

GRIGORY GRABOVOY
The Doctrine of the Earth
04.11.2003

Hello again
the topic of today's seminar
is my Teaching about the Earth

First of all, we should consider
in this structure of the Teaching
that the Earth is intended solely for that
so that people live

i.e. all manifestations of the Earth
in terms of, for example, the external structure
structures of interaction with external space
structures of precisely Divine development
are aimed at ensuring that a person lives

therefore, considering this structure of the Teaching
First of all, you can immediately see
parameter including Earth Rescue
from a possible global catastrophe

for this it is necessary to consider
that deep connection of the Earth
With for example with human Consciousness
with the fact that on the territory of yes , exactly the Earth
let's say it's happening from above
in the plan there for example, a possible disaster
from bacteriological including destruction of possible
because the Earth is very reactive
to the structure, for example, of the super-bacterial type

i.e. here is a bacteriological weapon
in fact, it can also cause
the structure of the Earth's decomposition
into enzymatic components
which is generally enough at the moment
not sufficiently explored

so when we talk about the structure of the Earth
we must first consider
human development parameter
towards a deep understanding of the Earth

in the structure of the Creator

because the Earth is also a part of the Creator
this is also the structure of God's development
in terms of precisely Infinite Life
accordingly, it should be endowed
functions of Eternal development

and from here you can see it quite clearly
Earth Eternity level
as a structure developing together with a person

if we consider this position
as well as the structure of the Earth's development
towards a person including
then it becomes clear
that in my Teaching about the Earth
transmission of information
namely educational information
is exactly that
that first of all the Earth was created for Eternal life

then learning happens almost instantly
from the term even "Earth"

here it makes sense to consider
that position of the World
that sometimes a term has a structure
as if Eternal or Infinite control

in this case it's Earth
has precisely the term for example Eternal Management
even through the structure of the last vowel sound, for example, yes
if we say "I"
then we mean that, for example, there I am a person

if we want to then consider the structure
within the limits of well within the limits of your Consciousness
"I" where I am
then the concept of "Earth" specifies the place

i.e. Earth is a place for human development

and at the same time, here is such a seemingly discretely broken term
there is "Earth"
then we always mean in Perception
that the Earth and man are one

i.e. a person looks at the Earth
as a structure for its growth and development

and therefore in my Teaching about the Earth
First of all, we need to consider
The spiritual connection between man and the Soul
in terms of Earth Perception

i.e. a person on the Spiritual level
perceives generally speaking
development of your Soul
in the structure of the Earth

i.e. first of all the Earth turns out
in the field of collective Consciousness
consists of the Spirit of man
expanded to the knowledge of the Soul

when we have this phraseology
we start to disassemble
it turns out that for that, for example
so that a person can recover
let's assume we want to restore health
or make a resurrection
or, for example, to produce self-resurrection
in the structure of interaction with the Earth

It is important to consider here
state of the human soul
in Perception of the Earth

i.e. a person perceives the Earth
as the Spiritual state of his Soul

here is a very important term
in terms of what the Soul still has
a certain spiritual state

and this is the level of Spiritual state
just like the Physical Body of the One God
personifies that the Spirit of man
it is considered in this case
as a projection of the Soul of the Creator
i.e. the One God
to Earth

that's when you start using these terms, for example
Well let's assume there to write out or listen repeatedly

then the connections are visible here
between the Spiritual state of the Soul
between generally speaking the Soul of man
and the formation of the Earth

as soon as we approach
to this point of knowledge
we get that the Soul of man
knows every parameter of the Earth quite accurately

in principle the Soul already has it
in general, knowledge about the whole world

but it means exactly about the Earth
knowledge is first and foremost
at the human cellular level

i.e. a person perceives the Earth
as very close or you could say so
the closest structure
in terms of Eternal development

Well, if we extrapolate, for example
consider such a position
that there is some for example there is an object
which develops in outer space
and it is aimed at Eternal development
this is such an object as the Earth

then we are with this object
we can produce
certain elements of interaction
i.e. just logically pose the problem

and having looked at
what elements interact
from God's point of view

then the first element is
it is the existence of this object
in the conditions of Infinite space

i.e. in conditions when, for example, from one of the sides
there may be a possible appearance of a comet
some unknown processes are possible

then you get the object itself
should interact with a person for example yes

in order to find a way out of this situation

i.e. this is an object, well, in fact, it has
the same development properties
what a person is

and that's why when we talk about it
what does it mean happen
well, some nuclear tests there, yes
some environmental problems are happening on Earth

then from the other side we can consider
that the Earth, for example, does allow these structures
if we consider
precisely as the structure of life on Earth
i.e. the Earth as a living organism
so that there would be some elements of further development

