

GRIGORY GRABOVOY
The Teaching of Salvation and Harmonious Development
**Methods of implementing management
through the structure of one's own Consciousness**
18.04.2002

Good afternoon to today's meeting.
I will talk about the methods of implementing management
through the structure of one's own Consciousness
for your specific requests

and today's work will proceed in this way
what I will do first means
well, let's say it's a kind of lecture version
i.e. I will show the following management methods
through the structure of Consciousness

and it is necessary to take into account that this will concern
only specific firstly appeals which are given here

and secondly, it will be further
undergo information generalization
for specific, well, further situations
which are not related to this appeal

I will work on requests within three days
from 22.00 to 23.00 today

in this case it is additionally necessary to form
actually thought forms for that
so that during the work
still connect and implement
some following tasks

and in connection with this it is necessary, if possible
after today's meeting it means to fill
Well, that means it's kind of subjective or something
observation protocol
especially after today's meeting
fill it out as much as possible
and send it in about a month at the most
here at the address that was given
's why that's all, well, that's the action
related to today's meeting

it is divided into what I will do first
lecture material
i.e. I will give a methodology for working with specific tasks

This methodology will be extended to other activities
by transferring such universal systems
which I will tell about

and then specifically based on the results
It is advisable to fill out the protocols
and then send these protocols to the post office box

so let's say it in three parts
maximum it will last up to one hour
I'll conduct today's meeting now

so from the point of view of structuring Consciousness
according to my system of Salvation and harmonious development
it is necessary to distinguish in Perception in this way
well let's say the control optical level is like this

replica

just work quietly
the thing is that it is necessary to highlight
control level thus
so that the management itself would be like that
so that the spheres
which you perceive as optical spheres
they were informed

and therefore it is necessary to use
the simplest systems possible to manage
here we should immediately highlight one simple meaning
in the control system through Consciousness

that according to the structure of the world, all systems are interconnected

hence
when you change in the structure of Consciousness
any optical element
you can influence the situation as if externally
for health, for events, etc.

and that is why it is important here first of all
as if a primary algorithm

how does this influence occur

so the influence happens first of all
allocation

it is precisely the target, so to speak, function of the target direction
your actions on the system of general relationships

but according to this system, first of all it is necessary
so that there would be no possible global destruction in the first place
so that there is provision
technologies of harmonious development

in this regard, management is actually
when put this way it is quite simple
from the point of view of the elements of Perception
and it only comes down to that
what do you need to highlight in your Perception
This is exactly the sphere of Macroregulation, let's say
where you provide exactly the first level

i.e. that there is no possible global catastrophe happening
and you provide
in fact the next level of management

i.e. you in the next second
you can do some actions
since the disaster did not happen

at the same time, it is provided and laid down in parallel
element means harmonious development
and also ensures the execution of private tasks

hence
my control system
in this case it is that
according to the system of Salvation and harmonious development
what do you highlight in Perception in different ways
First the Macrosphere
then already a private sphere, so to speak

and make the connection this way
what is your private event
happens at the same time
that you are implementing exactly this kind of Macroregulation
i.e. you do not allow a possible global catastrophe
and ensure harmonious development

in order to do this technologically
i.e. to use simply the elements of one's own Consciousness
you need to use some elements that are quite accessible
from the point of view of your previous practice
implementation well in general, any actions

and now I propose to consider
Four ways to implement this technology

first way
this is the use of concentration by numbers

the second way is to use concentrations on letters
the third one is on flowers
fourth on sounds and forms

fairly accessible technology
and most importantly, it is generally acceptable
in terms of fame
i.e. all these things are well known
and have already been used by you many times

's why
firstly, it means that we need to consider it in this case
Perception model
in relation to that
what do you want to implement for yourself, for example

this is the so-called model of Perception
it consists in the fact that you must first of all
to select, let's say, some optical signal
in your Perception
and highlight at the very beginning
namely the sphere of Macroregulation

here is the concept of "optical signal"
Well, that's basically what you can say
which is a fairly simple concept
but in some cases it needs to be highlighted

and here by isolating this signal
first of all, we need to do this before the start
it is precisely the technologies of using concentrations
as I said
on numbers

words i.e. letters
on color
sound
and form

and it is precisely this selection that consists of
what if you, for example, look at some image
then this image can be imagined yes
i.e. primary optics already exists in Perception

