

GRIGORY GRABOVOY
The Teaching about God
Creating a Dynamic Control Area
06.04.2005

Hello again
the topic of my seminar today
my Teaching about God
Creating a Dynamic Control Area

in this case the control is done in this way
that you are in a dynamic field
which is created as a control area
first of all you start to form
their own tasks

and thus you make the management
that is, as it were, in the sphere of these tasks
you are actually creating control in this way
that you output exactly into the dynamic environment
as if first of all those tasks that
the most distant from you for example Yes
in the information space

and secondly you have to try
highlight well at the same time as if
the most related tasks

here is the dynamics itself, it arises at that level
that current tasks are linked with distant ones
movement is obtained
i.e. well as if some friction and information

and due to this light-optical environment
a specific dynamic area arises
which is such that you can control it
almost all the time

i.e. you have to try when working with this material
there with this level of management
means trying to immediately carry out control
as control coming precisely from the dynamics of actions

i.e. for example when you consider
this management position
then try to work constantly and continuously
with their own tasks

i.e. in this management the tasks have
it is precisely this continuous character
i.e. any optical control line
it is in fact a field of dynamics
i.e. it turns out that you are practically all the time
you are in control while moving

and that's when you create
exactly this area of management
as manifested precisely in dynamics
then if we consider also how God does
For Him, any value is still just a value
which is in the dynamics
even in relation to different times
let's assume God sees the same
there is future past tense

and here is the light coming from any object
he is always a light in motion

i.e. it turns out that we have in this case
quite a concrete picture in general
that for God any object
this is a dynamic quantity
in management

and if we create by analogy for example
their own control systems
which are the same in terms of dynamics
well maybe not exactly the same
but we want to make sure that the management is active enough
let's assume it's based on speed

after all, you can change the control speed

then it turns out that we need to create
this area
as an area that is visible informatively
as a region specifically in well manifested

in some kind of movement

and this is this dynamic area
it's almost such that you start to see
my tasks well as if from different sides

i.e. for example you have some specific situation
then it turns out that you are in this area
you can have several points of view at once
several positions
in relation to one task

and this is very important you can then
to be practically always in the control field

and this is the control field
means which is created from this area
it is such that you can have
quite a lot of information for example yes any
and this information it can be
not always manifested in optics as a static phase

because here it turns out that we always have
next one as if Well or what about the control angle ?
what if let's say we make some movement
there let's assume well in a flat version

then this is a movement from the point of view of a distant quantity
it may not be completely flat anymore
there is a modification of the optics

and so when we speak
and already about the dynamic level of management
we can very well see the following angle here
just like God does

that any line of control contains, as it were, answers
often from many points of view
it is in this system that it is important to see exactly
the structure of God means Yes
when He sees in dynamics as if
still a generalized answer to all questions
well, in the form of , for example there of His Physical Body

i.e. here the body is also a certain information

a definite ^{yes} answer to all questions

and it turns out that if we start
this area of management
to enter ^{as if} into a list of tasks
it is very clearly visible here
what ^{well} setting the task of creating this area

we create of course so that management ^{yes}
make it effective or implement it at all
how to control through this system

then we see that it turns out that in this area
generally speaking, they are tracked very clearly
causal systems

because when the area is in dynamics
then it turns out that the signal you are considering
he's always ^{well as if} it were a carrier
carries certain earlier information

because if static
we can formally and conditionally separate
one situation from another

and in dynamics we often
^{Well,} in optics it's just visible like this
as if if we look at physical optics ^{yes}

if there is a beam we always see
where does it start at least

therefore it turns out that in the dynamic area of management
always practically clear quite quickly clear
to a person
what is the cause of any state of action

and now when this position is ^{well} understood, ^{let 's} say so
then you can change the control value itself
but from the point of view of the future signal

that's what's important
in the dynamic field of management
you can work not with information from the past

because it is possible to increase the speed
the speed of optical processes
and work in the future

i.e. knowing the reason but as if bearing it
into the information of the future
and coordinate the future itself
and moreover, correlate
in a very simple coordinate system
knowing the reason

i.e. changing the cause but already in the future
and you can immediately see how the changes affect
on the processes of the future

