

GRIGORY GRABOVOY
The Teaching about God
Continuous control system
20.11.2004

Hello again

The topic of my seminar today is my Teaching about God
Continuous control system

in this topic I talk about that
how to make any control
well, actually continuous
i.e. if you have any breaks, for example
in management in action
then in this topic I show how
similar to how God does it
management is not easy to do continuously
for example in terms of management objectives
but also in the plan of Macrosalvation

in this case, first of all, it is necessary
consider space time
which is located away from you
as in the remote level we assume actions yes
i.e. time as a certain information environment
as control optics
and at the same time you control the approximate state of the Spirit

i.e. unification
Spiritual level
and the external level
gives the formation of space
external time
And
the space of your Spirit creates continuity

i.e. the spiritual structure is actually kind of mixed
with the concept of "time" in information
it means it creates space
where time has so let's say Spiritual basis
well in the logic of understanding

then it turns out that the Spirit
which generally speaking is continuously in effect
no matter what you do, sleep

for example you are solving some problem

and the Spirit is still the level of complete freedom of the individual
for example in Infinite Deletion

and in the technologies of Eternal development
it turns out that because of that
that the Eternal Free Spirit
solves many issues at once
except for that question that is now being resolved

then according to the system of general connections
where every element is present in every other
it is clear that you are in control continuously then
when you unite the Spirit time and space
already reproduced from Spirit and Time

then it turns out that your Soul is present
in the Action of God
as in Infinite Deletion
and at the closest possible level
to you

i.e. your physical body for example
when you do some actions, for example
any, and yes, on a physical level
and these actions are as follows
that you are aware of the Spiritual status of the body
in the form of, for example, a glow coming from the body
there are the glows of the Spirit

for example how to look at a hand
and see that there is the glow of the Spirit

to do this you need to do this
so that time well your concentration yes
for example, it was significantly less
than we assume the radiation of the optics of the Spirit
from your hand for example yes
then it turns out that you will be able to diagnose
that you are working more at the moment
for example, the Spiritual phase of management

if you need to work with your Soul, for example
then in principle there is nothing complicated
you are simply pulling out the Soul's management structure

as just another optics optics of the Soul

i.e. the Soul itself works
this is where you need to see it
that it is the Soul that works itself

works continuously ^{yes}
this is the level of continuity
bringing forward another phase of management
Soul Management

i.e. the concept of "continuity"
it is also a change of management
because ^{generally speaking} when a person
^{For example well,} just not concentrating
does any ordinary actions, ^{that means}
it turns out that he somehow controls it anyway

this is precisely the creative level
of course when actions are shown
you can see it here
i.e. when the actions themselves
in this case I say "any"
but to a greater extent if we consider
^{say} exactly macro-creative actions
it turns out that it is quite clearly visible here
what is happening constantly
^{as if a deterministic cause-and-effect change}
optical states around a person

i.e. Spirit Soul Consciousness element of Consciousness physical body
then it is clear that at some point
physical body
is the absolute code of governance
and continuous
after all, if we look at the body there simply with our eyes
we conduct it through the physical body
then we also see in continuity
as a factual given

i.e. God realized here and showed
what is continuity in the Perception of One's body

and it turns out that this level of Perception
he shows that
what if we look at the physical body ^{and suppose}
or we mentally look through it ^{there}

along the skin line anywhere
then we move as God generally speaking created
including the body

i.e. God had such an opportunity
create a body for example there in linear motion
just take and, say, like the level of some kind of sculpture, yes
for God