optical signal extraction element
namely containing the sphere of Macroregulation
Well, this element consists of that
and an element of this phenomenon is that

what you can consider
any physical object
which is, well, as if, as close as possible in front of you
for example I can look there physical vision
on the dictaphone
and at the same time imagine a dictaphone, for example, yes, here

and here is the physical layer connection
which is perceived by sight
And
this is the dictaphone that I present
as if superimposing two images
that means as close to my physical body as possible
point
the sphere of Macroregulation stands out

i.e. it is a method of highlighting this sphere
well, like in automatic mode or something
when you form it
from dynamics from action

why is this happening
because if in the presentation
I impose
on a logically existing dictaphone
in physical Perception
what I imagine it to be

then consequently the element of Reality existed
therefore it was ensured
what is not there, well there is macrodestruction

and from here the sphere itself stands out

this is the first method
which later leads to that
that your private tasks they come from
that they are inside this sphere
or are a consequence of the development of this sphere

and here's if we consider
control element as a consequence and as a development
this sphere
then in management through numbers
Among other things, it is precisely this sign that needs to be considered

i.e. numbers that allow you to highlight
the next number i.e. the next sphere
and the numbers that provide control over the investigation
i.e. managing your private event

well, a private event could be a cure
you self-healing
i.e. or treatment of any other person
maybe it's not a person, but a plant, an animal, etc.
control of any system of Reality

that is why the concept of "private event"
quite a broad concept
the main thing here is to narrow it down right away
for your specific purpose

thus making such management
you take part immediately
in the Macrosecurity system
and thus you ensure
the most concentrated
Well, let's say it's a flow of information
which provides solutions to your problems

and you carry out a certain mission
on the implementation of the global security system

so here we need to understand
that it is precisely the concentration of information
for this management
it happens because you work

precisely through the Macro level

thus highlighting such a sphere
the superposition of two elements, so to speak, in Perception
and what is perceived by sight
so you are already actually working

it's best if it's your action
is a consequence of the Macrosphere
within this sphere
i.e. your boundary conditions are clear enough

the sphere itself is white, sort of silvery
small diameter
you just mentally enter this sphere

and then work by numbers
i.e. the allocation of a number in control
consists in the fact that
that the number 1 simply denotes the sphere itself
and for example the action itself is the number 2
which is the center of the sphere
and in this action you need to include the meaning of your management
what do you want

if it is for example a cure
Well, let's assume there is a cure for osteochondrosis
then you should formulate
this information
and either consider, let's say, a section of the spine there
or you have to formulate it in words
and introduce inside
to the center of this sphere
and simply denote it with the number 2

so the management consists of just that
what do you highlight means inside the sphere
between the center
and as if the outer surface

i.e. the number 1
for example, select the number 3 or the number 4
i.e. the next number
which is organized due to the fact that
What
you concentrate

as in the center of a sphere
and on the sphere itself

and the technology is actually very simple
with some practice
you start to find a place
where is this number third or 3 or 4 appears
as if in your Perception

and it is quite specific
it means it is fixed in the same place
and your task is just
concentrate on one number

what does this number have to do with 3 or 4
why 4 is a way to summarize information
just in case we take into account
some external nuances of Reality

in fact, it's more about
about focusing on the number 3

for example, when trying to cure osteochondrosis
number 3 means Well, it is located
on the radius
between the center of the sphere of Macroregulation
and its as if inner surface

and on that radius
which is directed specifically to you
i.e. to your physical body
Well, it often happens
that to the closest point of the physical body

so if we are talking about
about curing diabetes, for example
then the vector is directed in the opposite direction

and the number 3
is located at this radius
which is directed as if in another direction
the opposite side from you

it's enough to just go through it mentally
there by radius
and you can, in principle, fix this point

as a point of resistance to the movement of thought

then you can just in this place
concentrate
and treat diabetes in this way, for example
and in principle work in any situation

thus focusing on numbers
Well, in this case it is very simple
and it consists of the following
that you yourself highlight the number

as soon as you can single out the number
then formulate the problem
and how to introduce it into the center
it's not a particularly difficult task

imagining only her
here as if in the form of a central point
or there is a small sphere

then highlight the number 3 for example
this is just a task
well, like, practices of working with this Macrosphere