This is generally a mechanical technique
i.e. formally you work
generally speaking, it's all about information from the future
but the very subject of this work or form
you take out as a structure of work with the past

i.e. the structure resembles a certain sphere
which is practically built like this
that the sphere of the past
it's like a smaller sphere , right ?
located inside the sphere of the future for example

but ideologically, in principle, it is structured this way, even logically
World System
the next information is more
so the sphere should be bigger

for example, at this second we drew a sphere
all events of the world
a second passed
the number of events has increased
then the sphere should be bigger
Well as if the ball even yes the number of events
well, in the mass consumption of information

it turns out that based on this
to get some kind of neutral point of view
well, like control over the sphere of the past and future
we need to create again

the structure of the dynamics between spheres
there launch a beam that will go around all the spheres
along the inner surface between the spheres
by reflection yes
in this case it is simple optics

and then we get practically the following result
what kind of beam or signal is there
launched between spheres
by reflection comes back to the starting point

just like God
the signal is a kind of beginning, yes, the beginning of the signal
but there is also a structure that is sort of designated
as before the beginning
after all, with God, for example
what is the beginning what is the end of the Action
for Him it's all the same
It forms both the beginning and the ending.

here for a person to use this technology
you can track the result, i.e. the final action
and already form the beginning of the signal
knowing the result in fact

but then we need to move on
to a different control plane, as it were
i.e. it is best to enter the structure of the sphere of the future here

therefore, the signal must be formed on the sphere of the past
as if on its surface a
on the outer surface of the sphere of the past
but you need to work with the signal
on the inner surface of the sphere of the future

i.e. why on the inside
because it only takes a second to pass
we always find ourselves on the inner surface

Well for example, why are human organs enclosed
there inside well how is there a physical body yes
like some vessels
and because it is the control area
which will always be inside the system
Well as if by analogy

because from the point of view of logic
it is possible to create different systems of a different type
there are plants there, some vines there, etc.
and in principle they have control
is achieved due to external systems

and with an external system the structure is still there
with a large, as it were, branching of plants
root systems
They participate of course in the structure of information exchange
on a generally equal level
from the point of view of the equality of information objects

but here it turns out
what exactly is the content in the internal environment
this is the control level, so to speak
which controls itself as if autonomously
i.e. it controls any systems

and therefore when we start working on our tasks
but in principle our tasks are simply to study
namely the fundamental Laws of the World
God's action as God shows
knowledge of God

and be able to see what God specifically shows , for example
in the system there is Macrocontrol
i.e. what
what is necessary for a person in this system

here each person studies his own fact
well, maybe a certain position, yes in general, of one's own Soul
which is aimed at Eternal development

so it turns out that in the study segment
example , if we want to assume the level of management
of the type that in any signal there
any number of answers there

i.e. let's assume that external control is as follows
that you can choose any level
and on some movement take modify
before he came yes

here's how to do it
to form the desired word
regardless of the external image of management

to do this you need to do this
so that the image was so dynamic
that at the moment ^{of saying} the word
you got the right word from all possible ones
i.e. this is a very high speed, ^{yes}
ability to work at real-time speed

then as soon as you see
interaction of the physical body ^{there}
with such a level of time
then any event of the past
in principle it becomes controllable

i.e. the previous system
cannot have a negative impact on you
and the current one is in this state , ^{so to speak}
it turns out that it is also at the control level
because you are using
^{basically} what you do by controlling the past
block all negative systems in the current time

and it turns out that only the structure is revealed
your exact future
i.e. your future there, ^{for example,} everything is fine

and this is the main thing that needs to be actually seen in this system
i.e. to be able to see a signal that ^{seems to be} transformed
into the dynamics of current time

i.e. normal ^{and} a signal of the future
static signal of the future
turns into the dynamics of current time

because the world is constantly moving, ^{yes}
the structure of information changes
and if we look into the future
you can see your own specific one there
Well there ^{let} 's assume ^{positive} information

and if you need to align the information
you must bring management

to the level of alignment
and no matter what the information was
it is necessary to bring it up to the level
as if from my point of view

why should a person have
namely its management
and knowing well, among other things
there are some absolute structures of the future there
he still has to take initiative