i.e. the Earth is acting wisely in this case
allowing a person to produce, for example,
some actions
on the surface or there for example there in the depths yes
that means somewhere under the surface of the planet

here it turns out that the structure of the Earth's development
looks like a pretty reasonable structure
related to that
what if for example there is a very large planet there
then some, well, structures of a smaller nature
there we suppose for Saturn
there is interaction with the same comet
which is dangerous for the Earth
Well, in general, it 's completely problem-free

it turns out that the Earth can go
on the way, for example, increasing the size, yes

the easiest way is when people are resurrected
the sizes are increasing
i.e. one of the statuses of the Earth's development
this is the resurrection of the departed

and the second status
if for example they show it in some movies
that weapons can be developed there
and a certain comet
we can assume that there will be an explosion to stop it

but in reality the Earth is not developing
into a structure of precisely ^{an} explosive nature
in essence the Earth as the structure of God
it gives only creative development

and these are the development systems
precisely of a destructive nature
^{there are, for example,} macronuclear weapons
it's more like a structure, more like a development of the human mind
in terms of free will

i.e. a person can of course be there
test some systems
but for the Earth for its real Salvation
global destruction systems
they are not effective

that's why I was talking more about this word now
as "structure" as "structural systems of connections"
^{for example} the Spirit of man and the Earth
or there are the Souls of man and the Earth

in essence there are systems of fundamental connections
which talk about that
what is the Earth and man
this is unity in the plan of Eternal development

at least as the cradle of ^{humanity}
and civilization Earth is naturally located on that
what the heck Earth
the original source information is always preserved
^{for example there} in Eternal Development

if we consider a simple model problem
it could be purely mechanical
here is an element in Eternity
^{well let's assume there} is some big sphere ^{there}
where all elements are Eternal
here is the center of the sphere, it must also be Eternal

if we ask ourselves the question
and in Eternity
where is the initial level that brought ^{yes}
to the entire external structure of Eternity

then asking such a question
for a person
we come to the Earth

and when we ask ourselves
in general, in principle, on a Spiritual basis
then we come to God
moreover, to the Physical Body of the One God
which also interacts with the Earth
in fact, on the same Spiritual status
what a person is

for God, who came, for example, in the Physical Body
he also walks on earth
and it turns out that in this case this is the criterion
which is His on the Spiritual level
does not separate from a person

i.e. Earth
this is the status of Spiritual asceticism in general
God and man
God and man on Earth
have equal development status

because it makes sense logically
what if we talk about the moon
then people there walk around in spacesuits, let's assume
and this is not a natural habitat
for a person

but if we want to develop
towards there Infinite space
that is the concept of "spacesuit"
i.e. something that looks like a human body
at least it reflects its shape yes
and contains, for example, oxygen to begin with

then these systems
they interact anyway
with the shape of a human

and it turns out that the task
all the external attributes of development, let's say, of a person
it is also the preservation of its form in essence
which is the closer to the human body
the closer it takes on the parameters of a human form

and when we consider it from these positions
for example Earth
and at the same time we look
that it is still more spheroidal

then we move to a more connected structure
for example with the physical body of a person

we can consider it ^{there}
that the human head is closer to a spheroidal structure
and to which the products are more related , yes, Thinking reproduces thought
still closer to a spheroidal shape

i.e. it turns out on a material level
for God
the material structure of the development of Thinking
this is in the material manifestation of the Earth

i.e. God practically thinks in such categories
^{there} first of all ^{yes}
like the Earth
which is necessary for people's lives

i.e. here is the Thought of God
in this case it becomes more clear
when we, ^{for example}, want it to be there
There was peace and happiness all over the Earth, there were no wars

then we first of all mean that
what God logically laid down in the plan
what is natural when a person lives
he must have some basis for life

and further continuing development towards man
Well, I was saying that the spacesuit is more like a human body.
than ^{for example} there is a spaceship in the form of a rocket

then here it turns out
that this similarity
with the physical body of a person
passes into the structure of, ^{as it were}, spheroidal processes

i.e. we see at a great distance there
some optical systems in the form of starlight, ^{for example}
some planets are more ^{like} a projection of a circle, etc.

and it turns out that this is how we are closer ^{in essence}
we come to the structure of that
how does god interact with man
^{basically} giving him life essentially ^{yes}
then we come
to the structure of precisely the spheroidal interaction
^{for example}, a projection of the distant future

this is a sphere for a person in visual space

if we this projection

we translate into the structure of a separate object

i.e. we translate these spheres into the structure of the natural landscape

we see that when flowing into the object

this sphere seems to descend

and we see, in general, a landscape

i.e. we can observe

knowing the structure of the Earth's development

from the point of view of God, man and the Earth itself

how the structures of the future practically flow

into the structures of solid systems

well, for example, in the mountains, in the grass, etc.

