

GRIGORY GRABOVOY
The Teaching of Salvation and Harmonious Development
**Access system from the level of Consciousness
into physical or informational Reality**
20.05.2002

I will start today's meeting with this
I will explain the principle of control
based on access system
from the level of your Consciousness
into physical or informational Reality

and in this regard I will first explain
what exactly is needed first of all
identify
in the structure of one's own Perception
to be able to cross over
from the level of one's own Thinking in fact
from the optical level that makes up your thought

to the action level
i.e. the level that applies
or to physical Reality
or to informative

in the informative I suspect that
that there is some kind of predictive phase of the development of events
if you want to change them
therefore it is necessary that the level of Thinking be such
what is the optical phase of a future event
was subordinated
precisely to the controlling level of the current Thinking

so again we are talking about that
what should you
enter into the informative Reality
from the level of one's own Consciousness

due to the fact that well, your own Consciousness
also represents in fact
level of a certain light
i.e. a person perceives in the form of certain images
which can be attributed to optical phenomena

and if we consider Reality in that form
in which it currently exists
that all processes can actually be described
Well as if we were simply considering this point of view
from the point of view of even orthodox physics
that any processes can be considered
like waves
and corpuscular
i.e. light can be imagined
like a wave
as a particle
everyone knows this

if we use this phase in collective Consciousness
where does it say that light can be imagined
and like a wave
and as a particle
then it is quite clear that even if we consider
micro level phenomena
then looking at the micro level
quantum state in the form of light, for example a photon

you can very logically simply move on to that
what if you are in your own Consciousness
i.e. in its optical glow
what you imagine and how you think
carry this glow
to the level of a photon or a quantum state of matter
then you can influence this substance

so what we are talking about is that
what is it easy to influence
those. principle of influence or so let's say access system
what does it consist of

in this case when i say
precisely about the task of Macrosalvation
i.e. the minimal task
for example, preventing a possible global catastrophe
and in parallel or simultaneously
this is to ensure harmonious development

this is exactly the optical phase
which is the minimum required
in order to implement
this is the level of transition to external Reality

hence
the task of preventing, for example, a global catastrophe
it is also an access element in this system

and if we consider the position in this case

do as the Creator does

then what we're talking about is that you should just
organize the action systematically
and this action should be extended to development
i.e. to give the external system autonomy and stability
Well for example, the system on which you operate
or in the goal system what do you achieve

that's why today i'm showing management methods
which in the target, in the ideological sense, so to speak
aimed at that
what you owe at the expense of your own Thinking
i.e. due to the optical phase, in fact
which you can control
because the elements of Thinking can be controlled
as you wish
be able to cross over
into the structure of external Reality
and that means making management through the Macrosalvation phase
through the Macroregulation phase

so in order to do such an action
I propose to consider it this way today let's say
closer to the lever principle
the principle of organizing this management

and it consists of this
what is known in the phase of collective Consciousness
what if you use a lever
where one shoulder, for example, is much longer than the other
then we can move the big one for example some thing
i.e. using simply the length and the linear length of the lever

and considering that the phase of collective Consciousness
this is actually also an organization of the wave principle again
since any rigid, i.e. physically manifested matter
can also be considered as a system of waves
i.e. as a system of oriented photons

and then it turns out that for the transition it's simple
in the management of physical Reality
and there might be a task there
or treatment
or event sequence management

it just needs to be spread
here is the same lever
from ordinary physical Reality

and this method is quite simple
as if in a syllogistic execution and understanding
i.e. the task is clear enough

you need to strengthen the glow of your own Consciousness
in order to be able to control the glow
also within your own Consciousness
but with that glow
which can be called
or the purpose of management
or the implementation of the management goal

and that's why it turns out that you work all the time
within the limits of one's own Consciousness
and the control level is
or objective Reality
well, that is, what happens in physical Reality
for example healing
or the organization of some series of events

or informative Reality

then the task of control
is also the organization of access
and in general the need to control the result
at the expense of one's own Consciousness

i.e. first of all, as if by the first characteristics
execution of management
is again your own Perception
therefore within the limits of Perception
How do you form an action?
so you control it
or give an analytical or generalized assessment of the result

and already the next system when it manifests itself
at the level of seemingly objectified factors
this will already be the second criterion
in relation to management

i.e. here you need to know that your personal assessment
your personal level
here is primary in terms of the control task
for your personal actions

and this principle is well the principle of a certain responsibility
by Macro Access Level
level of Macromanagement
he must be remembered

so the first method is that
that you are using a regular digital system
to carry out this management
Well, let's say it 's the implementation of the leverage principle
transition to structure
for example physical
or informative
Realities

for this you select in the event part
that's the goal of management
what do you want to implement
number of events

i.e. for example if you have one event
the goal , for example, is to cure some disease
this means word 1
if you have 2 events, well 2, etc.