God created the world like this
what exactly is the initiative of the movement
well, a person there or something in his own future
it's like well as if to confirm that
that a person chooses this path independently

i.e. God requires that man constantly express himself
the structure of a kind of personal independent movement

i.e. and in connection with this
here is the controllability of future processes
becomes almost absolute
for those managers
who exactly knows this structure of connections

personal initiative yes personal
in terms of there Infinite development
in terms of even some one-time action

this is the level at which a person always chooses
your specific path
and it turns out that here already
this is precisely the dynamic level of control
this is basically the level of choice of a person's personality
some specific path

i.e. in this case a person
Well there is personality, so to speak, in a more general sense
This means that he constantly chooses the structure himself
which means this person has absolutely clear control over yes
any situation and chooses consciously

that's why you need to constantly well like, draw something
in management

structure of personal task
where a person is in control almost all the time
due to personal dynamics, ^{yes}
dynamics of one's own personality

there is also such a Spiritual here
and ^{in general}, to a greater extent, even the Spiritual aspect
connected with such social sociological even
management level
because the interaction of the individual in society
there in society, in politics, ^{for example}, in some personal matters
at the level of health management, etc.

all these systems
it is still an obligation of the individual or a task or goal
there are temporary systems that ^{kind of} compress
management level up to some specific categories

^{for example}, a person who is there to help many people
he chooses the most important things ^{yes For example}
from the point of view ^{there well} maybe more complex or more urgent

it turns out that it exists
something like ^{that} in terms of choice
action
what a person chooses there personally
but this is still the position of the individual
Here are the reasons why he chooses
this is a property and character
and ^{there} are so-called circumstances, etc.

and if, ^{for example}, a person begins to see here
management structure
that's exactly it, ^{as if} in a complex
then he has only one option left
find your own information
^{as if} actually in the information of the future
and in a very good stable position there

the thing is, ^{well}, to make it clear
what is the information of the future
it is a fairly stable structure
i.e. there is a favorable future there, etc.

i.e. how to make the future favorable

for a person
it needs to be at some super high speed
withdraw control
actually at the level of favorable events

what are you doing further by the way well as if sending yes
management into the future
the easier it is to actually output
on the structure of static favorable events

because the light lever increases
and output the control image
towards favorable events
easier

it turns out that with greater approximation
to a person
this is precisely the dynamic side of Reality
it is more manifested
i.e. the maximum dynamics is the person himself

and when you start from this point of view
study
closest to the human body
optics
then it turns out well it seems to immediately emerge
the next principle of human security
in this regard
well, that person who knows this system of the World

he understands that dynamic light
it is practically not accessible to external control
he is practically freedom , well, a completely independent world

and once when approaching a person
these properties of light are increased
this means a person can accordingly
It's very simple, so it means outlining your immediate tasks
and how to manage your current level of management
there are some options for behavior in some environment, yes
if there he swims underwater
some unexpected things, etc.
or any things that require
namely management decisions

that he can, in principle, as it were, absolutely control
situation
due to the speed of the dynamics of those areas
which are like well, they are pressed somewhere even to a person
they seem to be in dynamics, well, not specifically skin
but very close
there are even some deformations
they are even compressed, you can see these areas some
but this is in the case of some kind of large compression of many cases

and therefore the task will be some kind of archiving , yes
information
i.e. it is necessary to distribute information correctly
archive or simply disperse

and the ability to do this without some kind of archive cells there
without control
some kind of arrays of information
because you just have to remember
that in such and such arrays
you are located, let's say, at such and such coordinates
such and such volumes of information

it instantly becomes heavier
this area is kind of informative
and it still needs to be constantly kept in mind yes

for example, as God does
just imagine God the Creator of the whole world
He created the world
it turns out that He is in control
we need to create some additional world

but if He creates an additional world
he still needs the third world
which includes the first two
so He creates once it turns out

and it does not store information in copies
i.e. It's just in real time
He does and sort of reacts yes
for everything