Well, I mean informational
so it is precisely at this level that we should consider the level
like some kind of sculptural code or something
body creation

for example God looked at the surface
let's assume there is no air there
spent there on a mental level
it means that this is exactly how man was created
turned out to be a man yes

i.e. based on this it turns out
what is the concept of "continuity"
in the action of the human body
where exactly the body is this absolute and continuous control
consists precisely in this
what if God touched the body
at the time of its creation
it means the reciprocal value going to God
this is the system of connections
this means Infinite
has this continuous level

i.e. man in the very essence of his creation
because it was created
namely the Infinite level of God
his Infinite Thought
for example, God can create Soul Spirit Consciousness
human
thought generally speaking at any level of your Personality

and it turns out that here is precisely the Personality of God
intersects as if delving into a person's personality
where the Personality of God is in the aggregate so let's say
created the personality of man

i.e. on a personal level people are equal
as well as on a personal level

God is equal to man, for example
personality is personality
i.e. this is an expression of a kind of absolute level of control
from the point of view of Macro connections or internal connections

and it turns out that based on this
since there is already a level of equality
i.e. and the level corresponding to Eternity

when the external plan or external level of management
this is the Eternal value

then it is a fixed system
it is a continuous quantity

the body is a continuous control system
which generally speaking constantly generates
as if into the external environment
organization of external and internal relations

and here is to make it so that the Spirit of man
for example the Soul of a person
Human consciousness
or is there some kind of human action at all?
let's assume target management

you make optical control as well
in order to have a level of resolution of some issue
and when this action is also made continuous yes
for all information
here you need to see how clearly in the body
or thanks to the human body
is divided into information as follows let's say
at the management level
Soul Spirit Consciousness

there is one here too
well i entered the level as "thanks to the body" yes
because if, for example, the physical body of a person
Well let's say so to the element of universal creation yes let's say so
for example all physical bodies when
Well let's assume if we assume
that there was some preliminary moment
it turns out that the Soul is the Spirit of a person
and in general everything that relates to a person's personality
these are elements of human expression
they wouldn't be well as if locally projected yes

in the case of the body, all these elements are precisely projected locally

I really ^{tried}
to show purely theoretically
that perhaps there was a point
where else, ^{for example, there were no bodies or people}
and God only thought there that they needed them, ^{for example create there}

so here the area is very clearly defined
what is the actual existence of the body now
in fact, it distributes information in this way
around the next event

what for the next event
the body has always existed

because ^{it means due to connections}
Well For example there ^{remote in the past}
some segment of information
with all the Infinite future
we have a ^{kind of} projection
from the point of view ^{of a kind of systemic} level of vision of God

if God showed systemicity once
in relation to Himself
i.e. created Infinite space-time
and the Eternal ^{and} its Physical Body
then ^{it means} naturally He touched with such an element
all objects of Reality

and including the physical body of a person
and at the point where the body, in principle, has not yet ^{been} created
from the point of view of an outside observer

because God's gaze also touches His actions
always concerns all elements of Reality

and then it turns out like this
that ^{means} He brings the physical body there with this gaze, ^{yes}
into that Reality where it touches
i.e. where it touched or what it comes into contact with
the action or the gaze of God there is always everything

the inner world of a person is structured in the same way
i.e. in the inner world there is always everything

i.e. a person can turn to himself
at a certain sensory level
and here it turns out that once there is everything
then there are all systems of events

and this is precisely the reversal of these systems of events
this is already a person's internal self-construction
and continuous
and from here it is clear why a person seems to be
here the control system constantly emits
precisely in a continuous plan

but when we speak simply
about some autonomous radiation of such systems
from a person
then let's say in order to carry out external control
for events and such management

then let's look at this simple example
that this person has been working there for a long time
then he might, for example, rest, then he works again

so that's when the rest period is
then, for example, to a greater extent
from the point of view of an outside observer
the work of the human Soul is manifested

because the Soul is static and calm

but if the action is active
then it is more like it is considered logically Spiritual work
it turned out that Consciousness works
approximately the same all the time
that at rest
what is in a state of action

and if we understand this magnitude of Consciousness
in totality as God does
physical body
at the level where there seems to be a logical point
before the creation of man
as well as the faction of Consciousness that is active
creates action in a structure of rest

i.e. Consciousness is a level of some kind of equality
in action

and it turns out that we get that
that here is Consciousness
this is, in general, a universal uniform distribution
continuous action

if we want to touch the matter of Consciousness,
in terms of not only optics
and Consciousness, for example, is the essence
well, in terms of, for example, Infinite Development
it turns out that this is a system of some equalization measures
with the organization of connections, etc.

