

GRIGORY GRABOVOY
The Teaching about God
Centralized management
20.07.2005

Hello
the topic of my seminar today
this is my Teaching about God
Centralized management

in this topic i show
how, having any area of control
make it central
i.e. to control through it

and I show
that generally speaking in certain cases
centralization is necessary in this type of management
so that we always have a center
through which it is quite easy to implement, for example
including peripheral control

and thus solve problems
actually from the center
with simultaneous control
as if in the peripheral areas

i.e. in fact we are talking about
what we should do in this technology
a solution that is being implemented, for example
through the central region
receive at the same time
as a decision that actually came true yes
implemented in the field of well basically any other

there are several here
what does sophisticated technology look like in general ?
what can be done management
through peripheral centers

i.e. it is meant
that we can do management in this way
to access the central area
and from any peripheral center
make central area management

in this regard i would like to do
well, immediately in the form of a certain control
means a certain kind of construction
which should generally be
as a construction of action, i.e. implementation

and therefore it is desirable to participate
in this management in this way
so that any control is like this
what you should consider
in fact, in general, the area of tasks
any tasks generally speaking

In this management system it is very important to consider
any tasks, i.e. not only your tasks

and in connection with this
the solution to your problems will go
in the process of solving, for example , those problems
which you reveal through , so to speak, Spiritual vision

i.e. in fact, what we are talking about here is
what you have to do is control impulse
in general, in any area of information
identify the scope of tasks
in this area
and at the moment of control, your task is being solved

i.e. in fact, we are talking about the fact that
whatever happens under management conditions
you are constantly solving your problems

at the time of control
i.e. at the moment of pursuing your goal
you are constantly making management
and nothing can distract you
no matter what situations occur

this is roughly the angle of control
he looks pretty tough overall

however, in real conditions
we are forced to work like this anyway
that even for example in the case when we are talking

about healing technologies For example
some recovery technologies
or there are resurrection technologies
you still need to constantly strive for implementation

and whatever happens
we must implement management in any case

in this regard it is necessary to consider here
as the very depth of control and control impulse
i.e. where can management be developed?
and the fact that at the moment of action you have time
control your area of information
you have time for this area of information
implement additionally yes for your purposes

therefore in this control problem
we must identify very clearly
and the area of the Soul, moreover
their own tasks
at the moment of, as it were, external viewing

i.e. what do you need at all
at the moment of action
when you exercise control

and in this regard I would like to show technologies here
which must be implemented in this way
what is the speed of external viewing for example
and solving your problems
it is such that you have time to decide later
the following are the tasks that you identify

means the level of task identification
he is the primary level
it's like a field of information

then you have to increase the speed so much
so that you control yourself as if from the outside

and in all this the goal is
as a solution to the identified problems
and their own

and it turns out that these long-term ones are being tracked
or so to speak constant tasks or emerging tasks

at the time of control
This is generally speaking a special technology
which is based primarily
on the state of the human Soul
at the moment of action

i.e. you don't need to look for yourself there
at a certain level of information or something

or even a control point
but you need to consider the state of your Soul
at the control point

i.e. in fact it is like a transfer of the event
sensation or perception by the Soul
to the control point

Well, basically, as it is generally accepted
what a person perceives with the Soul
for example in the physical body yes
correlating the physical body with the state of the Soul
i.e. a certain process occurs inside a person

and in this case the same model is actually
needed to translate
into the external management structure

therefore, based on the management task
here it turns out that this is peripheral, so to speak
or outside central control
this is the task of actually identical management
but you perceive your exact True state
due to the fact that you are considering
state of the Soul
at this point
at the control point

then it turns out that since the Soul contains
all control systems control impulses
then it turns out that you are only here
transfer control
in the area of accuracy as if solving problems yes
precision of approach

i.e. the state of the Soul at the control point
in general, in any other
can the task be expanded?

extrapolate to all areas of information
and consider that in any field of information
there is also a certain state of the Soul

and if you are considering
the state of the Soul at that moment
when you produce an impulse
then you can go back and assess the state retroactively
how correct
was this the state or was there something else, for example ?

i.e. in principle
This is generally speaking an optical characteristic
This is a specific optical model
this is a specific very clear optical form
and it is visible and diagnosed very clearly

here you have to learn
state of the Soul
transfer
into the structure of external vision

i.e. you felt the state
for example, there at the level of the heart they accepted it
perceived that in optics this condition means
and they recorded it, well, they just remembered it
this optical model

further it looks and is always very unique and different
for any others

i.e. in fact you are distributing
your own light
to any area of information

and considering that you are starting
spread this light quite actively
because you need to get ahead of the events
and actually cope yes
with its task in management
and constantly carry out the task that you have identified, for example
or which generally occurs frequently
as an action task
in normal social events or any other events

and here it turns out that we can work simultaneously

on so many levels
i.e. we can clearly choose the system of action
what kind of system is this, for example , political or social
is this healing or is this resurrection etc.

i.e. clearly each area of action
visible in its own spectrum of Perception

here you can do it from a single control center
get a multi-spectrum approach
i.e. different spectrum
even the wavelength is different
different shades of color
means different spectrum

i.e. you have a control area
it practically never goes away
you are in control of the situation at all times
simply due to the fact that each color is located
in the right place

and you don't need to remember at all
how does information flow

you take the central area
as a result of subsequent events it breaks down
on layers just colors
they look exactly like layers

it is very important to see here
that they are very manageable
i.e. you can get through this area
virtually any control system

i.e. to reveal control in this way
that having reached the level of a completely peripheral
get a return signal
in the form of exactly the same area

to check if you have exhausted the entire system
in management for example
you need a signal that comes from you
bring into structure well for example there is a color one
calling her
what is this let it be a peripheral system
Well as if investigative
or there is a system that is located here

in the central region let's call it like this

because in principle in the field of management
after all, the principle of equivalence of information is
he is always primary

and yet we
to structure the model
or as is customary in social systems
what is the center
there are peripheral systems in control
then we should be able to ^{generally} unify the process
including connecting the process
with social systems