i.e. if possible it is necessary there
number of events to be less than 5

and when you do such a staged part
that's clear enough
what well For example there is a need to cure some disease
this event is basically one
although the disease can be complex and multifactorial
but in this case we can say that it is one event

and then you take this number means
reproduce

in the system of one's own Perception
in three positions

those. number 1 for example so this is the number
which in the principle of leverage should be as if strengthened
from the point of view of physical Reality

therefore we must organize
transition system
into implementation
i.e. the goal is healing
realization is healing the patient is cured

and so in order to use the control system
from the point of view of accessibility
then in the lever version, as it were
I have these principles
Well, that's exactly how it's controlled
so that in physics it would still be quite simple

now I'm just starting to pronounce it
how does the management work
Be more careful here if possible
from the point of view of the organization of this lever

i.e. the lever is just for the sake of it
well, the segments between these numbers
and the numbers are the same
for example one event

number 1 which is closest to you
this is the corresponding number
my Teaching about Salvation and harmonious development
i.e. you put such meaning into this number

the next further from the physical body
number
this is the goal of your management
i.e. for example, to heal or do something
this is the next number further away from you
i.e. you organized the shoulder of this lever

and then again the same number
you're just on that number
you put in the principle that the action has already been implemented
for example a patient is cured

and the task of management is
as if due to concentration due to the duration of retention
just on everything in memory
in the control memory, so to speak
this number
be able to at the expense of
first of all, highlighting these numbers

i.e. photons move like this
what if you highlight the number too much
closest to you
then the light reaches the next number 1
to the goal of management
your management goal

if you highlight even faster and even more there
then you
light from two numbers reaches
until the third day again number 1
where the management goal has already been achieved

and the main thing here is to create a rigid system
so that in the Perception of numbers, if possible
did not move

the more rigidly you organize the system
in your Perception
the faster you achieve your management goals

and the distance from the first
well, close as it were numbers closer to me
area of the Teaching on Salvation and harmonious development
until the second number of your management goals
there should be less
than the distance from the second to the third

for example I put the area
my Teachings on Salvation and Harmonious Development
I put the number, for example, in 50 centimeters

at a distance of 55 centimeters I set the control target
cure for example from diabetes
Well for example, the patient who is currently
here in a specific hospital
where am i now just well here I find out

and then I put it, for example, at a distance of 80 centimeters
again number 1 where the patient is already cured

and here the task is as follows
What or the number that well, the patient is already cured
implementation of management goals

i.e. you should already have moved into physical Reality here
in this phase of management

and either this number is a little lower
as if a stingray is going
i.e. horizontal segment and slope

or it is leveled
and you work only on the horizontal line

and this work is on the horizontal line
Well, it already reminds me of the principle as if the lanterns were getting stronger
i.e. the number closest to you shines

then the second one adds glow
i.e. the number of photons increases

and you move on to the implementation of the management goal
where it seems to already be shining or where it increases the glow
third flashlight

and that's how you will highlight it more
in general, there are actually 3 numbers
i.e. you will create a photon series
Push
towards physical Reality
and the further the third number is from you, the better
but it is best to work no further than three meters
in this system
with a number from itself

i.e. it is best not to place the third number
further than three meters
because then the number moves into the space of Thinking
in this technique and
and it is better to work in physical Reality

and when you highlight this number

then you should already have characteristics
that the action was realized
i.e. you have done the right management
and at least in this iteration
you have done everything that was necessary
for the technological efficiency of this operation

you should see what you would consider
on the Spiritual level of Perception

this is where the development of the Spirit lies
in control following the number three
that the glow from the number from the third number
reaches the first number
i.e. you got a reverse wave of photons

then in principle in this iteration
can you finish this action

the number of actions can be completely different

for example, it can be one action or several
duration from a second there to several minutes, etc.

so here we must imply
what for you to implement the transition
precisely into the structure
for example, physical or informational Reality
you received a reverse wave
in principle you can strengthen it
i.e. to correlate the position of the number
the third from you

and thus further improve management
by simply moving even the number

either horizontally further closer
or in a lever version

i.e. here the lever works as if in reverse
i.e. from physical Reality
you act in the structure of Consciousness
although at the level of Thinking
act from a small shoulder to a large one

and when you do this action

then you should actually say
after you have performed this action
check that after you
you don't do this kind of management anymore
for some time yet
well this lever is like this design
is in your field of vision

therefore you have achieved stability in management

if you do management
and the structure seems to dissipate almost immediately
then you are not well as if they didn't carry it out
the proper amount of concentration
this needs to be repeated several times

