GRIGORY GRABOVOY
The Teaching about God
With a unique control method
15.04.2005

Hello
the topic of my seminar today
this is my Teaching about God
A unique way of management

in this topic i show
how the management structure
which you make unique
use this structure for that
to make it smaller
for example, systems of restrictions of various meanings

i.e. if the control is unique
so that means you are showing the characteristics of uniqueness in this way
that you enter control
in the structure of, for example, distant events

and approaching this system is complicated by the fact that
that firstly unique management
i.e. often only you know that this is a unique system

and secondly, this is the path to this unique system
he usually does
similar to how God does it
when He does some specific action
then only He provides the path to this action yes

it turns out that this is the principle
so let's say this method of control
what does structure mean access
to a unique control system
this is a level that is practically
is often controlled by you
already because this is a truly unique system

and based on this, the construction of this system itself
this is interaction
still with many so to speak basics
your own personality

where the definition of uniqueness is already
it's more your personal practice yes
and your personal work

because to say about it
that the system is somehow completely unique
or is it multifacetedly unique?
or is there only one unique
only you can
knowing generally speaking why do you say so yes
it means that in some area of uniqueness there is
this management

and by analogy with how God does
you spread this knowledge
still to the external system

it turns out that on the one hand the system is unique
on the other side
according to God's task it is necessary to obtain a unique action
i.e. the projection of this action
in another system it may even be difficult to access

and often uniqueness is also because
actions well how is it designated
that the entrance to some hard-to-reach places
or there are control systems
this is also a unique and often action

i.e. there is another sign of uniqueness
it's some kind of complex technology
or which will repeat for example once yes
another maximum for example
or maybe it won't happen again

and then it turns out that from the point of view of uniqueness
there are a lot of information outlets
depending on how we look at it
this system
this is how we access
using this method of control

when we, for example, begin to carry out management
such as managing remote events
then the further the event
all the more so the level turns out to be unique
these events

for example Infinitely distant events
have that level of uniqueness
that they are, firstly, very massive
from a logical point of view
i.e. there are many events ahead of them

but on the other hand, that's what makes them unique
to, for example, access these events
i.e. in order for this access to be carried out
for example, at the right time in the right quality
you need to overcome these events as if from yourself
to the unique access system

and it turns out that by analogy with how God does it
for example, the creation of a unique person
and that means the action on the structure of the external environment there
by the structure of space-time

where each object is also unique
already because it is located at different points in space

we can consider
Spiritual, so to speak yes unique level
when a person with a certain Spiritual system
i.e. with the only characteristic peculiar to this person
system
is in control and the Spirit is limitless

and from the point of view of space
it's still a place

if we look at it from this point of view
generally the model of the world
and look well like another function of space
except for example there are functions
there are movements and places and implementations
then this is somehow still a certain targeting in action

i.e. it is precisely the uniqueness of space that
that at each point it is different yes

if we study this property of space
as a property of the environment in general
Well, for example, there is an opportunity to study
properties of different environments
and consider that it is from this point of view

explore space

then multidimensional systems for example
can be controlled quite easily
if we know exactly the redistribution
this uniqueness in the management system

i.e. every point in space
in a multidimensional environment
This is a unique characteristic
but we are trying to find a common Law
which is above this system
and at one point we control

in this case i'm not talking
about only geometric yes For example
or about geometry in general
I'm just showing that at the light-optical level
such systems exist
precisely the distribution of information

and it's better to just perceive it
with inner spiritual vision
not in the form of some kind of logical geometry
namely, to understand where this place is located
what am i talking about

and when
By the way, I'm showing this with my hand
it's located approximately here

that means and therefore when I speak in management, for example
what we can do in terms of uniqueness of action
transfer physical space
i.e. it is informative yes as if it were a control space
informational
but is located in the physical space of Perception

and if we want to go beyond the realm of Perception
i.e. we don't want to work
in the system of physical space
and we need to work
for example, only in the spheres of Thinking yes

then it turns out we have to find
some single transition
which corresponds to only one level

for example the structure of the sphere of Thinking

and again the task of uniqueness of action
it's like a translation task without changing the information

and then it turns out
you can work simply in the sphere of Thinking
without , for example, being tied to some space

simply if we work near the physical body
then the system of Perception is more simplified or something adapted

i.e. a balanced channel is working
which has the property of a certain familiarity

also by the way a unique characteristic in action
Habituation is a set of some unique coordinates yes

and when let's assume if we get used to the system
well knowing that everything happens around the physical body
then we are just transferring the sphere of Thinking
near the physical body and work

i.e. in essence we are just on everything
this is how we perceive this sphere
near the physical body

although it may be located at the same time
for example if you scan it like this
external level of control
objectified
with special digital systems there
then the thought itself may be located, generally speaking, in another place

i.e. we through volitional control
we just look at objects
Here

and here is the transition system we get
from the actual expressed value of thought, for example
to the system of Perception and Control
with this thought
these are different phenomena

and that's when we start to consider
connections between these systems

the easiest way is to watch them
For example there as if behind some phenomenon there could be an environment

see what interactions are going on
and the following property of this system can be determined

that once unique features are identified
as if even characteristic signs of the system
the number of actions is quite small

i.e. it is possible to identify
information distribution means
some Laws of information distribution
and see for example if we are talking about
about the treatment of some disease

by structuring Consciousness
you can see it here
that it is enough to identify the contour of the action
i.e., for example, to determine the primary parameters
some problem
without entering into the development structure of this information
and work only on primary
as if some unique matrix parameters

i.e. don't make the problem big yes
in information
in the system of collective Consciousness
and work only with the signs of unique management
Well, for example, just a diagnosis
which exists in the directory yes
or so information
and work with the primary environment

here too it turns out that there must be some
unique action
you need to work carefully
without affecting the main array
For example there is development of the disease

and if development exists up to a certain level
then still the array of further
as if possible in the collective Consciousness
development
you have to try not to touch it
and this is also quite a unique action

i.e. there are some predictive characteristics
in any disease
which are set out in general reference books, so to speak, publicly available

but in reality a person usually has
in fact, there are fewer initial problems

and here is how to differentiate
a system of possible development of an unfavorable
with what a person has
and be able to narrow down the information on the contrary
and already bring it to the norm
it is often a process
in general it is considered as a healing process
it is precisely the separation of this information

because as soon as the phase of collective Consciousness
is separated in a predictive form

as a rule, the disease may simply disappear
also by the signs of uniqueness

that the channels become unique
because that's exactly how they are built
according to your control system yes