so here is the identification of light areas
this level is still quite specific

related to the fact that we each light region
we perceive at very high speed

i.e. we need to try not to remember it
for ^{example}, there is a specific place there
and remember
the very fact of Perception of this light area

and when you attract this level to yourself
then you remember
not because you spend a long time studying the location
and because at some point you perceived ^{it}
for the purpose of remembering

and then the information goes on
into the management structure
from your Soul

i.e. it turns out that the Soul perceives information
She can ^{actually} store it, ^{so to speak}
Well, visualization as such may not happen later

i.e. in fact you are increasing
structural management system
through the increase of the ^{experience} of your Soul, it turns out

and if you enter
into the Soul management structure
then it is not always possible to see, ^{for example},

some image
because the speeds are very high
or because the control is from the Soul
control center .
and you come
back to basic management level

i.e. to identify the initial level
often there is simply no need to even identify it
The soul is, in general, in management
often primary level

for example, several times Yes
go out with the thought of that
that the Soul is the primary level of control
you are really starting
centralized control from the Soul

i.e. for this you need to repeat several times
that the Soul is the primary level of control

then it turns out ,
that centralization of control
or there through the central level of control
produce
This includes managing your own systems, so to speak
which you have in mind
Consciousness
Souls
Spirit
tasks of managing a certain level of events, etc.

so when i talk about centralized control
yours own control systems
i.e. the control systems of your personality
they are also practically implemented
in the form of certain relationships

i.e. for example, more rapidly current events
control can be carried out for example by the Spirit
i.e. this is the optics of the Spirit

This is very clearly revealed
what are ultrafast events
but still not having Infinite speed yes
in the first impulse of Perception
can be controlled by the Spiritual Sphere

in principle there are control systems
they are observed in this process
when in the primary impulse
there is an Infinite Control System
then the Soul is already in control here

here we need to make a very clear distinction
high-speed systems
primary impulse is very high
but still the speed is monitored
i.e. speed is visible, some movement, movement

when Soul management
then the static nature of the process is immediately visible
and the statics of the general process

thus highlighting the Spiritual sphere of management
you start to see
generally speaking, interacts very organically
your Spirit
your Soul
information systems in this case

i.e. you actually determine
some centralization
through our own management systems

Spirit
Soul
Consciousness
or is there a personality structure in Infinite action

after all, we are talking about Eternal development
And if you compare with that
as God does in Eternal development
He always implements that synthesis, let's say yes
connects processes in this way that they are equal in size
this is how it turns out
i.e. they have equal nature

and it turns out what are we
it is in the further action so to speak

here's if you consider it
development of the world
from the point of view of, let 's say, a discrete model

each subsequent system is based on the previous one

then it turns out
that every next impulse
it is based on the previous one
as if on some basis
in the whole Universe

and it turns out
that it must be an absolutely equal element
so that nothing in the world changes yes
so that the world exists forever, so to speak

that's how it works in this regard
which is also what happens in the Action of God
from the point of view of that how a person perceives
that the control processes when approaching them
must be completely universal
and a person must see the results

at the same time, he can consider
for example, the management process in this way
what do we have
actually at a universal level
or management of information objects

i.e. this is , in general, the investigative department
built for example through centralization

or is it Soul management
element of the Soul

i.e. it turns out that when approaching
to the management process
you must have completely average information
which guarantees the favorableness of the event
that which is controlled

this means your event is favorable
and the tasks that you identified

and so as a practice you can take making management
consider tasks current yes
for example around the city
for example in Russia
around the world

in general, in any field of information

And having identified these tasks
decide simultaneously implying
that you naturally somehow solve your
i.e. your tasks are solved, so to speak, yes
at this moment

i.e. tune in to that what when you decide
your problems are solved somehow
personal

and it turns out that based on this
you start to see
when approaching this area
when you start as if at the root of your Soul yes
look
from external events
then a completely universal impulse is visible

God does the same
when looking at God
you can see the universal and universal light as if yes
which gives any event it turns out

because God reproduces any event

it turns out what are we acting in the same way
we can actually at the expense of

well, there is no more concentrated impulse, yes
when we connect any event
into the next world which we reproduce
we act similarly
then the control becomes more precise
or becomes absolutely accurate

but at least the limit of stability
this is like a spectrum of absolute stability in management
in this case it is clearly visible

i.e. in this management
it turns out that there is no external event there
cannot move the implementation of your goals in general

i.e. it is very important that you have a platform all the time
there is personal safety, personal health, etc.

and why exactly is this what is characteristic ^{yes}
it turns out that ^{well in general, practically}
you have an absolute guarantee in that case
when you are dealing with external processes

for example, if you ask yourself the question
here God has absolute health there
absolute Eternal life there, etc.
how is this achieved ^{yes}

for ^{example,} just ask yourself a question
and try to find the answer
in terms of solving a technological solution

then the simplest answer is the first logical one
he is involved in all processes in the world ^{yes}
i.e. constantly engaged in something external

i.e. the technology in this case is identical
in terms of logical processes , perhaps?

we find the external system
and in this system
it turns out that we are guaranteed
so then a person has Eternal life
by analogy with how a person might consider
picture of Eternal development
having received the Eternal external impulse

saying that yes there is an Eternal God who lives forever
and thus constructing a control system

he is already starting to act further
inside very high speeds

and so, ^{as if,} some kind of guarantor ^{of} implementation
his plans are that he
Firstly, it has predictive capabilities.
are increasing
This is actually a very powerful predictive system.
including

if you are in this whole system
take some neutral event
you are fixing
any

i.e. you are doing a lot of things
control systems do something

and suddenly you just make a selection of a neutral event
completely neutral
which seems to have nothing to do with this
some leaf is somewhere

and you fix it visually
somewhere at one point
the whole prognosis is instantly put together

the entire prognostic line
is built on a neutral area
external as if area

this is how God makes the world stable, for example
why the world is forever evolving

and because God has some level
external which exists all the time

and it turns out that if we start
make this area of information external
and why do i say
It's better to take a neutral level
then the diagnostics will be more accurate
managing so to speak forecasting

because in neutral systems
less connections, as it were
with fast-moving processes
which you are engaged in

