

GRIGORY GRABOVOY
The Teaching about God
Control via addressable digital series
06.08.2005

Hello
the topic of my seminar today
this is my Teaching about God
Control via addressable digital series

in this topic i show
how should management be done
when you have a specific address object
and you assign to this object
some sequence of numbers

Well, in this case, for example , you have digital series
consisting of 14 or 15 digits

this control was made specifically
for that very reason
that there is such a cycle in the collective Consciousness
like a month
and it consists of , for example, 30 or 31 days

i.e. a holistic picture of management
it turns out to be a separate control unit

and if you divide it by two, well, by 14 or 15 digits
then it turns out that we have irrational management
i.e. dividing by 2 is from the point of view of management
as God does
this management is already on a universal scale

i.e. the principle is simple
God is the One who was originally one
in the existence of any other object
this is already the whole world
because any second object
already means universal control

by 14 or 15 numbers
this is an exit to the general field of control

and by the way, it is advisable to consider this exit option

from the point of view of optical implementation

i.e. here you can develop control
namely optical clairvoyance
because there is a way out
i.e. the transition as it were yes to the system of macroregulation
this is a certain light

and here you can learn to see light levels
which are quite useful
when it comes to accurate diagnostics of processes

and therefore from the point of view of this management
especially in the context of, for example, counter-terrorism operations
when you need to save an object depending on
what can happen in the forecast phase

optical component extraction
is often quite good and accurate
management level

so now I'll show you the control system
through these rows where it will be highlighted
very specific pragmatic practical meaning
control rows

therefore, when working with these series
It is natural to highlight the address of the object
this is if it is a stationary object yes
some house address for example
if the object is moving
Well, it could be a car number, a train car number, etc.

for management
on stationary objects and on moving ones
control systems are different

it has to do with what we mean
still when the system is more static
then the concentration of Consciousness
this is more of a local type of concentration

and if we are dealing with a moving object
then just imagine such a simple picture
that we are fixing some point of Consciousness
element of Consciousness on the control object

and when moving an object
we leave a trace in the control space

i.e. it turns out that we are dealing with
still with a different control characteristic

where the optics may still have a scattered coordinate
in space and time

and that's why it turns out
what is control of an object that moves
it just has a different system of concentration
and that's all

after all, in the task of concentration
as if to a universal control system
as God does
He made the management for example yes of the same type
gets the result on a global scale after all

at God's seemingly infinite distance
from the point of view of, for example, the processes of Eternal development
The perception of the element of His control is always the same

i.e. does He control a dynamic object or a static one?
an external observer would see the same impulse
Here

and in management we must always strive for that
so that your control characteristic
was quite versatile

Firstly, this simplifies the system.
well from the point of view of what you don't need
constantly think and analyze
are you doing it right?
as if an outgoing control impulse

but in the conditions of, for example, controlling clairvoyance
a person must in natural conditions
that's what he would do
to see an object in a calm state

and then it turns out
the simplest element of this control
is that you are moving
as if to the point of external control

some external environment

and you actually observe yourself
i.e. for your impulse

because you are in one place
It's enough to just look at everything
your own position even more

you could say that

i.e. your Soul shows universality
your attitude towards yourself

i.e. a person relates to himself
quite specific or quite even ^{there}
and so having developed a line of relations
i.e. the connection is obtained
with you
and an element of Consciousness of external control
you get a universal system

This is very important, that it is a universal system
this is practically an exit to the source of information
i.e. you get information from a fixed point

and therefore here in this very specific system
there is a next level ^{well like} development ^{or something}
management practices

considering that in the conditions of counter-terrorism, ^{for example}
so that there are no problems at all
with control structures
what needs to be considered here is that
so that experience can be gained at all
from the point of view of the integrity of the picture
practicality of the application picture
the same number series
we need to try to identify in the control object
some current, ^{well maybe} problems

let them not be dangerous there are not serious
but the ability to identify some systems
which can be checked and diagnosed
This is an important aspect of this management.

because if it can be identified

there is some kind of crack in the building
then naturally a person can identify
the system of destruction of the building is possible there

and from the point of view of the destruction system
we need to find out the reason what it could be yes

for example, there is some terrorist with explosives
maybe it's a natural disaster
maybe it's some kind of external missile, etc.

i.e. it is meant that especially in conditions of inadmissibility
i.e. some possible global catastrophe

i.e. to prevent, let's say, a global war
or even local
this should include
and the coordinates of the types of possible damage existing there
buildings of the object or the same missiles, etc.

i.e. therefore we mean that management
this control is still complete
which includes the possible or the probable
systemic damage to objects

and in connection with this
control system through numerical series
it should still reveal the causal coordinate

i.e. where is this defeat possible from?
and how to make sure that the information about this defeat
generally speaking, it has not formed

i.e. you need to be able to manage
to avoid a fixed image
as if negative information

on the one hand we are looking for yes as if in a search engine
what needs to be done to avoid problems

on the other hand, if we are talking about some kind of event
possible military actions there
then this is an influence on the cause
in order to prevent conflict between countries, etc.

i.e. we must always solve the problem fundamentally

but do not bring the impulse to fruition

i.e. in fact we must be able to intercept, as it were, an impulse
at the level of its distribution
there to a specific building or a specific car, etc.