second principle
this is work with words
i.e. the principle of this management is that
what are you working with actually with letters

i.e. since the words can be anything
then it is enough to select the control systems
in letters

and the highlighting in letters
Well, it doesn't differ much from the number in this case
you just need to highlight it
then the sphere of Macroregulation again
as far as possible and according to principle
which means which is close to the principle in numbers

the only difference is that
that in numbers it is a more discrete system
i.e. you impose a mental image on the physical one

and in words

you work within the framework of your Perception
all the time at the presentation level

i.e. the management goal is written out
well any goal
goal in words
It's better if it's not written out too long

then you take this goal
Well, how do you remember this text?
at least figuratively
at least some part of the text
here you remember twice
in one spatial place near you
and in another one, as if nearby, yes

and now you don't have to write it out
you can simply formulate it
and just get two images
of the same text

and here is the connection of this text
best at a specific point in front of you
i.e. it is better to work in physical space
in front of you
so that you have stability in your work
creates the same effect in reverse

the sphere of Macroregulation is highlighted
i.e. it stands out very easily
with such a simple, as if technological, technique
what shall we say, I have an application form here
I can Well, imagine as if it were in Consciousness
and I can imagine, for example, in the place above the sheet
I can be like at the level near the sheet

and mentally connecting
for example, on the same physical sheet, moreover
I can generally work
on the same physical sheet
but through Consciousness
i.e. as if through the representation system

then the lower left border of the sheet
if it is a planar system
highlights the sphere of Macroregulation

i.e. in this case the principle is the same
selecting a sphere is an action

so here the logical status is clear in that
mean when translated onto paper
practically does not change
i.e. working with the presentation
it's like working with physical space

so that means this is what you need to do to make this selection
we get that this sphere is already here
there is no need to look for it, i.e. no need to waste time
or concentrate on that there
in search of this sphere

the lower left border of this sphere is already ready
further the principle well it is basically the same
you take the text then well how do you archive the sphere
or you can just enter it
inside the center of this sphere of Macroregulation

and further here are the further actions
this is already a special technology
you continue working after all these actions
you work, it turns out
Well, in the lower left corner of the sheet
's how you work
what do you mean you choose the letters exactly like that from the text
what is the top part the top part as if symmetrically
I can just take and divide the letters symmetrically
into two seemingly mechanical parts

upper part
this is information of Macroregulation Macrosalvation
and the lower part is what corresponds
your private task

as if informing the two parts
top what is it Macroregulation
text just informing text
and the lower part informs
that this is the solution to your problem

you get the control effect
and you get a solution to that problem

which is set out in this text

so here by the way it can be applied
the principle is basically the same number
it is possible between
the sphere itself
and the center
the central sphere inside which
management is taking place

For example, you can do concentration
also on the number between two spheres

at this concentration
you're just enhancing the effect

you can find the number in the same way
that's the one I was talking about
at the moment of concentration by number

the thing is that well in this case
the principle is actually very simple
when you listen to it, let's say, several times

the speech simply boils down to this
what do you end up with
recorded text
well, it's like you're dividing it into two parts with a ruler
upper and lower
approximately symmetrical not necessarily exact

you put it in the upper part
Macroregulation information
well, you just think
what's on top is just the physical part of the text
corresponds to the information of Macroregulation
and below is what corresponds to your particular problem

and so making a series of , well, actually, such concentrations
along the text
just on a physical sheet
by conducting concentration in this place
i.e. inside this sphere
i.e. technology must be represented

you get the control effect
implementation of control according to the text task

next level of management

an example can be given

No, I don't specifically include an example here.
I just give them an example to those who need it

then next level
this is a level of control through colors

so when we say color management
then first of all it is clear that the concept of "color"
it's quite voluminous in general
or infinite in representation
concept

until we apply color to some surface
then we perceive color as an infinite system
i.e. it's like color information, actually

and in this case, working with color
implied
exactly how to work with color information

i.e. there is some primary action, some primary basis
information that seems to contain color
i.e. well, like a color base

and therefore working with color
is divided
for a fairly simple job in this regard

you highlight at the level of Thinking
namely the backing of this so to speak color
Well, for example, it could be an unripe nut
where inside is your target information
and you are just just
it's like peeling off a nutshell

you are the only one here in the sphere of Macromanagement
is obviously inside
together with the purpose of your management