This is, by the way, a very powerful technology
namely the treatment of the disease or something like that

alignment of some extreme states
do not create a system of copying
i.e. the ability to work
with only one subject area

and work with one subject area
possible with ultra-fast value

i.e. this is actually colossal optical dynamics
because from a fast moving object of information
It is almost impossible to make a copy

for example, how to treat complex diseases there
or there is some extreme condition
bring a person back to normal

you just need to transfer it
at least one element of Consciousness
to the ultra-fast optical element
It doesn't even matter by the way where he's going doesn't matter at all
as long as he is the fastest to manage, then

as a rule all elements
are moving into the structure of Eternal development
means with any properties
any element of information
moves towards Eternity

and it turns out we know the strategic level
and just choose the high-speed one and that's it

and if a person manages to do it technologically
Well, he learned to output control objects
into this high-speed, so to speak, flow corridor

then you can simply deduce it
a structure, for example, associated with some disease
and the person is cured

i.e. the disease disappears
because in principle the disease is actually
this is still not canonical
at least in reality
this is the absence of something normal

there is no functioning or physiological

and therefore this is burdened information
it has different copies
that means in the system of generalized diagnoses, etc.

and if we assume that we proceed from that
what does it mean and so it is in the system of Reality
each person is completely unique
there are no copies of it
that's exactly from the point of view of that
that God created the Norm of man
This is the Health Standard for example yes to his personal life
he he is unique each one he is one

and what are the diagnoses if these are some kind of diseases
then they are like Well, in some system directory they exist

and if you can get out
on the uniqueness of one's own information
due to high-speed flows
then naturally the person is healthy or he doesn't have a situation
corresponding for example there are copies

although there are of course some positive ones
there are professional skills
in the catalog system and these informative ones
well, just figuratively speaking

so, imagine it like this
a lot of information
how to get to a clean field of information
where the field itself is dynamics

and by the way, this field is actually quite unique
it is in management that this constant dynamics
requires a certain amount of attention

although this is a very strong field of control in general

i.e. the field requires a periodic level
contacts from the Consciousness of this area
dynamic control area

so this is a process that is like this
that at the moment of creation
the area can instantly appear on another level
another coordinate system

and it is clear that the area seems to be working
as if according to the Laws of some kind of self-development

when you look at this area
it's actually just a solution
your own questions
by you
but as a rule such an area manifests itself
in case of some difficult ones from your point of view
situations

this could be real
it's not like she's really that complicated
maybe there was a precedent similar to this situation
and your Consciousness constantly analyzes the situation
Will there be a repetition and some negativity?

i.e. here you can see that when a person starts
Well there is alarmed
so this is precisely the dynamics, such a dynamic area
transparent type so to speak
i.e. there are no fields of information accumulations there
it's just the perception of external information
this dynamic is perceived by the Soul

for example, an analogy can be drawn like this
you can look with your eyes at
well with physical eyes on space
and how would one know that the wind exists
because the wind moves the trees there yes
some leaves are shaking

but the wind doesn't blow in your eyes
so maybe he is walking at some distance
there may not even be windows there, etc.

and it turns out that when we draw the same analogy
then the Soul perceives in this case
this space

this is a dynamic field so to speak
but the field does not affect the Soul itself

i.e. the Soul is like a receiver of information
i.e. the receiving environment
but the Soul is that level
which is connected with the whole world
and the Soul is connected with God

so it turns out that you are
at the level of actual action of the Soul
but in the structure of Perception
i.e. the Soul at some level takes control here

and here it can be very clearly
already take control logically
where control comes from the structure of the Soul
just setting tasks for everyone
which you perceive logically

and how to modify the logical problem there
i.e. established factual

for example, did you have some precedent?
and you need to make sure that this precedent doesn't happen again

there are some logical parameters
which can clearly mean some situation
and it should be that this situation
well if it's negative and has some sense
so that the situation does not repeat itself, for example Yes
well and in a personal context

there are generalized situations
which in general maybe they are not very good
but on the other hand they don't interfere
or maybe in the long term it will be the other way around
they bring benefits there
it all depends on the point of view

but there are situations for example
which are clearly not needed by people
if it is associated with negative effects on health

for example, a person once sunbathed there
I got a sunburn there

next time he understands that he can't do this
however if ever there is some similar situation
arises
here is a burn that hasn't appeared yet
he starts to think
what if it's the same situation yes