When did you build it?
separated one structure from another
it is still a certain personal action
where there is a unique, as it were, handwriting, unique action, etc.

i.e. it turns out that in, as it were, interpersonal management
there help I mean to another person
in terms of healing
maybe even from some simple conditions
unfavorable or complex diseases
in terms of distant remote control
there in space-time

unique characteristics
it's like a way of practical management
which actually allows
have quite a unique access there
provided that you have this unique control
you do it as if on your own at a certain level

if you constantly keep it, then it's under control

control system of this type
then it turns out that you have enough
as if in general, broad in terms of information
way
which after some time
he is no longer unique
i.e. information is collected around it
even if you initially derive a seemingly unique spectrum

and it turns out that in order to preserve the uniqueness of the action
information needs to be transmitted as quickly as possible yes
logically it's clear
that the more precise the more unique it can even be sometimes
The control method may be more difficult to master

and yet the sooner you talk about it
having received my personal results
the longer its unique structure lasts
i.e. longer access level

Moreover, it is also increasing

because the knowledge acquired by other people
from this there method
Well, in this case it's not just about
about the unique method as such
it's more like a characteristic of the management method

but just any technological level, for example
which you receive

and it turns out that here
this is precisely the task of transferring knowledge
this is the way to develop any private technology
to the level of mandatory efficiency

i.e. uniqueness for example
in the system of Eternal development of man
all people live forever

at the same time, it is precisely the uniqueness
yes in their own way
this management structure
this characteristic should be generalized anyway

no matter how unique a person is
no matter what unique systems you build

whatever systems of personal Perception it reproduces
the whole system of uniqueness
in the structure of Eternal Development
leads precisely to Eternal Development
it means as if to some average value
which is common to all people

and based on this
we can do the same in the search option
find
and what is this Eternal value, yes

that people have the same

Well, first of all, this means a physical body.

i.e. setting the task of simply Eternal development
we come in a kind of search mode
in a unique search mode
to the concept of "physical body"

and it turns out that in this case
we found a solution to this problem
physical body

Eternal physical body

but once we find that way
Well, for example there is a solution to some problems there
in the field of mathematics, physics and any other
where some actions are shown, for example physical ones Yes

it turns out that this is precisely the search mode
this is also a defining construct of Consciousness

and this is management
sometimes as if of a rather high order
in terms of efficiency, in terms of depth
or there stability or knowability
like accumulation of experience for example Yes

and therefore it follows from here
that when we structure a unique management
to implement it here
in the form of a system that already reproduces
next management environment yes For example
i.e. in search mode

find the next control object

it turns out that this is the level of uniqueness of management
it allows, firstly, to clearly differentiate
as if external or accompanying
or a signal of resistance to your control

because the initial impulse
he is always unique
if the impulse begins to transform
some kind of resistance exists , yes

i.e. you don't reach if there may be
as fast as you wanted
if of course you put the issue of time in management

but you don't have to ask the question
and just take aim at control
start implementing it somehow
and at the same time, when implementing this management
you get that at some point
for example, you can kind of feel
some restraint and informative

if for example of course this is containment
there is your personal control factor
this is one

it's another matter if it does exist
external event system
as if hindering this implementation in management

then it turns out that it is just that
unique control characteristics
allow you to kind of just jump over
move to the next level of management
there next time
and calmly work in the same direction but with a different method

this is the uniqueness of management
if there it even has some socialized systems
if it interacts differently
with a word sound control system for example

and the use of frequent sound forms and digital means
This is a special unique control system

if it's even possible to talk about it
Well for example, like the initial letter of a word
and the word is simply viewed in Perception
i.e. you can even mentally pronounce or say yes

browse
and again we get a unique method
you can create a unique management method
due to the fact that you simply vary the system
and you try to make this system
was , well , practically , so to speak, implemented
under your personal control

so here is the level of uniqueness
that's what it consists of
that in search mode as if in search level
you can find quite a lot of properties
namely unique management

and we'll tell you if there is
Well, this is a concept that I would like to introduce , for example
if you met him with such a concept
as "counter to the seemingly unique control"
i.e. the level is against you
then this level is very clearly defined
as a linear level
here in this system

because it is clearly manifested
in the form of specific quantities
there, for example, in the form of specific situations there Yes
in the form of specific participants

and it turns out that a level arises here
well, there is no need to understand that
what needs to be done next time yes

but when a person thinks about something
he still has to do it somehow in the future
to perform some action

i.e. from the point of view of communication
current time there and future
there is constant movement and development

any situation

that's why it turns out
that there is some such unique state
that on the one hand he
a person can be a manager
in a calm position now

but the fact is that future systems are developing
they must be connected
some unique channel
which allows the future to be realized
or absolute which is realized in any case
and this also has a unique access system
in management

or are these some controlled processes?
well, maybe not always of any fundamental nature
which may vary
depending on the person's wishes

but at the same time when some event occurs
and it is realized precisely in the plan of Reality, yes
another one is being implemented
moreover, the overall meaning is in management

then here it turns out
what we can say quite clearly
from the point of view of unique access
that under the condition of interaction
for example, the structures of Consciousness
with completely different control systems
that's with the outside world there
interact with each other
various elements of human Consciousness

here it turns out
what exactly is a unique access system
this is the level that allows
and also differentiate the management system
and allows this system to develop in this way
so that it would be understandable for other people yes
who perceives and listens
or simply does it through Spiritual Perception

then it turns out that we have
in the system of precisely unique management

there are quite a lot of ways, so to speak
which allow you to use
these are the unique access systems
or unique realization of events

because they exist
in general, there is an essential point
that there are, in general, quite specific
systems for implementation
where exactly the achievement of the result can also be different
here is the trajectory of achieving the result

and therefore it can be varied
this is this unique access
maybe you see some result
which can be achieved
there one way or another

but that's exactly when the result is achieved
at the level of permanent management
i.e. you choose a unique different path

in this case, uniqueness
it could just be the path you created
So you see that everything is being implemented for you, yes