i.e. Consciousness works
for some reason by itself somewhere

in principle, the reasons are already clear
this is a system of interaction distribution
Soul and Spirit
here in this context of management

and when do you start
well, it is precisely this kind of focus of Consciousness
because in optics it depends on the focus
changes
and the management structure and the structure of Reality

so that's the trick
where Consciousness has such a function
we see that the intersection for example
from the point of view of Consciousness
Spirit and Soul
this is very classically expressed
for example, a clear including geometric process

if you look at how it happens
here at the level of visualization
compare with something
then it looks like, well, the Soul is a system of some kind of cells, yes
and the Spirit is what brings in the structure of external management
information is immersed in these cells

so here it is
Well let's say the cellular sign of the Soul
or the matrix sign of the Soul
to understand where the matrix is you need to go down like this well then

but as a cellular sign it's already easier
There is an analogy, for example, in nature, among bees, etc.

and then it turns out that
precisely in the bee environment
in their system of life development
life exchange even
They have a translation level among bees
here is the optical fraction of life
when they are close, i.e. flying close

i.e. if you look at the level

Well let's say the manager of clairvoyance or clairvoyance
Spiritual Vision Manager
then it is clear that interaction is taking place
by transferring elements of life support, as it were
but without reducing some energy in the bee's body, for example

and this level seems to correspond more
how is the level of knowledge like well the flight path
geometric orientation yes in space-time
at the bee

so is the physical body
by analogy, if we consider already
through the structure of the external World

i.e. there is such a term, yes

there for example, "working like bees"

i.e. they have some kind of backup system yes
from the point of view of an outside observer
which allows them to work there permanently

so here if we take the analogy from here
where is the manifestation of God
given in action for example there are insects there
then it turns out that he is a person
he can have a property in the Consciousness faction, so that's it
that he can perceive in an adapted manner
any information

i.e. there is such a property
let's project it onto the element of Consciousness
which is basically present in the bee itself
It would be better if we put forward some kind of plane
in the form of some kind of model level

and we will get information

so receiving information actually means that
what a person can already do well there it is similar yes
let's say from the point of view of exchange resources
from the point of view of the reserve level of development there

and it turns out that when you look at the controls
Well as if far away from oneself
for example, what is the horizon from the point of view of vision
can be physically examined
some further objects
but one can assume
what's next is something next
Well, let's mentally assume

i.e. to put the idea in simpler terms
take in optics put further thought
and the horizon lengthens
to the level of your Thinking

i.e. mechanical quantity
part you see with your physical sight
and part of you well as if you guess or assume
do it with your mind

if you use clairvoyance
then do you even know what's really there?
but still, it is, in general, an ordinary optical sphere
doesn't matter

i.e. human interaction
even at the level of visual images
images of thinking
with external space or time
it is still carried out often
by a simple optical principle

and from here if you go to the structure
where do you suppose that there is further yes
or look there with clairvoyance
some kind of clairvoyant controller
or simply Spiritual vision

in the concept of "controlling clairvoyance"
for the most part I put in the structure of the Spirit's view

i.e. the knowing Spirit
The spirit there is perceiving

and that's when from that level
you start to look at yourself in the current time
here you already come to that
what is real
system continuous control level
which consists of
that your body interacts in the following way
as if transmitting a signal into outer space
and receives an adequate signal from space
outside the management level

but the signal controlled in this case
because as i said
it is enough to put the thought form beyond the horizon
and you control with your own thoughts
It turns out that it works out for me
it is not necessary to look with physical sight
you can simply imagine some element

and if this is the management area
that is, the event area
and what is beyond the area?
this is also your control
if you add there, as it were, knowledge about the management segment

and here's to make the control space
continuous
you just need to do everything for the purpose of management
to set up, as it were, a sphere of external control in fact
i.e. the sphere of external observation
and this will happen often enough
to create a continuous background
at least management

i.e. if there are two quantities in optics
then they have the property of mutual reflection
and you set two spheres of control
you can, as it were, cancel them back
they interact constantly