Well, if the person is a manager
he can diagnose himself
and say that there are no problems
get information there yes For example
and therefore do nothing else, for example

but theoretically, for example, many people begin to speak
what if it is so and even having control
they start thinking
here's how to take action
well there Well, let's say skin restoration to recovery
or not to accept there

It would seem that it would be possible to make control there
and that means more well how not to discuss this topic

but here the situation is like this
what I'm saying is that in people's logic
it is not necessarily a specific case
there is simply some precedent there

and here to remove possible coordinates there precedents
or some negative information
For example there are some diagnoses there
make it so that under some
well, marked, so to speak, in the human Consciousness
some negative events

however, a person must clearly know
that this will not happen to him, i.e. there will be no precedent
there is no personal or any previous winnings
there in the history of civilization

he must see here very clearly
that his information is current
it just works at a faster speed
it is ahead of a similar scheme that existed, for example
or when it was organized

some kind of negative precedent
or if it is the structure of some diagnosis

Well for example, a thought comes to a person
that he might have to fight there
with some diagnosis
maybe it doesn't even concern him
a specific person
but nevertheless the main task
make sure that this diagnosis does not come true

i.e. the ability to derive a static diagnostic scheme
which in general works as a kind of dynamics too
the diagnosis tries to be as if yes, to actually overtake a person

if you paid attention when a person is being treated
then the information is not just there from somewhere
Well It's not like something is arising from somewhere
it manifests itself quite clearly as information
which actively interacts with a person

after all Well, here is some kind of diagnostic structure
it is still a structure that is practically
external information
in relation to the Norm
and Norma is normal health
a practically healthy person

it turns out that this structure is a system of interaction
has certain reasons certain
there are logical, informative , cause-and-effect, etc.

and so here is the allocation of this reason
it is still a personal action of a person
and a person must be absolutely clear
it is precisely the concept of a certain "diagnosis" there , etc.
this is a certain level of speed of work

and if we assume we have a higher speed
than the speed of possible development there
at some there well what kind of information object
any negative information there
there must be some kind of diagnosis for the disease

then we will have time to correlate already in the future

this situation and just do it
so that some negative level does not occur

and if this is done, for example, systematically
and in relation there let's assume any event
then it is clear that in any event
there is a way i.e. your own
as much as possible of your personal influence
on the structure of future events
by the fact that you just take
some block of information volume
insert into the structure of the future event
to the right place for example Yes
as if not analyzing often
you don't have to analyze the event itself

there is some light of information revealed there
and they took a controlled system there and installed it further
and that's all
means all previous events
will definitely be realized positively

and then a level arises
well, a fairly calm relationship, yes
to information there to Reality
that any event can be overcome
i.e. the ability to see, well, at the first level
a person can feel it there somehow
that the event itself is surmountable
because he controls
first of all all systems
moving very quickly for example
from one volume to another, i.e. again dynamics yes

and the fact that this level of dynamics is like an advance
it's already dynamics to be able to get ahead of an event
and be able to bring it out as if into a practical Norm

and here it turns out that the practical Norm
this is actually a known quantity
person the main amount of time
is in the practical norm

and it turns out that in principle you
take any one segment

who was there recently
or is simply the norm for a person
how to simply bring the platform into the future and that's it

i.e. emission of some known level
where did you look
its state as normalized
and like Norma, for example

and you just bring this state into the future
and use it as a kind of tuning fork
so that the future will react systemically
like this canonical image

and once the reaction is balanced
i.e. statics arise in management
those dynamics are evident
in the adaptation of these
are different vortex wave designs there
and then you already see
that everything is really okay with you in the future
there for example, regardless of any circumstances, etc.