but you have such a stable at least yes
or you can introduce the concept of "force" there
or rather it is usually simply called "accuracy"

i.e. you are confident in the precision of control
take another comparable method
and make the characteristic unique

i.e. choosing the number of ways
when you have a choice in Eternity

then your personal action can be more unique
well really, the more control options
all the more unique level
is your personal management

and it turns out that based on this
you can basically do the management this way
what we quite mean Well we can say here
that at a certain level we need to create
more favorable levels for decision making

the more choice of solutions
the more unique the remote level can be
there is a strategic level in management

but from the point of view
maximum, as it were, uniqueness of action
man was created by God
maximum uniqueness
this is precisely a divine action
in relation to a person

i.e. this is his Eternal development
the state of the Eternally Living Man
who has a healthy and happy life
i.e. what is written as some kind of Norm

because in the structure of Eternal development
the minimum level is
For example there is complete health there yes

it means that it should be of course
this is human happiness in a certain sense
he must live forever
knowing that this is kind of even necessary to do so let's say Yes
as some action

and in addition to everything else
it still exists here
the need to respond to cumulative events
he must guarantee
that under any combination of events
he is in Eternal development

and here it turns out that this is the level
he is quite unique
from the position of uniqueness again

, an external event can be anything
i.e. a sign of uniqueness
some difference of the event

it could be too
that it is precisely the uniqueness of the external system
how good is it suppose to be for that

so that Eternal development is sustainable

then it turns out that
why else is it desirable to develop frequently
such a unique control system

because then we can differentiate
external unique systems are non-standard

if we consider
how Thinking itself is structured
from the point of view of some non-trivial situations

That's exactly where the main parameter of Thinking is
thoughts of the most
in these situations
this is a search for ambiguous
namely unique systems of situations
and the thought begins to work almost independently

i.e. it is possible to observe
apparently you can always pay attention
that in some difficult situations
the thought seems to work itself out, yes
as an independent variable
i.e. the amount of work of thought is higher in this case
than simple known situations

i.e. some external work in simple situations
it's quite simple

there is , for example, a certain goal
the goal is being realized
and action towards the goal

if it's complicated
at every level of implementation
besides direct Spiritual action
Macroform is necessarily connected
i.e. in fact, for example, the level of thought
level of Thinking which
it speeds up depending on the work yes

as if some kind of indicator
then it slows down
it means you have done the job or are doing it well

it turns out that when you consider
this is the property of thought
then by analogy with that
that God created man
and then the person does everything on his own
so it turns out to be a unique message from God
and then life began to develop
a person can do it on his own

i.e. God simply passed on knowledge
and life is realized by the person himself

if according to this system
unique as if action and properties
go to
into the structure of the connection of some exchange processes

then it turns out that based on this
there must be some
a unique way of transmitting knowledge from God
to every person
where this knowledge is implemented
For example there is the life of the physical body of a person
or his actions

when we start to analyze this level
well, i.e. consider it as a level
for example, some kind of predictive-remote action

it turns out that the mechanism of realization of the body
it is some unique state of the body

i.e. a person goes through it all the time
some kind of special levels apparently
well, in the form of certain states of the physical body

and it turns out that these levels
if we start to perceive them as a level of action
it turns out that a person can quite easily learn
there to control, there to collect
Well, I mean to improve your body
don't get into situations where there are problems there are possible
not only in relation to the physical body
and in general to the tasks of a person, for example there according to
Macrosalvation

i.e. in connection with this, since the criterion is well, some problems
this is often a conditional criterion
and what will bring benefits and what, for example, will harm
often this is despite the fact that there is no such thing if there is a strong pathology there
in action
then it is some kind of conditional value

and then you need to look through
interaction of future events
with the current time
and it is quite clear to see these events
what is favorable

i.e. the uniqueness of the action consists in the fact that
say some event
what is most favorable for you
translate into primary action structure

if we do this management now
right now that's when I'm talking
that we can any event
translate for example
into the area of favorable actions based on a unique feature
then you see that the event begins to be realized faster

i.e. a person's memory of having achieved something
thanks to , for example, some unique actions
and he retained this experience

then a person even in any other business
can often lead to this area
control
although , for example, some other issues were being resolved there

and this is this area
unique access area so to speak in management
personally from a person
she has a great resource
it is precisely to correctly identify the external system

i.e. if something is not very clear
need to go out
on the structure of these unique connections

although there really is something there that is not clear
if you work with information, this shouldn't happen

You can always get any information
consider implement etc.

but for example we use some help
in the form of additional texts there, etc.
or some information there

then it turns out that if we
for example, we start to make management in this way
what does any additional control mean
this is a spectrum of expansion and unique actions

then it is clear that it is precisely the creation of the World , for example
where there is an increase in the matter of the number of people, etc.
this is a sign of exactly that
that indeed the One God created the World
and He is the One
gives precisely the unique characteristics of development

and only the uniqueness of the action allows us to create
some massive systems

and on the other hand uniqueness means in one action yes
if uniqueness
as a single, single level of action
because there may be a unique action
because it only happened once

and then we see
that it is quite a long way
for system development
in the structure for example there is infinite access

where each previous option
this is an experience that is passed on to the next people
so that other people can use it
in their development systems

at the same time the one who passed on the experience
it can also work on the same systems
which you for example these systems
could have already somehow supplemented or improved
maybe there are those people who started interacting
for example, according to the information transmitted

and here is any change of information

where is the unique root
still retains the essence of the information itself yes

i.e. why, for example, in management structures
often it is not important

it is precisely the social design of the action
the main thing is that the tasks are being implemented

and in connection with this, this level
unique output
unique access
this is actually the level that allows
a person to receive
sufficiently high speed of information exchange

i.e. the more unique the level
the more and higher the speed yes
the more tension in management

because the generalized environment
where there are the same similar ideas of action, etc.
has a level
Well as if some additional mutual support

that's why when people come together
in some groups of social movements, parties, for example
in political systems of governance
here we have a fairly correct path in general
when unification already makes people
as if more integrated aimed
for a specific event

and then this is the primary unique path of development
which is inherent to man from the very beginning
by virtue of his birth
creation of it by God

it is implemented like this
that transforming into a system of some events there
the man calmly takes out
your own management
in solving personal problems
by means of volitional, for example, unique control

