

GRIGORY GRABOVOY
The Teaching about God
**Application of predictive resurrection technologies
in preventing terrorism**

Hello again
The topic of today's seminar
this is my Teaching about God
Application of predictive resurrection technologies
in preventing terrorism

In this topic I show that to the concept of "terror"
in principle it can relate
not only there is some specific situation
relating to the direct understanding of terror

but also any individual factors, for example, impact on personality
where there is an impact there is some kind of traumatic nature, for example, yes
or some more serious consequences

therefore, in this case it is necessary to consider that
what exactly are prognostic systems
which will be manifested here in this technology
This includes control
behind the structure of the resurrection process itself too

because in conditions when society, for example,
does not have a systematically developed legislative base
for example, social bases
for the life of the resurrected

after all, the resurrected one must be endowed
possibilities of such management
where he will be protected from any kind of terrorism
which can be applied
and in relation to the already resurrected person

so the more accurately we can be here
provide general technology
the more resurrected ones can benefit
with this technology

and in fact it is a meeting with the resurrected

i.e. their arrival at the physical level of meetings
this is still the technology of their real security

therefore in this prognostic system
the situation will be revealed
how are the works
i.e. when we work on resurrection
and organizing meetings with the resurrected

i.e. a predictive system that should visualize
almost all systems and work plans

i.e. this is exact knowledge of what is happening
at the moment of resurrection
and then when the meeting takes place

and in addition I think that there will be
the entire cycle is standardized
this is the creation of a security system
basically just ordinary people, for example those who didn't die

but of course it works out in some cases first of all
I am saying this because society is not prepared in many ways.
protection of the resurrected themselves

so in the first level of technology
includes predictive technologies
i.e. the ability to see the situation as it is

structure of work with resurrected
this is the structure of the work for example before the fact of resurrection
it is still a different space and a different time
the time structure there is different

and visualization occurs
through the system, like, well some kind of transitional levels

i.e. wave-like levels
where the time wave comes into the current time
should be translated
in the structure of Thinking, for example, there was no one dying
or a living person well including the one already resurrected there

i.e. the time structure here is different
that's why there is such interaction
that when this type of control is done
the social plane in which a person is located

the one who, for example, resurrects or carries out
meeting with the resurrected
This plan should be further regulated

i.e. work is happening, for example before the production part yes

for example, a person has a task
resurrect someone make a resurrection

then it turns out that he is still in control
another level of space-time events

i.e. from the point of view of living people
there are social systems
some kind of law and order breakdown
levels of social norms of response
well, like some information that has a property
reflect the life of ordinary people living people

so from the management point of view
a person enters the system
where for example well it's still hard to say for sure
what does it mean if physical Reality is projected somewhere
or are these just living people again?

and when we talk about that
that a person is in that state
that the question of resurrection has not yet been raised

Well after all, there are many generations that no one even knows about, for example,
yes
at the current time

then it turns out that we are entering a different Reality
where there is no conditioned order of human life
i.e. this is different information

and the structure of the translation of information here
This is a special technology that takes into account control
as for that sphere of information
where, for example, there are unmanifested socio-physical processes
and control over this area

because the transition to one or another sphere of management
all the time it seems to make the system less stable
from the point of view of achieving results

i.e. if you take and control, for example
only the sphere where the organization of the resurrection is taking place
then the transition to social status in the ordinary life of people yes

it turns out that at this moment
control over social status
may be downplayed

and as a rule , then additional control is needed

to restore social status here yes

i.e. how can this be expressed?
as a rule, nothing radically bad
it cannot be expressed
This is clearly evident from what we do
precisely life

but here is control for the purpose of accuracy
so as not to be distracted by any social processes
need to be implemented

so with all this
there may be systems like this here
what is being done in social terms, well, the same instrument part, yes
some things are very useful

if you get distracted and delay the implementation time
in this system
then it will be anyway, well, as I think
prolong the process of the main
i.e. for example , there is a meeting with resurrected people

so here we need to clearly understand
that control should be external
beyond space
where is there any information about that
that such and such a person needs to be resurrected
or such and such people
such and such a nation for example yes
so in general there could just be a lot of people

then it turns out that this is some kind of information
we will not delve into the structure of this information there
because when transferred to the social plan
this is already information from living people

but if you think about it
how does God even consider
the structure of a resurrected person

then you have to think about it
how did god create man in the first place
at the primary level of human creation
God had the initial revelation
Soul level

but God can create the Soul
obtained from the moment of the creation of the Soul

personality is fully defined
and the investigative system
the body is always considered to exist

i.e. for God there is no understanding
that the body may not exist
as if in the direct human understanding

and it turns out that since we
From God's point of view we consider this position
then He primarily only sees the Soul of man

This is basically enough for Him
to know that the body will always be here
Well, from the point of view of human logic

if for example I observe this logic there
how should a person think in this case
then you get the prognosis itself
in general the phenomenon of everything is a prognostic phenomenon
namely resurrection
because the prognosis of resurrection is a special characteristic

because when we talk about that
that simply prognostic a person always sees
some events there of living people
it's still a kind of linear prognostication

everything is clear there, planes are flying
there are satellites hanging around somewhere, etc.

so it's all visible just like with physical vision
and there are no problems that an ordinary person sees
i.e. the picture of Consciousness contains the same Reality

as soon as we enter into the structure of the concept of "resurrection"
moments like this arise
where are the original processes
there are processes that speak of treatment ^{yes}
tissue restoration

instantly, it's just worth it
to start a person to do
in the prognostic version of the resurrection

from the collective Consciousness immediately comes such a certain
it even looks like a breakdown
a powerful surge of information
where is there such a thing as "slow tissue regeneration"

i.e. resurrected from the point of view ^{of well} there is a layman, ^{so to speak}
who in the collective Consciousness understands
what is tissue restoration
there is tissue growth, organ creation
it's about the same