and therefore in this technology
simple example of management
is that we must do primary concentration
in the middle of this row

i.e. on the seventh or eighth digit it turns out

so the first approach to working with rows
so as not to create a negative situation
this is the identification of the seventh or eighth of this digit
just sequential identification

which number is in seventh or eighth place

it is possible so as not to count these numbers and not to get confused
the first impulse of control is to simply do concentration
on the numbers seven then eight
literally there is a second's concentration
and so you kind of unpack a series of yes

then you start working further
if it is a stationary object
then methodologically you set up management in this way
that the first and second number is put
in terms of attitude towards you

this is the left corner of the building, for example , which is closer to you
Well as if you mentally put this number there
and the second number is the further angle

i.e. it turns out to be just an angular system of the left part of the building
in relation to your view as if
on this particular object

i.e. you must either imagine it or draw it schematically
It's better to work with a representation than to draw

then further when you consider it already means
Well as if closing the contour of the building

i.e. you are actually revealing the structure of the building
then the fourteenth or there is a variant of the fifteenth number
or there are the thirteenth and fourteenth numbers
if you have a fourteen-digit series
then it's just the right side of the building

then you fix it, i.e. exiting the control center
from the central number the seventh or eighth is obtained
you get the following picture

i.e. you need to consider in relation to the building
what objects of information
generally speaking, they are visualized
if you are working through optical control
or do you perceive them as just information?

Well for example, you think that external information

which, when focusing attention on these numbers
hits the building
has some kind of outline

and if the information is, for example, pyramidal in shape
then the management should be like this

from the inside

Well like some kind of pyramid in space, yes
you can consider the level that needs to be influenced

i.e. there is no impact on the building but you
or there on the car
but you are from the reflection of light as if inside this pyramid
find something in the world to influence
possibly on the political system
to prevent negative events

or maybe it's management
when a specific person
for example, a terrorist planned to blow up a building there
this is control over the course of its events

and in such a way that the events are again creative
for the same terrorist
he simply did n't make a decision or couldn't implement it
let him do other creative things there
i.e. to perform some control actions
which constantly bring us to the level of problem solving

i.e. creating an event level for another person
and for him to also accept this level

because whatever happens
influence a person i.e. it is impossible to influence
we need to create its solutions
which he accepts due to circumstances
i.e. this is generally intellectual work

and then when you start to consider
next level of management
then a sphere is possible
Here is how the sphere can be visualized
that a glow begins in the center of the building
or do you kind of feel it?
increased as if weight or increased concentration
light in the center of the building

this means you got a spheroidal impulse

spheroidal momentum means
what is management
i.e. some information is located somewhere far in the future
which should be paid attention to

and with all this
considering that you are still engaged
integrated management

not only there, for example, counter-terrorism
then we need to consider it
Why do you even have this information?
what is this like
maybe you need it for training to improve
find some node in the building
to consider
or in the car
consider what you actually Well, you're doing the management correctly.
well, some kind of management practice , so to speak

i.e. the spheroidal system is still calmer
it is desirable to derive control from the fence point of view
if you have a choice
to a spheroidal system

i.e. it is often necessary to place a sphere above a building

and bring the sphere to the building
to better deal with the training situation
and not to allow the existence of real systems

there is a certain consequence here

once you have learned to work
with a sphere
then very many situations dissipate of a negative type

because the ability to work on protecting the building
in collective management
disperses the system in fact
often some negative events

i.e. it turns out that your ability to work is
this is already a strong enough obstacle
for some negative event to occur

thus we have
for static systems in this case
distribution of this type

that numbers are concentrated
there on the left or for example on the right side
and control goes through the central area

for dynamic objects
those that move there, for example cars
management must come from above and below

i.e. the left part of the series is the first and second number
are consistently located on top
mobile object

Well there on the roof of the car, conditionally yes
or some kind of train carriage there
and the fourteenth fifteenth
or there is the thirteenth fourteenth number
are below

and the management is carried out according to the principle
if you stand on the right side
in relation to a moving object
and it doesn't matter where the object is moving
then the information output occurs
from the top two numbers

counterclockwise
to the bottom two numbers
i.e. well as if some arcs were arising in light optics

here it is useful to learn specifically in light optics
see the movement of information

i.e. the following property or pattern, so to speak Yes
such management
what for moving objects
information does not come from outside
it is inside the system

This is largely due to the fact that
what is a moving object
Well as if more densely or on a larger scale
interacts with the external environment

and therefore information
accumulated to a greater extent on the object

from the point of view of the structure of the World
it's like a postulate of the structure of the world
here from God's point of view
It was easier for him to create a system of Peace
when the moving object

more defines its own functions
i.e. the main concentration of information
is located precisely in the moving object

and by the way this is a very strong level
For example there well there is self-healing
or the healing of another person

if we consider this connection
because we work on universal systems
if we see here
how does the division in information go
that a moving object is a more autonomous system

then we can find the border
between human information
and the outside world
and get it only by concentration
there on the points of the body of some
recovery

because we ^{kind of} start getting the resource
from the system itself
and the system resource is Infinite
i.e. the human resource is infinite

and here from the point of view of Eternal development
when we start to separate this system
then first of all why are we doing all this
naturally for that
so that a person may live, so that he may live forever

i.e. here is the allocation of the status of a person
It's better to do it on the system
namely the mobile level ^{of} control

i.e. ^{for example} there is a man driving a car
the level of its interaction is highlighted
this person
with the external environment

at the same time you don't consider it at all
nor Human Thinking
you don't need it ^{then there} to consider some of his plans, etc.
you just need to save this person
he should just live
let him live as he wants

but naturally creative
if negative plan
if there is a terrorist driving a car
this is immediately revealed by the way

this is the communication circuit
between the external and internal level of numbers
immediately begins to manifest itself
the arc begins to bend
and a discrete break occurs

at the hearing level ^{yes} so called if you have a fine ear
you can learn to hear the system

discrete type systems arise there
Well ^{as if they were} ruptures
well, like when a string breaks, ^{for example} yes and so on.