and it turns out that if we want to build in this case

some logical thought of management
i.e. we decided to make this control like this
that can be viewed at any time
the action is like this
that it can be stopped there, strengthened there, etc.
i.e. to exercise full control over management

then here is precisely the uniqueness of the action in that
that some fundamental moment is being calculated

and at this root moment
some such as the quintessence of management
there is this transition
from one fundamental level to another

and it turns out that these are the ones
there are some corresponding words there
or randomly taken words
in this control system
they often may not have
for example, of some fundamental importance

because that's exactly what it can be
such uniqueness in management
that you can bypass the word system altogether yes
or even events

but management is nevertheless implemented
and at the same time you clearly understand that you did it

and this is where uniqueness comes into play
what can be done, let's say, to create such a system
specially, as if having modeled it in advance
possible some problems
or by looking at them remotely, yes
direct spiritual vision
or there managing clairvoyance

and try to do it through the unique access system
regulate these problems more precisely

because when you regulate
your problems on your own
they are more, well , correct and proper
Well, that's what's starting to happen to you to be realized

and here too it is important that your personal path there

it's your personal control
in the structure of unique management
would look almost like this
what are you implementing at the same time
and the task of God
and your own task

and in connection with this, some systems may be obtained there
in a more simplified version of access

and in this regard, if we want
let's assume that the control is made like this

so that it is understandable
and they could, for example, there all the people learn quickly enough
this unique control system

then I think that the transition
for example through the universal level
must be implemented without fail

i.e. to show the Teaching
for example , well as if in other languages of the world
here it is necessary that with any translation
that's right, the root level was the same, yes
in terms of these are the goals of the Teaching
for example there Macrosalvation is the first goal

when if we look at this process
in the form of exactly as if well actually
conversion translation here are the control values
from the primary goal yes

and translation of some substrate
to other control variables
when you keep control unchanged all the time

then this level again is the uniqueness of the action
precisely to keep control unchanged
also a certain unique state yes
True, it is volitional and connected with tactics

then here's a concrete example
take as wide a range of events as possible
and take it out
to a unique personal level

It's better to take broader events here
not only yours
what did you see there on the street today, etc.
individual people
literally, as much information as possible

and see what happens as soon as you enter
this system into a unique environment
according to this method described here

you will see that the environment begins to change
and acquire properties of interaction with another system
i.e. it is a dialogue system and often a very powerful one
and you can do it very quickly, for example to improve health there

it is possible due to this system
take a forecast for the future here

so go ahead and work
due to predictive properties
due to control properties
try to achieve the result in a unique way too
according to their tasks, according to the tasks of the hall, etc.

I will work with you

when do you work
in a unique control system
let's say in a way that leads to unique methods
Please note that it is your personal condition
and self-awareness
that's exactly in terms of unique action
in some space-time
this is already macro management

as soon as a person becomes aware of himself
in terms of control, or something
for the position of the physical body
then it turns out to be a unique level
interacting with the Infinite level
external space and time

and it turns out that the possibility to cover this is situational
exists to a greater extent precisely Spiritually

i.e. Spiritual action Infinite action

which is manifested
for example in the structure of unique management
we have in this action
almost very clearly balanced
implementation system

regardless of the conditions
that's when you Infinite Action
translate into a unique system
then it turns out that you
Infinite number of events
deduce into one sign

i.e. uniqueness is a kind of projection in this case

and it may be so
what if we assume this projection
provides implementation in the form of a specific projection

then it is precisely the projection that is the form

and therefore considering
some projection value
on human tissue for example
we can see it quite clearly
what's in the management structure
in fact, the tissue there is human organs
this is a projective component for example there are macroenvironments
but in a certain unique way
as if connected there for example with the structure of God's governance

or in this case I'm talking about that
what's in human
namely at the level of the physical organism's perception
uniqueness system
This is also a projective system of external events

and so it turns out that you need to see here
how are they formed
on what unique channels
your organs and systems are formed

then in principle you can enter this system
it doesn't necessarily mean you
so this applies to all people
due to their identical biological structure, yes

when the creator god made it so
so that there are universal mechanisms
adaptive control mechanisms in any conditions

it turns out that here we can quite well see
this sign
that the very uniqueness of management
it is often a structure
as if it were a personal struggle and personal action
for the structure of the distant future

because in the distant future when it is very distant
we may not set ourselves clear goals, for example

because well a long time passes there
Well let's assume there are billions of years there yes
so if we take and set a task at all
as it is

then it turns out that here
what is the next move

here's how to do it
so that the primary control system
which was implemented
for example in the initial billion years
so that it is real
Well, generally speaking, everything is the same as in any time
spreads towards Eternal Life

then here is the only property that can be distinguished
this is a property of stability for example per billion
plus there's some more time

and from here it turns out that this is the selection of this property
as if this control environment
into a structure as if personal when you can build
this is the comprehension of a certain Reality
as a structure of personal action

here is the highlighting of these properties
allows you to do management
as if in a completely different environment
and this environment can be distributed quite actively in general

i.e. here is a manager who works according to my Teaching
in the structure for example there is salvation of people healing of people

from can often be very complex diseases
he is always searching
because the unique path is the most effective
he has uniqueness
it's often more, well, concentration per unit of time
it may often be that it is faster
this unique level of control

and when we start to analyze the situation here
what do we need to build anyway ?
what control system to make
and how to do it
at a specific time
under some specific circumstances

then we see that each person has
there is a certain level of tasks
well, which ones are there let's assume formed
how does a person's field mean

although the point is that
for example, there is such a concept as "biofield" yes
and I'm talking about the fact that we work at all
at an integrated level

means the space of information and the material level

and therefore when we want , for example,
here is this transition to make
from the informational level to the material level
then it turns out that this one is unique
some kind of such access it is very peculiar
it is a system of knowledge

that's what it means to do an action
we must somehow
often implement precisely the system of knowledge

and consider what is generally in the prognostication of this system
can in general somehow either damage or stop
from the point of view of transmission to other people first of all

and when we begin to see
what is the suspension system yes for example actions
or opposition
Well , this is some kind of system
were some events there

often they can be of a positive nature

i.e. people can work at the same job
there was a favorable one person who moved from this job
but they have another person
there was a conflict there, it all drags on there, etc. yes