but in general it is possible so as not to waste time

there is no neutral element to be found there
because to find a neutral element
the same time is required in management

you can just take any element
which you are engaged in
make it well as if neutral

and to make it neutral
it must be absolutely stable
it must be protected

it should be absolutely as if developed
into the system of favorable level of events
Of an infinite type, so to speak

any event must be favorable
then we get a level of neutrality
for management purposes

it turns out from God's point of view
from the point of view of logic in general
here it turns out that
so that the event is neutral
to be **stable**
it must develop indefinitely
in a way that is favorable for oneself and for all directions

and from here, then, here is the technology for selecting your events
such a generally **stable** event
it already turns out to be implemented yes
realized in Infinite Action

we need to work here already
from the centralization of the area of the future

the future has multi-variant systems yes
in development
we need to centralize this area
to control through some area of the future
i.e. where is it located anyway

there are many future processes
it turns out that there is an infinite amount of them in information
and we have to find some point
through which we select this sample
neutral area
we do
as if it were its own neutral area
which has already been implemented in the future

so we have to find something there
in general, even in geometric terms
central place in management
and control as if from a geometric center
all systems of light in events

and it turns out that for that
so that for example many processes mean to implement

through some level even in social systems
you need to be able to derive centralization
in a certain geometric center, so to speak

and this geometric center
must have
maximum speed of information exchange
with all areas

well, that is, a certain sphere and the center of the sphere is like this
that the maximum speed of information exchange
with all elements of the sphere

and it turns out that based on this
we are actually going to continue in general
we draw a certain geometric area

if you think about it
why for example did God reveal
Well in general, in exactly this form
World
i.e. manifested physical Reality in this way

then here you can find some answers
related to that
what is the area of the future
it is always the area of identified systems

i.e. let's say this way if we follow here
this area of God's Thought for example
then the further the future
the more it is materially revealed
it turns out that way, even logically

and therefore, based on this
it is clear that the world is growing yes
in size there, precisely in physical implementation

here are the processes of the future
are docked
with informational information processes

and we have practically
Well in general, if we take as an analogy
how a person thinks
and by the way, many mechanisms of Thinking are in God
exactly the same as a human's

here from the point of view of both logic and action

and it turns out that since this is what happens
then just by observing how a person thinks
he is always making some next plans
develops events

it has a specific event area
he keeps adding something

the same thing God must also add it turns out
and that means He increases the space of events
It increases the material space, *yes*, and that includes

and based on this we very clearly find here
some center
it means the control center through which
God realizes *well like the other side yes*

it turns out that for Him it's in the past
for a person it can be in the current time
and for God too it can be in the current time

but God is present there also *in the future*
as in the current
those. equivalence of the region

and here we are already moving on
to the principled already then
element of today's seminar
management

that the person is in control
doing as God does
should have the same system management in the future
with the same coordinates
there is containment
dissemination of information , *etc.*
as he does in the current time

i.e. the information of the future should be as follows
and its management should be like that
human
that he will be in management in the future

should not differ from that
what is he doing in the present tense

and in principle, by and large
should not differ in its condition so to speak
from that
what does he do with the processes of the past

it turns out that this is sort of a universal level
he is a level of, well, some kind of attention to himself, so to speak

i.e. well, there is a person, for example
attracts attention for the first time
It turns out he can control equally yes
all processes of the informative, as it were, Reality

but the main element of this process
is the management of the substance of the future

i.e. if the past is clear enough
he can remember
that during his period when he was
in some part of the past

if the distant past
this is again a few
Well as if the area of distance begins to prevail
in terms of uncertain quantities

however, this is still different information
By the way, she is completely different in this case
when we talk about a centralized area of control

because in the case of management
through a centralized area
management in the past
it has already actually happened
to a greater extent at least

and through there the reconstruction of the past
Of course, you can get a control impulse
but it will be a very massive level very big
and in general, technology starts to advance in speed there
All in all how about being more minimal or something

the speed becomes minimal
speed minimization is an undesirable level
in centralization of management

and therefore through the past one can control
only if we see clearly
what is the information of the past
at very high speed
docks
with the structure of the future

and at the point of specific control
what do you do

and then there is a kind of psychological transition
into the management structure of the matter of the future
he's becoming more like that here
Well like comfortable or something real
from a logical point of view, let's say so
for those who are starting to manage for the first time

then here it is as if associatively along the line of association
something that is already a completed event in the past
and here is a fairly calm area
counts

then the transition is to the future
is carried out in terms of some kind of closure
where outside the structure of real events
the closure occurs
information of the past
with elements of the future

and that's why centralization occurs
how to find the central area of the future
in its management

need to be identified
maximum array of past information
and see where the joint is
and that's all
i.e. technically it turned out to be very simple technologically

and based on this we can get
already control by the way
behind regional systems
for spatial systems
temporary systems

already because the area of information for example of the past

it is a fairly well-known area
this is generally perceived as a known quantity by the way

to diagnose the structure of the past there
from Infinity
we need to proceed from what is generally known
in the system of collective Consciousness

if the collective Consciousness
Well, let's say it's considered that there
there is a certain period of human development
and what was in the Infinite Past
we still need to reach known values

this is the concept of "known quantity"
this is usually the structure of the past
in the structure of human action
this is the most well like an organic system or something

for example, the human body perceives the past
as a known quantity

there is a body part
and it starts right from the human skin
and so the projection goes somewhere a little deeper
Well, basically, mostly in the skin area
main concentration

that the past is perceived directly, you can feel it
see that spectral light wave there
light just

and that's when we start
consider the structure of the past
as a known quantity

then it turns out that it's a joint
then you just need to find ^{yes}
with the structure of the future

and to find the control center of the future
then the transition to the material system
because we need to find the substance it turns out

we actually need ^{to have} our own Consciousness
adapt in this way

that Consciousness, well, at the level of logic of course

i.e. there is always a difference
what a person perceives as current time
of course it's always different

however, in the control area
it should look identical

for example , there is some level of area A
this is the current state
some area A for example
area B let it be the future

then it turns out that external control
external as if scanning should show
that the area is completely identical in management

and region B is in the future

so it turns out that we should
to adapt Consciousness so much
to control the substance
yes , as events unfolded
there was the same as what is happening in the current time

i.e. we must each outgoing control line
make it identical to what will be in the future

i.e. actually the first system
it's like the immutability of some lines of control
even some events are obtained

then what event is immutable

the simplest answer is the very first one, actually
that he is the very first person
when he is Eternally evolving
it has its own permanent physical level there
i.e. it physically always exists yes

ideology may be unchanged, etc.
there is the ideology of Eternal development for example

here it turns out that
For example there in the ideology of Eternal development

at any time
this ideology still remains

so it turns out that there are some quantities
which are joined
on ideology
or for example on the state