I am just offering this as an example now
for example, make management simple for specific tasks
I suspect that these are private tasks
this is what you stated, for example , in your appeals
or do you have it in the form of thoughts
solving your private problems

and now I'm literally following there
the logic of organizing these numbers that I mentioned

make such control right now
precisely for their own particular purposes
what you have just addressed

do this management if possible
it takes no more than one minute
i.e. in this case do it quickly

I will try to accompany this management
well, if possible, some kind of algorithmicity
related to that
what you will organize maybe step by step
depending on what I say

i.e. first organize it in front of you
number of actions yes as I said

these can be any numbers, possibly up to 5
first you give meaning to the number one
whichever is closest to you

that this is the area of my Teaching on Salvation and harmonious development

the area consists of two elements
this is the prevention of a possible global catastrophe
and ensuring harmonious development
and the solution of a particular problem

i.e. you can even imagine that the upper part of the number
this is precisely the prevention of a global catastrophe
and the lower one is the solution to a particular problem

i.e. the technological nature of the field of the Teaching lies in the fact that
that when you go out on ^{this} on this date
there is an exit technology
into the space of, for ^{example}, physical Reality
and therefore the number is ^{actually} closer
from him ^{well} as if the management efficiency is higher

then you place further
management objective
identifying the number of actions
arrange try to arrange so
so that in your memory , ^{well} , in your Perception
hold two numbers already

and then when you hold two numbers
the third number ^{as if} where is the third number
this position can be individually identified

the easiest option
increase the distance fivefold
from ^{well} as if from the first number to the second
i.e. the segment should be approximately five times larger

and you can set the goal for implementation
i.e. the management goal has been achieved

it's one thing to formulate a goal ^{and} manage it
those. starting action
the second goal is achieved
realized in physical space
or in the informational space as well

therefore these are different concepts
Can you formulate the goal?
but here is the implementation

this happens for example in physical space
if this is a cure
or some physical factors of events

and thus you already find
here is the coordinate of the third number
Well as if already in an extrapolated or adapted version

the method consists of the fact that there is a glow as if the system
horizontally
the first number displays the second, etc.
second third
including naturally first third

and here it is important then to make a differentiation
let's make it so that in the first iteration
this is control of physical events only

the concept of "information events"
it is necessary to transfer to the level of, as it were, external space

and the second iteration
this is information event management
i.e. the goal of management in the third number
Well , this is more of a prognostication
i.e. the prognostic phase depends on your Thinking
and highlights the one you need for yourself
namely the prognostic phase

it is important to remember that
what are we talking about
via Macroaccess Macroregulation Macrorescue
this must be remembered

and the general purpose of implementing these methods
is actually a learning dissemination
and plus the use of yes for your own purposes
direct access systems

when a person can influence
on the system of Reality so
that Reality does not destroy it
for example, primarily due to macro-disasters

and thus it means you have accomplished this goal
well which I called private i.e. your goal

or this is an appeal
or what you put into your thoughts
i.e. only two
only two options

there is no other option
here in terms of the setting task

then you can use another option
i.e. well there let's assume the task is another person
enter into this system there without defining them correctly , etc.

in this case we are talking about your personal tasks

then by doing this management
now do the next control the same
which already extends to the tasks of the hall

i.e. everyone who is currently in the hall
just right here in this room
go to the overall system of tasks
let it be number 1
I'm just assigning this number

i.e. the task of the hall is one task, as it were
one task to solve all the tasks of the hall yes
all other tasks are under structural things

and here we are again working through the number 1
showed

This includes your own task
try to define it
what piece of this number
this is your task
in what place

because your task is still a subset
and you kind of identify the number 1
again, I am in charge of this department
i.e. you reveal it to yourself
this area of my Teaching on Salvation and harmonious development

then the next number is 1
goal room task
purpose of appeal for example

Well, I can assume I can take it there

any goal

and say that this is, well, a subtask of the hall

and that is why this is exactly the goal

Well, yes, there is a reason for example appeals

must be clearly presented

as a reason as generalized as possible

but still, in each specific case it is a specific thing

this is how to approach Thinking

and more distant

I work horizontally, just from myself

Here next to me is the first number 1

after 5 centimeters the second

and after 20 for example there are centimeters

if for example by five then it turns out 25

but two is possible in general

in this case it is not a rigid system after all

when closer

It's better not to move any further

the more than fivefold system

and there is already the implementation of goals according to the tasks of the hall

also number 1

now i am in control

you do it with me at the same time

controlling this number 1

my task is actually to get

I have already received , for example, a feedback wave from the control

but my task is to make it sustainable

process

for example, to carry out control

and for example, not doing more, yes, management , for example

the next minute there

maybe later it can be done but not now

I knew for sure that the controls are not shiftable

in this system

and here is the vector, well, not of displacement, i.e. stability
it is quite simple in logic
Sustainable management has been made
and the time interval has passed

