is like a kind of unique framework of this
which contains these events
it needs to be moved here
and implement the system like this
so that it definitely won't happen now and never

here as an independent work
try to make it so that the concept
which never happens there for example
possible global catastrophe
or moreover there is always Eternal development there
Eternal life of the human body

try to do it here now
as if in front of myself

i.e. as a result of today's seminar
when did you conduct the practice yourself
If possible, remember these states
and work independently
but do it now
achieve your goal now if possible

yes there are some long-term goals
there are more distant ones
but as a concrete practice
It is advisable to practice

i.e. to practice
or on associative Perception
if you don't read into the details of the lecture material
but getting results is a must

well for example there you had a fortune
got the result
remember the state

or then read the lecture material
or watch it there on video cassettes
and receive actual information from a specific package
in the form of a seminar, for example
get a specific result

try to do this
when the hall is working
look what everyone is doing

i.e. well, for example, there is some task that I set
and everyone performs this task
try to watch how they do it
because it's material
when a lot of people listen to it
at the same time it becomes very clear

just look at how they work
one two three people
in your Perception
it becomes clear to you right away
what's going on in terms of management
how to work at all

because the amount of work
although for example I show, let's say, different work
but the quantity is usually determined by that
what are you working on
with some specific finite number of actions
there are for example three actions yes
implementing the core management package

and it turns out that when you look
how are these just three actions
implement human actions
you have thirty options
but there are three actions

and if you look at how the hall implements in general
where there are more than ten people
there or there are three hundred people yes
then it turns out to be about a hundred people per action
you definitely achieve precise control

i.e. it turns out that it is not possible to achieve control
in listening conditions here in the hall
Well, it's practically impossible

and then the question is
and why, well, control or can it be delayed
or be realized at some later time

because then
listen to your Soul again
look at the earlier state
what does the Soul want
what is she realizing at this moment yes

what is the technique used for
which you have now
from the point of view of the Soul
and at the level of agreement, i.e. harmony with your Soul
universal harmony

then solve this issue for sure
as if in a short time , well, you need it

because as I showed by logic
but this is not just logic
I'm diagnosing after all
this information and she
you can just kind of feel it
that it is always realized
if you follow the logic exactly like this

it turns out that even management of private tasks
always achievable
of a creative nature of course

then it turns out
what if you well if we are talking especially about
about self-healing there
or about the restoration of another

it turns out that in order to convey it well
you must first
to a greater extent do it yourself

after all, that's what I call myself
implementation and dissemination of the Teaching

what needs to be done first
how can I be sure that it is this technology
this is exactly how it is understood and gives
here is the exact concrete result

of course there is another technology, mine for example
but the result is obtained
even with some specific technology
It is desirable to disseminate this technology

to emphasize as much as possible
precisely on the effectiveness
that you yourself received the result
they provided, well, they consulted the person
or those around them or they held some kind of seminar
and they were able to
so that it is this method that you have mastered
You took this method and passed it on

for example, well, in my specific practice
let's say I give specific examples
there are those related to the diagnostics of the plane there

if the element of external Consciousness yes
an element that contains the structure of the Soul
specifically the fact of the presence of the Soul
in the outer element

then when moving towards yourself
This is a very powerful healing system.
I just used it in practice
surrounding people, moreover

i.e. it turns out that I, well, quite often
Basically, I just use personal practice
and I kind of show those elements
which practically showed me
for example, a systemic constant result of achieving control
there for example about restoration yes
to ensure that the negative event does not occur, etc.

i.e. therefore, if possible, you use
personal practice
i.e. the methodologies that I give
anyway, I always give it in a practical sense
Necessarily

i.e. I am in control all the time
there is one task
to make sure that there is no total destruction
was universal means the opposite Salvation
and well, ensuring Eternal harmonious development

therefore what does Eternal mean
you must be able to self-heal
be able to restore others yes
and organize external Reality
there is an ecological system, social, political, etc.

and well here is the formation of the context I brought today
what could it be
this is one of the types
which exists in my education system

and it turns out that you have to decide here
with a choice of specific facts
i.e. what method or what
what is the sequence of words
there from my lecture material
leads to specific management

and when you highlight already well quite accurately as if
situation
it turns out that the transfer of information
the further the information is transmitted
one for example yes hard method
the easier the transfer becomes

because the effect is again
well a large number of people
the effect of being united by a common goal

because even in the digital row I have
first level of protection
system of universal salvation
in the numbers themselves

and it turns out that when one even digital row for example
Well, it is transmitted through the treatment of one disease
more and more people are starting to be saved
those who were cured for example from this
or they were restored or helped in the series of events

although I have digital event management series
treatment is not necessary there

and therefore here it is not important there
digital series or is it a verbal formulation
I showed it today
that it is enough to have only one letter
to make the whole spectrum of management

because this is what we are talking about
that the formation of management is such
that the goal must be achievable

because the task
which cannot have, for example, a second option
on possible solutions
the task of universal salvation it alone can be

and therefore, as it were, here we cannot suppose make a mistake there
it can't be allowed there options
what if it can be repeated somewhere there
This usually doesn't happen, yes
even in elementary things

take the same aircraft diagnostics
or there actually transporting some systems
it flies by once
and so that it doesn't happen so that it doesn't happen in any case
some kind of global destruction option
have to work like this
that the action is unique

i.e. this is precisely the development of the Spirit
development of the Soul
when you will definitely save
restore yourself there, for example
if it is necessary for you yes
well, maybe there are some problems there, let's assume, with health

and you can definitely teach
any other person

and it doesn't even depend on age

after all, conceptual systems are very simple
working with light for example
and such simple concepts

where the common goal is formed
it is precisely the attainability that is required
This is exactly what is happening now
as if of universal control in essence

because those who are there, well , doing it, maybe
not regularly or consciously
they do it anyway

the task is simply to convey to them, as if to give them the technology
more controlled
and so that they do it, well, more regularly

i.e. that is why the situation is like this
that it is within your power to do it quickly

that's why I'm calling for wider dissemination
it is my Teaching about Salvation and harmonious development
where would there be opportunities ?
how can I record the situation like this?
so that after some amount of time
it was already stop, well definitely
simply due to the number of people
it's clear that there are no problems
It is in the security system of the future

because in reality
an element of system security
is the educational aspect

what people have personally
this technology
do not depend on anyone
it's true
real and True freedom of personality from the Creator

and they can for example
well, it's quite possible to teach and apply
i.e. they are free

exactly Infinitely free yes

and can develop forever
there you can self-recover as much as you want
restore others, etc.

and therefore it is desirable here
it is precisely in the concept of wide distribution
in terms of it, it's not necessarily there
maybe even by the number of people at once
namely, more in the transmission of the ideological essence there

when each person personally
maybe capable and more
he is already there

he is already there
the main thing is to just look around and apply
techniques that I offer, for example
in the form of fairly simple techniques
as I said, I still don't write out the formula
but I speak in words

I'm finishing the meeting for today

Thank you very much for your attention
you listened very carefully