Well, in this case, man and Eternal development
for example, two constant quantities

and based on this when we consider
God
as an absolute unchanging quantity

then it turns out that we hit the mark
where is the transition to the material level
this is like a feeling of the control matter

because we need to be able to perceive matter in this way
how it happens now

and on the other hand, human logic
collective consciousness so to speak
all the time it is implemented in general
a certain static difference

This is fine
because any person
located in some place
it always differs yes from here to there
from another place
even he himself, who is close there
in a second it's still a different state

and here is the output
some kind of universal state
which would characterize the ratio
i.e. a certain state that is projected
as of the current time
for the future tense
and then it turns out we are well in general we are recording
some kind of model of information, so to speak

and then this information is obtained
we say yes, this is the human condition
that's it

a person is how we perceive it now
we designate some positions

and then it turns out that we
then it's clear that we need to transfer
what we ourselves have developed as if in management

and again we move to external control

i.e. as God does
as soon as He had completed the administration
He immediately naturally takes an external position.
in relation to management

for example, if you think about it
how did god even make any substance there
how it entered the structure of matter
into the internal structure yes
Consciousness
and created it

so that's how it turns out as soon as God perceived Himself
from the side of your Soul
that He is outside the structure
He created it here
logically it's even understandable

so it turns out that the task of creation
because we are talking
not only by the way about some microsystems
and we are talking about any information at all
about any social event

if this is a cure then this is a complete cure etc.

and it turns out that based on management
here is the transition to the structure of the external system
when already at means a certain level of management yes yours
there is a very clear level
then the one who talks about it
that you control through an external system

says that the control has been completed
and the areas of control they become identical
in relation to you simply

because in relation to you

Well, first of all, the fact that you were in control is one thing.
and the fact that you can enter the level
when any area of information
becomes neutral, as it were
i.e. having a favorable development

and it turns out that entering the point
where is the control area
passes
into the structure of natural favorable development
we get some neutrality
i.e. equality of degrees of freedom
the control systems are exactly the same

so although it looks a bit complicated
maybe it's like this in detailing and even in optical

however, everything is actually quite simple

With a little practice you can see the way out
what's the exit
into the management structure in the external area can
can be carried out for example
at completely different times

i.e. management of current time
next time management
can be implemented
or for example, it is somehow projected there
at another time

and therefore this control can be carried out
in general, in any scenario
i.e. this area is very universal

when we
precisely as if external centralized control
we do it as a level of interaction
with control areas

and with all that we need to remember all the time
that our own management
also periodically requires action
but as if in prolongation of some next levels

and the task is that
whatever happens

you are constantly implementing your management

i.e. here is the problem that generally speaking should be solved
no matter how complex the events are
in relation to you

and based on this
how would these events be assessed, for example, yes
or it's informational well as if simply
from the point of view of information technology
you can just watch

although in reality it's better to watch
spectrum of information
and Reality

and here your ability will be very important, for example
according to this technology
be able to manage future events

absolutely accurate and reliable

that you perceive the substance of future events
exactly the same as now, yes
then it turns out that you guarantee yourself
future events

because in essence we are still engaged in
exactly that
what a person must guarantee himself
there for example Eternal life

and if, for example, he, as an ideologist, decided
that this is the main control parameter
then it turns out he must understand very clearly
development nuances
understand why some process occurs
Now

but at the same time he still has to see
what does it mean in ideology anyway
for example, the state of Eternal life yes
what is the number of events in general
it means

and it turns out there is another level of control
Well, overall he really does look different

in information as if
being on the other side altogether
control planes

if you make some kind of central plane
and say that we are implementing management
Push
and to myself

i.e. and from the central region
and to the central region
and we work somewhere in the approximate space
closer to the body actually
this happens very close in optical systems

then the other system is not a mirror
and just if we limit
some plane
considering all control systems
and we talk
here is the farthest plane in control

the point is somewhere there
well, literally there, half a meter from the person

then all events of the Infinite type and series yes
relating to the Eternal Life of man
it's still a different area
in terms of even space level

This is generally considered
as a kind of projection of the Infinite magnitude
and these lines are endless
Axis of Infinity
they constantly have
even a different sound well as if sound in information

i.e. we can learn to listen to them
Well like some strings yes
i.e. we can learn to listen to their sound

and that means the approximation of this system, for example
these are the optical quantities
this is something that even with external control
seen as a system of Infinite events

i.e. after all, with Eternal life, events are Infinite

and it turns out that why do we immediately translate
this level as a level is as if external
i.e. a person watches his events
as for the external system
and receives information about himself
from there

and because in this case he already controls for sure
i.e. God is outside the system
always controls her

or when He is even in the system
there He still controls her

i.e. for God it makes no difference
that He is inside the event of life
that He is there outside the control system
as if there was even some kind of external behind this system

then I'm already talking about the next control system
if someone controls some area, etc.

i.e. He is always in a system of complete control

and that's when we start to consider
then it is always external, sometimes a very remote area

it even turns out logically
that we are talking about some other area of management
what does it mean exactly
not in the sense that there is something else there, as if something different
these are all the same events
but on the information they look
as a system of absolute stability after all

this is what guarantees eternal life to man
when he generally perceives this system, even by the way

there is such a level
when he perceives with his body
then this is a guarantee of his Eternal life
i.e. he must be able to perceive with his substance