but to a greater extent

This is easiest to observe in the mountains

where are the hard rocks that change slowly

then we can fully develop

a very effective mechanism for human recovery

and generally speaking, creating conditions

for its Eternal development

in one there in your physical body

as soon as we begin to understand

how future processes

which we see from the point of view of the development of the Earth

of your physical body

and we do not share

for example, the existing body shape

With

let's assume that the shape is more like a spheroid

when we saw it from satellites

for example, in the integrity of the Earth

here it turns out that the flow is carried out

by means of knowing the Spirit of man

i.e. the Spirit of a person who wants to know this future

he sees this as the future

passes

in the structure of the World for example

it turns out that in order for a person not to die at all

it is enough for him to display it simply with Thinking

form let's assume planets

the shape of the Earth

it means in general the form of the essence of everything that he encounters
but first of all it is the Earth
that means in its physical structure

and the display

this is for God
for the Thought of God
this is an interaction with the Earth

i.e. God practically created all the conditions

i.e. a person steps on the Earth if he steps with his foot
then he has every chance to attack there
there is an Eternal number of years

why does it mean that a person has such criteria there
it still hits the mark

in the system, let's assume, there is biological destruction
there is a dissonance here
precisely with the structure of the Thinking of God and man

i.e. if a person thinks by visualizing images
which he sees as linear systems

then God naturally thinks in a multidimensional system
well, first of all, for example, yes, for a person

first there is the Earth for His Eternal development
namely life
and only then can He go out
on the structure of a person
in general, that level
that man walks on earth
and she gives him the means to develop
Well, this is a logical model.

on the Spiritual level
God looks at man
as the basis for the general development of the Earth
as a basis in the structure of the Earth

and therefore these combinations lead to that
that it is only necessary to enter the product of Thinking
the same as God thinks
and we have it all
these so-called corridors are opening
well systems
i.e. the optical line is untied very quickly

in front of you

and Infinite number of combinations

Well, there is normal development there
or some kind of variable development
are transferred to Norma

i.e. the Earth is the criterion of the Norm
from God's point of view
for a person

i.e. and if we consider this process
as a process of standardization
we see that all other species of animals are there
fish etc. plankton birds
everything that is on Earth
this is the structure of variation of the Norm

i.e. if somewhere there is a high radioactive level
then birds can get there too
under the defeat phase

and it turns out that if we consider
lines of development of the Earth and vegetation for example
as systems of actual regulation yes
indications of the path of human development

then in general it works out
that the path of man in general
it is primarily aimed at that
what do you see
the structure of your, for example, Eternal Development
even when you look
on an ordinary object, some kind of earthly one
's a butterfly flying there
or let's say you're looking at the grass
i.e. this is the coordinate of that
what if there is grass here for example yes
so life is possible here
at this point

and during development, for example, into other Worlds
when standardizing precisely the health structure
i.e. the person must be healthy
but for example to develop into any other system

then the criterion is again
very simple combinations in general earthly life

why are there so many experiments being conducted ^{there now}
to create conditions ^{there} for plant life
for example, yes, in flight

and it turns out that this element
as if the external structure were flowing
already ^{for example} to plants there to animals
and already approaching a person, ^{for example}
i.e. the external landscape from the future
develops towards you

and when he approaches a person
this is where development stops
because there is already a person here
which was originally created by God
in order to have Eternal development

This is where the next level of interaction occurs
here man begins to act on the Earth
its structure
i.e. with your personality

and ^{in general} it's real
in logic this results in that
what a person can really do
there to influence the environment
truly a system of global destruction
possible , for example, yes , etc.

and the less this possibility remains
the more a person understands
namely the deep internal structure
interactions between Earth and man

i.e. Earth and God
and how God ^{showed} the Earth in general
so you can say ^{yes}
what should the earth do
in interaction with a person
then it will be easier

i.e. there is one common level
God pointed to development ^{for example}

and the next level
that this development
must be completed simultaneously ^{there}

and the Earth and man

then it turns out that if we compare
there for example, well, with some kind of navigation map, yes
in the development of the movement of funds
for example there is Infinite development

then it turns out
that it is enough to receive the command at the same time
i.e. to understand correctly
The earth must understand correctly yes
and man
then we get synchronization in development

and this structure of understanding
in fact, first of all
it's pouring out
in the structure of animal development
i.e. in the understanding of animals practically the same thing
what a person understands and knows
well maybe not fully there
it doesn't necessarily have to do with technological aspects like machines
but precisely in the understanding of the same thing

why for example there in ancient India
animals were considered first of all
which are close to a person yes
let's say COWS
they were given opportunities , in general, for co-development in order to
so that in particular they may be
and not exactly as I say now
considered the development position

but from my point of view this is precisely why
what does the structure of animal development in freedom mean
and in this freedom from people and from God
it would lead to that
that the intelligence of these animals would be well such
for example, that cows have stopped being afraid of people
and would begin to develop in the direction
in general, normal interaction
from the point of view of uniform criteria there
criteria of Eternal development
criteria for reasonable development there, etc.