hence
at the time where the management was made
it's already firmly fixed

and to change it, for example
it is necessary to change the structure of time channels
i.e. a fairly large amount of information
this is information from the past

and the past seems to be tied tightly
in the system of past events
any information

and that's why i use it
the principle of leverage, as it were Well, it's a physical principle.
in this system
because we fit into the mass of the past
where do these rigid communication systems exist

and then it turns out that we
as if making control
made it general enough
taking into account all the connections of all elements of Reality
at least in the current time iteration

i.e. you are doing a kind of separation of the current moment
and the next moment you perceive it simply
Well let's say if you're looking at some
as if a thing was given to you in the past
you always have a clear time for giving
and at the same time
you still perceive this thing in the current time
i.e. nothing happened to the thing

and here is approximately the same principle
that the stability phase must be sufficiently rigid
when you sort of re- analyze it

it can be ignored in detail
but that's exactly how it is here
rigid lever principle of transition as if

into the system of Reality

that is exactly what needs to be observed
the factor is already the same Reality as objective
because the purpose of management
is the management well objectified yes
i.e. in the physical, let's assume , Reality

next steps we will do it right now
this is the task of everyone who, for example, will use it
direct access technique
tasks generally speaking of all people there of all future people
Macro Rescue tasks

let's assign this as one task again
task for example there is a systemic harmonious Eternal development
and again we will make the same number 1 in front of us

therefore the second one is already bigger
and the third one is already sort of automatic
do you know where it is located
in your Consciousness

get a reverse glow
and closed the control loop

i.e. in this case it turns out
your own control
except that it is rigidly fixed
in the system there are time coordinates
in your work system yes

at the same time your body
i.e. you well as if in general personally on the Spiritual level
organism together with the cellular system
has a learning characteristic from this glow

and plus you also made Macrocontrol
This is also a self-regenerating system of self-healing

then the next method of control
i.e. in this case I
the control method uses numbers and light segments
I'm done and moving on to the next method

he is ideologically the same

i.e. the task of today's meeting is to be able to move on
in the management of physical Reality
and simply instead of numbers it is used
it means the level of control through letters through words

for this you only need to do everything
arranged geometrically in exactly the same way
Push
away from the physical body
just write it out as if
that the first phrase is the Teaching of Grigori Grabovoi
about Salvation and harmonious development

the second phrase is the goal of your management
do the same thing again
It's better to immediately make appeals according to your goals

everyone writes out their own goal
at a distance of, for example, 5 centimeters from the first phrase

It is desirable that there are no more than three sentences
to close as far as possible in the final sense
as in some one sentence

when they wrote out even an approximate estimate
the second phrase

the third phrase is the implementation of the management goal
Just write it down at the office right away

let's just work horizontally
here are written as if vertical letters yes
the third position is about 25 centimeters
from the second entry

and here is the implementation of the management goal
be more careful here
i.e. if you write implementation or control
look how
well, by transferring, as it were, the structure of one's own Consciousness
at least at the elemental level
on the third entry
look at how light is perceived
the surrounding walls for example

in principle an element

Well, at the information level I mean
i.e. consider what is ^{for example}
level of physical Reality
what is perceived by sight ^{yes}
and look ^{as if with} physical sight

then you can see
what can be developed here
control clairvoyance system

i.e. here you can see
where visual information connects
with information ^{actually} Spiritual
where the Spirit sees and translates into a logical phase
i.e. information of controlling clairvoyance

so when you are in the third phase
this is in your Perception
it is an element of physical Reality
including physical Reality

and now work again
first ^{physical} only physical Reality
i.e. what can be objectified in physical Reality
the purpose of your management

and moving on to the second phase
i.e. in fact you fill it with ^{meaning}
third entry
or change the entry
or just fill it
taking into account the information factor
i.e. the prognostic phase of physical Reality

for healing ^{well for example, take a diagnosis there}
ulcer disease, ^{let's say of} the duodenum

and then if we take such a position ^{yes}
and we will compress the task correctly
make this summary control
here is a specific task that currently exists

the patient who is now
^{Well as if he is not in the hospital}
but ^{for example, we took this task}
which is ^{like} a model problem

It doesn't really matter, by the way
patient
this system is quite uniform
diagnosis is also a form of information
so working through this diagnosis
Generally speaking, it can be used universally
in relation to any patient, naturally yes

what is the universality of management
that in this case we are dealing with
that management of a specific diagnosis i.e. cure yes
third position healing
from duodenal ulcer
how would it characterize that
that this applies to all cases
concerning this particular diagnosis

but if we want to use another diagnosis
we need to do the following control
i.e. a change, generally speaking, of the formal part of the formulation
changes the management structure generally speaking as a whole

i.e. if we , well, it would seem, take some other diagnosis
osteocondrosis let's assume
it seems to be the same thing yes
we write osteocondrosis
but the principle of control still changes