and in this case
the unique action system is often like this
that you need to find a specific path yes
to this other person
if the manager needs it
from the point of view of Infinite development

then it turns out that it is the simplest option
there explicitly or implicitly
display management information anyway
through the structure of action yes For example there are thoughts

and at the same time see that the very uniqueness of the action
for example, a thought has a different form
and it turns out to be quite interesting to find thoughts
appropriate to the management structure

and these thoughts that correspond
a certain form of management
they can be translated quite well

for example in the structure of the next action

i.e. thought as a source of control
from the point of view of actual generation
some energy and control

i.e. nothing comes from nowhere
but due to unique access
where the resource should not be very large it turns out

because it is in unique access
only a small area is informative
for control and management

and from the point of view of logic
if we look at this process
as a Macro-level process
then it turns out that uniqueness must go
through the then generalized coordinates

if we are talking about many people yes

and generalized coordinates
either they are different or they are the same
and they are just called differently
i.e. the same thing happens but it's called differently
due to the fact , for example , that the first name is there
was intended for other purposes yes For example

then it turns out that in the unique access system
recorded situation
recorded information
which, for example, is practically not implemented
as a system of uniqueness too
it begins to transform into a single-pulse level

and based on this, if, for example , we work by region
there by cities, etc. specific settlements
here are the connecting systems
there you can simply draw a straight line
between geometric parameters
between geographical points

and here you can see
that it is precisely the uniqueness that is manifested there
where there is even a primary route
i.e. to carry out control for the first time

God gave it that way
He gave all the time new and to develop the territories of the earth

and it turns out that this is what makes management unique
was preserved and developed
without let's assume some well like the next series of actions or something

This is where it is important to see
it means that behind a specific action there is, first of all,

what system of uniqueness is being restructured in this case
if you set a goal

and that means seeing how to create
such a structure of unique action
to take full control
there yourself other people in terms of target action

It's one thing to control from a general point of view

Well, that's the human condition
and another thing is the targeted way
accumulate newspapers with positive systems there
which allow us to understand the management structure

and then it turns out that the uniqueness of the action
often also consists of the fact that
to be able to differentiate the process, for example

differentiate the process
understand where the process comes from
because uniqueness is like a tuning fork, yes
in action
it often happens like this
and how can I see from here what to do next

and here is the most interesting thing
that at the moment of this Perception almost instantly
you receive information from this Macro level
there is some kind of Macrostar sometimes
looks like a star at the optical level
so it's multifaceted, multidimensional, well in general, the line

and in principle this is the management
what if we are from the level
right there let's say Macrostars of the Macrolevel
moved to target management
then this glow allows it
falling on the body
there, for example , the human body can recover

if the glow is brought out to the Spirit of man
what can be done specifically

it turns out that Spiritual signs also begin
have the property of uniqueness

God is already more unique than man
but when we bring it
Well, this level of control is sort of from the external environment, yes
from the external situation
then it turns out that you get more stability
in the current phase of management

i.e. the more diverse
for example, methods of interaction and work
with uniqueness with unique systems

the more accurately you can get the result
from the point of view of interaction
with its own unique level

and it turns out that this is your unique level
if you want to pay attention
for example, to your unique level
then it already exists initially

why do people mean Well as if they often don't have any
This means there are no claims even in complex interactions
because they don't have a unique system, for example
Well let's assume it's built on the principle of husband and wife, yes

i.e. if we consider this system
in terms of the uniqueness of the next action
a man and a woman there
then, for example, the birth of a child
this is also the next level, quite unique
from the point of view of the action of two persons there

and of course the next child is different
i.e. uniqueness is inherent from the start

and by the way, here in the management structure which
For example Well, we can implement it
as a structure of distant action yes
structure of the remote level of events

we can see that uniqueness
this is often your personal characteristic of Perception

because when you perceive
other information object
you always perceive it as unique
possessing a set of characteristics

if it is perceived correctly, for example
then the object itself saw the identification system
that you have come across its unique structure
and he doesn't need to show any kind of counter control
he starts to move away

i.e. you exercise control even over that
that you through a unique system
you start to diagnose the control level

if you want to understand and learn more
what's going on there
and from where some control lines are implemented
it turns out that it is often seen here
what is behind this
a large enough counter-control system means

and this system needs education
i.e. it is necessary to show that it is necessary to live Forever, for example
in general, in some specific actions, counteractions , etc.

and by "specific" I mean
not just educational level
and concrete help
put on the plan of action there
to a specific implementation plan
i.e. precision in control

but often accuracy or speed
we can only ensure by knowing
that we will have a unique management
not standard but some special one

and therefore it means an abstract expression
from this point of view
says that the management is unique after all
This is a non-standard system

we can quite easily identify here
The laws of interaction then
in conditions of external pressure and in management

i.e. the concept of "pressure" can always be translated
into a useful property
if we take for example the uniqueness of this system
let's make it generalized, so to speak

Well, there is some pressure
and quite a lot of people

for example, they can take on some problem
and then it turns out that the pressure starts to outgrow
as if in the structure initially well like another one yes
which in an antagonistic version , so to speak
sometimes interacts with your action level

then it turns out

for example, from the point of view of treating people
for example, to treat many people there at once
in one control impulse
it is possible to make it so that all people
received precisely the unique effect

here it is important to see in diagnostics
exactly its action
i.e. it is not necessary to be able to do it in some mechanical way
or by memorization means to differentiate the action

and enough happens here in this action
the action itself is easy to see
i.e. you need to be able to see information objects
that's how they are
generally speaking in information
or in Perception

and to see their shape
we must definitely follow up
does the management structure come from ?
i.e. where do we get, for example, the managing status
from the point of view of the initial action

and here is the analysis of this situation
the analytics action itself
leads to different properties
but always positive for you

i.e. the more time you have
the more positive action you can get
through the control system

and when we talk about what we need if
for example, show some action
well, which is in a unique control system
it means it is realized instantly
and is no longer used, for example
Well, due to some natural reasons

then it turns out that the task
namely Eternal life Eternal development

implies the presence of
some other unique input means into management

and this unique entrance

it is often based on very deep connections
here on very long ones
seemingly completely often in uncertain connections
that it could hardly be so For example
in management
in a logical way

but precisely in an informational way
from the point of view of control over the future
Of course, it is possible to differentiate very clearly
by means of precisely this level of uniqueness
how do management processes occur
in the environment in which you are engaged

if we want a unique system
translate for example into a digital control series
here's how to do it there
so that all the diseases that exist
were cured well For example there personally by you
that means all people, etc.