i.e. you don't separate the work with color here

management objective
And
Macroregulation sphere

case you have access first of all to that
what do you do when you start working
you should know right away that you will not share
Firstly, the sphere of Macroregulation
with the scope of your tasks
it's like this one
inside color information

and the color it lies
here on this surface of this sphere
and so your task in management is to
to get the right color, so to speak, color
take it and mentally disconnect it
from this sphere
and make it infinite
that's basically the whole point of this management

to know what color to choose
here you can use
Well, it's a pretty simple principle for finding a color
for a specific task

here is the principle of finding the color, it consists of the following
for example, for a completely practical example
Let's say you need to cure angina

then I concentrate
in the center of the highlighted sphere
Be careful here though
because I assign all these actions

I don't use a single sheet of paper , for example
I don't use physical space
I work only within the limits of my own Perception

the difference here is fundamental
work in physical Perception
precisely in Perception
there may still be physical space
but precisely in Perception

I can perceive

physical space such as a table
but at the same time the space of Perception
may not be here

Well, that is, in principle, one can imagine
what can i perceive there
anywhere in this room
or at any point in Reality

i.e. keep this in mind
what is the space of Perception
another space in this case

why do i give in this case
different systems or something
because when you just in practice
you work either one way or the other
It often happens that, for example , you have it at hand
there is no concept of such a thing as, let's say, there is a table there
or you can use written text

so for those cases
when you need to make management fast
and for example, not to use any systems there
which are delayed
It is better to use color control

Usually this is in cases where
Well, that's some kind of complicated problem
let's assume if there is angina which can lead to a heart attack
then it's better to work through color, for example

so here as soon as you
concentrate on the task
highlighting the color exactly in the center of the sphere

then light
it's just starting to be optical, well, something like that
that it begins to color
and you see that color
which is the control color
in relation to this system

those. management problem
comes down to highlighting a given color

and the sphere of Macroregulation
why is it united here
with the scope of your particular tasks
because color is like an infinite system
in the structure of Consciousness
does not provide, for example , strict boundaries for differentiation

so in this case
Macro regulation is united
with your area of control

when you concentrate
in the center, let's say, of this so-called "nut" in quotes, let's say yes
you can select any element
but it's better to choose something close
let's assume we first work on a known image
there is a nut onion
i.e. on some very well-known elements
where you can separate the skin, so to speak

and when you first introduce this element
in optical space or something
then the work is in the center of this element
it is clear enough to you

Quite clear
where is the center approximately
some kind of, let's say, fruit or vegetable

as soon as you start working
with specific objects
constantly switching
still with images to work with images
It's better not to work for too long
for example with specific elements of Reality there physical

because in this case we are talking about
what about the Salvation system
need to use often
sometimes very fast super fast
access to information
well, whatever happens there, for example
some catastrophic event

if you get used to working with the image
so to form an image you spend time

and in this case it is better to work with the image
which does not relate to physical Reality
but just mentally form
this sphere
concentrate in the center
and here is the first color that seems to start to flow
suppose for the treatment of angina
this means let's say this
purple color option in this case

you take it and as if by mental effort
shoot in a flat version
some kind of film on this sphere
remove until [...] until this color does not mean it is removed
from the surface of this sphere
and does not dissipate

at the same time in the space of your work
the coloring means it becomes light purple
i.e. the light is rarefied
gradually only some signs of this color remain

if you still perceive signs in this, well
better do it again until you see it again
for example, there's white there silvery white
the same sphere

i.e. you have to work until then
while minimal signs of color are preserved
principle
the logical principle of this control
consists in the fact that
what does it mean you actually information the target
make it endless
due to the fact that in Consciousness
color is an infinite quantity

as soon as you select a color element
well, as if from some general volume
considering that this color
this is the solution to your problem
you give infinite distribution
of his task
and the control action occurs
by the system of general connections

i.e. in this case, well, quite a lot
more assistance is being provided
from the side of, let's say, creative forces
who participate in this process