That's why
materially revealed as if yes with substance
what is in the collective Consciousness
refers , for example, to the concept of "biological life"

and that is why we must perceive
all elements of Reality, so to speak Yes
personality of a person

then it turns out
that here is the Perception of human tissue
the system that means Eternal development
this is one of the postulates
one of the methods even defined
these are the ones that are actually postulated
it means precisely Eternal development

based on this
now there is centralized control
it turns out that this is a series of some kind of centers there
which allow means actually identical
to sense or perceive

for example, the physical body of a person
from the point of view, for example , that he is in the future
perceives himself in the same way

i.e. he knows for sure then it turns out
that he is in the future
for example, there is one in the Infinite Future
he does some things there, etc.

by the way, you can do it in this management
do not consider specific cases unless necessary
if necessary, we can consider it

there is simply an absolute forecast phase there
which is always realized anyway
in a person

and often everything is clear anyway
the main thing is some kind of conviction, right?
physical matter of man
that he can have Eternal development

because in essence the main thing is, as it were Well is it a management situation ?
is being implemented
or the main level of events occurs
in that a person somehow convinces himself

that he can live there forever
that he lives there further
he may have lived there for a very long time
but he can go further and further
there is a constant system of some kind of interactions going on

for example, he has been living there for 200 years
further by analogy he should still understand
that he lives on and on
i.e. here is the system of identity of its state actually

this is the state of life

these are some specific expressions
I just mean
state of life in logical understanding
in a person

and he knows these states
and he thinks they should be the same

and indeed the main quantity
at least there
biological systems of human development
they should be exactly the same

here is the ability to prolong
Perception state
so that the Soul of man is convinced
that there is also actually yes in the future

and it turns out that based on this
we well it looks like maybe it's similar to that
what like well getting used to the future to normal there yes
a sustainable future

and based on this
we get a kind of management process
what if we for example get a sustainable future
in the plan let's assume well, some kind of Infinite development

i.e. we need in a sustainable future
see what processes might be well there are unstable
what could possibly be unstable
in terms of future processes

well, some random, seemingly random element
why does it arise

how much is this element for example Well, it is systemic.
everything is an expression of an action of some person

or maybe it was done there on purpose
in order to see
what is the difference between future process and current process

as a rule the future process adds
some one of the elements yes
next element

or the person looked at his watch
or some action took place

and this action
it's all exactly the same
but some action is added
one
and as if there are no more differences often no yes

i.e. the ability to focus attention
on some one seemingly random action
which occurs on the previous
Well in a generally normal background of events

and then it turns out that centralization of control
consists in the fact that
to be able to introduce these actions into a series of favorable ones

it turns out we have to differentiate
Well, first of all, it's clear
there is a physical body of a person
who starts to work intensively on prognostic issues
he can just make a simple element
see yourself there ahead and that's it

and as for

when he is already convinced of his prognosis
he understands that this will happen anyway yes For example

this is the easiest option
but it is designed for those
who has already worked a lot in management

and here is the situation with some viewing
this is the level that it is necessary
so that a person would be convinced there for a very long time
in the viewing characteristics

and the point is that the event must be realized
no matter
can a person view there
or he can't see it there

he should be absolutely practically so to speak
well, under any combination of events
it is possible to implement control quite clearly
Thus
that it will make management effective in any case
does he look into the future or does he not look into the future

i.e. he should have a future anyway
implemented very clearly

and in connection with this it turns out that we have
Well as if the following control characteristic

we need to work then not at the light level yes
not on the Perception of the event system

although it is possible to work at the light level
but again this is designed for people
which reveal the light of the desired area
work with light

and if a person doesn't work with light, for example
while realizing its Infinite development
in this case

and this is where many nuances arise
how correctly does he look yes

he's starting to work

and he doesn't have much experience there
he starts to think
and here is the next viewing
is it correct or should something be added there?
and often wastes time

it turns out that the task of such centralization arises
so that the future is absolutely sustainable
and man had Eternal development
even if it doesn't seem to work
with an external system actually yes

i.e. this is again a certain internal state

and to get one like this
such a level
it's such a quick transition
in the structure of the internal position yes
into the structure of a kind of internal state in general
such a Macrostate

this is exactly it
Macro level of a certain human condition
when a person actually realizes
Well so to speak in the Macrosystem
i.e. he perceives the entire external Macrocosm
he works with him and is influenced by him
The world is changing in a certain way

i.e. be able to track
in what way does a person
based on its current state
affects the Macrocosm
and how changes happen all over the world
i.e. under its action

that's when he starts to react
on this component
he does not seek change in the world
he's just learning to react to this state

then it turns out that he
yes he is at that point of the next development
because he sees that from his actions
Well, you can modify the Macroprocess

A macroprocess is called

not necessarily some big process
there is some very large one there
and often it is some personal management goal
let it be small

nevertheless see the transition
Well as if it were its own control signal
or even many signals there
into the implementation structure

and when you start to see
the simplest level of implementation
is that you realize yourself
at every moment of time

i.e. a person lives and if he has accumulated experience
realization of some period of life there
let him just be born and a few seconds have passed
it means he has already realized himself
even just conceived and seconds passed

it turns out that based on this
we see
that the level of some kind of guarantees
is there something in this type of management?
is the identification of the actual time axis
which means that events are tied to it
personal life of a person

and from this we see that they
Well it means connecting with the structure of life
these some elements of time
they actually start working
not like light, exactly not like some kind of beams of light, for example Yes

and work as a system of formation and creation of events
i.e. we are approaching the structure of event creation
as if from the inside
from the side, well, even before the root, so to speak

if you identify the root of events in information
then we can identify the area
which is even earlier

and that's when we start working
through the structure of time
but in fact I have now shown the mechanism of transition

it means the state of the Soul
and into the temporary structure

then we see how the system organizes
then we are already there in it so to speak more stable
or is it absolutely stable there
because we have data
that previous experience is certain
next level of the task for example Eternal development