and whatever you want
they are constantly doing some kind of work

i.e. a kind of , let's say, Eternal, such a top
which generates a constant glow

so that's why these spheres are kind of grey
sometimes tones here in the Perception of these spheres they arise
and by the way, they are gradually beginning to dissipate
turn into this silver color

because it means if you look from the outside
like exactly shades of gray
then this is a certain focus
but you can watch from the outside right away
these very silver spheres

then it turns out that
i.e. it will just be a slightly higher point of view
geometrically, and higher if you take
color changes
and you can see how the gray level turns into light there

and if you don't pay attention for a long time
as if your thought goes into some space
where does this mean that these spheres may not be visualized
i.e. why do you need them?
you put them up and they are standing there
but you remember somewhere that it exists

so this is the structure that I specifically cited
the structure of the creation of the heart of a person now
through continuous action

because it is in the heart that information is stored
as if the derivation of the structure as if
into the structure of past events
and the system of image dismantling

after all, everything happens to a person
it's not just that a person forgot something there
and the system works precisely to dismantle the image
previously perceived
if we approach it from the point of view of systemicity again

then a person besides what he is
perceives
controls

he still has to disband Perception
and put it somewhere else to disperse it

so when we look at this process
then in this process everything is continuous
it's obvious

because the images are one or another
they always come there even in dreams
or a person can think about how he will go to work in the morning
thought himself ^{through} and thought ahead
he touched on his area of information

and in a dream or ^{whatever} it was
in any state of wakefulness ^{there}
he is precisely disbanding it
still, some earlier events
in terms of just Perception

but in order to disband the event
^{for example, yes, in terms of some past elements}
you also need to be able to not affect future events
i.e. it is not in the area of management that this needs to be done
and in the region, well, ^{well like} target management ^{yes}
precisely impulse
and in the area of, as it were, ^{peripheral} management
where is the disbandment
this is a special management of course a special task
and it does not affect the structure of future events

because if we have ^{for example}
^{Well there is such a system as the resurrection of people}
it turns out that this is the management of the past
constantly influences the structure of the future

and if we work in this system
then we see that there is a fundamental difference here
how is it disbanded
image here
or there is an image of some ^{minor} event
^{there for example, a person went to the store and bought something for himself}
and he should
God does the same
He is constantly disbanding and organizing

and at the same time He does macro-creative things

there is always life

i.e. for God the concept of for example there are "deaths"
or some biological level
is displayed in a certain space
beyond control
i.e. the level of , for example , that management where there is only life
God also has it
and this is generally speaking the initial primary level

and it turns out that there is always life at this level

and that's when you look
Well, you're starting to understand this system.
maybe so let's say in a slightly simplified version
then comparing principles
as if disbanding of perceived images
Means Well, there are some images at the fundamental level
some at the peripheral control level
so in the management hierarchy

then it is clear that at a certain level
there is equal status for any image
and that's because it exists
disbandment is taking place
as if by itself and constantly
and the disbanded blocks are like elements of information
You can clearly see where they are moving

for example, I remember there, in the first grade
what kind of notebook did I have ? there
For example there specifically on some day then
let's say in the first month of classes or one and a half

then I see this notebook clearly
but I can, for example , take it now and look at it there
for example there Spiritual vision
it will be the same as if I watched it now yes

does this turn out to be direct control or something?
what to look at there in the future, what to look at in the past
but this notebook is why I need it now
what is in it, for example , I need
Well, I can open some page there and look at it.

so I need this image for further action
Means well move it somewhere

and by the way, there was a purely physical action
somehow I ended up with a lot of notebooks
in the ninth grade and there were saved even earlier
notebooks

so I took them there for some first classes
and in general I analyzed it for quite a long time somehow
Well , I remember there at least for a few minutes I thought
what is the best thing to do with them anyway ? Well physically
or just throw it away
or should I still collapse, for example? there in a pack to take somewhere
but I still rolled them up and took them to the roof

so i.e. the meaning is well I just gave
some practical action of my own
but here is reality and the actions of some
intersects with that
that as soon as we accumulate the image into a denser one
well, that is, to a higher level of system information
then we decide the question of presence
Well, I physically took the notebooks and put them in a certain pile
and took it there to the roof
the same can be done
and that's how it turns out in the information by the way
one to one literally
in the case of disbandment