i.e. you can still learn to work on sound but
but in this case how would you do the management
output the sound outside the system
no matter what happens
discrete such a rigid change
these connections of the upper and lower numbers
which are like on the roof of a moving object
and from below
and align the system until the problem is not realized

By the way, this is one of the ways to prevent accidents
but unlike those problems there
when it comes to a terrorist
if the accident is random, as it were
we have to move the seventh then that means
to diagnose yes
the possibility of some kind of accident
and prevent an accident

we have to move the number seven then
on the front of the car
Well , where are the headlights, let's say yes
and the number eight, i.e. the middle part of the row, in fact
we transfer back

and it turns out
can i ask why i say that it is not necessary
it's like even fixing
i.e. I don't specifically say where to transfer it
enough at least in the front area
a car or a wagon

and the back

i.e. we actually do it this way
so that the lines intersect
top of row bottom
and the middle part of the row

i.e. we take information about a car
or some train there
into some kind of peculiar sphere

and here you need to reach the level
when sound forms
that's exactly it if you want to make fast control

we need to move towards management forms
when the sound is out of control

i.e. for example you start doing management in this way
what do you start saying and the name of the object
for example "car"

you know what you want to say, right? let's put it this way
take the first two letters there "AB" let's say

without fully pronouncing well as if mentally names
i.e. without perceiving the object in the form of a word
you make the object protected

i.e. because you have to get in the word
in full word
already protected object

This is one of the management technologies
where you must be sure
try to use all resources
so that no problem occurs with the object yes

so one of the ways of this control
start working
with the first letters of the object's name there
and you work on seemingly unformed information
in a word

after all, you know what word is there, maybe yes
well, like for example there in the crossword
but the first letters that are written out
mean some information

and you work with these numbers on this information

and in case you see
some negative information
then this information does not reach the fixed object
because you are working with a part of a word

and information
falls into some kind of scattered area
but it does come to light

i.e. but it can be identified
What is this
if it's some kind of wheel in a car let's say Yes
then this is the third number of the series
that's when it starts to shine
these are like elements that move within the system

if this is a deformation of the body, let's assume
there's some kind of impact there
it's usually the ninth or tenth number

here it depends on that
what row are you using
fifteenth or up to fourteenth

i.e. here the exit point to Infinity has a meaning
if here is a thirteen-digit series
where is the fourteenth already the exit
then this is the ninth number

for five if it's like five-digit
there is such a peculiar level of management
here for a five-digit series
there are three fives there, that's 15 yes

where the fives cross
For example there from five to six or there from ten to eleven
these are also criteria systems
your diagnostic capabilities

i.e. you can concentrate your attention
after every five, let's say so
receive concentrated rays
to one point of the object

those. between numbers
5 and 6
10 and 11

and also after the number for example there 15 or after the number 14
until the first of the month
i.e. the external space works, not only the numbers themselves

you get concentration
many rays on some unit
and you can find a defect in this unit

with some practice you start to work
in terms of understanding interaction
for example, numerical systems
and your level of management

for example, from the point of view of creating Reality
if we consider the work of God there
how did he do it
to get into the collective Consciousness at all
Well for example the number yes

if you think about it
why are there suddenly some symbols there
and they are called "numbers"
why is the system built this way

on the one hand it's completely understandable
there a man took and counted
designated it with a number

but from the point of view of the organization of Reality
God introduces each system as independent

here from God's point of view
He can introduce any system at all.
maybe he could have entered a non-number there For example
and simply the Perception of Volume
and give a person such a resource
perceive volume immediately
and that's all

why the number then
a person just knows and that's it
why should he count yes
Let's assume that we will introduce such an option into management

but God brought out the number
that's why
how a number corresponds to an object
and why does it correspond to the object

and from the point of view of this analysis, yes
can be seen
what is real interaction
numbers and objects
at a certain level of Consciousness

i.e. through a number you can control an object
from the point of view of Macro-creation of course

from the point of view of management ideology
no harm can ever be caused in any way
through the postulates of Macro-creation and Macro-salvation
because this is the technology of Salvation

and so when you look at management
then you can control the system
in this case, consider
dots well as if access to control

when the car is moving if there is some problem or defect
then the car can stop, right? For example

if this is an airplane, can it be serviced
take action on the ground or in flight
so that there is no catastrophe

and at the same time we have a certain point
which is the point of provision
full control over the system

where God comes to the level
object
number
and control through numbers for example Yes

Here's an example to look at
how does god control through numbers
because for Him any information is basically the same type

if a person said a number and it exists
in the field of information as if
just as information

if the plane
from God's point of view, it is a uniform system

In principle, it makes no difference to him what he controls.
by plane, etc.