Well, you need to be here often
precisely the ideologist of Eternal development
i.e. we need to set Eternal development
as an ideology and as a goal in management

then it turns out
that from the point of view of centralization of management
in these often complex processes
it is precisely the task of man
precisely in the direction of Eternal development
is a centralizing task

and in connection with this we have
some kind of centralization
where exactly is the ideology as if in conviction there
or in choosing some level of action , let's say
This is, in fact, the main element
through which the centralization of any action occurs

i.e. any person can do it there, for example
what he wants as he wants
Well, naturally in the creative system there
management according to my Teaching

and here you need to see the main thing
how is this idea so to speak yes Eternal development
how it is realized only because
that it is an idea and can be implemented
Well, based on the current technologies there

for example, what is the structure of the current technology
what a person can do management
there is something to restore there
to cure something
make a control and get some event

this is the level that speaks about that
that yes, through management it is possible to influence Reality

but if it is possible to influence Reality
then it turns out that a so how can ^{yes}
a person can quickly prove it to himself

and then this level of Eternal development
this is information that is being built
very peculiar way, ^{actually}
on the one hand, there is a level that goes
from you
those. like an ideology is just your idea ^{for example} Yes

what's important here is that this is an idea that you agree with

then it turns out like this
then this area begins to grow
and what comes from you
begins to connect with what is, ^{so to speak} Yes

and what from you is this, ^{well, for example,} the development of management
technologies
ability to manage
there is a substance there
the body tissue there to heal, etc.
or rejuvenate there
in general, do some procedures
which correspond
that's exactly the technologies of Eternal development
at least of logical type

that with Eternal development
a person must be able to organize
^{well, there to create health, so to speak} yes, ^{get healthy}
the ability to manage events of any type , ^{in general,} etc.

and then it turns out logically
that there is no other criterion ^{as it were}
besides mastering and implementing technologies
here it turns out no ^{yes} in this logic

i.e. as soon as we bring out centralization
on the structure of external events
and we have at least some experience of primary management there

then it turns out that this is the Norm which is

a fairly specific factor in management
quite a powerful level in management

Well like actions yes

and it turns out that based on this
if we do centralization now
right now right in the management of this type

what we do is centralization
through task identification
so we work as if from the identified system
as through some designated center
and through the idea of, for example, Eternal Development

then we see that the entire external system
organizes
sustainable future events
i.e. you can do it specifically as practice
highlight the next level

you as ideologists of Eternal development
Well, a person who chooses his task
Eternal is precisely Eternal development
and perceives this information, for example, optically
or just logically there

so you set the management task in this way
some kind of light of control emanates from you
it can be organized
you can just mean Well how to compress something like this, let's say
implementation of this management and Eternal development
there for yourself
or all people taken together
the whole world in general

and consider
that the control is already external peripheral
this is what the event is stable
i.e. to make it so that the management level
from you
and the level of external events
connected at the level of the Soul's action

i.e. to realize the action of the Soul on a universal scale
and in external events
and in relation to yourself

and then there will be control
absolutely precise and harmonious
and in fact very harmonious
from the point of view of, as it were, no influence on external processes

Please note that in this technology

there is not even an influencing factor, it is not felt
a completely natural development of events is taking place
This is where it is very important to note this
and on this basis you can even work it out
most effectively

so now make such control
i.e. as I just explained
Push
and all external events
to the level of realization of the Soul
in all aspects of existence, so to speak
and it is precisely the factor of the natural development of events

the criterion is that you
the impact on events is not actually considered
events are developing as they do
should have developed favorably

work this way
I will work with you

when you work on event management
provided that the non-influence factor is
as if a diagnostic value
well, that is, you diagnose what you control
but there is no structure of influence

it is important to highlight here
what is the diagnostic value
may also be the actual level
well, including external control, as it were, from the other side

those. can be monitored from different points
and see what is not implemented at the event
influence in that sense, as it were
that it is not some kind of external or unnecessary influence

This is where it is important to consider
what is the absence of influence in a control problem

is this even worth considering?
natural course of development of a system of events
in terms of the most favorable
on a general scale ^{yes} first of all it turns out
and so that they are not affected
interests of some person, ^{for example}

natural contour of creativity
here it is still absolutely decisive
i.e. if a person does not consider creatively ^{, for example}
task process
then its tasks change

how to do it like this
so that this would be a task for the individual

then you need to enter the structure of initial development, ^{so to speak}
all people ^{yes}
Peace is obtained
and consider the creative path of each

i.e. consider
that in the structure of probabilistic values
there is always a choice in the decision

and the ability to see that this is a personal choice
that's what a choice of personality is then
so that ^{well} how can it not be influenced
but nevertheless the personality begins to develop creatively

and from this point of view
it turns out that the structure is actually Macro-creation
is again the goal of Eternal Infinite development

then it turns out that the person understands simply logically
what could be here
only the creative aspect of development
as a logical aspect even

and if, ^{for example}, a person does not consider
this is the point of view
then it turns out we need a spectrum of Eternal events
to translate into a structure ^{that is} as favorable as possible
for him

for everyone

i.e. the ability to work with the structure of Eternal events

how is the structure in general

well, some kind of local substance, let's even say so Yes

i.e. there are a lot of them

they even more mean human life

and yet one must be able to

these events are thus concentrated

to work with them as an area of information

and quite specifically

i.e. to introduce, for example, a sphere

move to some place

receive a control impulse, etc.

and based on this, it turns out that the task of such management is
is to identify management in this way

what are we looking at

tasks for example there of their personal management

as the tasks of each person

for example, the ability to do this for everyone

so that every person can realize their potential

his own task

regardless of even the level

there may be some neighboring actions

no matter

what are your actions

or any other person

i.e. to ensure guaranteed to ensure

to any other person Eternal development

Well, this is how it looks in the problem statement

i.e. we transfer our task it turns out

perform at any level

your own management

i.e. to implement your own tasks

in Eternal development

and here's something else additional

for every other person

this is what he needs to do the same

for example, he doesn't deal with the control system there, yes
effectively
or he doesn't want to do it
but nevertheless he must live forever
what needs to be implemented in management in this case

over time, yes of course, any person
seeing that there are many people
implement the system of Eternal Development
after all, experience is transmitted through Perception
starts doing it

but how come he should be there now too
in the safety and health system
any other person yes

ability to transfer control
into the system for everyone, so to speak

then it turns out just like that
development of this universal module
centralized control module
should be such that everyone notices it
on information
not necessarily even in words

and knew how to use the system
at the right moment
in a difficult moment
when they need help

i.e. at some point
a person can perceive the system
he may or may not believe in the system
some kind of it doesn't matter which one

but at that moment when he needs help
he should get this help

then it turns out we are
since we cannot violate it in any way
Well so let's say the rights of the individual are immutable
precisely because of freedom of choice
he has to make a decision

on the one hand, you can't force influence
on the other hand he has to make a decision

and choose the system that saves him yes For example Yes

it turns out that this is where it arises
a very specific task
maybe the most complicated one is in the influence phase
where the task is set as
not the absence of influence as such
namely, it is considered
natural development of the World system so to speak