Well, the principle is very simple
what is it worth for you to announce
and the information comes to the right level
it is being implemented
a reaction occurs in physical Reality
i.e. for example healing
or the realization of some physical event

at the same time you also participate in Macroregulation
i.e. you provide Macro-creation

next level
Job
this work means through sound and form
here the work is very simple
for example in relation to what I just said

there are absolutely very, well, kind of simple
aspects of this work
but nevertheless it is necessary to see here
what is the concept of "simplicity"
in work, for example, with certain elements of Perception
consist in the fact that it is, as it were, a simple level
he is often on a very saturated next level

and if you work on simple coordinates
then you can meet
with strong resistance there
or development of that level
where it is necessary to apply it frequently and discretely
like deep control
i.e. well, kind of non-trivial methods

that's why there is the concept of "simplicity"
in this case it should be considered exactly like this

and the explanation here is that
what if we consider the concept of for example form
i.e. management through forms
then in principle

or there, for example, control through sound or sound form

then in Perception

you can see the shape of the sound

and at the same time hear, for example, at the level of Perception
this sound

here is the organization of the form

or the organization of a kind of pre-sound system

this is that system

which can be organized

before the beginning of the optical element of Perception

i.e. the form can be organized

as if an element of Reality

but at the same time the form can be as it is clear

well, i.e. you can assemble it from elements of some kind of constructor

but let's say the elements of this constructor themselves

can be perceived in Perception

such as the pre-elemental level

because we work in Consciousness

through some elemental level, for example

i.e. it is either a number, let's say, a word or a color

and if we want to ask a question

and how to collect it in the first place

color

Here's what it was like before the color, let's say

then we can work

or with a comparable concept let's assume sound

which is organized by vibrations

suppose light structures yes investigative optics

or we can consider

that we organize sound through form

or there for example color

and here is the work with the form

in this case it is really quite simple

because it's a level

which is located before the level

optically densely revealed information

but at the same time if we want to work
through structures we assume forms
then a connection is needed here
as if with a correlating system
in this case it could be sound
those. vector system
guide
form control purpose

the principle is very simple
if you take a magnet
and let's suppose to scatter the crumbs of iron
then in that case when the magnet is brought closer
to these crumbs
they all start moving there, for example
towards the magnet

i.e. the forms should be immediately controllable

and that's why in this case
I show sound and shape management
simultaneously
where form is a system of organization
Sound or something like a system of perception

to control in this case
it is enough to put it in the form of a sphere, for example
that macrodestruction does not occur
there under any combination of events
Eternal harmonious development
and plus there is also a solution to your personal problem
i.e. as if into one form

it can be any form , generally speaking
Well, let's assume there's a sphere
or the one you identify
precisely as its form

i.e. it is important to identify here all the same often
individual form of management
if in the future you will develop the system
sound and form

and when did you discover this form
then it is important to consider what sound from your point of view
is the control sound

in relation to this form

and this is actually a very simple characteristic
you start to, well, listen, well, train
and try to start hearing the sound
as soon as you see the control form
i.e. you just highlight it
from three simultaneous compositions, as it were

then the management task
is just to keep the concentration
the intensity of this sound
Well, let's assume that the mantra principle of management is that
what mantra organize
some high or low concentration there
sound
and it lasts for a while

in this case you just do n't work verbally
and you work only for a short time
through the structure of Perception

but in principle a permanent action is being done

Moreover, in this case you can
unlike perhaps some system of generalized mantras
you can do very specific management
which you pledge
to the center of this or there in some limited system
of this form

so once again
as i said the principle is really very simple
do you work here
even before the optical level began
reproduction of information

but to collect the form, i.e. to hold it
in a structure where there is no information
i.e. you don't have any reason to
in this case, how to "catch on" or something
if I may say so in quotes

i.e. there is no reason to be oriented with Consciousness
so there is nothing to do in general even in this regard
there may even be a closer concept

that you don't even have any space
in order to work

and it's like when there is no external space
i.e. there is no optical form
then there is no level around which you need to work

i.e. if you work there
with numbers
or there with letters
with color
then at least you have
what is color for example a letter or a number
or any other image of Perception, for example

in this case your task is to form
and therefore on the one hand
ease of management
it may not even be described by any word

because the word
the word is formed after that
when there is a revealed part, at least a letter

and that's why it's well as if before
pre-verbal yes level of management
but it can be most effective

and that means that we should generally understand here
that the work would seem to be in simple coordinates
in this case it may actually be
the system is actually the opposite
well, like, fundamentally more complicated
the main thing here is to keep the shape as if
in the space of Perception