then here I think it is necessary to fix it first
control system
as a unique feature
for example, some kind of digital series

and when have you already fixed this system?
then it turns out that it is precisely the sign of uniqueness
remains in the fact that it is already spreading
this level of fixation and to other values

and here is the digital series in the structure of uniqueness
he's next
we need to look at it now and try to see it

why is uniqueness a specific digital series
then he's next

1 3 9 5 7 1 9 1

then you wait for some period of time
and to fix the row at one point
just add the number 2

and that's when you through the structure of a unique series

take control
then the control can be any further

here is another very useful sign
that it is enough to highlight
unique property in the form of a number series
then you can set any external task
and then it is already realized
in the space of a unique environment

this space is still different
and in this space for something to be realized
of course it is creative
the more creative the action there is at the Macro level
the more precise in the field of unique management
it is being implemented

then here it is clear that in any case it can be implemented
i.e. unique control time
very flexible time
this time can drag on, for example, mechanically
i.e. time acquires the properties of a mechanical system

because we need some differences
and the differences should be better in everything yes
in unique management
so if we want to artificially create this control

there is a natural difficult route there yes
unique
but the methods are similar

but if it is a truly unique level
it means that there is a completely different matter in management

and that's when you start asking the question
and what kind of matter is there ? For example
what is the difference

well, optics it would seem , yes , it is the optics of Perception

but if you consider the optical boundary
as if from the inside
from the inner sphere of Perception
it has one optical value even

and from the outside, as if from the outside of the sphere

there is often a completely different value there

moreover in control optics
even a small shift in control geometry
literally sometimes by several meters even on the map
immediately leads to another level of action

i.e. you either need to add a number
or strengthen somewhere, well, like, control
the following some property and level

and it turns out that in a unique control system
it is very important to differentiate the signal then
primary signal
how does it go how do you leave the management experience
and how are you, well, in the future already
when it is desirable to do personal practice in a given system

when a person is confident
he can quite easily set up control
quite widely

and by the way, in the system of precisely unique management
what is important is that after all
when you start working on a large scale
according to this system
then here is the property of something like uniqueness
it's practically starting to dissipate , yeah

but the wider you work
i.e. let's say more openly, having specific tasks
then the more precise your control becomes

although on the one hand it is unique
i.e. your personal action
on the other hand, it should be somehow more socialized

and so we have here as if
dual system of governance
where we attract one part to ourselves
management for example of the Soul level
not letting this information out
into the general management structure, as it were

You work only through the transfer of experience
through other systems
not directly yes For example

and on the other hand it's the other way around
as if an exit into the Infinite external environment

and this is what happens when we look at it
for example, some specific event
and often a person needs to take action
some methods and measures of management
when does it mean Well, I need help

it turns out that the system itself is unique in control
is based on that in this case
what else exists
as if some completely clear external action
in your unique management system it means
and this action is like this
that it can be generally defined and differentiated

and it turns out that if we do this action
we start to bring it out on ourselves
i.e. identified action

we see that in the unique management system
it practically means such an action
what we try to do in any unique action
first find what is most difficult yes
here at your level

i.e. find the structure
which may not be a problem now
maybe it won't be a problem
but let's say you like it
some additional action
which is happening there
at a specific level of management

and it turns out that the unique action is universal
you must first of all see the structure as if from the inside
i.e. to see why it is unique

basically any human action
it is unique

but here we are talking about exactly that
what can we work out
special mechanism

use of this system

and this is how this method of management means
we can clearly say
that no matter how the management is carried out, for example
at the level of primary actions
there is still a certain level of control

where uniqueness is a parameter
which is at the same time
both external and internal
and your management is definitely implemented
if you can create a kind of integrated uniqueness

and that's when she kind of locks herself into control
what is "integrated uniqueness" well as if generalized
this is some kind of external environment system that is also unique
your internal system your desire

then it turns out when creating a control area
as a unique area
there, for example, by you personally
or for example, students of my Teaching

then here we see
that in greater integration of actions
we get more actions
there at that point in space-time

and when the combination is already underway
Macro level and specific target levels
in a system of finite actions
then it turns out that this knowledge is often enough
to do something next
precisely creative action

i.e. it is not necessary to listen to everything
at the level of detail
it is often enough to understand
that such a phenomenon even exists

and now you should see it absolutely clearly
what if we
for example in the structure of unique management
let's make it so that the uniqueness itself is there
as well as a general sign of management
and so the sign is, for example, individual

then it is enough to take it this way
region
to understand how close , so to speak, it is
external wave of control in relation to you yes

i.e. what influences you there at the moment, for example
or are these earlier thoughts
or is it some specific action
or what we are doing right now

we make management through a unique access system

it turns out that everyone has the right
to do management in one's own way

but this is precisely the unique access system
what you can do at each level
to form
what is the level of the primary state there
and the level of the next action
but at the level of an abstract, as it were, logical system

here in the unique access system
you can see already implemented socialized systems

and it turns out that if you
through this level of implementation see
that's visible
what does it mean from the point of view of a distant forecast
unique system is a level
which is often mastered very quickly yes

i.e. that's exactly when we speak
about what is necessary for all knowledge
were transmitted there according to the Teaching
were constantly transmitted in this way
so that the material can be mastered quickly

then here it turns out
namely unique access to each yes
to the Soul of every person
it is already quite active there yes
quite effective
Path of Action for Macro Salvation

and research for example the presence

some negative quality
or there is a positive quality of actions
this is already a repulsive system
at the level of more general plans

i.e. to make such a conclusion
you need to have some plans first
some similar systems

in a unique system this does not happen
at least for now
certification systems for various devices, if these are devices, etc.