it turns out that here is this element of interaction
he is a kind of canon for God
when a person so it comes to that

that it does not destroy
there ^{yes} habitat there ^{let's assume} animals
he creates conditions
for ^{means} life there for example, forest plants, etc.

and here it turns out
a fairly harmonious level of interaction
in terms of ^{diagnostic} systems , so to speak

when a person understands this and does it
^{as if} on a physical level
it turns out that it is within the framework
^{basically} the same team
even on a logical level

it is important for the Earth that plants grow, ^{for example, yes}
and it is also important for a person
i.e. the team has been identified
in the form of, ^{for example,} photosynthesis of a specific plant
this is the command ^{for example yes}

if you look further what happens next
^{there} in the form of animals
animals that develop ^{there}
in this habitat
it develops for some reason
Well, there must be something for which wolves are needed ^{there, and} deer and
elks ^{there, for example}

if we consider this level of interaction
then setting the task how to do it
so that the wolf wouldn't be aggressive towards the moose ^{there, let's assume}
so that he doesn't eat it

then it turns out that for this
a man must provide for a wolf ^{there}
^{let's assume} some kind of synthetic food

but it means when we consider
such a regulating ^{function} of a person
then we come to the idea
which in principle is then true
man must intervene
in the management structure, ^{then yes, by} external nature
at a certain level ^{of} its development
so that it would correspond exactly to that
that all systems
even ^{at a generally} aggressive level

develop synchronously at the same time
and towards the kindness of development
i.e. the wolf does not eat a deer or an elk
because the man fed him

i.e. man created the conditions
it is given to man to bring a certain
some aggressive systems there yes
into systems of generally parallel development
in the form of a non-aggressive level

then a person begins to learn
but how to exist in that World
where there is a possible global destruction for example yes

how can he interact technology
there with the wolf
when the wolf doesn't eat another animal there
translate so that the nuclear bomb does not explode

and here by the way they arise
very specific technologies
which are aimed not only at
so that the bomb doesn't explode there
but also aimed at that
to cure , say, stage 4 cancer
cure incurable diseases

for example in some works
I was in charge
where for example considering such interaction
as the structure of the animal world
one of the systems there is a predator
the other one, let's say, is the one that is not a predator
It is very easy to see how the impact occurs
to prevent cell mutation
and did not happen for example there are malignant processes there

i.e. the analysis of these processes gives
very strong recovery system
or to recover, for example, yes
to a person when sick
well, the same as stage 4 cancer
he is enough for himself there
Well, for example, mentally bring it into a structure
there is a wolf or some kind of predator there
it doesn't matter who it is, some kind of predatory dinosaur
And

the other is not a predator
and try to do so
so that the predator doesn't eat this supposedly non-predator
i.e. by an effort of will by the control system
try to find your place yes
so that it doesn't happen
this generally aggressive manifestation of the system

then healing occurs
from quite serious diseases

i.e. one of the elements of this control
for example, it is often described there in some techniques
that here a man comes to a tree
if he finds the right location
between the trees yes
then he is cured

here, in general, it's the same system
but at a weaker signal level it may be

what if one tree
interacts with others harmoniously
then the person enters the recovery phase

it's basically a technology
which is given simply in a generally ordinary way
the level of plants, animals, etc.

and it turns out that
for a person
and for the Earth
the same thing again
but already an intellectual task

i.e. to create a system of development standards
any kind of biological systems there

and at the same time create conditions
so that, for example , those who have passed away there will definitely be resurrected
i.e. to create the following development system
based on , for example, the geometric systems that exist there
as if containment

i.e. logically, where would it seem possible to take it from?
that the Earth there can increase
but in the short time that has passed
about two and a half years

already the mass of the Earth

Well, it seems like it even got stronger
concentration in the optical range
that firstly a lot of external matter comes to the Earth

but here even if you calculate
the entire range of increase in the mass of the Earth
via satellite control
it is not comparable anymore
than all the external meteor showers , etc.