Well, the man cut himself
the tissue is overgrown ^{yes}
he starts to think like that
so naturally the resurrected one is going to gather somewhere like that

i.e. his understanding is naturally the first linear option
what should he observe
how does it happen

although for God the picture there is completely different
the person is alive
He has no original
like ^{this or something} control impulse
that the body may not exist

it means He always has it
if there is a Soul there is always a body
Well, the prognosis is that everyone will be resurrected again

anyway he sees a living body ^{yes}
as if in the Infinite level

here the task is to detail in that part
where God does not consider the position of control
there is a people view

i.e. it turns out
that all it takes is for God not to pay attention to something
how instantly the processes start well some kind of destruction occurs

and the task is to bring
this is the impulse of God
with which He looks at the Infinite System
where everyone is alive and well
this impulse
just translate into the structure here is a discrete detail
how does this level of assembling organs happen ?
human assemblies, for example, etc.

and then this process
everyday opinion well quite useful to use
if people think so, well
so we can use

organ growth system
human cell organization system

but there is a nuance here
if the person is alive and we are just treating
these are organs being grown
this has nothing to do with it at all
to the concept of "resurrection" "the man did not die"

it means there is just linear tissue growth there
this is direct control

in the case when it comes to that
that we must control the organs
as if a resurrected person at the prognostic level

then we must as I said
control the social plan
all the space around it

then we must clearly see and understand
what we owe by the Action of God
see all the time
the light is just ordinary, his own and this person
alive there in the Infinite Future

but to understand
that's exactly how it is there

some assembly of some molecules
resurrection in principle at the level of God's logic
it's not happening
precisely through the logical assembly of organs

i.e. it's not some kind of conveyor belt
where can I take and collect some cells there
and fit into one form

i.e. we must understand
that we work only speculatively
we work simply using
that fragment of collective Consciousness
where people think that it is the same process
similar process

i.e. we use a similarity system
but if one one geometric figure
similar to another
then the first one is in a completely different place

and the same principle can be used
work but in another place

it means working all the time not on human tissue
and knowing that in the Infinite Future a person is still alive
we work at the level of
what we see is the Action of God
we see the light
and we work in a place that denotes collective status

again we use the collective Consciousness
we say that the collective status is there, well for example an organ yes
how the organ is assembled

then it turns out that this is a very convenient value
in the context of the fight against terrorism

For example there Well let's assume this option
I have a number of bullet protection items there, for example, yes

so at the fifth extraordinary congress
political party DRUGG
this is exactly the row that was given

and it turns out that if you use this technology

then it works very, very precisely as counter-terrorism technology

because a flying bullet

if a person has, for example, some of the tissue is not collected, yes

you can take there, for example, a finger or soft tissue

which basically heals quickly

consider

and see what if this piece of fabric

as if in the space of information

exists at the assembly level only

but we are not looking at the person himself

we even have negative events towards him

we do not attract

we work only on the reflected signal

it turns out that the bullet can't hit him

i.e. she as soon as she

if it even exists

but firstly you can make control

that she doesn't exist

but theoretically if some option comes up

any impact there, any, and not just bullets there

toxicological

any substance that is harmful

there is radiological

it doesn't matter at all here

we see instantly

that this is a very powerful technology

i.e. the collective Consciousness is also built this way for a reason

this is not some useless function

in the collective Consciousness

where does it say that you should consider

Well she looks like this let's take a look

resurrection process

I'm putting it this way, let's say

as a process of simple treatment

where little by little the body is being collected atom by atom, for example

so it turns out that here on counter-terrorism technologies

you can gain a colossal amount

in this regard, what to consider

that any act of possible influence

goes to the part that is not yet assembled

i.e. we just take and consider everything
this system so
what does any damaging action mean
does not affect the structure of the fabric as such

in the information space
it's always the part that doesn't match
not a single molecule of the human body

then it turns out that with this level of management
any external influence
is squeezed out as if outside the sphere of man
then the resurrected one is no longer subject to external influence
even if society there is against, for example, yes

and it's not even entirely clear logically
why might society be against it
Well, society is simply not ready.

for example, they act the most
such points in the collective Consciousness
like the first "overpopulation" that's what it is
some kind of neo-fascist ideology

so what's the second thing
i.e. it must be disbanded immediately
in order to disband
a system of some kind of neo-fascism
you just need to concentrate this phenomenon

i.e., the soil, as it were, removes the soil from this projection
i.e. there is some specific control going on there
that's what overpopulation is
the platform is simply removed
the impulse passes
and that's all

this system doesn't seem to work
the second system means possibilities of this nature, let's assume
what how where their people will be met

and it is precisely in the work on counter-terrorism that it is very important
that those cases of resurrection yes

which are connected there with murders, including terrorist attacks
there is a large global local type

they naturally need
in protecting these people from the next terrorist attack
because of the level of information
there is still a level of sorts of a wave surge

if a person got into some information system
such a wave exists on information

and for example the resurrected man
he may again come under threat of influence
Well, if there are some massive terrorist attacks there
these are some dangerous territories in principle, yes
there are close border areas there, etc.

if this is a single terrorist attack
there is a murder of a specific person
for example, there is a custom order, not even a custom order
he should understand anyway
that he will have to overcome this wave, so to speak

because in this World
nothing special, right? unusual or completely different
No

there's a person there who has recovered from some kind of disease
a similar wave can occur periodically
until he is completely free of the disease