and here it is important to see that in a certain system
unique control can be defined quite clearly
it means a fairly remote area of management
through which you can
well, like through some kind of transit point
output information into the Infinite Future
thus from the Infinite level
there pulling out actually a unique certain ray there
come to yourself already

i.e. it turns out
what if we work over a long distance
then we can receive
from the initial level of management
saying that we can use it
and get, as it were, a collective management

the further we manage
by unique levels of management
the more we get
collective management there from different systems

when we start to think, for example
at some specific moment
what needs to be done
in terms of control speed

then I think that it is precisely in the unique management system
I see this situation like this
that it is important to have speed
if there are two objects well means of this system

and when do you start

in a unique control system
to do, for example, management of the implementation of tasks
you get another interesting enough factor

what is in the collective Consciousness
because everyone is considered a unique manager
here it is being built in the form of some kind of system
where is primary access
if these are images
you also need to be able to see control images

i.e. it's one thing to manage
and another thing is desirable
sometimes enter images under control
i.e. precisely the fixing systems

and the transition from one level to another
i.e. to the system of images
this is the level that allows
actually stabilize governance
and make universal action socialized

i.e. on the one hand
action that is completely unique or universal
but it becomes socialized because
that you have associated some image with this level

it turns out that by working
on images, for example, on thought forms
where there is also a management plan
which corresponds to the goal, for example , yes
and a plan for achieving the goal

you can see that in a unique level
it is precisely this control system that is achievable
that the unique area itself is very mobile
and as if often all-pervading

then here it turns out
what is the translation of the image itself
into the management structure
in impulse
often this is a special task

and if you find a transition
then in fact often many questions

are solved due to the fact that you found
more fundamental meaning
in a specific geometric position of your control

Well, if we look at this here
the principle of control is as follows
what is required for example
in a particular control environment

then here you can see what is really going on
using the assumed structure and image
and using the structure of the control environment
we see very clearly
as if the internal connection of the next plan

that your level of management is like this
what you achieve anyway
For example there is Eternal development
in any case, you have normal situations

and at the same time the image itself is a confirmation

i.e. one thing is unique management
another thing is the image of confirmation
that yes, in the future this will happen
you just look at this structure of the future
and that's all

and when there is confirmation
naturally to the primary level
is output
a fairly simple system, so to speak yes in control
quite a simple situation
when you are from the totality
image - information
and the image can be anything at all

i.e. you understand
what is remote strategic management
for you this is already a realized factor yes

i.e. you can already say now
what exactly is strategic level
it will still be realized for you

due to the fact that you
through a unique control system

could at the right time as if Well, yes, come in
look at the desired control point

and therefore unique management
should be right from the start
such a postulate exists everywhere

but in this case it is possible
to speak separately and specifically
what in terms of absence
any harmful properties of the system
then it is important to see the following

what if we, for example, set the task of management
well, like such characteristics as there Eternal development

and unique control in this case
becomes, in fact, non -unique, yes
in this system

then it is clear that people
for example, to carry out control over the subject

let's say we need to plant a coniferous forest
well where is the cut down area
that means specific unique breeds are sometimes needed
so that they really grow there

and here is the choice in the structure of the physical plane
some unique management properties
this is the management
when you actually choose the path all the time
due to action

anyway i keep saying
so from the management point of view
around some specific action

that we just pulled out a unique system
from let's say some context
here is the image - the action yes
course of action

and here is this context
image - action
he is such that you need to try to figure it out
first in the image

the image is one thing after all in this system
and the action may be different again

and that's when we look at
this system
image - action
again we can find everything in between
everything that prevents you from being realized
send these people there these events
into a structure more favorable for them
so that they don't deal with you, for example , don't touch you
to work more efficiently
from the point of view of information

and when you are convinced there on a physical level
then it turns out that it is management
coming from a unique system
to the generalized system means
this control is precisely the most characteristic
in general and just to the human body

therefore the image is perceived
comparable to the body yes
in this administration

i.e. the next level is like this
that your Consciousness is being formed
these images

and then you find these images
in the information in front of you

this level is also quite unique
the level of knowledge you get

you can even see the route
that first you formed the image
then it appeared in the information
and it is physical these are some real things

and then it turns out that in this system
you can see it very clearly
almost any implementation
so you can really
by some persistence
solve any of your problems

in this control system
the main thing is to keep the image in this environment

try now
considering that there may have been earlier
some problems are earlier
and try to solve it now
through a unique access system
I will work with you

and I think it's quite important sometimes that's the most important thing
in a unique control system
Well, in principle, in many other systems too
it is to see always a favorable level

i.e. when you are calm you see a favorable level
everything else can only be the work of action yes

not the work of concentrating on the obligatory achievement
but the work of action

and this is very important
because if you work through action
knowing that everything will work out well for you anyway
this is a different type of management
it's more calm and measured there
you don't need to hurry anywhere

the main thing for you is to act and simply
to do something
and the implementation will always happen

Firstly, confidence can come from that
that one action will still lead to a result
and you need the result
well not now there instantly there in a day yes For example

a lot of time you start to do management
one method, the second, the third, etc.

and if you look further ahead two days
it is clear that all this is being implemented

then it turns out
you still have to do something
and you work through the work of action

at this moment you can simultaneously
look at a number of other targets
some unique tasks
some earlier tasks

like this for example means to do it this way
so that the cases that are earlier
also all the time were realized yes

Well, that's when you go out on that case
which is quite calm
maybe make it uniquely calm on purpose
and then comes the structuring of earlier tasks

i.e. the action that you are at a unique level
you will achieve
this is the action that will happen anyway
you know it

and it's like a kind of rod
which allows it to work like this
what is next to this rod
you can quickly solve all other problems
well, like some kind of pivotal support point, yes
or support space
in management

and it turns out that as soon as you have such a space
you are forming
this is how you perceive Reality

then in general any other control systems
are often greatly simplified
because there is still
the principle of transmitting information by analogy

some perfect action
or even what you do
it means it's in management
carry out as a predictive current action

those tasks that have not been implemented
they only do this because of this glow
from a central, as it were, control rod
can be realized
because it goes as if basically it's simple

the recognition system is unique

any object of information
may have the property of recognition
other

and the number of events if you put there
in the form of a system of unique actions
and you try to put something real on this axis
then when approaching this axis
you can already decide through the dialogue of systems

and the uniqueness of the action is that
that you work due to that
that systems begin to exchange information
you kind of just observe

although by the way this is another action that is like a core one
maybe it's still being decided
but you are just absolutely sure that this will be resolved

and then it turns out that in this regard it is by the way
this is precisely the physical body of a person
having experience in development
is the most stabilizing factor
in solving many problems at once yes

and the number of cases is increasing because
that one unique level
man by himself
an event is also a unique level
interacts
the third there is the tenth level, etc.