Here you will see what
as an independent work
what is the change in control light characteristics
in the system of Perception

if we have
for example, the task of managing the event part
i.e. let's assume the problem is purely economic
increase well Means let's assume that the incoming amounts are yes
this is an economic problem
related well there with the activity of a specific person

hence
it even matters here
how does the amount come in

so if you introduce a principle

the incoming amounts are distributed to
again on Macrosalvation at least in part
you see that there is a difference in the incoming amounts
is also fundamental

i.e. you can see that there are receipts there
there are financial resources, knowledge and experience
or what you do there to other people
for the purpose of simply for the purpose of some specific

if you still constantly imply
i.e. you enter as if into the upper part
this is precisely my Teaching about Salvation and harmonious development
to the Macro Access System Macro Control
then you see that the color spectrum
is immediately stable

here, if possible, making management
make it so that it is stable
was the best in this management right away

Now go through your tasks again

focused on their task
which were in the very first management by the way
It's better not to change them

i.e. we work all the time on the same task
which was in the first management
somewhere there is time, well, from maximum up to two minutes now
to implement this task

so write as if mentally
The Teaching of Salvation and Harmonious Development
The Teachings of Grigori Grabovoi on Salvation and Harmonious Development
in front of you

then write the management goal
in 5 centimeters for example

and about 25 centimeters
write
implementation of management goals

you need to write
it needs to be clearly formulated

if you write the goal of management
how the implementation of the management goal is formulated

I explained that the goal, for example, is to cure a disease
and realization is the disease is cured
this is fundamental

if you do not clearly formulate the implementation of the goal
then you will get scattered control
i.e. the achievement will take longer to occur

because in fact the methods are quite elementary
in terms of implementation , yes
the main thing is to know the design
how does it function there
in real time here
what is the principle of speed
the principle of stability, etc.

next cycle
made the same management for the hall's tasks
i.e. they simply went out to the hall's tasks
write there again the Teaching of Grigori Grabovoi
about Salvation and harmonious development

next goal
the goal is simply management
the hall's tasks

and then don't write the word "goal"
and just write "implementation of the hall's tasks"
i.e. now it's all clear what we're talking about

and just make the following element like this
quite effective in terms of time reduction
so as not to return as if with Consciousness back
logically
due to the light wave going back yes
to the first entry

how to work optimally
learn to look for some non-load systems
for the system of one's own Consciousness

in fact, we are talking about
about quite significant work

in terms of management

i.e., as if focusing on the reverse wave
and how about you go back on the escalator
for the third level

i.e. there is a reverse photon wave
just like you sit on it and come back

i.e. you do not use willpower
use it
use investigative systems already
of this method

and do the same now according to the Macrosave system
i.e. Salvation of all, organization of events for all, etc.

if possible, here in the third task
work more intensively

if you have a task there well the task of everyone yes
what does it consist of? It's a fairly general concept.
you can output the image

For example there is a normal harmonious development of the planet, let's assume
see the Earth and in iteration there for a hundred years, etc. yes Infinity

or withdraw
to the level of simply informative glow
work on the tasks of the whole world
i.e. just a glow connected with the tasks of the whole World
that's all

i.e. there is no need to look for some best particular tasks here
or be able to accumulate the general structure
in some specific action after all

if you work specifically
you do it faster and you have faster access
if you are looking for yes how do you work in search mode
you are delaying the management time

next control method
based on color management

Same old same old
the only one for the access task
or both physical and informational Reality
color is used

in this case it means work can happen
in a vertical plane level

i.e. you represent the color
located, as it were, on a vertical canvas
and this color should just be different for everything
in the first iteration of control

for example the vertical color that is closest to me
and approximated and designated for example
there in silvery white color
I designate as the area of my Teaching
about Salvation and harmonious development

the next one there for example means color
well, which can be completely different
you can work on macrotasks at once

Well let's assume that the goal of management is that
to prevent the outbreak of a nuclear war
between for example Pakistan and India