and the width of the Earth
it literally increases by millimeters there per year
in some areas

and it turns out
what if we consider this process as a whole
then it is clear that as soon as a person is resurrected there
or is there a person there
the volume is still increasing

here is the mass connected
with the real Spiritual action of man
and God at the same time
for example, for the restoration of life

and when we consider such a process
let's assume that there are bones of ancient animals there
they exist intervalically
i.e. after a certain period of time
These bones are no longer found

For example there is minus 5 thousand years
in some regions
for example, they practically don't find bones, let's say, of people there
or some species of animals
at the moment when historically it seems to be known
that there were yes here for example, at least there are those animals
which means they are registered there
in nearby habitats

and there is a certain angle here
that after a certain time
The earth itself restores the structure of these animals
well for example there in the next space
maybe in another place

from the point of view of development, for example, of different species and systems
this mechanism is well known
in terms of the existence of the so-called underground flowing rivers

i.e. there is a transfer of a large mass of matter there
and in general elements of development arise
let's assume bone tissue
but already in a living form
i.e. the Earth has a system of human restoration there
or other types of animals
in living form

and when we, for example, begin to study this mechanism
we see that the system of settlement of different continents there, etc. objects
has, in principle, a different development perspective
than there is mechanical
not only there is the movement of people themselves
or some animals in different regions
but also the Earth's own development mechanism
in relation to, for example, the future process of Eternal development

and here it turns out
that as soon as we begin to understand
what is the Earth
this is a fairly active level of interaction, for example
with a person
with the future development of the Earth itself

then we understand that there are some earthquakes there
you can profile it, for example
if we know
why as if we have for example there
well, some kind of shake-up for the Earth
in this element of the planet's temporal development

here it is enough to go out
during the development of the planet
and it turns out that after a certain time
where for example there are no bones
it means that people here are restored
i.e. they are simply resurrected
after some time

and when we, for example, begin to analyze
this process

then it turns out that well for example, there for bone tissue even of a person
if we consider the structuring
as if bone tissue during human growth
well, during development from intrauterine development
in terms of the initial periods, even the first weeks

then bone tissue grows according to the same principle
How the Earth Evolves Infinitely
i.e. it is structured like this
as if it develops at the molecular level

if we compare these models
then let's assume even having taken a layer-by-layer spectrogram
we get the same thing
that and the optical range of outer space

at that moment when
if we look inside
i.e. from the outside the fabric
then we see the structure of a person

i.e. it turns out to be a person
at the mechanical microelement level
always comes to its own form

but in principle it applies
and generally speaking to any other species
means that exist on Earth

for others there let's assume some systems
or on other planets
here we can say something definitely
only by sending a spaceship, for example
or developing your own Spiritual diagnostic system

but essentially on a Spiritual level
any system in the world develops like this

it turns out that the Earth's development system
in terms of well, maybe there will be some new knowledge there
technical scientific nature
it allows interaction in terms of
that the Earth is also, in general, a structure
possessing the system of Eternal development

unlike, for example, a person
if a person does it with his Soul
to a greater extent yes, for example, there he resurrects another person

then the Earth does this precisely by level
i.e. physically manifested
for the Earth is like a form of thought of the One God

we can see that from the Earth
it can grow specifically there for example
human physical body

and when well let's assume
one of the elements there is the restoration of people
in quite ancient civilizations
there was an element of interaction with body parts there
let's assume there with the Earth
there is a wound, let's say, on the left leg
it could have been cured if you buried it there with some earth
right arm and right leg
and more than that there for example, sometimes the right hand is bigger
there the whole right leg
i.e. there were some very serious techniques there
interactions with the Earth

many diseases are cured by various such elements
Well now all that's left is that some exist
there are mud baths there and so on.
i.e. something that acts as if only on a number of diseases
and then in complex application

therefore, the interaction of the Earth and man, let's say
in terms of human life
This is the main aspect of the Earth's profile

if we consider, let's assume, such an element
let's say we're looking at the sound of a woodpecker
who knocks on wood

then it turns out that this sound
irritates a person to a greater extent
than, for example, some other sound

because it's clear
that the woodpecker generally breaks through the tree itself

and when comparing this sound for example
with any other
It turned out that this sound has a very specific and direct effect
directly on the human gene
he kind of goes around
even the structure of the physical level of a person

because a person initially knows
that some kind of destruction process is taking place

i.e. any destruction processes
which are visualized by hearing and vision
they directly influence human genetics

when we consider
the process of interaction on the Spiritual level
i.e. enlightened people
those who do not have a clairvoyance system
they can also perceive everything
what's happening far outside yes
at the level that it is reflected there in their Consciousness
and the task is as follows
so that such a thing, for example, does not happen in the first place

i.e. development of clairvoyance, for example
through the genetic system
perhaps it turns out, in general, through the auditory parameter
i.e. to make sure that the tree is not destroyed
woodpecker is
scare him off, for example

so it's clear from the ear
but if the woodpecker is very far away
and how to negotiate with him
so that he doesn't peck at the tree there
if that 's his food, let's assume yes
of interaction with the goal arises

is some state there
has an aggressive nuclear weapons system
and in principle there is a system of attack there
let it not be with nuclear weapons
this is a system of state development
permission means to maintain the political system
is in the right direction, etc.