and it turns out that based on this we can find
these are the internal management connections

if for God it's the same then let's see
how can it be the same for us there
and find the same system management resources

for this you need to have
some kind of reflective plane
again the same series just a numerical series
which no longer works by
there is reproduction of impulse
from the number of suppose

and which works due to that
that we send an external impulse
it is reflected
and here is the reflective element, it is already more universal

can be absolutely universal
if you do it exactly the same way as God does
but then you need to observe His Action yes

and so that you can do it right away
and in the process here is the Action to observe

there is already some here
in general, this is a unique teaching principle
where Action determines
and observation
and training
and the action itself

and it turns out that the further we go in management
the more clearly the following principle is outlined

the number exists
as a kind of symbolic, so to speak, model system
which, when approaching in terms of events,
keeps getting deleted
to a distant point of Consciousness

well, basically the same as there is a letter, a word, etc.
if you try to take some word from the information
and physically move it from the location of this word

then as soon as you start moving this information
the word begins to move away infinitely
it's like an absolutely stable system

in management

and so it turns out that we
By the way, this kind of training is very easy to do
we can say "car" there yes
or "car number such and such"
and we will try to take and move this information somewhere

so here on the impulse of removal
as if a light trail of some kind appears yes
in this light you can immediately see inside
generally speaking the whole machine with its internal structure

because it is being removed
for information purposes removed
the object itself
and when it moves away, movement occurs
we notice it

therefore the main level
well, this level of management
create a movement
in your own Perception

and in motion
we then diagnose the object

for example, in my management practice
there for aircraft diagnostics
to diagnose, for example, an airplane quickly
when there is little time
I was just creating the external sphere of control
which when reflecting an object into a sphere
in fact, as if Well, did this sphere create it?
synthesized, so to speak, movement

i.e. how the movement was created
and at the moment of movement
the plane begins to become transparent

i.e. the system is such that you may have even noticed
what if there is a car driving fast there
to some level
if you stop your gaze there
and record some detail, for example a number
but in order to try

there is a peculiarity in the management here

don't just look at the number
and try in the information space
There's a number on the car
and in the information space
the number is somewhere, well, some cell, let's assume Yes

the easiest way is to always put it on the left side
at the point
where between your heart
and some level of management there
just a geometric level
always the same distance

here is the simplest place of control
in numerical systems for transport
it's all about control
what is the distance from the heart to this plane
all the time the same

here you transfer the number here
and you try to move it
and here a gap appears

i.e. many people in practice, especially pilots
they have a similar system
from professional activity

and when we begin to see
that the movement of control for example is such
that we are in this kind of trail of light
we see the internal structure
then this is exactly what corresponds to our primary view

as I said if we fix the element of Consciousness
on some moving object
then a kind of trail of light appears
the object is moving

we get the same thing
in conditions of, as it were, adaptation of Perception
analysis of this system

and it turns out the same as God

there is also an extension
and the primary impulse contains information

after all, when God does management
Push
the impulse already contains information about the object

so God created man
man created the machine
then it turns out God has a way
not only there direct
He can look at an object through a person

and it turns out that at the same time
His impulse
this is an element of creating an object after all

God created everything
for Him any element any molecule is there
is maintained at the level of His Consciousness

and it turns out that through human actions
as well as in the primary impulse
He still retains the universal principle

His look
this is a matter, i.e. this is matter, this is Reality
Peace , so to speak yes part of the world

and God perceives the World
still the concept of "part"
for Him it exists in a different sense

God the Creator of the whole world
so the concept of "part" is Perception
through the logic of human perception

and if you think about it
why did God create the world like this
that He gave man the opportunity
create some constructions as follows

so here is the analysis
to teach a person
God had to create a system of development
when a person develops
and this is another kind of Reality yes

development of God himself
with all that God has
direct access to the control object

and this is where the problem arises
this is a merger
numbers
and the control object

the number there is perceived by a person
Well as if it were created by man

the man said that there is a number for example Yes
from a logical point of view
although God determined it from the beginning
this number

and the movement of the object

we see three dots

movement where there is information
where is the object itself

human action

and the Action of God
in relation to a person
i.e. training a person

and when we think about it
how the symbolic system teaches

then in principle the number is really needed for that
to learn something there, optimize something, etc.

it is possible not to consider the concept of "number"
but then it is more difficult to interact with Reality

in a complex, as it were, technological world
the concept of "number" has a completely different form
numbers can define connections between computers, etc.
this is already completely different
area of human action reproduction
where everything is built on precise connections

Well, in principle, again on numbers , words, etc.
i.e. on some formal apparatus
on some functions and formulas

i.e. it turns out that there is a certain level
Well as if mental activity of a person
which ensures development

and in this system we can find
how to put a number series there
in this area of information
to get all the investigative links

from the point of view of the logic of human development

for this you need to see
how a person should develop
in the system of many connections in this World

and it turns out that we highlight
for example, the information area
which corresponds
precisely human activity in general
as if intellectual activity
reproduction of funds
some material, spiritual, etc.