I am, for example, a light green color
I move away to a distance of 5 centimeters
from the first vertical plane

then, well, after 25 centimeters, everything is the same
for example, in blue I describe the implementation
i.e. there was no nuclear conflict
i.e. a conflict with the use of nuclear weapons
between Pakistan and India

i.e., you need to work very specifically
i.e. do not generalize
it is clear that it is desirable that it does not happen at all
but in this case we are doing
very specific work

and therefore at such and such a distance
a very specific implementation is found

and the principle of this management is that

that at the same time you, if possible,
do it with me right away, work like this
in the space of Thinking

so that it is silvery - there is white color
it was shining so intensely yes
so that the photons would be mixed up

with for example a greenish color there
made it less green and more lightened

accordingly it turns out
green and there is silver
falls on for example blue color
does this color make it more blue or something?
with an admixture of even green shades

i.e. this is the usual glow of photons
Well as if a monochrome beam
i.e. we make the goal of implementation shine
not monochronic but rather multicolored

and the logical principle of this control
consists in the fact that
what is the stable phase of control
usually carries more than one example
Well it's not like the color is saturated, yes

i.e. if we have several colors
then in principle we can achieve the same stability
as if we, for example, simply concentrate
on some one better lighter color

and in this regard the phase of stability is
mixing colors
in this administration

but since the task is still
to overcome a certain boundary position of Consciousness
i.e. there is Consciousness and there is physical Reality

then in this case we work
with informative Reality
here is the blue plane, this is the informative Reality

any plane dimensions

for example me well there are supposedly four dictaphones
who are standing next to me
and it is possible to make them basically Infinite
these planes

if you make them Infinite
then reflected inside the planes
signal
There is such a concept in orthodox physics
that "the reflected signal can gradually fade away"

and here it is reflected inside these planes
any one signal one photon for example
it's gradually leveling out
i.e. reaches a stable position

and if we have in the orthodox understanding
well, certain concepts
then they can work in this system
also on us

here in the concept of "color" the advantage is that
what color
and for the orthodox system he is the color
as if for a physical system
and it is also the color for Consciousness

here is the transition to the physical system
Here you can do it quickly enough
when you control with color

now make the same control as I just said
It is desirable to fit it into about 30 seconds
precisely for their own particular purposes

first plane area of the Teaching
second private task goal
and the third is the implementation of your task

when you work with implementation
Better limit the third plane
specific frameworks if possible

but at the same time maintain a kind of gap into Infinity
in some part, well, in some corner it is not closed
there is a subtlety here

to have an exchange with external information

when did you make this control
as far as possible as if from oneself
from the Spiritual of its own system from the Soul
illuminate all these screens with an internal glow
those. light it up yourself
emit the light of the Spirit and the Soul of development
personally

because in the end it's about
what are you developing with this method?
The spiritual principle is actually

planes if they start walking in front of you
and I deliberately gave a short time of 30 seconds
then return it back by force of will

and make them just tough
well, how about taking A4 sheets and putting them in front of you
and just make them tough

and try to highlight the first one more strongly
the first one is this sheet like this let's say Yes

so that it can even be like a strong light
there the second and third ones lit up everything

and then this appeared when this
of light as if from you
coming from you, for example , horizontally
into physical space

then you can see that this is actually a pillar
Well, well as if already glowing
it is possible to highlight universally as if
optimize any system

for example, by bringing this light to a person
you can cure it
just because it's in front of you
got into the glow zone

do it fast enough
the next level of control is 10 seconds at most
specifically for questions from the audience

and the next level of control in 5 seconds right away
go to Macroregulation issues
make it almost instantly

and that's when you do it almost instantly
then here is the transition as it were yes extreme glow
i.e. it appears as if
Please note that the glow in this case
as if self-reproducing at any point

i.e. it's okay as if a living glow
the light that lives
the light that lives outside yes

but living outside the light
This is your own health, among other things.

because if life
the glow of life from outside
and next to you
it means you are healthier because of it
well and the environment and who is nearby
or who even thinks about it by the way

that's why when it comes to collective management
then the task is precisely this kind of Macromanagement
it is resolved quite quickly

as a task, for example, here
I just put it in front of the audience
in front of those who will watch yes for example, a video recording
just assume a specific task for the month of July
so that there is no war with the use of nuclear weapons
for example between India and Pakistan at least until July
but in reality there was none at all

i.e. emanating from this one-time action
glow
must implement this system in Infinity

and when you suppose you solve this problem
at the level of well, here's a collective option
for example , you need to solve a problem from 22:00 to 22:03
Let's assume Moscow time

then you will pay attention when you decide everything together
what a glowing effect, well, the glowing effect is from you
and when you decide at different times
what is the difference
as an independent work just work
what is the difference of collective management
and the difference, for example, in private management

and keep in mind that the broader the tasks you solve
whatever they may be
there, so that, let's say, a nuclear reactor doesn't explode
or some Macrotasks for Salvation

the more intensely and more you actually do
including for yourself including

because the deeper you go the deeper you have an entrance
the more you solve your own problems
This is a logically quite understandable system

how do you manage large arrays and systems
the more appropriate and precise you are, naturally
you perform general and specific tasks
Well as if the level of skill is so let's say

the more information you work with
the more material it is easier for you to work
with deconcentrated well if there are some private ones there
trivial or not so difficult tasks