i.e. the image starts to be displayed
into the phase of more general systems
eventually it is excreted
into the phase of collective Consciousness
and concentration of collective Consciousness
in the past increases

it's understandable the more civilization develops
the more it means we have a concentration of past events

this leads to what we find
Well as if we find cause and effect as if
some elements of the future
some new technologies

but in reality it's just concentrated past
Well, this is one of the mechanisms of Reality

i.e. it can be seen like this
what does one of the levels mean

a denser state of matter
i.e. concentration of past events
it means it just kind of pushes through the structure of future events
and it creates a feeling that it means well, some kind of discovery
there it was created by cause and effect labor

although let us assume clearly that the cause-and-effect work
the basic elements of some physical structures were created there
buildings, machines, etc.

but nevertheless
For God, every event is equal
it turns out that this is precisely the systemic level of management, yes
continuity of management in that
that the past is like, well, bending over in the form of something
some kind of DNA-like system
it starts to have an effect
by denser concentration
for future events

and from interaction
with more sparse information
as if a system of the future
because well look at future events
there, that means this platform is based on
largely based on the structure of information from the past

it is visible simply as a certain field
and this field if you go down to it
it is quite clear that these are events of the past

i.e. from this point of view continuous management
it is interaction
continuous interaction of past and future
gives just the generation of some idea
i.e. we come to the concept of that
how can one develop a creative process

we need these bends of information
in the collective Consciousness
and that information which relates to the past
control
where is the intersection
as if well, higher specific gravity
this is the optics of the past
with more sparse optics
the near future

the further into the future
the optics become denser
and in the Infinite Future it is super dense

that in each fraction well the future
just for some elementary reason
there is a school system of sets , or something like that, the most elementary
it is clear that logically this is so
the further away the more structure of the past there is yes
in information

but here is the transition
the so-called "erasing the image of the unnecessary"
so-called as it would seem
it is precisely the task of identifying the following events
there is creativity there is continuity
in this case

and here is the highlight of the creative potential of creative thoughts
next thoughts next technology some
for example Macro Rescues
this is precisely the ability to connect
vector of the past with the future
so that these vectors are aligned
i.e. the ability to transform the structure of the past
into a useful experience yes actually

because if we can learn from the past there
some useful experience
it is precisely the co-direction of these vectors
brings great benefit there
greater creative process
can a person develop

so this is maximum creativity
where is the Soul well when there let's assume the Soul sings yes
The spirit has some creative realization or creative basis
there is just continuous action going on again
but already in the final impulse

i.e. at the same time some kind of discovery some kind of creative message
some correct thought exact thought yes
which leads to full realization
this is the level of connection of actual creativity
i.e. a single moment actually creates
Well in general, Infinite continuity

from the point of view of human perception

i.e. at this moment there is a transition to levels

means Perceptions of the human heart

of this optics

it is such that a person perceives precisely the Infinite line

well, with one organ that has a specific shape

and here it is very clearly visible

what can be seen

how is the organ organized in general

and his for example there Well, to improve health

due to the fact that this level of creative radiance

look so you can see

continuous phase of this action

but continuity is Infinity

this is the Eternal development

in fact, this is one of the technologies of Eternity

where is the observation of continuous processes

leads to the fact that the optics of this continuous light

well it shines on you

you are just observing yourself, as it were

and really mostly for myself

and you get it from self-observation

this is a continuous source of life , actually yes

some kind of energy there

and in essence very close to the knowledge of God

level essentially means

and when you start to differentiate this knowledge

Well For example why shouldn't God take it and paint it there

on the same notebook quickly

and that's it and you don't have to do anything

but the question here is that

please if for Eternal development

there is Salvation of civilization mutual aid

there really is nothing to do at this point

that's how it turns out, a certain process of materialization

but if the interests of at least one do not correspond

this process

you will have to do as everyone else does

and here is this difference between that
what is done individually yes

or it's done the way everyone else does it
also creates an element of continuity

all development for example vertically horizontally
arranged on continuous action
for example, if you think about it
what is there for example there are territories where people live
they are somehow connected rivers seas
i.e. they begin to expand
some geographical status of Perception
then this is the extension line
has continuity at its core