A well, some kind of wave principle

and it turns out that the controls here are similar
what a resurrected man
he may be in similar conditions

not necessarily in this particular place n
it is definitely from terrorist attacks
it could be a threat from some machine there
but it is precisely the threat of defeat
this is sometimes quite serious

and it turns out that this is the system
it is absolutely necessary to prevent
i.e. to make it so that these waves
as if they were completely well restructured

they were not neutralized

a person enters into a normal rhythm of life ^{yes}
that's why it turns out that it's about counter-terrorism
one more thing to keep in mind
what according to statistics
even basically it would seem ^{yes} people were subjected to
for example , acts of terrorism, it is very clear to everyone that it is bad

however, with repeated levels of difficult situations
basically from the point of view of such analytical statistics
main spectrum of threats
still, it often happens to them again

i.e. it would seem that they got it
completely innocent of anything
but still we end up in the structure
some kind of external influence here again
maybe a different plan, a completely different plan

i.e. it turns out that this is an external influence
for example, there is this type there
how does some kind of plan arise that is perhaps completely unusual ^{yes}
from a logical point of view

it means because I'm showing it on purpose
that there are some unusual logical control models
generally illogical systems

so it turns out that the control system is , for example, like this
that as such an illogical model ^{yes}
we can consider such a factor

let's say there is , for example, a phone call
and there are just some sets of words ^{yes}
denoting a telephone call

here's how to count that it's a phone call
or a voice recorder recording
how to understand

Only a human can perceive this
who knows what we're talking about
i.e. it would seem like an ordinary life, ^{yes} everyone sees

if people don't see the phone they think

that this is a voice recording that evokes a voice or just
i.e. it is very important to see here
that the world is built on that
what you need to know
where does this come from

and here is the basic control system:
so that we can use practical examples
seeing what is really happening
understood that the process of knowledge is also based on the fact that
that knowing we still have to be able to manage

because we know that in the future
but how can we influence this first of all ?
there for example in the future it is possible
some kind of terrorist attack let's assume yes

Well , for example, along the lines of the organizing committee.
political party DRUGG
they tried to give it to Nalchik in the summer
Well, well it turns out several months before this attack
b literally after the sixth extraordinary party congress
they don't take it and that's it
for example these stickers are the same

and there, for example, is at least one background
i.e. we didn't have a single address, although we were close

Now, for example, it's clear there
what if there was at least one address for example
here is at least one house
there is already some hope after all
not just hope, but even accurate information
at least there could be a background

by event it is already possible to do at least management yes

this is at the instrument control level

and if a person looks at the device
I always say it anyway
this is only the part that is needed temporarily
Moreover, they can be picked there, etc.
destroy these devices

i.e. it is necessary to develop
it is precisely the option of control through human Consciousness

Well this means you need to have reference points of influence on events

and these are the reference points of influence
it is precisely this dispersed mass of matter
in the control space

i.e. if a terrorist attack is possible
how a person should get around
Well some kind of bullet, for example, there

i.e. firstly there should not be a bullet, that's firstly
but there is another technology
where the body is not vulnerable

for example , in lectures at the Ministry of Emergency Situations where they are
employees of the Ministry of Emergency Situations
We've been to different hot spots
according to the technologies they mastered
Well, people , after all, they are not armed for the most part

and it turns out they just have to help
and at this moment something happens
some complicated process there sniper
some explosions are possible, etc. if there are military actions

then it turns out that although military units should be working there
but there are difficult sections when the military unit has already passed

and it turns out that here is the level of reaction
this is the ability to feel the body internally
at the level of complete total, complete control

"total" is a more narrow word even
and the level where a person controls
and the body
and the external environment

i.e. the external environment becomes like a part of the body

and such a level, i.e. viewing optical signal
which gets inside the body
it passes at the same speed
as a body boundary for example
also goes through the whole other system

i.e. there is no concept of "tree" and no concept of "wall"
the speed of signal transmission is the same

Well, for example, it's like in Shambhala, yes let's say
there is such technology there
there everything is permeated with one level of speed

if we use this concept
what is in the collective Consciousness
there is such a place there as Shambhala ^{yes}
there you can go through the wall, everything is movable, etc.
that's where the signal speed is
photon moves at the same speed

it doesn't matter if there is a wall or not
visually there is a wall, if he wanted he could go through
at a certain level there is ^{well} development of its own

i.e. it turns out that everything is provided for here
so that the person doesn't stop ^{or something}
opportunities for the movement of one's development

i.e. a person remains the same person
but at the same time it is protected ^{and has} an additional protection phase

at a certain level of this city, ^{let's say}
multi-stage like this
there at a certain level
the person is already completely out of reach

and he is the same, he just needs to get up
in all the history that is connected with Shambhala
you have to go somewhere all the time, overcome something
^{for example, like in fairy tales}

so it turns out that based on that
that this is absolutely real information
By the way, in Shambhala it really is like that

and when we start thinking about that
what is the concept of "Shambhala"
also an element of collective Consciousness
like everything that exists ^{in this world}

then it turns out that the mechanisms there are quite simple
what's the point of us going up some floors