this is basically a task similar to that task
what if you can't drive away a woodpecker with your hand
then on the political system
it is also possible to influence by means of some kind of control
through controlling clairvoyance

and when we start some elements of nature
compare with the system, for example, there is a policy of social development

then we see that the Spirit of God himself is the One and only God
manifested perfectly
in the small elements of the Earth's Reality
in terms of that
that any element
interacts with the entire social system

i.e. any microparticle of the Earth
interacts
with the social system there are future processes
this Earth this territory

and when do we start
enter into this mind of the Earth
then we see that the Earth influences it as well
and to the level of that
how are the relations there for example there is use and rent

in some areas they are very simple
under the same legislation
there was a so-called economic paradox
which is especially true at the beginning of the 20th century
when it seems like the same legislation
the same system of rent relations yes
in capitalist countries
some territories
still cannot be mastered due to circumstances
others are mastered very effectively

here comes the influence of the structure of the Earth
example, on the parameter of the economic regulation process
it would seem like a person

i.e. the Earth is also invading
Well, in a reasonable way , in general
from a human point of view
and from the point of view of the animals that live there
into a system of seemingly more developed systems
there are economic systems of human development

it turns out for the Earth
The control parameters related to this are given
that a more complex system can also be controlled
based on this
a person can consider it absolutely unambiguous
what if a more complex system appears there
more like, for example, it is more developed there, so to speak
well, how about with them

Firstly, he will always come to an agreement with the more developed
because they are more developed
still imply
more like a calmer, more humane attitude
to the system of development of the person himself

because first of all they see a person
which for example means well let's say it doesn't have yes
such a technical development system

although from God's point of view
man he can manage
generally speaking, any system
as well as any system
any other

i.e. this level is very clearly manifested
on the example of the interaction of the Earth and man
where the level seems to be inert
in a mechanical sense, such as the Earth
exhibits very strong and intelligent functions and management

and here we can fully consider such a process
as a process, in general, of the growth of human Consciousness
in the Consciousness of the Earth

right here in my Teaching about the Earth
there is such a special level
development of human consciousness
as the development of Consciousness in Consciousness
where one level is inseparable from another

if human consciousness
begins to mean to develop in the structure
namely Eternal development
i.e. in Consciousness a person understands
what needs to be done
that a person should have Eternal development

then it turns out
and the Earth's Consciousness begins to develop
already as if in an intellectually interacting way
with a person
towards also Eternal development

then a lot of processes
are resolved by simple interaction of Thinking
and a person

Well let's assume there are biblical episodes there
When there the sea parts, etc.

i.e. the interaction of the Earth and man
in terms of the structure of Eternity
This is a fairly accessible technology in essence
which can allow climate control
it can allow you to regulate, for example , irrigation systems there

and in principle, this is the essence for the Eternal development of the Earth
it is necessary to understand precisely the organic structure of interaction
Earth and man

for example, if we take some ancient civilizations
which, in general, developed and mastered, for example
desert areas
which have now become deserted
or they initially started to master
but then it still turned into a desert

that means the element of development is primary
was generally correct since they knew how to irrigate
but further, well, it's like a consumer attitude
led, for example, to the devastation of lands

so from the point of view of the Earth
a person of course should give more there
as much as possible than he can take there, for example

i.e. this is the principle of human development on Earth
it is to be able to give much more
for in fact it turns out for itself
this is the carrier on which the person himself is located

and if at this moment he gives more
it lays the foundation for future management yes
for self for self-development

technologically here is a complex of technological methods
from the point of view of this structure of my Teaching
Teachings about the Earth
here you can consider a whole range
very specific technologies
aimed at that
that a person can interact
towards the future of Eternal development
with the Earth

according to very clear criteria levels, that means knowledge

i.e. he knows that this is so, for example
and he receives from here Eternal development
i.e. the first level

i.e. knowing that the structure of God, for example, yes
Earth and man
manifested there for example in interaction
with future events
through plants for example

we can very well say
which is quite simple at a certain angle
look at some growing plant
we through the transformation system
we are going to future events
but they are kind of too soft for us
and located towards us