to take it at all
and perceive for example there the Earth is expanding yes
just some region
we need to make some progress in management, right?
to this let's say Earth
try to examine the Earth from all sides, for example
or select a segment
this action is based on something and happens somehow

and here is the main element
is continuity
note that any element of Reality
perceived continuously
if it were perceived discretely
This
Well, first of all, there would be difficulties
and there can be such things if, for example, Well there do jerky movements yes
do it on purpose
transfer control
from one level to another
not that it's difficult but you'll have to take it

information comes discretely in pulses
although she goes straight away
but for example, you are precisely the element of continuity
here you don't fully reveal it in action

so that's when you find continuity
then a very soft powerful wave of control arises

and this is this
it is the wave principle of control
wave as an element of continuous action
you feel this wave
goes for example there is control of this given wave
which you have identified in this technology

and this control is quite soft

but of course it can be controlled discretely
i.e. with these sparkling elements of light
where exactly all the events are laid down
but then this is what is there
in the center generally speaking waves of continuous action

i.e. discrete action is always found
in the center of a massive
or as if Well or something more continuous action

this is where the interaction occurs
What

Well there is a broken system there
continuous system
or is there a point system
continuous
always go in interaction

and any well it is clear that it is a continuous system
consists of a number of single action points
from the point of view of an outside observer

and here it is enough to enter this system
you know how this kind of management is generally comparable to that
that it's like some kind of domino
which is in such a suspended state
if you touch it, it starts to disintegrate there

so the image is dismantled in this way
when your presence does not affect the image
i.e. you enter this room there yes
with these means domino elements
but you, figuratively speaking, do not touch these elements
and you act as God acts
because it's God
It can go through any system.
without affecting the system
although He Himself had previously created these systems

both

so here is the element of knowledge

God created domino air there yes

For example, I myself passed through my mental gaze

or is it real there

It turns out that He is present everywhere

then from God's point of view

where, for example, His self-perception is obtained

so here is self-perception

it is precisely in the continuity of these processes of self-view

God can perceive as he pleases

i.e. in a macro-creative way

where the images have multidimensional holographic

or there is any creative character for God

and for everyone

the only difference is that

what He does is always constructive for everyone yes

for Himself, that means He must do the same

and when, for example, you see this very status

that these are the elements of communication

they are obtained on continuity in Perception

it is clear that all elements are expressed

and physical there in the material

and in the Spiritual World

they have precisely the structure of Eternal development at their core

i.e. Eternity is actually as if applied

to any element of interaction

take there two molecules two buildings two bricks there

or two people shook hands

or said some kind words there

or just said "hello" to each other

here the element of Eternity already arises

i.e. continuity in the structure itself

of this interaction

but in fact, again, these are elements of Eternity

as soon as people learn

highlight these structures in conversation even

and this is elementary, you just need to highlight the control optics

there go through the events help the person yes

if it is necessary of course

And ^{well} at least save macro ^{and} everyone
including this person

then it turns out
that results in an adequate action
but this is still the second action of another person
or ^{there is} another level of management

and it turns out that here is the continuity itself
that's it, ^{well in general} this is the situation
which is essentially present
at any level of management

and quite clearly

i.e. to make the management continuous as I said
^{there well} besides everything I said
There are many other methods
but nevertheless, as I said in terms of that
so that you can find, ^{let's assume,} other methods, ^{yes}
you need to create some kind of transition, ^{some} kind of platform
the platform must also be continuous
you shouldn't go there ^{and} fall into some kind of pits

so it turns out that there is continuity again
continuity is not necessarily only ^{there}
constant continuity in time ^{yes}
or ^{there} in space
it happens that one bridge is enough
but the main thing is that it is also continuous

the concept of "continuity" in management
this is the construction of this bridge
correct precise construction

and here it turns out
what exactly is in continuous control system
an important element is
your own personal permanent knowledge