We need to have this now to save people
we need to know this now and what happens
what we must clearly understand
what is the next level of management
where space merges with the body, as it were, yes

optical signal transmission level
one and the same
there is responsibility for all systems

i.e. instantaneous transfer of information, in fact, knowledge
from this space to everyone at once

this is very handy such a powerful fundamental element
this support lever
how do you know that there might be a terrorist attack
how to overcome

there on a personal scale
a person can do his personal actions yes
Well , imagine a person there goes to work
he is always somewhere in some places
he knows that some problem is possible , that means

and especially since for now he has no power there
for example, it can't influence socially there
call the police she doesn't believe him
for example, the police, some agencies

it may be that the police have no effect
it may not work if there are a lot of militants
police units
nothing is decided here at all

it turns out that it works here
there must be some level of control
where does the person work
at the level of the following systems, by the way

very important in the prevention system
i.e. influence to prevent a terrorist attack
to exhibit exactly that system
against which the media is fighting very powerfully

for example, there in the collective Consciousness of the current time, yes
for 2005 for example

is this main team or counter team performing?
which is precisely what hinders
the possibilities of analyzing this process as such

what is the process of resurrection
This is a very powerful warning action.
if there is an opportunity for a person in analytics
there we will suppose to somehow analyze the situation
and watch
what are the components of this extension
some extrapolation

i.e. translation into the level of possible actions
carries within itself the resurrection
it is clear that from the point of view of possible terrorism, as it were
this is an absolute guarantee of that
what you shouldn't do at all
there was no terrorist act there

because people can just come back to life
then they will just act as accusers, for example

and although in the resurrection system
so this component is basically excluded

i.e., the resurrected one does not act as an accuser
just shows with his life
that he should not engage in terrorism

but on the other hand, a legal aspect arises here
just that he is already alive yes
in jurisprudence there is the infliction of some serious defeats
but if a person is alive then how would it compensate for this

Well, in general, the article goes there
causing severe damage to the body there
but he is alive, so he is not considered dead

i.e. he is not charged with murder
possible terrorist after the fact of resurrection

and that means his only task is
how will the resurrected one react
he will kind of call him to account
for inflicting heavy damage there yes
or won't call for example

here since the defeats there are possible then are as follows
what could well lead to biological death there

i.e. possibly incompatible with the concept of "life"
then of course he accumulates articles

here we must keep in mind that the accumulation of the social base
in the conditions of resurrection
simultaneously counteracts this process
and at the same time it stops very strongly
those who begin to believe

and whoever doesn't believe them the same
how does the logical factor work
because here, as they say, there is such an option
that such an action is possible

i.e. to say that it is absolutely impossible
if there is even one case
it's no longer possible

and since there is a long-standing Christian faith there
for example , there too, after all, in the fundamentals
fundamental religions
all these processes are reflected quite reliably

then it turns out that we are dealing with
with that moment
what can a person say
what if this moment can be realized there?
in relation to a specific terrorist there

so it turns out that terror is sharply weakening here
i.e. this is the use of resurrection
in order to warn
from an analytical point of view

those. introduce the concept
that possible terrorism could lead to
that the man who will be resurrected
he may still be there, for example, there is an active person there
which can , well, in general, accuse if it wants, etc.

so it turns out that it is important here
to develop this concept
as a concept that, well , basically
how does the concept of responsibility look more like yes

that the person who carried out the terror there
he should be responsible, well, according to the Laws, more than God, yes
before God there

it is precisely in the concept of that
what exactly is the man who was resurrected
It turns out he implemented these Laws

and here there is a completely different conceptual line
legal rights
arises

here is the level of moral responsibility
which on the one hand is somewhat lighter
because the person is still alive

and on the other hand
he gets into a system like this
that he understands the futility of terrorism in general

this is such a prolonging effect
as if socialized among people
there on the Souls of people

and then it turns out here
very simple moment of the reference point
this is where it is important to work out
as if even a geometric model
this is precisely the counter-terrorist geometric model
in optics

where at the level of tissue organization yes
where the tissue seems to grow and gather
but it is not the man himself
and as if its reflection its information
relevant , typical information

for example, take and look
how does the fabric assembly process work
how is a person organized in general
originally human
never died there, for example

i.e. this is the process of the primary impulse
and growth is like God there

creation of the human Soul
growth is a kind of understandable process
it is concentrated
and the body exists there almost immediately

although an element of growth can be traced
like powerful pulses of light, for example

in case of resurrection this element is more logical
here in the logical phase
resembling tissue accumulation

at some level it is completely sparse
because a person is shooting somewhere in the Galaxy
he does not defeat the stars

so it turns out that this is the first stage of control
this is the pulling of the optical lever
from discharged fabric
to the image of a person

the discharged fabric is like this
that she should immediately as I said
replace the function of existence of the bullet itself first
there is some harmful substance there

and secondly, replace it immediately
in a level where space does not exist action

i.e. on the one hand we work
against some substances
Well they logically can be yes

and on the other hand we immediately show
place
that there is nothing there

i.e. we are in a favorable phase of management
control reference point
is in a favorable management phase
in this phase of space

here we need to look at it clearly, by the way
this is so literally like the resistance of materials
even more rigid optical design arises

if there is a concept of "resistance of materials"
there are deformations there _{yes}
there is an absolutely rigid body, that's clear

but here it is exactly
such is the absoluteness of the design
must be tough
that should never be touched
not a single element of human matter
even in the reflected signal

i.e. you have to work
accuracy needs accurate forecasting
where is the human substance located means

how can we see
this substance
This absolutely has to be seen
as a structure of the living World as a whole

this is what it is
the whole world
what is there
life in general

clearly understand the concept of "life"
i.e. there is a concept of "life" as such and that's clear, _{yes}
there doesn't seem to be much to talk about

but on the other hand we need to clearly understand
what is your personal life
what is the life of any other person
what is this in information
where is it located
as it is revealed geometrically

and here is the next level of management
is the identification of this parameter
designation of this parameter

because when we know
what information is relevant to a person's life
we know what to do next _{yes}

for example, there is a car driving at high speed
here is the light from the lamp, _{well}, we know the brand of the car