well, as soon as you are already in practice
you will be able to maintain this form
then in principle there are no special problems here

and there are certain methods of , well, control , let's say
behind the thought form
which is developing
in conditions, let's say, photonic elements
now there are, let's say, some kind of unique cameras
like there are video cameras there

which register a thought as, for example , a beam of photons

if in this case we consider
from the point of view of this video- well let's say the camera yes

how does thinking happen
which organizes management through forms

it's very clearly visible there
that it is like the center of the organization of the World
so, well, if we take the information of the whole world, for example, yes
and consider that this is optical information of a certain sphere
then the center of organization of this information
and the center of thought
in this case they begin to coincide
with such work

because you are going out
to the level of information organization
and accordingly this level he certainly requires
well often work on many parameters in many directions

so in this case let's say it this way
wording
formulation of some management goals
often it is already an investigative system

and here it is realized to a greater extent
Spiritual control system
where you can actually work
without formulating words or images there

but simply by making logical control
have on the Spiritual aspect
that state which means control
means based on the Spiritual aspect

and then you get
what does this action mean
is carried out
due to a specific state of the Spirit

then it turns out
this state is this control

here you need to train very , well, quickly

control system
through means let's say the education of a kind of training
remember Spiritual states under control systems

and later this is a Spiritual state
it is still universal

if we are talking about that
what are you trying to achieve, well, a healing system
any one disease

that means in this only Spiritual state
and the concentration of the Spirit at a specific point
first of all, well, you achieve healing
for example this particular disease
but at the same time according to a unified criterion
so, well, there is the spread of self-development of creative systems
other diseases can also be treated

while somehow differentiating
just a Spiritual state

so when you, well let's say so
through logical control phases
go to control
it is precisely through , for example, the state of the Spirit
the state further already for example of the Soul

then management well in the future
this is already a fairly calm phase of your development

and at the same time you can do some household chores
or without doing active management
to actually be an active manager
as your memory is your Spirit
works exactly according to the most optimal systems
well, which you got in general from the logical phase

and here as an independent work
Please try to translate if possible
logical element
well what i said
this is work with the logical phase of Perception
there are numbers, let's say, words, letters, color, or there is a sound

translate for example to level

namely work through the work of the Spirit

and then you will see
that here is a universal principle of dissemination of information
it starts working very quickly

i.e. if we assume Well, let's ask ourselves a question
how to translate cure
a specific variant of diabetes mellitus
example, there is a cure for some other system
or from some other disease
there is nothing specifically identified there

i.e. healing can be of the body's systems
but it can be considered for example at the moment
Norm

i.e. there are very subtle transitions here

and therefore let's assume that we are talking about healing
which records the normal status
at any diagnostic level

then it turns out that the development of this system means
It is best to conduct it through the exit to
specifically on the system of Spiritual concentrations

then you get
a fairly stable form of governance
which in principle is just that
the state of the Spirit at the moment
in relation to this task

and that's when you look at this aspect
then generally speaking if you translate it back
on the optical, as it were, logical principle of control
then it is quite clear why this happens

Well, Spiritual structure
it's like, let's say, high concentration light
if we want to normalize, let's assume some process
which is reflected in the logical phase
we just need to move this light there
and high concentration of light
solves a series of questions
unlike local levels
logical phase of control

so here you can basically use it
as if synthesis of control
although, strictly speaking, this is not, let's say, an end in itself
namely, to work only on the Spiritual phase of management

if the logical level is more acceptable
then work on the logical

but here is the generalization phase
i.e. for example in this case
Well, I tied the controls, let's say, to specific tasks
which are set out now
or in the form of an appeal
or who, for example, mentally pronounces the task
in today's meeting
for the purpose of managing there according to his personal tasks

then the second level
Well, who listens to a lecture, for example?
can solve their problems
this is the second level of generalization
it's like a second optical ring

and the third task
it is to create universalism of this kind
so that someone perceives
could pass this technology on to others
so that in the future, without reducing the optical level, as it were,
maybe by the intensity of the glow
it was transmitted, well, let's say, endlessly
with the aim of educating that structure of Consciousness
which can self-heal, for example, the body
or the own structure of Consciousness there
or external Reality

and therefore here is the level of generalization yes
to convey to a very distant time
It is better to work on the Spiritual aspect
then the principle of transmission is also infinite