and we take and consider
in general, in this situation, for a person to live forever
where should be the light of its development

because that's what God does
He is always determining the next path.
which leads to the Eternity of human development

we do exactly the same
and as soon as we see the light
we can this number series
put in space
Eternal creative development of man

i.e. on one side the row is on the object
it's glued there to the building, to the car for example Yes

and on the other hand in the information space
he is in this collective environment, so to speak Yes
which develops towards Eternal development

and then it turns out we connect
with God's task
we create practically with our management
the system of Eternal development

and this is where the correlation between the two series begins
correspondence of one number to another
This is where the main information about the history of the object is revealed

and why did I tie this so-called object
one could put it this way
"tied up" looks exactly like that there by the way
precisely as a connection system
in the system of collective Consciousness

as some kind of nodal systems

that's because we are developing in society
naturally we must take into account
all elements of development in society
on the principles of complete freedom
and any object of information
provided that the object is creative

and when we see
that the series develops synchronously in this system
and the glued row is the address

then from the point of view of targeting we begin to see
all interaction
between our so-called model level
what we created as a model of some kind

Well, how do they make a model of some kind of airplane there?
wooden model
but it still reflects the properties of a real aircraft

and it turns out that we have here
system of connections
where is the first number, well there is a row that is on the building
physically glued there
and you interact with this row
or you you maybe wrote it there even yes

so what happens next
that the first number interacts with the first row

which is in the collective phase of Consciousness
there is a tenth in tenth

and along these lines
we begin to read the history of the object
into Infinity

because the collective Consciousness of humanity
which has development precisely in terms of the current moment
this is the development, if it exists up to the current moment
this means it is in information and in Infinity

here, pay attention that in numerical systems
It is very important to see the next level

if there is a control object
then it is always there
here we wrote the number 5 there for example

all this number will always be there
in the information system

and the concept of "always"
this means it works
that we are considering the structure of Eternal development
as a structure on one side Infinitely remote
on the other hand, it is a projection of future events
or there is Infinite deletion of information
on the number 5

and that's when we start to analyze
the following system
i.e. based on past events
that there will definitely be future events

we don't just have connections there
precisely creative future events
we have a system of how to act
so that there are negative negative events
did not come true

i.e. following these lines of communication
and knowing that the information of the future is Infinite
those. highlighting the spectrum
namely the Infinite information of human development

why do i always say this

what exactly is the technology of Eternal Development
she is still often different in many ways
because you need to allocate a special area
which denotes Eternal Development
this is generally a different path often even

i.e. physically it looks the same
man does yes as if
but a person who develops forever
he is forced to
or maybe he would be happy to of course
not necessarily forced there
but he deals with other optics
optics of Eternal development

and a simple example
if he has a choice there analytical choice
what needs to be done

here he is, somewhere, a man is walking
he has two options

one optics
it's just some information there
and the other optics is Eternal development

here to take a step towards Eternal development
and where should he go if he knows and does this
what is its difference
what if he doesn't do it for example
technologies of Eternal development

but what if he doesn't do it?
the control element seems to collapse
and appears as a simple projection
to the system of Eternal development
well, really, any local element is a projection

i.e. so that with the object
no negative event occurred
we must projective systems
from the elements of Eternal development
actually put it out of reach in the system
Well how to remove from information move away

for this you need the contour of Eternal development
highlight

and here is the interaction between these rows
this is a clear outline
there is a clear match there
first number of the series
the first number of the series
which is located on a building or on a car
this is still a specific line

and so that we, for example, do not make a mistake
from the point of view of, let's say, human health improvement technologies
by the way, a very important element
is the equality of these systems

i.e. a person on information so to speak
on the Perception of any other person
and physically he must always be healthy

and here is the ability to work with these rows
which correspond to the object
and correspond
there, for example, in some phase in the collective Consciousness
it is always the regulation of human health

i.e. work to improve events
always useful for a person
Well, that's the logic of control

with all this number
in fact, there is such a principle
that a person has a number in the grand scheme of things
cannot match
because a person is an external control system

man always controls the number
you can't assign a number to a person

for example from God's point of view
it is impossible to say that God corresponds to some number

It reproduces any number and any Reality.

and it turns out that the number does not correspond to the person either
a person is outside the system of such as yes management
but the word corresponds to the man
the word for example "person"

and when we begin to see
how to move the number away
there is a negative number of some event

then enter the word
corresponding to a positive event
everything is very simple
everything is ^{fine} here, you can see it here
from different sides of course
how to do it
^{Well}, everyone knows how to work with numbers.
basically everyone is used to it

it is possible to work on pre-sound forms again
without creating the word completely
starting to say the word immediately make control
having drawn up and then said

and it turns out that even if you see
negative events in this management ^{yes} in the numerical
take it and verbally enter it here
a positive picture of management
the number differs from the word in principle

and then we start to enter words
maybe it's difficult in principle ^{yes} sometimes

i.e. the ability to enter into a hard phase of information
where some negative event has been identified
somehow squeeze it into this event ^{by some kind of} willpower
a word that means a positive event there

^{well}, i.e. no event occurs
i.e. there is no accident happening there
there is no destruction of the building
the person there is healthy

so, to simplify the situation
always work with a person
a specific person
which could be ^{well} in such a situation
that he might have difficulties
from a possible problem with the building or the car

and helping another person
this is the action that ^{God} does all the time

God helps all the time

i.e. it turns out there are no problems there
you always have the right to help

and here is the exit to the access system
where do you enter words
the easiest option
so that these words had or were spoken or met
in information
the person to whom it concerns

and it turns out that we should then
again on the principles of complete free will
consider
how to set up verbal control

the easiest option is there
so that there would be benefit to this person
so that nothing happens to him ^{there} and that's all
to the people who live in the building
no negative events occurred
and that's all

such a formula, ^{well, some kind of} verbal expression
is being brought into control

and now we are already working with the verbal part
then the verbal part should be located
approximately in the middle of the building