We know it's a car but we don't necessarily know the brand.

well, roughly schematically
i.e. we can see the signal
but we don't have to go into detail
We just need to work with the signal
which corresponds to a person's life

next level
management platform connection
from the so-called rarefied region ^{yes}
where matter seems to gather

I say "as if" that it's just as if

we think
what is in the collective Consciousness
such a position exists

Well, it really does exist.
people really think
that it can be close sometimes
to the treatment process

therefore the support system reaches the level of life
and this is already a dynamic system
and dynamic system
begins to interact
with static support system

and then we move on to this right away
it's not that we take it there and resist
to some specific one, ^{well} level
or maybe just some kind of terrorist attack there mechanically ^{yes}

we should get straight to that
what we have overcome
what we have overcome by management means

and when do we start
it means to already be part of this system
this control works
that we clearly understand that there are no problems with us

we clearly understand that the resurrected one is healthy and alive
there is no system of society ^{there}
Well who might not benefit there

that's what happened there, the man was resurrected and lives there
it could be people, some campaigns, continents
maybe it's not the point, it means

we clearly understand
that none of the systems work here anymore
on a resurrected person, *for example*
just even on a living one

By the way, this is a fairly powerful system
and to protect simply living people who did not die

so in connection with this here we have
that's exactly what it is in an axiomatic way
as if in a conceptual sense
just the same level
pivot point of absolute favorability

it is where matter gathers
life control structure
and accurate prognostication
where it has already been realized that a person is alive

and here is the level where the approach is taking place
Well, actually, there is some kind of problem there
brewing perhaps *yes*

here we have created control points
three
and now we can project a signal from here
i.e. to get a sphere
from these three points of light actually

this sphere can be introduced into the structure of future events

here is a plan of events
the plan must be carried out, *well, preferably, yes, at least*

then further
this plan should be implemented in this way
what does it mean that it is carried out based on these systems
systems *for example* warning there
the so-called resurrection

There is
there is a system of mandatory input into events
total prevention resource

for example, a possible disaster problem

by the way this relates to that
that a person should, for example, this system
can be used for treatment

For example, there a person may have a problem in the body
he also takes and considers
the only one that excludes from the factors
that it is connected precisely with the resurrection

but it just uses the technology in principle
there it takes its support points
removes from the management structure
possible negative signal
through the structure of rarefied matter
and then he calmly forms a good one for himself there
health level

i.e. this system is very important

if complex systems are overcome
there are some severe chronic diseases there
which is precisely some kind of turning point possible
there are diseases there yes

i.e. the ability to break
it is the course of a person's disease
towards health

and then it turns out that here
for a living person for an undying one
just a fragment of resurrection it is excluded
as information
the factor of the mere presence of each cell is considered
in the information system

i.e. it looks like this well for example, what it looks like there
some kind of system of matter in outer space

this is what it looks like
at the level of control over human matter
i.e. this can be a rarefied substance
built according to the Laws of the cosmic, as it were, well Realities
Macrorealities
and we can look at and feel every molecule here

like, well, there 's something unnecessary there that we don't need
we can take it from there
but to work as if with the external universe

Here is a person who perceives the universe
and for example if we consider it like this
then we can say that it is very similar
here in the control system
and we can very clearly, as it were, shoot there
everything we don't need

but then it turns out
what we see is the level of information of a person
i.e. this is not human information as such

a person consists of a monolith
there for example is a management level
corresponding to the body yes
there Soul
personalities

and we are the same as in the case of using it there
resurrection mechanisms

to prevent, for example , terrorist attacks
for a living person we also consider the process
that this is information that corresponds to a person

but this is not specific information of human tissue
in the sense in which we usually work

i.e. it's just like a projection , for example
similar to this is how the fabric is constructed
in outer space for example yes

those. unified system
which has the structure of Eternal development

and it turns out that it is precisely for Eternal development
imposition of your action system
i.e. when you see your fabric
as a system, well, there, uniformly dispersed distributed
in the form of elements of matter

then you clearly see the uniqueness
as if a certain mono level of your body

here it becomes clear
that the body is a single level
it is absolutely inseparable by the way

and it arises
quite a powerful golden glow of bodies
i.e. a truly powerful golden color
the body becomes golden there
simply even in the management structure

then it turns out that the body is realized
in Eternal development
and it is actually protected even from social problems by the way

it's not just that a person lives there or gets healthier there
and also from social problems

i.e. you can use this system
for working in social systems
there so that the documentation is there in the norm
corresponding personality
there the enterprise should be in the norm
where does this person work

so that everything would be OK for him there
he walks along the sidewalk so that here too it would be normal

i.e. the ability to make this glow like this
so that it interacts
with the external environment
giving a normal path of development to a person

after all, a person can have
quite a lot of complex elements
that's how logical it is

and the ability to have that light here
Means which gives a real path there
which, well, let's say, will improve yes

m, for example, you can not do the management
and can you do management

and here in order to improve precisely through management
improve technologically
This is exactly what happens here
what is important here is this inner glow

here is some kind of system of the body's solidity to consider _{yes}

i.e. here is the unity of the structural system
which is expressed
in the unity of personality in fact

i.e. personality, why is she, _{for example,} calm
maybe the person himself can be calm
that he knows some kind of mono principle _{yes}

that his body, _{for example,} is indestructible there
because he knows the aspects of action

i.e. he understands that he is striving for this
he overcomes it
not because he's there _{well} is conducting some experiments
what not to do