I think this is what is needed here
to work out
the correct position on Eternal development
a person must see
that Eternal development exists
that he personally has it

i.e. as soon as he sees it
the mechanism of its action immediately becomes
what he is considering
the most optimal action for yourself

i.e. some reaction mechanisms are activated
to information favorable to him

selection of favorable information
happens because he has accepted the Eternal development

even if it's somewhere in the Infinite
in Infinite Distance
but at least that it exists yes For example
to reveal, moreover, in optics or in Consciousness

and here the important transition is
which does not necessarily have to be viewed optically
process
it is enough to reveal in Consciousness

optical this one here well some pressure
on the structure of Consciousness
it looks like some
well, it even looks like a print of information, so to speak

Eternity
by the way, it interacts with Consciousness

very fast prints exactly

here's who noticed, perhaps in some difficult situations
looks like some kind of seal [...]
some level of event printing there

i.e. as if even the words there speed up
the structures of relationships are modified
in the implementation of events, etc.
and it happens as a kind of seal of events

Well, well in general, according to those management structures
when we work even with fast systems
then the structure of Eternity looks like this
well, like some kind of stationary form
which is projected onto some axis of events

it turns out that well as if imprinted events
from Eternity now
of course they have an extension
in the form of specific actions in human dynamics

i.e. a person sees that those elements
coming from Eternity
here
in the form of a very fast action there
in general, some kind of event aspect

this is what is perceived organically by a person
i.e. it is perceived by its fabric yes
at the current time

because it's important here
so that information from the future
was transferred
specifically on the human tissue system

and as soon as we show
what's in the tissue system
there is a connection with future events
for example, Infinitely remote including

then a person begins to choose for himself
the right decision
the one that is, for example , a management technologist
offers him

then by the way it becomes much easier in general
getting results in management
for example, there may be some very
including complex tasks

so it is possible to get such acceleration
that complex tasks are implemented in any case

and it turns out that based on the control system
see
in what way what specific fabric
interacts
with this element of the future
where is Eternal development
this is very important
and this can already be shown technologically

means that a person makes the right decision
just need to diagnose
where it reacts in the structure of Consciousness
on fabric
which is in contact with the external with the Eternal element

and here is this Eternal element

must be projected onto this fabric
in the form of a high-speed system

to reveal this
you just need to consider this model
in management

there is a specific person
look at the light that comes to him
even this is not light
and generally speaking, information about events
this is where she touches him
at maximum speed

well, as if in response well, the seal of events, yes

i.e. where Eternity gives well how would I know about myself yes
to this particular person

and concentrate control precisely at this point

it turns out to be a control center
as a rule it is near a person

but I don't think it's possible here
there is a certain level that is clearly visible
you can't do this on the surface of human tissue
This needs to be done near a person

on the surface of the fabric
there is simply a healing effect there
i.e. well, you can even increase it this way

but here it turns out
that he might as well pay attention later
because the person has a developed function
primarily for management
what is outside the body for example Yes

even if it's just a millimeter, but further
control of external external space

and what is located
here the body is a special level of control
and as a rule, if a person, for example, thinks
that he should, for example, make management there
go to some point of the body
then he's kind of wasting his time

i.e. you can even logically notice
what is it for a person to perceive some area

near the body
this is the instantaneous quantity in action
he perceives and everything

on the body it is some kind of thinking option
some kind of time extension option
i.e. some milliseconds are spent, yes

so it turns out that based on this
you need to put the concentration somewhere near the bodies
so it's just because of psychology, so to speak, in management

and here, by the way, there is a very important element
what exactly is management
when we look at matter
i.e. we are considering a sign of , say, the presence of a body
in the Infinite Event Level

then here it is also important to see

as one of the diagnostic, so to speak, methods
what a person perceives somehow
events near you

i.e. to determine what it means well, the solution to the same problem
how to determine that it is the same substance
the same person is located
at some distance from the current time
into the future there well for example in Infinite Future

namely his Perception
near, for example, the physical body
and the fact that in principle elements still arise here
in the form of external, generally quite powerful impulses
which exist near the body
in the form of information
i.e. the body receives information there in a more concentrated manner

impulsive nature of information
more revealed
that's if he looks at his body
then you can pay attention to external processes
it is not necessary to diagnose your body for example Yes
it is enough to diagnose your reaction

then it turns out there is no difference in the information
that you diagnose external information
what is the future

but you don't need to analyze the body's property
and extrapolate the logical model

as in the case when you build a central area
it's like an element of action

but when did you build it
This technology can be implemented as follows
that it can be simply supplemented or strengthened
due to the fact that you are still watching
how the physical body reacts
to external information

and it turns out that, for example, for the technology of Eternal Development
it is necessary to see that at some period
there are impulse elements there

in viewing

when you enter this information and you
large amounts of information pass near the body
and a system of impulses arises
near the physical body
it is very clearly visible

if you start to react to this
Well then , for the future structure
then it turns out your task is to align
from the current time
so that the impulsive nature of the impulse
a large array of information
was the same as now
well, so that your condition is not different in the future
or it was improved there if necessary, etc.