or in the middle of the car

orientation also matters here
i.e. the word itself expressing the action
must be on some plane

i.e. it's better if it doesn't hang in the air ^{for example Yes}
in the aisles somewhere
after all, it is information and by the way, it is visualized

so when we work in the car
^{Well,} you can do it on the backs of the seats
this is also put in the middle of the object

i.e. means to enter a word
when there is a material object

again, it's not difficult

it's enough to mentally write down ^{yes}

Well For example there is "everything is fine" exclamation mark for example

Well, any option means

and when you start to analyze

action of word and number

then here it already arises

Remote Event Dynamics System

then it's clear

why did god introduce the control of number and word

with all that said, I still say

about the methodology of work

for example, on counter-terrorism

to prevent any destruction there

buildings, natural disasters, some military actions, etc.

i.e. these are some kind of force majeure situations

but there are still simple situations

who are completely calm there

and in this case

a person can contact a number

defining it

i.e. it turns out

that man and God in the case of harmonious development there

they said the number at the same time

and in case of force majeure

God has singled out a number

for the protection of man

but without assigning a place to a man, He did not assign him a number and

and it turns out that from this point of view we

we begin to see very clearly

what is a person in principle from the point of view of Infinite development

it turns out that it is absolutely protected

it is not marked

as an element of the current or something well some kind of temporary Reality

he is actually like the absolute world

looks in control

It is practically impossible to attach any phase to it
which would be typical in the following version

so a man was born ^{yes}
there is a birth number, then well, some date ^{for example}
here is enough primary date of birth
and then there are no more dates
i.e. there is no date of death, etc.

it is impossible to actually link any number to the essence

and based on this
if we start acting this way
then we see that the word is pronounced
both man and God

i.e. a person also has the right to pronounce a word
and a person has the right to develop a word
and this is what he does

God originally determined the word
i.e. the internal meaning of the word then

how does a person even know the word

Well, of course he's there hears, learns in childhood, etc.
and this is how a child learns the fundamental meaning of a word

i.e. if he looks at the information
how the word was created by god
and how is it taught, ^{for example} there are parents ^{there yes}
then the following status appears

that the word was created by God
naturally orients him towards Infinite Life

and that's when the parents say some words there
children
in general when a person says something to another person

if he imposes this man
on the words that God created
then there are no problems in principle in managing the real ^{thing}

He constantly shows the path of Eternal development

and so it turns out that the ability to impose words
to the right place of control
at the moment of conversation
this is still a special technology
which is also a technology for example there is counter-terrorism
by the way, even the political administration uses technology
technology of any control
from the point of view of Eternal development
and it is precisely the benefits there for all people, etc.

and when we start to see here
that there is a field of action
i.e. we have highlighted the outline with numbers
recorded an external object

with words we begin to develop the field of action

it turns out that the field of action is actually Infinite

i.e. it can be expressed in words
develop the Infinite Management System
inside a sort of closed object

the same thing exists in the Action of God
inside any finite closed system, so to speak
there is an Infinite Action of God

and now if we start to analyze
this control system in this way
Well, well, well there let's say you need to sign
some paper useful for all people
Well let's say in the political department

so the paper should have a shape
Well For example there should be a date there
The text should be such that the information
if it concerns a person

the date should not determine
any negative events
for a person

i.e. we are simply entering information
let's look at the point
where a person has no negative events

and for example we write text
depending on this you can sign it
and then the implementation goes like this
that you are now constantly at the management level
you take care
about a specific person or about all people

i.e. the system of Macrosalvation can be expressed in that
that you are simply setting a task
just on everything there Save everyone
when you write any paper there

and this point will be like this
just like God does
for example, you will be constantly accompanied
all in their Eternal development there

the principle of duty and development of the World
into Infinity
i.e. how does the World develop into Infinity?

this is a specific mechanism
there is the same movement going on there
as God does

and so if we work on this movement
in the same way as God does
then what are the problems at all then there are no accidents

the person definitely has no problems, he has no injuries, etc.
He lives forever

and thus in the control structure
when you highlighted the numerical phase
entered the words
focus on that
i.e. look at what God does i.e. perceive it

and Perception is often simple
Well For example watch the road there
while driving the car yes

or at least mentally look through it
if it's a train there's some information ahead
i.e. well, somehow try to perceive space

pay attention
that here is the internal Perception of space
next or around the train
this is a fairly strong guarantee of traffic safety

on the plane by the way when you fly
try to perceive the inner space
because there is a different principle there
this object is not on Earth
and exit to outer space
there should only be technological

i.e. the exit means control of the outer shell immediately
i.e. creation of an autonomous system
well, similar to how a person acts

and that's when you start to see
that the allocation of all these systems
it's just your personal inner development

then all control systems become open to you
it becomes enough for you to just see
what is happening around the object in general
there in a radius of 100-200 meters there is a million kilometers, etc.

you perceive the system as a whole
then you are
precisely at the secure management level

the same can be extended to others
look out for the safety of others

and now try to do this control
taking into account the complete health of all participants
because the criterion is always
full health of the participants

this one kind of goes without saying
here in this management
health should be restored instantly
if there are any problems in health

do this control
numbers on the contour of the transport there
there is this building in general there are all the buildings in the city

internal management well let's assume "everything is fine" etc.