i.e. look to the future
It's easier to watch from the start
through the structure of the plant, yes, for example , i.e. the first aspect
what does this practice of knowing the Earth give us?
from the point of view of human Consciousness, for example

but if we look
from the point of view of the Consciousness of the One God
then here it turns out
that in order to adapt your Consciousness
to this viewing from God
we must see His thought
i.e. Thinking
thought and the Earth are one and the same for Him

then it turns out
that in Thinking one can develop any constructions
i.e. any in terms of precisely Eternal development

and it turns out that it is the same as how a person thinks
he can think in general quite positively
for your future
or at least determine there
future positive criteria
then God can create in the same way
the most positive future

because for Him this is also Thinking
i.e. Infinite level of development

and here is the variability of possible development
means Earth
this is the state of God's thought

when you start thinking like that
then you see
that thought also depends on the Spiritual state
i.e. the states of the Spirit of God

it turns out that God acquires human qualities
personified precisely with the Earth
i.e. precisely those emanating from the Eternal level of the Earth

then God becomes closer
i.e. understanding the Earth
and therefore contributing to its Eternal development
this is also, in general, the approach of God
to their pressing problems

logically of course it is so
if we know the laws of development there we assume soils yes
we can plant more wheat, etc.

and therefore it turns out that here
well especially when we know
how soil develops from God's point of view
then we can make wheat
for example, yes, Infinitely growing
well, some kind of system like this that allows for development
for example in the Infinite amount of products there
from one place

i.e. here it turns out
which we can very well use
for example, the technique of developing your Consciousness
towards the knowledge of the Earth
in order to practically completely implement
these technologies

here, for example, in contrast, it may be
from technologies aimed there
to some external civilizations of the planet, etc.
It is precisely with the Earth that one can fully exercise control
which will be tracked by you
how is your practical work

i.e. if somewhere there a tree dries up
what needs to be done to prevent it from drying out
if there is a pond somewhere
outside the ecological means normal situation
so how to clean it, let's say, with your Consciousness

i.e. when you start working in this aspect
then you see what the Earth gives you next
and much more

i.e. it seems like , well, you put it in there , for example there are a lot of them
or more than there in another system
and then you still get much more

i.e. here is the return of the Earth
to you
in terms of , well, some kind of assistance
some softness of events
like that plant that seems to be
a kind of gateway filter for the softness of the future

the Earth is also that filter
that kind of prism, so to speak
which ensures the future

and when we then consider this structure
precisely as a support system
we understand that it is already obvious in this system of provision
there shouldn't be any problems at all

i.e. for example, a support system
human nutrition and drinking
she's actually first and foremost
even for example there on some spaceship
should be located well in general, everything is fine

It is natural that a person should invest in that
so that this system is absolutely controllable
i.e. it must have Infinite resources
it must have the structure of Infinite development

if we follow the analogy of this process, for example
it turns out that when you
for example, you consider the process of that
that the Earth is restoring the system
i.e. the Earth has its own restoration functions

if this process is accelerated
then you can get quite a lot
rapid regeneration of the Earth itself, soil, plants, etc.

but in essence from the Creator from the One God
the recovery process is worth it
any destroyed information object ^{there}
or ^{there} transformed

i.e. if there was a plant
it was somehow destroyed
it could even be due to the change of seasons
then it turns out that according to the Law already from the Creator
this must be restored

it turns out that if we do this
look at the time axis
then the element of matter transformation
This is a structure essentially of time management
but from the side of the Earth

if we want to restore any leaf ^{there}
that ever existed in this civilization
we have to make this leaflet
^{well how to} bring it to the center of the world
give him complete freedom of development

then around this leaf
^{you will} exactly grow space
First of all, the Earth
and which will be completely free
and then a person can, ^{for example,} occupy it

this is basically the development of civilization
that's pretty much how it happened
there were free lands and people occupied them

i.e. but if in essence
this is what became the primary Norm of the World
those. the task stood precisely ^{to mean} that everything was indestructible

then it turns out that a person masters
new lands and new territories
as soon as the territories are filled
a person must be able to reproduce them
then by myself

or it ^{means} he reproduces through his Thinking

or they are of course growing ^{there} these lands
due to technology, ^{well,} resurrection
but they grow specifically for this person

and further development
implies that a person has the ability
expand the ^{area} of its development

here we are talking more about that
what if ^{for example} the habitat
can be distributed
on a passive control system

in this case we are talking about
precisely about a certain Spiritual area of development
when a person sets goals for himself
and develops them himself