and when there are many unique systems
there are already medium systems
which denote, as it were, a class of actions yes

and then, strictly speaking, we have
some directories distribution of information

i.e. we can through some unification
there is a unique action implementation
select the system in this way
that we are practically in the system of action

i.e. knowing that everything will be fine anyway, no problem
simultaneously solve huge amounts of information
which, by the way, concern the task of Macrosalvation

this is where it's important to see
what is in the unique access system
Macrosalvation tasks are often solved
at the level of some one stabilized system
personal plan

i.e. you can just take it and come up with it
some unique design
and stabilize, well, take something there
it's a completely simple matter, it's personal

for example, you have been
I wanted to do something simple
reviewed this case in the information system
made management
Well for example, such a thing
that maybe it shouldn't have been done
there is additional control
but you decided to do it

and stabilized their level
this is absolutely by the way such a pragmatic level
in this system

and further already near this system
built management there for Macrotasks yes
so that there is no explosion at the nuclear power plant
so that the main criteria that can be dangerous
For example there for humanity as a whole
or even often if it is
it can't be allowed for one person
there is often such an aspect that needs to be considered

not necessarily there throughout the entire Macro level

you take it and start managing
at a fixed point

at the same time
why do i say that the event must be in the future
when the event has already been realized
you don't have dynamics yes

It's like you 're pulling yourself out
due to the fact that you put the implementation there in the future
and at the same time move in sync with time
and at this time you put the implementation system

Well, a simple example
there a man decided to go to the store to buy something for himself
he knows exactly what it is yes
and the event has not yet been realized
it's somewhere around there, for example, in a day

he has a lot of time to spare
due to the movement of this information
to the goal
by the uniformity or uniqueness of this event
solve all previous systems
or there are current ones

often very complex
or are these global macrosystems
or some highly specialized systems

therefore, as a management implementation system
in any case, there is such a recommendation

try to choose or create a simple action
fix
see a positive result
for a seemingly extraneous action

and since there is already a positive result there, yes
then everything is fine with you there at that time
Well, let it be in a day, or in a hundred years, or whatever you want

so everything in between is solved yes
and even a complex, for example, primary problem
as if he is attacking some unique characteristic
your level of management
what did you take

through a simple action we considered
your future management
and here we already clearly see these reflective screens
they line up on their own
that negative action cannot be
as if it were very problematic

i.e. it no longer affects
the root structures of your personality

and by the way in the structure of treatment for example
in the structure of Macro Access, etc.
this is a very important aspect
the root, as it were, original structures of your personality
they should not be affected under any circumstances

i.e. it is important to constantly maintain central control
no matter what happens

i.e. there is a system of action
you just mean you control
and here, by the way, it's not even that important
there is more of an element of action here

i.e. what you manage, how you manage is not important
anyway, everything will come true for you there

but there is an element where unique access is needed
i.e. as the first unique access that you created
this is a sustainable action
and others, for example, actions to achieve mandatory

in the system of Eternal development
this is actually the bare minimum
be able to achieve the Norm of Events

because if a person achieves this goal
he must achieve this definitely yes

at the very least it means being able to improve your health
be able to structure events in such a way
so that there are no radical problems there, etc.

this means and therefore it turns out that based on this
from the point of view of responsibility for all external events yes
for example some kind of disaster
this is from the point of view of logic and Consciousness
This is a radical problem of course

if a person, for example, is even busy there
but that means the control mechanism was not implemented, for example Yes
or didn't have time or some other reasons

it turns out that the more accurate and more then
you implement
systems similar comparable
not that there are similar problems
and mandatory access systems
the more precisely you are sure that next time
you will be able to actually prevent it from happening
Well, maybe more problems?

many of the same
because there are not a lot of problems
but it's just unknown
because you managed to do the management
and these problems did not happen

that's why this option arises
what is the problem level
this is often a unique level too
which must not be allowed to happen

i.e. to realize good development
and not allow
negative type control structure
we should declare it unique too

then the properties are very simple
unique system it is a local system

This means that events are quickly recognizable.
here is a huge array of information
making it unique is more difficult and even impossible

because there is an intersection of information
and how to say it's unique
if you take all the information of the World
then this is clearly not a unique option
all systems are concentrated here

and take for example the entire Macro-level system
move to one place
and a unique level of control
differentiate as as problematic
and that's all

then it is possible to prevent it

negative status of events
although primary structures may be evident
and try well how to achieve something
your management level

and therefore by unique features
by installing stabilized systems
so near these levels
you can solve problems very quickly

and the tasks that have been solved
they are practically like that
what have you decided? You don't have any special business anymore
you have finished managing
and here is the criterion of completion
is precisely the external unique feature
i.e. the external unique environment allocated by you
which is in contact with the socialized
i.e. all arrays of information
where this negative event is not present

and like this unique, well, small piece
who is trying to get inside
positive information
due to its unique properties
that he has no way to enter
because of the thin light optics there
due to instability in management, etc.

you are already sure here that a huge array
is being implemented
means Eternal development
a huge array of information
has the property of not allowing a negative level
also due to the fact that we can make it unique
external level
as if well, unfavorable management
and thereby eliminate this control

leave only Macropositive level
and with primary access with positive levels
with their own tasks
get there Infinite number of unique systems
within the generalized system

i.e. Macroenvironment
contains all your development levels

then it is clear that you live forever
and there seems to be no other option here

because the model is quite simple and understandable
the clearer and more accurate it is in Perception
the more people will be able to master it faster
technology of Eternal development

because it is in any case
every man's path
and civilizations too

here is precisely the unique control system
it allows for more precision and accuracy
select control area
and make this area more objectified
for everyone

at least due to the uniqueness of each person's Thinking
this system becomes completely transferable

and also thanks to unique features
is better mastered

which means you achieve your control faster
the faster the system is adopted by others
the faster you achieve personal control

This is where I end today's seminar.

Thank you very much for your attention