simply at the level of managing your tasks
Of course it still exists
principle of personal access factor
and then here well there are nuances, you can just figure it out

when you manage your tasks
and why is it required
or one or the other time
to carry them out

this is as an independent work
or reading some universal control systems
which I give on the lecture material on the methods
you can see how to speed up the management in general
coming from you

the next method of control is the fourth
it refers to management by means of forms

in this management, if possible
whenever possible when you use
forms for management
pay attention
what is the distance between the shapes
translate
into the distance on the Spiritual basis

i.e. space that is physical
in front of you
this is the Spirit that contains
form data
i.e. your own Spirit

and in connection with this it means
Well, act the same way as I already said
First of all, let's take the form, for example, a sphere
remote from you for example, 50 centimeters
the diameter can be any in general
but it is a circle, let's say, or the boundary of a sphere
should not affect your physical body

i.e. the control is always in front of you
i.e. the diameter should be selected
Well, not big, let's say 10 centimeters
this is the sphere of my Teaching on Salvation and harmonious development
let it be, for example, silvery-white

i.e., if possible, some light tones
give form anyway in your Perception
although you can choose those tones
which you like here

in this case, the color is not of fundamental importance here
although of course it acts in a control context
but when you work through forms
then only forms work
there is such a method

the next form is deleted there for example
from the end of one sphere to another
for example choose 5 centimeters
and accordingly further than 25 centimeters

from the second sphere to the third

the task of management is to
that it is necessary to align the diameters of the spheres
so that they are the same
and moreover, the same as in the first sphere
i.e. the sphere of my Teaching about Salvation and harmonious development

i.e. at the Spiritual level, or rather to a greater extent in practice
the tasks are that, for example, like this
take there Let's assume ancient Tibetan practice
development of the Spirit through forms
when the balancing of forms developed the Spirit yes
into outer space
they could heat the rooms well in general, etc.

then here is exactly the same principle
that you carry the glow from the forms

putting
that's where the forms are yes
in your space of Perception
but Perception can also be Spiritual
it is not necessarily only logical, i.e.

and therefore you go forward simply by an effort of will
transfer forms logical forms
keep in logical phase
i.e. they should not dissipate

just the outer space holding them
Well, if I presented the form, yes
why doesn't it gradually fall down like a balloon

i.e. collective Consciousness implies
that there are Laws of Collective Consciousness
which also relates to the Law of Attraction

and then a person has somewhere in general
at a certain level of Consciousness
the principle arises that forms can gradually descend
i.e. this all applies by the way
and to the management of other systems
not only to forms

because it has to be supported by something

what is written or the number there, let's assume

so that's when you move to the Spiritual phase
control
then the Spirit does not depend on attraction
The Spirit shapes Reality most intensely yes

primary status is formation
Soul and Creator
and when you move on to the Spirit
pay attention to what the glow is
the optical phase of the Spirit is different

try to speak logically when you speak
about the Spirit
see what a difference it makes
in terms of Perception

because when you learn to differentiate
what is Spiritual Administration
only by color by glow

well if there is for example some kind of color system there yes
sparseness intensity color characteristic
even the sound characteristics
at the level of subtle perception

then you will be able to control more accurately
but again, it's the principle
this is the development of the Spirit to such a state
so that there is no macro-catastrophe
and you solved your private problems

thus balancing these spheres
and be sure to do it with me
after all, you can do it simply on everything
working with the mechanism
yes, by the way, you can enter the goal later

It is known that the first sphere is the area of my Teaching
about Salvation and harmonious development
second goal
and the third realization of the goal

when working with forms, the goal can be entered later

and there is a certain universalism in this
work with the sphere
you ^{kind of} saturate it with meaning in the future
and it turns out that you simply work universally
as if you already remember that these spheres can be quickly saturated
and then you can basically control instantly

thus highlighting the controls
from the first sphere
you will immediately receive a ^{kind of} glowing cylinder

which can be so illuminated
that it could just be ^{like} a cylinder
which disperses even the boundaries of the sphere

and make the control now like this
as we did before according to the algorithm
i.e. make the control in about 5 seconds
for their own particular purposes
do it very quickly

so here's how to do it very quickly
it's enough to imagine at least
pieces of these spheres

it is not necessary to identify in memory
or there in Perception
the whole sphere

so do it again very quickly
at least the glow from the sphere , well, literally in 2 seconds
solve your management problems

if possible, so that the third sphere does not balance
was rigidly fixed
within the limits of this light cylinder, so to speak

let it be horizontal management
no need to lower the third sphere
let it be a horizontal control system

and pay attention when from the third sphere
the glow went to the first
Well, the circle is closed, ^{yes}
move on to the next level of tasks
control over the hall is again almost instantaneous