and when you start looking at this area
then you come in general in that position
to quite simple I think
Well, at a fairly objective level
action in management
where it is absolutely clearly visible
and here it is as if very clearly manifested
what is basically in management
that's the main thing in this dynamic area of management
the main thing is to do it so that the definition
how about your next one
this is like a step towards the next level of management
it means it was such that you clearly control
any level at the level of Perception

and this level by the way
this is precisely the controlling clairvoyance
i.e. the ability to constantly control
development system for any situation
For example there in the Infinite Future

positions should often be considered

what is this concept
such as there is "Infinite level of information"
which is in the past yes

because we can say
that there is for example there is an endless past
then it turns out that we are closing the circuit
on the same level
and then it is clear why God does not need to make a copy
He has a completely closed system
and He sees any event as if from two sides, yes
well, like some kind of mosaic
from the past
this is one level of events
but from the future it looks different

from the past
even for such seemingly massive ones or what about systems?
it turns out that it's not that difficult here
see how the management takes place
because from the past
we see separate segments

because information increases
and if we have a beginning in the past
then the cone increases
we must from one as if spot and light
get some spots
here in the past
one in the future
this is a different volume, the events of the World are already developing

and by the way, this is also a very powerful healing mechanism
ability to approach from this point of view
to the dynamics of the situation development

here you can find one of these levels
Well, they look like some kind of light spots
make some level ideal

then there is an inextricable connection of events
as if it were the same event
and you get a powerful restorative effect

the main thing for us is to do it this way

to identify the ideal level
was such that he
well most densely in the current time
was tied up
with all other components of events

from the point of view of the future
it is usually the opposite of concentration
because there is more information in the future
and the array that looks bigger
in a lesser form
in a smaller volume

and based on this
it turns out God is on one side
sees as if a coordinate system
which is constantly increasing, growing, yes
and on the other hand
He sees, on the contrary, a concentrated system.
the more He goes into the future
the more concentrated
the point becomes management in fact

and then it turns out that God comes to Himself
to your primary thought
when He goes into the Infinite Future

The infinite future is transformed
just into normal space
where there are no forms, there are no rigid areas
i.e., as if simply in dynamics as such

and this dynamic contains precisely the manifestation of the World
and Spiritual for example Yes, God's Peace

and God sends this knowledge to people
then a person gets it
any level of Perception is needed
to identify as a system that is sufficiently open to management

i.e. there is more dynamic control
it is such that a person must understand
what's in this area that 's not drawn yet
in Perception by light-optical impulses
the solution is actually largely in place

his future tasks
and you can even trace it
what task

this is the task that is most closely implemented here
that's when you ask a question about your task
the outline begins to emerge
and a mass of optical elements arises

specific events specific deeds
i.e. it turns out that there is a kind of instantaneous construction
depending on your task
this is your kind of world of Perception

and it turns out that when you start to see this
This is actually the most powerful
also controlling clairvoyance
it's like this is actually a kind of system
which allows one to develop such clairvoyance
move from level
where the beginning and the end are one point

i.e. it turns out that the information is not revealed there
as information for some purpose
and it simply exists
as an informative dynamic field

and as soon as you set the task
the field is transformed
into the structure of clear physical objects
some houses there, well, you can find out
any systems that exist yes
planes if you need to fly somewhere
you can see it
what kind of plane do you have there or what kind of transport, etc.

and here I am, well, a bit of a training one, so to speak
level of management it consists of
what is needed here is simply super high speed
bring to some such form
resembles a drop
which is pushing space towards you
we see only one part of it
but we know that it is super fast and super strong
there is an area under management

and when do you translate this system
in the structure of current events there
then it turns out that current events
in fact you can vary them
i.e. they can change
depending on what point of view you look at it from

took the task and set it there at a certain level yes
optical here For example
took over and moved control
look from this side
and events in the future may change

i.e. it is clear that the World is variable
and depending on your point of view
events are changing and ahead

logically it is clear
that you can go
either there or somewhere else
do this or that action

in this case i am talking
when you don't take action, for example, obvious ones
Well no matter how hard you work on it
and everything works out for you
simply by shifting the position of the point of view

and it turns out that here we have
like such a design
what if we are considering
let's assume a system of Infinite development
how simple the Law of Development

for example, development must be Eternal
The Eternal God He is naturally by analogy
just gave people the same path