and it turns out that you start
here is the concept of "improvement"
in absolute health
the concept is embedded
how a person should develop his Perception
so that he would have, for example
a certain reserve of Eternal development
at every point

after all, Eternal development
it is still a slightly different technology
in the sense that it is constantly needed here
reservation level
from the point of view of the real Eternal quantities

because here it turns out that it is still constant
a certain level of information comes from that
that there could be some different events
in Infinite Development
but you should be able to differentiate them now
and be able to manage them now

i.e. it is actually management
An endless spectrum of events
a number of events

and periodically this requires special
Well as if to distract attention

special time
maybe not a big one, but a special one

i.e. management of Eternal events
this is a different control

and as soon as we start
Well, actually, it's to see that
what is the concept of "other"

Well, it seems like the controls are like controls, yes
the same methods
but it is precisely here that special attention is required, so to speak Yes

i.e. prolonged attention is obtained
should be Infinite in general
Endless attention
There is an endless thought there
Infinite systems of some kind
which look exactly like the Infinite

form i.e. one thought
but it is the prolongation in optics
or there in action
Infinite
every thought has an infinite number of actions

and we need to ensure
the fact that this is a system is the same
the same has, for example, weight in the information space
so as not to burden the management yes
i.e. the ability to constantly regulate these processes

and that's when you start to just do it
not specifically there, not going into detail, not [...] there
some advanced technologies in this regard

for example now so as not to show
that this is fundamentally speaking

it's not a matter of principle, you just have to accept it
and do this
even if it is universal technologies

you have to understand that management is required here
as for a special system
and why is it different, for example, or there is another

because it concerns you personally as well
but it also concerns all people at once

so it's very like

Well, he's such a responsible ideological person or something

area of action

where you need to constantly monitor

in the conditions that the status in the collective Consciousness

Not everywhere yet, let's say so yes, at least prepared

to the technologies of Eternal development

the ability to determine all the time in this status

your personal position and implement it

this is what it turns out to be, that the controls are somewhat different

because if it's just event management

even if the Infinite series is there in some other way

then it turns out that there is a way out again

to external information

so here is where I came to this

what is an infinite series of events

in a person

human personality

and the person perceives

this is for example like your own for example Yes

as your line of conduct or management

and in this case we are talking more

about the line of his behavior as if yes in control

and then it turns out that when this line

docks

for example somewhere at the implementation level with other events

then other events should not be different

that's exactly what they should be

Well should there be something in the information

instantly switch

in their realized events

i.e. as if events pass into the goal of implementation and

and the structure of the physical World is revealed

i.e. you look as if with your eyes

this is controlling clairvoyance
or a control predictive vision so to speak
where you see a world that exists as if by itself
it seems like that, i.e. well, it exists and that's it

and now the future becomes absolutely certain
i.e. Perception of a stable certain
signal of the future

and here near the physical body of a person
these are the points I was talking about
that they need to be built near the physical body
so that it perceives

For example like all Infinite development

can be built this way
what are you, well, based on the line of conduct in management
you outline the structure of future events
regardless of what you had earlier, generally speaking

this is where it's important to see
what is in the implementation of future systems
often it doesn't matter what a person had before, let 's say
there were some difficulties
how difficult they were
or vice versa there was no difficulty

it is important to see
that the control itself implements the action status
i.e. you will still do what you want to do
Well, of course, in a creative sense, naturally
according to my Teaching

i.e. it turns out that you see a certain status
which allows us to say
that you are all the space of events
moreover, there are some random variables
how are there any force majeure
Well, as it is written in some contracts, yes
circumstances

and you need to exclude
so that this does not happen
so that it doesn't affect

i.e. how to exclude the concept altogether
Well, there is a concept of "force majeure circumstances"
what what is it
well, to perceive the text of some agreement
take and remove from information

there are many methods
just work this way
so that you don't have anything that could interfere

for example, there was no earthquake there
some kind of natural disaster, etc., etc.

and in fact there are not so many parameters
several external control parameters
so that there are no force majeure circumstances

and get attached
to just a normal everyday picture of actions
those. your tasks yes

they may be of course not ordinary
but you have to see yourself constantly
that you implement management

and it turns out that you can see yourself
there in Infinite Time
but without visualizing yourself

here if you go deeper into this technology
then this is the external control point
which perceives as a signal of Eternity
it carries information about a person's actions

but you don't need yourself all the time
how should I search for something in the information
you just need to know that this is happening

and that's when you start to reach this level
you know what this is happening here
then it turns out that you are already moving to the level
that you first of all know that this is happening
it is not necessary to see this information by the way

but can anyone there know how to do it?

or developed controlling clairvoyance there
can see her

then the first element
which one is well somehow connected with that
what you need to know is that this is happening
This is an ideological conviction again
what to know what to have Eternal development

well at least so that it wouldn't be there
global nuclear war
we must set the task of Eternal development

it will simply allow us to fight effectively, let's say
with the possibility of some kind of global catastrophe
this means first of all

or how to logically take something and implement it
precisely in terms of Eternal development
but it is possible technologically

and when we start to consider
where does light actually turn into action
where light goes into the event yes etc.

then the whole outside world
then it is perceived quite clearly in general and unambiguously
in terms of the fact that it is completely stable

i.e. we come to such a position of Perception of the World
that no matter what processes occur
at the normal level of Perception
they are absolutely stable and eternal

i.e. it appears to be of a technological type
conviction so to speak

because everything you have gone through in management technology
gave you such an experience that it is really so
you understand this
at the level
Souls
Spirit
Consciousness
just as a person understands
there when he learns the multiplication table for example yes and so on.

i.e. it is a completely fixed value

and when you start to reach this level
that has actually already been implemented
this is centralized management
via control center from any area
and the purpose of the control center

i.e. you actually become yourself

Well as if it were a control center
you start to manage like that
that your action your perception
this is already management

and it turns out that you actually well then already
at this management level or something
you can do your own things in peace
maybe without even being distracted by
to the management position

but only correctly
these are the intuitively subtle lines that I perceive

it is actually, in general, like a certain axis of control
in space

like God does
He also perceives certain positions, so to speak. Yes
in management

He himself is an organizer of any size.
then he must perceive something else
not the value itself often

this is a similar state
you are in this state
and the implementation of any action takes place
according to your plan

This is where I end today's seminar.

Thank you very much for your attention