because people who live simply
don't do technology
they are also ordinary living people
if you can call them "ordinary"
about them _{well} living people
which they currently live
This means that their body has the same features

why do i say that everyone is equal
there are technologists who work there
according to the structures of Eternal development

when there is a person living nearby
but he, _{for example,} doesn't know
Specific technologies, _{yes} Eternal development

then in principle there is no big difference between them
here's the fact

one lives and the other lives
this is the principle of information transfer
namely the Soul of man
where everything is pretty much _{like well} in general, somewhere evenly _{yes}
given to every person
speaks about that
that any person can be very quickly
translate
into the structure of the Eternal development there

by the way, that's why from the point of view of this action
for example, there is such a thing as a political program
there is a party movement that gives to all members of society
some kind of unified layer
Perception Management

these are such massive movements
allow you to translate quickly
into the structure of Thinking
namely the structure of Eternal life
for everyone
where people even there are some people
which are technologically advanced
allow others to be present
by the factor of exactly as if it were a match
here is the factor that in this community
there live people who actually, well, someone, for example, knows how to do it

those who know how to do it well
it is there that the Eternal development
they do this specifically
and there are those who, for example, don't know how to do it

and here is the translation factor
to the level of initial development
when a person is born, he also counts
that he doesn't know how to do Macromanagement there
because there is no logical knowledge

so children often know how to do management from the start
because there is here

the level of their universal connection
with the whole level of Reality

then it turns out that we generally see
how do they work and children
and if we start looking even earlier
then we see how before the organization
Human
before the creation of the Soul even of man
this primary action occurs
those. transfer of knowledge and skills

after all, we only talk about what we convey
every person

we receive knowledge there we apply it and pass it on ^{yes}

Well some kind of conveyor belt, such a transfer of knowledge
for example, universal about Eternal life

i.e. the knowledge is somewhere
there is a standard level that exists ^{well} "somewhere"
I'm saying that everyone has them
at every level of Perception

i.e. before doing any action at all to a person
he needs to perceive and participate first
in the process of Macroregulation, etc.

Well, these are the light control systems
light levers
This is practically his permanent path
but he does them very quickly

just like God does
It passes in one impulse
and all management

the same person
I saw I started doing it with one impulse
but when detailing, then any system is possible
bring into full control
due to knowledge about this system

or due to the fact that according to some system
a person begins to see
what is behind this or that phenomenon

because he's ^{like} on the other side
knows some system of events

for example , from the side of an observer
as he personally observes, etc.

and here we are to work
with any system
there is a legal system
to bring into life an aspect of, for example, resurrection
aspects of countering terrorism
using resurrection techniques

here it turns out that it is important to see

that in essence it is a powerful anti-terror system
just factually

because it's clear from the ideology
what if there is a resurrection
then terrorism in principle is simply senseless
it's just pointless to kill a person
or the meaning is meaningless there is the death of a person, etc.

i.e. this is the principle
that this situation is fundamental
initially it was defined that way
as a situation of life, and Eternal life

after all, if you can do resurrection, then resurrect there
then it turns out that life is truly Eternal
for everyone
including for those who had there
some biological variant yes
end of life for example earlier

i.e. it turns out to be a resurrection technology
they are more like expanded
and therefore they affect quite a lot of layers of society
many directions arise there
related to the fact that people begin to react

well, sometimes it's even kind of strange
there are those who are not familiar, well not a technologist there
or maybe a person there just received some order
to somehow master the system in my own way
misrepresented in the press

here it is clear
what you need to know deep fundamental roots
the influence of such a process as resurrection
on the structure of society
then it will be absolutely clear what to do next

Well, let's imagine a simple picture there
that the resurrected one goes home, for example
what if there's some negative article there?

for example now after the publication well actually
for example, there is against the resurrection technology
so that people there don't do this
against me personally , for example , there are students

who are engaged in resurrection

so when was the fact established
what are the resurrected
there are technologies there

now it's already like this, we show all this in reality
technologies
there are facts of this type
management facts ^{yes} clairvoyant, etc.
controlling clairvoyance

then it turns out that the task of pressuring the media on history arose
Well, if you observe how society reacts, ^{yes}
there, ^{well}, at least part of the media is bought there
or there is not even bought just as analysts
they can react

then it turns out that now these publications have become about that
that was there even a factor of the resurrection of Jesus Christ there
there were publications in MK there
i.e. they question the factions
namely in "Komsomolskaya Pravda" etc.
^{as if} the basis of the Christian faith is that

they started to introduce already, ^{as if} such types of doubts were starting to
appear
but it turns out that since there are already resurrected ones there
there is now
so of course it was a fact
here we just proved that it was
it turns out by your actions

and that means considering that since it means we have proven it
then they use some kind of illogical model
trying ^{to kind of} start
but this already means it is ineffective

i.e. you have to see it everywhere
what are the structures of the next action
i.e. some resistance ^{yes}
there are resurrection processes

processes of Eternal life
with each subsequent action
they have an increasingly weak tendency
there is less and less possibility there

because the collective Consciousness is still becoming rarefied
becomes more socialized
this concept is like "resurrection"

and in principle here from the point of view of counter-terrorism
a very clear element is emerging
example, they started to publish some kind of publications there
in the general media
that was there even a fact of resurrection

then it is immediately clear to any person
that when faced with that
that there is absolutely strict proof here
we have protocols
they can't do anything
how to start doing external analytics yes

especially since it turns out that they actually undermine it
the foundations of the Christian faith from the beginning
considering that well trying to say
that there was no such fact as resurrection
for example Jesus Christ

and it turns out that they work in this way
against society in general
and does anyone understand the possible type of terrorism there?
what if that's the case then they clearly understand
that we have this system there is a working system
which works on facts as such