"Everything is fine"

and control over the situation
Now do this control
I will work with you

in management it is necessary to consider very precisely that
that management must be completely real

i.e. we are talking now
not about any hypothetical systems
which are possible there with special training
they will start to act

I'm talking about the fact that this is a real applied system
which should bring concrete results immediately

Well For example there I work there with aviation
or there with any other systems
there is also a specific diagnosis
it exactly matches what happens in Reality

we are talking about what should coincide in Reality

and so that the work happens, or rather, let's say so
learning took place faster
systems of such targeted control
by numbers by number series
it's more like digital-optical control
the figure that carries in this management
often sound form compensation there

I'm saying that you don't have to pronounce it in words
the whole system should be formalized first and then discussed

and this is the control
this is the level where digital optics actually modulates
well, an expression of the optical range or something

if the word "management" is said there partially
having removed some letters for example
and first make a creative level
and then set the controls
then management means that it is initially creative

i.e. here it turns out that we always achieve the result yes

right here in the system
this digital optical control
It is important to highlight the next fragment

It is not necessary to see any optics of course
if possible or you can see the time there
you can teach yourself to see there
take it at the expense of the technology of my own Teaching
set the task there in a universal way
For example there is a controlling clairvoyance
and just see everything, everything you need and everything

Well, spend a few days there
for the development of precisely the elements of clairvoyance

but when we start to think like that
about the fundamental principle yes
dissemination of technology to all

i.e. any person should live forever
be safe, etc.

then it turns out that the next level arises

the need to transmit information
well, the information that you have
to those people who are there now, for example
do not deal with this technology
either they were just born or they will be born there in the future

and the ability to redistribute this information
at the level of there super-fast access

i.e. one of God's tasks
ability to get information very quickly
distribute
hand over
the information that can really save people

and it turns out that based on this
we see the following actual management status

that at the moment of your action
by this type of management
i.e. identifying a possible problem

at the level outside of the unformed ^{yes}
control information phases
to prevent this from happening

the selection is already further than that
it doesn't matter what kind of person is there
it's not his name that is meant there
and what kind of person is there in principle?

this is the concept of "man"
when you don't consider his personal events system
you only need his safety

this is ^{how} the level of this person is highlighted
it happens after
when did you diagnose the system
introduced control correction
^{well, that is, they created a stable, harmonious building there}
or a safe car
and only then do you approach the person's information

i.e. he is already safe in this system

and then you give him the path of Eternal development
where he must choose himself
then it should work
learn ^{how to} differentiate your state
why is everything going well for him there

he should understand your signal
and this should be his experience too

and here is the task of transferring knowledge
i.e. the ability to distribute information so
what about those people you saved
or ^{let's say it this way:} who couldn't have it?
some negative information

because you work with all objects
and we must immediately introduce the system
that this person could not have had some kind of crisis

but nevertheless this man
It would be desirable to do so as soon as possible
this is God's task to quickly convey knowledge about Salvation
mastered this system

so there is a certain level
in a number series
which means the following

since the number series is not directly connected in any way
with a person

then it turns out that it is possible to train a person
precisely through this neutral environment

well why so much for example in the history of civilization
many systems are accelerating
when digital technologies are used
many events are accelerating

this is a simple analysis that gives that
what are these neutral systems
but they essentially do not affect a person
therefore they have free development

and when should we set the task of control
behind these systems
it turns out that in this case, revealing
number 5 as a hard number
and the number 12 and also the number that is located
in fifth place and in twelfth

concentrating attention
from the point of view of processing the impulse of your knowledge
and as if like a reflective mirror
transmission to humans
he has the right to accept, he may or may not accept
but at least you gave him the opportunity yes

God does the same
It gives an opportunity
a person may or may not take

and further when we consider this management
from a logical point of view I see it this way
It would be better if people actually took it
God's information more accurately
then we would become Eternally Living faster

but nevertheless they are free
they have the right to take when they want yes

this information for assimilation

and when do we start
consider management in this way
that the person who needs to be saved
if he has a difficult situation
he must definitely accept the information, yes it works

on the one hand, absolute free will
on the other hand if there is a real problem

he must be saved in any case
he must definitely accept the information

then the concentration through the number 5 and 12
should draw for this person
which is in transport and in the building
the course of his future events

and it depends on this move
must make a conscious decision himself
well at least for some reason he has to leave the building there
or get out of the car stop the car
not to go somewhere for example Yes

and when you start working on this system
that reflection
i.e. a very simple principle
the method is absolutely the simplest, so to speak, pragmatic
in terms of management
because it is very simple
concentrate on the fifth number and the twelfth
in this row

transmit at this concentration
information that you would like to convey
from the point of view of what is possible there
or problems or for example there are no problems there
also information

and then further, then in order to save a person, it is necessary

for God is ever-living
then it turns out that every person
must live forever anyway
just logic

here's ^{how} he can convey to this person
it is possible only in that case
if he understands it completely consciously
what are you talking about
he understands what system is in operation ^{yes}
and accepts it as a control system

i.e. you convey your personal experience quickly
under his control
he begins to understand it
at the level of , well , even some element of Consciousness
for example, immediately translating into logic
at the level of some feeling ^{and} Spiritual action

and then it turns out
that the concept of "Spirit" is the concept of "Soul" of a person
the concept of "action by the Soul"
in this case it becomes a fundamental aspect
Saving a person

i.e. a person can always be saved
when it is used [...] it turns out

because until he translates into Consciousness
and after all, the impulse
^{Well For example there we will call it a telepathic impulse}
it does not always translate into Consciousness
because the person is just busy
there is a pilot flying, a driver driving
he doesn't ^{seem to} have time for such impulses, ^{but} it turns out

means the main control element
is the interaction of the Soul
but the interaction is as follows

that you are acting there with your personal Soul
to events
some such possibly negative
this person
i.e., disorganizing the events for him
must show that he must act
With soul too