if i need to transfer to
well, at a specific level, for example, at the current time
then I can enter into the logical phase
and convey specifically
well maybe even at the target level

if these are doctors for example
then the transmission element must be like this
what do doctors understand

if there are children there or are they builders
then accordingly it means yes you can transfer it to them
who knows anything specific
you need to use their level of knowledge

if for children
then it's better to transfer it there
from the point of view of provision there
creative development of children
i.e. taking into account the tasks there intensity of children's development

i.e. if possible, as independent work
look at the levels of information transfer
management there by Macro- and Salvation
due to the system of Consciousness
and exactly so that when transmitting
Well, the technology was transferred with the same intensity.
what does it mean, for example , that you listened and understood

these are the tasks of such a transfer
are also being implemented
well often quite quickly
at the level of the state of the Spirit

because the state of the Spirit
transmitted at the level of training and management
Well, it's quite simple and fast

and you may have noticed
there when they were trained in different systems
what , for example, including school
that teacher who is there
May be if we were talking about
about some explanation of the subject
was in one state or another
it was possible even on a normal physical level
see how much more intense
increases means the transfer of knowledge
when you see a familiar state

here is the principle of recognition
the principle of a seemingly familiar state

associated with a fairly specific technology of Macro Access

In fact

This technology is access to any control system
i.e. it is possible to stop the explosion of a nuclear reactor
It's possible if a plane crashes there
materialize the board there
or restore the pilot's Consciousness
in case there well it happens

I have encountered situations in my practice
when there was poisoning among pilots
and there it was only possible to restore
because the cabin is closed for example
managed to restore

i.e., actually , here we need to see another principle
that in the conditions of man-made development
remote control of external systems
in many ways this is already a very necessary path

and in the future, with the so-called technocybernization of, say, society
this can happen at all there will be only one option
when will it be possible to track
moving external systems there
simply because you can control them

and here I am on this topic by the way
so I make , for example, a system of certain crystals
who can grasp the idea
and give a control impulse
for example technical systems

i.e. well anyway the type of technology will be like this in the future
what is taken into account in this technique
the option is first of all that
that technology should not destroy man

and for this you must be able to
for example, at the expense of , let's say, your Consciousness
determine
exact coordinates of the technical system
and for example, indicate the trajectory of development there, yes
of this system

That's basically what I wanted to say today

here at today's meeting
according to technologies, let's say, management
related to specific tasks, such as today's tasks

because as a rule the tasks presented
they largely shape
exactly well as if a chosen ideology or something
methodology for the material that I present

and the task of course, well, that's what I think
if possible, then your task is to
so that this material can be distributed

i.e. it is desirable to master it exactly like this
that after the first levels
which you simply listened to, for example, during a meeting
start distributing immediately
technology
and it's best to get it right away
controls

i.e. there is no need to separate
for example the training phase
from the phase of action

because in the technology of Salvation
often even the minimum information is like this
that it should be used immediately for control
to obtain specific results

so if possible, keep track
two levels of results
this is a result at the information level
i.e. you perceive a certain problem and shift it

and the second option
this is when you have some task
well, which is revealed at the physical level
you are dealing with this task

if possible more well how do you track correctly
how did you apply this system ?
how it was implemented there may be in detail or in general
and what are the results at a specific time

i.e. that's when you will practice constantly

then the control system
it will become more and more concentrated for you
or more well simple and clear

in a certain sense
it will just be a normal state
which is true, the one that allows you to decide
at least that's the question
that there will be no possible global catastrophe
That's for sure
and plus solve private problems in parallel, as it were
in the direction of Eternal development

so well , I think that these meetings
must pass so that even audition
let there be what you perceived there as a series of separate elements
It is better to take action immediately on your specific tasks

except that of course I will work from 22.00 to 23.00
three days in a row today and tomorrow and the day after tomorrow
according to your requests

myself yes let's say so apply control
but in this management I will be investing a significant part
in the future there is a transfer of knowledge
about today's meeting

and if possible
use it as intensively as possible

first of all, right away, here's what you can do now
and plus what you will have for example in the form there
let's assume there is a dictaphone recording, etc.

can you use some of my material
Well, from earlier lectures here

Well, that's about it
I'm finishing today's meeting

thank you for your attention

all the best to you

Goodbye