Well, in modern society, if you think about it, yes
how the facts about the resurrection are presented
there are specific resurrected people there
some of which even appear on screens
like Pilipchuk Boris Yaroslavovich
or Nekrasova there and someone just

but the fact is one hundred percent established
that yes people are resurrected
By the way, there are actually a lot of them

but there is a very well-written situation, for example
on the facts of the meeting with the resurrected

Firstly, it is the most powerful protection against terrorism

in relation to any persons who work on this topic

because the facts are presented
that the man took and saw the resurrected yes
somewhere

Here is the fact described in the protocol
that at such and such a time he saw a man
or there he said hello to him or drank tea
it doesn't matter

a resurrected man appeared somewhere and went somewhere yes
if we imagine the characteristic that the resurrected one remained
or there is some room there
there he lies, for example , on the sofa, watching a movie, yes

and next to him is the one who resurrected him, for example, yes
then very small funds are enough
to take and turn the situation around

there are many opponents
very powerful rich campaigns
who start cloning

i.e. the possible physical elimination of such people
in principle, then it doesn't even pose a question

but when there is a fact of meeting
but resurrected for example at the moment
he is not in this place somewhere
then it turns out to be like eliminating the one who saw
in principle it is impossible

because then the fact becomes even more harsh
maybe this way he can be convinced
that he saw some kind of optical illusion, etc. yes, that means

and that's basically how it works
that is the very fact of the meeting
protects at the current level of development of civilization
Well it could literally last for a few more months there
that people will still be sorting out this factology

factology that protects
and as the one who resurrects
and resurrected

as I said, legally very clearly

a system for developing this information has been set up
she protects as the one who resurrected
and the one who is resurrected

where exactly the meetings are factually described
either at a distance or close or even conversations
but the resurrected one, *for example*, is not in this place
it is specifically impossible to catch him

and so that people are not found
in conditions like *these* quite complicated *yes*
need to be in the system of collective Consciousness
introduce a defense system, i.e. a counter-terrorism system
against the system of protection of these people
from the largest systems of influence in this World

and this is the counter-terrorism system
should be built on that very thing
so that the optical axes of the organization of the matter of life
and predictive future
were being built
as a system for precise visualization of events

this is when it all gets translated
in the structure of human personality *yes*
all these optical axes
a person sees all processes
sees how the resurrection took place at the level of matter there
even there at the level of matter assembly
at the substance control level
at the level of being resurrected
at some point somewhere at the level of understanding
is it worth approaching him now or not ?
how safe is it for the resurrected, *for example*, etc.

and it turns out that here is the question
Well, there is no such thing as security there
costs
in relation to an individual
in relation to more than others
who had problems of some kind there
Well, there were complex criminal cases there, murders, etc.
this is how safe it is for them to get out alive

this is *like* more generalized information

and this is where you start to analyze
you begin to understand
what problems then need to be solved in this society
Now

they are not only political, not only social
they ^{are} the tasks that you solve knowing exactly
what to do next time

with all this the process of resurrection
it shouldn't be delayed
this is a process that must happen
at some specific moment
or as a rule the resurrection itself
happens quickly or instantly
namely a meeting

i.e. to say all the time that we are engaged in analytics
we are all like ^{long} -time workers
and very correctly analyzing for a long time
you can't do that either
Right

This is a must have
time management criterion
and here we get this predictive vision again

so combining these questions
preventing terrorism there ^{yes} disasters
in general even prevention
death there ^{so to speak} any character ^{means}
with what you begin to control through visualization

you get a precise model of behavior
an accurate system , or let's say the most accurate one
in fact, this is usually almost accurate
who strives to do so
see all processes yourself

and it is due to this technology that I have now given
you can not only see, you can prevent

if here in Russia on the phase of matter
increase optical control
any terrorist attack is possible
with good saturation of the collective Consciousness
even personally you can actually shift

if ^{only} a person had time, etc.

and it turns out that this is what is important
work very clearly and understand
it depends on you personally

when do you start to understand this

you begin to work in the collective Consciousness
then there are no questions
you are already steadily coming to the question
meetings with a resurrected person
to the question of resurrection as ^{well} as as such

and you are already ensuring a favorable future
for this resurrected one
there in general even for any person
and under any combination of events

this is the main goal of management, the main knowledge

thank you for your attention

I would like to say, you know, ^{let's say it this way}
as additional information

I tried to give it at high speed now
there is still a process of seeing
the main thing here is to be able to see

i.e. it is practically clairvoyance, simply controlling
and if you noticed
I am now constantly strengthening the control system
by clairvoyance

then today i showed the technology
which is actually very powerful
can solve prevention

i.e. we see ^{some} action movies and some situations
and the social status is like this
that we need to constantly strive
^{Well,} it's better to act independently
still, first of all, ^{yes} often

and in principle considering that it is not on our side
naturally there at least for now
these are the law enforcement systems

Well, it's not that there is, of course, pressure from different forces
so at least in a personal context they understand it
what are the tasks of the party there, it's all done for the people
Well, it's like they're saying that they can't do anything.
it means they do things in their own way

although here is the task of management in resurrection systems
she is such that you have to take it into account
that the regulation of the social plan
It is very important from a social perspective

so be careful here
I would like more to be developed here
This particular clairvoyant one, or something component
managing predictive vision
in this in this lecture

and in the future I will increase the system
still a predictive level of management

i.e. try to tune in to that
what a person must see for himself
where is some situation and event located
what will happen

but despite all this he must still do it
for example, he sees that the situation is, well, not very good
she's kind of calm there, right?
but he still has to do it

and here is the ability to decide, i.e. the ability to decide
i.e. it's difficult there is someone who doesn't accept the resurrected
some people even take it very well
but is it really true yes

and someone very well
but what if it's not safe for him?
i.e. if there were any murders, etc.