as soon as you make knowledge permanent
by properties by direction
and you will know
that is exactly the feeling of constancy of knowledge ^{yes}
or the concept of "accuracy of information receipt"
^{as if} some kind of external knowledge

when you reach this level of management
then it turns out that you have the following
that's where you can restore health yes
somehow improve your health even if you are generally healthy
there for a million years ahead for example yes
ability means to do an action that is in accordance with God

when you start to see for example
that these systems actually work specifically for you
i.e. you start to take care of yourself
then you see
that's the advantage after all
continuous control systems
at least you can take care of yourself at the same time

and when do you start
let's assume that we work in this technology
that means a system of action
aimed , for example, at resolving some event
it seems to be warming all the time
well, one of the levels of interaction
from the event to you
always solves your problem
Well it kind of warms your area yes
interacts with your area
in terms of solution
i.e. with an approximate area

and on the one hand you are solving some distant issues
setting the goal of control if it is an optical method
it is possible at the level of the Soul Spirit Consciousness
it is still a kind of visualization of the concentration of information

and it turns out that you
well from the point of view of Consciousness
there may be different systems of perception
I speak at the level of Perception naturally
from the level of Consciousness for example
from the point of view of a single personality there
and it's clear enough to me
I can take the transfer of the Consciousness faction
at a level, for example, some distant one
and I can bring this fraction of Consciousness closer

and it turns out that my Consciousness is that of any person
can work as a control element

well, which always works

It is only necessary to single out the faction of Consciousness

so did God who singled out there for himself

the structure of the Soul

for example, yes, Spirit and Consciousness

to pass on this knowledge to people

He naturally created an element of continuity.

i.e. continuity here in the World

it is a system of transmission of real or precise knowledge

Well , as a rule, there are many processes there too

such as there is a test of time , such terms exist, etc.

Well, basically, even any mechanism

even there it is tested and adjusted according to time

from the point of view of possible

Well there is a local, as it were, continuous level of development

local continuous i.e. level as if that

which corresponds to the function of the object

some device even, etc.

so that's when i showed that continuity is present

in many elements

as a control system , well, it's unconditional in general

then we can identify the structure of continuity

literally as a certain layer as a certain layer of information

and then wrap it up in these labels like this let's say

those "candies"

which must be very sweet or very necessary

for this you just need to do everything

Well, first of all, differentiate

like this layer of continuity

pull out in optics

i.e. do not create a dynamic system

well which can be created

but for this you need to do constant management

and simply bring continuity into statics

say yes, this particular layer

this is continuous management

such information

then we can isolate this layer

to take means some well I say "candy" yes
some event to put
and wrap it in a continuous system
and that's all
in continuous phase
the event will still turn out for the better for you
because the continuous number of actions yes
you apply
the main thing is to be able to design it

and it turns out
that when you start developing this technology
then it becomes quite clear to you
what does the concept of "continuity in information" mean ?
or there in the control system in general
it's not just very useful it happens often
what is the only necessary action or something
in many cases, by the way
Well, there may be a few special ones, but in many

For example there on the physical level the picture is normal yes
the satellite is flying to some distant planetary system
he must have some resource, so that he can fly, yes

and then it turns out that here is the concept
It is precisely the "continuity of action" that corresponds to that
that this is some kind of system that provides a resource all the time, yes

i.e. due to the fact that there is
continuous communication system
a continuous system of some modifications in the World yes
all this is often manifested
in the form of a specific local system and such
which only the Spirit perceives
your personal Spirit

i.e. how to identify a person, for example
well, in terms of spiritual properties , perhaps

To do this you just need to look at everything
where the Spirit of man perceives the whole World and him personally
here's how to understand this person in general
now looks at the information
and where in Perception
namely the Spiritual status of the individual

then the whole world and man
and a person perceives the World at the same time
and a person, i.e., acts as if simultaneously and continuously
i.e. constantly changes the communication system

and it turns out that this is an undetected image, in fact
i.e. there is no need to identify anything here
it's clear anyway
here "it's so clear" is a very powerful level of knowledge
for example, how does a person perceive in general
as he understands
that something is clear to him or not clear, for example

if you think about this question
and try to understand
what mechanisms are triggered in this case
it's precisely in the optics of Perception in the Soul

why exactly does a person know that everything is clear to him there
For example so if there is
clairvoyance is in charge there
Spiritual vision

that's why everything always becomes clear to a person
i.e. the concept of "not clear" does not exist