Well, let's assume there is a simple task there
what ^{does it mean} to combine space
between the Earth and the Moon ^{yes}
One thing is, you can fly there of course

but it's a different matter if you gain technologies
and develop through Consciousness
around itself the Earth and oxygen
then in principle, so as not to violate
^{for example, there is} the peace of the same Moon
and to prevent it from shifting
you need to understand the gravitational parameters
and understand that any other external body
it has the functions of inviolability ^{there}
Well, from God initially

hence
this is the entire external structure of the vacuum
and a system ^{of sorts of} location of distant objects
this is a system of inviolability of external systems
or ^{there are} internal systems ^{yes}
in relation to the macro object

i.e. in the Universe, ^{for example,} processes are extremely rare
when ^{we assume} a certain macroobject
Let's ^{assume} that somehow it 's destroyed ^{there}

therefore ^{these} are these macrosystems
i.e. the outside world
i.e. external, ^{as it were,} optical space

it is built this way
that we are first of all solving the problem of non-contact
i.e. equality of development

if we solve this issue
by means of a logical plan yes
i.e. we say
"Yes we can grow a large amount of Earth
but let's not touch the outer planets
we will create a gravitational parameter with our Consciousness
which will hold these planets
in their place"

then we are quite very fast
we can develop the Earth there, for example
there is the required number of kilometers or tons there , yes

i.e. here is the process of development
rests most of all
it is precisely in the structure that there is no infringement
as if elements of free development
other objects of information expressed materially

because if you pay attention
let's say you're thinking about something
and the intersection of another thought
with this thought
this is already creating some kind of resonance yes
and often this is impossible

i.e. you can do it by willpower
for example, you need to go to the store
and at the same time you think about something else
you can make another thought
completely at a free level
substructure of your Thinking

God also thinks
For example, he created the Earth.
but the intersection of thoughts is impossible here
you can only create a substructure

i.e. to develop matter in structure
when other matter has the same semantic status

i.e. using the example of my Thinking
we can very easily consider
how physical matter develops

materially manifested World

and when you start here by analogy ^{there} with God
to reason

then it turns out that this is the concept

as if "external vacuum" ^{yes}

it is a very tight containment

as if this is precisely the balance of matter
from the point of view of this process

and it turns out that in order for us to get
in a vacuum ^{there is} the structure of the Earth
you just need to include the balance parameter there
Consciousness
and that's all

Well, it's more like physics of course
these are the arguments
but nevertheless in essence
that's how it is

i.e. it is possible to make specific control systems

let's say to grow an organ ^{inside a person}

All you need to do is create a structure

what is your action

it won't affect ^{any} interests or ^{freedoms}

other systems of external systems

and for this you just need to know the structure of the organ
and try to create this organ simply for everything
as it is originally from God

and when you ^{for example} this organ
create exactly like this
what it is originally from God
you get a very stable control system ^{in general}
which is precisely by analogy with that
^{for example, how the Earth develops}
according to the Laws of Earth's development
you can totally sync

^{For example it means there is development of some organ, for example}
or or there is the resurrection of man
with that

that the Earth in principle develops according to the same Laws

i.e. reflecting the structure of external management, ^{as it were}
which comes from the Earth
from the structure of life

i.e. attracting to a person ^{there} the attributes of the Earth's growth
this means plants
this means that the natural world ^{there} is normal
you thereby contribute
^{in general}, the norm of a person
it turns out at the same time
Norm of the Earth

because the human norm
it acts immediately and simultaneously
to the Earth's Norm

it is a very meaningful process
and ^{in general} people themselves have already determined this a long time ago
that interaction with nature
if possible at least at the level of Thinking ^{there}
^{of some stories}
already has a fruitful effect on a person

not to mention that
what if he really helps nature ^{there}
and in this regard it develops

therefore, from the point of view of my Teaching about the Earth
There are a lot of interaction technologies
precisely with the Earth itself

and, in principle, the interaction itself
the deeper and more fundamental you are
consider here
the presence of the One Creator God
the more accurately you find the control system
exactly, ^{well}, according to my tasks

and if possible, consider the following aspect here
^{that means} considering those arguments, those arguments and those examples
specific tasks specific management practice
which I just showed you

^{means} in relation to its task
try to do it this way
just as a concentration
keep this task just in mind

and you will see that even listening to this lecture, ^{for example},
simple, seemingly passive containment
in memory tasks
leads, among other things,

often to a quick solution to this problem

i.e. here

Generally speaking this tool

and we will extend the lectures to other systems

it is precisely in the structure of the Earth

you will see how the Earth

and generally reasoning about it

they are just helping you

very seriously and often radically

This concludes today's seminar.

Thank you very much for your attention