Means For example there is a resurrection structure
it's just for nothing as if such an integral part
this Law actually

i.e. Eternal development
contains naturally resurrection

as a guarantee that everything can be restored

and this is one of the additional factors of confidence
any person who is engaged in
namely the technologies of Eternal development
that this is the aspect of resurrection
in general, Norma is normal

after all, why exactly are we talking about it?
for example in Christianity about the general resurrection
because it really exists here
it's just a normal law of development
where these areas just merge
there above there thoughts
information of the future
information of the past

and it turns out to be just an image
well, in fact, he is simply like an image of Eternity

i.e. the element of current time
this is the structure of Eternity
it works out to a greater extent

and the structure of Eternity has properties
and resurrection and such properties
so that a person does not die

and based on this
it turns out that we are in the current time
we have the maximum, i.e. the most powerful
management potential
from the point of view of temporal aspects

from the point of view of space
where we think that time is
Well there is a made-up category, logically made up
then here, in principle, it's all the same

that's what's interesting
property of space and time
at the optical level it coincides
when working specifically with dynamics
this is what is in the management there in action
when we specifically create dynamic areas

i.e. we need to create a movement
how to create the first movement

you just need to create a standing point in space
then it will be clear that the movement has occurred

and that means we must create exactly that
the structure of some kind of movement of action

and often, as you can just move
determine precisely
where there is a person or some object
not even geometrically connected in any way

but movement is an action
personality is always defined in a specific place

God is always manifested everywhere

so you can just follow the movement
always determine where the person is and
well, with the purpose of helping this person

By the way, I have a certain one
well built on concentric principles
that's how the system works
they just detect movement
and it's immediately clear where

later the coordinate system is built
and the coordinates are sort of tied
to the already found place

i.e. space is also created
and has some even in this in this model
quite conditional systems at at as if well, purely geometric
you can create spaces around the found displacement

it looks like creating space at a point

then the work of such systems is obtained
it is very optimal
there is no need to calculate anything there for a long time
in terms of specific search calculations of some kind

it's quite easy to identify
glowing travel level
to indicate this by the fact of being ^{there}
For example there is some object of information ^{there}
in this place

and then build the space
it is very easy to build
Well, there is a 3D version and that's it.

what else can you come up with here?
Well, there is some kind of three-dimensional object
that's enough

it turns out that the management is quite effective
here it is built precisely according to the following logic
what does it mean here matters
here are the motives of earlier systems

for example, a person who has one motive
can be realized in space
Well For example it's different ^{there}
not as it could be ^{considered}
the process is kind of logical
so the personality initially had such structures ^{yes}

i.e. it is always clear what a person will do
not only a person any object
how will it develop in this coordinate system
that any system is visible

and here's how to help a person in this case
he must first then sometimes make sure of that
that some action is happening
Well , somewhere it will be realized one way or another

and then the information is given
which one ^{is there} for example, it promotes ^{there}
some next levels of development

and this is the level of implementation that results
when some or other events manifest themselves in a person
this is exactly how God's task is revealed

God does just that
He wants people to try to understand in advance.
and whenever possible, took action
even with a lot of work
some actions in advance
so that the management is around the person
was provided with normal

i.e. there were favorable events
for this person

and if we analyze the situation here like this
how should a person behave then?
so that with a large number of actions
have optimal characteristics in events
there are the most optimal ones

and from the point of view of Eternal development
he should at least have normal ones
from the point of view of normal life and normal health

and from this it follows that he should
constantly if it is necessary to align events there
towards Norma
i.e. to recognize a certain position
under, of course, really realistic conditions
what is this Norma

i.e. recognition of this factor
already stabilizes the situation
i.e. the person himself determines the decision

this position is normal for him
he [...] if he identifies the criteria
that there are no unnecessary factors there
he can say yes it's normal
he kind of admits yes

this is how God does it
at this moment God simply creates

and if we want to make the control here like this
that is, God created
and a person can recognize information

corresponding to its action

here it turns out that the recognition factor
it's like he thinks that a person already exists
well, a certain element of the external world
which leads him to management
and God creates this element

then this question arises
why does God create a specific element
why does He create for man, for example ?
some kind of management level or something