This is how, ^{for example,} a person learns from God

he watches ^{for example} the Action of the Soul of God
and it works the same way

the same
the fastest and most efficient
there is an easy way to learn
it turns out this is the Soul of a person

and when the other person starts to act
also synchronously
here the Soul alone always sees
actions of another Soul by the way
at a certain level there is Macrosalvation

that's why training is underway
there may even be a training system there according to the level
took over and disbanded the situation
another person looked

when I say
I say "another person" all people can watch this
it means that this level of interaction
he is absolutely unique

after all, having considered the case
at the moment of creation of the human Soul
when God had already created the Soul of man
and for example a million years passed there yes

then the unique Soul is preserved
in the status of uniqueness
there are no other options happening there

i.e. the Soul actually exists
as a level, well, absolutely unique in this World, so to speak

and also and therefore it is impossible to assign any number to a person
because this is a completely unique status
which is not defined
position, number, quantity, etc.

for God any man
this is a completely unique level
he is not connected to any other person at all
there is no averaging there
there is nothing like that
there is only a personal attitude there

and when do you start working

in this system yes so let's say management
where only God has access, here for man
only He has the right to transmit information there
which a person unconditionally accepts

but you can only recommend
and so when you start working
so that your recommendation is effective
you have to show it yourself
how are you doing
so this is control over the object
but when you do

For example there in aviation practice
I'm taking control of well let's say management information
and I do the management
then it turns out that the people who are there on the plane
they gradually begin to see and do the same thing yes let's assume

and when you start doing management
as if for the driver in a difficult situation yes
you start to fix the control
on the building in a difficult situation

and completely practical cases there in flight practice
that's when the test pilot is there in the glider

For example there is a specific case
ripped out a very large piece
just a fragment of the plane's glider itself
physically it should have collapsed
in hydrodynamics

then when was the landing
the engines turned off and he physically couldn't fly
this is a specific aviation incident
nevertheless the plane was landed

there are quite a lot of such cases in management practice
when the pilot, for example, takes control of the system

in this case, of course, this is what we are talking about
about the extreme option
if this is what I told you there is some kind of glider there

the question is what you need to take on
sometimes control even in calm situations

and this is the management
when you conduct management
and the other person either agrees or not

but here he is still saved
because when you did the management
it was realized in a positive sense
then he got into a good situation
further he can study your management

and here is the level of agreement , let's assume yes
as God does
God built the world
and He constantly improves it
in a constructive direction for the better

and He doesn't ask permission there
for a specific person
and is it necessary to make the world there more creative?
He just does yes

the same thing acting similarly
at the level of creation one can act
depending on its management goal

you need to make sure that the building is not destroyed
you do it
no need to ask anyone

and when you start taking control
and show
what should he study then
because the main task is still like this
what a person should still study
your actions that were positive
i.e. integration of experience yes

then you take this experience to the level
then you can already withdraw
the same digital series

i.e. to enlighten completely, so to speak
this is the digital series
and then it depends on how you are
how do you build management

you start transmitting
information so to speak of positive favorable management
into the entire system of Reality

naturally this information comes
and to the person whom you, for example, saved
or simply given technology

because the concept of "Salvation"
this is an extreme case, you always need to enter control
that nothing would have happened to him

even if there are some difficult situations
but you always have to enter the element
that yes, it is basically an accident and it would not have affected yes For example

i.e. constantly enter control
that danger did not come near the man

and when do you start here
well, this is the level of highlighting the row
after the whole management complex
do
then please note that your personal experience
it starts to increase quite significantly

i.e. you get from this control
seeing this row
the series is still specific
it already emerges as a source of knowledge

and then you improve your technology
according to a more detailed system of viewing the design

i.e. you look in more detail
what design elements does it mean, for example?
Well, we need to take it under special control, let's say Yes
etc. etc. etc.

i.e. you enter the system of full control over events
at least there is some kind of microcell in this building
or is there a microsystem

i.e. you begin to take full control upon yourself
then naturally it's understandable
that there can be no talk of any terrorism at all
you even control the system

there is an internal structure of the building
there any crack can be found and so on.

Means Well, this also applies to the car, of course.
and by the way, this is a very powerful aspect
your personal safety

Well for example, your organism as a physical body
because the ability to work
with objects of external Reality
it's like a reflective wave
here is the light from the same digital row there
this is an element of your personal well as if the fields even
you can just feel it that there is a person nearby
something special starts to be created
safety field
and the person walks in a safety loop all the time
you can see these contours around you

because of personal experience with the system
It always transfers to you naturally yes

your body
your personality
you personally acquire qualities
which are almost all the time
not just there, as if on some logical level
create a security phase

and you find yourself in such a phase of events

i.e. with complete freedom you can walk wherever you want
Well, be wherever you want
in this case the event phase becomes safe

the peculiarity is that the outside world
how is it configured
for your safe development for your safe life

This is where I end today's seminar.

Thank you very much for your attention