i.e. memory is already in effect ^{here}
automatism begins to act
i.e. there is no need to even detail the spheres
i.e. to reach the third level quickly enough
and get just ^{information} , in fact
i.e. get the level that the action has been completed

because the more you work
the faster you complete levels
Well in general this implementation

and the third act
that's the principle of Macrosalvation
in this system do this
what is this action
^{as if} done far ahead
those. regardless of time

i.e. you did it
this action it acts ^{as if} constantly here
i.e. there is no time for action
i.e. work in a timeless interval

because if you need to do it like this
so that there is no macro-destruction
then this needs to be done in advance ^{yes}
so as not to use such a concept as ^{there}
"no time to do" or "no time left"

and therefore work with spheres
allows you to go to the Macro structure
mandatory i.e. Macrosalvation in any case
when time is ^{kind of} a relative term
i.e. external characteristic
and the action will always take place

and now working with spheres
just as an independent work
work so that you try even somewhere
bring them closer there combine them somehow rearrange them
look at the position of the spheres ^{yes For example}
leads to that
that the time factor ^{is kind of} absent

for a certain type of disease

for example, those associated with the spinal cord and the brain
element of withdrawal , as it were
removal of the time factor
leads to a fairly rapid cure

so it can be used
as a technological approach
when the time component
is removed from the management level

then the next level of management
consists in the fact that
fifth method
that you manage in principle the same way
but with the help of sound

for this you just find some melody
or some one sound there, a note for example Yes
Means well and what about the one that
can you imagine how
what is the strike of a key on a piano here is a note

and you're just on everything
closest to the sound
you again give meaning to my Teaching
about Salvation and harmonious development

the next sound is the control target
i.e. here you learn to give more
precisely as if to an external system
to give meaning to management i.e. to appoint

this is quite an important characteristic
because when you study in general
assign control to an external system
in fact, you learn to move on immediately
into the system of Reality, for example, by appointing

i.e. they appointed that some kind of problematic process , yes
my health has become unmanageable
a person, for example, was cured
just appointed

and therefore here is the principle of appointment
here is the sound and the information is entered
what is considered that this sound

this is what characterizes the information
some specific action
closest sound

Everyone can choose the sound for themselves
which one do you like

and geometrically again
this is so for example, some small speaker
is located at a certain distance

after 5 centimeters again the second speaker
goal and management
and after 25 centimeters this is already the realization of the management
goal

the task of this management is to do so
so that the sound of the first speaker yes
a level close to you, so to speak
namely the areas of my Teaching about Salvation and harmonious
development
it would have sounded about the same
how is the sound of the second and third

i.e. as if well, balance the sound level yes
it's like you're turning up the volume
and you make the next one louder and the third one even louder

then it turns out you get
approximately background sound level

and when you work through sound for example
it could be some kind of melody

i.e. you basically make management independent
independent of space
Well as if of external space

because sound can sound and go away
quite arbitrary
This is a characteristic by the way
some kind of universalism in management
because the more universal the system itself is
sound is not a rigid scheme

and in principle not even light

i.e. we are in a logical understanding
when we listen to sound
we don't control it
where does it spread there yes
we can calculate in a physical model
for example how does it spread at all
but in the collective Consciousness
this is a fairly passable system

so when you work through sound
passage into physical Reality
can be fast enough
because in physical Reality
sound is not a rigid system in general

so when you work
Well, through a rigid system
in the system of my Consciousness as I explained
like a lever system
With
not a rigid system
you get a fairly balanced position
and now stability no longer needs to be backed up several times
Here

then here stability is already in that
that the sound spreads sufficiently
Well let's assume it's chaotically wide there
and in principle it is as a rule
reaches at a certain volume yes
control object

and so it's like here
this is the method that is good for it

try now in about 2 seconds
make your own management for a particular task
through sound

then for example there is control over the hall in a second

Well as if the management is done in passing
i.e. right away
i.e. you have completed the cycle and the glow has appeared
all controls are there

and then at home you will sort out the details

and almost instantly

but in the interval there should be some time there are milliseconds
made management on Macrorescue

according to the tasks of all those living there, all those who will live there
later, etc.

This is where I end today's meeting.
If possible, practice for 5 days
intensively

Of course we can go further
but within 5 days preferably from 22.00 to 23.00
need to do well how to manage this
if possible, at least for half an hour
plus there is also a special task there
look at this particular section
from 22:00 hours and plus, for example, 3 minutes
for collective management
on the task of removing a possible nuclear conflict
between Pakistan and India for example

be sure to check out the difference
when you personally at another time
and when we do everything together

since this task is supposedly set for July 2002
but with prolongation into Infinity
i.e. the reflected beam of light goes to Infinity

i.e. apply the methods that I just mentioned
selectively
Which one did you like more, for example?

thank you for your attention

best wishes