Well, first of all, it is clear that the Eternal One
It gives the level of Eternal development
shows how to live forever yes

and then you have to see here
well, quite a subtle connection
between their events
and deep, well, sort of personal
internal events of other people

then here comes the transition
to a deep, as it were, personal level
which is not expressed there in the form of any requests
and this is a real understanding of the situation of other people

and by the way, in the structure of Macrosalvation
when global destruction is possible
from some kind of nuclear disaster
so it works out here
it is the understanding of other people
this is a very strong unifying factor

where are the people who definitely
on one vibrational wave, so to speak
shine against this possible nuclear explosion
and there is no explosion

but these are personal tasks
People
it's just their job
the task is set by God

i.e. it turns out that tasks are created

Well, that's counter-control.

and no explosions occur there

it means the more tasks a person creates for himself

free decision

the more stable the picture of the world

Well, naturally it means

that here are precisely the creative tasks of course

and here at the dynamic level of control

It shows quite clearly

this area

and then when we talk about that

such as there to do there well in case it is necessary

some kind of action

which completely restores the situation there For example

how to make it so that

Well, there is a concept there for example, "complete control over information"

so that a person, well, under any conditions

for example, he always understood very clearly

that this action is possible in relation to him

just imagine some situation

and it can be logical

i.e. a person thinks yes, logically he can have

this or that situation

how to overcome it at all

and here in the dynamic system

there is a way here, it is very simple in general logically

we need to create a dynamic system like this

so that everything you have mastered positively

you must pass it on to another person

and he must manage to master it as quickly as possible

desirable

i.e. due to the fact that he masters

your accumulated experience

you have a controlled level of the future

because once he mastered it, another person

you have a certain guarantee
that the system works
well for all people
exactly as if for all situations yes

and this is precisely the dynamic level
why do I think it is necessary to develop sometimes in management
because here we can work out
some kind of standard system
for all people

i.e. imagine a very large amount of information
at high speed
it affects everyone more or less equally

and that's when you work
precisely with a dynamic system
it turns out that you can see quite clearly
what well in general, there is an influx of information here
is the same for all people

and so if one person
mastered something did something
For example there is a human as a species yes
correctly identified in the biological body
abstracting from the concept of "species" there for example there are animals there
just as an object of biological information, so to speak

can be considered as a type
if only one person can do it
Well there is a body of a man
so it turns out that in this case there are no problems
This is a standard procedure in general

then any person
Well, one way or another , well, maybe not exactly the same thing
he might do it anyway

that's why there are procedures there
well, which at least once in the history of civilization
there were manifestations
precisely from the point of view of human actions
Well, it is precisely creative actions of course
aimed at all people
as a rule, this is most clearly visible

naturally this can be learned
i.e. if he was resurrected there or was resurrected there
at least one person
so everyone can do it
logical simple conclusion

if one person
there can be something to see and control remotely
Well, that means it's a system-wide level.

and at the dynamic level it is very clearly visible
by the way, according to my educational programs
very often it turns out that in difficult situations
people get educated very quickly
doctors, that means pilots, that's exactly it
where some urgent measures are needed
They learn the control system very quickly

and when we start working
so here even well such practically data
Well, a person is mastering the system.
is already starting to work with the external environment
quite unclear properties
in the environment receives
in fact, in general, the following results, etc.

and so here is the development
namely the dynamic control area
this is a very important characteristic
in solving almost all issues often
simultaneously
and provided that those questions are due to high speed
they are often not manifested
how harshly negative information

i.e. in fact you do not allow it to manifest

it's actually a kind of peculiar state of affairs
what can you treat in this condition
to go constantly
to better to better to better degree of management yes

information that reaches Reality
she keeps getting better and better and better

and you don't allow it to be realized
due to the dynamics of the actions

i.e. dynamic information area
allows for systematic treatment and monitoring of results
and have practical experience

and this applies not only to treatment, of course
to any area of management
and in technologies of Eternal life
I think this is often a very necessary value
be able to cope with such a huge number of events
impulse which is universal
which does not allow negative events to occur

in fact, this is an area
in fact, it can be said that it provides
namely Eternal life to man

and upon its detailed study
it is in the structure of human perception
it is always possible to make the most optimal control
get super fast results there
mandatory result, etc.

This is where I end today's seminar.

Thank you very much for your attention