it turns out that we have to take responsibility for ourselves
guarantee safety for everyone
and this is again an accurate vision

and that's how it is as soon as we arrive
to the control system
there are still such systems
that a person is not necessarily killed there
for example there is no information

and this is already a big advantage
this is up to ninety percent of success
faster ^{yes} on meeting

because
and it's not even about the meeting itself

in speed if there is no exact information
that the man was ^{well} died there
This is of colossal importance for the situation

you could say that he was just ^{somewhere} there, ^{yeah}
connection was lost for some time due to a number of reasons
if it's a terrorist attack or something else

It is very important to be able to determine the situation
there is no complete data that the person died
God bless
the main thing is that they are not recorded anywhere

i.e. to increase this parallel constantly to increase
but if the question is about resurrection
it doesn't matter in the general resurrection
there will be no difference between people anymore
there is practically no difference between the resurrected
and simply living without dying

so it turns out that it is very important here
This is the concept to follow
i.e. try to see constantly

that's how a person looks all the time ^{yes}
here you can do it like this, by the way, it reminds me
so at the level of my personal opinion

You can just look at the horizon there, ^{yes}
^{Well} I can compare this to the fact that I am riding a bicycle, ^{let's say yes}
somewhere there for fishing then

I mean, I just look at the horizon

I watch and drive away
there usually is well without straining

and suddenly I start to peer into the distance yes
along the road surface

i.e. I keep an eye on it all the time
I'm even starting to do something
I try to hear something voluntarily, like this

the concept of "prognostics" in this regard
this ability is also to attract
and some of the following resources

Well if there is a kilometer or three
how can you physically do it there hear with the ear

naturally it seems impossible

but nevertheless I am beginning to listen to Reality, yes
because I'm catching a wave here

I then start doing predictive management
This needs to be clearly understood
where just you look
and where do you do the management?
i.e. where do you do prognostic work?

Here's from my personal experience
I'm kind of like I used to ride a racing bike
at school then
and for some time suddenly began to appear
just packs of dogs somewhere along the roads

I was driving through, well, through a cotton field
there are practically very few people there
where exactly is this village Bogoraz village
and around the department there were different ones, for example
The 20th Congress of the CPSU Branch " was there, etc.
"Vinsovkhoz" here

for example, it was possible to drive there for several kilometers, just fields
and for example from the point of view of prognostics
and I went to
the big old sports bike "Tourist" was
at high speed

and so that there are no dogs on the way there
these flocks were running
wild dogs
so I'm just showing my specific experience
what does it mean what is the difference between predictive level of
management

then at the management level
you need to listen
try to understand
Well kind of peculiar or something
how do you even identify this pack of dogs

can you , well it's easier for me, I took it there, I defined it
but nevertheless, in order to displace this pack of dogs
they are like, well, if I go
they can run from any side, for example
there's just running towards them along the road

and it turns out that I should have

constantly shift this pack of dogs
and I didn't really pay attention

I went there for about a year
there they somehow didn't pay any attention to them at all

this is also important in prognostics
it is not necessary to do everything in a row
we need to identify some specific facts

here the impulse arose it would seem already close to the village
I'm passing by
suddenly they started running
Well, how aggressive were their goals or not?
I don't really think I'd look into it
I just increased the speed
and then, as if at high speed, I simply overtook them

i.e. they didn't have time to cross the road
and I drove by
after that I became permanent after that
constantly engage in forecasting
to drive away flocks

then they never met me by the way
but for this I am just showing this on purpose

my practice
I don't think they were aggressive maybe
there were just a lot of them and they were running in my direction

and therefore perhaps they would have just run by the way
but just in case, wild dogs
for an ordinary person yes
you have to understand
here you always have to think
and what kind of thoughts can an ordinary person have
in this situation

It's unlikely that they'll bite anything
Of course you can stop there
throw a stone there for example for sure
they are not, well, they are not wolves after all

but I'm kind of here yes
and even if there are wolves
you can make control
I think there are no special problems there either

the question is not this, the question is that

what is free will
and suddenly a logical image of Consciousness appears in a person
the dog shouldn't bite there
it shouldn't cause any harm there

and this is the prognosis, here I am clearly
a line of predicted forward tension is revealed
and management is done

and this line of predicted voltage
I still took it from the background level yes

the situation is not dangerous in principle
it can be logically problematic
for the average person
which does not have prognostic properties

and when do you start working here
be sure to think about that
which in a normal situation means
this or that problem
exactly in a normal situation

not from the point of view there

Well, let's assume some complex processes

maybe there are no complex processes for you at all

at a certain level

managers reach such a class

often that they really do after some time

I just know a lot of students who have no concept of "difficulty"

ceases to be absent

Well, it's just not present

there is a management task

they rule

All

so that's why it turns out that here

you always have to think

and in logical terms what

that for all people

how to solve this issue for all people, i.e., etc.

and in general we still react to the situation like this

that we must pass on knowledge to everyone

this means we must control matter

from the point of view of well as if it were an ordinary person's access

that's why i think

what we need to be careful about here is

prognostics is aimed at that

so that we can pass on knowledge

of course to people

this is very important

now you know how I will simply have another special flight

I'll talk

and then we will continue

OK

thanks for your attention then