Well, one way or another he perceives it
some object of information
to consider it one way or another

and it turns out that this is exactly it
continuity in management
this is the action that guarantees
Here's to man Eternal life
precisely in interaction with all systems

i.e. not just some local action
but it is interaction
there are many different techniques that arise there
Well for example, one continuous action is possible yes
connect with another
the structure of Infinity will be obtained
well, which is also a kind of continuous quantity
but it looks like a form
right in the Infinite space

i.e. to create some element of Reality
let there be little material ^{there}
it is necessary to combine continuous processes
and the result is some kind of final product ^{and} matter

Well, really, God is One and continuous
created matter in this way
that He created the elements
Infinite Eternal and continuous

but for ^{example} God has an element of Eternity
but for humans there is a similar system
it's continuity
i.e. a person can work at a continuous level
he can show that
he can highlight this fraction
and by analogy with God it turns out to build matter

i.e. in this case continuity
it is a system of creating events in the form of that level
that these events are built practically
on the material level

and in connection with this it turns out that you have
actually the property ^{yes means} your body
when you learn some knowledge

for example, according to my Teaching
then you are not just ^{for example} you get some knowledge ^{there}
you are constantly accumulating
the system of continuity in Macrosalvation

and at least from here it is clear
what exactly when is the action of Macrosalvation set
it will definitely be implemented
i.e. the world will definitely be saved
It only takes one person to ask the question like that
that the world needs to be saved

because interaction
continuous quantity
With
some static ^{yes}
it's always a better ^{system}
there is always victory here
and always precisely macro-creative

it is precisely the macro-creative victory that exists

and here it turns out
what if we want to make a specific control for example
knowing the mechanisms of continuity
from the point of view of the principles there
there are no criteria of knowledge
then you can move on to the next phase

here's how to make a control object controllable
Well there is a cure for the disease
or help there, some kind of healing there
just like that, if you look at the organs
or just about the person as a whole

then you need to make the pulse continuous
indeed if there is no break in the impulse
then you get all the information about the information object
and at the same time you can influence
on the control system

so it turns out that this is still
and the level of some construction yes
some target action
which in principle can be created independently

i.e. you can say reset the control
there at the point of infinity
and get from this point for example there
a very large structure of information

soft large amounts of information

and that's when you see that it's very
in general, well, this is a pragmatic property of management
take and from a small level of information there
get a very concentrated system

and for this we must ensure
again, continuity of action
i.e. some small level is abandoned
like a snowball, it becomes denser
but at the same time, this is the road
so it should be continuous and smooth, i.e. without any bumps
because if there are bumps
then in general there is no continuity at all
i.e. discreteness arises at one level or another

and now if we look into the Soul of a person
it is precisely in the Soul of man
discreteness does not exist
from the point of view of Eternal development
there is no discreteness there is only that level
that the Soul is designed like this
that we can consider it
it means but at the same time the natural state of the Soul
it is a continuous state of Perception of the work of action

and we come to that
that it is precisely the concept of "continuity"
yes it has many quite aspects of management
the concept of "continuity" has different properties
methodological systems can be distinguished from here

the main thing that is needed is a state of continuity
Well should I come in ?
to be able to logically and spiritually comprehend
and in this state
when you consider the world as dynamic
i.e. you see the dynamics
you are practically doing very powerful target management
just because you
First of all, you are in this state
secondly, you see that it is possible to increase the system of knowledge
accumulate costs quickly enough, manage, etc.

i.e. as a result of today's lecture
try to achieve the state of continuity itself
means to output as a control state

that's exactly what you are in
in the continuous control system
gives such a glow
that you are sure to achieve the management goal

and try to do it
also for Macrosaving specifically

because your continuous action
aimed at Macrosalvation
this is a very powerful level of help to all people

This is where I end today's seminar.

Thank you very much for your attention
